HISTORY HAS NO SUBJUNCTIVE MOOD

*Rustam Minnikhanov,
President of the Republic of Tatarstan*

The history of Russia as a great Eurasian superpower founded by the collective efforts of many peoples and embodying the unity of Slavic and Turkic civilizations is a subject of growing interest among domestic and foreign researchers. The realisation of the special role the Russian state plays in current global processes, which is rooted in centuries-old traditions and a rich history, calls for the study of the previously unknown and unexplored pages of the country's past and peoples.

In the previous decades the history of the Tatars—the second-largest ethnos in Russia—often happened to be the subject of disputes and deliberate or inadvertent distortion, which adversely affected the spiritual health of the general public.

The reconstruction of historical truth in its entirety therefore became a topic of interest to various scientific centres.

The major outcome of their activities was preparing and publishing this seven-volume academic work titled 'The History of the Tatars from Ancient Times'. This treatise was produced under the scientific and methodological guidance of the Sh. Marjani Institute of History of the Tatarstan Academy of Sciences, with the participation of specialists from leading scientific centres in the Russian Federation and countries both near and far abroad. It incorporates modern approaches to the historical, socio-economic and cultural development of the Tatar nation, the entire multi-ethnic population of Tatarstan. Of primary importance is, to my mind, is the integrated and unbiased approach of the authoring team as they assess the formation milestones of the Tatar ethnos in the context of global processes.

The 20th century was a time of revival for the culture, economy and ultimately the national identity of the Tatars rooted in the times of the Turkic, Kimak, Khazar khanates, Great and Volga Bulgaria, the Golden Horde, the Kazan and other khanates of the Middle Ages, as well as the Russian state.

Modern Tatars are direct heirs of the Eurasian civilization, which integrated in itself the most varied cultural elements of Turkic peoples. In May 922, an embassy of the Baghdad caliph arrived to the town of Bulgar on the Volga. This event was the official recognition of Islam as the state religion, which signified the accession of the Bulgar state into the family of Muslim countries and Islamic peoples, and contributed to expanding its international contacts.

The spiritual world of the Tatars' ancestors based on humanistic traditions of Islamic civilisation was characterised by tolerance towards the religious beliefs of other peoples.

The Bulgars founded a developed state where crafts, trade, science, and culture blossomed. The Volga Trade Route, just as the Northern Fur Route through the Kama basin, connected different countries based on trade interests and facilitated the formation of many modern peoples of Russia.

The Tatars called the Volga 'Idel-Yort'. The hero of the epos Edigü addresses Idel-Volga with the words:

'Hello, Idil, Motherland and Home!
May peace be upon thee, sweet Home!
Therein, in this house, my father
Became happy as a fiance and son-in-law.
Having married, herein my mother
Became a daughter-in-law, became a wife.
Hello, Idil, my sweet Home!
Where my being has begun.'

The Russians, Chuvashes, Maris and representatives of other peoples of the Volga region may and do address similar words to the Volga. Over time the Volga became the most important link in the trade chain, one of Russia's essential vertebrae. Locals were known to say 'Il koche—Idel koche' (the power of the Volga is the power of the country).

The first capital of the Ulus Jochi (the Golden Horde) was founded here, on the Volga, on the land of the 'Holy Bulgar'. National history often gives contradictory evaluations of the role of the Golden Horde, focusing on the negative aspects of the 'Mongol yoke'.

Certainly, in the Middle Ages wars were continuously being fought, and feudal conflicts which sowed discord and destruction were on the rise. Wars between Russian princes were no less devastating than those with the external enemies of Rus'. But history did not consist exclusively of wars, destruction, and violence. The exchange of cultural accomplishments and trade played a more significant role in life, as demonstrated by the numerous monuments of archaeology and architecture.

In the times of the Golden Horde, many cities sprang up on the territory of modern Russia. The creative potential of this state should be noted carefully, as it connected the West and East by trade routes and played a role in the formation of the Great Russian statehood.

It is difficult to overestimate the significance of the Golden Horde in the formation of the Tatar ethnos. Today there are a lot of arguments over the ethnogenesis of our people and whom we should consider our ancestors—the Bulgars or the Tatars. I believe that the complex and contradictory history of our ancient ethnos provides a decisive answer to these questions. There have been various cultural components with a common Turkic basis since the times of the first Turkic Khanate, and they continued to develop in the period of Volga Bulgaria, eventually melding into one culture and mentality during the epoch of the Golden Horde and Kazan Khanate. No culture and no nation ever just stands in one place. Therefore, while evaluating the time of the Bulgars on its merits, we must not forget about the role of the Golden Horde and the subsequent periods of our history, including the 20th century.

Cultural heritage, despite historical conflicts, continued to shape the life of the Tatar people even after our country was incorporated into the Russian state, and allowed us to not only retain our identity but also achieve impressive progress in trade, industry and science.

The reforms of Catherine the Great were of great importance for the Tatar people. After visiting Kazan in the spring of 1767, she both stopped the practice of open religious discrimination and also recognised the spiritual rights of her subjects of Muslim origin and duly appreciated their passionate patriotism. The reforms of 'Granny Tsarina'—this is how our ancestors warmly referred to Catherine II—contributed to the enlightenment of education, the construction of new large mosques, and the development of trade and crafts.

The spread of capitalist relations in the Tatar community resulted in the rise of the national bourgeoisie, which made great strides in commerce and production, and largely shaped the nature and content of the social life of Russian Muslims.

In the latter half of the 19th and beginning of the 20th centuries, the Tatars experienced a reformation movement—Jadidism—which ensured the dignified existence of their people under the new, constantly changing conditions of capitalist reality. Tatar illuminators and theologians made a decisive contribution to these reforms, including Ğabdennasır Qursawı, Kayyum Nasyri, Hussein Faiskhanov, Şihabetdin Marjani, Rizaetdin Fakhrutdinov, Galimdzhan Barudi, Ziya Kamali, Musa Bigiev, and other representatives of the academic and pedagogical community.

In the beginning of the 20th century, the Tatars began a modernised system of Islamic and secular education, and started working with an elaborate periodic press. Tatar public figures took active part in the activity of political parties. The Muslim fraction actively worked as part of the pre-revolutionary State Duma.

This time period was also the golden age of all the cultural achievements of the Tatar people. Professional literature, theatre, music and visual art enjoyed immense popularity not only with the Tatar people, but also all the Muslim peoples of Russia. The history of domestic culture will forever remember the names of Ğabdulla Tukay, Ğayaz İsxayıq, Ğabdulla Kariev, Ğäliäsĝar

Kamal, Salix Säydäş, Baqi Urmanche and other ascetics of Tatar art.

The formation of the Tatar Autonomous Soviet Socialist Republic (TASSR) in 1920 became one of the decisive historical milestones preceded by the vigorous actions of the Tatar public in creating the 'Idel-Ural' State, a Tatar-Bashkir republic.

The emergence of the TASSR, which reflected the desire for national self-determination, was at the same time an important step towards the formation and development of multi-ethnic state formations in Russia. There is no doubt that Tatarstan's progress in culture, production, and agriculture would not have been possible without the reinforcement of the unity of the Tatars, Russians, Chuvashes and representatives of other peoples who live in our republic.

All these factors gave reasonable enough grounds to proclaim the Declaration of State Sovereignty of the Republic of Tatarstan in 1990. As a result of political and socio-economic reforms in the end of the 1980s and beginning of the 1990s, the Republic reached a new level of development in politics, economics, culture and international ties.

A multi-ethnic and multi-religious society with a unique history of cooperation and tolerance was formed in Tatarstan. It should be noted that due in large part to the policies and multifaceted activities of the first president of the Republic Mintimer Shaimiev the entire world learned about the 'Tatarstan model'—a successful region in the Russian Federation that addressed even the most complex socio-economic and cultural issues in a consistent and balanced way.

The key conclusion that follows from the logic of historical development is, I believe, that the Tatars who preserved their national and cultural identity played a vital role in establishing the power of the Russian state.

The fact that the majority of Russian Tatars live outside the administrative boundaries of the Republic of Tatarstan authoritatively dictates their vested interest in strengthening the Russian Federation and in the overall development of integration processes between its regions.

The Tatar people have always served their Motherland faithfully and loyally: in Minin and Pozharsky's militia they liberated Moscow, built Russian navy, fought against Napoleon on the battlefields of the Patriotic War of 1812 and battled against German fascist invaders during the Great Patriotic War. It was perfectly natural that Musa Dzhallil became a symbol of courage and tenacity for all the peoples of the former USSR.

Today, the multiethnic population of Tatarstan has set itself the goal to further refine all sides of life of the republic and increase its role in the Russian Federation.

In terms of key economic indicators, Tatarstan is a leading force in the country. In terms of gross regional product, the Republic is comparable to such countries as Slovakia or Bulgaria. In 2011, we produced as many goods as the Novosibirsk and Nizhny Novgorod oblasts combined.

This convinces us that we can correctly address issues of socio-cultural development. The island-town Sviyazhsk, the city of Bulgar and the historical centre of Kazan are being revived. Many other settlements are also being transformed. Museum expositions are getting better and numerous tourist routes are being created.

But at the same time it is quite obvious that without knowledge of the past and an objective analysis of the historical experience of our ancestors, it is impossible to plan for the future.

The significance of this publication is defined by this very fact. I believe that the academic 'The History of the Tatars from Ancient Times' will make a contribution to developing and popularizing the objective history of the peoples of the Russian Federation, and open up its readers to the exciting world that is the thousand-year history of the Tatars.

INTRODUCTION

The Development of Tatarstan and the Tatars in the 20th and beginning of the 21th centuries*Radik Salikhov*

Writing the multi-volume treatise 'The History of the Tatars from Ancient Times' based on a body of newly revealed sources and recent scientific discoveries certainly requires novel creative and methodological approaches. The challenge here is not only in the activity of a researcher on the front lines, but also in the different views and theories of the processes spanning the life of Tatar society through the milestones of its development. This problem concerns the writing of the 7th volume to a great extent, as it describes the story of Tatars in the early modern and modern periods. In the edition adopted by the Editorial Board, this volume covers the epoch from the beginning of the 20th century, or the Soviet and post-Soviet era as it concerns the development of the Tatar people and Tatarstan. A highly challenging task for modern historians is the obvious burden related to the theories, sources, and authorship that is included in the final installment of this multi-volume work, for it comprises three different socio-economic formations which are very tough to unite in an integrated manner. The core message of this concept lies in the emergence of the political history of the Tatars in the beginning of the 20th century, which then shaped the direction of the nation's development throughout the century.

The first section covers the main processes of jadidism—a powerful ethnic cultural revival that made its first splash after the Manifesto of 1905, when the Tatars had succeeded in building a network of modern innovative educational institutions, a secular intelligentsia had begun to form, and book houses, a national press, large charities, and cultural/educational organisations were starting to emerge. The intensive development of the Tatar bourgeoisie in the midst of the industrial revolution, which exhibited a high ethno-political consciousness, was an important factor in this period. The section's

first chapter focuses on the key features of the commercial and industrial life of the country, its commercial activity and peasant agriculture, and is framed by the socio-economic development of Kazan guberniya and the Tatar world in the beginning of the 20th century. The intense business activities of the Tatar bourgeoisie enabled them to accumulate considerable material and financial resources, a significant part of which were allocated for social purposes: charity, a reform of the confessional school, founding various public institutions.

Both the Jadid movement, which shook every aspect of Tatar lives, and the hasty growth of national identity, contributed to the intense struggle of Russian Muslims for civil rights as well as their organic interaction with the main political forces of the empire. Accordingly, the second and third chapters explain the complex picture of the formation of the first Tatar political parties, which claimed leadership in the entire Turk-Islamic community, as well as the ethno-confessional policy of a state faced with a large and full-scale liberation movement. Despite serious ideological contradictions in the Islamic environment itself over socio-cultural transformations and paths for the further development of the nation, the Tatar elite managed to hold three all-Russian Islamic conventions in 1905–1906. Their decisions charted a single course for the achievement of national cultural autonomy, which was the first crucial step towards the Tatars' self-determination.

A notable feature of this volume is the combination of territorial and extraterritorial approaches. The Tatars occupy a vast area over the entire Eurasian continent, thus they cannot be limited to Tatarstan only. At the same time, as the traditional political, economic and spiritual centre of the Tatar people, Kazan played the role of the chief city for many centuries in the multi-national

Kazan region and guberniya, both of which bore a vividly expressed multi-religious and multi-cultural character. The world-famous Kazan University, Kazan Spiritual Academy, Kazan Foreign Seminary and many other educational institutions were educational and spiritual centres for the Russians, Chuvashes, Mordvins, Maris and many other peoples of Russia. The unique international environment created by strong economic and social relations and traditions of good-neighborly cooperation, in many ways determined the nature of the development of the Tatar nation, its openness and desire for reforms and progress. Therefore, the fourth chapter of the first part of the volume, which highlights the educational and cultural achievements of the Tatars in the beginning of the 20th century, simultaneously casts Kazan guberniya as an important scientific and cultural region of the Russian Empire that had a tremendous impact on the fates of not only the peoples of the Volga region but also the entire multi-national state.

The revolutionary events of 1917 and the civil war that followed changed the political landscape of Russia in a radical way. The cruel class struggle was accompanied by a powerful national liberation movement seeking to capitalise on the historical chance for the self-determination of peoples of the former empire. For the first time in several centuries the Tatars had the opportunity to revive their own statehood and determine their place in a rapidly changing world. The sixth and seventh chapters of the section explore the participation of the Tatars in the revolution, the race for power in Kazan guberniya, and the unity of the Tatars behind the idea of territorial independence. The proclamation in 1918 of the Idel-Ural State was the first step towards nationhood. Despite the failure of this movement due to the counter-measures of the Bolsheviks, the ideological struggle and organizational work of these Tatar political leaders led to the formation of the TASSR.

The second part of the seventh volume focuses on the development stages of the Tatar Autonomous Soviet Socialist Republic. This event was preceded by long years of tireless activity on behalf of the national intelligentsia,

business leaders and clergy that resulted in the Idel-Ural State, the Tatar-Bashkir Republic. The first, second, third and fourth chapters note that the formation of the TASSR was the realisation of a century-long Tatar aspiration and an important step towards national self-determination. It contributed to the emergence of the phenomenon of a multi-ethnic state formation within the RSFSR. One of the leaders and theorists of the national liberation movement, Mirsaid Sultan-Galiev, played one of the most influential roles in this process. His ideas combining principles of class and anti-colonial struggle, a kind of 'Islamic socialism', did not find support with the Bolsheviks, but in the 20th century became a flag for the liberation struggle of nations that were held under colonial rule.

The inconsistency of Soviet Tatarstan's statehood on the one hand, which had already manifested itself in the 1920s, in the formation of its own government institutions, indigenisation of the apparatus, development of national education and culture, the strengthening of its economy, and on the other hand regarding political repression, emigration of old-regime intelligentsia, elimination of the national bourgeoisie as a class and the struggle with clergy and religion reflected the forced, artificial disruption of ideological and cultural traditions which inevitably led to the gradual 'erosion' of the national component of statehood. The further tightening of the policy bent on the destruction of Tatar schools, publications and cultural institutions within the USSR limited the spiritual life of the Tatar people in the republic, with Tatarstan itself being granted less and less opportunities for its development.

Even though the industrialization of the economy and the collectivisation of agriculture transformed Tatarstan into a developed industrial and agricultural region, the tight centralisation of economic power, absence of economic rights and Republic property as well as the humanitarian costs of peasant rights also negated the status of its autonomy and brought about intense social protests.

Among the positive factors in the formation of the TASSR was the development of the

numerous talented scientific and creative intelligentsia. The golden age of Tatar professional soviet literature, music, drama, visual art, academic research and science contributed, under difficult state policies, to maintaining national identity, native languages, culture and staying on top of the advances of world civilization.

One of the key challenges facing modern historical science is unbiased and comprehensive coverage of World War II, which is a topic that easily becomes the subject of political speculation in foreign historiography. The Soviet Union's decisive role in the victory over Fascist Germany is not subject to any doubt. The fifth chapter of this part of the volume covers the outstanding contribution of the Tatar people and peoples of Tatarstan in the struggle against fascism. Starting in the first months of hostilities, the most important rear military-industrial base and knowledge-intensive industries began to form in the TASSR, and the aircraft industry also began to improve. In Kazan, the eminent Soviet constructors A. Tupolev, S. Korolev, V. Petlyakov, V. Glushko and others, who created the famous divebomber Petlyakov Pe-2, conducted research on jet engines that afterwards provided the basis for the space industry in the USSR.

Around 700 thousand people were conscripted from Tatarstan into the operating army. The names of Tatarstan citizens who exhibited unparalleled courage and heroism have earned an inscription in the history of battles in golden letters: P. Gavrilov, M. Devyatayev, G. Gafiatullin, G. Zagitov, M. Syrtlanova, and many others. Out of 11,519 Soviet warriors honoured with a Gold Star of the Hero of the Soviet Union, the Tatars rank fourth after Russians, Ukrainians, and Belarusians. The unfadable courage of the hero poet Musa Cälil and his fellow soldiers who organized stalwart anti-fascist resistance among war prisoners in Germany embodies the high civil and fighting spirit, steadfastness and patriotism of the Soviet people.

The sixth, seventh and eighth chapters of the second part explore the history of post-war Tatarstan characterised by a rapidly evolving modernization and steady increase in scientific

and cultural potential. The formation and development of the oil and petrochemical industry, aviation, automobile manufacturing, agriculture and other industries, coupled with the progress of academic and institutional science, transformed the republic into one of the most advanced regions of the Soviet Union.

However, it was obvious that the truncated autonomy of Tatarstan defined by the principle of political segregation heavily stifled possibilities for further advancements in the economy and culture. As the ethnic crisis triggered by the artificial ideological restrictions of culture, language and humanistic research mounted, there was a breakdown of traditional links among Tatar communities in the USSR as well as a declining capacity to endow traditions with new meaning and realise the spiritual rights and achievements of the Tatar people in the republic itself. The idea of enhancing the official state status of Tatarstan gained increasing popularity in the collective consciousness of the peoples of the republic.

The third part of the volume addresses the modern period of Tatarstan political history. The proclamation of the Declaration on State Sovereignty in 1990 was a natural extension of the reconstruction of statehood put forth originally by the Decree on the Formation of the TASSR of 1920. In the aftermath of perestroika and the socio-economic reforms of the 1990s, the republic gained independence in politics, economic matters, culture, and international ties. In other words, it now had its own logic of historical development. A multi-ethnic and multi-religious society with a unique history of cooperation and tolerance emerged in Tatarstan.

The long, successful years in power of first president of the republic M. Shaimiev introduced the whole world to the successfully tested 'Tatarstan model' as an example of a unique regional state construction within the Russian Federation, effective interactions with the federal center, a deliberate economic strategy and a place for social and interethnic stability.

All of these crucial and for the most part new problems for domestic science are consistently developed in the chapters of the third part of the volume. The first and second

chapters provide a historical assessment of perestroika processes both in the country and republic, the complex socio-political situation in the USSR, and other factors that paved the way for the proclamation of Tatarstan's sovereignty. The third chapter of the third part focuses primarily on the establishment of new relationships between the Republic of Tatarstan and the Russian Federation, which is a complicated period in the development of the republic's statehood. The researchers address political milestones in the 1990s: the Referendum of 1992, agreement 'On the delimitation of subjects of jurisdiction and mutual delegation of authority among government bodies of the Russian Federation and of the Republic of Tatarstan' dated 1994, the adoption of the Constitution of the Republic of Tatarstan, the implementation of national policy in the Russian Federation and the development of inter-ethnic relations in Tatarstan, etc. By signing the bilateral treaty, the Russian Federation de jure recognised the act of self-determination of the peoples of Tatarstan.

The vigorous external activity of the republic, its cooperation with international organizations contributing to the enhancement of the authority of Tatarstan on the world stage were some of the major achievements in this period. The history and priorities of the external affairs of Tatarstan are covered in the fourth chapter of the third part of the volume.

The advances in state-building, the economy and culture played a fundamental role in consolidating the Tatar nation not only in the Russian Federation, but in the world as a whole. Tatarstan turned into the spiritual centre of gravity for a nation with millions of residents dispersed as a result of historical destiny across every continent. At the same time, in the Tatar communities developing as cultural and national autonomies, they had their own possibilities for conserving and reviving native language, culture, and identity. The fifth chapter goes into detail on the ethnic and cultural status of the Tatar world and the role of the world Tatar congress in expressing the interests of the Tatar people; it characterises the increasing influence of the Tatars within the Russian Federation and the CIS.

The new status of Tatarstan opened significant prospects for the development of culture and the education of the Tatars and other peoples of the republic. The doubtless achievements in this field have received high recognition in the global community. Tatarstan became a hotbed of innovation, pilot projects in national education and professional art and international forums on the most topical issues of the day. The celebration of the 1,000th anniversary of Kazan not only radically changed the face of the capital and its infrastructure, but was also a turning point in the historical identity of the Tatar people. Recognised as one of the most ancient cities on Earth, and with a high level of military, city planning and manufacturing culture, an organic mix of Islam and Orthodoxy as well as Turkic, Slavic and Finno-Ugric populations, Kazan strengthened its status as the third capital of Russia and a major centre of the world's cultural heritage.

In 2004, Kazan State University celebrated its 200th anniversary. This glorious educational institution established special traditions in the academic science and education of Tatarstan. The creation of the Tatarstan Academy of Sciences gave a new impetus to basic research in a variety of subject areas and became one of the most crucial conditions for modern economic and cultural development. The sixth chapter analyses the logic of cultural processes in the republic, which allows us to situate the role and place of Tatarstan on a better footing in Russian and world history.

The independent socio-economic policy of Tatarstan was designed to increase the living standards of the population, and moving it closer to European standards dictates new approaches in strategy and tactics. Breaking the chains of commodity dependence and creating innovative plants on the basis of available progress in science, technology and production in the republic are key to its economic viability. The seventh chapter of this part of the volume explains the priorities of the socio-economic development of the Russian Federation under market-oriented reforms. It is worth noting that the independence of Tatarstan has allowed and continues to allow for

the implementation of large-scale social projects, such as the Slum Dwelling Elimination Programme, Social Mortgage Programme, Gas Provision for all Inhabited Areas Programme and others.

Today this course remains unchanged in the context of a new socio-political situation in the country. In 2010, an experienced politician and economist named R. Minnikhanov became the new President of Tatarstan, under whose leadership the petrochemical complex, construction, automobile and aviation industries, agriculture and culture continue to efficiently develop, and the republic is preparing for the 2013 Universiade, 2018 FIFA World Cup and other events on the international level. In other words, Tatarstan is entering a new phase in state-building, which is addressed in the third part of the volume.

The peoples of the republic feel confident about the future. The path they took in the 20th century, despite its complexities and contradictions, turned into a story of state renaissance, a restoration of traditions and the Tatars' discovery of their unique place in world civilization.

* * *

Experts from leading scientific centres in Kazan and other cities across the Russian Federation contributed to this volume. Doctors of Historical Sciences R. Xakimov, I. Tagirov, R. Salikhov, A. Xabutdinov, and Candidate of Historical Sciences A. Bushuev contributed greatly in determining the structure and concept of the volume.

The documents contained in supplements to the volume were provided by A. Bushuev,

L. Gabdrafikova, A. Gallyamova, Z. Garipova, I. Zagidullin, A. Kabirova, I. Minnullin and selected by A. Bushuev, L. Gabdrafikova, I. Xanipova.

The volume's photographic materials were found and pre-selected by B. Izmajlov, R. Salikhov, and I. Xanipova. A. Bushuev, B. Izmajlov, and R. Salikhov selected the photographic materials.

The literary references and abbreviation list were prepared by A. Bushuev, L. Gabdrafikova, B. Izmajlov, and E. Mironova.

The Index of Names and the Political and Geographical Index were prepared by A. Bushuev, L. Bushueva, L. Gabdrafikova, A. Gallyamova, B. Izmajlov, A. Kabirova, I. Minnullin, E. Mironova, I. Xanipova, and L. Shafigullina.

* * *

Illustrations in the volume include photographic materials preserved in the funds of the National Archive of the Republic of Tatarstan, the Central State Archive of Historical and Political Documentation of the Republic of Tatarstan, the National Museum of the Republic of Tatarstan, the Kazan National Cultural Centre, I. Tagirov's personal archive, and those published in the photo album 'Tatarstan: Historic Milestones. 1920–2010' (Kazan, 2010) and in the book 'Republic of Tatarstan: Nature, History, Economy, Culture, Science' (Kazan, 2010) and posted on the website of the RT President (www.president.tatarstan.ru), the RT Cabinet of Ministers (www.prav.tatarstan.ru), the RT State Council (www.gossov.tatarstan.ru), and OJC TANECO (www.nnpz.ru).

HISTORIOGRAPHY AND SOURCES

Radik Salikhov, Aleksej Bushuev, Al`fiya Gallyamova, Ajslu Kabirova

The recent 20th century was an era of great upheavals and global political and socioeconomic changes for Russian society. The state's radical transformations aroused a profound interest in its history. As long-present myths and stereotypes were busted, science was liberated from hackneyed phrases and shibboleths and enjoyed an extensive growth in research areas. In an effort to put the historical record straight and fill in the gaps for certain subjects, experts had to dig down to the very basis of historical science, thus starting from a fundamental reconsideration of the entire historical legacy.

It is therefore essential to perform a historiographic analysis before analyzing the events and processes constituting the history of the Tatars and Tatarstan historically. Without historiographic research it would be impossible to cover all the literature available, assess its progress, and determine the controversial or unresolved issues and approaches to studying them. The purpose of historiography is to compare and contrast historians' works and ideas at different stages of the historical progress to discover trends and patterns in the development of historical thought as well as assess the contribution made by each generation of scientists to progress over a certain period of time.

The contemporary analysis of the history of the Tatars and Tatarstan in the 20th–early 21st century would be impossible without assessing historiographic knowledge on key historical sources. However, the conceptual complexity of the volume, which presents the history of the Tatars and Tatarstan over three controversial and diverse stages of historical progress (pre–Soviet, Soviet, and post–Soviet), prevents the authors from making a point to provide an exhaustive analysis of the entire set of sources and historical works on all the issues that the volume addresses. To do so would be not only difficult due to the enormous array of sources and published works in history, but pointless because of its potential to turn this section into a list of bibliographic references.

The authors believe a summary of the historiographic situation in terms of the contemporary history of Tatars and Tatarstan to be a sounder solution. It is thus reasonable to restrict the volume to a general assessment of the most important works from a factual and conceptual perspective. It is also essential to provide a general account of major groupings of historical sources with significant materials important to the study of the history of the Tatars and Tatarstan in the 20th–21st centuries, not just large in volume.

The History of Studies on the Tatars and Tatarstan in the 20th and Beginning of the 21st Centuries

The first steps towards studying Tatar society in the early 20th century date back to pre-revolutionary publications. Pre–Soviet literature on social processes in the Tatar community of the early 20th century demonstrate a pronouncedly ethnographic approach. Works of that period emphasise the lifestyle, household activities, education system, and culture of the Tatar population presented as a tight-knit, secluded ethno-confessional group reverencing

Islamic custom and law [Pinegin, 1890; Rybakov, 1900; Sukharev, 1904; Alektorov, 1906; Znamensky, 1910; Nedzhib, 1911, p. 169; Katanov, 2001, p. 182; Mashanov, 2002; Koblov, 2007].

However, it was in the late 19th–early 20th century when national historiography began to take shape that wanted not only to shed light on events in the distant past but assess key trends in contemporary national development

and activities of prominent representatives of the clergy, business community and intelligentsia [Battal, 1912; Shkol'nyj vopros v russkom musul'manstve, 1913, p. 515; Gaziz, 1994; R. Fäxretdin, 1995; Akchura, 1997 a; Akchura, 1997 b].

Despite being at the initial stage of its development, Tatar historiography has been able to accumulate a considerable amount of factual resources, thus forming the basis for further studies on the past of the Tatar people and other peoples in the Kazan region.

The power shift in the country triggered dramatic changes both to the development of historical science as such and to historical studies on the peoples of the Volga region. History saw a spike in attention from the first days of the Bolshevik regime. With no stable support of the masses, the party leaders wanted to assure people that their victory was natural not only by raising their weapons and establishing a dictatorship, but also by introducing a historical perception based on a rigid ideology.

From the very beginning of the Communist regime the history of the Russian revolutionary movement, the Russian revolutions, primarily the Great October Socialist Revolution, the class struggle and the Bolshevik Party became subjects of great interest in national historical research. Global historical issues and certain aspects of Russia's history, such as religious history, issues pertaining to the history of ethnic groups and their culture, and early periods of political history were declared irrelevant and remained largely unexplored.

The promotion of the Communist ideology was realised in two major ways. On the one hand, what was known as 'old' historical science was subject to eradication. Pre-revolutionary research institutions and associations were eliminated, the established system of higher education underwent a radical and violent transformation, and 'bourgeois' scientists were excluded from the scientific community. On the other hand, new and thoroughly Marxist academic research centres were established and censored by party bodies.

The situation was identical in the Soviet Tataria. Numerous experiments in the scientific

sphere shifted the republic's balance of power dramatically. The policy of socialisation and Bolshevisation of all institutions employing historians had already been completed by the early 1920s. The Tatarstan Office of the Istpart (the Committee for the History of the October Revolution and Russian Bolshevik Communist Party), established on 16 October 1920 soon after the central organisation was founded, contributed the most to mainstream research. Its most active employees were S. Livshic, N. Znamensky, R. Tagirov, M. Borisov, E. Medvedev, and others. Members of the Central Committee of the Istpart S. Piontkovsky, A. Arosev, and V. Adoratsky were responsible for censorship over the employees [Litvin et al., 1972].

Historians' first works were dedicated to studying and determining the 'leading role' that the Bolshevik Party was to play in the revolutionary movement according to the Marxist-Leninist concept. For the most part, these were mostly memoirs. Such works by witnesses to or participants in the historical events were largely subjective. However, even works dating back to the early period of historiography are marked by the author's willingness to present the history of the Bolshevik Party from the 'right'—that is, a politically thought-out standpoint¹.

Some Tatar authors demonstrated a keen interest in the October Revolution. Among them were G. Ibragimova², M. Sultan-Galieva, and M. Sagidullina. G. Ibragimov's most influential work on this topic is titled 'The Great October Socialist Revolution and the Dictatorship of the Proletariat' [Ibragimov, 1922]. He presented it in February 1920, but it was not published until 1922. The book presents a detailed account of the revolutionary experience, the nature and driving forces of the revolution, the stages of the proletariat's revolutionary struggle from February to October 1917, and

¹ The written regional history of the Bolshevik Party as a part of the sociopolitical movement in the Volga region is presented in detail in special works. See: [Litvin, 1982; Litvin, 1985; Litvin, 2003].

² For details of the historical heritage of G. Ibragimov see: [Khasanov, 1977 a; Khasanov, 1987; Alishev, 1986; Mukhametshin, 1987; Khakimova, 2004].

demonstrates the significance of the October Revolution. The work relies on a large number of literary and archival sources. It explains essential issues related to the dictatorship of the proletariat, the transformation of the state apparatus, and the elimination of the exploitation of man by man in a way understandable for the masses and, most importantly, consistent with Marxist theory, which ensured the patronage of the new authorities for G. Ibragimov.

The story of M. Sultan-Galiev and M. Sagidullin and their works is different. M. Sultan-Galiev's presentation of the Tatar revolutionary movement in his article 'The Tatars and the October Revolution' was met with bitter criticism [Sultan-Galiev, 1921]. The main reason for these remarks was the author's denial of well-marked class differences in the Tatar community, which Istpart censors interpreted as a denial of the Tatar proletariat. The author's rejection of the classic Bolshevik presentation of the proletarian revolution, to which class struggle was essential, coupled with a number of other statements brought about tragic consequences. M. Sultan-Galiev was convicted several times and executed by shooting in 1940 [Sultanbekov, 1991 a].

M. Sagidullin was M. Sultan-Galiev's uncompromising opponent as a representative of the republic's radical left political force. Any sedition was seemingly impossible in his book 'Tatar Workers on the Way of the Great October' [Sagidullin, 1927], prepared on the occasion of the 10th anniversary of the Socialist Revolution. In fact, it was written to once again pin down the Tatar perception of the Marxist 'undeniable truth', which G. Ibragimov had presented in a most understandable way. Yet M. Sagidullin failed to meet the expectations of the party leaders, perhaps unintentionally, as he gave a positive assessment of the role the Islamic Socialist Committee, established in Kazan in March 1917 and headed by V. Vakhitov, played in consolidating the region's diverse political forces. The book contained a number of other 'incorrect statements'. Both what was known as the right opposition and the left adherents of the new regimes were to fall out of favour with the Soviet Command and Administration System. M.

Sagidullin was arrested in 1932, convicted and consequently executed by shooting, just like M. Sultan-Galiev in 1938 [Sultanbekov, 1991 b].

The preparation and course of the October Revolution were also central to the anniversary compilations of 1940 and 1945, celebrating the establishment of the Tatar Autonomous Soviet Socialist Republic [Zaycev, edit., 1945].

The focus of the 1940s was not restricted to studying the historical events of various periods; it also included the assessment of personal contributions to such processes. Historians were largely occupied with the lives and military records of prominent revolutionaries whose biographies were connected with the republic. The two-volume book 'Life of Outstanding People in Kazan' (1940–1941) is representative of the trend of the time [Azovsky, edit., 1940–1941]. The compilation contains the articles 'Mulannur Vakhitov' by Sh. Manur, 'Yakov Sheynkman' by M. Bubennov, 'Abram Komlev' by A. Lebedeva, and 'Viktor Tikhomirmov' by N. Gusev. Other researchers continued to work on this topic in the following years. The trend peaked in the late 1950s, when detailed essays on the revolutionary and personal lives of M. Vakhitov, X. Mavlyutov, Sh. Usmanov, etc. were published [Iskhakov, 1958; Iskhakov, 1960; Yakhin, 1963].

The historiography pertaining to the Great October Revolution and the party bodies' role in it had become well-established by the early 1950s. The first serious generalising works in the form of graduate theses relying on local material started to crop up in Tataria [Tarasov, 1950; Karimova, 1950; Daminov, 1953; Ananyev, 1950; Shishkin, 1954; Ionenko, 1955]. According to the tradition of that period, they all focus on the party's history. Some of the works were subsequently published as monographs [Tarasov, 1956; Zalyalov, 1957; Ionenko, 1957; Litvin, 1957; Smykov, 1958]. The history of the Civil War was another area of focus for Tatarstan researchers³.

Studies on the 'advance of socialism along the whole front' were key to research in the 1920s–1950s. That is, historical works provid-

³ For details, see: [Litvin, 1988].

ed an account of how the three-link Marxist-Leninist programme (progressive industrialisation, enhancement of the kolkhoz and sovkhoz system, and a cultural revolution embodied by radical cultural and ideological transformation) should be implemented.

In Soviet Tartaria, with nearly half of its population being Tatar, issues regarding national and state building were pressing. The establishment of the Tatar Autonomous Soviet Socialist Republic in 1920 was a restoration, albeit limited and incomplete, of Tatar national independence, which triggered enthusiastic research by the intelligentsia. The issues of national development, linguistic and cultural revival, and specifics related to the formation of a national policy within the Republic's multi-ethnic environment appealed to professional historians and philologists as well as politicians.

G. Ibragimov addressed these issues extensively in his works. He initiated the collection of documentary materials pertaining to the history of the establishment of the TASSR and the first years of its development. The first collection of works on Soviet construction appeared in 1922, prefaced with the author's article on the historical past and present of the Tatar people [*Sovetskoe stroitel'stvo v Tatarskoi Respublike za god*, 1922]. He also coordinated the publication of 'Materials on the History of the Organisation of the Tatar Republic' [Ibragimov, 1925 a]. Party officials of various ranks were willing to study issues of national policy in Tartaria. For instance, the historical journalistic works of M. Sultan-Galiev, I. Kazakov, Kh. Gabidullin, M. Sabidullin and others present the regional history of the establishment of the Soviet state as a valuable historical source for those interested in the initial stage of Soviet historiography in the republic [Sultan-Galiev, 1921; Kazakov, 1923; Gabidullin, 1927; Sagidullin, 1927].

The ideological struggle between the 'right' and the 'left' in the republic was still the focus of the vast majority of works published in the 1920–1930s⁴. Issues related to national and

state construction were burning at that time, and those in opposition to the government's official position were putting themselves at risk. It was Tartaria where the central party authorities chose to conduct the first demonstrative political trial of M. Sultan-Galiev, who rejected many aspects of J. Stalin's theory. Ideological and organisation criticism of what is referred to as nationalist deviationism in the republic lasted for a decade. Journalistic and historical literature played a serious role by carrying out the orders of the political system.

L. Rubinshtejn, G. Kasimov, A. Arsharuni, Kh. Gabidullin and Kh. Khasanov wrote the first studies on the issues of ideological struggle in the TASSR [Rubinshtejn, 1930; Arsharuni et al., 1931; Kasimov, 1931; Khasanov, 1931]. They all were published in the 1930s, following robust anti-Sultan-Galiev campaigns in the Tatar Republic. This was the beginning of dogmatic clichés and ideological guidelines for studying the theory and practice of national and state construction.

The subject had little, if any, scientific coverage during the subsequent period, which was marked by cultic social practices. Only a few graduate theses shed light on certain aspects of the republic's national policy during the first years of its existence [Bulatov, 1947; Valiulina, 1948; Enaleev, 1950; Valeev, 1955]. The works could not avoid the influence of the time, which was primarily expressed in apologetic terms for J. Stalin's national policies. The works were united in their shared underestimation of the difficulties and hardships of solving the national problem in Tartaria.

Historians were unable to study the entire range of issues related to the TASSR's experience during the first years of its existence until the historical crisis of 1956. A wide source base was utilised in the second half of the 1950s to address national issues. Studies by M. Mukharyamov contributed to the research on the subject more than any other work published. He authored and co-authored a large number of articles and books. For instance, M. Mukharyamov's work 'Soviet Tartaria in the Brotherly Family of the Peoples of the USSR' appeared in 1955, followed by 'Soviet Tartaria: A Child of

⁴ Several works are devoted to the questions of ideological and political struggle in Tatarstan in the 1920–1930s. See: [Belyakov, 1988; Sulima, 1996].

October' co-authored by M. Muxaryamov and X. Gimadi [Mukharyamov, 1955; Mukharyamov et al., 1957]. These works presented an account of how the Bolshevik national policy had been implemented. The authors described national and state construction in the TASSR as a component in the general development of the multi-national Soviet Socialist state.

Another book by M. Mukharyamov, 'October and the National Question in Tataria', which appeared in 1958, was also of great importance at that time [Mukharyamov, 1958]. The author analysed numerous sources and brought new materials into scientific consideration to present a non-prejudiced depiction of the national liberation movement in the region, as well as an unbiased evaluation of Tatar revolutionaries' activities and the part they played in the October Revolution and in the protection of socialist achievements, which were subject to the ideological censorship of the time.

Works by I. Klimov are also of great interest [Klimov, 1957; Klimov, 1960; Klimov, 1962]. The author relied on new archive documents to pioneer research on national and state construction during the TASSR's recovery period. I. Klimov relied on official statistics to present a practical solution to the republic's national issue during the New Economic Policy.

The new trends during the Great Thaw were covered by historians Sh. Xafizov, G. Khisamutdinov and M. Bulatov [Khisamutdinov, 1957; Khafizov, 1958; Khafizov, 1960; Bulatov, 1963]. The first compilations on the history of the Tatar Republic—that is, Volume 2 of 'The History of the TASSR' and the first edition of 'Essays on the History of Party Organisation in Tataria' elaborated on their assumptions [Istoriya TASSR, 1960; Andrianov, 1962]. I. Tagirov, R. Nafizov, R. Khayrutdinov and others all addressed issues of national policy in the later stages of historiographic development.

Problems related to the foundations of a socialist economy were closely connected with issues of national and state construction in the republic. The history of Tataria's industry became a focus of research as soon as a programme was introduced for building a new society. Most of the original articles by the republic's

scientists on the history of industry appeared in the publication 'Trud i Khozyajstvo' ('Labor and Economy'). The most fecund authors included D. Arcy'bashev, I. Pobedonoscev, A. Afanas'ev, and V. Ermolayev [Sitnov, 1923; Arcy'bashev, 1925 a; Arcy'bashev, 1925 b; Afanasyev, 1925; Ermolaev et. al, 1926]. They studied nearly all the branches of Tatarstan's industry—domestic, craft, rental and trust companies. Many projects were focused on electrification and plant nationalisation.

Research on the workers movement both across the country and within the republic was closely associated with the history of industrialization, but it was not restricted to the Soviet period. According to Marxist-Leninist theory, the development of the Russian revolutionary movement in the 19th–early 20th century was directly connected with the awakening of the proletarian consciousness. It was thus critical to depict the social and economic situation of the working class, its rising discontent, and more importantly, its predictable engagement in a struggle against its oppressors. The magazines 'Proletarij Tatarstana' ('Proletarian of Tatarstan'), 'Socialisticheskoe khozyajstvo Tatarstana' ('Tatarstan's Socialist Economy'), and 'Revolyucija i nacional'nosti' ('Revolution and Nationalities') published all kinds of works on the most prevalent issues of the labor and trade union movement.

Scientific studies on the subject in question began to appear in the mid-1920s–early 1930s. G. Zalkind was a prominent author who studied the development of the republic's mining industry [Zalkind, 1930], and M. Borisov is famous for his works on the history of labor organisations and the trade union movement [Borisov, 1923; Borisov, 1927; Borisov, 1930]; E. Medvedev addressed issues related to the formation of Tataria's proletariat [Medvedev, 1930 a; Medvedev, 1930 b; Medvedev, 1931 a; Medvedev, 1931 b]; M. Koburt analysed labor legislation [Korbut, 1925; Korbut, 1926; Korbut, 1927; Korbut, 1928].

The history of plants and factories became a research focus in the 1940s, with A. Klyuchevich, Ya. Vinecky, V. Nikol'sky and N. Sokolov at the helm [Nikolsky et al.,

1939; Kushaev, edit., 1940; Vinecky, 1947; Klyuchevich, 1950]. The authors paid special attention to the formation of the Kazan proletariat as the 'revolutionary hegemon', and demonstrated the part the working class played in the development of revolutionary processes. In a manner of speaking, these works had to pave the way for special research on the history of the formation of the Soviet working class.

Research on the history of the TASSR's industry and working class gained momentum in the 1950s, when O. Chesnokova, M. Postnov, T. Medvedeva and other researchers presented their graduate theses [Postnov, 1952; Chesnokova, 1952; Medvedeva, 1953; Petrova, 1954; Tiunova, 1958]. The above authors collected a considerable amount of information on selected subjects, which they proceeded to summarise and generalise. In fact, they made the first attempt at a systematic presentation of the historical material on social industrialisation in Tataria at certain stages. This is what makes their works a valuable contribution to historiography, yet

they still failed to present a comprehensive analysis of the problem in general. In addition, the general theoretical approach to the issue of industrialisation was mechanically applied in Russian regions during that period. The industrialisation of the USSR and the republic were identical. General provisions and concepts were extrapolated to individual republics without regard for local conditions. Works published during that period are representative of the dominant idea of the patterns socialist construction was supposed to take, where the theory of industrial development was top priority. The cult of personality oppressed individual creative thinking; research was descriptive, theoretical and restricted to factual findings. The statistics painted a completely favorable picture of the time. According to the data published at the time, the TASSR had been increasing its investments in communications, construction and the power industry year by year, and the number of industrial workers and employees had been growing. But nowadays these statistics do not seem reliable.

Research on peasants was directly related to the history of the working class. This issue was especially important in an agricultural area like the Volga region⁵. The founders of Marxism believed that the poorest peasants were to become the proletariat's most important ally in the revolutionary struggle against the exploitative class. Historians were therefore obliged to produce works that would demonstrate the ironclad unity of that alliance based on shared goals. N. Firsov [Firsov, 1922]⁶ and E. Chernyshev were the most famous experts in the agricultural history of Tatarstan [Chernyshev, 1925; Chernyshev, 1926].

As the ruling party established itself, Soviet historians were faced with new tasks. It was important to provide a theoretical basis for the construction of a new socialist state. In terms of agriculture, they had to prove that mass collectivisation was necessary. V. Ermolaev and M. Khasanov provided the most 'convincing' representation of the 'achievements' in recovering and developing the republic's agricultural production [Ermolaev, 1925; Ermolaev, 1927; Khasanov, 1928]. A selective approach to statistics enabled them to infer that the republic's agriculture had been growing at an increasing rate, in contrast to I. Shtutser and A. Berger, who rejected the idea of forced cooperative kolkhoz and sovkhoz rural construction, which they stigmatised as 'petit bourgeois' and promoted by Chayanov and Kondratyev [Shtutser, 1924; Shtutser, 1926; Shtutser, 1927; Berger, 1928].

The consequences of deviating from the compulsory conceptual framework were tragic. Such historians were repressed. However, party authorities did not confine themselves to punishing the authors of seditious works, instead sparing no effort to dismiss their ideas. A dedicated compilation titled 'Kondratyevshina in Tartaria' (Kondratyev's policy in Tataria), was published to this end in 1931 [Vintaykin et al., 1931]. Its authors Z. Vintaykin, F. Medvedev,

⁵ For details, see: [Zalyalov, 1978; Gibadullina, 1993].

⁶ In addition, for the works of N. Firsov see: [Zaripova, 1996].

and G. Shheperin tried to provide an economic justification for mass agricultural collectivisation, at the same time criticising the opinions of 'petit bourgeois' authors.

Any discussions on agricultural development trends seemed to have ended by late 1920, and the Leninist concept was declared the only correct approach. Historiography on this subject contains a large number of works dating back to that period that tried to prove that the Marxist-Leninist programme of socialist agricultural transformation had been completed successfully [Bajrakov, 1926; Gusev, 1929; Paperny, 1929]. Historians tended to emphasise the positive changes by demonstrating the growth and reinforcement of the kolkhoz network and the entire agricultural cooperation system, as well as the improved social status of kolkhoz workers with no more than a passing mention of the drawbacks.

Few works pertaining to agricultural issues appeared in the 1940s; they mostly promoted the 'achievements' of collectivisation [Savostin, cr., 1940; Ilyin, 1947; Nefedov, 1950]. Serious studies on this subject did not appear until L. Il'ina, L. Kulikova, E. Matveeva and others presented their Candidate's theses in the 1950s [Ilyina, 1952; Kulikova, 1953; Bajramov, 1954; Matveeva, 1955]. E. Ustyuzhanin had his first work published in 1954 as the main contributor to the agricultural historical research of that period [Ustyuzhanin, 1954; Ustyuzhanin, 1956; Ustyuzhanin, 1957; Ustyuzhanin, 1959]. Apart from retelling the history of kolkhozes with interesting facts and examples, the author provides statistics on the number of various forms of collective farms and uses archive sources to infer that kolkhozes could be found in the country back in the first half of 1918. E. Ustyuzhanin elaborated on these statements in his later work and in chapters from 'The History of the Tatar ASSR' and presented a large-scale coherent narrative on the republic's history of collectivisation from the first joint farms to the 'final and complete victory of the kolkhoz system'.

Agricultural reorganisation began to attract more historians after 1956. Apart from the questions already raised, those related to rural

productive forces and equipment, principles of social income distribution and training for various categories of agricultural experts, the assistance to be provided by the working class (twenty-five-thousanders) in the establishment of the kolkhoz system, etc. became a scientific focus [Vakhitov, 1955; Vostroknutov, 1958; Dyuvbanov, 1958].

Cultural revolution was another anticipated element of the socialist construction in the new society. Every educational, scientific and cultural institution worked to inculcate the communist ideology. The Soviet government would not tolerate non-conformism. The raising and upbringing of society's new type of person was a high priority issue into which both the machinery of the ruling party and the entire state hurled all its efforts. This explains the publication of a large number of works on the role of educational establishments and the formation of a unified national training system in the 1920–1930s. These addressed a wide range of issues: from teacher engagement in the elimination of illiteracy and attempts at reforming the education system, to various ways of involving 'old' bourgeois experts⁷.

The issue of university-level educational development was being studied on a large scale. Higher education institutions were facing two major goals in front of them: to provide widespread access for working-class members of society and peasant youth, and to attract new teaching staff capable of working in line with the government's tasks. The first newspaper announcements on the development of Soviet university-level education in the republic in the form of new university preparation courses or workers' faculties date back to the Civil War [Znamya revolyucii, 1 November 1919; Firsov, 1922; Korbuto, edit., 1924; Na putyax k vy'sshej shkole. 8 let raboty' (1919–1927), 1927]. Most of the authors were teachers and students of workers' faculties. This fact largely determined the personal nature of their articles, which mostly presented their own memories and ideas. Articles by M. Korbuto, A. Dikov-

⁷ For details, see: [Garipova, 1978; Semenikhina, 1987; Galeyeva, 1994].

icky, and I. Vixirev addressed such issues as the role and meaning of workers' faculties in educational activities and the history of the introduction of what was known as the 'socialist perception' at universities, which characterises them as research works [Vihirev, 1922; Korbut, 1924; Dikovitsky, 1927].

A number of works in the early 1930s presented a detailed history of the republic's higher education institutions. The canonical two-volume monograph by M. Korbut 'V. Ulyanov-Lenin Kazan State University over 125 Years' occupies a place of pride among them [Korbut, 1930]. Works focusing on the activities of other higher education establishments in Kazan are far smaller in scale. But they help us to form an idea of the activities of newly founded higher education institutions, their staff and students, curricula and training programmes. The articles on the Archaeological and Ethnographic Institute by M. Brechkevich and on the Eastern Academy by B. Vishnevsky are of particular importance [Brechkevich, 1919; Vishnevsky, 1921].

The first general studies on the republic's history of education were written in the 1950s. Among such works, the monograph 'The Development of Public Education in the Tatar ASSR' by Yu. Tuishev and the somewhat more recent brochure of the same name by V. Gorokhov and B. Rozhdestvensky deserve a special mention [Tuishev, 1950; Gorokhov et al., 1958]. Other works raised education-related questions as well, such as those dealing with the history of public preschool education, the introduction of compulsory seven-year education, the development prospects of Tatar schools, etc. [Azovsky, 1958; Korneeva, 1958; Shirkevich, 1958; Makhmutov, 1959].

Articles covering the history of the republic's developments in science starting popping up in the 1940s–1950s. They naturally lacked quality research; many were written to celebrate anniversaries. However, the very fact that historiography was addressing such issues was of great importance. A. Arbuzov, B. Gagaev, N. Lozanov, G. Salexov, G. Palkin and N. Sokolov study the establishment and development of Kazan mathematic, chemical, otolaryngologi-

cal, surgical, livestock and other schools [Arbuzov, 1941; Gagaev, 1946; Lozanov, 1946; Salekhov, 1948; Palkin, 1952; Sokolov, 1957].

