

## **Praseological units in press: cultural peculiarities**

**Abstract:** Any contribution to the study of language used nowadays is impossible without considering national and cultural peculiarities. The role of phraseological units in representing the culture of a nation is significant. Focusing on the phraseological unit as an instantiation of the domain of language-in-action makes it possible to speak about a phraseological unit as a social tool carrying a specific function of accumulating cultural heritage and translating a system of shared beliefs, values and types of behavior in a certain group, community and nation.