Among other issues related to the republic's cultural development, studies of the collected works of writers and artists were also quite popular. The 1920s–1930s were productive in terms of published works on literature and art. Books rushed onto the literary scene in torrents. The social shift of October 1917 and the preceding and subsequent events caused certain literary and artistic traditions and trends to emerge, re-emerge or gain momentum, while others declined [Ibragimov, 1924; Nigmati, 1925; Sagdi, 1926; Tulumbaysky, 1926; Saadi, 1928; Nadzhmi, cr., 1930].

The situation changed drastically in the 1940s–1950s. Socialist realism, which had come to dominate Soviet culture, made any ideological pluralism impossible. Considerable effort was taken to determine the influence that Russian literary traditions had on the development of national art in the formation and development of a new Soviet literature. Many authors emphasized the continuity of multi-ethnic Soviet literature, which had encompassed the legacy of A. Pushkin, M. Lermontov and M. Gorky in fiction prose and drama, and that of V. Mayakovsky and D. Bedny in poetry. Books that were being written during that period were rather one-dimensional. A. Glebov, X. Xajri, G. Kashshaf and M. Gaynutdinov wrote articles on works by Tatar writers Sh. Kamal, G. Tukaj, X. Taktash and others [Kashshaf, 1941; Gaynutdinov, 1944; Glebov, 1950; Agishev, 1954; Khayri, 1954]. No large-scale research was conducted to analyse the literary works of Tataria.

P. Dulsky was a major contributor to studies on the republic's artistic legacy. He was one of the founders and the first Director of the Artists Union of the republic, and is regarded as a pioneer of Soviet art criticism in Tatarstan. He wrote works tracing regional art history, in particular the formation and development of Tatar popular art [Dulsky, 1925; Dulsky, 1929 a; Dulsky, 1929 b; Dulsky, 1930; Dulsky, 1931; Dulsky, 1945; Dulsky, 1946]. P. Dulsky patriotically appreciated the mastery of local art-

ists. In his works he often emphasised the fact that, even though some artists from the capital were engaged in designing certain Kazan public buildings (Ginzburg, Golosov, Guryev-Guryevich), it was authentic painters, sculptors, and architects residing in the republic who ensured the general artistic boom in Tataria during the Soviet period.

P. Kornilov, V. Egorov, N. Kalinin, and M. Khudyakov also studied the condition of ancient buildings and constructions in the republic [Dulsky, 1920; Khudyakov, 1920; Kalinin, 1926; Egorov, 1927; Kalinin, 1927; Ado, 1927; Kornilov, 1927]. The republic's historiography covered theatre and music, too. Newspapers were publishing news on the establishment and activities of people's theatres, the founding of the Central Easter Music School of Kazan, services provided by artists to workmen, peasants, and Red Army soldiers during 1917–1920 despite the civil war, famine and general destruction [Znamya revolyucii, 5, 6, 21 November, 2, 17 December 1919; Linscer, 1925; Polyansky, 1930]. However, such printed matter merely provided information rather than focus on the development of popular arts.

The first research works on the development of the republic's theatre and music cultures appeared in the 1930s. G. Polyanovsky wrote a note to comment on the staging of the second Tatar play⁸, 'Eshche', praising the revolutionary sentiment embodied in the new musical work. No works ever analysed the formation and development of the artistic education system, the methods of and approaches to knowledge transfer in this sphere or was done in a creative atmosphere among team members, which is in fact what shapes an artistic perception.

The first thesis on the history of the Tatar theatre by R. Usmanova as a summary of material previously available to scientists was presented in Moscow in 1954 [Usmanova, 1954]. The author relied on information from periodicals, museum expositions and archive sources

to describe key periods of the development of the national theatre. R. Usmanova concluded that Soviet theatre had always been critical to the programme of national and state construction in Tatarstan as an important element of the cultural revolution implemented across the country.

Cultural and educational establishments also became a subject of research, though such historical works were very few. Museum and library measures to improve the population's cultural level were subject to more extensive analysis. This issue was studied by E. Bushkanec, V. D'akonov, M. Elizarova, M. Andreev, and A. Karimullin [Andreev, 1951; Bushkanec, 1953; Karimullin, 1954; Dyakonov, 1955; Elizarova, 1958]. Their works are largely annotative, and they do not analyse any complex problems. The authors confined themselves to affirming 'the time and effort-consuming but efficient work of cultural establishments undertaken to teach and educate the broader population'.

The Great Patriotic War is a special subject in the historiography of the 20th century. The first attempts at studying this subject were made even before the military action was over. However, they are not purely historical works but rather essays, articles, and short stories on the heroic deeds of the Soviets at the front lines and in the rear [Anisimov, 1941; Burdzhhalov, 1942; Kufae, 1942; Pospelov, 1942]. Professional research on the history of the Great Patriotic War and the part the peoples of Soviet Tatarstan played in it was initiated only later. However, the materials collected during the war largely underlay the first general works on TASSR workers' contribution to the final victory.

The regional historiography on the Great Patriotic War in the 1950s was mostly represented by articles on various issues of Tatarstan's history during wartime [Kalishenko, 1950; Lyushin, 1952; Gayfullin, 1954; Polovnikova, 1954]. An especially large number of works dealing with the military prowess of our compatriots against the Nazi invaders were studied in many works [Absalyamov, 1946; Ishmuratov, cr., 1946; Mudarris, 1946; Kniga

⁸ The first Tatar opera was 'Saniya' staged in 1925 (during the 5th anniversary celebrations of the TASSR). Its authors are: Sultan Gabyashi, Vasily Vinogradov, Gaziz Almkhametov.

geroev, 1946]. Such works shed light on the contribution of the republic's residents to the crushing defeat of the Nazi troops near Moscow, Stalingrad and the Kursk Salient during the defense of Leningrad, and in operations liberating other peoples and countries. They emphasised the importance of Tatar military patriotic traditions in encouraging soldiers on the battlefield.

The 20th convention of the Communist Party of the Soviet Union was the beginning of a new period in research for military history in general and the rear aspect of the subject in particular. Democratic trends gained momentum and society overcame the ideological consequences of the cult of personality, which improved the working conditions of social scientists. The Decree by the Central Committee of the Communist Party of the Soviet Union dated 12 September 1957 on the development of a truly scientific history of the Great Patriotic War was crucial to the intensification of military research [Pravda, 29 September 1957]. 'The History of the Great Patriotic War of the Soviet Union' in six volumes, prepared and published in 1960–1965 [Pospelov, edit., 1960–1965], covered an extensive amount of factual material in an analytical way. The improved overall theoretical quality of generalising works led to the writing of serious scientific monographic studies by A. Mitrofanova, Yu. Arutyunyan, G. Kumanev, U. Chernyavsky, Ya. Chadaev, V. Aniskov and others, which focused on new aspects of the history of Soviet society during wartime [Mitrofanova, 1960; Arutyunyan, 1963; Kumanev, 1963; Chernyavsky, 1964; Chadaev, 1965; Aniskov, 1966].

The development of a regional historiography acquired momentum as well. In their theses, Z. Akhmetshin, G. Vovchenko, M. Zarecky, L. Khanin, and Z. Gilmanov studied the socio-economic and ideological issues of Tatarstan's homefront during wartimes. Some of these works later appeared as monographs [Akhmetshin, 1961; Gilmanov, 1963; Zarecky, 1963; Khanin, 1966; Gilmanov et al., 1967]. The main driving force that it was primarily the Soviet planned economy and the devotion

of citizens 'of the world's first socialist state' which ensured the victory over fascism is ubiquitous in works dating back to that period. That is, historians gave priority to the political system over the human factor.

The stagnation of the 1960s–1970s did affect historical science—despite the demagogic slogans encouraging people to foster the development of historical science by ensuring favorable research conditions, ideological pressure grew heavier. Changes were introduced to the well-established governmental concept of the history of the Great Patriotic War, although to quote V. Kulish, 'it hardly differed from the previous version except the names of Stalin and his adherents were less frequently mentioned, and praises of the people were more ubiquitous' [Kulish, 1996]. This newly refined concept was now underlaying the following fundamental works: 'The History of World War II' in 12 volumes, some volumes of the Capital History of the USSR, and that of the Communist Party of the Soviet Union describing the war period [Minasyan, edit., 1965; Istoriya Kommunisticheskoy partii Sovetskogo Soyuz, 1970; Minasyan, 1970; Grechko, edit., 1973–1982; Istoriya Soyuz Sovetskix Sotsialisticheskix respublik s drevnejshix vremen do nashix dnei, 1973; Sovetskij ty'l v Velikoj Otechestvennoj vojne, 1974].

Informative monographs exploring various issues of the activities of the Soviet party state apparatus as well as various aspects of the country's economic, social, and cultural life during wartime completed the historiography of the Great Patriotic War in the 1970s–1980s [Kravchenko, 1970; Mitrofanova, 1971; Aniskov, 1975; Deborin et al., 1975; Sinitsin, 1975; Kumanev, 1976; Kolesnik, 1982; Kondakova, 1982]. Apart from the subjects studied previously, the regional historiography tackled a number of new issues, including the development of Tatar front periodicals, the state of hospital institutions, the activities of TASSR trade unions, military training, etc. [Khudyakova, 1970; Tsirkov, 1970; Sharonov, 1970; Ajnutdinov, 1971; Khramkov, 1974; Grinev, 1978; Karmanov, 1978; Ibragimov, 1979; Pyanov, 1979; Vanchinov, 1980; Machnev, 1981].

Extensive research on the wartime history of Tatarstan and the impressive factual materials accumulated over the years prepared the ground for more comprehensive studies. In 1977, the first general monograph on the republic's history in 1941–1945 by Z. Gilmanov was published [Gilmanov, 1977; Gilmanov, 1981]. It presents a cohesive account of the organisational and ideological activities of the republic's governmental and party bodies regarding the military transformation of all areas of the economy, and describes the contribution of Tatarstan and its population to the final victory. Despite the political restrictions inherent to the Soviet epoch, which did have an affect on the presentation of certain events, the author's observations and findings remain valuable for scholars.

Z. Gilmanov's book triggered a bout of active research in the republic. The TASSR's most important scientific centres for the history of the Great Patriotic War were Kazan State University, the G. Ibragimov Institute for Language, Literature, and History, and the Kazan Branch of the USSR Academy of Sciences (Sh. Marjani Institute for History under the Academy of Sciences of the Republic of Tatarstan since 1997). New theses written at the time filled in the blanks of the republic's historiography of the war period. They studied the notion of peoples' friendship as a reason why victory was upheld [Buzyakov, 1987], issues of periodical presentations of wartime history [Khayrutdinov, 1989], the historiography of the contribution of the working class in the Volga region to the defeat of fascism [Khramkova, 1987], wartime activities of the artistic intelligentsia of Tatarstan [Mazitova, 1990], and women's role in various spheres of the republic's life during wartime [Asylgaraeva, 1991]. Many books on the heroic deeds of the Tatarstan people were written [Ajnutdinov et al., cr., 1986]. The summary monograph 'Workers of Tataria on the frontline of the Great Patriotic War' by Z. Gilmanov was completed in 1981 [Gilmanov, 1981], in which the author traced the heroic path of the people of Tatarstan in all major military operations.

When speaking of the post-war period in the development of historical research on the history of the Tatars and Tatarstan, two aspects should be noted. Firstly, a rigid ideological framework restricted the potential research field dramatically. Secondly, regional historical works fit in the generally accepted patterns of Russian historiography, according to which the post-war decades were generally interpreted as a triumph of the Leninist economic, social and cultural policy in the republic.

Three summary works presented a comprehensive history of the Tatar ASSR. The first of them, Volume 2 of 'The History of the Tatar ASSR', was published in 1956 [Gimadi et al., edit., 1956]. It was created predominantly through the effort of historians from the Galimdzhan Ibragimov Institute of Language, Literature and Art: X. Gimadi, X. Xasanov, M. Mukharyamov, I. Klimov, A. Tarasov, E. Ustyuzhanin, G. Xisamutdinov, and G. Plotnikova. The preface to the volume described it as material for discussion. This disclaimer must be attributable to the changing political situation at the time the book appeared, which can be no means be found in the volume, except that it did not mention J. Stalin. Chapters 9 and 10 of the book, which described the post-war decade, referred to materials obtained from the current archives of various institutions and a wide range of periodicals to expound upon the status of the entire Soviet Union, the international situation and plans for the fourth and fifth five-year plans. When describing the industrial and urban standing of the Tatar ASSR, it mentioned predominant success in the oil industry and residential construction. Labor enthusiasm and the most highly productive workers were the main focuses of these sections. Agriculture was covered through the lens of individual examples of successful kolkhozes. The drought of 1946 was mentioned as the main reason that prevented agriculture from overcoming wartime hardships. The cultural aspect was centered on positive trends in the development of education, new works of art and literature praising Soviet reality.

The following generalising work on the history of the Tatar ASSR was written in 1968

[Mukharyamov, edit., 1968], and its final four chapters deal with the period in question. Chapter 20 by I. Georgievskaya puts forth a comprehensive analysis of the post-war five-year plan. It provides more information on the drawbacks of economic development attributable to post-war hardships when compared to previous collective works. This is especially true when it comes to agriculture. At the same time, the achievements of advanced farms are a major focus of the book as well as the period of the mid-1950s. The agricultural backwardness of the area is described in detail in terms of electrification. On the contrary, the industrial section largely focuses on technological advance and innovations. Just as in the previous edition, the book describes the development of the oil industry, which was thriving as never before, in detail. The republic's success was also documented in the production of consumer goods. The author did pay some attention to agriculture, though that was largely confined to the resolution of the September (1953) Plenary Session of the Central Committee of the Communist Party of the Soviet Union. Its correlation with the republic's situation was not described in proper terms. The book also contains positivist praise of the labor enthusiasm of workmen and kolkhoz members during the post-war seven-year plan, which is referred to as the communism construction period. The cultural section focuses entirely on achievements; there is only a passing declarative mention of post-war violations of the principles of democracy, and hardly any information on the Thaw are present. Nonetheless, the work is still considered to be the most fundamental of all studies on the topic. One reason is that the co-authored monograph 'The History of the Tatar ASSR', which was written ten years after (in 1980), in fact paralleled the previous edition without making any significant contribution to the development of history and research on the history of the Tatars and Tatarstan.

Generalising works prepared for anniversaries, e.g. the 50th, 60th anniversary of the Great October Socialist Revolution, the centenary of Lenin's birth, the 40th, 50th, and 60th anniversary of the TASSR, were also flawlessly adher-

ent to ideology. Their titles are representative of the content: 'Tataria on Its Way to Communism', 'Under the October Sun', 'The Triumph of the Leninist National Policy in Tataria', etc. [Mukharyamov, edit., 1965; Mukharyamov, edit., 1968; Belyaev, Mullayanov, cr., Sabirzyanov, edit., 1980; Ziganshin, edit. 1980]. According to official demands, they presented the history of the Tatar ASSR as a chain of continuous victories and conquests of the peoples of the USSR.

Monographs on the history of the regional communist organisation provide comprehensive coverage of the republic's socioeconomic, political and cultural life [Lifshitz et al., 1962; Lifshitz et al., 1973]. Apart from these co-authored works, a number of individual studies dated 1960–1980 also contributed significantly to the research on various aspects of the history of the Tatars and Tatarstan in the 20th century. I. Tagirov's works became a milestone in research on the participation of the Tatars and other peoples of the region in the national liberation and revolutionary struggle as the first large-scale and more or less unbiased account of the part the national factor played in the country's shift in power [Tagirov, 1977 a, Tagirov, 1977 b]. Books by P. Abramov, A. Zaycev, A. Sereda, F. Gazizov, and V. Starikov [Sereda, 1950; Gazizov, 1956; Zaycev, 1957; Abramov, 1960; Abramov, 1967; Starikov, 1967; Abramov et al., 1970] are also of interest, as they contain numerous statistical tables on the economy, demography, employment, education and other issues with material valuable for re-analysis from modern standpoints. Issues related to the social and economic history of the Middle Volga region in general and Tataria in particular remained the focus during that period. For instance, the most exhaustive work on post-war industrial history was B. Tokarev's monograph 'The Party Management of the Industrial Development of Autonomous Republics in the Middle Volga region' [Tokarev, 1963]. What makes it valuable is its comparative approach to the industrial development of the autonomous republic of the Volga region. U. Belyalov, G. Gornik, T. Sagitov, Sh. Valeev, N. Pushkarev and others

made significant contributions to research on the republic's industrial development [Menshikov, 1956; Valeev et al., 1975; Belyalov et al., 1976; Voronin et al., 1980; Belyalov, 1982; Gilmanov et al., edit., 1984]. Among the works containing a profound analysis of information obtained from the current archives of statistical bodies and plants, those by economist K. Azizov (and co-authored books prepared under his auspices) are outstanding, as they not only explore the current value and changing trends of the key indicators of the republic's economic development, but highlight a number of industrial shortcomings, which does not quite fit in with the historiographic framework of that period [Azizov, 1973; Azizov, 1977; Azizov, 1979; Azizov, edit., 1983]. The Middle Volga Expedition of Moscow University's Geography Department carried out a scrupulous analysis of the structure and specialisation of the republic's industry in the late 1960s and noted the transitory nature of most of the republic's sectors as well as poorly developed production communications between them [Koval'skaya, edit., 1969]. S. Knyazev made an enormous contribution to illuminating the history of the oil industry of Tatarstan and the country by authoring three monographs. Apart from analysing an impressive range of unique documents, he shared his personal memories as a person whose career was connected to the industry [Knyazev, 1981; Knyazev, 1984; Knyazev, 1990].

The collective monograph 'The Working Class of Tataria' summarised the republic's industrial history and that of the working class over the Soviet period as well as the historiography behind the subject. Volume 2 of 'The History of Kazan', which appeared during Perestroika, also deals with industrial history [Gilmanov et al., edit., 1991]. It is free of political clichés that were ubiquitous in Soviet historical literature, but still formulates key statements in a Soviet manner. For instance, it is largely focused on a 'creative attitude' towards work, labor enthusiasm, and a growing communist consciousness as important markers for socialist industrial production, while leaving gravely negative trends in its development uncovered.

At the same time, it has a bolder, though fragmentary, presentation of the negative developments in urban infrastructure.

E. Matveeva, Z. Puckova, A. Shajdullin, M. Kurkin, and V. Kuz'min authored works on the history of Tatarstan's agricultural development and peasantry in the 1960s–1980s [Shaydullin et al., 1960; Kuzmin, 1975; Matveeva, 1980; Putskova, 1973]. The republic's most important work on agricultural issues is the collective monograph 'Lenin's Cooperative Plan and Its Implementation in Tataria', which analyses all the works on the republic's agricultural history written prior to that time [Dyuvbanov et al., 1970]. The Soviet research on this subject was summarised in the joint report by the republic's leading scientists at the 21st Session of the All-Union Agricultural Symposium, which was held in Kazan in 1986 [Abdullin et al., 1986]. Works by the republic-famous agricultural economist M. Kurkin and other economic experts write about the republic's agricultural development in the most adequate and profound way [Kurkin, 1956; Kurkin, 1968; Kurkin, edit., 1968; Kurkin et al., 1969; Kurkin, 1986].

Research on sociocultural development and national relations in Soviet Tataria continued, albeit less intensely, during that period. These issues are covered mostly by the scientific literature on the development of specific areas of culture [Valeev, 1975; Gafurov et al., 1977; Aydarov, 1978; Ilyalova, 1986]. M. Musin and M. Mukharyamov shed light on issues related to the implementation of national policy and the way it influenced the republic's spiritual life [Mukharyamov, 1955; Musin, 1964].

Apart from Soviet historiographers, foreign authors also covered the history of the TASSR. The most exhaustive of their works was 'Soviet Tatarstan: The Theory and Practice of Lenin's National Policy' by T. Davletshin. The scientific community recognised the book, which was published in London in 1974, as one of unprecedented depth in its coverage of the Soviet history of Tatarstan. The author used the periodicals and published statistics available to address issues related to the development of national culture and education until the early

1970s. The author's freedom from any ideological restrictions enabled him to formulate an adequate depiction of the history of Soviet Tataria and the Tatar people, though it was largely fragmentary due to a lack of representative sources.

As the Soviet Union disintegrated and its regions experienced sovereignisation in the 1990s, radical changes as concerns historiography paralleled the collapse of communism. Science is witnessing a growing pluralism of approaches, methods and subjects. And on a particularly crucial note, research is becoming increasingly regionalised. When ideological barriers were removed during the 'Archive Revolution', domestic studies grew progressively more unbiased and comprehensive as their authors tackled new areas of research or referred to previously secret documents that had now become available in order to reconsider old ones. This could not help but affect the research on the history of the Tatars and Tatarstan in the 20th–21st century.

I. Alekseev, L. Ajnutdinova and others focus on the growing social and political involvement of the population of Kazan and the Kazan guberniya, and the formation and activities of political organizations from liberal to royalist [Alekseev, 2001; Ajnutdinova, 2003]. Among recent works on the history of Tatar political movements, D. Usmanova's monograph presents the most complete and unbiased account of bourgeoisie involvement in social processes. The study, which relies on a large array of sources, introduces new facts on the active part played by the Muslim intellectual class and entrepreneurs in the establishment of the first political party *Ittifaq al-Muslimin*, the formation of Muslim fractions in the State Duma, and the protection of the spiritual, cultural, and economic rights of their fellow believers [Usmanova, 2005]. L. Yamaeva's study on the liberal Muslim social and political movement mentions the business people of the Ufa guberniya as the social basis of Islamic liberalism, but also emphasises the narrow spectrum of their social and political activities [Yamaeva, 2003].

Expert studies analysing the legal, social, economic and political conditions of reforma-

tion in Tatar communities and exploring the social situation that favored Tatar consolidation, the formation of a national ideology, and the development of new civil institutions also deserve due attention [Mähdiev, 1989; Zagidullin, 1992; Litvin, 1993; Sultanbekov, 1994; Sultanbekov, 1995; Gilyazov, 1995; Tagirov et al., 1995; Väliev, 1996; Iskhakov, 1997 g; Mikhaylova et al, 1997; Fakhrutdinov, 1998; Gaffarova, 2001; Nogmanov, 2002; Volxonsky, 2003; Makhmutova, 2003; Yusupov, 2003; Khabutdinov, 2004; Amirkhanov, 2005; Mukhametshin et al., 2005; Senyutkina, 2005; Ämirxanov, 2005].

A number of works appeared in 1990–2000 to shed new light on the history of Soviet Tataria and today's Tatarstan, as well as its peoples. The new tendencies of opinion encouraged a more unbiased approach to political history; several works encompass various aspects of the political development of the Republic of Tatarstan at the present stage. Of special importance are the works by K. Idiatullina and B. Sultanbekov, which address the evolution of the republic's political elite and governmental agencies. They provide a sincere account of the activities of the republic's first secretaries of the Soviet period Z. Muratov, S. Ignat'ev, F. Tabeev, R. Musin, and M. Shaimiev, as well as its outstanding politicians and social activists S. Baty'ev, F. Faseev, M. Khasanov, and I. Tagirov [Idiatullina, 1997; Sultanbekov, 2003].

The fundamentally new situation that emerged in the country in 1991, following the dissolution of the USSR, the collapse of the CPSU's monopoly and archive disclosure, created the conditions for a new research on the participation of the Tatars and other peoples of Tatarstan in the Great Patriotic War. Among the fundamental works on this subject dating to this period, the 4-volume history of the Great Patriotic War deserves a special mention for its most unbiased depiction of the past [Velikaya Otechestvennaya, 1998–1999].

New approaches to the war-related issues in Tatarstan in the 1990s were initially applied to general works. For instance, I. Tagirov's monograph raised important questions concerning the war period. In his essays on Tatarstan's so-

cial, economic, and cultural development, the author presented an unbiased account of the economic conditions of the republic's everyday life, demonstrated the connection between the front and the rear, mentioned not only positive but also negative chapters in the military history, and highlighted the national aspects of the events in question [Tagirov, 1999]. Nowadays, experts have a more multidimensional, pluralistic approach to the history of the War and a wider set of research methods. Many studies aimed at determining the human factor in terms of demography, psychology, and the history of everyday life have been undertaken. A. Kabirova, E. Krivonozhkina, and others are major contributors to the study of these issues. A. Kabirova has spent a long time studying wartime problems by analysing the situation experienced by various social groups, the social sphere state, the way in which the republic's general sentiment was manifested, the tighter labor relations, etc. [Kabirova, 2005; Kabirova, 2011]. E. Krivonozhkina carried out a detailed analysis of the wartime situation of the TASSR's rural population by studying a set of demographic processes, demonstrating how the republic's citizens developed new mindsets in case of emergencies, determining the role of religion, and assessing the rural population's state of health [Krivonozhkina, 2001; Krivonozhkina, 2011]. V. Sakaev followed Krivonozhkina in his thesis on the demographic aspects of the development of the TASSR's urban population during the war, which filled a historiographical gap that existed to that point [Sakaev, 2008].

Frontline problems are another popular subject today. In this respect, of special importance is the immense work by the editorial office of the Book of Memory, headed by A. Ivanov, whose coworkers prepared the fundamental work *Memory* that immortalised the names of all the soldiers and officers who fell on the front line during the war—natives of Tatarstan and conscripted by the republic's military committees [Pamyat', 1993–2010]. It clarified some key information regarding the involvement of Tatars and citizens of Tatarstan in the military struggle against fascism, thus

shedding a new light on the republic's contribution to the Victory. In 1998, A. Ivanov presented the key findings of his studies in the form of a monograph called 'Combat Losses of the Peoples of Tatarstan During the Great Patriotic War of 1941–1945', followed by a thesis [Ivanov, 1998; Ivanov, 2001]. In addition, the republic's search organizations prepared a three-volume edition called 'Names on Soldier Locketts', which contains information about 6,410 military servants who fell at the fronts of the Great Patriotic War and whose names search organizations found out during field studies [Konoplev et al., cr., 2005–2008]. Studies by I. Gilyazov are outstanding among other works about the war as they speculate on the nature and causes of collaborationism [Gilyazov, 1998; Gilyazov, 1999, Gilyazov, 2005].

The history of the Great Patriotic War and the involvement of the Tatars and other peoples of Tatarstan in it generally remains an important study area.

A number of issues related to the history of the Tatars and other peoples of Tatarstan in the 20th—early 21st century are addressed in the fundamental studies by Member of the Academy of Sciences of the Republic of Tatarstan I. Tagirov called 'Essays on the History of Tatarstan and the Tatar People (The 20th Century)' and 'History of the National Statehood of the Tatar People and Tatarstan' [Tagirov, 1999; Tagirov, 2000; Tagirov, 2005; Tagirov, 2008 b]. The author focuses on the history of nationhood of the Tatars and Tatarstan. Therefore, the works provide an extensive analysis of the establishment of the Tatar ASSR, as well as Perestroika and the acquisition of sovereignty by Tatarstan. I. Tagirov discusses the development issues of the Republic of Tatarstan at the turn of the 1980s–1990s from the standpoint of a direct participant in the events of that period and the negotiations with the Russian Federation. He also evaluates the role of the Declaration on State Sovereignty of the TSSR of 1990 and the 1994 Treaty 'On Delimitation of Jurisdictional Subjects and Powers between Bodies of Public Authority of the Russian Federation and Bodies of Public Authority of the Republic of Tatarstan' in the development of political

interactions between Tatarstan and the Russian Federation, as well as in the establishment of agreement-based federal relations.

The collective monograph on the Tatar history and culture from ancient times to the present, titled 'Tatar History and Civilisation', published in English, became an important milestone in Tatar and Tatarstan studies [Tatar history and civilization, 2010]. This fundamental work was prepared by Tatarstan scientists under the supervision of R. Khakomov and M. Usmanov. The Research Centre for Islamic History, Art, and Culture ensured its publication and translation into English. The edition has a holistic approach to many issues of the Tatar history—from Jadidism and religious reformation in the early 20th century to the formation of an ethnic, cultural and political nation, of a statehood. It also traces the development of the Tatar language, literature, education, science, and arts. This collective work made a significant contribution to rising global awareness of the Tatar history and culture, stimulating further research in this area.

Research projects carried out under the supervision of L. Drobizheva provide a thorough and detailed analysis of many components of the ethno-political development of the Republic of Tatarstan. The author used an interdisciplinary approach to empirically study the phenomenon of cultural distance and ethnic borders in terms of ethnic differences in social and professional activities, ideological orientations, and perception of normative values. She studied the ideology of national and ethno-political identity along with the relations between democracy and nationalism within the context of political, social, and economic changes and the historical background of the peoples of Tatarstan, Tuva, North Ossetia, and Sakha (Yakutia) [Drobizheva, edit., 1996; Drobizheva, edit., 2000; Drobizheva et al., edit., 2007].

Characteristically, a number of works analyse various methods of and trends in the implementation of popular political involvement in the republic's social and political movements, organizations, election campaigns, etc. Works by R. Gibadullin, R. Yuldashev, and D. Iskhakov contain an informative material on the

development of the Tatar national movement and its role in the social and political life of the republic and the Tatar people [Iskhakov, 1991; Gibadullin, 1998; Yuldashev, 1998]. O. Krasilnikova, M. Kildeev, V. Nemirovskiy, and A. Bushuev studied the development of social and political movement along with trends in the social and political activities of various social groups, etc. [Kildeev, 2002; Krasilnikova, 2002; Nemirovsky, 2003; Bushuev, 2009]. Findings of theoretical and applied studies, republic-wide surveys on various issues related to various aspects of the social and political system and electoral sentiments constitute a large group of literature [Mukhametshin, 1998; Vyuzhanina, 2002].

Studies of Tatar and Russian entrepreneurs that made a significant contribution to the region's development in the early 20th century have become an important area of today's historical research. Works by R. Salikhov, L. Sverdlova, N. Tairov, and other authors analyse the national business community's role in the country's economy, the characteristic aspects of its professional activities and structure, social, political, and philanthropic activism [Sverdlova, 1991; Sverdlova, 1993 a; Sverdlova, 1993 b; Sverdlova, 1994 a; Sverdlova, 1994 b; Amirkhanov, 1995; Amirkhanov, 1999; Amirkhanov, 2005; Nigamedzinov, 1999; Nigamedzinov, 2003; Fillipov, 1999; Gibadullin, 2001; Khayretdinov, 2001; Abubakirova et al., 2002; Senyutkin, 2002; Yamaeva, 2002; Tairov, 2002; Tairov, 2004; Zagidullin, 2003; Salikhov, 2004]. A number of contemporary scientists study various aspects of the social and economic development of the Soviet Tatarstan. Studies related the TASSR history during the New Economic Policy and collectivisation periods have also become an important sphere of research. These are represented by R. Shaydullin, who studied the issue of peasant households in the TASSR [Shaydullin, 2000], I. Gataullina, who explored the social and economic processes in the Middle Volga region [Gataullina-Apaycheva, 2007], L. Kuznetsova, who dealt with the development of social policy for workers and officials [Kuznetsova, 1996], and D. Davydov, who studied the

peasant population of the TASSR in terms of its size, age, gender, and ethnic composition, along with natural and mechanical migrations [Davydov, 2010]. Besides, a series of scientific articles appeared in the 1990s–2000s to shed light on various aspects of the social and economic development of that period. The period from the 1920s to the 1930s is thus being intensely explored by historiographers.

Works dealing with the post-war history of the Soviet Tataria are much fewer. The most prominent experts in the study of the post-war four decades are Y. Smirnov, who studied the industrial development of autonomous units in the Volga region during the post-war period [Smirnov, 1998 b], and A. Gallyamova, who explored the achievements and controversies of the TASSR's social and economic development during the four decades following the war, which were characterised by intense modernisation [Gallyamova, 2010]. The TASSR's industrial development in the latter half of the 20th century is being studied within today's evaluative framework by A. Kalimullin [Kalimullin, 1995; Kalimullin, 2005; Kalimullin, 2011], S. Belov [Belov, 2003; Belov, 2007; Belov, 2010], K. Faskhutdinov [Faskhutdinov, 2007], and other authors.

A number of contemporary authors deal with the social and economic development of Tatarstan in the post-Soviet period. These include F. Khamidullin, D. Xayrullof, V. Xomenko [Khamidullin, 1995; Khayrullof, 1997; Analysis and the main dimensions of development and placement of labor resources of the Republic of Tatarstan, 1999; Khomenko et al., 2006; Khomenko, 2007; Khomenko, 2011; Khomenko et al., 2011]. Though most of their works are not considered to be historical studies, they contain very valuable factual material that provides an insight into various areas of the republic's social and economic development at the present stage of its historical progress. Studies by F. Gaynullina, T. Mirsiyapov, A. Fomin, and R. Ahmetzyanov analyse the 90s experience of forming social protection mechanisms for the population of the post-Soviet Tatarstan [Gaynullina et al., 1996; Gaynullina, 1998; Fomin, 1997; Akhmetzyanov, 2000]. The

book 'Under the Aegis of Mercury', published by the RT Ministry of Trade and Economic Cooperation, deals with the economic activities of the Republic of Tatarstan [Salikhov, edit., 2000]. It provides a detailed analysis of the Tatarstan's foreign economic relations and inter-regional activities in the republic in the 1990s. Additionally, I. Galiev's thesis traces the development of the republic's foreign economic relations [Galiev, 2006]. In general, the historical research about the social and economic development of the post-Soviet Tatarstan only recently has started gaining some momentum, and a number of issues remain unexplored.

The modern historiography of the cultural development of the Tatar society and Tatarstan formed during the latter half of the 1980s to the 2000s and was influenced by the publicity and democratisation of the society. The burning ethnic issue triggered a surging social, political, and civil activism after the USSR was dissolved, which resulted in important national and governmental reforms. After the Republic of Tatarstan declared its sovereignty in 1990 and adopted the RT Constitution in 1992, the cultural and linguistic revival of the nation became its top priority. It largely determined the contemporary focus on issues related to the development of the culture of the Tatars and other peoples in Tatarstan.

The reformation process in the Tatar society of the early 20th century is of special interest for today's scholars. The most recent historiography of the Tatar Islam, Jadidism, and policy, which is representative of new concepts of the nation's social history, is essential in this respect. It is primarily represented in the works by D. Iskhakov, R. Mukhametshin, R. Salikhov, F. Sultanov, D. Usmanov, A. Xabutdinov, R. Khakimov, A. Yuzeev, and L. Yamaeva [Khabutdinov, 2000 c; Khabutdinov, 2001; Ibragim et al., 2002; Iskhakov, 2003; Khayrutdinov, 2003; Yamaeva, 2003; Salikhov, 2004; Usmanova, 2005; Khakimov, 2005].

R. Khakimov views reformism as the inexhaustible potential of Islam that develops according to its own patterns in spite of the pressing circumstances. Jadidism as the true 'Islamist reformation' that addressed issues of

history, ethnogenesis, education, and economy, was a historic deed of the Tatar bourgeoisie and intelligentsia [Khakimov, 2005].

R. Mukhametshin believes that Jadidism, which determined one of the most influential trends in the Tatar social thinking, emerged as a reform in popular education but was initially meant to address broader issues. One of its consequences was the implementation of elements of the secular world perception based on the principles of rationality, universalism, and objectivity [Mukhametshin, 2003].

According to A. Khabutdinov, at the first stage of the bourgeois reforms in the 18–19th centuries the Tatars interaction with the Russian government brought about a Millet—a unique religious union established in the early 20th century, when Jadidist transformations had caused ethnic secular intelligentsia to form, and a Turkic-Tatar nation to take the European pattern of development [Khabutdinov, 2000 c]. The majority of the big bourgeoisie welcomed the innovations [Khabutdinov, 2001 b].

The discussed literature is generally characterised by a diversity of approaches to defining the Tatar reformism, its sources and course of development.

Few as they are, contemporary studies on the history of the religious development of the Tatar community in the Soviet Tatarstan are very important in terms of both the amount of materials collected and analysed and the level of generalisation. Among them of special importance are works by I. Minnullin, A. Mukhametzyanov [Minnullin, 2006; Minnullin, 2007; Mukhametzyanov et al., 2008], and R. Ibragimov [Ibragimov, 2005], which present an exhaustive account of the relations between the authorities and religion, as well as the life of Tatarstan's Muslim community during the Soviet period.

Folk artistic traditions in monumental and decorative arts are studied in the works by G. Valeeva-Suleymanova [Valeeva, 1999; Valeeva-Suleymanova, 1995]. Her monograph on Tatarstan decorative arts from the 1920s to the early 1990s is of great interest in terms of professional art. It was the first work to present a systematic history of the Tatar decorative arts

in the 20th century, tracing the development of key art forms stage by stage and demonstrating stylistic trends represented by professional artists and masters of decorative arts.

Speaking of research on cultural processes in the post-Soviet Tatarstan, it should be noted that the historiography of that period is marked by a pluralism of opinions, approaches, and judgments, as well as reliance on international practice and a general lack of domestic historical studies that would adequately represent the current cultural trends. The reasons include the events in question being relatively close in time and the crisis of social studies of the late 1980s to the early 1990s, a lack of adequate methodological procedures, and the predominant focus on earlier stages of the society's cultural development. A conceptually new approach to studying the national history in general and that of the culture in particular formed in the latter half 1980s. It is all the more relevant because scholars wanted to find the causes of the general crisis by studying issues related to the history of the culture.

At the same time, masterminds of social and political organizations, political analysts, ethnographers, and historians strove to solve problems of Tatarstan's cultural development. Reviving the Tatars' national language and culture was of utter importance in this respect. In his works, R. Khakimov studied issues of cultural construction and the problem of Tatar cultural borders [Khakimov, 2002]. He believed that the status of Tatar, as the key language in the Turkic group enabled the Tatar culture to enter the global stage within the general Turkic culture.

Works reflecting the interim results and celebrating the republic's cultural achievements began to appear in the 2000s. R. Valeev's 'The Culture and Art of Tatarstan at the Turn of the Millenniums: The Key Development Trends from the 1990s to the early 21st Century' presents the most exhaustive description of the post-Soviet Tatarstan culture [Valeev, 2008]. The reason why the study is of interest is its dealing with a number of issues related to the implementation of the cultural policy within the republic. It was the first work to analyse

the legal and economic aspects of the issue. The author explains the reasons behind the cultural controversies at the turn of the 1980s and 1990s. The work also sheds light on the governmental support of cinema, personnel policy in musical and art education, the development of popular arts, museums, and libraries in the Republic of Tatarstan. Besides, R. Valeev took a holistic approach to the issue of protection of the RT cultural legacy [Valeev, 2007 a; Valeev, 2007 b].

Intercultural interactions in the Republic of Tatarstan is a popular and well-explored area of study with regional historiographers. Studies by G. Gornik are central to the trend [Gornik, 2000; Gornik, 2002]. His monograph 'Bridges of Culture: On the History of Tatarstan's Cultural Relations with Foreign States' analysed a material on Tatarstan's cultural relations with foreign countries. The author focused on works of professional and popular amateur art, paintings, international art festivals and competitions held both abroad and in the republic. Apart from using archive materials, the author interviewed famous solo performers of theatres and ensembles, as well as directors, which suggests that G. Gornik's study is a major factual contribution.

L. Ashrafullina's thesis also represent Tatarstan's intercultural relations with foreign countries in terms of activities carried out by civil society institutions [Ashrafullina, 2004]. The work highlights sociocultural trends in the development of the cultural connections of the Republic of Tatarstan with foreign countries and their implementation mechanisms. L. Ashrafullina described the activities of governmental structures and social institutions in the sphere, determining the problems that they had faced.

The international Tatar organisation known as the World Tatar Congress is responsible for reviving the Tatar culture outside of Tatarstan. One of the founders of the Congress, its first Executive People's Commissariat Chairman I. Tagirov made an attempt at describing the history of the Congress and summarising its diverse activities [Tagirov, 1992; Tagirov, 1997 a; Tagirov, 1997 b; Tagirov, 1999; Tagirov's In-

terview, 1993; Tagirov's Interview, 1994 a; Tagirov's Interview, 1994 b; Tagirov's Interview, 1996 a; Tagirov's Interview, 1996 b; Tagirov's Interview, 1997], which was continued by the current Executive Committee Chairman R. Zakirov [Zakirov, 2006]. These works reflect the Tatars' status in Russia's regions, in other CIS and non-CIS countries, and analyse the WCT's activity areas in terms of ethnic consolidation. It was the first work in domestic historiography to determine the forms and principles of Tatar social organisations' activities aimed at reviving the ethnic culture in areas with dense Tatar population.

A number of works by contemporary authors analyse modern paintings in terms of art criticism [Gaynutdinova, 1995; Pashkova, 1995; Pashkova, 1997; Tsoy, 1995; Tsoy, 1996; Polyakova, 1998; Razumeychenko, 2000]. S. Chervonnaya was the first to mention a cultural and geographical decentralisation of Tatarstan's art and suggest that the republic's culture is incomplete without the industrial eastern part and unintelligible without an understanding of the unique Tatar ethnic school [Chervonnaya, 1988]. In her further studies S. Chervonnaya explored the post-Soviet specifics of the visual arts of the Republic of Tatarstan in terms of the religious and ethnic tradition [Chervonnaya, 1999; Chervonnaya, 2008]. Analysing works by individual artists of the former autonomous republics of the Russian Federation in terms of religious influence, the author emphasises the Islamic context of contemporary visual arts. R. Sultanova studied the formation and development of visual arts in new industrial cities of Tatarstan (Naberezhnye Chelny, Yelabuga, Nizhnekamsk) during the post-Soviet period [Sultanova, 2000]. A. Akhmetshina's thesis is focused on the ethnic authenticity of Tatar arts, emphasising the currently revived sacral art that dates back to ancient times and is based on the idea of Tatar ethnos to Turkic peoples and its connection to the Muslim world [Akhmetshina, 2000].

Music scholars G. Kantor, Z. Saydasheva, R. Iskhakova-Vamba, V. Dulat-Aleev, and A. Maklygin have studied the Tatar musical art within the development of the Tatar culture

[Kantor, 1995; Iskhakova-Vamba, 1997; Dulat-Aleev, 1999; Maklygin, 2000].

Famous teatrologists of the Republic of Tatarstan I. Ilyalova [Ilyalova, 1993; Ilyalova, 1996; Ilyalova, cr., 2006] and M. Arslanov [Arslanov, 2002] created summary histories of the Tatar theatre. I. Ilyalova was the first to study the history of the formation and development of G. Kamal Tatar Academic theatre. Her works provide a profound historical analysis of the development of theatre in the Republic of Tatarstan by the early 21st century. M. Arslanov worked for many years to produce a series of studies on the formation and development of Tatar stage direction over the 20th century. They analyse the key directorial works, which are indicative of the essential trends in the development of stage direction, and reconstruct a number of milestone plays by prominent directors, some of which are based on Tatar literary works. G. Zaiynullina's thesis explores elements of Sots Art and Post Sots Art in the Tatar theatre art [Zaynullina, 2010]. The author explains that the Sots Art in plays by M. Salimzhanov, F. Bikchantaev, R. Zagidullin, and I. Makhmutova was largely attributable to domestic issues—that is, the local historical, ethnopsychological, and political situation.

In spite of numerous works that have appeared since the mid-1980s, the historiography of the issue in question is rather ambiguous. Even though representatives of a number of science branches have been involved in the research, a comprehensive historical depiction of the development of sociocultural processes in the post-Soviet Tatarstan remains to be provided.

To sum up the state of knowledge on the history of the Tatars and Tatarstan in the 20th–early 21st century, the analysis of that complicated and controversial period has undoubtedly been successful. Yet, the coverage of certain stages and aspects of this period is erratic. The Marxist-Leninist ideological framework that restricted research almost throughout the 20th century has ceased to exist. The contemporary historiography is thus pluralistic in terms of approaches and research methods. Its interdisciplinarity is also increasing, especially when it comes to exploring the current social development. The materials collected by pre-revolutionary, Soviet, and contemporary researchers over years provide a new insight into the long historical way that the Tatars and other peoples of Tatarstan had to walk from the 20th to the 21st centuries.

Source Material on the History of the Tatars and Tatarstan in the 20th–Early 21st Century

The basis of the source documents for the research on the modern and contemporary history of the peoples of Tatarstan is a set of materials, both published and unpublished, which includes legislative, regulatory, clerical documents, formal correspondence, personal documents, and periodicals.

Over many years of research, historians and archivists have discovered, edited, and published an enormous collection of documents on the history of the Tatars and Tatarstan in the 20th century. Without doubt, the Soviet and post-Soviet periods have produced the largest number of published documents. As a general rule, when documents were published in the Soviet era, ideological reasons meant more at-

tention was paid to those that were representative of a long, hard road, from the proletariat and peasantry of Tataria, to the overthrow of the ruling bourgeoisie, and the establishment of a new state in which a truly socialist society was to be built.

Collections of works representative of the activities of administrative bodies in various aspects of economy and culture [Zasedanie verxovnogo soveta TASSR, 1947–1987; Yudin, 1978; Deyatel'nost' sovetov Tatarii, 1983; Komsomol Tatarii v czifrax i faktax, 1974] and dedicated to certain areas of domestic and spiritual life [Promy'shlennost' i rabochij klass Tatarii, 1986; Kochurova, 1964; Knyazev, edit., 1978–1979; Mukharyamov,

edit., 1976] appeared in the republic during the Soviet period. These publications give an insight into governmental policy with regard to the region's development as a society in diverse areas. However, publications of this kind are biased and proclamatory as a result of their politically circumspect nature. As they had to meet requirements of ideological 'purity', they were restricted to documenting positive trends in national and social development. Therefore, it is not possible to use these documents as a basis for a complete and non-prejudicial study of modern and contemporary Tatar and Tatarstan history.

Major efforts have been made in the post-Soviet Republic of Tatarstan to publish and promote documents dating back to the Soviet period. One example of a fundamental and unbiased approach to document publishing is 'The History of Kazan in Documents and Materials. 20th Century', which was published to celebrate the 1000th anniversary of Kazan by the Department for Modern and Contemporary History, Sh. Marjani Institute of History of the Tatarstan Academy of Sciences [Amirkhanov, edit., 2004]. This comprehensive study covers the entire 20th century and refers to documents that had never been used in previous research. They fall into three categories: economy, politics, and culture. Free of any ideological restrictions, it contains an impressive number of documents that present an objective picture of the history of the republic's capital over the contradictory and troubled 20th century. The book is outstanding in its thoroughness, in the breadth and depth of its coverage of the issues, and in its use of a new conceptual approach, which sheds light on the history of the republic's capital from all angles.

A number of dedicated collected studies present a wealth of documentary sources on certain issues of contemporary history: the history of 'korenization' (indigenization) in the Tatar ASSR [Garipova, author and compiler, 2009], the Great Patriotic War [Kabirova, cr., 2011], the development of the Tatarstan oil industry [Knyazev, edit., 1993], municipal construction and Tatarstan's attainment of sover-

eignty [Khakimov, 1996; Mukhametshin et al., author and compiler, 2000].

The social and political situation, ethnic policy, and cultural development of Tatarstan over the period are also the focus of documentary works published in the journal 'Gasy'rlar avazy = Echo Echo Vekov' [Dokumenty' aktual'ny'e i sejchas, 1996; Piskarev, 1996; Piskarev et al., 1997; Valeev, 2004; Galiullina, 2004; Gallyamova, 2007 a; Tagirov, 2010; Tagirov, 2011].

Having mentioned the improved quality of published materials during the post-Soviet period, which put at the disposal of researchers a diverse source base which reflects the realities of the recent past, we should note that unpublished archive documents are still the main source materials for the study of Tatar and Tatarstan history in the 20th–21st centuries. The majority of these unpublished materials are kept in central and regional Russian Federation archives.

Documents held in the Russian State Historical Archive, St. Petersburg, are important for studies of the pre-Soviet period. They are a source of information on the political, social, economic, and cultural life of the Tatar population in pre-Soviet Russia. In particular, the fund of the Department of Spiritual Affairs For Foreign Confessions (Fund 821) provides documentary data on the social and political situation in the Islamic community in the Russian Empire and its reformist movement in the latter half of the 19th century–early 21 century. Reports and analytical notes by officials from this department based on findings send from the field give a clear insight into the Tatar bourgeoisie's activities regarding financial support to mosques, new-method maktab and madrasahs, and the establishment of community guardianship and charitable organizations. They describe the political activities of the Islamic elite, its ideology, and assess its role in the Islamic renovation movement. An analysis of these reports paints a picture of the extent to which the authorities understood the nature of the Jadid transformation, including the participation of the Tatar commercial and industrial class. Sources in the Fund of the Police Department (Fund 102) in

the State Archive of the Russian Federation, are consistent with these materials. In the present context, cases pertaining to the so-called pan-Islamist movement are of interest. These include information provided by agents and correspondence with gendarme offices, which reflect the active social involvement of the Tatar bourgeoisie. They also give an insight into the principles underlying political investigations among the Islamic community. The Fund of the Office of the Special Corps of Gendarmes (Fund 110) provides important information on officers and secret agents directly engaged in investigating pan-Islamic cases. As Tatars resided in various governorates within the Russian Empire, regional archives are an essential research source. Materials provided by the National Archive of the Republic of Tatarstan, the Central State Historical Archive of the Republic of Bashkortostan, the State Archive of Kirov oblast, the State Archive of Orenburg oblast, the State Archive of Ryazan oblast, the Central State Archive of Samara oblast, the Central State Archive of Ulyanovsk oblast, and others, proved to be of value for the research. The set of archive funds that are important for studies on Tatar history is largely homogeneous and representative of the development of Islamic communities in specific governorates.

For ease of description, the entire array of published and unpublished sources kept in governmental and agency archives can be divided into several groups.

Laws and regulations. Laws and regulations are an important part of the documentary basis for studies of the modern and contemporary history of the Tatars and Tatarstan. Essential for the pre-revolutionary period are the laws of the Russian Empire. They are indicative of governmental policy with regard to Muslims, their legal status, and regulations that applied to confessional communities [PSZ, 1830–1884; PSZ, 1885–1916; *Sbornik zakonov o musul'manskom duxovenstve*, 1898; Arapov, author and compiler, 2001]. Among materials published by higher governmental bodies, journal resolutions by the Ministry of National Education are of value as they eluci-

date the essence of the new policy with regard to post-reformist Islamic education.

It is well known that the our country's legislative system changed dramatically when the Bolsheviks came to power. An enormous documentary array of various laws and regulations accumulated over many years of Soviet rule. Among them are decrees by the new authorities, USSR, RSFSR, and TASSR Constitutions, laws, orders, resolutions, and instructions by executive governmental agencies and the ruling party—the Communist Party of the Soviet Union. Documents drafted by governmental bodies of the Russian Federation and the Republic of Tatarstan were added in the post-Soviet period. By analyzing this group of sources, experts can study the social and political atmosphere of the period, understand how the authorities interacted with the society in terms of social, political, economic, and cultural development, and determine many other factors and conditions that had a tangible effect on the society. Constitutions and laws establish the procedures and general principles behind governmental policy in all spheres, regulate the formation of governmental agencies and citizen involvement in it [Konstituciya TASSR, 1984; Konstituciya SSSR, 1988; Konstituciya RF, 2002; Konstituciya RT, 2004; Zakon SSSR, 1988; Zakon TASSR, 1989; Zakon RT, 1994]. Edicts by the Russian Federation President, resolutions by the Russian Federation Supreme Soviet, Republic of Tatarstan Supreme (State) Soviet, and Republic of Tatarstan Cabinet of Ministers regulate the key aspects of governmental policy implementation in the Russian Federation and the Republic of Tatarstan and represent the specific nature of events and campaigns held by governmental agencies in relation to various issues.

Similar to, but separate from laws and regulations, is a documentary array that includes statutory, policy, and other types of documents (addresses, decisions, resolutions adopted at meetings, etc.). These were made by various social and political movements, parties, and unions which were active in the country and the republic at different times, including those published as supplementary material to studies

by other authors [Ustav VLKSM, 1989; CPSU Program. CPSU Charter, 1989; Proceedings of the Founding Congress of the Sovereignty Committee, 1990; Platform of the Tatar Social Centre, 1991; Program of the Ittifaq Party for Tatar National Independence, 1991; Yuldashev, 1998]. The documents are a living testimony of the time and the socio-political changes that occurred, which makes them interesting analysis material. However, once again, they are not free of a certain bias. Analyzing such documents, from those by the CPSU and the All-Union Leninist Young Communist League to documents by contemporary social and political forces, researchers can gain a clearer insight into the republic's political and social atmosphere, certain aspects of the political consciousness of their adherents and participants (such as their values, orientations, etc.) and reflect on the reasons of public involvement or non-involvement in them.

Clerical documents. The second group consists of clerical documents: protocol documentation (minutes and shorthand records of meetings, congresses, conferences), official correspondence of central and local governmental agencies, reference and information documents on various subjects, and reports.

Reports by public administration bodies: minutes, shorthand records, and resolutions of meetings that describe how Tatars participated in the activities of municipal councils and worked to protect Muslims' economic, spiritual, and cultural rights.

Reports by charitable, cultural, and educational organizations, which were widespread in the late 19th–early 20th century, shed light on the transformation of the traditional Islamic charity system, its history, and specific features of the specialized social security organizations that covered much of the Tatar population. Figures on the income and expenditure budgets, investment allocation, as well as the composition and management of such institutions are of interest. Charters of social and philanthropic organizations established and patronized by the ethnic bourgeoisie form a meaningful supplement to such documents. Unfortunately, materials belonging to this source group as well as

reports by autonomous public bodies for some governorates of the Russian Empire are missing; only certain years are covered.

The Gasyr Publishing House has recently published archive documents on the charitable activities of regional entrepreneurs and the history of the formation and development of Muslim state-funded education [U miloserdiya drevnie korni, 2002; U miloserdiya drevnie korni, 2003; Kazanskaya tatarskaya uchitel'skaya shkola, 2005]. Of special importance is the series of scientific biography collections 'Shäxeslärebez' ('Our Personalities') by the Ruxiyat Publishing House, which contains various documents that give accounts of the lives and public activities of prominent representatives of the Tatar bourgeoisie, clergy, and intelligentsia [Bertugan Rämievlär, 2002; Gobäydullin, 2002; Gomäri, 2002].

Clerical documents generated by Soviet and party bodies are essential to research on the history of the Tatars and Tatarstan during the Soviet period. Proceedings of congresses of the CPSU and the All-Union Leninist Young Communist League, their regional conferences and plenary sessions, resolutions by central and local party branches are indicative of their ideological course for ideological and political (communist) youth education, value system formation, etc. [Materialy' XXVII s`ezda KPSS, 1986; Materialy' XIX Vsesoyuznoj konferencii KPSS, 1988; Dokumenty' i materialy' XX s`ezda VLKSM, 1988; Materialy' XXVIII s`ezda KPSS, 1990; Central State Archive of Historical and Political Documentation in the Republic of Tatarstan, Fund 15, Inventory 14, File 1; Inventory 15, File 149, File 169, File 770, File 599, File 1865; File 4034, Inventory 47, File 1, File 2; File 48, File 1; Inventory 49, File 1, File 130; Zasedanie verxovnogo soveta TASSR, 1985; Zasedanie verxovnogo soveta TASSR, 1986a; Zasedanie verxovnogo soveta TASSR, 1986b].

Documents by the Tatar CPSU Regional People's Commissariat kept in Fund 15, RT Central State Archive for Historical and Political Documents, are of great interest in this respect. As real authority in the republic was exercised through the activities of the party's

regional committee, it provided practical government in every sphere of social life, thus generating a mass of clerical documents. Among them are shorthand records of regional party conferences, plenary sessions of the CPSU regional committee, meetings of the key party and economic figures, minutes from regional party office meetings and their pre-materials—field information, reports to the CPSU Central Committee, replies to queries by the CPSU Central Committee, etc. The fund provides extensive information on every aspect of the subject, both positive and critical in nature. Of great importance are documents of personal origin: letters of complaint and field note musings, which give a fragmentary but unembellished account of the real situation.

Materials from the Kazan City Committee of the CPSU (Collection 26) are of a similar nature. Of special interest are materials by the Baumansky District Committee of the CPSU (Collection 19), which controlled all institutions and organizations in the centre of the republic's capital. It was the institution responsible for 'sobering' the artistic intelligentsia during the post-war period of ideological dictatorship. The materials give a good insight into the intelligentsia's position during the thaw period.

Also of interest are materials contained in the funds of the Presidium of the Supreme Soviet, the TASSR Council of Ministers, and individual ministries, which are kept in the National Archive of the Republic of Tatarstan. Especially important and relatively well-structured information is contained in the introductory clauses of resolutions by the republic's government, where often a summary analysis of various issues relating to the society's activities is laid out. In spite of the many drawbacks of unpublished sources, including those determined by the nature of the Soviet period, and their fragmentary content that lacks cohesion, through an overall analysis, experts can explore processes that were underway in the republic.

The most valuable information in the Russian State Archive for Social and Political Information is contained in the funds of the

Agency for Party Body Control (Fund 17) and the Office of the CPSU Central People's Commissariat for the RSFSR (Fund 556) for 1946–1958. The most interesting fund in the Russian State Archive for Contemporary History is that of the Office of the CPSU Central People's Commissariat for the RSFSR (Fund 5). The above funds are indicative of central policy for the republic. Of greatest interest in this respect are minutes of the Office's meetings which contain discussions of reports by chairmen of Tatarstan offices, and report notes by officers in charge and inspectors of the Central Committee of the All-Union Communist Party (Bolsheviks) who traveled to check the regional situation. The following documents are of special interest: a translation of the brochure sent by the Tatar Regional Committee of the CPSU, which expressed dissatisfaction with national policy, and Sh. Mannur's letter on the republic's deprivation. A memorandum by a KGB officer on the activities of the artistic intelligentsia, mostly writers, is also valuable. Of special interest is an analytical note on Kazan students.

For the study of the history of the republic, the most valuable collections of the RF State Archive are those of the Administration Department of the Council of Ministers of the RSFSR (Collection A-259). Here, materials contained in correspondence between the Council of Ministers of the TASSR and central governmental bodies, primarily the Council of Ministers of the RSFSR, are of greatest interest. Of certain interest are materials in the fund of the Migration Department, Council of Ministers (Fund A-327). They contain valuable information on planned migration. Interesting documents on errors, difficulties and failures in various spheres of the republic's socio-economic and socio-cultural development were found in the fund of the People's Commissariat for Soviet (State) Control of the RSFSR (Fund A-340), that of the USSR Ministry for State Control (Fund P-8300), and that of the USSR Commissariat for People's Control (Fund R-9477). Of great interest are materials from the Correspondence Department of the USSR Council of Ministers (Collection R-5446).

Important information on the ideological and cultural aspects of social life has been found in the fund of the General Directorate for the Protection of State Secrets in the Press under the Council of Ministers of the USSR, also known as Glavlit (Fund R-9425), which contains annual reports by the TASSR Glavlit for 1946–1973. Those dated before 1970 contain interesting information that clearly indicate that ideological control over the activities of the artistic intelligentsia through censorship was fully maintained during the implementation of liberal concessions under the resolutions of the 20th CPSU Congress.

A vast majority of the archive materials from the Soviet period contain ideological clichés and myths praising the existing system and failing to adequately represent ongoing societal development.

Clerical documents in the Current Archive of the Ministry of Trade and External Economic Cooperation also contain valuable information on Tatarstan's economic development. It is mostly found in analytical reports and references for meetings of the RT Cabinet of Ministers, ministry boards, etc.

The correspondence between the TASSR Council of Ministers or the RT Cabinet of Ministers and various (in particular central) ministries and agencies regarding cultural construction, public education, artistic development, activities of artistic unions, the protection of historical and cultural monuments, etc. was intended 'for office use'. Many of these documents had been marked 'confidential', 'top secret' or 'restricted use' and were declassified only in recent years. These documents tend to be dry and to the point in character, but are also credible as they mostly contain reporting information not intended for public disclosure. However, the time and conditions under which the documents were created mean a well-balanced critical approach is required, as many of them omit or downplay certain negative aspects. This applies both to Soviet formal documents and to some contemporary materials. The clerical documentation gives an insight into many specific aspects of the interaction between the government and society, as well

as that of governmental institutions and individual citizens with each other, and provides a deeper understanding of this interaction.

Periodicals. Materials in Tatar and Russian periodicals of the latter half of the 19th–early 20th century also constitute a significant group of sources, which can shed light on the study area. Products of the spirit of the age and the social atmosphere in Russian and Tatar communities of that period, they present subjective contemporary assessments of the most important events, at the centre of which were the reformist Tatar bourgeoisie and clergy. Newspapers and magazines such as *GydKazan Moxbire* (1905–1911), *Yulduz* (1906–1918), *Vakyt* (1906–1918), *Bayan el'-xak* (1906–1914), *E'xbar* (1907–1908), *Koyash* (1912–1918), *Şura*, *Iktisad*, and many more Islamic liberal and Jadid periodicals formed an important information hub, clarifying and promoting social innovations. Socialist revolutionaries and social democrats both read the following left-wing Tatar periodicals: newspapers and magazines *Azat* (1906), *Azat Xaly'k* (1906), *Tang Mazhmugasy'* (1906), *Ural* (1907), *El'-Islax* (1907–1909), *Yashen*, and others, which were pronounced in their opposition to the bourgeois press, thus fostering the conditions for public discussions on the key areas of Jadid entrepreneurs' and the clergy's activities.

The Orenburg-based conservative magazine '*Din ve' magy'jshat*' was a harsh critic of both the reformists and the secular intelligentsia, rejecting any reforms or direct involvement of the Islamic community in politics. Russian periodicals that published meaningful works on the life of the Tatar population also based their interpretation of events on their own political leanings. For instance, the newspaper *Kazan-skij Telegraf* (1893–1917) initially favoured cultural and educational renewal in the Islamic community. However, as the editorial office adopted a pronounced right-leaning position in the early 20th century, it began to describe the same changes as a threat to the Russian Empire's political system. Liberal periodicals such as *Kamsko-Volzhskaya Rech'* acted as a platform for prominent Jadid leaders who wanted to stand their ground.

Soviet periodicals are of interest, too. It is worth noting that materials differ depending on the period when they were printed. Soviet journalism had to put up with ideological restrictions just as Soviet historiography did. Thus, periodicals were less efficient as information providers in 1946–1985 than they were during perestroika and glasnost. Even in the latter half of the 1980s, emotional evaluations tended to overpower the factual content of retrospective periodical materials. In terms of depiction of the past, the period was marked by a focus on the stressful political events of the early 20th century, as well as the establishment of the TASSR, the struggle around the national issue, and repressions of the national intelligentsia. In any case, the periodicals are valuable as they present a chronicle of events and the spirit of the age, though in a way not free of embellishment and bias.

A large amount of source material on contemporary history is also concentrated in periodicals. Central and local newspapers provide broad coverage of various issues related to the political, socio-economic and cultural development of the Tatars and other peoples in Tatarstan.

Sources of personal origin. Of no less value are sources of personal origin that are specifically suggestive of the public political sentiment of the Jadidist clergy and the ethnic intelligentsia [Iskhaky, 1991; Barudi, 2000]. For instance, the diary of G. Barudi, the leader of Kazan bourgeois reformists and a prominent clergyman and social activist from a rich merchant's family, reflects profoundly on the history and future of the Islamic world and the necessity of transformations to ensure the preservation of faith and social progress. The diary dates back to 1920, when Barudi was Mufti of the Orenburg Mohammedan Spiritual Assembly. Quite naturally, he often addressed in his notes the issue of the interaction between the Russian ummah and the new Soviet government as well as that of the existence of Islam in the context of class and atheist propaganda, which was gaining momentum.

Memoirs which are representative of various stages of the history of Soviet Tatarstan

are also of interest. The collection of memoirs compiled by V. Yakupova to celebrate the 10th anniversary of the Republic of Tatarstan's sovereignty reveal the previously unstudied problems of social, economic, and cultural development during that period. Memoirs by the republic's top officials, F. Tabeev, G. Usmanov, M. Shaimiev, and M. Sabirov, as well as writers R. Valeev and R. Mustafin contain intriguing information on the history of the oil industry, the construction of KamAZ Factory, and Tatar culture.

The memoirs by the first RT Prime Minister, M. Sabirov, 'Three Season', contain interesting data on the industrial development of the oil-producing southeastern region and the engagement of the local population in industrial development (Sabirov, 2006). He also edited a book of memoirs by managers and employees of the Tatneftgazstroy Company, which relates the accounts of people who directly contributed to the creation of the country's fuel and power sector [Sabirov, 2008]. Valuable information on the fledging period of the republic's oil industry can be found in memoirs by employees of the Minnibayevo Oil Company, which was subsequently transformed into Almeteyevneft Trust Company (The History of the Minnibayevo Oil Company, 2000). The book, compiled by famous local historian R. Amirkhanov, describes the strenuous working conditions of the region's oil pioneers.

Memoirs by colleagues of P. Tunakov, the famous economic leader of Kazan and the republic during 1950s–1960s, published to celebrate his 90th birthday, contain valuable data on the social infrastructure of Kazan [Abdyushev, edit., 1999]. The book by E. Bogachyov, the pioneer of the republic's modern public utility services Chairman of the RT National Bank, gives an insight into the everyday atmosphere of the 1950s–1960s, important details of the life of dormitory students and representatives of the technical intelligentsia, and manifestations of the public stance of Kazan's Sixtiers (Bogachyov, 2001).

Memories and reflections by the Regional Committee Secretary for Agriculture, F. Sadykov, are of interest in terms of agricultural and,

partly, industrial history (Sadykov, 2001). The book by the republic's legendary kolkhoz chairman, F. Galiev, is rife with interesting details about rural history, the republic's agricultural history during the difficult post-war period, the development of a stable kolkhoz system and its troubled relations with various governmental agencies (Galiev, 1987). Personal impressions, evaluations, and speculations can be found in essays on post-war rural history and Khrushchev's reforms in the Tatar ASSR contained in the book by the former TASSR Minister of Agriculture (1959–1962), U. Biktimirov (Biktimirov 1992). Agricultural subject matter is generously covered in a book by prominent RT politician R. Muratov (Muratov, 1996). It provides interesting information on the troubled post-WWII decade (famine, impoverished countryside, persecution of individual part-time farmers, tax burden).

Writers and humanitarian scholars from the republic have created a number of well-worded memoir accounts. The book 'Children of Their Time' by T. Galiullin provides a bold critical evaluation of the social and cultural policy implemented by the republic's government while depicting the morals of the local establishment during the so-called Tabeev epoch (Galiullin, 1993). Interesting information on the intelligentsia's attitude to the government can be found in the journalistic book by A. Eniki (Eniki, 1996); the literary community was depicted by T. Minullin (Minullin, 1994); repressions and the repressive policy for Tatar culture are the focus of A. Gilyazov's book (Gilyazov, 1997).

G. Valeeva-Sulejmanova describes the ostracism of the ethnic culture and her father F. Valeev's attitude to it in the essay 'The Golden Apple of Truth' (Valeeva-Sulejmanova, 1995). S. Shamov recalls the persecution of Tatar composer S. Saydashev in his memoirs (Shamov, 2004). In his book, he cites from memoirs of other friends of prominent artists. Memoirs of colleagues contained in collections dedicated to the memory of two prominent Soviet researchers, Z. Gil'manov and M. Mukharyamov, depict the atmosphere in which historians had to work during the Soviet era (In Memory of

M. Mukharyamov, 1995; In Memory of Z. Gil'manov, 2000).

Journalistic works, mostly dedicated to well-known people, usually managers of different levels, provide extensive and interesting information for analysis. For instance, the book by R. Mustafin and A. Khasanov on the first President of the Republic of Tatarstan contains meaningful supporting data on the difficult post-war period and the republic's agricultural history in the 1950s–1970s (Mustafin, 1995). Y. Shafikov's book on the life of Secretary of the Tatar Regional Committee of the CPSU, F. Tabeev, contains entertaining vignettes about the republic's social, political, and economic life in the 1960s–1970s (Shafikov, 2001).

Of certain interest are journalistic summaries which bear a kind of eyewitness nature. This is true when their authors do not confine themselves to their lives but describe the activities of institutions within their professional competence. Among such works is the book 'Fifty Years in the Vineyards of Culture' by M. Nizamiev. It provides information on the activities of various cultural institutions, museums, libraries, mostly in the countryside (Nizamiev, 1998). What makes such materials valuable is their revelation of the republic's political machinations for HR matters and important decisions to create large industrial facilities during that period. Most frequently, however, the message of such journalistic works is to praise the organization to which it is dedicated.

T. Minnibaev's 'Political Career of Provincials', which was written during the glasnost period, is an exception (Minnibaev, 1991). The author studies deputy candidates' biographies and election programmes published in newspapers from 1959 to 1990 to shed light on the problems of a political career in Soviet society. He demonstrates the safety mechanisms that secured long-term political welfare. The author raises burning questions about the lumpenized consciousness, as well as the clan hierarchy of provincial political leaders and shares anecdotes about the republic's political figures, whom he avoids to name directly. He did mention the names of those whose actions had not

always afforded them a quiet life and whom he respected, though. These are N. Kady'rmetov, K. Faseev, philosopher V. Lukashov, eccentrics I. Gimatov and T. Nazmiev, and several other journalists and social activists.

Dozens of journalistic works appeared in the Soviet and post-Soviet period to shed light on the history of certain enterprises and institutions in the republic (Bukharin, ed., 1957; Anisimov, 1960; Belokopy'tov, cr., 1993; Zari-pov, 1998; Pechilina et al., 1998; Abyazova et al., 2001; Frolova, 2001; 50th Anniversary of OAO 'Kazancompressormash', 2001; Dronova, 2002; Bury'lina, Project Manager, 2005), mostly to celebrate their anniversaries. Collections of works on the entire republic's history and also of its individual regions, mostly written by journalists, were also numerous (Alekseevsk district, 2000; Yakovleva, 2004; Nasretdinov, Minikhanova, Project Manager, 2005; History of the TASSR in One Journal, 2010; Our Home Tatarstan, 2010). Most of these works are written in an inflated language which fits their cut-to-measure nature. However, they often present interesting details that shed light on the difficulties of the fledging period and add a personality-centered dimension to the republic's history.

The collection 'Tataria: a New Line in Its Biography', authored by prominent social activists, journalists, and editors of publishing houses, presents the achievements of the Tatar ASSR during the Soviet period as exclusively positive, which is typical of Soviet books (Belokopy'tov, ed., 1981). Authors of 'The Steps of the Batyr' made a panegyric to the construction of the Kama Automobile Plant by romanticizing the overcoming of fledging stage difficulties (Musin, ed., 1973).

A racy description of the industrial development of new regions can be found in journalistic works by prominent journalists of the republic M. Zari-pov, R. Zari-pov, R. Mustafin, and Moscow journalist L. Zhukhovitsky (Zhukhovitsky, 1976; Mustafin, 1981; Zari-pov, 1986; Zari-pov, 1987). Though most of their essays deal with the Soviet period, they took an unusually harsh critical approach to the negative aspects of the republic's economic life.

While recognizing the value of literary sources, including memoirs, we still have to take into account their possible bias. Firstly, the human memory is limited. Secondly, deliberate corruptions can occur in memoir texts for many reasons. It is not necessarily a intentional fabrication, although still possible, but rather overdrawing some events and downplaying others that the author finds unfavorable. Thus, memoir documents pertaining to the epoch should only be used in combination with other sources.

Statistical sources. Mass statistic sources represent another important source group. It includes table statistics for a wide range of indicators provided by various institutions and organizations, published and preserved in archives, which deal with the size, age and gender composition, and migration of the republic's population, social and economic figures, etc. (Population Size, Composition, and Migration in the RT, 1992; Population Size, Composition, and Migration in the RT, 1993; Population Size, Composition, and Migration in the RT, 1994; Population Size, Composition, and Migration in the RT, 1995; Population Size, Composition, and Migration in the RT, 2001; Population Size, Composition, and Migration in the RT, 2002; Findings of the All-Union Census, 1990; Findings of the All-Russian Census, 2004; Age and Gender Composition of the RT Population, 2004; Age and Gender Composition of the RT Population, 2005; Republic of Tatarstan, 1998; Republic of Tatarstan, 1999; Republic of Tatarstan, 2004; National Archive of the Republic of Tatarstan, Fund P-3610, Inventory 1, File 1824, 1886a; RT Central State Archive for Historical and Political Documents, Fund 15, Inventory 12, File 230; Inventory 13, File 272; Inventory 14, File 377; Inventory 15, File 228, 886, 1656, 2527; Fund 4034, Inventory 46, File 26; Inventory 47, File 23; Inventory 48, File 21; Current Archive of the State Council of the Republic of Tatarstan, Fund P-3610, Inventory 1, File 1930, 2017, 2146; Fund P-6004, Inventory 1, File 42, 134, 235, 365, 510, 913; Statistics on the Treatment of Oral and Written applications to the State Council of the Republic of Tatarstan from 01.01.2002 to 31.12.2002

etc.). They are representative of the changing social and demographic situation, the status of the population, and the development of the republic's infrastructure of social institutions, indicating objective changes in the social and economic life of the peoples of Tatarstan. The statistic material available gives insight to various processes, in particular those which are expressly negative.

Of special importance among published sources are official published documents by the TASSR Statistical Agency covering a period of five years with extraordinary releases to celebrate the republic's and the country's anniversaries. They are hard to analyze, however, being inconsistent with each other and incomplete for lack of transparency during the Soviet period. Public editions never contained information on the condition of military industrial plants or other similar data. Besides, the values presented in them do not fully reflect the state of production, its profitability, the financial situation in certain branches of economy, economic relations, the allocation of national income, financial wealth by social strata, and many other aspects indicative of the real situation.

However, published statistics are quite representative and rich in content that enables researchers to trace transformation processes and determine the dominant trends. It is especially true with the statistic collection published to celebrate the 70th anniversary of the TASSR (Belova, edit., 1990). Being published in the context of glasnost during the struggle for sovereignty, it contains much more data as compared to previous editions, thus providing a multi-dimensional insight into ethnic considerations.

Dedicated collections of works dating back to the perestroika period contain information that traditional collections published before 1985 did not include and are statisti-

cally valuable. For instance, they present data on housing per capita, housing quality, the amount of telephones and private automobiles per capita, and the development of social infrastructure in the RSFSR, TASSR, and Kazan. In terms of industry, statistics were published on personnel turnover, loss of working hours, changes in yield on capital investment, etc. (Social and Economic Development of the Capitals, 1989; Social Development and Living Standard of the RSFSR Population, 1990; Social Development of the Country in the RSFSR, 1990).

At the same time, a number of things impede analysis of the statistics for the transitional period in history. These are primarily the constant changes to the list of indicators taken into account, leaving certain indicators partially covered or uncovered because of social and political changes that were being introduced in the country during that period.

Data of sociological studies carried out in the republic in different years form a separate subgroup of sources on contemporary history (Perestroika, 1987; Mukhametshin et al., 1998; Musina, ed., 2006; Musina, ed., 2011; et al.). Findings of surveys are an essential source due to the specific conditions of that period. Data obtained in representative mass surveys fill some gaps in the archive information on contemporary history.

Therefore, the range of sources described above presents the critical documentary basis for studying the complex processes within the modern and contemporary history of the Tatars and Tatarstan. They are representative enough to give an insight into all aspects of the society's political, social, economic, and cultural development in the 20th and early 21st century. Importantly, the above source groups often complement each other and suggest viewpoints for a critical analysis of literature on the research subject.

Section I

**Kazan Guberniya and the Tatar Community
of Russia at the beginning of the 20th Century**

CHAPTER 1

**The Social and Economic Development of Kazan Guberniya
in the Tatar Context in the Early 20th Century****§ 1. The Economy of Russia During the Imperialist Period
and the Development of Tatar Entrepreneurship in Kazan Guberniya***Lyudmila Sverdlova, Marat Gibadullin*

A complicated economic situation had developed in Russia by the beginning of the First World War. Russia's general economic performance was impressive. The average growth of industry production exceeded 11% in 1910–1914. Producers' goods industries increased their production by 83% over the same period, while consumer goods production increased by 35.3%. The previously initiated monopolization progressed rapidly: higher-type monopoly associations, such as trusts and concerns, appeared. However, industrialization had a long way to go in 1913—Russia's economy remained predominantly agricultural, foodstuffs, semi-finished goods, and raw materials accounting for over 90% of Russia's export. At the same time, Russia's import of industrial goods was large enough to cause concern about the country's growing dependence on industrial import in the upper strata of the bourgeoisie.

Among pre-war influences, Stolypin's agricultural reform facilitated agricultural modernization and brought about a considerable growth of agricultural production, to which favorable weather conditions during the antebellum period and increased prices for agricultural produce in the global and domestic markets also contributed.

The country's rapid economic development caused the population's living standard to rise from 1908 to 1913, which took the form of an increase of national income per capita by 17%. It brought about a considerable growth in the domestic commodity turnover, of which the trading volume of Tatar-owned commercial enterprises in Kazan as of 1904 and 1913 are suggestive (Table 1.1).

The number of Tatar-owned trade enterprises increased by 12% over nine years, while their commodity turnover surged by 47%; the commercial capital of the national bourgeoisie tended to grow.

*Table 1.1***Commercial capital of the Tatar bourgeoisie of Kazan in 1904 and 1913¹**

Years	Number of businesses		Annual turnover	
	total	increase (%)	total (million roubles)	increase (%)
1904	121	100.0	10.2	100.0
1913	143	122.0	15.0	147.0

¹ It covered approximately 1/3 of the number of commercial enterprises that were in the hands of the Tatar capitalists. Small establishments (with a turnover of less than 10 thousand roubles per year) were not taken into account as their proportion of the total turnover did not exceed 3%–4%, although numerically they ranged from 78% to 86% of all enterprises.

However, the data on patterns in retail turnover does not fully reflect the real situation in the national trade entrepreneurship. The nominal turnover in current prices is a point-in-time indicator of the state of the commercial capital. In order to get a more objective idea of the dynamic patterns we have to adjust the nominal turnover to the increased price level. For this purpose we can use the price index as the ratio of the current price of the commodity bundle of the base period to its price of the base period [Torvey, 1993, p. 17].

Having compared the commodity price levels of 1904 and 1913, we can infer that commodity prices for raw materials, flour, sugar and other commodities traded by Tatar entrepreneurs increased by 30.9% over the period in question (calculated in accordance with: [Svod tovarny'x cen, 1914]). Thus, the real commodity turnover, or the 1913 turnover in 1904 prices, was 11.5 million rubles. That is, it had increased by 12.7% over 9 years. The growing commodity turnover of Tatar-owned commercial enterprises in Kazan is largely attributable to the increased price level. It should be mentioned, however, that inflationary domestic trade was an essential trend of Russia's economic development in the 20th century.

Characteristically, the development of the Tatar bourgeoisie's commercial capital in the early 20th century was slower than when compared to Russia, though a certain growth was witnessed. The peculiar structure of the domestic market was one of the reasons.

The capacity of Russia's market of produced goods expanded steadily in the early 20th century. The demand for cast iron, steel, energy commodities, and construction materials surged, which brought about an intense capital growth in the respective industries and trade spheres. At the same time, the consumables market expanded at a slower pace as it faced the low level of the population's material welfare. Tatar tradesmen mostly strove to meet the population's needs and largely depended on the consumables market.

Another reason why the Tatar bourgeoisie was accumulating commercial capital at

a slower pace might be the fact that Russia's transition to imperialism was marked, among other things, by a dramatic aggravation at competition in the domestic market, which now involved not only local entrepreneurs but large-scale capitalists from Moscow, Saint Petersburg, and other trade and industrial centres. The rivalry for market outlets caused an influx of large capital to provincial areas, where competition was less and opportunities of profitable investment far wider. The migration of capital from areas of surplus to areas experiencing a shortage is a regularity for a market economy.

This pattern emerged in Russia in full measure. In Kazan alone, the large stock companies of V. Vysotsky, A. Kuznetsov, V. Aratsky, Joint-Stock Company 'Treugolnik', and others, established branches in the beginning of the century. [Khalikov, 1988, p. 255]. Possessing enormous, by provincial standards, capital of ten and more million rubles and enjoying far more opportunities to purchase goods at favorable prices, raise credits, etc., these firms seriously challenged provincial entrepreneurs in local markets.

As commercial capital grew, its concentration and centralization increased (Table 1.2).

Large capital came to dominate the market by forcing not only small entrepreneurs but also some of the medium ones out of the market. Owning an insignificant part of commercial enterprises, large businessmen concentrated about 57% of retail commodity turnover in 1913 as compared to 50% in 1904, their share of the total number of commercial enterprises remaining almost unchanged. The percentage of small and medium businesses remained large (over 96% of all enterprises), but their share of the total commodity turnover decreased by 7% over the period in question.

All of the large commercial capital of the national bourgeoisie in the territory of Kazan province was primarily concentrated in Kazan. Small and medium trade companies dominated other locations within the province.

The second most important city in terms of trade in the Kazan Volga region was Chistopol. It became even more significant at the end of

Table 1.2

**Concentration of the Kazan Tatar businessmen's commercial capital
in the early 20th century**

Size of commercial enterprise	1904		1913	
	number	turnover	number	turnover
	(%)		(%)	
10,000–49,000 roubles	71.6	13.2	68.8	12.7
50,000–399,000 roubles	24.2	37.2	26.9	30.0
≥400,000 roubles	4.2	49.6	4.3	57.3

the 19th and early 20th centuries as the region's major centre of crop trade, in which Tatar entrepreneurs actively participated. According to the 1913 data, there were 33 Tatar-owned institutions in Chistopol and the uyezd, having a total annual turnover of over one million rubles [National Archive of the Republic of Tatarstan, Fund 3, Inventory 1, File 7493].

When Russia entered the imperialist stage, it witnessed a growth of commercial capital and an expansion of the trade entrepreneurship sphere. It was reflected both in the growing number of trading houses and in the increased size of their authorized capital. For instance, in Kazan from 1892 to 1913 the number of trading houses increased from 20 to 87 (or 4.3 times), while the amount of capital went from 2.5 to 4.9 million rubles (doubling) (calculated according to: [National Archive of the Republic of Tatarstan, Fund 98, Inventory 5, File 2374]). Tatar capital grew and strengthened its position during these years. Tatar entrepreneurs had opened as many as 154 trading houses having a total capital of 4.9 million rubles by 1913 [Khasanov, 1977 b, p.223].

However, major structural shifts happened in spite of the general capital growth. They were related to the fact that the growth in the number of trading houses was mainly attributed to small and medium capital, for which the problems of survival under conditions of fierce market competition held actual meaning. For example, in Kazan the number of small and medium sized trading houses, having capital of up to 100,000 rubles, increased 6.3 times, but for large ones only 1.3 times. For

Tatar entrepreneurs, these indices changed by a factor of 20.8 and 2.6, respectively (calculated according to: [National Archive of the Republic of Tatarstan, Fund 98, Inventory 5, File 2374]).

Such changes resulted in a general reduction in size of trade capital. Their average capital became smaller. While the average trading house in Kazan had a capital of 125,000 rubles in 1892, the value had decreased to 60,000 by 1913. The figures for Tatar entrepreneurs are 147,000 and 32,000 rubles, respectively.

Some trading houses were notable by the size of their commercial operations. For instance, the trade house 'Khalfin Brothers' was notable by its large capital and extensive commercial activities. It was established as an unlimited partnership by burghers from Menzenlinsky uyezd, the Khalfin brothers in 1910. The trading house specialized in the sale of grain. A large network of branches in 15 localities across Ufa guberniya was indicative of large-scale commercial activities. The trading house had a total of 34 shops and 2 warehouses, with a total annual turnover of its enterprises exceeding 1.2 million rubles. [National Archive of the Republic of Tatarstan, Fund 551, Inventory 1, File 65, Sheets 36–37]. The trading house even exported some goods abroad.

The trading house 'V. Ibragimov and Brother' played a significant role in Kazan's commerce. It was established in 1912 by local merchants Valiulla and Usman Ibragimov to trade tea both within and beyond the city. The trading house had an authorized fixed capital of 75,000 rubles [National Archive of the Re-

public of Tatarstan, Fund 98, Inventory 5, File 1212, Sheets 19–20]. The firm's office was situated on Sennaya Street, where there were also 3 trading and as many storage facilities. It employed 9 people. The company's turnover was 1.3 million rubles in 1913 [National Archive of the Republic of Tatarstan, Fund 3, Inventory 1, File 7699, Sheets 43–44].

Gradually, the role and importance of capitalist associations in commerce increased. So, if in 1904 Tatar capitalist trading houses belonged to 3 commercial establishments (2.5% of the total number), in 1912 it was 19 (17%), and by 1913 it was already 24 (18%). During these years, the turnover of these enterprises increased as follows: 380,000 rubles (3.7% of the total turnover), 1,113,000 rubles (17.3%) and 3,420,000 rubles (24%).

It is important to note that at the beginning of the 20th century, as in the mid-19th century, some trading houses were established for the development of industrial production. For example, the 'I. Arslanov Soap and Glycerin Factory Partnership' with a capital of 50,000 rubles, was established in Kazan in 1900. The company included a soap factory founded by Kazan merchant Iskhak Arslanov back in 1870 and several other enterprises. The founders were the first guild merchants S. Aitov and G. Gizatullin, each of which contributed half of the fixed capital [National Archive of the Republic of Tatarstan, Fund 98, Inventory 4, File 35, Sheets 14, 16]. The partnership enhanced the plant's production capacity significantly. While in 1900 the plant produced a 21,000 poods of soap of various types, having total value of over 75,000 rubles [National Archive of the Republic of Tatarstan, Fund 908, Inventory 7, File 354, Sheet 31 reverse–32], in 1905 the values had increased to 40,000 poods and 210,000 rubles, respectively [National Archive of the Republic of Tatarstan, Fund 685, Inventory 1, File 5, Sheets 117–118]. It is noteworthy that S. Aitov initially raised capital through commerce. He was one of the largest traders of raw materials in Kazan. At the beginning of the century, his company had a turnover of over 1 million rubles [National Archive of the Repub-

lic of Tatarstan, Fund 98, Inventory 7, File 441, Sheets 55–56].

Tatar entrepreneurs also established industry-oriented trade houses in other governorates in the Volga region and the Urals. Yet, X. Khasanov estimates the number of trading houses owned by Tatar capitalists which carried out full-scale industrial activities in 1913 as 18 out of 154 [Khasanov, 19776, p. 220].

Therefore, commercial capital remained important to the development of Tatar ethnic industry.

Trade joint stock companies established by large-scale entrepreneurs also contributed to the mobilization of funds. Tatar businessmen also founded such companies.

'D. Izhboldin and Sons' was registered and began to operate as a joint stock company in 1913, its board was situated in Moscow. The company's fixed capital amounted to 3 million rubles. The partnership was able to raise a profit of 11,000 rubles over 6 months in 1913. Its balance as of January 1, 1914 was 5.3 million rubles. The Izhboldin Company carried out large-scale commercial activities in Sarapul, Yekaterinburg, and Shadrinsk, where its wholesale stores and warehouses were located, as well as Nizhny Novgorod, Irbit, and Menzelsk fairs. They mostly sold dry goods [Joint stock and share enterprises of Russia, 1915, p. 602; Izhboldin, New Delhi, 1963, p. 125].

The total number of partnerships held by Tatar entrepreneurs increased 3.5 times from 1900–1916 as compared to the 1880s–1890s, that is, from 16 to 57. However, most of the share capital (73%) was invested in trade, while trade houses had a very small authorized capital. 72% of all partnerships in the early 20th century had a fixed asset of 2,000 to 10,000 rubles (calculated in accordance with: [Salikhov, 2002, pp. 220–249]). Not only merchants but also burghers and even peasants could be co-founders of a partnership. It was not impossible for a co-founder to contribute as little as 300 rubles. A large number is family enterprises characterized the Tatar business community.

Noteworthy, Muslim women, mostly relatives of other shareholders, are mentioned as

shareholders and even co-founders of some companies. Women founded joint stock companies in isolated cases. In 1915, Kazan burgher women Fatika Sabotivna and Khalifa Mukhametshevna Sabitova contributed 2,000 rubles each in cash, goods, and property to establish an unlimited partnership, the Trading House of 'F. and G. Sabitova', which was engaged in crop trade [Salikhov, 2002, p. 237].

Thus, the Tatar commercial capital had developed to an impressive extent by the beginning of the 20th century. Capital concentration and centralization were well under way; the scale and rate of accumulation increased. Tatar merchants continued to play a central part in the formation of the ethnic industrial capital. It was they who mostly initiated the establishment of new industrial enterprises. It is safe to say that the ethnic trade capital was crucial to the development of market relations in the Tatar society.

Reforms in Russia served as a powerful impulse for the deep transformation of social and economic relations in Tatar society. The process largely consisted in the gradual involvement of the Tatar population in the functioning of the market economic system and its integration to the general Russian market.

As everywhere else, market relations in the Tatar community followed the intrinsic economic patterns common for all peoples in Europe and Russia. The Tatars, just as with other peoples in the Russian state, travelled a long path to formation and consolidation, that included such stages as initial capital accumulation, industrial revolution, the transition from free competition to monopoly capitalism, etc.

On the eve of the First World War the national bourgeoisie had achieved a relatively high level of maturity. By this time, a number of modern businesses and several joint stock companies had been opened by Tatar entrepreneurs. Market social reproduction had become the economic basis of Tatar existence. The institutional framework of market economy and, most importantly, ethnic entrepreneurship, had developed. In competing against each other and against wealthier Russian and foreign capitalists, they had to exercise ingenuity and initiative, and adopt non-traditional approaches to finding capital application and market outlets. At the same time, fierce market competition motivated Tatar entrepreneurs to join their efforts with capitalists of other ethnicities and regions of Russia. As a result of the integration and internationalization of economic life, the entire Tatar nation became actively involved in the unified economic expanse of the country, facilitating their access to scientific and technical knowledge and achievements, to domestic and global economic practices.

However, Tatar entrepreneurs did not restrict themselves to purely economic activities. They created the material background to ensure a full-scale and all-round development of the Tatar people. They did a lot for the support and development of national culture, science, and education. Due to this, at the beginning of the 20th century the Tatar people experienced a spiritual and moral upsurge, a break in their national insulation and isolation occurred, and the interaction between Tatars living in different regions of the country strengthened. All this contributed to the increased role and strengthened authority of business structures.

§ 2. Main Spheres of Activity of the Tatar Bourgeoisie

Radik Salikhov

Social activeness and the efficiency of Tatar entrepreneurs in the early 20th century were largely determined by the results of their professional activities. Successful businesses concentrating large financial and

physical resources, as well as the rapid development of commodity-monetary relations and modern industry were a locomotive for progress for only yesterday's patriarchal Tatar communities.

The establishment of capitalistic relations within the Muslim community of the Volga region and Cis-Ural region throughout the 19th century determined the formation of large centres of Tatar entrepreneurship in Kazan, Orenburg, Saratov, Simbirsk, Ryazan, and other Guberniyas of the Russian Empire. A number of essential political and economic influences, such as the abolition of serfdom, the governmental reforms of the latter half of the 19th century, and the beginning of the industrial revolution that triggered rapid industrialization in previously existing manufacturing, and the appearance of new sectors of production.

The size of Russia's Tatar bourgeoisie and its actual contribution to the country's economy is an issue still important and underexplored. For instance, according to the statistics provided by X. Khasanov, the Tatar bourgeoisie consisted of 7,565 people (including family members), i.e. 0.41% of the total in the Tatar social structure at the end of the 19th century. In 1914, Tatar capitalists owned 141 industrial enterprises having an annual capacity of over 10 million rubles and 154 trading houses having a total authorized capital of over 9 million rubles [Khasanov, 1977 b, pp. 218–219, 223, 229]. M. Gibadullin analyzed the records of the 1897 First General Census of the Russian Empire and estimated the number of Tatar entrepreneurs in 10 governorates at 13,892 people. According to the researcher, in Kazan guberniya there were 2,818 in commerce and 2,988 in Orenburg guberniya. He does not provide any concrete figures on the number of Tatar businesses and their total capital against the general Russian backdrop and often relies on the statistics of X. Khasanov and fragmentary information from statistical records collections.

It must be admitted that the poor source base, weakened by its class orientation and a certain disregard of the ethnic and confessional aspect of Russian entrepreneurship does impede both quantity and quality analysis of the key spheres of the Tatar bourgeoisie's commercial and industrial activities. It seems that only a rough solution can be provided by sources of different types and different statistical methods. In

general, M. Gibadullin's calculations are more representative of the count of the Tatar bourgeoisie than similar statistics of X. Khasanov. However, it is also obvious that the contemporary literature on the information of the number of Tatars engaged in entrepreneurship in the late 19th–early 20th century is understated.

The city of Kazan was one of the largest centres of the ethnic commerce and industry in the Volga region and the Cis-Ural region, as its history and geographic position had determined its great importance for the consolidation and development of the Tatar ethnic group. According to the First All-Russian Census of 1897, the Tatar share of Kazan's population was 22% [Khalikov, 1988, pp. 199, 213–214], while the Tatar bourgeoisie, being the second largest after the Russian one, exerted serious economic, social, and political influence on the governorate centre. For instance, the 1900 statistics by the Kazan City Duma (Council) mention 19 Russians, 7 Tatars, and 6 Hebrews among persons with 1st guild authorized capitals and 188 Russians and 52 Tatars in the 2nd guild.

At the same time, the city's Tatar bourgeoisie was by no means limited to people belonging to this or that guild. We think that the rough average number of urban Tatar tradesmen and manufacturers—that are, those who had a business, large or small, and had a profit, correlates to the number of householders in the sloboda mahallahs of Kazan. Here in 1909 there were 1281 people (calculated according to: [National Archive of the Republic of Tatarstan, Fund 2, Inventory 2, File 8464, Sheets 1–18, 76, reverse–77]). Taking into account the fact that the average Muslim urban family consisted of 5 and more members, the Muslim business community of Kazan included approximately 6,400 people, which is about 20% of the total Tatar population of the governorate centre.

According to D. Iskhakov, the number of urban dwellers of Volga-Ural Tatar origin that lived in Russia in the late 19th century was 160,000 [Iskhakov, 2002 a, p. 65]. By analogy, at least 20% of them were actively engaged in commerce or production, which is 32000

people if we count family members. We should clarify once again that these figures are approximate and, in our opinion, are not representative of all quantitative parameters of the Tatar bourgeoisie. It is all the more so because all urban Muslims were to some extent engaged in active market relations through small-scale retail, crafts, and servicing the commercial infrastructure.

We find it obvious that the ethnic bourgeoisie, though it remained a small social group not only as part of the Russian society but within the social structure of the Tatar ethnic community, still preserved its ethnic and confessional identity as well economic independence, acting as the key, and very efficient, coordinating force for Russia's Muslim ummah.

Kazan had the advantage of having the highest concentration of ethnic capital and diversity of commercial and production activities over other cities in the country with a dense Muslim Tatar population. The principal business activities were confined to the Old Tatar and New Tatar Slobodas, which were in fact special ethnic urban units guided by Sharia in their everyday life. The main commercial centre of Muslim Kazan during that period was the 2nd Police Neighborhood, which covered several quarters of the Old Tatar Sloboda, in which a large Eastern bazaar known as the Hay Market existed from the late 18th century. That was a neighborhood of tenement building, hotels, restaurants, inns, hundreds of shops and stores, mostly belonging to Muslim entrepreneurs. According to the statistics provided by the Kazan Treasury Chamber, it contained 334 officially established Tatar-owned commercial and industrial enterprises having a total annual turnover of 14.6 million rubles from 1914–1916. By comparison: merchants and tradesmen of other ethnic and confessional groups who traded in the Hay Market and streets adjacent to it only owned 87 businesses having a total turnover of 2.2 million rubles (calculated according to: [National Archive of the Republic of Tatarstan, Fund 3, Inventory 1, File 8020; File 1479, Sheets 1–23; File 11481, Sheets 1–22]).

Practically all Muslim institutions of that district specialized in trade. The largest turnover was associated with crop retailers and groceries (66 businesses having a total turnover of 4.4 million rubles), dry goods shops (20 businesses having a total turnover of 2.4 million rubles), shoe shops (55 businesses having a total turnover of 1.6 million rubles), raw material shops (9 businesses having a total turnover of 1.2 million rubles), tea shops (1 business having a turnover of 1 million rubles), and haberdasheries and stores (9 businesses having a total turnover of 560,000 rubles), etc.

Tatar industry in Kazan was traditionally concentrated in the 5th Police Neighborhood, which included several streets of the Old Tatar Sloboda and the entire New Tatar Sloboda. According to the statistics for 1912, it contained 116 active Muslim-owned businesses having an annual turnover of 2.4 million people, 34 of which were production plants having a total turnover of 1.2 million rubles.

Soap making dominated the city's Tatar industry. One of the largest and most successful enterprises in this industry was 'Iskhak Arslanov Soap and Glycerin Factory Partnership', founded by 1st guild merchant S. Aitov and 'merchant's son' Kh. Gizzatullin in 1900. They acquired the factory from the merchant I. Arslanov [National Archive of the Republic of Tatarstan, Fund 98, Inventory 4, File 35, Sheet 16]. In 1912, S. Aitov and Kh. Gizzatullin's plant had an output of 49,130 poods of various kinds of soaps and 173 poods of tallow candles. 50 workers laboured here and the annual turnover was 200,000 rubles [National Archive of the Republic of Tatarstan, Collection 757, File 2a, Sheet 195].

Another important area of Muslim industrial activities was coarse calico production and dyeing. Two coarse calico dyeing plants owned by Tatar capitalists produced 600,000 arshines of coarse calico per year and had a turnover of 450,000 rubles. They employed a total of 92 people. The largest enterprise here was the 'Utyamyshev Coarse Calico Dyeing Plant Partnership'. It had an annual turnover of 217,000 rubles [National Archive of the Republic of

Tatarstan, Collection 151, Inventory 1, File 26, Sheet 26 reverse].

The foodstuffs industry, mostly represented by confectionery shops and bakeries, was a flourishing Tatar sector at the beginning of the 20th century. A total of 7 businesses having an annual turnover of 91,200 rubles and employing 95 workers were active in Kazan.

Apart from coarse calico, soap, and foodstuff production, a traditional industry of the early 19th century, tanning, had been to some extent preserved in Kazan. For instance, burgher Yakub Ibragimovich Kozlov ran a Russian leather tannery in Bolshaya Simbirskaya Street, New Tatar Sloboda (now Mekhovshnikov Street), at which 32 workers processed high quality leather that was popular far beyond Kazan. The business had a turnover of 120 rubles [National Archive of the Republic of Tatarstan, Fund 3, Inventory 1, File 11483, Sheets 10–11]. A network of trade companies and tradesmen formed around numerous efficient plants to provide the raw materials that they required.

Thus, numerous branches of trade and industry flourished in the ethnic neighborhood of Kazan in the early 20th century. Muslim entrepreneurs were actively involved in various spheres of production except for metal processing, alcohol and tobacco production and trade. The 5th Police Neighborhood contained 188 trade and industrial enterprises in 1916, of which 116, having a total annual turnover of 4.4 million rubles, were owned by Tatar manufacturers and tradesmen. Again, over 30 out of 50 industrial plants within the neighborhood were owned by Muslim entrepreneurs. The 19 largest plants and factories had a total annual turnover of 1.2 million rubles (calculated in according to: [National Archive of the Republic of Tatarstan, Fund 3, Inventory 1, File 11483, Sheets 1–33]). In the Old and New Tatar Slobodas in Kazan together, a total of about 500 Tatar-owned commercial and industrial enterprises having a total annual turnover of 19 million rubles were active in 1914–1916 (calculated according to: [National Archive of the Republic of Tatarstan, Fund 3, Inventory 1, File 8020; File 11479,

Sheets 1–23; File 11481, Sheets 1–22; File 11483, Sheets 1–33]).

The success and stability of Tatar trade and industry in the context of fierce competition suggests that the ethnic business had some special economic coordinates, a firm customer of its own, a raw materials base, and labor resources and practiced business cooperation. That is, several elements had formed within the specific Tatar Muslim economy as the key sphere of activity for Russia's Tatar entrepreneurs, who shared no interests with the Russian bourgeoisie or at least did not have any interests inconsistent with the latter's professional ambitions.

There is historical evidence that special branches of the ethnic commerce and industry supplied the religious needs of the Muslim population; their production and offers enjoyed a stable high demand in areas with a dense Muslim population. These were primarily the production and trading of ethnic clothes, sacred objects, spiritual literature in the community's native language, foodstuffs, etc. Such businesses can be termed Islamic-orientated. For instance, 104 businesses of the kind were active in the district of the Hay Market in Kazan, which made up 31% of the total number of Tatar-owned shops and factories in the neighborhood. They had a total annual turnover of 2,460,000 rubles, i.e. 17% of the total annual turnover of all Muslim-owned businesses (calculated according to: [National Archive of the Republic of Tatarstan, Fund 3, Inventory 1, File 8020; File 11479, Sheets 1–23; File 11481, Sheets 1–22]).

Besides this, another important sign of the special economic relationship in the Muslim Tatar community was self-reliance, a pronounced ethnic and confessional solidarity. A majority of Tatar-owned commercial manufacturing businesses relied on the handicraft of Muslim auls, being their chief consumer of animal breeding and agricultural production. This determined the specific personnel policy and labor organisation as well as tight professional connections between Muslims, residing in different regions of the state. As missionary V. Doronkin noted:

For Tatars engaged in seasonal work and trade, it is difficult, even impossible, to find good employment or trade without "protection", a "mutual support" from Tatars, without 'kinship'. Tatars tend to trade exclusively with Tatars' [Kasimovskaya pravoslavnyaya magometanskaya missiya, 1909, p. 171].

Apart from Kazan, a significant trade and commercial centre for the Tatar people was Orenburg guberniya, which had been acting as a trade mediator between Russia and Middle Asia since the 18th century. Tatar business was concentrated in the cities of Orenburg, Troitsk, Seitov sloboda, and other localities. According to the statistics of 1872, in Orenburg the local first and second guild merchant community consisted of 158 Orthodox Christians, 15 Schismatics, 20 Muslims, and 5 Hebrews [State Archive of Orenburg oblast, Fund 41, Inventory 1, File 107]. As in Kazan, the number of entrepreneurs is unlikely to have been limited to the figures above. According to the 1897 census records, 11,321 Tatars resided in Orenburg, and about 13,000 in Seitov township [Iskhakov, 2002 a, p. 65; Bakirova, 2004, p. 221]. Approximately a quarter of them were engaged in entrepreneurial activities.

In spite of its relatively small Muslim population, Troitsk was clearly dominated by the Tatar bourgeoisie, represented by such influential trading families as the Yaushevs, the Bakirovs, the Valievs, the Idrisovs, the Urazaevs, etc.

The main commercial sphere in which the region's ethnic business community was active in was purchasing fabric, raw materials, peltries, leather, animal fat, and livestock for further sale in Russia's domestic markets and fairs. In the late 19th–early 20th century, the Khusainov brothers from Seitov township, 1st guild Orenburg merchants, controlled a major sector in the trade with Turkestan. The family's undivided capital amounted to approximately 4 million rubles in the last quarter of the 19th century. The founder of the family business was Akhmed Galeevich Khusainov (1837–1906), who while still a young man, opened his own store in Orenburg, trading small commodities and raw materials, to which

his brothers, Makhmud (1839–1910) and Gani (1839–1902) later joined. Together they formed the company 'Akhmed Khusainov and Brothers', which carried out trade mediation between European Russia and Middle Asia. The general sales of all the Khusainov Brothers' enterprises amounted to several million rubles.

Significant indicators showed that there were many notable entrepreneurs from Orenburg guberniya, mostly animal raw material merchants or owners of agricultural and livestock processing plants. Fur and leather, dry goods, and foodstuff traders, such as 2nd guild merchants Abdulla Kinikeev, Khusain Gubaydullin, Gimadutdin Khalilov, honorary citizen by birth Mukhametsabir Adamov, the peasant Mukhammadi Ayupov, and many more enjoyed success in Orenburg.

The 'Yaushev Brothers' Trading House was one of the governorate's largest commercial and industrial companies with an annual turnover of 1.1 million rubles. They owned a tannery, a soap factory, grain mill, tea plant, retail and wholesale stores for the sale of dry goods, haberdashery, hardware, groceries, and other goods in the city of Troitsk. Besides this, the trading house owned two gineries and cotton plantations in Tashkent and had its own branch offices in Chelyabinsk, Kochkar, Kustanay, Tokmak, and other localities [Central Historical Archive of the Republic of Bashkortostan, Fund I—295, Inventory 6, File 1459, Sheets 3–4].

However, the majority of Troitsk businessmen restricted themselves to a narrower sphere of trade in raw materials and the processing industry. It was not coincidental that, among Tatar industrial institutions, apart from the Yaushev factories specified above, only 3 wool-scouring plants and 11 slaughterhouses with tallow boileries were mentioned. [List of Owners of Industrial Facilities Located in Orenburg guberniya, 1900, pp. 81–82]. However, they remained the indisputable leaders in the tanning industry. According to the statistics of the Troitsk City Duma, in 1917 the uyezd centre had 5 large tanneries that processed a total of 96,000 skins per year. Three of them

belonged to Tatar capitalists: the Yaushevs (annual output of 60,000 skins), the Valeevs (annual output of 15,000 skins), and the Idrisovs (annual output of 5,000 skins) [State Archive of Orenburg oblast, Fund 15, Inventory 1, File 348/1, Sheet 50].

In the latter half of the same century, Tatar entrepreneurs Shakir and Zakir Rameev, having accumulated start up capital from trading dry goods, opened several dozen gold fields in which thousands of workers laboured. In 1902–1904, they owned 79 gold fields having a total annual output of up to 50 poods of gold. On the whole, in terms of the numbers of Tatar commercial and industrial enterprises, in terms of their gross turnover, Orenburg guberniya was in no way inferior to Kazan. According to some figures, it reached 16 million rubles a year [Amirkhanov, 2000, p. 233].

The territory of the following three governorates in the Volga region was a major Tatar industrial area: In Saratov, Samara, and Simbirsk large Muslim-owned textile factories emerged from the 19th to the early 20th century. Among these were Ishmukamet Deberdeev's cloth factory in the village of Verkhozima, Kuznetsk uyezd, Saratov guberniya, and similar ones in the village of Pendele of the same guberniya, owned by Mustafa and Yakh`ya Deberdeev. The plants produced army broadcloth. The former employed 600 workers and the latter two 900. The Deberdeevs' factories were regarded as the largest plants in the Saratov Volga region. While at the neighboring plant of Rabotkin one worker produced an annual amount of goods having a value of 357 rubles, the same at the Deberdeevs' factory yielded 414 rubles 70 kopecks [Grigoriev, 1974, p. 5, 6]. The cloth factory of Khamid Aleev from the village of Mullovka, Stavropol uyezd, Samara guberniya also supplied the Russian army. The Aleev brothers established a cloth plant with steam equipment in the villages of Bobylevka and Lyakhovka, Simbirsk guberniya, in the mid-19th century. However, the most important textile plants in Simbirsk guberniya belonged to the Akchurins. For instance, merchant Sulejman Akchurin established a cloth plant in the village of Staroye

Timoshkino, Sengiley uyezd, in 1849. It employed 200 workmen and 15 experts and had a turnover of 60,000 rubles in 1855. Its staff had increased to 1,423 workmen in 1861 to produce 255,000 arshin of cloth having a total value of 204,000 rubles. After the businessman's death, his sons continued to run his business, first as the Akchurin's Widow and Sons Trade House ('Vdova Akchurina s synov`yami' and, from 1874, as part of the Brothers Akchurin Trade House ('Brat`ya Akchuriny'), members of the 1st Simbirsk Merchants Guild, honorary citizens by birth A. Akchurin, Ya. Akchurin, Sengilevskoye 1st guild merchant, honorary citizen by birth Yu. Achurin [Tairov, 2002, pp. 19–25]. They had two factories in Staroye Timoshkino outfitted with the latest equipment. The plants produced various types of cloth from 1876 to 1877: army, guard, napless, camel hair, etc., both for public use and for private trading at a volume of 700,000 arshin having a value of 85,000 rubles, which amounted to 38.3% of the governorate's cloth production [Sverkalov, edit., 1989, p. 91]. The trade house employed a total of 1,450 people in 12 buildings. The plant also prepared the necessary raw materials. The Akchurins bought wool in Middle Asia to scour over 100,000 pood of it at the plant each year [State Archive of Ulyanovsk oblast, Fund 76, Inventory 8, File 297, Sheet 44]. Another large capitalist from the Akchurin family, Timerbulat Akchurin, became the owner of a cloth plant in the village of Gur'yevka, Karsunsky uyezd, Simbirsk guberniya, in 1862; the plant employed 1,200 workers and produced up to 1 million arshins of army cloth in the late 19th century. He also owned the Samaykino Plant, Syzran' uyezd, which employed 800 workers producing 500,000 arshins of cloth.

The Gur'yevka plant alone had a turnover of 2,293,886 rubles in 1914. At the same time, the annual production capacity of 7 Tatar-owned industrial associations in the Volga region amounted to 765,000 arshins of cloth, i.e. 35% of the total production potential of the region's 24 largest plants (calculated according to [Tairov, 2002, pp. 87–88]).

Fur and tanning industries were traditional among Tatar entrepreneurs from the city of Kasimov, Ryazan guberniya. Back in 1830, a tannery ran by the honorary citizen by birth Xamza Sayyid Shakulov with 180 vessels and an output of 45,000 skins having a value of 140,000 rubles enjoyed success there. However, during the post-reform period the Merlushka lamb skin industry became better developed. The Kastrovs became actively engaged in sheepskin tanning and the sheepskin coat trade in the 1860s. All small plants ran by Kasimov businessmen were processing and dyeing a total of 120 Bukhara and Kirghiz merlushka lambskins, which they primarily purchased from Tatar merchants in Orenburg and Astrakhan [Materialy' dlya geografii. Ryazan guberniya, 1860, pp. 274–276]. The industry gained momentum in the early 20th century. For instance, Xabibula Musyaev ran a fur factory in Kasimov, which employed 60 workers and had an annual output of 50,000 rubles. Plants owned by Kh. Taneev, M. Devishev, Vergazov Brothers' Trade House, etc. were also active in the city. In 1913, A. Kastrov's merlushka lamb skin plant alone had an annual output of 1.5 million skins. 9 large Tatar-owned fur plants having a total turnover of 3.6 million rubles operated in Kasimov uyezd [Filippov, 2001, pp. 67, 98]. Yet, like in other regions, the ethnic business in Kasimov was not purely industrial but also commercial. Many famous Tatar families from Kasimov—the Akbulatovs, the Kastrovs, the Ishimbayevs, the Shakulovs, the Tubakaevs, and others carried out intense commercial activities, mostly outside of their governorate, at the Nizhny Novgorod Fair, in Moscow, Saint Petersburg, and Little Russia.

Kasimov Tatars were largely engaged in small-scale service provision, catering, and retail trading in capitals and on stations along the Nikolayev Railroad. They eventually formed influential and rich local communities in the late 19th and early 20th century.

Speaking of the nature of Tatar bourgeoisie's entrepreneurship in the post-reform period, we should place special emphasis on the further development and growth of capital from infra-eth-

nic mediated trade. This was attributable to the commodity production of that period which had a tendency to establish joint ownership trading houses. As the ethnic economic system was formed and tight, deep trade and economic relations were established between regions with dense Muslim populations, capital became extremely concentrated, and new advanced business forms were introduced. It was consistent with Sharia, which favored cooperation and equal partnerships. The above mentioned trade house of Akchurin's Widow and Sons, which disposed of the assets of the Staroye Timoshkino cloth plant in 1870, was one of the first Tatar joint ventures. It was in Simbirsk guberniya where the first Tatar joint stock company ever, the Partnership of the Akchurins' Staroye Timoshkino Cloth Plant ('Tovarishhestvo Staro-Timoshkinskoj sukonnoj manufakturny' Akchuriny'x'), was established in 1891 [Ros-sijskij Gosudarstvennyj Istoricheskij Arkhiv, Fund 22, Inventory4, File 28, b. Sheet].

The economically well-developed city of Kazan also witnessed a quantitative growth of the partnership sector. The incomplete official statistics for 1877–1900, mention 15 Tatar-owned trade houses. 68 more partnerships were reportedly registered from 1900 to 1916 (some were co-founded by Russian and Jewish merchants). Over 300 trade houses and joint stock companies were recorded in the city from 1872 to 1916, Tatar merchants and entrepreneurs being the founders of 28% of them [Khayrutdinov, 1996, pp. 48–49].

As reported by X. Khasanov, 154 Tatar trade houses having a total fixed capital of 4.9 million rubles as of 1914 existed in Russia [Khasanov, 1977b, p. 223].

Thus, Russia's Muslim Tatar economy was concentrated in certain economic regions with certain commercial and industrial specialization and characterized by intense capital concentration in industries of high priority to the Muslim community¹. The Orenburg region

¹ Detailed information on the regional groups of Tatar business activity is given in: [Amirkhanov, 2000, pp. 228–249].

and Middle Asia were the primary raw material base for the soap, cloth, and fur industries, which were largely concentrated in the Middle Volga region and Central Russia.

Nizhny Novgorod Fair came to act as the country's an essential ethnic commercial centre in the 19th and 20th century by hosting major trade operations, commodity exchange between businessmen from across the empire, and mutually beneficial interactions with the Russian provincial and capital bourgeoisie. Nearly all famous Tatar commercial families owned real estate and large-scale businesses there. The latter included wholesale and retail shops of dry goods, soap, cloth, raw materials, fur, Asian clothes and footwear, and literature [Tairov, 2004, p. 260–264; Zagidullin, 2006 b, pp. 74–95]. In fact, every summer Nizhny Novgorod Fair turned into a large Oriental Tatar-speaking city, attracting the ethnic commercial and industrial elite. It is no coincidence that the most important institutions of the Tatar bourgeois community were established or promoted there. The Nizhny Novgorod Fair provided a stage for the first professional actors of Tatar origins, offered subscription for the general Turkic newspaper *Terdzhiman*, and hosted serious social and political events, including the establishment of the first Islamic party *Itifaq al-Muslimin*.

The actual Muslim economy with its rapid development of capitalist relations provided support for the theory of prominent bourgeois ideologists, who viewed Islam as an economic religion [Mukhametshin et al., 2005, p. 116]. Apart from special Muslim-oriented consumer industries and a close cooperation within the ethnic business community, Tatar entrepreneurs clearly tended to observe the moral and ethical rules embodied in religious laws. Tatars were unlikely to manufacture and sell alcohol and tobacco products as well as foodstuffs not permitted in Sharia, or run gambling centres, or other illicit entertainment facilities. This surely restricted the range of activities in which the ethnic business community could participate, which cost it to forego enormous profits. However, it is again suggestive of its primary aspi-

ration to meet the basic needs of the Muslim community.

Yet, the Tatar capital in the post-reform period had grown enough to not only satisfy the Islamic ummah, but to sell large amounts of production outside of Russia— in Germany, Turkey, the USA, Great Britain, and other powerful countries. Thus, the Muslim business community faced the increasing challenge of raising large funds and establishing cooperation with banks. It is a common fact that Sharia prohibits faithful Muslims to borrow and lend money at interest. However, Russia's developing economy laid Muslim entrepreneurs under a necessity of accepting a compromise and using the popular financial instruments. Otherwise they were doomed to ruination. The clergy and businessmen usually deposited even waqf and other charity money in banks at a certain interest.

Taking into account how active the Tatar bourgeoisie was, the government encouraged its representatives to work as experts in loan and discount committees of various banking authorities. As the Muslim business community was growing in strength, it was regarded as a major consumer of bank loans for commercial transactions and industry production.

For instance, merchants S. Aitov, M.-S. Burnaev, M.-S. Galikeev, and G. Ishmuratov were members of the loan and discount committee of the Kazan branch office of the State bank in the late 19th–early 20th century. Merchant M. Galeev was member of the loan and discount committee of four banks: the Volga Kama, Kazan Merchant, Kazan City Public, Nizhny Novgorod Fair, and Menzelinsk branch offices of the State Bank [National Archive of the Republic of Tatarstan, Fund 98, Inventory 3, File 3195; Fund 1, Inventory 6, File 505, Sheet 160]. The situation naturally caused certain anxiety in Muslim lawyers and journalists, who initiated a discussion of the issue in the early 20th century by suggesting that a dedicated Muslim bank should be established in Russia. To quote the *Iktisad* magazine, 'if there existed a separate Muslim bank, the interest paid my Muslims would be covered

by the interest they receive. Muslim wealth would thus remain in our pockets' [Xismä-tova, 2002, p. 50]. Another suggestion was to develop mutual loan societies, that would use no bank interest. However, such organisations were perceived as dubious, since they were not mono-confessional and thus did not favor financial relations in strict accordance with the Sharia. Due to a number of circumstances, these ideas were no instant solution to the most serious problem of bringing contemporary market activities in line with the Islam law. Therefore, the integration of the ethnic business into the country's economic system did not mean a loss of autonomy and independence. In fact, it would create favorable conditions for the development of certain elements of the specifically Muslim economy with its

special branches, ethnic and confessional cooperation, and strive for financial independence. It was during that period when the concept of ethnic wealth, which Muslims expect to primarily serve the entire Islamic community, entered into public consciousness. It is obvious that the Tatar bourgeoisie owed its success, competitiveness, and stability, which it had achieved in a foreign religious environment as a social minority, to Russia's Islamic ummah. The latter was the only consumer of its commodities and services and the primary supplier of workforce and physical resources.

Therefore, the Tatar business community was vitally concerned with keeping Muslim mahallahs united and protecting them from both governmental missions and Europeanization, to which assimilation is inherent.

§ 3. The Social and Occupational Structure of the Population of the Kazan Region and the Tatar Community: Similarities and Differences

Nail` Khalikov

The first years of the 20th century were a milestone in Russia's historical development. At the turn of the century the country entered the imperialist era, which, in particular, brought about material social, economic, and class changes. The processes had begun and gained momentum previously and developed rapidly in the post-reform capitalist Russia (the industrial revolution, the development of capitalist production relations, etc.) to peak in the early 20th century.

Russia's social structure and the social status of its population generally matched social class divisions until 1917. The society was still officially classified into: noblemen, clergymen, merchants, peasants, and meshhanstvo (townsfolk). Other social groups were not formalized as classes, but bore the marks of belonging among them: cossacks, workers, entrepreneurs, industry manufacturers, factory owners, etc. The class division developed during the feudal period and was established in the 18th century to persist in times of capitalism. This is vividly

witnessed to by the records of the First General Census of the Russian Empire of 1897, which relied on this classification of the country's population².

According to the census records, the population of European Russia at the turn of the 20th century was 84.1% peasant, 10.6% burghers (meshhanins), 1.5% noblemen and officials, 0.6% honorary citizens, and others. [Dubrovsky, 1975, p. 43, Table 3]. Of Russia's Tatars, 93.0% were recorded as peasants, 3.68% as workmen, 1.75% as burghers (meshhanins), 0.59% as clergymen, 0.48% as noblemen and officials, and 0.41 as bourgeoisie (merchants and industrial manufacturers) [Khasanov, 1977 b, p. 229, Table].

Agriculture was formally the primary and traditional economic activity and source of

² We widely use the Census data compiled in the 1890s but which has not lost their informational value, and this may be extrapolated more or less accurately to the first years of the 20th century.

sustenance and income for the vast majority of Tatars in the Volga region. Of primary importance was arable farming (86.7% of all Volga region Tatars registered by 1897 in ten governorates of European Russia). They were recorded as belonging to the peasant class. Yet not having land, herds, hands to put to work, and under the burden of inordinately high taxes, a large part of them had to raise profit from something other than agriculture. It was not infrequent for a recorded peasant to have been long engaged in seasonal non-agricultural work, mill work, and the like, thus being in essence a member of the labouring class. A special term was coined for them: 'landed hired workers'.

The largest percentage (over 90%) of Tatars, who named arable farming as their main occupation during the 1897 census, lived in the Penza, Nizhny Novgorod, Kazan, Ufa, Samara, and Saratov guberniyas. This was not a coincidence. These governorates lay primarily in wooded steppe, which offered the most favorable conditions for arable farming. Orenburg guberniya had the smallest percentage of Tatars engaged exclusively in agriculture (64%). It was a region of well-developed business and agricultural capitalism, where many found employment in various production and service industries. The governorate, which had long been a centre of commerce between Russia, Middle Asia and the Orient, had about 12% of the Tatar population engaged in trade.

According to 1897 statistics, 96% of the Tatar population of the Kazan guberniya and 85% of Russians were engaged in arable farming [The first total census of the population of the Russian Empire, 1897]. XIV. Kazan guberniya, 1904]. This is attributable to more stable community traditions in the Tatar countryside and the population's devotion to its land. This is why Tatars in Kazan preferred local handicrafts. This does not apply to Mishar Tatars in the western governorates with their fourfold system of land tenure (service class, petty bourgeois, and private land use). The restrictive role of their community, poorly developed domestic handicrafts, along

with other reasons, led them to prefer seasonal work in distant areas.

Petty bourgeoisie: house-owners, bakery and inn owners, small-scale tradesmen and entrepreneurs, low level employees, artisans, servants, and horse-cab drivers constituted the social category (along with tax-payers) of meshhanins, a major part of the urban population.

The proportion of meshhanins differed widely depending on the city of the region. Somewhere it exceeded half of the total population (Mamadysh, Kazan guberniyas), but Tatar urban dwellers were always (much) fewer than Russian meshhanins. In 1897, the ratio for Kazan guberniya was 19% and 72% respectively. Only in Chistopol Tatars accounted for a quarter of the town's population, one fifth in Kazan, and, in other uyezd centres, the percentage was even smaller. About one third of meshhanins in Buinsk, Simbirsk Guberniyas, and Malmyzh, Vyatka Guberniya, were of Tatar origin. During the post-reform period, the meshhanin class grew primarily due to an inflow of peasants. In particular, Kazan guberniya had over 11,000 meshhanins (1897), while Orenburg guberniya had as many as 22,600 [Khasanov, 1977 b, pp. 231–232], among whom many were Tatars.

In the post-reform period, especially in the first years of the 20th century, the spreading of capitalism, the developing factory industry³, and new production relations prompted the formation of two new classes, the proletariat and the industrial bourgeoisie, to form. Impoverished peasants became proletarianized as labourers. The working class also experienced an inflow of former handicraftsmen, whose domestic production decayed because of the insufficiency and high prices of raw materials and competition with cheap manufactured goods.

³ At the end of the 19th century there were over 200 factories and plants with around 12 thousand workers in the Kazan guberniya, in 1904 the number of enterprises increased to 326, and the number of workers employed in them reached 15 thousand people [Gilmanov, eds., 1968, p. 248]

Russia's working class fell into the following categories depending on their economic activities: 1) agricultural workers, 2) factory workers, 3) miners and gold field workers, 4) construction workers engaged in logging, earthwork, railroad construction, etc. 5) ship service workers, mostly dock loaders in Kazan, Nizhny Novgorod, etc., on the rivers Volga, Kama, Vyatka, Belaya, railroad workers, 6) unskilled labourers, 7) workers at local centralized and decentralized manufacturing works.

Tatars accounted for 10 to 12% of workers in the Kazan guberniya in the early 20th century; their percentage reached 30% at large plants in Kazan and could be as high as 50–60% at factories in the Kama River region [Gilmanov, ed., 1968, p. 250].

Tatar workers in the Middle Volga region and in the Kama river region at the turn of the 20th century were concentrated at the Krestovnikovs' works, the Alazufovs' factories, and others in Kazan. The Zakazanye became a major industrial centre back in the 18th century. It included the Kukmor felt and fur factories in the village of Shemordan and in nearby villages. Ushkov's Bondyuga and Kokshaysk Chemical plants in the Kama river region, cloth factories owned by the Akchurins' commercial and industrial partnerships in Korsun, Sengiley, and Syzran' uyezds, Simbirsk guberniya, the Deberdeevs' plants in Saratov guberniya⁴, the Saydashev's and Subaev's glass plants in Tsar-evokokshaysk uyezd, Kazan guberniya, and other plants employed many Tatar workers.

Plants were often established in settlements and villages with long traditions of handicraft. Dense population, scant and infertile land, and excess of workforce favored their preservation. Manufacturing plants, first scattered and later centralized, appeared in such villages back in the 18th century. Factories began to develop in the mid-19th century (Shemordan, Kukmor, Staroye Timoshkino, etc.). These centres attracted seasonal workers from the country on

a large scale in the latter half of the 19th century—early 20th century. This was the case with Mamadysh uyezd, Kazan guberniya.

Tatars worked at metallurgical plants in St. Petersburg, Yekaterinburg, and other cities, in the Rameevs' gold fields in Verkhneuralsk uyezd, Orenburg guberniya, which employed a total of 1200 workers with a large percentage of Tatars. The Kushva Iron Foundry in the eastern branches of the Ural Mountains (Verkhoturksk uyezd, Perm guberniya) attracted about 10,000 workers of Tatar and Russian origin. There was a mosque in the plant settlement [Spisok naselyonny'x mest, 1909, p. 30]. Approximately 2,000 Tatars were engaged in hard coal production on Perm guberniya in the late 19th century [Gavrilov, 1985, p. 107].

According to the 1897 census record for ten governorates of European Russia, 86.7% of the Tatar population was engaged in farming; 1.2%, in livestock breeding; 0.26%, in timber trade; 0.6%, in ore mining; 0.4% processed fibrous material; 0.15%, wood; 0.34%, metal; 0.18% worked in chemical production; 0.3%, in plant and animal produce processing; 0.8%, in production of clothes; 0.36%, in house maintenance and construction; 0.5%, in hauling; 3.2%, in trade (agricultural produce, fabric, clothes, fur, etc.); 1.3% were administrative and public officials; 2.3% carried out private activities and worked as servants. The clergy accounted for 0.5%. No data is available on workers due to the limitations of the census taking method use. However, the occupations of factory workers matched the plant's specialization. Our knowledge is limited to the fact that Tatar workers tended to do hard, unskilled, and badly paid factory work.

Many Tatar peasants did handicrafts. Contemporaries noted in the early 20th century, '... not all Tatar peasants are farmers; many of them... earn their living as seasonal workers at Russian and Tatar owned soap factories and tanneries in Kazan, horse cab drivers, etc'. [Speransky, 1914, p. 12]. Or, 'Because of the decay of arable farming in Tatar villages, thousands of rural dwellers go to nearby cities in the Volga region to do seasonal work. Poor Ta-

⁴ The Tovarishchestvo (Partnership) had a weaving section in the Tatar village of Pendelka in the Kuznetsk uyezd.

tars in Kazan clean streets, work as porters on quays, watchmen, day laborers, and watermen.'

Diverse as they are, peasant commercial activities (except for handicraft) fall into two categories: workforce trade and commercial and industrial entrepreneurship. The first category was represented by the rural proletariat, wage workers with land lots. They were impoverished or disadvantaged peasants with insufficient land lots (2–4 desyatinas, the standard being 8–16 desyatinas), possessing one horse, or none at all (which was pretty much the same economically). They could not live from their land and had to hire out their work force. These included farm servants, day laborers, woodcutters, miners, constructors, unskilled laborers, etc. For instance, the percentage of poor wage laborers in the congested Menzelinsk uyezd, Ufa guberniya, which had a large Tatar population, at the very end of the 19th century was 60%: '... the percentage of rural proletariat correlated with the amount of land available to peasants. It was much higher in uyezds that lacked land as compared to those rich in it' [Usmanov, 1981, pp. 274–275]. In Buinsk uyezd, Simbirsk guberniya, large numbers of Tatars engaged in local and distant seasonal work lived in villages and volosts with the smallest land lots [Census of homesteads of Simbirsk Guberniya, 1910–1911. Buinsk uyezd, 1914, p.43]. The percentage of peasants engaged in such commercial activities in Tatar-populated volosts was as follows: Drozhzhanoye volost—about 60%, Novo-Kakerlinsk volost—80%. For example, in Drozhzhanoye volost, factories and other plants employed the largest number of seasonal workers (over 500); 400 were unskilled and day laborers [Census of homesteads of Simbirsk Guberniya, 1910–1911, Buinsk uyezd, 1914, Table].

Tatar peasants worked at factories, in coal and ore mines and fields in the Urals, Siberia, and the Donbass, oil fields in Baku, fisheries in Astrakhan, and others. Many of them worked as laders on rivers. Such works remained seasonal for many Tatars even in the early 20th century, as they had to return home for summer agricultural activities. Craftsmen also did seasonal work as board sawyers, carpenters, stove

setters, furriers, wool beaters, tailors... Some became shepherds. Others worked in town as salesclerks, street cleaners, servants, bath attendants, etc. Many Kasimov Tatars were waiters, inn servants, even ran refreshment rooms at railway stations. The list goes on.

The number of passports and tickets (permission to leave one's place of residence on a temporary basis) suggests that seasonal work was extremely popular: up to 150,000 in Kazan guberniya and up to 140,000 in Simbirsk guberniya in the late 19th century [Smykov, 1973, p. 91].

The second category is the rural petty bourgeoisie, wealthy peasants who carried out entrepreneurial activities in arable farming and livestock breeding, for which purpose they bought and rented land on a large scale and hired workers. They also owned small industrial plants, mills, tallow boilers, fur and leather tanneries, tar distilleries, and other 'industries'. Such peasants acted as subcontractors for home industry as small-scale tradesmen, purchasers (cattle dealers), etc. They were especially numerous in Orenburg guberniya, where land was abundant and capitalism was developing rapidly [Usmanov, 1981, pp. 273–274].

The population was engaged in local and seasonal work in arable farming and in other sectors. Home industry belonged to the latter category. Land use (agricultural) work included work for rich fellow villagers, often to pay for arable land, horses, seed grain, and food borrowed from them. Masses took in the summer harvest and hay making in the 'steppe' in the southwest uyezds of the region where entrepreneurial farming and livestock dominated. By the beginning of the 20th century the non-agricultural sector began to grow as compared to agricultural seasonal work [Smykov, 1965, p. 44], an effect of the development of capitalism in industry and transport.

While Kazan Tatars in the Kazan guberniya preferred non-agricultural seasonal work in the nearby country and towns, Kasimov Tatars and Mishar Tatars in Penza, Tambov, Simbirsk, and other Guberniyas tended to undertake long trips for seasonal work—to Moscow, Saint Pe-

tersburg, Kharkov, the Crimea and the Black Sea coast, the Caucasus, Kuban, Caspian Sea, Orenburg, Bukhara, and Siberia.

Tatars from the Volga region were actively involved in cottage industry. Russian statistics uses the term 'home (small-scale rural) industry' to denote various types of manufacturing business⁵ and the social class relations associated with them. Cottage industries included wool beating, furriery, tailoring, cobblery, etc., as well as small-scale production of such goods as mats, woodwork, carts, and the like, supplied either to a market or to a supplier who also provided raw materials. As industry progressed to cheap mass-scale production, many cottage industries decayed: weaving, potters' wheel and dishware production, and others. [Dubrovsky, 1975, pp. 353, 357].

The following cottage industries were especially common in Tatar villages of the Kazan guberniya: cart production in Kazan and Mamadysh uyezds, mat and sack weaving in Kazan, Mamadysh, Spassk, and Chistopol uyezds, felting, primarily in Mamadysh uyezds but also in Tatar villages in Kazan, Laishevo, and other uyezds of the Guberniya; tailoring in Laishevo, Mamadysh, Kazan uyezds, mostly among Kry-

ashen Tatars, ichigi boot production in Kazan, Tetyushi, and Chistopol uyezds.

Principally the same social and occupational structure of the Tatar community also existed outside the Middle Volga region and the Urals.

For instance, Siberian Tatars in Tobolsk guberniya were engaged in farming, livestock, fishing, and hunting; Sarts (Bukharans) and Volga Tatars tried their hands at farming, home industry, and trade.

Tatar tradesmen and peasants came to the north of the Kazakhstan in the mid-18th century after the sentry line was built and the town of Petropavlovsk was founded. Initially, such peasant migrants were primarily engaged in livestock breeding, but farming became increasingly important with time. The territory began to attract Kazan and Kasimov Tatar merchants in the mid-19th century due to the incentives offered by the government. The Tatar population of Petropavlovsk amounted to almost 9,000 in the first decade of the 19th century. Most of the local trade live animals and animal products, down and leather passed through the hands of Tatar merchants. From Petropavlovsk goods were transported to the markets of Vienna, Paris, Boston, Berlin, Hamburg, and, via Odessa, to Turkey.

§ 4. The Stolypin Agrarian Reform and Tatar Peasants

Rafail` Shaydullin

The social and economic development of Russia's agriculture in the early 20th century clearly indicated that the Tatar peasantry had broken away from feudalistic production to commit itself increasingly to a capitalist economy. The construction of the Trans-Siberian Railway and the Moscow-Kazan railway network, booming commercial steam navigation along the Volga and the Kama rivers, the material growth of the urban population, rapidly

increasing demand for agricultural produce on the Russian and West European market caused the marketability of peasant production to increase. As bourgeois entrepreneurial relations were introduced into the Tatar community, the development of commercial farming in the country expanded significantly. Its consequences were not limited to dramatic social changes in the peasant community; qualitative shifts in the development of agricultural production were also noticeable. Most importantly, these included an improved farming practice using better agricultural tools and machines on larger areas for commercial and industrial crop

⁵ The statistics of the Ufa guberniya confirm that there were 42 different types of industry in the early 20th century [Handicrafts of the Ufa guberniya, 1912, p. 8].

growing, and an increased marketability of animal products.

The market caused a clear transformation of the rural Tatar economic system. Its influence brought about major changes to the structure of crop acreage. 'Grey' grains such as rye, oats, barley, and millet were known to have dominated the Tatar country economy for many years. However, they better fit into a subsistence economy and were a market product of the lowest variety. They enjoyed no considerable demand on international markets and were mostly for an internal consumption. Though the total yield of rye and oats in the Tatar countryside did not decrease, their percentage, as compared to other crops, diminished. At the same time, the influence of capitalist commodity market relations on the Tatar peasant grain farming was not limited to quantitative changes. The most essential qualitative shift was a significant increase in the percentage of the most intensive crops; that is wheat and potatoes. Another positive change was the introduction of grass cultivation, especially of permanent grass. The increased acreage devoted to industrial crops, wheat, potatoes, and feed grasses was a major step toward the progressive transformation of the Tatar country farming.

Thus, the turn of the 20th century was marked by a boom in the Tatar rural economy, which witnessed dramatic industrial changes. The area under multiple crop rotation, and especially that under intensive commodity and industrial crops was increasing year by year, as was the quantity of agricultural equipment and instruments. In that period, *zemstvo* and industry-sponsored agronomic services and private individuals began to establish agricultural equipment rental stores and breeding centres for peasant livestock improvement, hold agronomic fairs, and publish agronomic literature in various local languages. These activities gained momentum during the Stolypin agrarian reform. The introduction of various agricultural machinery and improved tools as well as new approaches to farming was thus accelerated.

The advancement of new forms of labour division was no less crucial to the development of the Tatar countryside. It primarily consisted of an expansion of the area where peasant wage labour could be applied to commercial businesses, workshops, etc. However, arable farming remained the economic basis for entrepreneurship in the Tatar country. Yet, small plots and wages in field husbandry and animal breeding, as well as the poorly developed factory and plant infrastructure in areas with a dense Tatar population (especially the Volga region and Cis-Ural region) motivated the ethnic peasantry to find new spheres of work by processing plant, animal, wood, and other local raw materials. Sack weaving, felting, tanning, and mat production were the most popular home industries among Tatar peasants. In some regions of Russia, up to 40% (or even more) of the Tatar population occasionally had to abandon their agricultural activities for a long-term seasonal agricultural work in towns and in southern governorates. Many Tatar peasants worked in large cities (Moscow, Kazan, Samara, and others), in Donbass mines, Ural gold fields, Baku oil fields, and the like. [Vorobyov, 1953, p. 62].

At the beginning of the 20th century, among the general complex of the Tatar peasantry's socio-economic problems, the issue of land was the most painful and vulnerable. It touched not only landless and land-poor peasants, but also those who were not in an utter need of land. A considerable majority of the Volga Region peasantry, especially in Kazan guberniya, experienced land tightness. The so-called 'agrarian overpopulation' was felt everywhere, where Tatars lived densely, especially in the Middle Volga Region. There existed excessiveness of working force which landowners, rich villagers, percenters and all kinds of buyers squeezed dry. Land scarcity of peasants' farms was one of Kazan guberniya's curses: 91.2% village commoners had tiny land allotments. Undoubtedly, it doomed the major part of peasant families to hunger and poverty. Back in 1884, an official of the Ministry of Internal Affairs of the Russian Empire baron A. Ikskul von Üxküll-

Gyllenband reported to St. Petersburg that in many ways the poverty of Kazan guberniya's peasants depended upon 'insufficient provision of lands' [Daishev, 1958, p. 7].

Of special interest in terms of land management is access to land for the key ethnic groups of Kazan guberniya. An analysis of the governorate's statistics for ethnic groups within the country population suggests that 29.8% of Russian and 24.8% of Tatar peasants had up to 2 desyatinas of land; 53.9% and 72.3% had up to 4 desyatinas; 16.9% and 2.9% had 4 and more desyatinas [Krest'yanskoe zemlevladienie v Kazanskoj gubernii, 1909, p. 56]. The statistics are clearly indicative of the Tatars' disadvantaged position when compared to Russians. According to 1907 statistics, the majority of Tatar peasants in Kazan guberniya had an average of 7.2 desyatinas of land per family, while the figure for Russian peasants is 7.9 desyatins. The situation resulted from the colonial policy implemented by the tsarist government, which was especially harsh to Muslim Tatars [Vorobyov, 1953, pp. 62–63].

However, the most dangerous trend was the dwindling of per capita lots and loss of land by Tatar peasants. The number of landless peasant families was increasing in Kazan guberniya year by year. The percentage of landless families increased by 1.1% from 1891 to 1907 [Krest'yanskoe zemlevladienie v Kazanskoj gubernii, 1909, p. 66]. The number of landless families in 1907 was estimated at 20,323 (4.9% of all peasant families) [Krest'yanskoe zemlevladienie v Kazanskoj gubernii, 1909, p. 66]. 4.3% of Tatar households had lost their land lots by that time [Vorobyov, 1953, p. 63]. It was caused not only by the natural increase of the rural population but by the intensified fragmentation of peasant holdings.

This clearly suggests that by the beginning of the 20th century a large part of peasant workers had been deprived of the main application of their labour—land. That is why many areas with a dense Tatar population, especially in the Middle Volga region, suffered an extreme lack of land. Both poor and medium-income peasants who owned tiny land lots complained

about the problem. Even peasants who had 20–30 desyatinas of land per household mentioned it. This was the outcome of the social and economic reforms of the 2nd half of the 19th century. Their social nature gave birth to a troublesome child known as 'the land question'. It was a burning issue that ignited the country's social life to its limits, kindling the first Russian revolution and leading many thousands of peasants to rise up.

The national agricultural crisis was attributable not only to the tsarist government's policy, aimed at preserving the nobility-based system of land ownership but to surging taxes, inflating rental payments, primitive tools, and the dominance of the obsolete (three-field) system of arable farming. Besides, areas with a dense Tatar population were marked by a severe shortage of draft animals. The economist P.Lyashhenko estimated the number of horseless peasant households in ethnic-populated areas to have exceeded the general Russian average. In the 1890s, 34.8% of Tatar, 14.1% Mordovian, and 11% of Chuvash households were horseless [Lyashchenko, 1948, p. 503]. This all prevented the peasant economy from progressing and doomed the majority of the rural population to poverty and extinction. Many peasants lived in small single-room log houses with thatched roofs (it was not uncommon to keep livestock in the house during the cold season). They wore home-made clothes and woven bast shoes. Izbas without chimneys and with a dirt floor could be found in some areas with a dense Tatar population. Besides, a large part of the peasantry led a half-starved existence and often fed on orach and other surrogate products. The struggle for food was very effort-consuming in many places, peasants always had to think of new ways to survive until the next harvest. Chronic undernourishment and unbearable living conditions caused thousands of Tatar peasants to die of dystrophy and in various epidemics; especially in years of poor crop harvest, which became increasingly frequent at the turn of the 20th century. According to A.Kaufman, 26 people per 1,000 urban dwellers and 19 per 1,000 rural dwell-

ers died in Great Britain; the figures were 30 and 23, respectively, in France. The ratio was reversed in Russia—35 in the country and 30 in town [Kaufman, 1918, p. 58]. We estimate the death rate of Russia's Tatar population to have been up to 40 people. As the result, Tatar farmers in many areas with a dense Tatar population abandoned their households and fled wherever they could.

During the revolutionary events of 1905–1907, not only the ruling elite but the lower level noble administration changed their opinion on the peasant issue radically. The intensified social and political peasant activities, which posed the threat of a new class war in the country, threw the tsarist government into a dilemma: it had to choose between the existing agricultural system and a dramatic shift in arable farming to clear the way for agriculture. It was natural that the peasant struggle was primarily aimed at eradicating the medieval relations in the country that had been impeding the economic development of agricultural production. The struggle determined one of the main features of the development of the half-patriarchal Tatar countryside—a clash between feudalistic relations and expansive capitalism in agriculture. When the peasant movement gained momentum in the spring and summer of 1905, the tsarist government finally realized the necessity to take measures to relieve the multi-ethnic peasantry. In order to appease the latter, it abolished the redemption payment (the Manifest of 3 November 1905) and adopted new land management regulations (the Edict of 4 March 1906). Besides, it introduced new regulations on the Peasant Land Bank and transferred allotments to it (the Edict of 12 August 1905) and state-owned land (the Edict of 27 August 1905) for further sales to landless and land-poor rural dwellers. The annual redemption payments of former serfs as well as state, and allotment peasants were to be halved on 1 January 1906 and abolished on 1 January 1907. A little later, the Edict of 4 March 1906 was adopted to establish the Committee for Land Management and Land Boards, which was to play a core role in the

forthcoming land reform. Local governorate and uyezd land boards were established. They had a number of important responsibilities: ensuring more favorable conditions for landless and land-poor peasants to migrate to vacant land and improving rent relations in the country, assisting rural communities in improving their use of allotments, amicable allotment of alternating strip lots and other kinds of public arable land; dividing large rural communities into smaller economic units and fostering peasant dispersion.

When the Saratov landowner P. Stolypin was appointed Minister of the Interior Affairs of Russia in April 1906, the peasant community felt the crushing power of the state apparatus. Every political and economic lever available to the government or local governorate administrations was used against it. A large army of journalists, writers, economists, and lawyers joined the anti-communal war to lambast the communal system of land management.

Stolypin's reform provided for a new land management system based on capitalist farms, known as khutors and otrubs. The social and economic basis of the reform was the expectation that the new rural household forms would absorb at first peasant allotments and eventually landowners' latifundia. Two solutions were suggested: to divide community allotments into khutor and otrub lots and to establish khutors and otrubs in land provided by the Peasant Land Bank. Thus, land boards were mostly responsible for promoting khutor and otrub farms in allotments, bank- and state-owned land.

It should be noted, however, that to establish the new land management system in areas with a dense Tatar population would require enormous capital investment and considerable organizational and agricultural efforts involving agronomists, engineers, technicians, land surveyors, and economists, none of which neither the tsarist government nor local governorate administrations had. Suffice to say, it is not only the inflexibility of the majority of peasants but 'inert permanent members and low level of education in most of the boards' that impeded

the organization of land management in Tatar rural communities [National Archive of the Republic of Tatarstan, Fund 256, Inventory 1, File 1, Sheets 91–94]. Many agronomists, surveyors, and technicians lacked knowledge and expertise in land management organization in the country. Their unawareness of the ethnic features of the Tatar peasantry also contributed to the failure of the land management undertaking. They often took a red tape approach to their work. Finally, the introduction of new land management forms required active involvement of the peasant masses. It was very hard to radically transform the old practice without their creative energy.

Evidence of the poor performance of local land boards proved to be a very small number of applications by peasants for land formalization as private property was registered. For instance, in Kazan guberniya 2,910 applications for land allocation were submitted to land boards from the date of the edict on 9 November 1906 to the end of 1907. The same year, the Kazan Branch Office of the Peasant Land Bank effected transactions to acquire a total of 34,147.5 desyatinas of land (having a total value of 34147,5 million rubles). The land was transferred to 39 rural communities, 58 partnerships, and 9 individual households [National Archive of the Republic of Tatarstan, Fund 1, Inventory 4, File 4451, Sheets 10–12]. The situation was similar in other areas with a dense Tatar population, which is attributable not only to the inertness of Tatar peasants, who were determined to uphold obsolete farming traditions, but to a lack of public access to the government's Edict of 9 November 1906. The Tatar peasantry, just as other ethnic groups, had a very superficial idea of the primary purposes of Stolypin's land management policy. Therefore, authorities had to provide extensive clarification on the objectives of the new agrarian reform not only to Russian peasants but also to those of Tatar, Chuvash, Mari, Udmurt, and Mordorvian origin. Somewhat later, local governorate and uyezd land boards prepared and published dedicated brochures on the objectives of the Edict of 9 November 1906. Those

were later translated into Tatar and distributed among the rural population.

All these drawbacks in the work of land boards can be attributed to local governorate officials' aloofness to the problems faced by the country's multi-ethnic peasant population. Besides, local throwbacks in the course of the implementation of the new land reform and land management in ethnic villages always caused hesitation and confusion among governmental officials, forcing them to manoeuvre among different peasant groups and strata of Russia's multi-ethnic society. The chief initiator of the land reform P. Stolypin was, naturally, dissatisfied with the situation. For instance, he addressed the Governor of Kazan M. Strizhevsky to demand 'continuous and assiduous supervision over and persistent guidance of the governorate's land management [Kabytov, 1977, p. 17]. The Governor of Kazan followed officials of the Ministry of Internal Affairs in demanding that land boards accelerate their land management measures in rural communities. For instance, in an instruction to uyezd boards Strizhevsky noted that '...from now on I shall assess the performance of police officials in terms of successful enforcement of the law of 9 November 1906 in each uyezd' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 4, File 5251, Sheet 3].

However, the land management campaign was not as fast as governmental and governorate officials had expected it to be. The mass anti-community campaign that spread across the country failed to eradicate century-old peasant land institutions. The Russian common practice of large-scale peasant coercion was unable to ensure a smooth implementation of the agrarian reform in the Tatar countryside. An active campaign was initiated to protect the interests of the peasant land community in the very first days of the land reforms. As the result, the peasantry was rather reluctant to adopt new forms of land use, which greatly bothered governorate administrations. M. Strizhevsky wrote in his report to Emperor Nicholas II (1910): 'We are witnessing a serious crisis in the peasantry's transition from community land

use to private land ownership in the form of a drastic reduction in the number of applications by individual householders to leave communal holdings' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 4, File 4875, Sheet 41].

The sluggish land management in Kazan guberniya is undoubtedly attributable to the compulsive nature of the governmental campaign. The procedure for registering allotments as private property is indicative of it. According to the 1906–1910 statistics, 17,097 (77.7%) of 21,998 householders that registered their land as private property became owners of private land lots under resolutions by zemstvo administrators and only 4,901 (22.3%) under the decisions of village meetings [Registration of Land Lots as Private Property in Kazan guberniya, 1911, p. 21]. Thus, a large part of peasant households registered their land as private property under the pressure exerted by zemstvo administrators and not according to a mutual agreement of community members.

It is also essential that the rate at which the governmental land management campaign progressed was indicative not only of the peasant's negative perception of the new agrarian law but a number of natural, climatic, economic, ethnic, household, and other factors. When analyzed in terms of registration of land lots as private property by ethnic peasant groups, the changing figures suggest that Tatars were far behind Russians. The average total number of householders that had registered their land as private property in Kazan guberniya in the early 1911 was 4.5% (of which 0.5% were khutor owners). By that time only 3190 Tatar peasant households, i.e. 2.5% of the total number of peasant households, had registered their land as private property. At the same time, the total land area registered as private property was 7.5% for Russian peasants, 2.2% for Tatars, and 2.1 for Chuvashes [Registration of Land Lots as Private Property in Kazan guberniya, 1911, p. 28]. The khutor form of farming was very uncommon among Tatar peasants. Russian householders reportedly owned 4,559.1 desyatins of the total khutor

land (59.4%); Tatar owners had 935.4 desyatins (12.2%), and those of Chuvash origin 664.7 dessiatins (8.7%) in 1910 [Registration of Land Lots as Private Property in Kazan guberniya, 1911, p. 32]. The statistics are indicative of the low popularity of the khutor system among the Tatar peasantry.

The small percentage of land registered as private property by Tatar peasants is probably attributable to a relatively weak social differentiation in rural society, which was dominated by vestiges of patriarchal traditions. Rich and partly medium-income peasant strata supported the community system of the Tatar countryside, as they would rather benefit from preserving certain traditional economic forms than from replacing them with the otrub or khutor system of land use. The poor progress towards privatization of land among Tatar peasants is also attributable to the proliferation of usury in the country, which often assumed the form of reciprocal services. It undoubtedly impeded the development of productive efforts in Tatar agriculture under these new conditions. The Muslim clergy also contributed to the trend as the primary preserver of the traditional community (djien) custom. Therefore, it protected its flock from Orthodox Christian intrusion. This all served to slow the decay of the Tatar community and the individualization of peasant households.

Statistical and factual evidence shows that in the active period of Russian agrarian reform, despite all the 'attempts' of government officials, traditional community land ownership was not eradicated in areas with a dense Tatar population in order to clear the way for a unified and harmonious land use system. Otrub and khutor land allotment was imperfect even in lots directly supervised by governmental agencies and zemstvo administrators. The division was largely formal and not representative. The fact is that many khutors remained unpopulated, while their owners preferred staying at their former places of residence owing to organizational, social, and economic difficulties. Even the basic utilities for khutor households were often absent—

water supply, roads, and other infrastructure communications. It was impossible to transfer even strong households. Besides, the rural population did not seem to share any interests with the ruling elite, which embarked on an official policy to eradicate peasant freethinking by establishing an isolated and confined rural economic system.

Of course the process of economic development itself had decided the fate of the Tatar community, yet at the same time it is worth noting the fierce resistance with which it met the governmental officials who would destroy it with the wave of a hand. It was the violent intrusion of new economic forms in the country without any practical material or agrotechnical aid from the tsarist government that undermined the trust of Tatar peasants in the agrarian reform, motivating them to turn to the country's diverse political forces for support and protection of their violated land rights. The struggle between adherents of the communal system and those who advocated transition to khutor and otrub households was acute and peaked in 1917.

The Stolypin agrarian reform not only failed to ruin the peasant community but brought about a revival. This is obvious if we know what social groups quit the community and what forces prevented its dissolution. Statistics indicate that the largest quitting category was represented by land-poor, impoverished peasants, many of which had long broken their connection to the land. These were largely handicraftsmen, seasonal workers, and others who had previously rented out their plots and not taken the opportunity provided by the reform to sell them. The second category consisted of householders not fit to work (elders, widows, orphans, etc.), who had previously rented out their lots and were now given an opportunity to get rid of them. This was the largest community-quitting category. The third category consisted of migrants (we estimate their number in the Tatar community as not more than 10,000 families), who were able to move to new land by selling their lots. Furthermore, there was also a group of wealthy peasants known as

peasant landowners ('*kozyajstvenny'ye muzhychki*'), who had long been trying to break free from the community. Now they had an opportunity to sever any economic connection to it. Though small, members of this category became major land purchasers concentrating most of the land acquired in their hands. Quite naturally, the loss of this peasant group did not affect the community's sustainability.

Thus, the two key groups of rural householders quit the community: poor villagers, handicraftsmen, seasonal workers, unemployables, and others who had nearly severed their connection to the land and now conclusively cut away from their holdings, and the wealthy country elite, which had long felt the congested, isolated, and inert community rather as a burden. The former quit the community to fully liquidate their households, while the latter wanted to expand their households and, most importantly, their land lots. It is no wonder that their cessation of membership in the traditional Tatar community by no means affected its status.

Hardly had the Tatar peasantry overcome the agricultural crisis of the early 20th century when it found itself facing even deeper destructive perturbations caused by the First World War. The tsarist government initiated a number of mobilization measures that affected above all the human and physical resources of the country. The enormous outflow of human force, draft animals, food and raw materials as well as the increased tax burden and many newly introduced labor duties strangled the economic life of the countryside.

The war devoured men of health and in their prime, thus impoverishing the country of even the minimum of productive force. Suffice to say, the Kazan Military District sent as many as 7,950 march squadrons (about 2.4 million soldiers and officers) to the Russian army from 1914 to 1917, of which Kazan guberniya provided over 290,000 people [Tseytlin, 2006, p. 80], most of them from rural areas. G.Iskhaki roughly estimates the Muslim (including Tatar) share of the Russian army as several hundred thousand people. To quote the author, 'the first general conscription in Russia in 1906 affected a

surprising number of Tatars; the percentage of Tatars that went to the front exceeded that of the Russians. The total number of conscripts was approximately 960,000.' [Iskhaki, 1932. p.18]. Many Muslim conscripts, especially representatives of Middle Asian peoples, were engaged in logistical activities for the Russian army. Dedicated Muslim military detachments consisting of Tatars, Bashkirs, Chechens, Ingush and other people were formed during the First World War. For instance, the Kazan Military District formed the 94th and 95th Muslim reserve infantry regiments and other military detachments. Unlike Middle Asian Muslims, Tatars were mostly sent to the field army on the Western Front to actively participate in military operations against the troops of the Triple Alliance. This is evidenced by the contingent of German prisoner of war camps. 'Notably, their number in the camps of Sossen and Wongedorf, Germany, was up to 57 people' [Iskhaki, 1932, p. 18].

Most of the rural conscripts represented the low to medium-income social group; wealthy households that could pay their way out of military service were hardly affected. Continuous conscription to the military bled the governorate's rural peasantry dry. Women, teenagers, and wounded soldiers were unable to compensate for the conscription of peasants. Most of peasant households suffered a bitter lack of workers. The 1917 census records give a clearer insight into the availability of workforce in the countryside. In Kazan guberniya, 44.9% of all rural workers had been conscripted, leaving 24.1% of all households without any workers [Sirinov, 1923, pp. 397–398].

The enormous outflow of workers from the multi-ethnic country, especially from Tatar villages, affected the small peasant household dramatically—they were often doomed to ruin and self-liquidation. Impoverished peasant families enlarged the reserve labour army. Suffice to say that the number of farm laborers willing to work for food surged during wartime. Cheap women's and children's labor grew common in the countryside.

Apart from human resources, the war claimed other material sacrifices. The mass

withdrawal of horses, which were the primary driving force in arable farming, from peasant economy was a heavy blow to the multi-ethnic rural population. While in West Europe and, especially, in the USA, mechanical motors were already wide-spread and horses had ceased to be crucial to the household, in Russia the horse remained a draft animal and a means of transport. The countryside had lost a large number of draft horses by the latter half of 1917, which affected small peasant households dramatically. A total of up to 2.1 million horses had been mobilized by the latter half of that year. Statistics for 50 governorates in European Russia, including Kazan guberniya, reports the total number of horses to have reduced from 17.9 million to 12.8 million from 1914 to 1917 [Lyashchenko, 1948, pp. 643–644]. It should be emphasized, however, that in Kazan guberniya the total number of horses had increased by almost 10.5% by 1917 as compared to 1916 (from 485,800 heads [Fazulzyanov, 2005, p. 380] to 571,500 heads [Fazulzyanov, 2006, p. 387]). We are not inclined to believe that the increased number of horses was important as such. It must be attributable to the specific development of Tatar horse breeding as the main branch of animal breeding, which was marked by intense production during that period. Besides, Kazan guberniya was central to the military district, which eventually caused a large inflow of horses from other regions to Kazan. Moreover, horses unfit for army use were rejected and sold to peasants.

Apart from the heavy damage to human resources and draft animals, peasant households lost their agricultural tools. Scant as it was before, the supply of agricultural industrial goods nearly stopped during wartime. Factories producing agricultural tools were paralyzed in the first year of the war. Some of them stopped production or did not operate at full capacity for lack of metal, fuel, and workforce; some switched to munitions production. Large agricultural machinery works had reduced their output to one third of the antebellum value by the end of 1914; the total output of 173 largest plants amounted to only 25% of the pre-war agricultural machine production in 1916. Most of

these factories shifted over to military production. The remaining ones severely lacked metal and fuel. For instance, only 1.3 million pood was supplied to them instead of 15 million pood metal as required [Lyashchenko, 1948, p. 644]. Moreover, the import of agricultural machines and tools, which yielded up to 9.7 million pood and covered up to 50% of Russia's demand before the war, was reduced to as little as 196,000 pood in 1915 and 391,000 pood in 1916 [Lyashchenko, 1948, p. 644].

The country could not rely on small repair and other metal workshops, cottage industries, and village blacksmith's shops, which were left in a catastrophic state. When war was declared, some part of artisans and blacksmiths were conscripted; others had to give up agricultural tool repair and production for lack of metal and fuel and go to town to earn a higher salary. Village blacksmiths closed their shops, so there was nobody to repair ploughs, sokhas, or harrows, hammer scythes and adjust reaping hooks, or to repair harness and carts. A large part of the peasantry was deprived of the most primitive agricultural tools.

In a chain reaction, the peasant economy in Russian provincial territories began to decay. The whole body of the countryside fell apart link by link in areas with a dense Tatar population. The size of farm land and livestock dwindled in households; land produc-

tivity and total crop yield were diminished resulting in a severe shortage of food and a distress within the financial system. The credit and banking activities went out of control. A dramatic inflation of the Russian ruble as well as growing prices for bread and those for agricultural tools and essential manufactured goods, which were growing even more rapidly, aggravated the situation for Tatar peasants. The war paralyzed the Tatar country economy. To put it differently, the war devoted all human and material resources to the useless marauding of the fruits of human labor.

Thus, the agrarian transformations of the early 20th century caused no significant improvement of the social and economic situation in the Tatar countryside. They complicated the land relations in the country's agricultural sector. The natural increase of the Tatar population and shrinking lots caused an intensification of peasant labor. On the one hand, the area in peasant field under labor-consuming industrial crops, primarily potatoes, expanded. On the other hand, an increasing number of peasants became seasonal workers and artisans. For some part of the Tatar population, non-agricultural wage work gradually became the main means of subsistence. Liberal bourgeois reforms did cause a stirring among the Tatar peasantry, changing not only its social and economic role but its political outlook.

CHAPTER 2

The Formation of the Turkic-Tatar Political Movement in Russia (the Beginning of the 20th Century)

§ 1. The Pre-Revolutionary Situation and Revolutionary Events in Russia and Kazan guberniya

Dilyara Usmanova

The first years of the 20th century were characterized by a pre-revolutionary situation in Russia, when a deep popular discontent became obvious and revolutionary organizations in opposition to the government were constantly propelling discontent, while the traditional authorities were clearly incapable of controlling the country. A heavy financial and industrial crisis intensified the strike movement, which is proved by the fact that over 500,000 strikers were registered in the country from 1901–1904. Political demonstrations under the slogan 'Down with autocracy!', which contemporaries termed a vulgar saying, followed strikes increasingly often. The peasant movement gained momentum during that critical period. It covered most of the governorates of European Russia in 1902. Russia's failed war with Japan in 1904–1905 brought even more popular discredit to tsarism in terms of international relations.

In the early 20th century Kazan guberniya was a provincial region with clearly prevalent agriculture and predominantly peasant population. Therefore, the discontent of the governorate's rural population was as intense and as powerful as in other areas of the country. From 1901 to 1903 alone, over 15 peasant riots took place in the governorate. The most dramatic disturbance affected Laishevo, Spassk, and Sviyazhsk uyezds. Those were largely spontaneous and included unauthorized appropriation and plowing of landlords' fields, arson and plunder of their estates. In some very rare cases, peasants refused to provide outstanding

amounts of redemption payments or even laid down a programme of demands.

Industrial disturbance also began in the first years of the 20th century, which is also attributable to the heavy industrial crisis that left tens of thousands of people unemployed. However, the root cause of industrial workers' discontent was subhuman, enslaving working conditions, extremely low salaries, deprivation of any social guarantees and insurance, and household conditions beyond endurance. The only governorate centres with well-developed industry were Kazan and partly Chistopol, where the disturbance was the most intense (it mostly affected such enterprises as Alafuzov's Plant, the Paratsk Mechanical Plant, and others.) During the revolutionary period, disturbances and strikes also occurred at most small-scale tanneries, soap plants, and stearin factories. Printers, tailors and bakers joined the movement. The workers of Kazan's two largest plants, the Krestovnikov's Factory and the Gunpowder Factory, tended to avoid active striking, which is partially attributable to a stricter workplace morale (the Gunpowder Factory was a military plant that supplied state orders and practiced military discipline), as well as somewhat better working conditions.

The territory of Kazan guberniya was generally underdeveloped industrially and marginal to the revolutionary movement as compared to the country's industrialized centre and south (both revolutionaries and liberals described it as a 'sleepy city', 'a Vendée').

The first Russian revolution began on 9 January 1905, when peaceful demonstrators were shot in the capital, which was a powerful revolutionary trigger that affected the entire country. The cruel and pointless punishment, provocations by key participants in the demonstration and the police broke the camel's back. Clamor and disturbance erupted across the country, Kazan guberniya included.

A new wave of the striking movement that raised the banner of solidarity with the capital's executed demonstrators and with economic demands broke out on 20 January, when Alazufov's workers threw down their tools. The striking had engaged over 4,600 workers by 21 January, making it an event of unprecedented scale for Kazan. It resulted in a temporary capitulation of factory owners [Amirkhanov, 2005, p. 14]. The January strike in Kazan lasted for 4 days, spreading to a whole network of small and medium businesses apart from Alafuzov's Factory (it involved loaders, tailors, printers, bakers, and the like). The strike movement in the spring-summer of 1905 was poorly coordinated in spite of powerful agit-prop from the social democrats and consisted mostly of economic slogans. The strikers succeeded in a number of cases. Some plants introduced a 10 hours work day, increased salary, and abolished the penalty system.

As revolutionary movements gained momentum and the public developed protest sentiment, various political groups and parties became active. Back in the pre-revolutionary period, branch departments of socialist parties were active in Kazan and a number of uyezd centres: the Kazan Committee of the Russian Social Democratic Labour Party and the Kazan Socialist Revolutionary Group. The student movement was rather active, though not expressly political. Liberal parties—the Party of Popular Freedom (the Cadets) and the Union of 17 October (the Octobrists) were not established until the Manifesto of 17 October that stipulated inviolable civil rights for the population and vested legislative rights in the State Duma, which was to be established

under it. Monarchists took the opportunity to establish the so-called Tsarist People's Union, headed in 1905 by V. Zalessky, in Kazan [Alekseev, 2002 a; Alekseev, 2004]. The Cadets were the dominant liberal party which had local departments in Kazan and a number of uyezd centres (Chistopol, Laishevo, Tsivilsk, Yadrin). Its leaders were university professors (A.Vasilyev, G.Shershenovich, N.Zagoskin) and lawyers (M.Mandelstam, A.Bat', I.Babushkin). Octobrist masterminds were members of the university community (M.Kapustin, A.Smirnov), large businessmen (V.Karyakin), and officials of local authorities (N.Melnikov) [Ajnutdinova, 2003; Usmanova, 2006]. From the autumn of 1905 to the spring of 1906, regional departments of such parties were primarily engaged in the coordination of and participation in the election to the First State Duma.

The so-called October Rebellion was one of the most important events in the region in the autumn of 1906. A political meeting of many thousands of people took place near the building of the City Duma of 19 October. Radical speakers (the Bolshevik S.Lofovsky, Socialist Revolutionary P.Dravert, and others) encouraged the public to fight it out in spite of the Manifesto of 17 October. They instigated the crowd to disarm the police; people tried to set free political prisoners, etc. Another large political meeting took place in the city theatre that evening. The speakers advocated insubordination to the city administration and dissolution of the police, instead of which a militia was to be created. The militia consisted of university and gymnasium students, a few young workmen and craftsmen, and representatives of the radical youth. A united part committee named the City Commune was established on the night of 20 October 1905. It included representatives of various parties (Bolsheviks, Mensheviks, Socialist Revolutionaries, and Cadets). The rebels were unable to maintain control over the city for a long time. The local administration regained control over the situation as soon as they overcame their startle response on 21 October. Government troops occupied the City Duma

building, where the communist command staff had convened; about 130 militia men were arrested and were sent to the city prison. Some local Bolsheviks (S.Lofovsky, I.Sammer) and

Social Revolutionary leaders (in particular, members of a Tatar pro-Social Revolutionary organization F.Tuktarov, Sh.Mukhamedyarov), and others were arrested.

§ 2. Tatar's Contacts with All-Russian Political Parties and the Establishment of the First Islamic (Tatar) Political Organizations

Dilyara Usmanova

The non-Russian political movement in Russia in the early 20th century was influenced by all-Russian political parties. The percentage of members of political parties across Russia fluctuated from 0.5% in 1905–1907 to 1.2–1.5% following the February Revolution [Shelokhaev, 1997, p. 20]. The figures are much smaller when it comes to the Tatar population of the country. Tatar involvement in all-Russian parties was uncommon and limited to a narrow group of people.

The first Tatar political group in the Volga region was founded around 1895 by students of the Russian-Tatar Teachers' School in Kazan. Yet it was unpopular and did not find any significant resonance with the Muslim community. The group published the hand-written or hectographic magazine 'Tarakki' ('Progress'). In 1901, it was renamed to 'Shakirdly'k', and later to 'Xorriyat' ('Liberty'), also after its hand-written periodicals. Many members of the group joined the Islax (Reform) Movement, which gained momentum shortly before and during the revolution. Thus, the radical Tatar movement in the region in the early 20th century was predominantly represented by active shaqirds (madrassa students) who advocated a reform of the Muslim education system (the Islax Movement)⁶. Islax's most prominent masterminds were Yusuf Akchura, Gayaz Iskhaki,

Faty'h Amirkhan, and Gabdrakhman Mustafin. As radical political sentiment spread to wider social strata, the Islax movement was transformed from a purely Jadidist initiative for an education reform to a politically motivated revolutionary democratic movement.

The Muslim community also adopted Socialist ideas in the early 20th century, when Russian socialist parties were being formed, which is largely attributable to students' activities. The first socialist democrats of Tatar origin were brothers Ibragim and Ibniyamin Akhtyamov⁷, who studied at the universities of Kazan and Saint Petersburg at the beginning of the century. It was very uncommon, however, for Tatars to be members of political associations shortly before the first Russian revolution. In fact, the Russian political movement (especially its liberal and socialist trends) was in an inchoate stage and could function on a more or less legal basis abroad. The Russian government did not liberalize its international policy until the autumn of 1904 ('the Spring of Sviatopolk-Mirsky'), but no legal framework was present for political parties before the October Manifest of 1905.

The social and political activities of Russia's Islamic community generally gained momentum during the first Russian revolution of 1905–1907. It was the period when more or less expressly party-oriented political groups began to form among the Muslim population. Tatar social revolutionaries united as the

⁶ One of the most important sources on the activities of the pre-revolutionary Muslim congresses and the formation of the Tatar political movement is the book 'Fundamentals of Reformation' by Musa Bigiyev, who himself played an active part in their work and in some cases carried out secretarial functions [Bigi, 1917, 289 b].

⁷ Later Ibrahim Akhtyamov became a lawyer and the leader of the Mensheviks in Ufa, and Ibniyamin Akhtyamov, an active figure in the national movement.

Tanchy'lar Group, while Tatar social democrats established a group known, by analogy, as Uralchy'lar. The groups were named after their two official newspapers—Tang Yulduzy' (Morning Star) and Ural. Among their prominent activists there were former students of the Kazan Tatar Teachers' School Gayaz Iskhaki, Fuad Tuktarov, and Shakir Mukhamedyarov; Khusain and Khadicha Yamashev, Gumer Te-regulov belonged to the latter group. The Tang Group was active in Kazan and maintained intimate relations with local Socialist Revolutionaries (in particular, Fuad Tuktarov was a member of the party's regional department), while the centre of Yamashev's group was Uralsk. However, they only remained active for a short time and had a limited influence on the Tatar community. Both groups stepped off the public stage until the end of 1907 without even developing into a political party, which is partly attributable to governmental repressions and partly to the extremely small size of their target audience.

The ethnic liberal movement was represented by a group of adherents of the Constitutional Democratic Party (the Cadets). In this case too, liberal ideas were initially promoted through a network of personal contacts and relations as well as through Muslims' contacts with representatives of Russian society in the higher education establishment or imperial social institutions. Local self-government agencies, especially zemstvos, city dumas and boards acted as an important social and political 'school' for Muslim liberals.

Of no less importance for the promulgation of liberalism were creative individuals who could not only perceive but also generate ideas, thus founding a socially and politically active environment. Gabdrashid Ibragimov was among such participants in the Islamic political movement. Having returned from abroad in 1904, he did not hesitate to get involved in politics as a 'clarion' for the Volga Tatars to awaken the politically inert Muslim community [Validi, 1924]. G.Ibragimov resided in Saint Petersburg to bridge the capital's political community and the Muslims. As the editor of the Tatar Ul'fiyat

periodical he attended the Convention of the Union of Autonomists and Federalists, chaired by famous professor Jan Baudouin de Courtenay, which took place in the capital in November 1905. The delegates, who came to represent the ethnic interests of the Polish, Ukrainian, Estonian, Latvian, Lithuanian, Hebrews, Armenians, Caucasian Muslim, Volga Tatar, Kirghiz (Kazakh), and other non-Russian communities in Russia, formulated the following objectives for the Union: to declare and establish real equality of all peoples within the Russian empire; to secure the cultural and ethnic rights of all ethnic minorities both across Russia and in its autonomous peripheral areas; to transform and decentralize the ethnic periphery according to the principles of democracy, and the like. With the Union's first objective being 'self-determination of peripheral regions in the form of regional autonomy', its long-run goal was viewed as widely transforming Russia within a federative framework. Delegates to the conference elected a Central Committee of 20 people, among whom was G.Ibragimov. Established in the autumn of 1905, The Union of Autonomists and Federalists prefigured the Autonomist Union [Usmanova, 2005; Tsiunchuk, 2006b, pp. 245–255] founded by members of the First State Duma. Even though the two unions were short-term and inefficient undertakings, their very appearance is indicative of how popular autonomism was in Russian society.

For the empire's Muslim population, especially for the Tatars, the involvement of Muslim activists in an all-Russian convention was a major mobilizing factor. R.Ibragimov is deservedly renowned as an originator of the idea of ethnic autonomy. His contribution to the institutionalization of the Islamic political movement is also significant. The first flagship articles in his Ul'fet newspaper [Ibragimov, 1905b] suggest that awareness of a number of non-Russian ethnic programmes encouraged the Muslims to realize their own ethnic interests and embody them in a political programme. In his front-page article of the first issue, titled 'Autonomy', G.Ibragimov wrote, 'News is arriving from different sources that unions, parties,

organizations, associations are being created. Every ethnic group thus tries to assert its interests. Only the Tatars seem to have no force to lead such a movement. We have nothing. Why so?.. Many of the races get what they are given and, as they say, conquer what is not. What is the future status of our Tatar race? What do we Tatars need? What should we strive for and what do we want in the future? Do the Tatars know what they need?.. These are questions of utter importance, and we have to think them over and try to provide answers' [Ibragimov, 1905b]. G.Ibragimov's speculations on the ethnic vector of development as well as statements from this and the following article were reworked into a brochure, which was one of the first works to address the issue of an ethnic and governmental transformation of Russia and the political future of Muslim peoples in the empire [Ibragimov, 1905 a].

Yusuf Akchura was a vivid example of personified promotion of liberal ideas in the Muslim community. He had an extensive network of contacts with the Russian intelligentsia which enabled him to enter the liberal community and attend the earliest (2nd, 3rd, and 4th) Cadet conventions to represent the country's Muslim population [Ty'rkova-Williams, 1998]. The 2nd Convention of the People's Freedom Party (January 1906) even elected Yu. Akchura a member of the Central Committee of the People's Freedom Party, which suggested that

representatives of the Islamic political elite wanted to be seated as unelected members with the Cadets.

However, the interaction was largely limited to unconnected personal contacts. Yu.Akchura entered the Cadets' administrative body in a way which is most spectacular. Though Muslim names are on the lists of delegates of both the Second (5-11 January 1906, S.-G.Alkin and S.Galikeev from Kazan) and the Third (22-25 April 1906, Yu.Akchura from Kazan and D.Sheikh-Ali from Ufa) Conventions of the Cadet Party, the representation of the country's Muslim community was marginal to Cadet activities. Noteworthy, it was D.Sheikh-Ali who raised the question of Muslim representatives in the party's Central Committee. Even though the convention moderators explained that the issue could not be addressed according to the procedure, most of the delegates agreed to the suggestion, surprising the party's leaders. Yusuf Akchura was subsequently elected a member of the Cadet Central Committee, which certainly facilitated the further attraction of Muslim members of the First State Duma to the Cadet fraction⁸. The very situation in which the decision was made indicates that the Cadet management had no preconceived strategy for interaction with the ethnic movements. The Muslim initiative just chanced to come useful for Russian liberals' image in that context.

§ 3. All-Russian Muslim Congresses dated 1905–1907. The Formation of the Muslim Union 'Ittifaq al-Muslimin'

Dilyara Usmanova

All-Russian Muslim Congresses (1905-1907) played a key role in the formation of the Muslim political movement. They became quite a popular phenomenon in the political life of the Russia's Muslim peoples in Russia. The very fact of their holding was made possible only due to the liberalization of the Russian Empire's domestic policy. However, even earlier, in the conditions of absence of democratic

freedoms, Russian citizens found various ways to hold public meetings. For Russian liberals, these were all kinds of 'banquet campaigns' or congresses held outside the Empire (in Vyborg, Finland, etc.). Muslims often used as an offi-

⁸ Yu. Akchura was with the the Central Committee of the Cadet Party only briefly—after a year he left the all-Russian liberal party to take up the leadership of the Muslim party.

cial cover the Nizhny Novgorod market fairs or even weddings. For example, the first such meeting was held in the spring of 1905, when guests who had arrived to attend (M. Bigiev's) wedding ceremony in Chistopol, according to the memoirs of contemporaries and police agents' reports, were more engaged in discussing public needs and problems rather than in congratulating the newlyweds. It was very convenient to use the Nizhny Novgorod fairs to hold such events, because they were attended by Muslims from all over the empire. Initially, Nizhny Novgorod Fairs were used by the Muslim clergy to raise funds for their madrassas from wealthy merchants. Before the beginning and during the first revolution, the crowded Nizhny Novgorod fairs became a convenient place for public events. However, All-Russian Congresses were preceded by regional meetings. Some of them were held in Kazan.

At the beginning of 1905, two major meetings were held by the Kazan Tatars. The first of them took place on 23 January in a house of the merchant Khusainov, under the control of G. Ibragimov. At the meeting, it was decided to start a petition campaign aimed at determining the needs of Muslims and elect deputies for a trip to St. Petersburg. On 29 January the second, a more populous meeting (about 200 participants) was held, where a detailed petition was adopted to be submitted to the Tsar. Principal attention was paid to elimination of all national, religious and class limitations, and to provision to Muslims the rights, equal to those exercised by other nations living in the empire [Khasanov, 1965]. Thus, during the liberalization of the domestic political situation in the country, Muslims intensified their work, but carried it out in the traditional forms of preparing and submitting petitions and applying to the supreme authorities.

A legal meeting of Muslims from all over the Russian Empire was impossible before the promulgation of the October Manifesto dated 1905, which provided for a freedom of assembly along with other democratic freedoms. However, with respect to the attending members, the problems and discussions raised, as

well as the nature of the decisions taken, these congresses were events purely addressed to the Muslim community of the country. The first two of the four pre-revolutionary Muslim Congresses had been held before the Russian Parliament started its work and had been carried out in semi-legal conditions. Muslim Congresses were of particular importance, the first of which took an important decision on forming a political party.

In the literature, there are various names of this liberal-democratic political organization of Russian Muslims formed between 1905 and 1906 by the decision of the All-Russian Congresses of Muslims: *'Ittifaq al-Muslimin'* (*'Bøten Rusia møselmannary Ittifaqy'*, *'Muslim Union'*, *'Union of Russian Muslims'*, *'All-Russian Union of Muslims of Russia'*). A. Ahtyamov, Yu. Akchura, S.-G. Alkin, I. Gasprinsky, S. Dzhanturyin, R. Ibragimov, Kh. Maksudi, A.-M. Topchibashev, Sh. Syrtlanov, etc. were the Union leaders. The creation of an all-Muslim party was the first and the only attempt to unite liberal forces of Muslim nations living in Russia at a national political level [Iskhakov, 1997; Yamaeva, 2002; Usmanova, 2005; Iskhakov, 2007; Senyutkina, 2007; Usmanova, 2010, pp.376-378].

The decision to establish a liberal Muslim party was announced at the 1st All-Russian Muslim Congress (13–20.08.1905, Nizhny Novgorod) [Khabutdinov, 2005; Senyutkina, 2005; Usmanov, 2005] convened to develop a common political platform for Russian Muslims. The congress was attended by about 120-150 representatives of Muslims, including leading representatives of the religious and secular intelligentsia, national leaders, as well as representatives of the Tatar upper bourgeoisie. Congress organizers failed to obtain official permission to hold the Congress, and therefore the main meeting (15 August 1905) was held illegally under the guise of a river trip down the Oka river. G. Ibragimov, Yu. Akchura, and A.-M. Topchibashev, the ideologists of the Muslim liberal movement, were the main organizers of the Congress. I. Gasprinsky was unanimously elected to the position of the

Congress chairman. An attempt to prevent the radical left youth from participating in the organizational meeting failed. (A group of Tatar socialist revolutionaries headed by G. Iskhaki and F. Tuktarovy had been told the wrong time of the ship's departure to prevent them to attend the meeting.) Left radicals brought some discord into the Congress' proceedings insisting that it was impossible to create a single Muslim political party, which would unite workers, peasants and bourgeoisie which were socially alien to each other. Their political opponents, namely liberal-minded people (Yu. Akchura, A.-M. Topchibashev, and others), believed that the party being created was to be based, first of all, on ethnic principles, and not on the principle of class discord and misunderstandings. The Congress participants discussed urgent problems facing Muslim population of the country. They argued for the proposition 'that Muslims from all over Russia on the basis of socio-cultural and political demands and problems of current Russian life should band together'; for the establishment of a legal regime based on participation of freely elected popular representatives in lawmaking and state management' and the complete 'equalization of political, civil and religious rights of Muslims with the rest of the Russian population'. After a number of illegal meetings and unofficial discussions, the delegates went home on 20 August 1905.

The 2nd All-Russian Muslim Congress (13-22 January 1906, St. Petersburg), which had no legal status as well, played a major role in establishing the party, as well as in determining the position of Russian Muslims before the elections to the first Russian parliament. A petition filed by a capital merchant Muhammad-Alim Maksudov and Rashid Ibragimov to a St. Petersburg governor stated the Muslims' intention to hold a series of meetings from 25 to 25th of January, to consider the following range of problems: 'discussion of various applications for religious and spiritual management filed by Muslims from all over Russia, as well as prior petitions to unite and summarize them; explanation of the highest manifesto dated 17

October 1905 in relation to the spiritual, political and economic life of Muslims; clarification of the Muslims' attitude to the State Duma and discussion of the announced programs of various political parties'. Similar petitions were filed by S.-G. Alkin and Sh. Syrtlanov [Ros-sijskij Gosudarstvennyj Istoricheskij Arkhiv, Fund 821, Inventory 8, File 1198, Sheets 6-7]. As St. Petersburg was subject to a regulation of the Minister of Internal Affairs on the prohibition of any public and private meetings of political and economic nature from 19 December 1905, the Congress was not permitted by the authorities. The Minister of Internal Affairs justified his refusal, in particular, by the desire not to create a precedent: 'If we allow a Muslim Congress, there will not be grounds to deny Hebrews, Poles and others living in Russia'. Therefore, the authorities did not want to create a precedent and allow major public events. Near the building, where the Congress was to be held, the delegates were met by a police squad on duty with a prohibition of the city authorities to convene and a prescription for the delegates to go home ['Novoe vremya', 1906, January 21; Akhverdov, 1906]. Therefore, the Congress consisted in illegal private meetings held by the delegates who had arrived in the capital. The approximately 100 delegates from various Islamic regions of the country—Turkestan, the Caucasus, the Crimea and the Volga-Ural region—the greatest influence was exercised by an Azerbaijani lawyer A.-M. Topchibashev, a Mullah G. Barudi and a lawyer S.-G. Alkin as representatives of the Kazan Tatars, an Akhun A. Bayazitov and a publicist G.-R. Ibragimov as capital residents, Orenburg delegates F. Karimi and Sh. Tukaev, and others.

The first edition of the future party's charter (§§ 23) and probably a temporary program were adopted at those meetings. Both documents were written in the Russian language by A.-M. Topchibashev and then translated into Tatar by M. Bigiev. According to the charter, the Russian territory was divided into 16 regions populated by Muslims: the Caucasus (with a center in Baku), Crimea (Simferopol), St. Petersburg (St. Petersburg), Lithu-

ania (Minsk), Lower Volga (Astrakhan), Upper Volga (Kazan), Ufa (Ufa), Orenburg (Orenburg), Simbirsk (Irkutsk), the Steppe (Uralsk), Omsk (Omsk), Semipalatinsk (Semipalatinsk), Akmola (Petropavlovsk), Transcaspian area (Ashgabat) and Semirechensk (Verny). Local committees (Mejlis) were established in all regional centers that were to be elected by a general meeting of these regions. It was also decided that the All-Russian Muslim Congress was to be the party's supreme governing body⁹.

In addition, the participants of the meetings decided to act in solidarity with constitutional democrats during the election campaign and to try to have Muslim representatives in the Duma in a number proportionate to the number of the Muslim population in the empire. When most of the Congress delegates had left, Muslims remaining in the capital began to seek an audience with the head of the government. On 29 January 1906 a delegation of seven people (including Mullah Z. Kashaev, A. Shagidullin, Sh. Tukaev, as well as Z. Rameev, D. Sheikh-Ali and Yu. Akchura) was received by Count S. Vitte. The Muslim representatives filed a note to the head of the government outlining the wishes of the Muslim community regarding the work of Ignatyev's meeting, as well as expressed their concern that elaboration of the 'Muslim issue' had been entrusted to V. Cherevansky, who was known for his anti-Muslim views.

If we talk about the 'party formation', the most important role in the organization of the Union was played by the 3rd All-Russian

Muslim Congress (16-22 August 1906, Nizhny Novgorod). The Congress organizers managed to implement their plans. A petition signed by G.-R. Ibragimov, Kh. Maksudi and G. Iskhaki was granted by the authorities two days after its submission. The permission was granted provided that the Congress would be closed for the public, would take place outside the fair and strictly according to the approved programme. And the Congress programme attached to the request was formulated quite evasively and consisted of the following items: (1) 'on the need to counteract teachings not corresponding to the true teachings of our prophet Muhammad by propagation and publications', (2) on the need for complete transformation of primary Muslim schools, maktabs and madrassas and transferring their control to the society instead of the Muslim clergy, (3) on the development of a programme of reorganization of the spiritual administration and on the means of its establishment based on Islamic cultural fundamentals, progress and tolerance, (4) the issue of financing (waqfs, etc.) required for reorganization of schools and the clergy. In their petition, the style of which is very interesting, the petitioners emphasized the need to combat 'utopian ideas of Pan-Islamism' and destructive ideas of socialism and anarchy, which contradicted the spirit of Islam and negatively affected the unenlightened Muslim masses. Moreover, the authors of the petition pointed to the undesirability for Muslims to study abroad, especially in Constantinople, where young people got inspired with either teachings of west-European revolutionaries or eastern intolerance; they wrote about the need to advocate true Islamic principles among the population. The style of the petition evidenced that it had been written by a person, who not only knew the mood of the upper bureaucracy, but used the very sorts of arguments and expressions that could reach the hearts of the adherents to 'the public interest'¹⁰.

⁹ The Charter of the Union of 23 paragraphs, compiled by A. Topchibashev, was printed on 8 March 1906 in the capital's Antakolsky printing house. The text of the Charter was preceded by a brief pre-history of the Union from 1904, composed by M. Bigiyev [Russian State Historical Archive, fund 821, inv. 133, file 473, sheets 239-242]. The programme was printed a little later—on 10 April 1906 by the same Antakolsky printing house. Only ten years after the programme was published, in the summer of 1916 the Police Department entered into correspondence with the explanation, 'does this pamphlet not apply to those prohibited from making public addresses, and has prosecution not been initiated by the authorities for the compilation or distribution of the aforementioned brochure' [RSHA, fund 776, inv. 9, file 265, sheet 2].

¹⁰ For the original of the petition by Ibragimov-Maksudov-Iskhakov and the programme of the future congress, see: [RSHA, fund 821, inv. 8, file 1198, sheets 8-10].

However, already at the first meeting, G.-R. Ibragimov had to explain the delegates the wording of the petition submitted to P. Stolypin, the Minister of Internal Affairs. The delegates were indignant not only at the fact that he had filed the petition in violation of the decision of the 2nd Muslim Congress regarding voting by present participants, but rather at the very wording of the petition, which 'in no way corresponded to the wishes of progressive Muslims'. G.-R. Ibragimov took the blame on himself explaining his actions by a desire to contribute to the common cause. However, not wishing to limit the work of the Congress by those restrictions imposed by the programme's wording, the Conciliation Committee prepared a resolution that 'the motivation of the petition by Ibragimov is excessive for the Congress' [A. Sh., 1906]. The conflict was over, but complaints against Ibragimov appeared in many Tatar publications. This story was far from being accidental. On the one hand, this was very typical for Ibragimov as a personality prone to achieve a goal employing a flexibility bordering on unscrupulousness, and sometimes even exhibiting adventuristic traits. At the same time, it was his efforts and ability to make concessions that allowed for the first and only Muslim Congress in pre-Revolutionary Russia to be held that had been organized not by the authorities but by the Muslim community.

The Congress opened with 800 delegates present, and completed its work with 1200 participants representing all Muslim regions of the country. A.-M. Topchibashev was elected to be the Congress chairman, and I. Gasprinsky, Sh. Syrtlanov, G.-R. Ibragimov, S.-G. Alkin, G. Barudi and A. Apanayev were elected as his deputies. Secretarial functions were performed by Yu. Akchura, M. Bigiev, S. G. Dzhanturin, A. Gismatullin and M. Shirvansky. At the request of Turkestan Muslims, Sh. Koshchegulov and A. Ilkhamdzhanov were additionally elected to the panel. The Congress agenda included four issues that were the most important for Muslims: on the struggle against missionary advocacy, on the reorganization of the Muslim clergy, on waqfs and, finally, on the reforming

primary education. All the meetings and discussions were held in the Tatar language. The work of the Congress was watched by 16 correspondents from Russian and Tatar newspapers, and Congress decisions were sent by telegraph to major capital editions (the 'Rech', the 'Oko', the 'Strana', the 'Tovarisch', the 'Russkiye Vedomosti', the 'Russkoye Slovo', the 'Novy Put'). Congress Resolutions were published by almost all Muslim periodicals and published as a separate booklet in Russian and Tatar [Tretij vserossijskij musul'mansij s'ezd v Nizhnem Novgorode, 1906]. The most important decisions of the Congress touched upon such issues as reforming the Muslim education system and establishing public control over it, reorganizing the spiritual administration and introducing the principle of election, and transforming the Union into a political party. Finally, a party programme was adopted, and governing bodies were established: the Central Committee and the Central Bureau (headquartered in St. Petersburg). Further development of a number of issues (on waqfs, etc.) was transferred to the Central Committee of the newly formed party. The Congress delegates supported actual exercise of the freedoms granted by the Manifesto dated 17 October 1905, forthcoming convening of the second State Duma, and opposed to consideration by governmental institutions of the 'Muslim issue' before the Russian parliament started its work. The next 4th Congress was scheduled for August 1907, but it could be held neither in January, nor in August 1907.

The programme adopted by the 2nd and approved the 3rd Congress was developed on the basis of a programme of constitutional democrats adapted taking into account the interests and the needs of the Muslim population. The first paragraph of the programme declared that 'the party's task was to unite in a common practical activity all Muslim citizens of Russia having similar political views to implement a number of political, economic, social, religious and other reforms'. The major provisions of the programme were as follows: constitutional and parliamentary monarchy; an update of the whole 'regime of civil and political life

on the principles of freedom, truth and humanity'; democratic rights and freedom, equality of all Russian citizens before the law 'without any sexual, religious, racial or national distinctions'; preservation of private property; granting land to peasants from the state fund; partial forced alienation of estates for a ransom; return to Muslims of waqf property and land confiscated by the state for migrants' needs. The most thorough requirements formulated in the programme were the religious ones: Muslims must be granted the right to found religious, collective and sole institutions, the right to freely choose all officials of the Mohammedan clergy, the right of public control over activities of religious institutions and clergy, the right of disposal of all waqf and other property belonging to mosques, educational and charitable institutions [Iskhakov, 1997; Usmanova, 2010, pp. 376–378].

The Central Committee was entrusted with control functions and granted the right to change the programme if necessary without convening the Congress, management of the local committees, coordination of the election campaign in the State Duma, and given control over the party finances. The Central Committee consisted of 15 people: Yu. Akchura, brothers A.-X. and S. Maksudi, S.-G. Alkin, A. Apanayev, G. Barudi-Galeev (Kazan), R. Ibragimov, M. Bigiev (St. Petersburg), G. Bubi (Vyatka); Sh. Syrtlanov, S.-G. Dzhanhyurin (Ufa); A.-M. Topchibashev (Caucasus), I. Gasprinsky and M. Davidovich (Crimea), Kh. Koshchegulov (Stepnoy district). Furthermore, it was decided to additionally appoint by executive decision five representatives to the Central Committee from Muslim outskirts of the country (three from the Caucasus, one from Turkestan and one from Orenburg). Kazan, Ufa and Orenburg regional committees were the most active. In Kazan, there were such newspapers as 'Kazan Mukhbire' ('Kazan Bulletin') and 'Akhbar' ('News').

Party leaders made several unsuccessful attempts to legalize the party. The charter of the Muslim party was considered at the meetings of the capital prisutstviye (commission)

on 15 and 29 May 1907. The party was represented by its founders, a deputy of the State Duma K.-M. Tevkelev, G.-R. Ibragimov and G.-O. Syrtlanov. The commission members' opinions differed: four members delivered a positive verdict on the issue being discussed. In their opinion, the publication of the constitution on 26 April 1906 (Art. 86 and 87) and the Manifesto dated 17 October 1905 actually established a constitutional monarchy in Russia in terms of limiting the Emperor's supreme power. Therefore, they believed that the Muslim party's aim—the establishment of a constitutional monarchy in Russia—was not itself illegal, and the party could be registered. D. Drachevsky, the commission chairman and the St. Petersburg governor, did not agree with this interpretation of the above laws and protested the decision of the four commission members [Rech', 1907, September 19]. The Muslims' petition was rejected, and the party was not legalized. In fact, consideration of the issue of legalizing the Muslim party provoked another dispute about the nature of the political system established in Russia after adoption of the above laws (the October Manifesto dated 1905 and the Constitution dated April 1906). The uncertainty and dual nature of the political system and the possibility of interpreting the problem differently were used by the authorities as grounds for denying legalization of the Muslim party.

When the Union was just created, the radical national youth ignored it considering it to be only a cultural and educational, and not a political organization. Many 'Tangists' (F. Tuktarov, G. Iskhaki, etc.) believed that it was impossible to unite socially alien elements in the condition of a class struggle. Moreover, in the conditions of the first Russian revolution, a view was quite widespread among the radical Tatar youth that Muslims should not create an independent political party. This view was most clearly expressed by M. -F. Tuktarov in his famous book about Muslim deputies. Characterizing Muslim deputies, M.-F. Tuktarov spoke of the current uselessness of an independent Muslim group due to the 'ignorance' of

the Muslim population and a lack of traditions in the political life. Consequently, it was much more important for Muslims to work together with all-Russian factions and groups at that time and to obtain their parliamentary and political experience, while the creation of an independent Muslim faction as well as a Muslim political party could happen only in the distant future [Usal, 1909, p.55].

Similar conclusions were made by Mammed-aga Shakhtakhtinsky, a deputy of the 2nd State Duma, although on quite other grounds. Addressing the history of the Muslim Union and then analyzing the denial of the party's legalization, M. Shakhtakhtinsky considered the very idea of creating a party as absolutely tactless and inappropriate. According to an Azerbaijanian publicist, the Muslims' claims to participate in the transformation of Russian supreme power on constitutional principles, were the cause of a colossal scandal. If Muslims wanted to participate in political life, they had to act only within the framework of political associations of like-minded Russians. And in fact, high politics was not the Muslims' cup of tea. According to M. Shakhtakhtinsky, the reason of all problems of the Muslim population lied in prevalence of the antisocial Islamic teachings, which were a major hindrance to progress. Blaming Muslims for many troubles and sins (absence of pragmatism and curiosity, indifference to everything, inertness, apathy, lack of knowledge and skills, inability to work and disbelief in the sanctity of labour, etc.), Shakhtakhtinsky expressed the greatest anger regarding polygamy [Shakhtakhtinsky, 1907].

Even later, many of the radical-minded Muslims believed that creation of a genuine Muslim political party was impossible: 'As shown by the political experience during the existence of the third Duma, Muslims do not have a party in the strict sense of the word, but have only one progressive political movement', a deputy of the third Duma I. Gaydarov wrote on the eve of elections to the last pre-revolutionary Duma [Seid-Zade, 1991, p. 94]. Indeed, even the Cadets were called a party of leaders without an army, not to mention political as-

sociations of non-Russian nations that were not so rich in ideological or organizational forces.

Although the Central Committee announced self-dissolution of the party in 1908, some of its subdivisions continued work. In fact, the functions of a coordinating body were undertaken by the Muslim faction; the majority of Muslim deputies called themselves members of the Muslim Union. At the 4th All-Russian Muslim Congress (June, 1914), it was announced that the 'Ittifaq' continued its functioning. Some liberals believed that the Muslim Union was a 'national and political union uniting nationally like-minded, but politically different people', rather than a political party (Ibn. Akhtyamov) [Millet, 1914, March 6].

The paradox of history lied in the fact that after 1908 neither the conservatives, nor the radical youth, nor the liberal Muslim political organization criticized by them were actually able to exist legally. And while the conservatives represented a marginal layer in the Muslim political movement, and the radical youth underwent a kind of evolution of their ideological views over the period from 1907 to 1908 (this evolution is most evident if you see the fate of G. Iskhaki and F. Tuktarov), the 'Muslim Union' experienced a different kind of transformation. From an organizational and political point of view, it soon ceased to exist, having not become a real political party. A certain disorganizing role was played by the fact that after 1908 two of the most active and initiative Union leaders, G.-R. Ibragimov and Yu. Akchura were in exile, and a number of Central Committee members were subject to repressions for their political activities. In particular, S.-G. Alkin, S. G. Dzhanturyin, A.-M. Topchibashev, and others were deprived of political rights and excluded from public activities for signing the Vyborg Manifesto; A. Apanayev, G. Barudi and G. Bubi were subject to repressions for their cultural and educational activities and were in exile.

After the February Revolution, there appeared suggestions in Tatar publications to revive the 'Ittifaq Al-Muslimin', but the majority of the population negatively treated the

cadets, and therefore the leaders of the Muslim political movement opposed the revival of the Muslim 'cadet' party. In 1917-1918, almost all most influential party members headed national movements in their regions.

The most active members of the 'Muslim Union', who had founded it, were somehow linked with the Russian parliament, whose walls concentrated the entire legal political life

of Russian society. As to the non-political activities, they took place predominantly within numerous cultural, educational and charitable organizations, as well as Zemstvo institutions. Consequently, beginning from 1907, virtually all Russian Muslims' legal and political life was concentrated around Muslim factions of the State Duma, which soon turned into a kind of a national political center.

§ 4. Muslim Representatives in the Russian Parliament: General Characteristics of the Muslim Faction of the State Duma and the Role of Tatar Representatives in its Activities

Dilyara Usmanova

Due to a relatively late entry of the country into the era of political modernization and insufficient development of the political sphere, there were just a few institutions in imperial Russia, which could act as an all-Russian political tribune. They included the State Duma of the Russian Empire established in the period of an acute political crisis of 1905 and functioning during eleven years with short breaks from 1906 to 1917 (see more information about the State Duma of the Russian Empire: [Demin, 1996; Smirnov, 1998 b; Lukoyanov, 2006]).

The question of whether one can consider the Duma as a parliament in the strict sense of the word is controversial and debatable because of the known considerable limitations of its power. The law-making function of the Duma was considerably limited by the moderate upper chamber (the State Council), where many legislative initiatives of the deputies were doomed to certain death. The State Duma was not a full-fledged regulatory body, since in reality it did not affect formation of the government or the country management system. Finally, the Duma's representative functions were greatly cut by the elections law dated 1907 in relation to both individual strata of the population and entire regions, and a number of nations. Despite all the limitations and reservations, the State Duma may be called a parliament. This was a specific feature of moderniza-

tion of the Russian political system, which was already inconceivable without a representative body such as the State Duma since 1906. Similarly, with historical retrospection, the Russian State Duma would be inconceivable without its national and religious factions and groups, among which the Muslim faction played an important role [Yamaeva, 2002; Tsiunchuk, 2004; Usmanova, 2005; Iskhakov, 2007].

Numerous legal restraints and infringement on religious grounds that took place in the Russian Empire provoked protests of the Muslim population, dissatisfaction with the existing position and longing for feeling themselves equal citizens of the country. This was a legal background for forming an independent Muslim faction in the Russian parliament, which aimed at fighting the existing 'injustice' in relation to Muslims.

It was extremely important for the Muslim population of the Empire to participate in the work of the State Duma in terms of forming and developing political culture, namely learning the basics of political and parliamentary activities, including the ways of how to use an all-Russian platform to present and protect national interests, and how to enlist the corridors of power to lobby for Muslims' interests and needs in the bureaucratic environment. Muslim deputies used various arguments depending on whom they were appealing to. Appealing to

representatives of the ruling bureaucracy, Muslim representatives (G. Enikeev, S. Maksudi, etc.) insisted on unchanging loyalty and fidelity of the Muslim population to the throne, and asked for mercy in exchange for that loyalty, namely for revocation of existing restrictive and limiting statutory provisions. When Muslim speakers delivered a speech from a Duma platform to the members of other Duma factions, they changed the tone of their statements and the arguments emphasized. In this case, they insisted on the legality of their requirements, on the need to introduce civil equality in the country.

The political experience of the Muslim deputies was based primarily on religious, ethnic and regional identity. Religious identity was especially predominant, which led to the creation of an independent Muslim faction uniting most of the Muslim deputies of all the four of pre-revolutionary Dumas. At the same time, in practice, the problems addressed by certain Muslim deputies, first of all, the way they developed their factional and external activities, were also affected by other ethnic, regional, social, professional and cultural factors.

Objective factors of forming the Muslim deputy corps include the laws on elections dated 1905-1907 that limited the number of representatives of non-Russian nations and provided advantages to one or another social groups or nationalities. The objective factors also include the social structure of the Muslim population, in particular, the prevalence of rural and the lack of urban population among Muslims. A significant number of noblemen among the elected Muslim deputies, especially representatives of ancestral aristocracy, which was typical for Caucasian and Kazakh deputies, also reflected specific features of the social structure of the population in these regions. The composition and nature of the Muslim deputy corps was also influenced by such factors as a lack of party structures and political experience, inability to carry out electoral campaigns, presence of many groupings competing with each other, personal ambitions and errors of individual political figures.

In total, 25 Muslim deputies were elected to the first State Duma (27 April—9 July 1906), who represented the main 'Muslim' regions of the country: the Volga-Ural region, the Caucasus, the Semirechye region and Turkestan. The idea to create an independent Muslim faction emerged almost immediately (initiated by S.-G. Alkin), but it took some time to implement. Only on 21 June the first general meeting of the Muslim group was held, where the creation of a faction was announced. A.-M. Topchibashev, an Azerbaijani deputy, was the group leader. The faction being created aimed at preliminary discussion of issues on the agenda and preparation of speakers, coordination of all Muslim deputies' positions and help in writing petitions. In addition, active agitation and explanatory activities were planned. These included meetings and interviews with Muslims living in St. Petersburg, going around the Muslim territories by deputies to let the population get acquainted with the Duma's work, publication of reports on the Duma activities in the Tatar language and release of a Muslim newspaper in St. Petersburg. A speech about the faction's aims and composition scheduled for 14 July did not take place due to premature dissolution of the Duma. Therefore, all official documents name Muslim deputies in the Cadet faction or (a smaller part) among in the Trudoviks (labour) faction. Six out of nineteen Muslim deputies being in Moscow at the moment of Duma dissolution joined the 'Vyborg Manifesto' (A. Akhtyamov, S.-G. Alkin, A. Ziatkhanov, S. G. Dzhanturin, A.-M. Topchibashev and A. Bukeikhanov). All of them (except A. Akhtyamov) were later deprived of their political rights after having been imprisoned for a period of three months.

The Second State Duma of (20 February—2 June 1907) existed for only one hundred and three days and was also dissolved before the end of its term. What was the second Duma for Muslims? In quantitative terms, it turned out to be the most favorable, all Muslim regions were represented in the Duma by people's chosen deputies. In total, 37 Muslim deputies were elected, who organized two factions and sent one representative to the governing bod-

ies. Stormy political events in the country and polarization of Russian society resulted in the instable unity of Muslim deputies being broken. Splits in the faction had already appeared by the end of February. Most of Muslim delegates (their number had exceeded 30 by the end of the Duma's work) organized a Muslim faction. A minority in the amount of six people formed a separate block called the 'Muslim labour group' and officially joined the Trudoviks (labour) faction. They jointly solved the main purely ethnic problems.

M.-A. Biglov, an Ufa deputy, became an official chairman of the Muslim faction, and R. Mediev, Kh. Usmanov, M. S. Khasanov and F. Khankhoysky became Bureau members. Several commissions were formed in the faction. One considered draft laws concerning the position of the Muslim population of the empire, as well as legal and economic matters. As to general political matters, the Muslim programme (remade from the Muslim group's programme by the end of March) was in many ways close to the Cadets' provisions. They advocated, among other demands, single-chamber parliamentary system, a ministry of the Duma, universal, direct, equal and secret voting, equality of all citizens irrespective of nationality or religion, universal free and compulsory primary education, an elected inferior court. The national factor became apparent in the fact that the Muslim deputies insisted on using the Tatar language in local government bodies, the inferior court, as well as the primary school, because it was native for most of the population of these regions. The Muslims' position also differed when it came to the issue of the people's courts—given their history and popularity among the local population, the question about their preservation was solved affirmatively. Moreover, the agricultural issue was also interpreted somewhat differently. In general, the members of the Muslim faction agreed with the Cadets in their wish to confiscate landowners' property for a fair compensation (while the Muslim Trudoviks insisted on non-reimbursable confiscation). However, Muslims had a special interest regarding the is-

sue of waqf lands, which was reflected in a special draft law on waqf lands (primarily applying to the Crimea), which was prepared by the members of the Muslim fraction for submission to the Duma for consideration. This is the question of waqf property that led to a split between the majority of the Muslim deputies and the minority represented by the Muslim Trudoviks (labour faction). The latter considered it possible and even necessary to confiscate the waqf property and to distribute it among land-poor peasants. Another issue that caused lively discussions in the faction concerned women's equality. The final liberal wording of this programme item required an explanation of the most influential ulamas of Troitsk, Orenburg and Kazan that the Quran contains no provisions speaking against political equality between women and men. However, the work of the Muslim parliamentary group was influenced by a number of adverse factors. There was no single leader, an insufficient number or even lack of hard-working faction members (both draft laws were a result of the activities of the former deputies A.-M. Topchibashev and S.-G. Alkin), Muslim deputies' activities were often discordant (conflicts of local and group interests), there was also financial indiscipline among faction members, and other issues.

Upon dissolution of the Second Duma, the election was also changed (3 June 1907), which deprived such Muslim regions as Turkestan and the Stepony district of their representatives, as well as sharply reduced the number of deputies elected in the Caucasus. An increase in the voters' qualifications led to a significant reduction in the number of Muslim voters, and hence the possible maximum quota for non-Russian deputies. In general, according to the new elections law, the population of the regions with predominant foreigners (Poland, Baltic Countries, the Caucasus, and partially the Volga-Ural region) could elect only twenty-five deputies. The electoral campaign of autumn 1907 included a new feature, namely the general division of electoral forums into Russian and foreign ones. All this, along with active use by the administration of the so-called 'administra-

tive resource', predetermined the general look of the deputy corps and a minor share of Muslim deputies therein (only 10 out of the total number of 442 deputies).

The Third State Duma (1 November 1907–June 1912) was the only one that worked for the whole statutory term. The Duma considered 2432 draft laws during its 5 sessions. In terms of its composition, the third Duma, a Duma of 'political weakness and untimeliness' was much more right and moderate. The independent Muslim faction, which finally took shape on November 9–10, included only eight deputies. After a couple of sessions they were joined by a Daghestani I. Gaydarov, who was a former member of the Social-Democratic group. K.-M. Tevkelev was elected as the faction chairman, and S. Maksudi and Ismail Lemanov were elected as secretaries (and worked on a paid basis). The Muslim group adopted a programme developed by the members of the Muslim faction of the previous two Dumas. Initially, Muslim deputies of the third Duma were going to treat general issues together with the Narodnaya Svoboda (People's Freedom) party, but dual membership was prohibited. It was allowed only to conclude individual agreements with other parties (primarily with national groups and the Cadets, as well as representatives of the Octobrist Party (the Union of October 17) on specific issues. Muslims reserved the right to act independently both on matters of general political and general public nature, as well as on those that touched primarily or exclusively the Muslim population. Therefore, the Muslim faction of the third Duma introduced some adjustments to the Duma's tactics.

The work of the commissions formed in the Muslim faction (that on religious affairs, education and verification of old laws concerning the life of the Muslim society) actively involved deputies of the former Dumas—S. Karatayev, S.-G. Alkin, A.-M. Topchibashev, F. Khankhoysky, etc. Those Muslim deputies who were really involved in the law-making activity, first of all included G. Enikeev, who was a member of the Commission on popular education and worked on the development

of the corresponding project. The formation of the Muslim faction's political image was strongly influenced by G.-O. Syrtlanov and S. Maksudi, whose moderate views and cautious tactics contributed to some 'right focus' of Muslims. Almost all members of the faction spoke from the Duma's rostrum, but Caucasian deputies Kh. Khasmamedov and I. Gaydarov should be marked out. S. Maksudi delivered the most impressive speeches of all the representatives of the Volga-Ural region. Duma activities contributed to the transformation of a young lawyer and recent graduate into an influential and experienced politician with a promising future. S. Maksudi's speeches made him widely popular in the Russian Muslim world. Especially wide resonance in Tatar society was drawn by S. Maksudi's speech dated 6 March 1912 about the government's struggle against the so-called 'pan-Islamic threat', which was translated into Tatar, published in the Yulduz newspaper and cited by quotations in several leading Tatar editions. However, as assessed by contemporaries, the Muslim faction, which had to become a centre of the Islamic movement, could not always manage to achieve its task, because it was 'small in number, weak and not very active'. The Tatar print media spoke very critically about the political image of Muslim deputies.

Elections to the Fourth State Duma (15 November 1912—5 February 1917) were held in autumn of 1912. In addition to the election law, the government and the local administration used all available administrative resources. This included a system of mass 'clarification' against undesirable candidates, judicial punishment for frivolous reasons to eliminate potentially hazardous and patently successful candidates, division of electors into divisions and sub-divisions and use of the Orthodox clergy. As a result, the Muslim population of Kazan guberniya, for example, which was one of the most important and significant Muslim centers in Russia, was left without a representative in the Russian parliament. However, the failure of the Muslim election campaign of 1912 was due not only to repressions of the authorities.

Muslim liberal politicians did not manage to arrange a single center, which was to direct and coordinate activities of Muslim electors, and the Muslim population did not have a clear idea of the election campaign strategy.

The Muslim faction of the fourth State Duma consisted of 6 members headed by K.-M. Tevkelev. I. Akhtyamov was a secretary. One of the Muslim deputies (Mohammed Dalgat) joined the Progressive Party. Muslim representatives did not prefer a single political group, but were ready to cooperate with any Duma group (especially national ones), always remaining within a block of opposition parties and factions. However, the small number of its members deprived the Muslim faction of any opportunity to act effectively.

Thus, only 79 Muslim deputies were elected to all four Dumas. As some of the deputies were elected for a second term (K.-M. Tevkelev was elected four times), only 67 Muslims worked in all four Dumas. The class and national identity of Muslim deputies was somehow determined by the election laws of 1906 and 1907, which generally limited representation of non-Russian nations in the Russian parliament. According to the national indicator, Muslim deputies represented the main ethnic groups of the country as follows: most of them were Tatar (25), who were followed by Azerbaijanis (11), Kazakhs (9), Bashkirs (7¹¹), Lezghins (4), Uzbeks (3), Crimean Tatars (2), Turkmen and Chechens (1). Most of the Muslim deputies were representatives of the nobility (19 members, including six representing the ancestral aristocracy, who were the descendants of ruling Khans) and peasants (at least 20-25 members). Such classes as the petty bourgeoisie, merchants and officials were also represented among the Muslim deputies, although to a lesser degree. A considerable group of the deputies was formed by the Muslim clergy—15 seats (or 13 people, as two mullahs were elected twice). But as the Muslim clergy

was not a separate class, almost all mullahs belonged to the peasantry. As to regional specifics, all Mullah deputies were sent to the parliament by the population of the Volga-Ural region (10) and Turkestan and the Steпноy district (3). Of 67 Muslim deputies, 33 people had a higher and secondary education (21 and 12 respectively). The educational level of Muslim deputies is comparable to that of all Duma deputies on the whole. The greatest share of those well-educated was among the deputies from the Caucasus. Most deputies, who did not have a European education and poorly knew the Russian language, were sent by the population of Turkestan and to some extent the Volga-Ural region.

Religious issues, the public education, the immigration policy, the status of ethnic outskirts, and finally, the issue of holidays were perhaps the most important for Muslims of all the issues discussed in the Russian parliament. It was while considering these issues in the commissions and especially during general Duma debates, when the members of the Muslim faction were the most active. As to fundamental issues, Muslim deputies usually took a consolidated position and usually tried not to expose underlying disagreements outside the group. This tendency was caused, in particular, by the following circumstance. Due to the discriminatory nature of the election law dated 1907, representation of individual Muslim regions in the Duma was disproportionate if compared with the census data of 1897: the Volga-Ural region was represented by 23 deputies in all the four Dumas, Turkestan and the Steпноy district—16, the Caucasus and the Crimea—23. In the circumstances when certain Muslim regions were prevented from sending their deputies to the Duma, the mission to protect their interests and announce their wishes and demands was undertaken by Muslims from other regions and areas of the Empire, primarily the Volga-Ural region and the Caucasus. A number of issues (religious freedom, public education, the use of national languages in litigation and by local authorities) were discussed by the members of the Muslim faction in alliance with other ethnic groups, especially members of the Polish Kolo.

¹¹ It should be noted that the nationality of some members was 'borderline,' which is reflected, for example, in the differences between their official nationality, as stated in documents, and nationality according to 'the native language.'

Of course, internal discrepancies and contradictions within the Muslim parliamentary group were caused by the presence of specific regional or national interests. Nevertheless, the main watershed, which led to a split of the Muslim deputies into the Muslim faction and the Muslim labour group, lay in the social sphere rather than the sphere of religious and cultural issues, and was based on the radical positions held by some Muslim deputies regarding the agrarian question. The radical position of some Muslim deputies on this issue reflected its acuteness for most of the population.

A complex of issues relating to the confessional sphere and public education was the most important for Muslim deputies out of all other issues. The issue of reforming the management of ecclesiastical (religious) regulatory bodies in the post-reform era can be divided into three major periods when the issue was most actively discussed and was, as it seemed at the time, closest to its resolution: the first stage chronologically dates back to the period from the mid-50's until the mid-70's, and the second from the 90's of the 19th century. The third stage began between 1904 and 1905. It ended only after the February Revolution of 1917, which created conditions for implementing transformations that had been planned in the pre-revolutionary period. The third stage witnessed some new trends, the problem had a wide public resonance and became openly discussed. Finally, its development involved new legislative bodies, namely the State Duma as a whole, and in particular, the Muslim faction. In terms of the content, the matter was not already in the elimination of spiritual administrations or derogation of the rights of the Muslim clergy. At the same time, governmental authorities responsible for implementing the reforms insisted on decentralizing religious centers and splintering existing religious institutions into smaller and therefore less influential and vigorous ones. The plans of the capital's bureaucracy and the Muslim projects irreconcilably confronted each other on this issue, which made it practically impossible to achieve an agreement on this issue under the conditions of the existing political system.

The issue of public education was connected with religious issues. As to the governmental policy in the field of foreigners' education, the Muslim deputies' positions were close to those of non-Russian deputies in general. Like other deputies representing non-Russian population of outlying districts of the empire, Muslims flatly opposed transformation of the state primary school into an instrument of Russification, insisted on ousting this policy from the school and adapting the school system to the needs and interests of members of ethnic minorities. The latter could be achieved only by permitting the usage in state schools of national languages, ethnic teaching staff and by taking into account national, cultural and linguistic features of studying children while developing a curriculum. The study of materials taken from Muslim periodicals shows that the future of confessional schools was a very acute issue for Muslims in the pre-revolutionary period. Due to the fact that the draft reform of religious institutions in charge of confessional schools *de jure* and *de facto* was not placed for consideration by the State Duma, the issue of a Muslim confessional school did not draw the expected resonance in the Parliament. It did not occupy a place in the activities of the Muslim faction members to the extent it should have according to its importance for the Muslim community as a whole.

Despite minor results of the law-making activity of both Muslim deputies and the Duma as a whole, participation of Muslim representatives in the Russian Parliament was of great importance for the formation of a political movement of Muslims in general and, in particular, the Tatars. The State Duma was the only all-Russian political platform in imperial Russia, where representatives of the Muslim *ummah* could publicly and legally protect their national interests, learn to express their demands, find the right political allies, and get used to inevitable price of compromise and balance of interests. At the same time, the Tatars played a key role within the Muslim faction directing their efforts to protect the interests of the entire Muslim community, regardless of region or national origin.

§ 5. Conservative Trends in the Tatar Political Movement: Politicization of the Vaisov Movement in 1905–1906 and the Attempts to Create the Royal–Popular Islamic Society and 'Sirat Al-Mustaqim' Union (the 'Straight Way')

Dilyara Usmanova

The general revival of social life observed in the period of the first Russian revolution (1905–1907) that was accompanied by the emergence of parties and party groups was followed by a period of political ‘frost’ after the recession of the revolution. Most of the Muslim political associations that emerged at this time were not legalized and eked out a nominal existence (‘Ittifaq al-Muslimin’), or ceased their activities entirely (the ‘Tangists’, and others). A more or less active social life of Muslims was around the Islamic faction of the State Duma, as well as charitable, cultural and educational organizations. Moreover, many representatives of the politicized and very radical youth, who had shown themselves recently or during the first Russian revolution (F. Tuktarov, Ibn. Akhtyamov, G. Iskhaki, etc. abandoned their former interest in socialism ideas and became ‘nationalists’. Some of them focused on education, career, family and personal life.

At the same time we see other trends, such as a strengthening of the right conservative movement. It is noteworthy that an analogy can be drawn here with the Russian right monarchist and nationalist movement in the society: Russian pro-monarchist and nationalist parties also began to arise relatively late, if we take into account the whole political range including the period of decline during the revolution. They emerged mostly at the government’s initiative and enjoyed the support (both moral and financial) of authorities.

Conservative ideas appeared among the Tatar population as well. The traditionalist wing among the Muslim clergy was rather strong, which however preferred not to interfere with the political sphere grouping mainly around the magazine ‘Din Va Magy'yshat’. There were many people with moderate views among the merchants.

The so-called Vaisov Movement (‘Vaisov God’s Regiment of Muslim Old Believers’) was a variety of the Muslim conservatism, which became more and more political in nature after 1905¹². This quite obvious trend to the political side was observed namely at the beginning of the 20th century, when the community was headed by Ginanutdin (Gaynan) Vaisov, one of Bahawetdin’s sons (08.11.1878—28.02.1918), who headed the movement up to his death in March 1918.

The image of the new movement leader Gaynan Vaisov reflects some traits of a man of the new era. He not only resumed functioning of the community during the first Russian revolution, but gave a powerful momentum to the movement and brought a new essence thereto. With all his desire to outwardly remain a leader of a religious community and to continue his father’s cause, Gaynan was a secular man, a model of secular thinking and secular way of life. He quite successfully adapted to the politicized Russian community of the beginning of the 20th century and integrated therein to a greater extent than his predecessors. Under Gaynan’s leadership, the movement was transformed from a religious community with an obvious religious, social and cultural doctrine, into a kind of a political community, in which the religious component ceased to be predominant.

As a young man, G. Vaisov was involved in retail trade, lived in Kazan, Simbirsk and Middle Asia (Merv). In 1903, he was sentenced to one year in prison for resistance to the police,

¹² The history of the emergence of the Vaisov community, the fate of its first leaders, and the details of its movements in the second half of the 19th century are described briefly in the 6th volume of ‘History of the Tatars from Ancient Times.’ This also includes the most important literature on the history of its movement. For more details, see: [Usmanova, 2009 b].

which he served in the Ashgabat prison. From late 1904 to early 1905 Gaynan returned to Kazan, revived the community on the wake of the revolutionary upsurge and proclaimed himself a 'sardar'. The peak of the Vaisov's activities fell between 1905 and 1909 when, headed by a new leader, the Vaisov's restored a prayer house in the New Tatar sloboda, attempted to establish an autonomous religious community independent from the OMSA and founded a chancellery with their own parish registers and a treasury.

Already in the first months of the revolution of 1905, G. Wäisev, who accepted the title of 'sardar', applied to the highest bureaucratic authorities. The first petition sent by him to the Council of Ministers dates back to 23 February 1905. After G. Vaisov received a formally benevolent reply from the Department of Religious Affairs for Foreign Faiths, he wrote a new detailed petition to the Prime Minister (26 March 1905). This and numerous other petitions included the Vaisov's fundamental requirements: recognition of autonomy of their religious community, exemption of Muslim Old Believers from the military duty on religious grounds, renunciation of the name 'Tatar', exemption from paying the majority of taxes and tributes (except for the land tax), provision of cultural freedom (publication of books, magazines, etc.). G. Vaisov also republished a part of his father's poetic heritage, having added some of his own poems [Vaiszade, 1907]. In the early 20th century, the Vaisov's still sought to appeal directly to the supreme bodies. Wishing to receive the Emperor's audience, G. Vaisov went to St. Petersburg in 1908.

With the emergence of new regulatory authorities including the State Duma, the community leaders began to address their appeals to this institution. The first appeals to the Parliament belong, in particular, to Shigabutdin Sayfutdinov, one of the community leaders, who was in exile on the Sakhalin at this time (spring 1906). The reason that inspired the exiled Vaisov's to appeal to the members of the State Duma, lay in the usual oppression from the side of the local (Sakhalin) administration. The

few of Vaisov's appeals to the State Duma that survive, known thanks to archival documents, evidence their recognition of the Duma as a legitimate institution de facto, and its members as the people's representatives. Perhaps, it was important for the Vaisov's, who consistently stressed their loyalty and allegiance to the supreme power, to realize how the new institution corresponded to the will and the wishes of the Emperor.

During the third Duma's work, Sh. Sayfutdinov wrote several times to S. Maksudi, a member of the Muslim faction and a deputy from Kazan guberniya, and appealed to such deputies as N. Shubinsky, A. Selivanov and D. Gul'kin. A number of indirect pieces of evidence indicate Wäisi's attempts to establish direct contacts with faction members. Articles seized during searches of 1908-1909 and filed together with the indictment, included business cards of the third Duma member, G.-O. Syrtlanov [National Archive of the Republic of Tatarstan, Fund 41, Inventory 13, File 3]. At the same time, the Wäisi did not consider the State Duma to be a new, modern political body so much as one of traditional bureaucratic institutions to which they could address their appeals and petitions.

The Wäisi community leaders alleged that they did not recognize political parties and organizations, considering them unnecessary novelties. Let us note a speech by Sh. Sayfutdinov delivered at a city-wide assembly of Kazan Muslim electors held on 9 January 1907, where he expressed his opinion against joining any political party. 'Muslims', said Sh. Sayfutdinov, 'do not need political parties. The Quran is enough to guide Muslims in their actions and their lives' [Yulduz, 1907, 12 January].

Nevertheless, the general politicization of the Russian society affected the Wäisi as well, and the new political realities brought inevitable tactical changes in their actions. In order to officially legalize their movement, community leaders developed the so-called 'Charter Related to Military Prayer Books' between 1908 and 1909, discussed a possibility of holding in 1910 of a Muslim Old Believers Con-

gress, planned to publish their own magazine to promote their ideas, appealed to political institutions and even participated in election campaigns, as was mentioned above. Although the Wäisi were not capable to fully master the current political ideas, they were at least trying to adapt to the modern political institutions and use political tools.

Many requirements and actions of the Wäisi in between 1905 and 1908 were assessed by the authorities as a clear political challenge, and sectarians' actions raised serious concerns regarding emergence of a new alternative and uncontrollable society. In 1909, an investigation was launched against the Wäisi, which ended in judicial proceedings in 1910. Eleven out of fourteen defendants were found guilty and sentenced to between two and four years of prison for establishment and membership in a criminal organisation, 'which set the task of disobeying orders of the Government'. Having served his term in prison, G. Vaisov, the head of the movement was exiled to Siberia, he could return to Kazan only after the February revolution.

Over the entire existence of the Wäisi community of Muslim Old Believers, its members were constantly prosecuted for their ideas and actions logically following from them. But the authorities always attached the nature of a punishment for a particular criminal offense to such a persecution, irrespective of the true motivation. The proceedings of 1910 was the first to have a clear political nature. After another defeat, there started another period of calm in the community's life (1911–1916), disturbed only by episodic conflicts of individual Wäisi with the authorities. However, the pre-revolutionary decade was generally a logical step in the development of the Wäisi movement, when it underwent a clear evolution towards gradual secularization of the 'sectarian' consciousness and lifestyle, emergence of new aspects and strengthening of the political component. During the revolution of 1917, the Wäisi community finally assumed a political character. This was reflected, among other things, in a name change (from the 'Wäisi God's Regiment of Muslim Old Believers' to the 'Party of Wäisi

Communist Revolutionaries' at the beginning of 1919), in the leaders' obvious political ambitions, as well as in establishment of an essentially unnatural alliance with the Bolsheviks.

However, political conservatism in the Muslim environment still seemed nonsense, which is proven by formation of so-called Tsarist-People's Muslim Society [Alekseev, 2001; Alekseev, 2002a, Alekseev, 2004] and the Muslim People's Union 'Sirat Al-Mustaqim' [Ros-sijskij Gosudarstvennyj Istoricheskij Arkhiv, Fund 821, Inventory 133, File 474; Iskhakov, 2001, Sheets 362–370; Fakhruddinov, 2004, p. 292; Usmanova, 2009, pp. 56–57].

The Tatar (or in fact pseudo-Tatar) socio-political organisation 'Tsarist-People's Muslim Society' was established in December 1908 in the Chistopol uyezd of the Kazan guberniya. Khayrulla Fayzullin, a Chistopol peasant, was its nominal head (other Tatar names can be also found in this organisation), but V. Zalesky, a Kazan professor and a rightist leader, was the initiator and the instigator of the whole campaign. He developed the charter of the organisation and lobbied for obtaining the necessary decision from the appropriate authorities. According to V. Zalesky, the creation of right monarchist organisations in the Islamic environment was to promote the 'political separation of foreigners', to stop the spread of separatist ideas among the Tatars and prevent their participation in the progressivism movement. According to the charter of the Royal-Popular Islamic Society, it aimed at 'preservation among the Tatars of loyalty to an oath sworn on the Quran to keep loyal to the Autocratic Unlimited Tsar and at establishing a strong union with Russian patriotic society'. Like all Black-Hundred (far rightist) organisations, the Tsarist-People's Muslim Society had its own flag, seal and lapel pin, had the right to build schools, open hospitals and shelters and possessed broad legal rights. The organisations' charter was approved by the governorate's prisutstvie (commission) on 9 December 1908, and during the spring (April-May) of 1909, some branches of the Royal-Popular Islamic Society were established in a number

of settlements of the Chistopol uyezd. The total number of the society members ranged from between 240 and 250. However, the liberal press quickly began a revelatory campaign, and the subsequent investigation on the part of the local administration showed that the so-called 'Pan-Islamic propaganda' and anti-government agitation were carried on under the guise of a monarchical organisation, and some of its members were 'not always decent in terms of morale'. As a result, on an order of the governorate authorities, the activities of local branches of RPIS were suspended in autumn of 1909, and in December of the same year a decision was taken to close all of its offices.

Another attempt to create a conservative pro-monarchist Muslim party 'Sirat Al-Mustaqim' at another, all-Russian, level was undertaken from late 1913 to early 1914. The Union was founded by Fatykh Bayrashev, a major capital trader, a St. Petersburg Akhun Muhammad-Safa Bayazitov, an Akhun of the 1st Troitsk cathedral mosque, Akhmad Hajji Rakhmankulov and a merchant Habibullah Yalyshev.

The relevant documents (namely a petition to establish Sirat Al-Mustaqim and a draft charter signed by the above four persons) were submitted to the DRAFF of the Ministry of Internal Affairs in November 1913. The charter was based on similar documents of other Black-Hundred organisations such as the Union of Michael the Archangel and the Union of Russian People. The text of the charter did not undergo principal changes in the process of its agreement with the authorities, although it was edited to some extent by the employees of the above DRAFF. According to the charter, Sirat Al-Mustaqim aimed at 'uniting all Russian Muslims to study Islam in its past and present, to educate and fundamentally improve the well-being of brothers in faith on a basis of strict compliance with law, loyalty to the Monarch, the unity and integrity of Russia' [Ros-sijskij Gosudarstvennyj Istoricheskij Arkhiv, Fund 821, Inventory 133, File 474]. As intended by the founders, this Union was to unite the conservative part of Muslims in order to counteract modern trends in the Muslim ummah.

The Union's activity extended to the whole territory of the Russian Empire, except for the western, southern and far eastern outskirts (that is Poland and the Western region, the Caucasus, Turkestan and the Far East), which in fact means the area covered by the OMSA.

All major affairs were to be supervised by the Chief Council consisting of 12 members. As to its practical activities, Sirat Al-Mustaqim Union set a wide range of tasks. As to the religious sphere, they provided for assistance in organizing the hajji, and constructing mosques; as to the sphere of education—opening general education and vocational lower and secondary educational institutions, national maktab and madrasahs, organizing libraries, and publishing books. The charter stipulated provision of various kinds of charitable help to those in need, including medical services. It would seem that it was a typical charitable organisation if we consider its tasks. However, it was no secret that formation of a pro-monarchist Muslim organisation 'Sirat Al-Mustaqim' was a political project. It was a kind of a conservative political alternative to the liberal party 'Ittifaq Al-Muslimin' that was not legalized, an answer of conservatives and traditionalists to their political opponents—Muslim (Tatar) liberals. This is noteworthy, that both organisations, although called Islamic, were to a great extent a result of the activities of the Tatar community. At the same time, although there are no documents supporting this assumption, it is obvious that this project was partially initiated by some members of the government, just as many Russian pro-monarchist parties were created from above.

The process of legalization of Sirat Al-Mustaqim was completed. Probably, the failure was due to the negative attitude to the project of an all-Russian Islamic organisation from the part of most governors, as well as concerns among the upper capital bureaucracy. The issue of establishing the Union was raised on 16 May 1914 at a Special Council on Muslim affairs. Members of the meeting saw the danger of uniting Muslims (traditional concerns about Pan-Islamism) and the possibility of penetration therein of 'unreliable elements'. Moreover,

legalization of Sirat Al-Mustaqim would create a precedent giving other foreigners a reason to 'solicit' similar rights. Guided by these considerations, the meeting unanimously acknowledged the unconditional undesirability of 'approving the Sirat Al-Mustaqim project from the point of view of Russian statehood', since this was an organisation uniting Muslims from all over the Empire irrespective of their nationality' [Rossijskij Gosudarstvennyj Istoricheskij Arkhiv, Fund 821, Inventory 133, File 474, Sheets 376–376 reverse].

The project of the Sirat Al-Mustaqim party and its founders personally suffered sharp attacks from the Tatar liberal press, which named this union Black-Hundred and appealed to Muslims not to support its organizers. Only the *Din Va Magishat* magazine supported Sirat Al-Mustaqim. Upon approval of M.-S. Bayazitov as a mufti of the Orenburg Muslim Spiritual Assembly in July 1915, the idea of establishing a Muslim conservative party ceased to be relevant: the conservative part of Muslims was now attracted by the management of the OMSA.

§ 6. Major Characteristics of the Islamic (Tatar) Political Activities in Russia of the Late Imperial Period: General Conclusions

Dilyara Usmanova

Thus, we can say that the Muslim community passed the same way as the whole of Russian society in its political development within the period from the beginning of the revolution (January 1905) and to spring of 1906, to the start of the first Russian parliament's session. The period from autumn of 1904 to spring 1905 was a time of the Muslim population's awakening (as G. Tukay later wrote, 'we woke up with the revolution of 1905') and the formation of the first political associations. At that time there were primarily local associations of Russian Muslims (in the Volga region, the Crimea, the Caucasus and capital cities), whose leaders tried to solve their problems in a traditional Russian way by holding meetings and the so-called 'banquet campaigns', writing petitions and requests, sending deputations to the capital. The second characteristic feature consisted in the formation of political groups and unions on the party principle. At that time, left movements prevailed among Muslims: groups of various socialist nature (Social Democrats and Social Revolutionaries), as well as liberals¹³. It

is noteworthy that it was the liberal wing of the politicized Muslim community that was the first to try to organize and create an all-Russian Muslim political party. Finally, the third characteristic feature of the Muslim movement lied in its wish to act as a single political movement, without division on any national or regional basis. Therefore, despite the predominance of Kazan (Volga-Ural) Tatars among managers and ordinary party members, they never tried to create a separate Tatar political party. The fourth characteristic feature consisted in the political, ideological, personal and partially financial dominance of representatives of the Tatar community in the general Muslim political movement, which allowed the upper bureaucracy to blame the Kazan Tatars in their striving for 'Tatar hegemony'.

The peak of the political activities of the Muslim (Tatar) liberals came during the period of the first Russian revolution (1905-1907). It was then that the major congresses were held, all-Russian and regional structures of the Muslim party were created, and the greatest political activity of individual politicians could be observed. After the recession and end of the revolution we note a decline of political activity of Russian Muslims, as of all other parties in Russia in general. This was partially due to

¹³ It can be said, incidentally, that Russian liberalism (as represented, for example, by the Cadets) during the period of the first Russian revolution was quite radical in its demands and judgments, which allowed the authorities to regard them as revolutionary parties.

repression on the part of the authorities, partially due to the general tiredness of the population from rapid political activities, revolutionary shocks, and partially due to a spread of such moods as apathy and frustration following the euphoric period of 1905 to 1907. From 1907 to 1914, the political activity of the Russian Muslims was mainly concentrated around the Islamic faction of the State Duma.

It should be noted that Russian Muslims had not only radical movements (socialists and liberals), but also quite a strong moderate-conservative movement that attempted to organize a political force. Despite the fact that the conservative wing of the Muslim community should have enjoyed the sympathy and support of the authorities, it nevertheless caused concerns on the part of the government. No rhetorical words about the loyalty of conservatives and traditionalists could remove traditional concerns of the authorities, who saw a threat in any political activity among the Muslim population. Therefore, despite the ab-

sence of repression or persecution of the conservative elements of the Muslim community, its representatives did not manage to create a worthy alternative to liberal and modernist (Jadid) projects. Another conservative (traditionalist) alternative, namely the Vaisov's movement, despite the activity of its leaders, played even a more marginal role in the Tatar public movement and could not offer the population a positive program corresponding to the requirements of modern life.

In general, Muslims underwent an evolution in the late imperial period, which was characteristic of the whole of Russian society. This ran from the first timid attempts to express their needs and wishes to the development of a political program and attempts (although not very successful) to create political structures capable of conducting modern political activities. The Volga-Ural Tatars played a key role in this process, seeking to head and lead the emerging political movement of a 'single Muslim nation'.

§ 7. Liberal Parties of the Kazan Guberniya during the First Russian Revolution of 1905–1907

Larisa Ajnutdinova

The sharp aggravation of social class contradictions in the course of the Revolution of 1905–1907 served as a kind of catalyst for the formation of political parties. Besides the already existing revolutionary and democratic parties, there appeared monarchist, liberal and national parties, blocks and alliances on the political stage. And while social democrats and socialist revolutionaries came to the Revolution with a well-established institutional system, Russian liberals had only some experience of working in Zemstvo and in organisations with rather amorphous structure, such as the Union of Liberation and the Union of Zemstvo Constitution-
alists. Assuming that the form of organisations such as those of the aforementioned unions, was the most acceptable one, liberal leaders tried to unite people, who shared the idea.

The process of structuring liberal parties in Kazan was greatly influenced by the events of October 1905, when the revolutionary mood became the most acute. On 16th October there was a fierce collision between demonstrators and the mounted police in Kazan. Spontaneous skirmishes grew into an open beating of innocent residents, which shocked the civilians and caused the indignation of the City Duma. Despite the savage reprisal with the demonstrators, students, workers and ordinary residents again gathered on the streets of Kazan near the Kazan University on 17th October. This time, the police opened fire. As a result of the massacre, 40 people were killed and wounded [Khasanov, 1965, p. 132]. This night made many people reborn. Peaceful residents, who previously avoided revolutionaries, themselves became

revolutionaries on the next day. They included many liberal-minded individuals, who led by members of the Kazan City Duma accepted the Tsar's manifesto of 17 October, published the next day, with a special triumph. It was then, when legal political parties began to emerge in the governorate.

The Kazan Committee of the Constitutional Democratic Party (People's Freedom Party) appeared in October of 1905 [National Archive of the Republic of Tatarstan, Fund 199, Inventory 1, File 736, Sheet 6]. Such committees appeared in a number of uyezd centres of the Kazan guberniya in 1905–1906, including Laishevo, Yadrin, Chistopol, and Tsivilsk. These committees had to work in difficult conditions. Constant harassment on the part of the local authorities was accompanied by a certain absenteeism of people. Thus, the Chistopol branch of the party had to operate even under the guise of the local department of the Kazan Protectorship of the People's Sobriety [National Archive of the Republic of Tatarstan, Fund 199, Inventory 1, File 445, Sheet 172–reverse]. Such an example was not an exception. At the beginning the Cadets were often forced to hide their political orientation under the shade of such organisations. Local authorities, especially provincial ones, had a negative attitude towards any innovation, such as parties or elections, and considered them to be a temporary concession to the rebelling people. Moreover, the local authorities had various levers of pressure on the public, from administrative to moral ones. Therefore, the information about the activities and number of members of provincial branches of opposition political parties is sometimes so fragmentary and incomparable. Nevertheless, even in accordance with incomplete data, there were more than 700 members of the Constitutional Democratic Party from 1906–1908 in the Kazan guberniya. There were even more proponents of the party, but many of them did not dare to openly declare their affiliation with the opposition party, which was called a left one in official police reports, and everyone, who were somehow involved in it, immediately fell under suspicion.

The number of the party members was rapidly growing. Already at the end of December there emerged a need to structure the organisation within the whole governorate. At the general meeting of the Kazan Cadets held on 31 December of 1905 it was decided to establish a governorate party committee consisting of 20 people (Yu. Akchurin, S. Alkin, I. Babushkin, A. Bat', M. Venetsianov, A. Vasilev, A. Simolin, M. Khvostov, G. Telberg, A. Chernoyarov, etc.) [SA RF, Fund 523, Inventory 1, File 214, Sheets 27–28], as well as some delegates from the Kazan guberniya committee were selected to attend the 2nd All-Russian Congress of the Constitutional Democratic Party held in Moscow from 5–11 January 1906 (Y. Akchurin, S. Galikeev, A. Vasilyev, G. Shershenevich). The presence of representatives of the Tatar people in the governorate committee and the delegation to the Congress proves the fact that the local Cadet organisation tried to take into account one of the main characteristics of the governorate, since its very emergence, namely, the multinational structure of its population. Since the very beginning of its activities, the governorate committee tried to unite the proponents of the All-Russian liberal and national movements.

The same meeting adopted a resolution, determining the tactics of Kazan delegates at the party congress. They would have to act as follows: to support the participation of the party in the elections to the 1st State Duma; to announce that the Kazan Cadets considered it necessary to create a subtitle or a motto for the party like those of extreme parties for a more successful campaign among the general population, which would transmit the idea of the party more clearly than the words 'constitutional and democratic' did; to declare the desirability of adding a special item into the programme, following the item on the revision of the criminal and civil codes and taking into account the legal characteristics of individual nations related to their religious beliefs (for example, the Islamic order of succession); to report to the Congress that item 1 on the main rights of citizens should have included the words 'the Tatars, Sarts and others' after listing

the nationalities (Poles, Hebrews); to draw the attention of the Congress delegates to the procedure of elections to the representative assembly, 'in case of a spread of the women right to vote, Muslim women should have been entitled to participate in the elections without violating their national customs'; to offer the Congress that item 7 of the programme 'on detention of citizens' should have been formulated according to the British pattern, that is every citizen should be able to report on the illegal arrest of another citizen; to achieve adding a special item providing that the party accepted the principle of minority representation in the elections; to speak for the political responsibility of ministers and to include an item into the programme, providing that the Cabinet of Ministers would be relied upon by the majority of the Legislative Chamber members, etc. [SA RF, Fund 523, Inventory 1, File 72, Sheet 1–reverse].

This resolution shows that during its formation, the Kazan Guberniya Cadet Organisation had a radical viewpoint regarding many national issues. The desire to acquaint the Congress with the problems of other peoples, inhabiting the Russian Empire, primarily the Tatars, demonstrates the growing power of the national liberation movement in the region.

The social composition of the Constitutional Democratic was uneven. To attract new members, its leaders proposed to accept members not based on recommendations, and by filing a conventional note or even a verbal statement to one of the Committee members. Thus, any person could become a party member, if they accepted its programme completely or partially [Istoriya politicheskix partij Rossii, 1994, p. 114]. Speaking of the social basis of the Kazan Guberniya Cadet Organisation during the First Russian Revolution, it should be borne in mind that it was dominated by the intelligentsia: teachers of higher and secondary educational institutions, lawyers, newspaper editors, officials, etc. Moreover, there were many representatives of the middle urban class and liberal landlords. People with a higher legal education made up a large share of the party members. Based on the analysis of the list of

electors from the Kazan Guberniya Cadet Party to the State Duma, it is clear that the intelligentsia amounted to about 60% of the total number of the party members, the bourgeoisie—25%, burghers—11%. 90% of the Governorate Committee management consisted of intellectuals, 50% of whom had a legal background.

By this time, the Constitutional Democratic Party had been joined by a significant part of professors and teaching staff of Kazan higher educational institutions, who wished to transform the society by legal means. According to some reports, in 1905–1908 the ideas of the Constitutional Democratic Party were supported by 22 professors and 10 freelance university lecturers of the Kazan University, 1 teacher of the Veterinary Institute, and 8 teachers of Higher Courses for Women [National Archive of the Republic of Tatarstan, Fund 199, Inventory 2, File 200, Sheet 1; File 1273, Sheet 7]. In addition, Zemstvo employees were an active element of the Constitutional Democratic Party. Besides them, the Cadets were supported in Kazan by some representatives of wealthy merchants, in particular, by such merchants as I. Stakheev, brothers A. and D. Chernoyarovs, brothers I. and P. Aleksandrovs. There were also representatives of Tatar businessmen and landowners, including I. Kazakov, B. Apanayev, M. Galeev, S. Aitov, etc. On 4 June 1906 at the meeting of the Central Committee on the financial support of the organisation, G. Shershenevich specifically spoke about this [Protocoly' CK, 1990, pp. 142, 149], noting that the Tatars were especially attracted in the party programme by the item on cultural and national autonomy.

The local Cadet organisation was also supported by some students of the Kazan University and the Veterinary Institute. They usually united in various legal study groups. Thus, the university law circle almost fully consisted of Cadets [Volzhskiy listok, 1907, August 19].

One of the main practical tasks in the activities of any political force during the First Russian Revolution lied in the development and promotion of their ideas. This work was of particular importance for those parties and

movements, which did not fix rigid organisational requirements in their charters. Therefore, the publishing activity became one of the main forms of propaganda for the Cadets. The Constitutional Democratic Party management was always particularly interested in the state of its local committees in terms of availability of promotional literature therein and establishing of their own publishing activities. At one of the first meetings, the Kazan Committee raised a question of the need to work out and publish popular leaflets about the programme and the current issues. Therefore, already on 11 November 1905 they appealed to the Central Committee of the Party with a request to send them literature and instructions. In response, the Central Committee immediately sent them 100 copies of all the party publications, 100 copies of the party programme, 25 copies of the charter, a list of the Central Committee members, and 1 copy of each circular [SA RF, Fund 523, Inventory 1, File 214, Sheets 26–27].

Immediately after its formation, the Kazan Guberniya Committee established permanent contact with the Central Committee. Agitation literature was constantly sent to Kazan to the address of Bashmakov brothers' store. N. Bashmakov, the owner of the store, was a party member and agreed to help in disseminating the party literature by selling it in his store and sending it to other book sellers. The members of the governorate organisation purchased books in his store at the expense of the electoral committee for subsequent free distribution in the city and uyezds [SA RF, Fund 523, Inventory 1, File 214, Sheets 27–27 reverse]. The Cadets managed to quickly solve the issue of periodical publications. Reporting on the All-Russian Party Congress on the affairs of the Kazan Guberniya Organisation in January 1906, professor G. Shershenevich noted that there was a party newspaper in Kazan, published in the Tatar language and called the 'Kazansky Vestnik' (it was assumed that it would be published in two languages—Russian and Tatar, but they managed to publish only the first issues in such a way) [S`ezdy` i konferencii, 1997, p. 57]. S. Alkin, a member of the Cadet Party Guberniya

Committee, was the publisher of the newspaper. In addition, already in December 1905 the *Vecherneye Ekho* newspaper was published in Kazan, which was definitely related to the Cadets, if we judge by the topics of the articles: the list of its regular authors included members of the governorate party organisation, such as I. Mandelstam, V. Ivanovsky, N. Gusev, and G. Telberg, etc. Thus, already at the end of 1905 local Cadets established publishing activities and communication with the centre.

Once the *Vecherneye Ekho* newspaper was closed in July 1906, the Kazan Cadets began publishing the *Kazansky Vecher* newspaper, which was officially considered a party body. Its publisher was N. Gusev, a secretary of the party governorate committee. Thanks to his activities, the Cadet Party publications under various names ('Kazansky Vecher', 'Volzhsko-Kamskaya Rech', 'Kamsko-Volzhskaya Rech') were constantly published until December 1917. The governorate authorities twice tried to get rid of this man, sending him beyond the Kazan guberniya. However, despite this, N. Gusev returned and continued leading the publication of the party press [National Archive of the Republic of Tatarstan, Fund 1, Inventory 6, File 767, sheets 33–reverse, 35].

Furthermore, the most active members of the local Constitutional Democratic Party, who included such outstanding figures as G. Shershenevich, M. Khvostov, I. Mandelstam, A. Zavadsky, A. Bat', S. Alkin, Y. Akchurin, I. Babushkin, N. Gusev, worked directly with people at election rallies, meetings, lectures, etc. The Guberniya Committee arranged lectures on acute problems of the modern time, which were mainly read by professors and university lecturers. The party members were actively involved in election meetings both in Kazan and in uyezds. They also frequently attended public meetings.

The process of forming the 'Union of 17 October' in Kazan was going simultaneously with organisations in the capital. On 10 November 1905, the governorate zemsky uprava held a meeting with the participation of representatives of Zemstvo Assemblies voting members,

lecturers, etc., including M. Kapustin, I. Praksin, V. Razumovsky, K. Zakroev, L. Okhromenko, P. Belkovich, I. Petyaev, P. Gerken, M. Depreys, A. Boratynsky, F. Butenin, E. Sofronov, etc. After discussing the political situation in the country and the region, they decided to unite in an organisation, called the 'Kazan Party of the October Manifesto', proclaiming 'the termination of anarchism in Russia, transition to creative activities, pacification of the country and support of the government in its intention to implement the freedom and reforms provided in the October Manifesto' as its fundamental task. At the same time, they noted that they were an independent organisation intending to 'join the Union of 17 October', according to the major foundations of their program [Kazansky Telegraf, 1905, 19 November].

Assuming that the Union of 17 October did not take into account the characteristic features of the local population in its programme, the Kazan Octobrist Party developed its own version involving a number of Tatar activists headed by merchant A. Saydashev [Obnovlenie, 15 March 1906]. On 13 December 1905, the Party's general meeting approved the final version of the programme; M. Kapustin, a professor of the Kazan University, was elected to the position of the Party Chairman, while merchant S. Aitov and nobleman V. Markovnikov were elected to the positions of Deputy Chairmen; a governorate committee consisting of 18 people was formed. It should also be noted that the members of the 'Kazan Party of the October Manifesto' managed to open a party office in Chistopol in January 1906, chaired by A. Logutov, a mayor and a merchant, with V. Goppe, an agronomist of the Chistopol uprava, being the secretary [National Archive of the Republic of Tatarstan, Fund 199, Inventory 1, File 445, Sheets 172, 229 reverse, 230]. They did not manage to create local party offices in other uyezds of the governorate, although there were many noblemen, landowners and entrepreneurs supporting the party. The number of members of the governorate organisation amounted to 540 people at this time [Kazansky Telegraf, 17 January 1906].

The core of the party was formed by professors and the Zemstvo intelligentsia, thanks to whom the programme of the Kazan Octobrist Party differed from the programme of the 'Union of 17 October' by its more democratic nature. This led to the fact that the Kazan Octobrists found themselves on the left wing of the All-Russian Octobrist Movement. Despite this, the party reflected the political and economic interests of upper and medium landowners and commercial and industrial classes, which reduced its popularity almost to zero in the conditions of a continuing revolution and fierce competition on the part of socialists and Cadets. In Kazan guberniya, as in the whole country, the party was socially based on noblemen and representatives of the commercial, industrial and financial bourgeoisie, whose number in the governorate was insignificant. Interest in the party was initially shown by representatives of the Tatar bourgeoisie. According to the Kazansky Telegraph, the party meeting dated 13 December 1905 was attended by Muslims, who, having listened to speeches of speakers, noted that the Cadet programme reflected their hopes and aspirations better and therefore they left the meeting [Kazansky Telegraf, 15 December 1905]. Most Tatars were deterred from the Octobrist Party by the lack of a real programme for the solution of the national issue. Therefore, the Octobrist Party did not become popular among the Tatars. And due to the fact that its programme primarily represented the rights of upper classes of the population, it was not supported by the peasantry, and thus remained a purely urban party.

The leaders of the 'Kazan Party of the 17 October Manifesto' paid much attention to the arrangement of agitation and publication activities. The Obnovleniye newspaper was the party publication of the Kazan Octobrists, for which B. Varneke, a professor and one of the most active party members, was an ideological leader. Employees of the newspapers were mostly professors and lecturers, including V. Gruzdev, P. Krotov, S. Shestakov, A. Bogoroditsky, and N. Petrovsky. In 1905–1907, the

ideas of moderate liberalism were also reflected in the Kazansky Telegraph newspaper.

The peak of the activity of local liberal parties falls on the time of the election campaigns to the 1st (February–March 1906) and the 2nd (January–February 1907) State Dumas. These months are marked by the activity peak of the liberal parties, especially in the province.

The Kazan guberniya Committee of the Constitutional Democratic Party had to conduct the election campaign in conditions of repressions that struck its members in the period of winter-spring 1906. So, the Chistopol office reported about the arrest of the candidates planned unofficially for the State Duma. Besides, '2 doctors, 12 teachers of zemsky schools and 2 teachers of a city school' were dismissed for propaganda in their favour [Bulletin of the party of national freedom, 12 March 1906, pp. 161–162]. A similar situation also arose in Kazan. On 5 March one of the most active members of the committee, Y. Akchurin, was arrested here [Bulletin of the party of national freedom, 19 March 1906, pp. 207–208]. In such a way the authorities tried to undermine the authority of the Constitutional Democratic Party in the Governorate and not to let their candidates into the State Duma. Such incidents took place in other cities of the region, too.

A partial solution to this problem for the liberals, especially for the Cadets, became their participation in the electoral assemblies, which the local authorities couldn't forbid because of their legitimacy and commitment. For almost all the social and political forces participating in the election campaign, they became not only a serious challenge for their political maturity, but also an indicator of their popularity rating among the masses. The leaders of the Governorate Committee of the Constitutional Democratic Party understood it well, and therefore, sent the most popular propagandists to the assemblies. Such members of the Guberniya Committee as A. Bat', G. Telberg, A. Vasilyev, M. Khvostov, S. Alkin were the most prominent figures there. The local periodicals repeatedly reported about

the animated debates at these meetings, success and failure of their opponents. During the election campaign to the 1st State Duma the main struggle for votes took place in the Kazan guberniya, between the Cadet parties in alliance with 'Ittifak al-muslimin' and the Octobrist Party.

The local Cadets, aiming at getting the support of the Tatar national movement at pre-election assemblies, especially where the Tatar population prevailed, actively criticised the autocracy for the policy of oppression of the non-Russian peoples. So, the Kazan Chief of Police, reporting to the Governor about the meeting of the employees of public and government agencies concerning the State Duma elections, which had taken place on 9 January 1906 in Kazan, noted that the representative of the Guberniya Committee of the Constitutional Democratic Party A. Bat', speaking at the meeting, criticised the government, saying: 'What kind of law it is, if, giving freedom and equality, it at the same time makes the Tatars write the Tatar words in the Russian alphabet at school' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 4, File 2107, Sheet 138]. After his speech a police officer, having seen a revolutionary sedition in it, considered it necessary to close the meeting. The repressive policy of the authorities towards the Constitutional Democratic Party during the 1st State Duma election period increased their popularity in the region even more.

During the election campaign to the 1st State Duma in the Kazan guberniya, the moderately liberal parties created an electoral alliance, which included the Kazan Octobrist Party, 'The union of pastors ...' and the Commerce and Industry Party. The leading position in the alliance belonged to the Octobrist Party. Thus, the number of their active supporters increased to 1200 people. Despite the growth in number and the financial support from the commercial and industrial part of the population, the influence of the Octobrist Party in the Kazan guberniya was less significant, than that of the Constitutional Democratic Party. And except for the support of the local authorities, their

situation could have become even less stable. The formation of the pre-election alliance predetermined the final merging of these parties into 'The Kazan Party of the Manifesto of 17 October.'

It should be emphasized, that the Constitutional Democratic Party and 'The union of 17 October' were interested in the support of 'Itifaka al-muslimin', as there were several millions of real voters. It was especially true for such regions as the Kazan guberniya, where the Tatars made up the 31% of the population. To win over the Tatar population, the Kazan Committee of the Constitutional Democratic Party purposefully pursued their interests before the party leaders. As a result, some changes were made even to the party's programme. The actions of the Kazan Committee of the Constitutional Democratic Party led to almost absolute support of the Tatar population of the Kazan guberniya at the elections to the 1st State Duma. The Kazan Octobrist Party, having realised after their defeat at the elections, that the Tatar people's support was one of the key factors promoting the victory of the Cadets in the Guberniya, noted that 'The union of 17 October', would have probably appointed not one, but ten, twenty worthy Mohammedans as candidates if there had been any Mohammedans among its members. But the union didn't manage to attract them, despite all the efforts' [Obnovlenie, 1906, 15 May].

As a result of the 1st State Duma election campaign, the Cadets won with advantage in the Kazan guberniya. Among those, who became the deputies of the 1st State Duma from the Kazan guberniya, we would point out the members of the Guberniya Committee of the Constitutional Democratic party G. Shershenevich and A. Vasilyev, who actively worked in the Duma commissions on various draft laws. So, A. Vasilyev actively participated in the elaboration of the draft law on the agricultural issue, while G. Shershenevich worked on the draft law on the freedom of assembly. Besides, A. Vasilyev was elected the secretary of the Duma Food Commission for Famine Elimination, created in June 1906.

After the defeat at the elections the activity of 'The Kazan Party of the Manifesto of 17 October' almost stopped. The Committee was disorganised. Out of the six offices of the party in Kazan, which had emerged during the election campaign at the polling stations, only the office of the 4th polling station operated. Here the best forces of the organisation were concentrated under the chairmanship of university professor P. Krotov. Since the 3rd of September 1906 it was headed by professor B. Varneke [Kazansky Telegraf, 1906, 7 September]. This office actually took the lead in the entire organisation. The membership of the party also considerably decreased: first of all, it was left by the come-and-go people. The gendarme department estimated the membership of the organisation at that time as 22 people [National Archive of the Republic of Tatarstan, Fund 1, Inventory 6, File 414, Sheets 18, 22–reverse].

The activity of the Guberniya Committee of the Constitutional Democratic Party considerably decreased. Having linked their fate with the activities of the State Duma, they patiently waited for the outcomes of its work. Many of the party members at that period focused on working in public organisations, which aimed at the development of education and culture. Here we can point out the aforementioned Legal Society, and also the Kazan Society of Public Universities, established in 1906 on the initiative of N. Zagoskin. Besides, there appeared the Kazan Society of Education Promotion and many others. Under the auspices of these organisations, educational courses, lectures, excursions were being organised, as well as libraries, reading rooms, bookstores and shops were being opened [National Archive of the Republic of Tatarstan, Fund 199, Inventory 2, File 907].

After the dissolution of the 1st State Duma, in connection with the forthcoming election campaign to the 2nd State Duma in the autumn of 1906, the activities of liberals revived in Kazan. At the initiative of the Samara and Kazan guberniya Committees of the Octobrist Party, the Volga Region Congress of the Octobrists was held in September in Kazan (10–12 Sep-

tember). The congress was attended by delegates from Samara (S. Bogushevsky and T. Shishkov), Simbirsk, Maloga (prince I. Kurakin), Nizhny Novgorod (A. Stanovoy), and Moscow. There were also A. Guchkov and A. Belkin from the Central Committee [Pervyj Povolzhskij s'ezd, 1906, p. 7]. The congress participants discussed the party program, its charter and further tactics. The resolutions of the congress reflected the attitude of the Volga Region Octobrist Party's organisations towards the existing political landscape in the country and in the region. 'The brief political program of the Union of 17 October' became the result of this work.

In November 1906 a student (university) fraction was formed at the Guberniya Committee of the Constitutional Democratic Party, which was headed by students K. Belilin, N. Klyuchnikov, N. Utekhin, etc. [Bulletin of the party of national freedom, 30 November 1906, p. 2111]. The fraction's position at the university was modest, it took the third place by the number of its supporters. So, at February elections to the Central University Body of 1906, out of 1056 votes cast only 93 votes were given to the Cadets, which allowed them to nominate one deputy (459 votes were given to the Revolutionary Socialists and 410 votes to the Social Democrats). The position of the Octobrist Party in the university was even more deplorable: they got only one vote [Kazansky Vecher, 17 February 1906]. A small Cadet group was also formed at the Veterinary Institute.

The Kazan Office of the Constitutional Democratic Party during this period was not only suppressed by state authorities, but also torn by the internal controversy. So, in January 1907 some more moderate liberals left it and founded the office of 'The Party of Peaceful Renovation' in Kazan. However, owing to its small number, it did not play any significant role in the social and political life of the Kazan guberniya. It was headed by the lieutenant general I. Pankratov, a former member of the Constitutional Democratic Party. Despite the withdrawal from the Constitutional

Democratic Party, they couldn't get rid of its ideological influence. At one of their meetings in January 1907, the members of the 'Peaceful Renovation' discussed the issue of the relations with other parties. By a majority vote, they decided not to establish any relations with the Octobrist Party and the parties of greater left-wing orientation than the Cadets [Kazansky Vecher, 12 January 1907]. And up to its voluntary dissolution during the election campaign to the 3rd State Duma, the Kazan Office of 'The Party of Peaceful Renovation' was completely under the influence of the Guberniya Committee of the Constitutional Democratic Party.

During the pre-election struggle to the 2nd State Duma, the Cadets in the Kazan guberniya once again managed to leave behind their main opponents, the Octobrist Party. However, the course of the last pre-election campaign in the capital of the Guberniya—Kazan—delivered absolutely unexpected results for the Cadets. At the city electoral assembly the Octobrist Party managed to create a decisive advantage and nominate 46 candidates as electors, while the Muslims nominated 27 candidates and the Cadets—only 7. A university professor, the leader of the Kazan Octobrist Party M. Kapustin was elected the Deputy from Kazan. In spite of the fact that from 10 deputies from the Kazan guberniya it was the only deputy from the Octobrists' Party, the victory won in Kazan became a real breakthrough for them. The Kazan Octobrist Party played a significant role at the elections in Samara, where the professor B. Varneke was sent on a mission. Due to his efforts, the local Octobrists also managed to get their deputy from Samara to the State Duma.

The defeat of the Cadets in Kazan was caused by a variety of reasons: first, unlike the Cadets, the Octobrists, like during the previous campaign, had concentrated all the forces only in Kazan; secondly, the Cadets had to act semi-legally, being under the threat of repressions by the local authorities; thirdly, the population became disappointed in the parliamentary system itself, in connection with the tsar regime's disrespect for it and the absence of any real

results; fourthly, the Cadets, having made the Vyborg Proclamation, frightened off a considerable part of moderate city electorate.

It should be noted that professor M. Kapustin represented the left flank of the Octobrist Party in the Duma, which was closer to the Cadets. In the Duma he was distinguished by his activity, which earned him a great popularity in the liberal environment. He was elected the chairman of the Octobrist Party's fraction and, being its leader, tried to lead the fraction in the way of cooperation with the Cadets. V. Purishkevich even made up an expression as 'an Octobrist of the Kapustin brand', characterising those members of the union who stretched the constitutional principles 'like rubber, infinitely to the left' [Purishkevich, 1907, pp. 5, 9].

After the end of the election campaign to the 2nd State Duma, all the attention of the political life of the liberals, like the first time, was turned to the activities of the deputies in the State Duma. The periodicals quite thoroughly covered all the issues, which were discussed in the legislature. The local activists tried to give detailed explanations to those projects, which came from the deputies of their party fraction.

The hopes of the government that the second Duma will be more obedient, than the first one, did not come true. The oppositional majority did not accept the government declaration on the reforms, that the new State Duma had to deal with. Like in the previous Duma, the agricultural question became the centre of attention of the deputies, and its discussion dragged on for several months. In the conditions of the revolutionary movement recession, on 3 June 1907 Nicholas II issued a decree about the Duma dissolution and the change of the electoral law. The true reason of the Duma dissolution consisted in the impossibility of cooperation, both for the government and for the body of popular representation, in particular, on the issue of the agrarian reform implemen-

tation. So ended the most significant activity period of the political parties of the Russian Empire.

Thus, in the years of the First Russian Revolution, the main liberal parties were institutionalised in the Kazan guberniya. The events of the revolution of 1905–1907 served as a catalyst for the formation of these parties, and the reforms of the existing regime according to the liberal program became the purpose of their activities. The radical wing of the liberal movement in the Kazan guberniya was presented by the Constitutional Democratic Party centred around the Kazan intellectuals. Despite being small, it managed to quickly organise the propaganda, which resulted in the formation of numerous offices of the party in uyezds. The moderate wing of the liberal movement was presented by 'The Kazan Committee of the Manifesto of 17 October' which, despite being close in program with 'The Union of 17 October', claimed its independence and adopted its own program and charter. The region was peculiar by the formation of a national party on a confessional basis 'Ittifak of al-muslimin', which, having found that the Constitutional Democratic Party had a like spirit, fully supported it at the State Duma elections. Besides the political parties, the liberals took an active part in the activities of public organisations, formed in abundance during the revolution of 1905–1907. Here they actively engaged in charity work and the promotion of their ideas.

The revolution of 1905–1907 enabled the liberals to go beyond the economic problems they had to deal with in the bodies of the local self-government and come out with political demands. The liberal movement expanded beyond the narrow borders of Zemstvo, entered the political arena and declared about its determination to struggle for the power within the existing legislation for the purposes of reformation.

§ 8. The right-wing monarchic (Black Hundred) movement in Kazan and the Kazan guberniya in 1905–1917.

Igor Alekseev

The right-wing monarchic (Black Hundred) movement in Russia: entry into the political arena. The right-wing monarchic movement in the Russian Empire emerged in 1905–1907, as a reaction to the attempts to perform the revolutionary and liberal modernisation of Russian society. The political crisis of the beginning of the 20th century, which created a real threat to the existence not only of the autocratic regime, but also to the monarchist system in general, was the main prerequisite for the appearance of right-wing monarchic organisations both in the centre and in the regions. In response, representatives of various social, national, religious and professional groups in the Russian Empire, interested in the ongoing preservation of the traditional institutes of state power and social order, started to unite. Due to this the right-wing monarchic (Black Hundred) movement became widespread and involved all the classes.

The right-wing monarchists Chernosotentsy (Black Hundreds) were guided by the triune conservative principle ‘Orthodoxy. Autocracy. Nationality’. Their ideology united the right-wing traditions of Slavophilia, official patriotism, a conservative movement of Orthodox Christian and religious thought, and also some elements of political populism. The right-wing monarchists supported: the restoration of the pre-imperial autocratic form of rule (which they partly idealised, opposing Western European absolutism, constitutional monarchism and the republican form of rule, and partly modernised, bestowing anti-bureaucratic and anti-bourgeois properties to it), limited only by the ‘moral and compulsive’ regulations of the Zemsky Sobor, a body of discussion of bills, consisting of all classes. They also advocated the preservation and the maintenance of the position of the Orthodoxy and conservation of the unitary structure (‘unity and indivisibility’) of Russia by means of granting exclusive rights

to the Russian people and gradual assimilation of foreigners (except the Hebrew Jews, whom they offered first to take beyond "the habitat border", and then to resettle them all beyond the borders of the state).

The right-wing monarchic movement obtained its second, everyday name from the phrase ‘Black Hundred’ (an ancient form of self-government of the Russian people in a community, in a broad sense it is the tax-paying (tyagly) town population in Rus' (Ruthenia)), to which the autocracy’s opponents—the liberals and socialists—viewed as pejorative. At the same time not only representatives of the right-wing monarchic social and political organisations were often called Chernosotentsy (Black Hundreds), but also all those who adhered to conservative, anti-revolutionary and anti-liberal views.

Most historians consider the ‘Russian Assembly’ to be the first right-wing monarchic (Black Hundred) organisation, created in St. Petersburg at the end of 1900–beginning of 1901, which united, in the main, representatives of the Russian intelligentsia, noblemen, officials and the Orthodox clergy of the capital. The largest and most well-known Black Hundred organisations of the Russian Empire were: ‘The Union of the Russian People’ (created in March–April 1905; the first chairman of the Executive Council was the count P. Sheremetev), ‘The Russian Monarchist Party’ (created in spring 1905, from 1907 it was called ‘The Russian Monarchic Union’, the first chairman was V. Gringmut), ‘The Union of the Russian People’ (URP) (created in November 1905, the first chairman of the High Council—A. Dubrovin, also a Zemsky activist from the Kazan guberniya N. Yazykov was included into the first membership of the High Council), ‘The Russian National Union of Mikhail Arkhangel’ (RNUMA) (created at the beginning of 1908, the chairman of the Main Chamber was

V. Purishkevich) and the 'All-Russian Dubrovin Union of the Russian People' (ADURP) (created in August 1912, the chairman of the High Council was A. Dubrovin).

In different parts and governorates of the Russian Empire the process of forming the right-wing monarchic organisations was taking place with varying intensity, which was, as a rule, caused by their internal characteristics.

The emergence of the right-wing monarchic (Black Hundred) organisations in the city of Kazan and the Kazan guberniya. Kazan department of 'The Russian Assembly'. In the Kazan guberniya, where the national, religious, social and economic contradictions had rather deep roots, the process of forming the right-wing monarchic organisations was performed almost simultaneously with the process in the capital. The following factors had the most notable influence on their political shape and programme requirements: firstly, and to a large degree, the agrarian character of the Kazan guberniya (with the prevalence of a communal form of land tenure, more than a sixfold predominance of peasants, as well as frequent crop failures and problems related to peasant landlessness and land scarcity). Secondly, the ethnic and confessional characteristics (characterised by the relative quantitative balance of the Russian, Tatar and Chuvash population, the growth of national consciousness of the Tatar people and its bourgeoisie, creating ever more considerable competition for the local Russian capital and also the existence of the implicit and explicit confessional, cultural and religious contradictions between the Muslims and the Christians).

At the end of 1904, on the wave of escalating confrontation in society, it was decided to create in Kazan, on the basis of Kazan Association of Sobriety' (KAS) (formed on 30 July 1892; the chairman of the Committee was the treasurer and the printer of the Imperial Kazan University A. Solovyov) the governorate's first right-wing monarchic, national Russian political organisation—the Kazan department of 'The Russian Assembly' (KDRA), the final official registration of which for a number of rea-

sons took place only in November–December 1905. In the collection of works under the name 'The Materials to the History of the Kazan Temperance Association and Other Associations' which was issued in 1911 in Kazan, it was reported that: 'As early as 1904, being aware of the preparation for the unrest in which mainly Hebrews were involved, 'The Kazan Temperance Association' decided to found in Kazan 'The Russian Assembly'. In 1905, in order to influence Russian society, carried away by the Jewish movement, it increased the number of copies of the magazine 'Deyatel' and began to issue the newspaper 'Rus' Pravoslavnaya i Samoderzhavnaya' ('Orthodox and Autocratic Rus').

The first general meeting of the members of 'The Russian Assembly' in Kazan, which announced the official opening of the KDRA, took place in a festive atmosphere on 6 December 1905—on the day of the Name Day of Emperor Nicholas II. The members of the Council were chosen there, and they included: the chairman of the Council—A. Solovyov, his comrade (deputy)—S. Babushkin and the secretary—V. Belilin. A. Solovyov remained as chairman until the cessation of the KDRA's activities. His comrades at different times were: member of the Chamber of Appeals S. Babushkin, professor P. Znamensky, custodian of the Kazan city museum R. Rizpolozhensky and professor N. Katanov. The secretaries of the department, apart from V. Belilin, were: the people's educator V. Sukhanov, the priest N. Troitsky and the merchant F. Grebenshchikov. The treasurer was the honorary citizen by birth A. Tyufilin.

Apart from them, at different times, the following people were elected to the KDRA Council: the rector of the Kazan Spiritual Academy (KSA), the bishop from Chistopol Anatoly (A. Grisyuk), the associate professor of KDA Varsonofy (A. Luzin), N. Galkin-Vrasskoy, archimandrite Gury (A. Stepanov), the hegumen of the Kazan Spaso-Preobrazhensky monastery (I. Udalov), P. Kuvshinov, L. Losev, priest P. Rozhdestvensky, E. Frishman and others. Honorary members of the KDRA were archbishops from Kazan and Sviyazhsk Dimitry (D.

Sambikin) and Nicanor (N. Kamensky), the archbishop from Volyn and Zhitomir Anthony (A. Khrapovitsky), the bishop from Vologda and Totemsk Nikon (N. Rozhdestvensky), the bishop from Chistopol Alexy (A. Dorodnitsyn), the bishop from Mamadysh Andrey (A. Ukhomsky) and the Kazan merchant V. Bulygin.

The KDRA was considered one of the most influential and reputable departments of 'The Russian Assembly', though its membership was always small; from 20 to 60 members. However, at different times, it directly controlled and supervised about ten public and socio-political organisations (including ones with a very branched structure), some of which united several thousand members. The best known and biggest of organisations, de facto subordinate to the KDRA, was KAS. Its members were informed at the suggestion of its Committee that they had to join either 'The Russian Assembly' or URP. As a result, a peculiar hybrid of a political right-wing monarchic (Black Hundred) organisation and religious, educational and charitable society was formed.

In 1905 The KDRA began to publish active counterrevolutionary right-wing monarchic propaganda in its periodicals and KAS editions (magazine 'Deyatel', newspaper 'Rus' Pravoslavnyaya i Samoderzhavnaya' ("Orthodox and Autocratic Rus"), but being criticised by the liberal and left-wing newspapers ('The Volga Leaflet', 'The Russian Word' and others), initially it strongly refused to acknowledge that it belonged to the 'Black Hundred'. Up to October 1905 the confrontation between the right-wing monarchists and their political opponents took place in Kazan via newspaper and magazine polemic. The liberal and left-wing press attributed the beating of students in Kazan in February 1905 to the 'Black Hundred'. However, there is no documentary evidence about the organisation and participation of the KDRA members in this incident.

The participation of the right-wing monarchists in the October events of 1905 in Kazan. The Kazan 'Royal-Popular Russian Society'. 'The Society of churchwardens and parish trustees of the city of Kazan'. The history of the

right-wing monarchic (Black Hundred) movement in Kazan and the Kazan guberniya can be divided into five time periods: ideological and preparatory (the end of the 19th century—the first half of October 1905), organisational (the latter half of October 1905—the beginning of February 1906), united (February 1906–November 1907), confrontational (November 1907–October, 1912) and destructive (October 1912–February 1917).

The immediate impetus for the institutionalisation of the Black Hundred organisations was the publication of the Imperial Manifesto on 17 October 1905, followed by the revolutionary events in Kazan, which ended with an open confrontation on 21 October 1905 between the representatives of the socialist and liberal parties and their "militia", controlling the Kazan City Council, and the 'patriotic demonstration', junkers and police. As a result of the mass rising of the right-wing monarchists, supported by the governorate administration, a so-called 'Kazan republic' in the city was liquidated and the old order was restored.

These events were followed by a new 'patriotic demonstration' of thousands of people which took place on 22 October 1905 (on the day of celebration of the Kazan icon of the Mother of God), where the active role belonged to the local Tatar population led by the Islamic clergy (headed by the mullah G. Barudi), the merchant A. Saydashev and other famous people. When the demonstration dispersed, on the streets of Kazan a crowd gathered, mainly consisting of teenagers, who, on 23 October 1905 broke into the warehouses and religious buildings belonging to the Hebrews. In the first half of November 1905 there were some incidents of reprisals against the revolutionary propagandists in the city of Arsk and in the Chistopol uyezd.

The union of all the counterrevolutionary forces of Kazan led to the creation of the 'Committee for the protection of legal order' ('Party for the protection of legal order'), which soon produced the moderate monarchists who formed 'The Kazan Party of the Manifesto of 17 October'. On the basis of the

remaining right-wing element the independent Black Hundred organisation—‘The Kazan Royal-Popular Russian Society’ (according to the charter —‘Kazan ‘Royal–Popular Russian Society’) (KRPRS) was created, the decision about the ‘renaming’ was taken on 4 December 1905 at the third meeting of a ‘group of united house owners and residents of Kazan’, which took place in the arena of the Kazan Infantry Junkers’ School under the chairmanship of professor V. Zalesky of Imperial Kazan University. From the very beginning of its existence the KRPRS asserted itself as a right-wing monarchic organisation, one of the first (according to its own version—the first) to decide ‘to take on the Black Hundred terms and to recognize them as honourable’.

At the same time the KRPRS made a number of statements, including on the desirability ‘of keeping the autocracy of the imperial power in all its integrity’ and the inexpediency of conducting popular and direct State Duma elections. Besides, the resolution which acknowledged the need to legalise and take under control ‘the economic strikes and labour troubles not accompanied by violence against the character and property of both owners of companies and their administration and the workers who don’t sympathise with the strikes’, and the closure of both state and private railroads and postal and telegraph offices. They should be recognised as a ‘a criminal act, high treason, requiring strict measures of prosecution’. This event served as the reason for the KRPRS to address the acting Kazan governor A. Reinbot on 11 December 1905, offering to render active assistance to the administration in stopping revolutionary propaganda. After that the leaders of society were invited to have a private talk with him.

The main initiator and inspirer of the creation of the society was professor V. Zalesky, a nobleman by birth, who was elected on 4 December 1905 to chairman of the Board of the KRPRS, and who headed the society for its entire existence. The Council, elected by the society, which nominated the chairman, the secretary and the treasurer from its members,

administered the affairs of the KRPRS. 9 people—representatives of various classes and professions—were the first members of the Council: professor V. Zalesky (chairman), private lawyer S. Sokolovsky (secretary), secretary of the Kazan guberniya nobility assembly A. Dubrovsky, I. Panfilov, teacher and house owner P. Moykin, peasants P. Maksimov and M. Sazanov, priest N. Troitsky and merchant A. Kalyagin. The honorary members of the KRPRS were: the Kazan governor M. Strizhevsky, the Ufa governor A. Klyucharyov, the Kazan vice governor D. Kobeko, the bishop from Chistopol Alexiy (A. Dorodnitsyn), prince A. Shcherbatov and others.

The social and class composition of the members of the society varied from noblemen by birth to peasants and workers. The number of KRPRS members was determined by its leaders according to two indicators—the number of ‘listed’ and ‘unlisted’ members: as a result, the number of society members is estimated in various sources from 1.5 to 15 thousand people. At the same time, indirect data shows that the number of ‘listed’ society members at the peak of its activity did not exceed two thousand people, which anyway made the KRPRS one of the largest Governorate right-wing monarchic (Black Hundred) organisations in the Russian Empire.

The peak of the social and political activity of the KRPRS was in 1906–1907. The KRPRS meetings which mostly demonstrations regularly took place in spacious rooms (mainly, in the arena of the Kazan Infantry Junker’s School located in the Kremlin), that enabled them to attract the general public and choral groups, and also to arrange mass processions. In January 1906 ‘The Astrakhan National Monarchist party’ claimed its intention to join the ‘like-minded’ KRPRS (the chairman of the Council was the merchant N. Tikhanovich-Savitsky). On 11 February 1906 at the meeting of monarchists of Ufa it was decided to create ‘The Ufa Royal-Popular Russian Society’ (the chairman of the board was the merchant K. Laptev), which entirely accepted the KRPRS programme and ‘united’ with it.

On 1 (or 4) December 1905 one more independent organisation—the ‘Society of churchwardens and parish trustees of the city of Kazan’ (SCPT) was created. The society was formed according to a resolution adopted at a meeting which took place on 1 (according to other sources—4) December 1905 in Kazan, with more than twenty churchwardens, parish trustees and honourable parishioners of the Kazan churches, ‘for the peaceful realisation of the great beneficence granted by His Majesty the Emperor to the Russian people and for the restoration of peace in our troubled and difficult time’.

The Council administered the affairs of the SCPT, and from the day the society was created until his death in April 1910, its chairman was the merchant A. Kukarnikov. In November 1906 he was also elected to chairman of the board of the department of URP in Bogolyubov, operating in the Admiralty Sloboda of Kazan. In June 1910 L. Matveevsky, an honorary citizen by birth, was elected to this post. The first membership of the Council of the SCPT, besides A. Kukarnikov, included three more merchants, famous in Kazan—V. Bulygin (‘taking the place of the chairman’), I. Perov and E. Sofronov (treasurer), and also the Kazan theological seminary teacher A. Kalinovskiy (secretary). Some SCPT members joined at the same time Kazan moderate and monarchic organisations (‘The Kazan Party of the Manifesto of 17 October’ or the Kazan guberniya department of the ‘Commerce and Industry Party’).

The first resolution and the manifest of the SCPT appealed to all Russian people (‘and first of all, to the churchwardens of the uyezd cities and settlements of the Kazan guberniya’) to join the union ‘for the protection of the Holy Church, the adored Monarch and the government for the fastest and most peaceful realisation of the Most Gracious manifestos of 17 October and 3 November’. In the next documents (including the programme adopted by the SCPT) the ideological assumptions of society acquired a complete right-wing monarchic (Black Hundred) orientation. The main goal of the SCPT was to revive the Orthodox parish

organisations and turn them into the All-Russian ‘church and state’ unit (by changing the system of elections, conducting them in parishes). From 5 December 1905 to 25 August 1906, 153,000 copies of manifestos and resolutions of the society were circulated (in the south of the country too).

The SCPT sharply condemned the revolution, the republican form of rule, the strikes and labour troubles (especially on the railroads, post and telegraph offices), having emphasised its favourable attitude towards the army. It also called on all the Russian people (and also the Old Believers and Muslims) to gather in their parishes (respectively—in the houses of worship under the leadership of mullahs) and to form local committees of the society. However, due to the creation of the moderately monarchic ‘Union of pastors and churchwardens of Kazan’ as a counterweight to the SCPT, the efforts to attract representatives of the local Orthodox clergy and to revive the parish organisations did not yield the expected results. Nevertheless, in the first year of the SCPT its ranks included: 29 churchwardens, 17 parish trustees, 74 authorised representatives from 22 city parishes of Kazan, and also ‘by public decision’ there were the parishioners of 11 settlements and 7 villages of five uyezds of the Kazan guberniya, the servants of ‘the Usady manor of the Zhuravlyovs’ (the settlement of Usady of the Kazan uyezd of the Kazan guberniya), ‘the Cheremyshevo manor of the baroness Buksgevdin’ (the village of Cheremyshevo of the Laishevo uyezd of the Kazan guberniya) and other people. According to the estimates of the Kazan chief of police, on 10 October 1906 the number of SCPT members was ‘up to 500 people’, however, later it dramatically decreased. Shortly, thanks to the similarity of policy guidelines and the friendly contacts of many members of the SCPT and the KDRA, these two organisations became closer, and then the former, while formally remaining independent, turned into some kind of “appendage” of the latter.

In total, in the first year of its existence there were about 2,7 thousand people in the

Kazan right-wing monarchic organisations (not to mention so-called 'unlisted people' and sympathisers), mainly consisting of Russians and Orthodox Christians, with few exceptions.

The main policy guidelines of the right-wing monarchists (Black Hundreds) of the city of Kazan and the Kazan guberniya. The national question. 'The Royal-Popular Islamic Society'. One of the determining factors behind the creation of independent socio-political organisations (with their own programmes and charters) by Kazan right-wing monarchists (the Black Hundreds) was the need to take into account the peculiarities of Kazan and Kazan guberniya in their activities, which was not reflected in the programme and charter documents of the Black Hundred parties and alliances.

In the agrarian question this resulted in clearer and more realistic requirements with regard to the solution to the problem of landless and near-landless peasants and the precautionary approach to the elimination of the peasant community. In particular, KRPRS recognised the possible alienation of the determined price for up to one third of land from large and middle landowners, who will not want to sell it willfully, and also suggested a particular 'communal-farm' model of land tenure.

In national and religious matters local specificities were reflected in the application of more flexible and differential tactics towards different categories of non-Russians and non-Christians. For example, from the very beginning of its activities the KRPRS demonstrated particular sympathy towards conservative Tatar-Muslims, trying to bring as many of them as possible into the ranks of followers of unlimited Russian autocracy. So, against the backdrop of the rapid liberalisation of the national movement, it tried to initiate, as V.F. Zalesky expressed, 'the political disengagement of non-Russians', to stop the process of disseminating separatist movements among Tatar-Muslims and to prevent them from participating in the 'progressive' movement. With this aim, the Black Hundreds took a series of

concrete steps towards rapprochement with the conservative-monarchical circles in the Tatar-Muslim movement.

On 29 January 1906 the assembly of the KRPRS, 'recognised that it was fair that the Muslim population (of the former Kazan Tatar Tsardom) should have its own representative in the State Duma', resolved to 'launch by telegram before His Imperial Highness a motion to appoint a second deputy from Kazan especially for Muslims'. A second telegram with a similar request (with the signatures of: V. Zaleskij, A. Solovyov and A.I. Kukarnikov) was sent to the Minister of Internal Affairs. But the Tatar-Muslims themselves perceived this gesture by the right-wing monarchists with caution, because they saw in it a political 'trick', which actually was not without foundation: the Black Hundreds believed that, if the Tatar-Muslims united in elections and operated on the basis of 'the worst Tatar is better than the best Russian', then they put forth a Muslim for election, and they were strongly opposed to this. An additional ('special') deputy automatically resolved the problem of the national and religious competition in the elections for Kazan.

The Kazan Black Hundreds made more candid 'overtures to the Tatar-Muslims in relation to enhancing their economic status within the Russian Empire. So one of the ideologues of the Kazan Black Hundreds R.V. Rizpolozhensky in his report at the meetings on 7 and 15 November 1906 declared, inter alia, that: 'In relation to the Tatar group of nationalities that professes Islam, with respect for this venerable religion and the deeply laid foundations of nationhood in its confessions, it is preferable to eliminate the development of Christian missionary work among these peoples on the precondition that the missionary work of Mohammedans among Christian communities will not be allowed. In particular, in relation to the Kazan Tatars, in view of their particular trading talents, it is necessary to take care of the further development of their commercial activities in the Middle East and on the establishment of trade ties with India, for which the immediate concern should be the organisation of the rail-

way links to India's road network'. In one of the resolutions of the First Volga-Kama Regional Patriotic Congress, held in Kazan from 21 to 25 November 1908, it was stressed that the number of lawyers should be limited to three per cent—'Jews by belief or blood', who 'regularly ruin Russian and Islamic trading and industrial companies and thus create significant opportunities for the development of Jewish companies'.

However, despite all this, the attempts of Kazan right-wing monarchists (The Black Hundreds) to find common ground with conservative Tatar-Islamic groups in Kazan did not produce the desired results, and therefore V.F. Zalesky tried to establish a right-wing monarchic Tatar-Islamic organisation in a rural area—in the Chistopol uyezd of Kazan guberniya. Parallel to this, the local Black Hundreds voiced strong criticism of the liberal and socialist movements in the Tatar community, members of the Islamic faction of the State Duma and democratically oriented community leaders from among the Tatars.

On 9 December 1908, the Kazan guberniya department for the affairs of public organisations accepted the charter of the 'The Royal-Popular Islamic Society' (RPIS), according to which the goal of the newly established organisation was 'to preserve the faithfulness of the pledged allegiance to the Quran to the Autocratic Unrestricted Tsar among the Tatar population and strong unity with Russian patriotic societies'. Members of the Royal Popular Islamic Society, with very few exceptions, could only consist of 'natural Tatars of both genders, all classes and conditions'. 'In the Royal Popular Islamic Society charter, it was stated that Jews can never be allowed to be members of the Society, even if they convert to Islam'.

The Higher Council dealt with RPIS affairs, which was temporarily (until the anticipated opening of the RPIS in Kazan) located in the village of Karamyshevo in Kutuyomino volost, Chistopol uyezd. At the head of the Higher Council was the chairman, who had two comrades (deputies). The chairman of the Kara-

mysh RPIS department (and also of the Higher Council) was a peasant Kh. Fayzullin, his comrades were S. Khisamutdinov and G. Muzinov, Sh. Rakhmetullin was the secretary, and the treasurer was M. Aflyatunov. From 9 December 1908 to the beginning of July 1909, the High Council of the RPIS opened eighteen departments with a total of more than 240 people (in the villages of Ibrayevo Karkali, Nizhnyaya Kaminka, Novoe Demkino, Novoye Ibraikino, Novoye Kadeevo, Novoye Uzeevo, Sluzhilaya Eltan', Staroye Ibraykino, Staro-Tatarskaya Keremet and other), whose members, with few exceptions (village chief Kh. Sirazetdinov, mullah G.G. Timirbulatov and others), consisted of simple peasants.

At the same time, the activities of the RPIS were mainly limited to political statements of an anti-revolutionary and anti-liberal nature, and also the rallying call to the Russian people 'under the rule of the Great Russian Tsar'. From the very beginning, the RPIS made a high-profile announcement on the creation of a propaganda counterbalance in the fight with the 'progressive' movements in the Tatar-Muslim community. 'While the Islamic faction of the State Duma fraternises with the opposition,—it was written, for example, in the newspaper 'Moskovskiye Vedomosti' on 4 January 1909,—among the Kazan Tatars... there are apparently opposing movements'. However, the process of disseminating the ideas of the Black Hundreds among rural Tatars was soon interrupted by administrative proceedings, which began after the publication in the cadet newspaper 'Rech' from 9 April 1909 entitled 'Rescue the Fatherland', which revealed that in the ranks of the RPIS, there was a large percentage of persons with deviant behaviour. Despite the fact that many of the pressed charges were unsubstantiated, it revealed, among other facts, that under the cover of the monarchical 'signage', the President of the Council and members of the Society department in the village of Upper Tatar Maina, the Yuzeev brothers, were active in Pan-Islamic propaganda, and the comrade (deputy) of the High Council of the RPIS S. Khisamutdinov in due course was prosecuted

for campaigning for the resettlement of Tatars to Turkey.

As a result, on 23 June 1909 a district police officer from the Chistopol uyezd arrested the Yuzeev brothers and closed the department of RPIS in the village of Upper Tatar Maina. In October 1909 the activity of all RPIS departments was suspended, and after that—on 30 December 1909 they were shut down. RPIS formally ceased to exist on 20 September 1914 after the reference check. The attempts of V.F. Zalesky to continue working to establish the Tatar-Islamic right-wing monarchic organisations produced no tangible results. Meanwhile, in the report of the district police officer from Laishevo uyezd from 6 February 1916 three departments of the 'Royal Popular Society' were mentioned, that functioned in the villages of Malye Nyrsy' (under the chairmanship of M. Galyazetdinov), Saushi (under the chairmanship of Z. Khisamutdinov) and Balykly (under the chairmanship of Y. Khalikov) of the Klyuchishchye volost in Laishevo uyezd (16, 11 and 11 people respectively).

Much greater success was achieved by the Kazan right-wing monarchists (The Black Hundreds) among representatives of the Chuvash population and other peoples, who inhabited the territory of Kazan guberniya. An approximate count shows that the departments of right-wing monarchic organisations on its territory, which were opened and operated in the places with a uniform and mixed Chuvash population (in the villages and settlements of Novy Chuvash Adam and Chuvash Cheboksarka in Chistopol uyezd, Shor-Kasy and Yanglichy in Tsivilsk uyezd, Kyumel'-Yamashi, Malaya Shatma, in Sarchak Yadrin uyezd and others), accounted for about 15 percent of their total number.

Simultaneously, the Kazan right-wing monarchists (The Black Hundreds) were characterised, in general, by their extreme approach to the problem of the 'European question', that has in some cases (inter alia, in the interpretation of professor V.F. Zalevsky) racial connotations. Meanwhile, the same V.F. Zalevsky was strongly sympathetic to the idea of an all-

Slavic community and as such offered unconventional ways to address the 'Polish question', which was not always understood by the Black Hundreds.

Increased attention on the part of the Kazan right-wing monarchists was paid to the creation of Russian national artisans and charitable associations. The largest public outreach charitable organisation, which they controlled, was KAS. On 16 July 1908 the 'Artisan Society of Construction Work' was opened by the KDRA (the chairman was an honorary citizen by birth, A.M. Tyufilin), and on 21 October 1908—a general education school with a tailor department of the KRPRS (the leader was craftsman N.A. Petrov). In 1908 under the auspices of the KDRA the 'Kazan Society of Orthodox Russian Women' (KSORW) was established (the committee chairwomen were M. Sokolova, V. Bulygina, O. Ternovskaya), and in 1912 the 'Kazan Society in the name of the Most Merciful Savior for the care of the juvenile weak-minded and cripples' was established.

The right-wing monarchists of Kazan and Kazan guberniya also attached great importance to the development of national education, which they demanded to be provided in a conservative, traditionally Russian spirit. They expressed strong dissatisfaction with the introduction of autonomy for the universities, and fought for the eviction of the liberal and left-wing professors from universities, and also for the strict ideological, political and national selection of students. The student community included: from December 1907—the 'Russian Club of Monarchic Youth' (from 1908—'Kazan Society of Russian Monarchic Youth'; the Chairmen of the Council—P. Poletika, N.I. Mamonov, N.V. Sergievich, N.A. Aleksandrov), from February 1912—the 'Club of Non-Partisan Student Academics of the Kazan Higher Education Institutions', whose aim was to normalise education, combat the manifestations of revolutionary activity and liberalise higher education. In 1908 the 'Kazan Society of Russian Monarchic Youth' opened the gymnastics and sports lovers club 'Berkut' (from 1913—the gymnastic society 'Sokol'). From 1907—

1908 the 'group of right-wing professors' was active at the Imperial Kazan University (the leaders were the professors N.A. Zasesky and N.F. Vysotsky), which included right-wing and moderate monarchists.

The peak of political activity of the right-wing monarchists (The Black Hundreds) of the city of Kazan and the Kazan guberniya. Establishment of URP departments. The peak of political activity of the local Black Hundreds was seen when they united their activities.

In early November 1906 the Kazan guberniya Department (KGD) of the URP was opened, which was chaired by the President of the Council of the KRPRS, Professor V.F. Zalesky. Formally, the department was guided by the charter and programme documents of the URP, but in practice it had broad autonomy and pursued its involvement in a manner that was beneficial, in particular for its leader. The KGD of the URP participated in election campaigns, the organisation of meetings and demonstrations, and opened URP departments in towns and uyezds across Kazan guberniya. According to information provided by the Kazan Chief of Police, as of 4 December 1907 the KGD URP amounted to 'about 500 people'.

In the second half of November 1906 in the Admiralty Sloboda of Kazan, the Bogolyubovo (Admiralty) department of the URP was also opened, and presided over by the President of the SCPT Council, merchant A.I. Kukarnikov (from May 1910 the priest N.M. Troitsky was the President of the Council department). According to various estimates, the Bogolyubovo department of the URP contained from a hundred to two hundred people.

In December 1906 the 'Regional Town Council of the United Russian People' (under whose jurisdiction all the governorates of the Volga-Kama region were supposed to be) was established in Kazan consisting of V.F. Zalesky, A.I. Kukarnikov and A.T. Solovyov, who had chosen archimandrite Andrey (Prince A.A. Ukhtomsky) as its fourth member. However, soon after the town council status was lowered to governorate level, and its establishment remained on paper only.

Soon (thanks mainly to the work of V.F. Zalesky and A.T. Solovyov) the entire Kazan guberniya was covered by a network of URP departments. According to the Kazan Governorate, as of 18 December 1907, 97 URP departments operated in the Kazan guberniya (totaling about 7 thousand people), including seven departments (totaling about 1.2 thousand people) in six towns—Arsk, Kazan, Sviyazhsk, Tsarevokokshaysk, Tsivilsk and Chistopol.

The Kazan right-wing monarchists actively participated in the elections to the State Duma of all four convocations, but were unable to bring in a single 'listed' candidate. During the elections to the State Duma of the first and second convocations, they were united blocs, accordingly nominating the general list of electors from the United Council of the RPRS, KDRA and SCPT and a 'copy of electors to the State Duma from the Russian people'.

The right-wing monarchists (The Black Hundreds) of Kazan and the Kazan guberniya were indispensable participants in monarchic forums, and also activities related to the celebration of the main anniversaries in the history of the Russian State and Russian Orthodox Church. The Kazan right-wing monarchic (Black Hundreds) movement was, in particular, represented by different individuals: At the Third 'All-Russian Congress of Russian People' (Kiev, 1—7 October 1906), Fourth 'All-Russian Congress of Russian People' (Moscow, 26 April—1 May 1907), All-Russian ('Vostorgovs') 'Congress of Russian People' (Moscow, 27 September—4 October 1909), 'Congress of Right-Wing Professors' (Saint Petersburg, December 1911), Fifth 'All-Russian Congress of Russian People' (Moscow, 21 November—1 December 1911) and at a meeting of monarchists on 21–23 November 1915 in Petrograd (Saint Petersburg.) On 11 March 1906 those elected from the Kazan right-wing monarchic organisations were introduced to the Emperor Nicholas II in Tsarskoye Selo. Furthermore, on 10 September 1910 the KRPRS delegation had a meeting with the Chairman of the Council of Ministers of the Russian Empire P.A. Stolypin, who was in Kazan.

Informational support for the Black Hundreds at different times was provided by such periodic publications as: the magazines 'Deyatel' (published from January 1896 to April–May 1917; editor-publisher—A.T. Solovyov) and 'Kazan Raeshnik' (published in 1907; editor-publisher—N. Prokofiev), newspapers 'Gazeta "Pravykh"' (published in 1906–1908; editor-publisher—N.O. Prokofiev), 'Kazansky Telegraf' (published from April 1893 to March 1917; editor—N.A. Ilyashenko, publisher—A.G. Ilyashenko), 'Rus' Orthodox and Autocratic' (issued from 1905 to 1916; editor-publisher—A.T. Solovyov), 'Soshniki' (published from December 1906 to January 1907; editors—P.K. Kuvshinov, V.F. Zalesky, who was a publisher too), 'The Black Hundreds' (published from November to March 1907; editors—P.K. Kuvshinov, V.F. Zalesky, he was the publisher).

The schism in the right-wing monarchic (Black Hundred) movement. The establishment of the RPUAM and ADURP departments. 'The First Volga-Kama Regional Patriotic Congress'. Already by 1907–1908, mainly because of subjective contradictions, the URP was embroiled in strife and division between its leaders, which also affected the departments that had been operating in Kazan and the Kazan guberniya.

The negative impact of this manifested itself during the time of preparation and immediately after the unsuccessful elections for the local Black Hundreds to the State Duma of the third convocation, when the serious contradictions between the main Kazan right-wing monarchic organisations and their leaders emerged. The intensified opposition of A.T. Solovyov and V.F. Zalesky kicked off the ideological and political institutional disengagement process within the entire movement. At the end of 1907—the beginning of 1908 about a hundred people resigned from the KGD URP, who were displeased with V.F. Zalesky's actions, and they organised an alternative second Kazan department of the URP in the Pyatnitsky parish (chaired by the hieromonk of the Kazan Saviour-Transfiguration monastery Sofronij), united with the Bogolyubovo (Admiralty)

department of the URP, KDRA, SCPT and a number of other URP departments, opened in the Kazan guberniya by A.T. Solovyov and his like-minded colleagues. In the end, the KGD URP, together with the KRPRS and URP departments faithful to V.F. Zalesky were in the 'competing' camp.

In November 1907, V.M. Purishkevich and his followers, who had left the URP, created the RPUAM. Less than a year later—in October 1908—the RPUAM Kazan department was opened (in other sources—office, house) chaired by a Kazan homeowner and teacher P.F. Moykin (former member of the Council of the KRPRS, SCPT and URP). Subsequently, the RPUAM departments were opened in a large number of uyezds in the Kazan guberniya, including those based on the URP departments.

21–25 November 25 The KGD URP and KRPRS, whose leadership shortly before that demonstratively split from the chairman of the High URP Council A.I. Dubrovin, held in Kazan the 'First Volga-Kama Regional Patriotic Congress' with representatives of 57 'provincial' URP departments, and other right-wing monarchic organisations from Kazan and other governorates (the Honourary President of the Congress—Prince A.G. Shcherbatov, Chairperson—V.F. Zalesky). In light of the proceedings of the Congress, eight resolutions were adopted (including on the reports 'Clergy and parish', 'The Issue of Land Management', 'The Non-Russian issue' and others), and two loyal addresses and a telegram in the name of Emperor Nicholas II were drawn up. The URP departments (KDRA, SCPT) that were removed from the Congress by V.F. Zalesky, and those, controlled by A.T. Solovyov (which entered the so-called 'United Monarchic Societies and Unions in the Kazan Department of the "Russian Assembly") held their alternative 'general assemblies' in Kazan on 21, 23 and 25 November 1908.

At various times I.I. Vostorgov, A.I. Dubrovin, and V.M. Purishkevich were involved in the perennial disputes amongst the Kazan Black Hundreds. As a result, from 1908 to 1911 the ongoing confrontation between V.F. Zalesky

(who adhered to an independent policy) and A.T. Solovyov (who supported A.I. Dubrovin) the KGD URP declined and lost its leading status. In 1910 the following decisions were adopted: at first on the dissolution of the KGD URP, the withdrawal from the post of President of its Council V.F. Zalesky and the election of A.T. Solovyov, and later, the reinstatement of the former and removal of the latter.

In March 1911, the Kazan guberniya department for the affairs of public organisations registered two formally separate organisations: The 'Kazan Union of Russian People' (founders—V.F. Zalesky, S.T. Golubev and A.E. Dubrovsky) and the 'Kazan Russian People Union named after Saint George' (founders—A.T. Solovyov's followers led by the merchant F.S. Grebenshchikov). There was not much organisational difference between these unions. Their affairs were managed by the Councils, led by their respective presidents. At the same time in the 'Kazan Union of Russian People' the Council was called 'Main (Governorate)', it originally comprised three people (former founding members of the union), and it was entitled to open and close departments of the organisation in uyezd towns, villages, suburbs and other areas. The Council of the 'Kazan Russian People Union named after Saint George' held similar rights.

The two officially established centres led to the effective elimination of the former governorate department and the final decentralisation of local right-wing monarchic (The Black Hundreds) movement. Gradually, most of the other right-wing monarchic (The Black Hundreds) organisations and their departments that operated in the Kazan guberniya declined too.

In August 1912 the ADURP was officially established, created by the split in the URP in 1909–1911 (one of the candidates for the High Council of the province was elected A.T. Solovyov). As a result, the URP departments with a pro-Dubrovin orientation which operated in the Kazan guberniya and were under the control of A.T. Solovyov, were re-registered as ADURP departments. Meanwhile, often in one

municipality there were departments of more than one 'allied' organisation.

In the lead-up to the State Duma elections of the third convocation some of the Kazan right-wing monarchists (The Black Hundreds) transferred to the 'Russian Election Committee of Kazan' and the 'Kazan Russian National Club'. However, V.F. Zalesky and some members of the KRPRS spoke out against the 'nationalists' and nominated their own candidates. Moreover, A.T. Solovyov and his followers distanced themselves from the nationalists, and this was one of the reasons for their defeat in Kazan. Only one deputy was elected to the State Duma of the third convocation from the Kazan guberniya—a nominated person from the Congress of large landowners from the Laishevo Uyezd, a nobleman by birth F.N. Kazin, and entered a right-wing fraction.

Termination of activities. A severely negative impact on the status of the Black Hundred movement in Kazan and the Kazan guberniya was caused by the general crisis of the official monarchic idea, which intensified during the First World War.

In January–March 1916, the Chief of the Kazan police and district police officer mentioned in their reports about 66 right-wing monarchic (The Black Hundreds) organisations and their departments (totaling about 2.7 thousand people), which were listed in eight uyezds of the Kazan guberniya (excluding Mamadysh, Sviyazhsk, Tetyushi and Cheboksary'). Besides, 11 of them (totaling about 1 thousand people) had already 'de facto' and 'de jure' ceased to exist two to four years ago, or did not hold a single general assembly in this time, which is essentially the same thing. By the end of 1916, out of the other 55 organisations and their departments which still operated, 50—except the KDRA and two its 'satellites' (about 500 members), the KRPRS (about 200 members), and the department of RPUAM in the village of Tankeevka in the Tryokh-Ozyorsk volost, Spassk uyezd (40 members)—barely functioned and did not have any influence on the local population.

The main activities of the right-wing monarchic organisations in Kazan and the Kazan guberniya at the outbreak of the First World War were 'work for defence', rehabilitation and charity work. The KDRA and KAS were actively engaged in the 'dry law' enacted in Russia. They opened an infirmary for wounded warriors (No. 38) in Kazan, which included a club 'Vera, Nadezhda, Lyubov' (chaired by S.K. Shtenger), and also provided assistance in their shelter to refugees who passed through the city. The KSORW collected warm clothes, tobacco and other basic necessities for the front.

After the victory of the February revolution in 1917 the activity of the right-wing monarchic organizations (The Black Hundreds) finally came to an end, their members were harassed and persecuted, and periodical publications which supported the Black Hundreds were closed or ceased to exist due to the revolutionary circumstances.

On 4 March 1917 'A letter to the editor' was published in the newspaper 'Volga-Kama Rech' signed by V.F. Zalesky, where he claimed that: 'The small group of rightists, who united around the tailor school (that had long worked for the defence), decided beforehand to refrain from political discourse until final victory was

gained over the external enemies and full internal peace was reached. With the restoration of normal political life, members of this group are using the rights that belong to all Russian citizens to join legitimate political parties, whose programmes align with their convictions. Soon he also announced that 'there are no right-wing organisations in Kazan', and his acceptance of the 'new order', but despite this, on 17–19 March 19 he was arrested.

On 11 March 1917 the last issue of the rightist newspaper 'Kazan Telegraf' was published, and in April–May 1917—as was the last (No. 4–5) issue of 'Deyatel' magazine. On 28 April 1917 in the 'Volga-Kama Rech' newspaper an article entitled 'The termination of the association of sobriety' was published, where it was reported that: 'The Executive Public Safety Committee addressed the issue of the work of the local association of sobriety, founded and led by the 'well known' A.T. Solovyov stated: 'In light of the highly undesirable direction of this society, it should be closed down, and all its affairs entrusted to the city directorate'.

Presumably, by mid-1917 the right-wing (Black Hundred) movement in Kazan and the Kazan guberniya was completely suppressed and never revived in its previous form.

CHAPTER 3

The Ethno-Confessional Policy in Russia at the Beginning of the 20th Century

§ 1. The Ethno-Confessional Policy of the Russian Government Towards the Tatar Population

Dilyara Usmanova

The main directions of the state-wide national policies, an integral part of which was the policy towards the Islamic population of the Empire, were formulated in the latter half of the 19th century [Kappeler, 1997; Dyakin, 1998; Vorobyova, 1999; Karpenkova, 2005; Tikhonov, 2007]. At the turn of the 19th–20th centuries they did not change radically, although the political modernisation, which began during the first Russian revolution (1905–1907), forced the government to make certain adjustments to its policies. The so-called 'Islamic question', which should include a consideration of the government's attitude towards the Tatar population, was subject to change in accordance with the changes and fluctuations in the policies as a whole. Ultimately, it was about the different scenarios of 'integration' of Islamic subjects into the Empire.

The position of the public authorities on the religious ideology of Muslims was based on the doctrine of 'limited religious tolerance', that allowed the profession of Islam, but prevented its distribution and strengthening¹⁴. In this system the State bodies of the Muslim Spiritual Board (Orenburg Muslim Spiritual Assembly and others), dating back to the late 18th century, were considered a government regulatory body. But even in such a truncated

version, the muftiat looked like 'a form of Islamic self-organisation not only in the eyes of the Muslims themselves, but also in the eyes of the Russian church-state elite', and therefore was not credible [Alekseev, 2002]¹⁵. In general, the 'mistrust' and 'suspicion' towards Islamic subjects, which in large part replaced the disparaging and paternalistic attitude, that especially characterised the beginning of the 20th century on the part of both governmental circles and broad sectors of Russian society.

In the government policy we can see the simultaneous liberal aspirations and strengthening of nationalistic tendencies that were especially evident after the defeat of the revolution, at the final stage of P.A. Stolypin's Prime Ministership (head of government from 1906–1911).

The ethno-confessional policy of the government towards Muslims (in particular, Tatars) at the turn of the 19th–20th centuries was defined by such factors as:

- the quest for the cultural and administrative unification of the country in order to create a 'united' Russia;
- the shift in emphasis in the legislation from 'spiritual' to 'national' motives, which was apparent after the beginning of the 20th century;

¹⁴ In the view of some researchers, this model reflected the attitude of the authorities to non-Christians, formulated in the classical Islamic law [Alekseev, 2002b].

¹⁵ At one of the interagency meetings on Muslim affairs (1910) the Head of the Department of Religious Affairs of Foreign Confessions explicitly stated that the Orenburg Muslim Spiritual Assembly 'does not have the full confidence of the government,' and the loyalty of Muslims was external, ostentatious.

– a mounting fear of Islamic fanaticism and that other non-Russians would be assimilated as Tatars;

– the persistence of the perception in Russian society and in government circles, that Muslims were ignorant and fanatical, and of the superiority of the Russian-Christian culture, which encouraged various programmes for their (Muslims) 'enlightenment';

– the need to provide more liberal policies and to undertake political modernisation of the country, meant the equivalence of civil and national rights for all the subjects of the Empire, the provision of more rights and opportunities of society for self-expression and self-organisation.

As we can see, there were push and pull factors, which taken as a whole contradicted the ethno-confessional policy in the Russian Empire during the late Imperial period. In the beginning of the 20th century the 'Islamic question' posed a range of issues related to the Islamic nationalities of the Empire, which included the key issue of the widely ensuing cultural-national movement amongst Tatars and the risk it posed to Russian statehood.

The Islamic population in the legal space of the Empire. The most fundamental changes across the entire civil and criminal law system were made during the bourgeois and democratic reforms in the 60s–70s. XIX century [Mironov, 1999 Vol. 2, chapter 8]. In the civil law system the Code of laws of 1832 (which was introduced in 1835) continued to be in effect until the end of the imperial period (1917). While some specific changes were made later, the request to draw up a new set of civil laws at the beginning of the 20th century was rejected. The majority of legal writers recognised the undesirability of the codification of legislation in the midst of the revolution, and the Government was determined not to make any profound changes. More serious changes affected criminal law: in 1903 a new criminal Code was adopted, which gradually came into effect from 1904. In particular, on 14 March 1906 the law implemented sections of the Criminal Code related to religious

crimes¹⁶. However, by the time of their implementation they had already become hopelessly out of date: given the degree of liberalisation of religious policies in 1904–1905, these crimes were a significant anachronism. The Criminal Code of 1903 with some amendments existed up to the end of the imperial regime, and thus preserved old severe penalties for religious crimes (for example, the 'apostasy from Orthodoxy', 'defilement' and others), although religious tolerance was declared, and religious legislation in general, evolved over time towards the recognition of the freedom of conscience.

In relation to the Islamic population of the country a general civil law was in effect (volume XI of the Laws), but with respect to marriage and family-inheritance matters, Islamic law (Sharia)¹⁷ was also recognised. According to some studies, the introduction of certain provisions and institutions of Islamic law into general imperial legislation for the eastern outskirts and in the judicial institutions of Russia was 'a well-considered step taken by the Government that facilitated the harmonisation of relations in a multi-ethnic society' [Bekmakhanova, 2003, p. 48]. Without denying the positive effects of these steps taken by the authorities, it is believed that there was much less planning and forethought put into such policymaking, than there was spontaneity and actions, that emanated from immediate practical reasons. Since the Tatars were the first to be part of the Russian state, there were less exemptions and exceptions from general imperial legislation in relation to them (as compared to other outlying Muslims).

¹⁶ The issue of religious crimes under Russian law has been thoroughly developed by Russian law scholars and has an extensive historical and dogmatic literature. Among pre-revolutionary authors were such luminaries of Russian criminal law as N. Tagantsev, A. Kistyakovskiy, A. Zhizhilenko, V. Shiryaev, S. Poznyshchikov, N. Timashev, and others. For further details see: [Usmanov, 1999; Safonov, 2007].

¹⁷ Some of the most important pieces of legislation in respect of the Muslims have been reissued in the last decade [Yunusov, edited 1999; Arapov, compiled 2001].

Taking into account the preservation of the principles of Islamic Law and legislative reform plans towards Muslims, at the beginning of the 20th century the Department of Spiritual Affairs was entrusted with establishing a special compendium, which would 'comprise a summary of Sharia regulations, determining the order of inheritance by law and spiritual testament for Sunni Muslims', with a parallel text in Russian and Arabic. The compendium, first of all, was intended for judicial personnel involved in proceedings for cases of this type to familiarise themselves with the principles of Islamic Law. The respective articles were translated by the DRAFF workers P.V. Antaki and G.N. Taranovsky, and passed examination in the Orenburg and Taurian Spiritual Assemblies. The first issue of the '*Compendium of Sharia regulations of Family and Inheritance Law*' with rules of inheritance was published in the autumn of 1912. It was sent out to the governorate regional administrations with a significant Islamic population, and also to the largest libraries and academic institutions in the country. On the recommendation of P.V. Antaki, the compendium was also sent to the famous Russian scientists (professors V.V. Bartold, and V.A. Zhukovsky) and Islamic public figures (I. Gasprinsky, the Rameev brothers, F. Karimi) [RSHA, Fund 821, Inventory 133, File 604, Sheets 54, 58–59; 67; Law, 1912, No. 30, 42, 44]. Simultaneously the second part of the compendium, concerning '*Individuals under guardianship and their rights*' was prepared. Finally, the third edition of the compendium, which included Sharia regulations on marriage, was prepared by P.V. Antaki by spring 1914 [RSHA, Fund 821, Inventory 133, File 604, Sheets 110, 114, 118.]¹⁸, but was not published until the revolution of 1917. An interest in the legal regulations that were in effect in the Islamic society was expressed by governmental leaders in terms of the practical implementation of 'legal pluralism', with what the authori-

¹⁸ The compilation of the Arabic text of the collection was entrusted to the Mufti Safa Bayazitov. See: [RSHA, fund 821, inv.133, file 606, sheet 43 reverse].

ties had to contend with because of the vastness of the Empire and heterogeneity of its population. The preparation of similar compendiums was a compulsion, derived by an awareness of the insufficient capacity of government officials in the area of Islamic Law.

It must be said, that up to the February revolution in the capital and on the outskirts there were very few experts on Islamic law, and the main experts on the 'Muslim question' up to the end of the 19th century were educated in spiritual academies and seminaries, and primarily in the Kazan Spiritual Academy, where in 1854 the so-called 'Anti-Muslim Missionary Division' was opened. Naturally, their purpose was missionary activity. Significantly, a course on Islamic law was absent in the majority of law departments of Russian universities. Even at Kazan University, whose purpose was to train specialists for the easternmost regions of the country, such a course was only introduced during the 1916/1917 academic year, when P.K. Zhuze, a lecturer of the French language in Kazan Spiritual Assembly, was entrusted to provide an 'optional, but recommended in connection to Islamic Studies' course on Islamic Law to jurists. In the course, considerable attention was paid not only to dogmatic issues regarding Islamic Law, but also to raising awareness of the situation of the Islamic population in the Empire with respect to Islamic and general Russian law [National Archive of the Republic of Tatarstan, Fund 977, Inventory Council, d. 13224, p. 1–6; RSHA, f. 821, inv. 133, d. 630, 4 p.]¹⁹.

It is noteworthy that interest in legal matters by representatives of the Tatar population of the Empire, who became aware of the lack of Muslims' knowledge about their legal situation was expressed. In particular, in 1913–1914 the Kazan legal agent Sh.-G. Imanaev undertook a barely successful effort to publish a Tatar language magazine 'Khokuk

¹⁹ The full programme of Assistant Professor P. Zhuze was published in 1916 [The Review of Teaching at the Imperial University of Kazan. Faculty of Law, 1916, pp. 15–16] and reprinted by I. Yemelyanova. See: [Yemelyanova, 1998, pp. 137–138].

va khayat' ('Law and Life'), which specialised in legal problems²⁰. A yet more significant example—imam-mudarris madrasah in the 1-st central mosque of Ufa Dzigangir Abyzgildin along with traditional courses (interpretation of the Quran, sayings of the prophet, history of the prophet, tenets of Islam and others) taught a class 'lawmaking in the Russian Empire, which was related to mullahs' [RSHA, Fund 821, Inventory 133, File 466, Sheet 477]. Finally, during the Duma pre-election campaign of the first convocation the candidacy of an Ufa Tatar, lawyer Abusgud Akhtyamov, was promoted as an example of a successful model of an Islamic scholar with higher legal qualifications, who was familiar with the legal provision of Muslims (in 1890s he served in the Orenburg Muslim Spiritual Assembly).

Restrictive standards of Russian law in regard to Muslims. The development of religious law by the State Duma of the Russian Empire (beginning of the 20th century). Russian legislation laid down regulations according to which the religious and national identity of the legal entity initially gave certain advantages in civil rights or were the basis for restrictive regulations. A strengthening of the restrictions on the grounds of religion or nationality was observed in the 80–90s of the 19th century. It stems from a deviation from the policy of liberal reforms of the Epoch of Great Reforms and also from the fact that the main guideline for imperial policy became the ideal of a 'united' Russia headed by the Russian people. This ideal was strived towards through cultural and administrative unification based on the Russification of the society. That is why terms such as 'alien', 'aboriginal', 'persons of Russian origin' and other words, the legal sense of which was uncertain and often changeable depending on the internal policy, were widely used in Russian law at that time. The plurality of interpretations of these terms, shortcomings

of legislation and its contradictions led to the issue of multiple 'by-laws' (Circulars issued by the Ministry of Justice and Internal Affairs, remarks and 'interpretations' made by the Senate and others) which often changed the essence of the law beyond recognition.

The restrictive legal regulations on the grounds of religion and nationality can be divided into several groups: the first group referred to the entire non-Russian population of the country, the second was based on the limitations of rights of Non-Christians (mostly Hebrews and Muslims) and finally the third group referred to the regulation and elimination of rights of certain nationalities (mostly Hebrews). The restrictive component underwent significant evolution: from the prevalence of religious motivation in the beginning to the gradual domination of national motives at later stages of the development of Russian statehood. At the same time their analysis highlights the binding force of religious and ethnic components of the restriction motive. Protective tendencies in religious legislation are more evident especially in regard to the Tatars. This demonstrates a differentiation of national religious policy and also the fears and phobias which tsarist officials had about the real and supposed 'Tatar threat'.

One of the most important restriction was related to the *right of persons of non-Christian origin to purchase and own immovable property*. According to Article 262 of the '*Regulation on the governance of the Turkestan krai*' and Article 136 of the '*Regulation on the governance of the regions*' non-Christians were prohibited from purchasing land and owning other immovable property in the Turkestan and the Governor-Generalship of the Steppes. The economic motive and national character of the problem are evident. This restrictive measure was against the Hebrews first of all and also against the 'Muslims of Inner Russia', in other words the Tatars who were extremely active traders and business people in the regions. It is not a coincidence that the authorities were seriously concerned about the danger of the extension of Tatar influence in the Middle Asian

²⁰ The magazine was published during the course of the year—from 20 January 1913 to 20 January 1914. There were 10 issues in total. For more details see: [Usmanov, 2009 v, pp. 100–105].

region, and combated 'Pan-Islamism' and 'Pan-Turkism' whose ideologists and guides were Tatars of the Volga region. The numerous demands from Muslims to remove those restrictions were left without response, as they affected the interests of border region officialdom and Russian merchants.

The reasons for another restrictive regulation—namely *the prohibition for non-Christians on trading on Sundays and on Christian holidays*, apart from the apparently religious one were economic, which was demonstrated at the discussion in the State Duma of the draft law '*On proper holidays for commercial workers*'. The proposal to make Friday and Saturday days off for Muslims and Hebrews respectively was rejected by most members of the Duma. Opponents of this amendment were afraid of the expansion of the Tatar merchant class. As a result the concession from the government to grant local authorities the right to set the day off taking into account religious and local traditions was declined by most members of the State Duma, having joined the right-wing and left-wing fractions together.

The restrictive law for Non-Christian attorneys at law (1889) initially related to the Hebrews. However, in the beginning of the 20th century, with the increasing number of Muslim students in Russian institutions of higher education together with the beginning of the formation of high society it affected the interests of the Islamic population of the country. During the modernisation of the legal and political system in 1905-1906, liberal-minded lawyers repeatedly raised the issue of the removal of such restrictions. The draft law ('*On the removal of restrictions of the rights of Muslims to become a member of the class of attorneys at law*'²¹) drawn up by Muslims and progressives and approved by the majority of the

Fourth Duma was considered by the government as 'improper' (20 March 1914). Only in the end of 1915 did the authorities make some concessions: at the meeting of the Council of Ministers on 29 December a decision was adopted of the Interagency committee on the free inclusion 'of the Karaims and Mohummedans as attorneys at law and their assistants in the absence of discrediting facts' [Pravo, 1916, 10 January]. This government decision was a concession of sorts to the Islamic population as the number of Muslim lawyers was so small that it did not 'endanger' the authorities.

Starting from the 80s of the 19th century Muslims were deprived of their right to teach in higher and secondary education state institutions and could work as private tutors only for their fellow believers. In 1911 the Ministry of Internal Affairs issued a circular which forbade the approval of the title of Mullah for persons who obtained theological training abroad (especially in Turkey or Egypt) even if they were Russian subjects. However, while insisting that this circular was followed, the authorities did not intend to make it an amendment to the law as 'the law does not prescribe any limitations on the rights of persons who have studied in foreign educational institutions' [RSHA, Fund 821, Inventory 133, File 576]. Together with the fight against Pan-Islamism, the approval of persons graduated from New Method Madrasahs to the position of Mullah could only be done if information was available on 'one's non-participation in religious tribal propaganda'.

On the whole we can say that at the turn of the 19th-20thcenturies restrictive laws against non-Christians dominated in Russian law. Though the emergence of these laws was directly connected with the tightening of the policy towards Hebrews, as a result they affected the interests of the Islamic people of the country. These numerous restrictive laws were particularly painful for the Tatars. This fact allows us to differentiate the government policies towards the Islamic population of the country. The second important feature of the restrictive laws towards Muslims especially in

²¹ The bill was initiated by the progressives, but among the 54 deputies signing it were members of the Muslim faction—that is, I. Ahtyamov, M. Dzhafarov, G. Enikeev, G. Bayteryakov, and M. Minnigaleyev. The text of the legislative proposal was republished with an explanatory note: [Muslim Deputies, 1998, pp. 231–233; Usmanov, 2005].

contrast with 'Jewish legislation' was its by-law nature. The restrictions and bans were more often worded in numerous 'circulars' and 'explanations', rather than approved as real acts of the Legal Code of the Russian Empire. That is why they were not so evident, though no less painful. It is not a coincidence that demands to remove the religious and national restrictions was typically given in all petitions and applications submitted by Muslims and that it also was a matter of high priority for Islamic liberal parties and the Islamic delegates of the State Duma [Usmanova, 2005].

There is doubt that from the end of the 18th century Russia was 'a tolerant country', but this was 'a policed tolerance'. The principal turn of religious policy started in the winter of 1904–spring 1905 with the publication of the decree '*On the strengthening of religious tolerance*' (17 April 1905), which granted... the freedom of belief and prayer to everybody for the sake of conscience'. Although the decree was based on the principles of religious and administrative privileges and somewhat extended the rights of non-Christians and partly confessions of a different faith, its consequences turned out to be much more significant. Perhaps surprisingly for the drafters of this law it became a prologue to the declaration of freedom of conscience. In respect to the Islamic population of the country the edict stated: 'to accept the regulations to be reviewed which concern the most important aspects of the way of life of persons of Mohammedan faith'. The duplicate main regulations of the edict 'The highest provision of the Ministry Committee, approved on 17 April 1905' defined the principal range of issues related to Muslims. The organiser of the 'Special meeting on religious tolerance' (under the guidance of Count Ignatyev) was authorised to develop and submit for consideration to the Council of State the following draft laws:

- 'on the construction of meeting-houses of non-Christian faiths;
- on the procedure for the election and appointment of religious officials of the Mohammedan clergy, parish or higher institutions;

- on exemption from conscription for military service for certain persons of the Mohammedan clergy;

- on the opening procedure of Mohammedan spiritual schools (maktab and madrasah);

- on the establishment of Spiritual Directorates for the Kirghiz in the Akmola, Semipalatinsk, Ural and Turgay oblasts and also for the Mohammedan communities in the North Caucasus in the Stavropol guberniya, the Turkestan krai and Transcaspian oblast;

- on the possible permission to bring up abandoned children in the religion of their foster parents'.

On the 25th of June of the same year the provision of the Ministry Committee was approved, which determined the conversion procedure from Orthodoxy to another faith before the respective law is issued: persons wishing to leave the Orthodoxy had to submit an application addressed directly to the governor or other police officials of the uyezd; having verified them the local authority represented by the governor issued the respective order. That 'transitional provision' was valid at least until 1912.

The October Manifesto dated 1905 was a big step forward as it established the foundations of constitutional order and the declared freedom of conscience was a part of democratic freedoms and appeared to be a prerequisite for the 'transition to the rule of law'. However, this transition was carried out on a 'one step forward, two steps back' basis. The reason was that all the above-mentioned documents were drafted by officials, who were 'adherents of the policy of state principles'. So the issues of the edict of 17 April 1905 and of the October Manifesto were very important but only the first step forward the transformation of the whole system of interrelationships in the Empire in respect of different faiths and the State. Moreover, liberal edicts caused certain confusion in the current law.

The State Duma, being the lower house of the Russian Parliament, played an important role in the development of religious legislation in the beginning of the 20th century (1906–

1917)²². The Russian Parliament, which began functioning in April 1906, had to take on most of the hard work in removing those contradictions and bringing the law in accordance with the principles declared in the mentioned edicts. During the short working life of the Duma of the first convocation (26 April–9 July 1906) its members only introduced a draft entitled 'General provisions of the draft law on freedom of conscience signed by 50 deputies of the first convocation, mostly Cadets on 12 May 1906. The basic principles of the freedom of conscience declared in the Manifesto of 17 October 1905 were formulated under seven points of the draft law. The draft corresponded to the radical public feelings which prevailed during that period.

The government supposed that it was less convenient and practical to draw up a general draft law on the freedom of conscience than to prepare and enact specific draft laws. That is why it favoured the path of the submission of particular draft laws to the State Duma of the second convocation. Out of the more than ten religious draft laws introduced by ministries to deputies, the most important for the Muslims were: 'On amendments to the regulations concerning the conversion from one faith to another', 'On non-Orthodox and gentile religious society groups', 'On amendments concerning family rights in respect of the declared freedom of conscience on 17 October 1905', 'On the removal of political and civil restrictions dependent on belonging to non-Orthodox and gentile faiths that were provided in the current law...'

The government's intentions to reform the religious law characterises well the draft law 'On the attitude of the State to certain faiths'. This key draft within the group of religious laws according to the contemporaries was 'an extraordinary document created by the bureaucracy and woven with contradictions' (S. Melgunov). The government intended to favour the path of small concessions while not changing

the essence of its religious policy: 'non-Orthodox persons' faced numerous obstacles.

The religious commission 'unanimously and without debate decided to adopt essential regulations on the freedom of conscience submitted by the People's Freedom Party to the State Duma of the first convocation' as the key guideline for further work. In 13 meetings the members of the religious commission (including three Muslims S.-B. Karatayev, S. Maksudi and M.-Sh. Tukaev) only had time to consider the regulation 'On non-Orthodox and gentile religious society groups'. However, that work was also not completed.

The State Duma of the third convocation (1907–1912) established three separate Commissions instead of one: for the affairs of the Orthodox Church, old-believer issues and religious matters (including two Muslims, namely I. Mufti-Zadeh and M.-Sh. Tukaev). The last one had to 'prepare draft laws related to non-Orthodox and gentile faiths being considered in our legislation as the beginning of the declared freedom of conscience'. The change of name and subdivision of the commissions into three was caused by a number of factors: an attempt to avoid the use of expressions such as 'constitution', 'parliament', and 'freedom of conscience', as they were severe irritants for conservative government circles. Besides the creation of independent commissions for Orthodox and old-believer church affairs, possible situations in which 'non-Christians' became 'arbiters of purely Russian issues' were supposed to be prevented. It was also widely believed among deputies that the Orthodox church should have no influence on the Duma.

The draft laws submitted for consideration to the religious commission were prepared by the respective department of the Ministry of Internal Affairs. Being the initiator, the Ministry could withdraw the submitted draft law. That was done in October 1909 when the Ministry of Internal Affairs withdrew two extremely fundamental draft laws which most irritated the right hand of the Duma. The most important for the Tatars was the draft law 'On changes to the regulations concerning the conversion from one

²² The development of religious law in the Duma is dealt with in detail in: [Usmanov, 1999; Safonov, 2007].

faith to another'. Its was discussed in detail by the Commission in 1908–1909 and a report was submitted to the General Meeting on 22 May 1909. The discussion took several days from 22–26 May to 1 June and it finished with the adoption of a slightly amended draft law dated 30 October 1909. The amendments submitted by the commission and approved by the State Duma changed the draft law in a liberal manner. The biggest debates were caused by the discussion of issues on *freedom of faith* and on the legalisation terms of the conversion from one faith to another. The right nationalist wing of the deputy corps viewed freedom of faith as an inadmissible humiliation for the Orthodox church, considering that 'the idea of equality between all the subjects of the tsar regardless of religion and tribe is immoral, non-state, destructive and fatal for the country' (Markov The Second). The restrictions also had to affect the freedom of religious conversion. According to the governmental plan 'converters or their ancestors (predecessors—D. U.), but not more distant than their grandfather and grandmother, who belonged to a non-Christian faith' possessed the right of religious conversion. The members of the Commission and the majority of the deputies moderated that law, having granted the right of conversion to all adults (over 21 years old). Another principal amendment submitted by the liberal part of the Commission and approved by the Duma related to the religious conversion of minor children (from 14 to 21 years old) which were granted that right with the permission of their parents, adopters, guardians and others. The State Duma granted parents the exclusive right to determine the religious belonging of minor children (under 14 years old), based on the principle that the 'conscience of the parents replaces the conscience of the children'. Muslim deputies favored the legalisation of that conversion, pointing to the hardships and misery felt by those who wanted not just to renounce Orthodoxy but to return to the religion of their ancestors (from the speech of K.-M. Tevkelev, I. Mufti-Zadeh, Kh. bey Khasmamedov and I. Gaydarov) [State Duma. Stenographical reports].

The State Council was a considerable obstacle to converting the draft law into the law, having rejected all amendments submitted by the Duma. The work of the special Conciliation Committee (24 January 1912) did not produce the desired results: no agreement was reached on any of the disputes. The deputies preferred to give the government 'an opportunity to preserve the current law issued in accordance with Article 87 of the Constitution as early as in 1906' which made the possibility of conversion contingent upon the will of the local authority. So the draft law, which was extremely important to the Tatars, and which regulated the ability to convert from Orthodoxy to another religion, and in fact legalised the process of baptised Tatars returning back to Islam, did not enter into force and therefore granted all the power to the local administration.

During the work of the last pre-revolutionary Duma (1912–1917) the government favoured the path of submission of secondary draft laws to the Parliament which related to private issues (the so-called 'legislative vermicelli'). Some of the religious draft laws considered and approved by the deputies were withdrawn by the Ministry of Internal Affairs and the remaining ones in the Duma portfolio were mostly secondary draft laws. During the work of the Duma of the fourth convocation the legislative proposal on 'Freedom of conscience' (3 December 1912) was submitted by 32 members of the fraction Narodnaya Svoboda (People's Freedom). In February 1916 a group of liberal deputies spoke in support of the abolition of all national religious restrictions. However, all the ministers without exception spoke against such a draft law and proposed to postpone any resolution to the problem until the end of the war at best.

To sum the things up, we can say that the tolerance of the Russian State during the pre-revolutionary decade (1905–1916) on the whole was limited in character as the Orthodoxy, which maintained its position as the predominant Church, was the prevailing confession and the basis for the state ideology. Religious legislation, based on the principle of confessional

'ranking' granted the predominant church the exclusive right to proselytism, prevented the conversion from one region to another while at the same time rejecting the possibility of the out of religion status. Religious tolerance was declared in regards to the Muslims but in practice it was strongly limited and restrained by all possible by-laws and circulars.

The State Administrative System on Muslim Spiritual Affairs. The Department of Religious Affairs for Foreign Faiths (DRAFF). Since 1832, all religious affairs of the Russian Muslims were under the supervision of the Mohammedan branch of the Department of Religious Affairs for Foreign Faiths (DRAFF). In the beginning of the 20th century, its composition often changed and consisted of the following figures: M. Yachevsky (1904–1905), V. Vladimirov (1905–1908), A. Kharuzin (1909–1911), E. Menkin (1912–1915), G. Petkevich (1915–1916), N. Kharlamov (1916–1917) [Vitenberg, 2001, pp. 36–38]. The DRAFF was a part of the MIA (the Ministry of Internal Affairs) and was the higher authority in the Muslim Spiritual Board of the Empire. Its sphere of competence was determined by the Charter. The February Revolution caused a sequence of reforms: on 5 August 1917, the Department was incorporated into the newly-created Ministry of Confessions, which ceased to exist after the October Revolution.

Among seven branches of the DRAFF which existed in 1917, the fifth branch administered the affairs of the Islamic, Lamaistic and pagan faiths. The Islamic branch of the department managed the following affairs: conferment of spiritual ranks to clergymen and affirmation of consistory membership, rewarding clergymen with marks of distinction, control of the establishment and activities of religious educational institutions, and record-keeping on the number of parishes and parishioners. Other aspects that were part of the competence of the DRAFF included the building of new mosques on behalf of a parish, and the formation of religious societies. Additionally, the members of the Department prepared different draft laws related to foreign religions and reviewed draft

laws on religion which were prepared by other departments. Since the end of the 19th century and during the first decades of the 20th century, the activity of the Islamic branch of the DRAFF was largely bureaucratic. The work was directed towards supervision of the Muslim population. Information was provided to the office in the form of responses made by governorate institutions to the inquiries of the Department. Much attention was paid to the preparation of analytical surveys and records on the most significant problems in any given period. Work with information collected from Muslim newspapers and magazines, analyses of the content of the Tatar periodical press, and data provided by police supervisory bodies were also considered as an effective means of response to the situation in Muslim communities and regions.

Apart from the DRAFF, there were also other state institutions which were involved in the affairs of the Muslim peoples of Russia. Issues related to the organization of school education for non-Russians were resolved in the Ministry of National Education, which strove to monitor the activity of Islamic religious schools (Maktabs and madrasahs) and to carry out national policy in the field of education for non-Russians. The Russian Orthodox Church developed missionary practices with respect to Muslims. The Main Directorate for the Press monitored Islamic publications. In the beginning of the 20th century, the police department of the MIA started to become involved in Muslims affairs. Ultimately, at the beginning of the century, special inter-agency committees within the MIA were convened for developing a general policy towards Muslims.

Bodies of the Department of Muslim Religious Affairs were also represented by spiritual assemblies. In most of the territory of the Russian Empire, Muslim clergymen were subordinate to Muslim Spiritual Directorates (Orenburg, Taurida and two Transcaucasian directorates). The territory within the competence of the Orenburg Mohammedan Spiritual Assembly (OMSA) was limited to the European part of Russia and Siberia. In honor of the

centenary of OMSA in 1889, a report was published where the following data was recorded: by 1889 there were approximately 4222 communities and 7203 clerical ranks including 60 akhoonds, 2734 imam khatibs, 2621 imam mudarris and 1873 muezzins in the region under the competence of OMSA, with a population of 3,5 million people. In the beginning of 1911, there were 5771 parishes with 5409 cathedral mosques in the region of OMSA, in which 3946 khatibs, 3696 imams, and 691 mullahs conducted services [Farkhshatov, 1999, pp. 67–72].

The authorities demonstrated consistent indecisiveness concerning the issue of *restructuring the bodies of the Muslim Spiritual Board*, despite having announced that the revision of legislation related to Muslims was long overdue (Vol. XI of the Code of laws). Projects for the total or partial reformation of OMSA were developed in governmental circles since the mid-60s in the 19th century. Their main goal was weakening the influence of the mufti and muftiate, strengthening the role of the Russian language in records management, limiting the sphere of competence of the religious authorities, and the fragmentation of the OMSA with subsequent abolition. However, practically all of the proposals were left unimplemented due to the indecision of the authorities and reluctance to aggravate contradictory and painful issues. In the mid-70s, the head of OMSA, S. Tevkelev, suggested to reform and regulate the activity of religious authorities [Usmanova, 2005; Zagidullin, 2007]. The project of Tevkelev was directed towards the following: determining the precise number of mosques which can be built, creating an intermediate position between mullahs and the muftiate—a district akhun who would control the activity of mosques and schools, and setting an election procedure for Assembly members [RSHA, Fund 821, Inventory 8, File 616, Sheets 1–48]. However, it was not carried out either.

In the beginning of the 20th century, projects were developed once more in the bureaucratic apparatus, related to the fragmentation of territory under the control of OMSA into

smaller pieces in order to weaken the organization. One of the creators of the project was V. Cherevansky (1836–1914), a member of the State Council. In his work entitled ‘Statement on the religious affairs of Sunni Muslims’, prepared for the Special Meeting on religious affairs headed by A. Ignatyev (1906), he proposed dividing Orenburg Muftiate into areas and nationalities, thus creating a range of smaller spiritual administrations: Saint Petersburg, Crimea, Caucasia, Orenburg, Steppe and Bashkortostan [Rybakov, 1917]. In that way, the territory under the control of OMSA significantly decreased due to the loss of such regions as the North-West, Siberia and the Cis-Ural. It was proposed to join the North Caucasus with the Transcaucasia district. Additionally, the creator of the project proposed to withdraw the title of ‘Mufti’ and to gradually replace it by ‘chairman of the board’. Though agreeing with the main idea of reducing the OMSA into smaller districts, firstly to weaken the influence of the Tatar clergy, and secondly to decentralize the spiritual life of Muslims within the Empire, the critics made several remarks. Particularly, the chairman (since 1905) of the Special Meeting on the Education of Oriental foreigners, A. Budilovich, proposed for the newly-created regional spiritual administrations to be characterized by regional rather than tribal affiliation. According to A. Budilovich, it was also extremely dangerous to establish spiritual administrations in Orenburg, Troitsk and Petropavlovsk due to their proximity to the eastern border and the possible strengthening of Tatar influence.

Simultaneously, representatives of the Muslim community developed their own projects on the reform of spiritual administration bodies. In the beginning of the 20th century, the question grew in public importance due to the press and the activity of the Islamic fraction in the State Duma. The first time that the question was widely discussed was at the All-Russian Muslim Congresses in 1905–1907 which, *inter alia*, adopted a wide reform program of the Muslim Religious Affairs administration. Some of the principle points of the program

were the issues of the electivity of muftis and equality of status between Muslim and Orthodox clergy. In 1907–1908, Yusuf Akchura developed a draft law on parish reform [Millyat, 1914, 17 May]. In 1906–1914, members of the Islamic fraction focused on that problem [Usmanova, 2005]. The reactionary turn in government policy, which became evident from 1908, made their full realization practically impossible. As the government ‘tamed the country’, all the projects were postponed and the petition of the Muslims was considered to be ‘illegal solicitation’. Due to the specificities of the political system of the country, the realization of any projects initiated by Muslims themselves was practically impossible without appropriate approval by governmental authorities²³.

The governmental authorities, as we can see in the projects of the Commission of count Ignatyev, A. Budillovich and others, had their own opinion on how ‘the Islamic question’ was to be solved. The most prevalent threats were thought to be pan-Islamism, ‘Tatarization of the foreigners’ in the Volga region, and spreading Islamic fanaticism’ by the Tatars among the

Kazakh population of the steppe regions. The tendency was especially evident during the sessions of two important anti-Muslim meetings in 1910 and 1914 [Makhmutova, 1998; Vorobyova, 1999].

The first of the two ‘Islamic’ meetings was held in January 1910 (12–29/01/1910) and was led by P. Stolypin, under agreement with the Synod and the MPE headed by A. Kharuzin, the head of the DRAFF. The expressive title of the Meeting is evidence of the direction of its activity: ‘Extraordinary meeting on the development of measures against the Tatar-Islamic influence in the Volga region’. However, the key subject of the meeting was the Tatar movement and the system of Islamic education. When making their judgements about the situation, the members of the meeting agreed with the governor of Kazan guberniya M. Strizhevsky, who stated the following: ‘in the last years it [The Tatar movement] became more pronounced and definite under the influence of important events in the life of Russia. The movement is undoubtedly Pan-Islamic and is based on both cultural and political ideas. One characteristic of the Tatar movement is that it not only tended to bring the Muslims Tatars together in a single united whole, but at the same time to conquer other nations’ [Makhmutova, 1998]. Practically all of the members of the meeting speaking after the Kazan governor reiterated the threat and serious danger stemming from the activity of the Tatar population to the Russian state. The chairman of the meeting (the head of DRAFF) was convinced that ‘the loyalty of Muslims was merely formal and not real. (...) The confirmation of their superficial loyalty is the fact that they strive for cultural consolidation in a fight against Russian origins, and try to lull the government authorities using their seeming loyalty’ [Makhmutova, 1998]. The members of the meeting considered the following possible countermeasures against the threat: the prohibition on reforming Islamic confessional schools, the prohibition on creating a national educational system and the establishment of schools taught in native languages. All suggested countermeasures in this sphere were directed

²³ The last of the major pre-revolutionary events, which took place to discuss ways of reforming the OMDS and the entire system of spiritual administration in the country, was the congress of representatives of Muslim public organisations, which was held on 15–25 June 1914 and was recognised as the fourth Muslim congress led by the chairman of the Muslim faction K. Tevkelev. The main speakers at the congress of deputies of the Duma were I. Akhtyamov (giving reports on the Orenburg Muslim Spiritual Assembly and the administration of the Siberian Muslims as well as an overview of the main projects being carried out) and M. Dzhafarov (on the Caucasian Muslims); editor of the ‘Millyat’ newspaper I. Lemanov (on the Tauride spiritual administration); former deputies S. Maksudi (on the main provisions of the administrative reform of the spiritual affairs of the Russian Muslims); S. Karatayev (on the position of the Kazakhs); A. Topchibashev, and others. The work of the meeting of the congress had three essential aspects: organisational, spiritual, and educational affairs, and waqf (mortmain endowment). And although many of the issues raised were not fully developed, the draft ‘Provisions on the Administration of the Spiritual Affairs of the Muslims of the Russian Empire’ was adopted as a result of the congress (from ten resolutions). For more details, see: [Millyat, 21 August 1914; Usmanova, 2005].

towards making Islamic schools noncompetitive and to force the Muslims themselves to attend Russian schools through the system of prohibitions and restrictions. They were supposed to eradicate all secular subjects in maktabas and madrasahs, including Russian classes, and to forbid the teaching of the Russian language. This was steadily implemented from the 1870s. The school itself was 'a property of the government' and could only be of Russian nationality. Children 'who received their primary education in foreign language schools were cut off from the Russian public spirit'. Thus, it is evident that the discussion of national cultural issues conflicted with the liberal educational reform projects being discussed in the Russian parliament, which helps explain their ultimate failure. Among the proposed countermeasures against the Tatar threat was the regulation of the state-legal position of Muslims with enhanced control over them [RSHA, Fund 821, Inventory 133, File 573].

It is known that the prime minister was not only the initiator of the meeting but also controlled the preparatory activities and work, and was well-acquainted with its conclusion. It appears that they could not but substantiate the belief of the government executive that it was necessary to continue the reform program, grounded in the conception of 'a united and indivisible Russia'.

In May 1911, P. Stolypin developed a reform project of the public administration system of the country²⁴. He anticipated the establishment of two ministries in the new government system: on nations and religions. The Ministry of Nations, according to the conception of P. Stolypin, should meet the religious

and cultural needs of every nation in the Empire by carefully studying the cultural, religious and social life of the nations in order to create conditions for loyal attitudes among them. Two theses of Stolypin's project on the establishment of the Ministry of Nations are notable. They were repeatedly and strongly emphasized, namely: the necessity of abolishing all restrictions of a national nature (likely including the shameful Pale of Settlement in regard to the Hebrews), and the existence of numerous external and internal enemies of Russia who did nothing but weaken and divide it [Zenkovsky, 1956, pp. 79–81]. The Ministry of Religions should not only monitor the activities of the Orthodox church but also look carefully at the activities of other religions. At the same time, all the members of the Ministry had to have a proper spiritual education (Orthodox) and to be 'deeply committed to the Orthodox Faith' [Zenkovsky, 1956, pp. 82–83].

Thus the reform project being developed by P. Stolypin preserved and was even called upon to strengthen one of the basic principles of imperial ideology—the predominant position of Orthodoxy.

A new special inter-agency meeting on Muslim affairs was held in April–May 1914 under the chairmanship of the Deputy Minister of Internal Affairs N. Zolotarev. In spite of the request of the Muslim members to postpone the meeting until the Islamic congress, it nevertheless started on 29 April 1914. The main aim of the meeting, as the previous one, was to discuss 'the Tatar domination', as 'the Islamic question' was primarily considered to be 'Tatar-Muslim'. The discussion was about the danger of the propagation of Tatar national culture among neighboring Muslim and pagan peoples. As Islam was considered to be the guide of Tatar ideas, the fight against 'Tatarism' was accompanied by opposition to both Islam and Islamic religious structures. After a fortnightly discussion, the meeting retracted its previous promises about reforms of the administrative system for Muslim affairs and the liberalization of the law on Muslims, thus taking a stand for preserving the status

²⁴ According to Professor A. Zenkovsky, the prime minister spent four days in May 1911 dictating his project to him for further elaboration before presenting it for consideration by Nicholas II. After the death of Stolypin a large number of papers were seized from his office and then disappeared. The author of the memoirs of Stolypin left Russia after the revolution, taking with him his notes, which he wrote in 1906–1911 and published many years later. The project on the transformation of the state was included amongst them. See: [Zenkovsky, 1956].

quo. It accepted the necessity of preserving the Taurida and Orenburg muftiates within their previous territorial regions, the current replacement procedure of higher Islamic spiritual positions by appointment, and the appointment of parochial officials by election. The meeting proposed to deprive the Muslim clergy of two competences, namely the issues of Muslim metrication and hereditary affairs. The first was under public provisions and the second was under judicial provisions. Afterwards, government experts came to the conclusion that the reform of OMSA, as the

establishment of new muftiates, would be contradictory to state policy directed towards the gradual weakening and elimination of the Institute of Muslim affairs (1914) [RSHA, Fund 821, Inventory 133, Sheet 566].

Soon the beginning of the world war made the resolution of the planned issues impossible both in accordance with the government plan and with the preferred plan of the Muslims themselves. Radical reform of the entire system of relationships between the state and the Muslim population became possible only after the February Revolution.

§ 2. The Ideological Struggle among Russian Muslims

Rafik Mukhametshin

Tatar social thought at the beginning of the 20th century, the whole of its problems and their tendencies and trends, was generally directed towards the formation of a national ideology and determination of basic ideas of the national liberation movement and national identity. This period heralded the rise of the new forces to the public stage and a high-grade change of the public conscience: on the basis of the religious reformism, enlightenment and liberal ideas, the principal tendencies of the social thought were developed. This made a theoretical basis for the strong rise of the national movement that followed among Tatars on the way to progress and to the creation of their own history. It was exactly during this period that basic principles of traditional values were weakened and the bases of the secularization of theoretical thought were established. Those tendencies were especially clear after the revolution of 1905–1907 when periodicals and secular education were widely spread, interest in the advances of modern research was aroused, political parties and associations were established, and the relative freedom to express own political views became possible.

The printing industry played a great role in familiarizing new theories and ideas of crucial importance for Tatar social thought during that

period. Tsarism, which perfectly understood the role and significance of the printing industry, especially of periodicals, for spreading new ideas and information that were not always kind to the official authorities, did not permit printing newspapers and magazines for almost a hundred years. On this occasion, the Trustee of the Kazan Educational District of the Main Directorate of Press in 1903 directed his attention to the fact that 'newspapers in the Tatar language satisfying the natural curiosity of the Tatars and providing them with all necessary information on the public and every day life would eliminate the need of the Tatar to study the official language and, in any event, would contribute to national separatism rather than to cultural integration of the Tatars with the Russian population...' [National Archive of the Republic of Tatarstan, Fund 92, Inventory 1, File 21132, Sheet 5]. Only during the years of the revolution of 1905–1907 did the Tatars get the permission to publish newspapers and magazines. Thus, only in 1905–1907, 33 editions were legally published in the Tatar language (21 newspapers and 12 magazines) [Amirkhanov, 1986, p. 10]. After 1906, about 8,000 books in an edition of 5.6 million of copies were published annually in Russia [Karimullin, 1974, pp. 21, 185]. There is no

doubt that in this case it is necessary to pay attention not only to quantitative measures, but also to the trends which were outlined in the printed products in the Tatar language. Thus in the Circular sent to the governor of the Russian Empire it was noted that 'recently, completely new currents could be seen in Tatar literature which threaten to impair the centuries-old way of life of the 14 million Muslims of the Russian Muslim religion and give the opportunity to assume an oncoming serious turning point in the life of the population' [Karimullin, 1974, pp. 187–188]. At the same time it is impossible not to pay attention to the fact that in the beginning of the 20th century the circulation of secular literature increased up to 83–85% of the total and, per edition, up to 70–75% of the total number [Karimullin, 1974, p. 291]. Newspapers and magazines informed the Tatar reader of up-to-date currents in philosophical and social thought and the literary life of the West and Russia. The press revealed to the reader all the troubles of the fight between the old and the new, practically becoming a powerful means for formation of the social conscience. M. Pinegin, Kazan press inspector, directed his attention to the fact that 'The Tatars certainly did not lose the capability to assimilate new ideas due to schools and young mullahs and perhaps mostly to the Tatar newspapers and magazines which penetrated the population, 80% of whom are literate in their own way' [National Archive of the Republic of Tatarstan, Fund 420, File 258, Sheet 5]. In this connection the important fact was that 'the striving for making literary language spoken especially strengthened after 1905 when the Muslim writers felt more need to address not a group of scientists and well-educated people, but the general public. At that period of time a great number of editions in language very close to the people's one was published' [Journal of the Ministry of National Education. *Novaya seriya*, 1917. Part 59, p. 67]. N. Bobrovnikov further states that 'this reading which was very favorable to the development of the deep layers of society is intensified day by day: strange languages are gradually replaced with the derivatives from Turkic roots

and are widely used in numerous newspapers and magazines, through textbooks, schools and theatres. It can be stated that now, out certain Tatar newspapers, for example "Vakyt" (Orenburg) and "Yulduz" (Kazan), are clearer to an uneducated Tatar than our newspapers are to a Russian peasant educated in a two-class school' [Novaya seriya, 1917. Part 59, p. 68]. Also, 'the mektebs are being transformed all over into secular educational institutions with the real Tatar and not teaching jargon' [Novaya seriya, 1917. Part 59, p. 68].

The role of Tatar educational establishments that had previously played a defining role in forming social awareness grew even more in the new conditions. It is no coincidence that the main task was to educate people, as without education the possibility of social and national progress was unthinkable. That is why it was quite natural that 779 madrasahs and 8,117 mektebs in Russia, where education was provided for 267,476 students [Amirkhanov, 1986, p. 82], were founded in the epicentre of a quite severe ideological struggle for the minds of the growing generation. However, this field was also noted for its certain tendencies. As it was stated in the circular to the governors of Russia in 1900, the supporters of a new method 'urge the Tatar population of Russia to education, to acquisition of practical knowledge in crafts and industry as well as in foreign languages, in order for it (the population—R.M.) to be civilized and rich' [Karimullin, 1974, pp. 187–188].

The artistic culture at the beginning of the 20th century was also clearly noted for its growing self-awareness. This period faced a huge interest in the legacy of the past, national roots, spiritual, religious and ethnic traditions. At the same time, the literary, cultural and political relations with the West and the Orient were studied and thought over. The pages of the periodicals contained the discussions about the interpretation of the cultural legacy of the past and the attitude towards the problem of 'West-East' and Western civilization, in general. Within this context, a special importance belonged to the issues of the society's political establishment. The people's

dissatisfaction with living conditions aroused a special interest among Tatar intellectuals in the issues of state governing. The ideas of freedom, constitutionalism and parliamentarism were widespread at the beginning of the 20th century. In an attempt to solve pressing societal issues, Tatar thinkers demonstrated a conscious intention to adopt the achievements of Western culture and European forms of political organization. The majority of the Tatar intelligentsia regarded the constitution and the parliament as political leverage that was able to turn Russia to progress, and it would allow for a possibility to use more realistic means for the political reorganization of Tatar society. These tendencies in social thought, establishing the synthesis of elements of traditional and European cultures as the main problem, did not eliminate the conflict between the new and the old in all fields of ideological life. On the contrary, the struggle between the old and the new in social awareness became unusually intensive as the fight embraced almost all the antithetical powers leaning upon the institutions, criteria, and the behavioural sets of traditional and modern society. This struggle brought about a lot of paradoxes in Tatar society, complicated world-view and moral clashes, social commotion due to the changes, and giving birth to new concepts and new ideas. At the same time things trended in the opposite direction, preparing the ground for the preservation of traditional tendencies. The point is that social thought appealed to Western ideas and values in search of solving the problems related to the modern aspects of political, economic, social and cultural life, and leaned upon the traditional past in search of the pillars for national self-identification.

Social awareness in Tatar society was formed with the influence of social and economic factors. That is why it was quite natural that the attempts to think over these factors were characteristic of the Tatar social thoughts at the beginning of the 20th century. This period is characterized by a high interest in economic issues. The Tatar thinkers tried to distinguish the general tendencies in the development of economic relations by taking into account

national characteristics. The journal 'Iktisad' (1908–1913), the first professional economic publication in Tatar, paid much attention to different economic theories, scientific assessments of economic situations, ways of form to obtain benefits and profits, and the abolition of poverty in Tatar society. The interpretations offered by the journal are interesting by virtue of their attempts to deal with the economic issues by taking into account the admittedly ethnic peculiarities of the Tatars. It is logical that the journal, by explaining the subject and matter of economic studies, underlies that this is 'a science studying business patterns and showing the ways of the successful existence of a separate nation, people, and state. It is divided into economic politics and political economy. The first one explains the reasons for economic changes, and the second one deals with the rules of the changes in economic relations' [Iktisad, 1908. No. 1, p. 2].

In its programme article, the journal also highlights that 'all problems are considered through the canons of Islam' [Iktisad, 1908. No. 1, p. 1] as 'Islam is an economic religion' [Iktisad, 1909. No. 1, p. 1] and these ideas are supported by the Hadiths of the Prophet Muhammad, for example, 'the one who cares about his economic state will not become poor' [Iktisad, 1909. No. 1, p. 1] and others. According to F. Murtazin, the journal's Editor in Chief, first of all, it underlines the interconnection and complementarity of economy and religion [Iktisad, 1908. No. 1, p. 2]. That is why the journal by comparing Marx's economic conception with the zakat doctrine proves a doubtless advantage of the zakat in solving the problems of the society welfare: 'In any case, the Europeans will accept the zakat and solve the problems of the treasury and budget this way' [Iktisad, 1908. No. 4, p. 97].

Agreeing with the social democrats, the journal places their statements about the necessity to rethink radically Marxist doctrine [Iktisad, 1908. No. 4, pp. 97–99]. From the point of theoretical thinking and its practical application in Tatar society, interesting were the statements concerning the improvement of

production and increasing of labour efficiency. The journal singles out five conditions that can facilitate this process: 1) free labour; 2) private ownership of the means of production; 3) professional level of workers; 4) labour division; 5) united efforts [Iktisad, 1908. No. 3, pp. 79–80].

Revealing different aspects of these conditions, the journal strongly underlines their importance also for the Tatars. Thus, monopoly in different industries is regarded as the factor that slows down free entrepreneurship [Iktisad, 1909. No. 7, p. 198]. Dealing with the issue of professional staff training, the journal highlights its urgency for the Tatar workers, who unlike the Western European workers 'approve themselves mostly in unskilled labour' [Iktisad, 1908. No. 3, p. 79]. The journal underlines that increasing the professional skills of Tatar workers is necessary together with the implementation of their right for labour, and to follow it is one of the principles of Islam [Iktisad, 1910. No. 10, p. 258].

In the implementation of the latter, it is important to take into account the interests of the family, mahallah, nation and state [Iktisad, 1910. No. 10, p. 290]. Within the context of the above-mentioned problems, the journal also considers the question of the poverty and wealth of the nation. The position of the journal in this question is quite interesting as by avoiding simplified ideological assessments, it tries to discover economic mechanisms of the given phenomenon. Distinguishing that 'the reasons for poverty are numerous but the main reason is legal ignorance and inability to make use of laws... there are requirements that must be met by every nation and by the population of every state: first, every nation and every government must take care of their wealth; second, they must be able to multiply it' [Iktisad, 1908. No. 1, p. 8]. The journal's conclusions in this regard are distressing for the Tatars: 'Do our Russian Muslims make use of these economic laws?... No, that is why the poverty of the nation is natural and easy to explain' [Iktisad, 1908. No. 1, p. 8]. Highlighting the general theoretical character of these reasons, the journal also ana-

lyzes the other reasons for poverty: breaking the balance between production and consumption [Iktisad, 1909. No. 10, p. 290], changing demographic processes [Iktisad, 1909. No. 12, p. 357] and others. The journal tries to define the way to break out of this miserable situation: 'For this, attention must be paid to the following: 1) it is necessary to keep in the hands of the nation such types of wealth as land, water, and forests and to try to be their owners as much as possible; 2) what the nation possesses should be used for its interests; it is required to study the ways of using natural resources. Otherwise, the benefits will be acquired by those, who are able to make use of them; 3) education and vocational training. And our Prophet said: "Vocation is a way to get rid of poverty"; 4) developing different types of trade; 5) improving the current ways to do farming' [Iktisad, 1908. No. 1, p. 10].

The general theoretical aspects of preserving and multiplying national wealth, fighting against poverty, according to a lot of the journal's authors, certainly do not contradict Islamic canons. On the contrary, Islam contains measures that do not permit poverty as a social phenomenon. Among them, the journal's editor-in-chief F. Murtazin, the author of the article series 'Misery and Islam', pointed out the following ones: 'Any healthy adult must perform their duties. It is not mandatory to give sadaqah (alms) to such people' [Iktisad, 1909. No. 7, p. 193]. Quite thoroughly considering the moral and individual aspects of this problem (about the debt of children to parents, of parents, of close family members, etc.), the author noted that the Islamic canons pay a lot of attention to the necessity of setting up charity organisations" [Iktisad, 1909. No. 7, p. 195].

In general, it can be said that the journal 'Iktisad' is a specific reflection of new tendencies in Tatar social thought at the beginning of the 20th century. Highlighting economic theoretical questions, the journal detailed the actual problems of Tatar society. It is no coincidence, although the programme article underlines that 'the journal is not limited to a point of view of some party, it will adhere to cen-

trism in every case and in every thought, and everything will be considered from the point of view of the economy' [Iktisad, 1908. No. 1, p. 1]. However, it had an intention 'to get the Muslims familiar with the economic state, to arm them with scientific knowledge in trading, agronomy, crafts and industry and to demonstrate economic ways of using the national wealth' [Iktisad, 1908. No. 1, p. 1]. Although it should be noted that the journal practically does not contain references to the 'Tatars' or 'Tatar society', but all the theoretical issues are regarded within the context of general Islamic values, and a range of the journal's issues are of clearly-defined national shade. Considering the ways to preserve and multiply national wealth, criticizing monopoly, defending private property and free entrepreneurship, paying attention to training highly-qualified specialists and to setting up social and charity organizations that, to some extent, are able to accumulate and reasonably distribute, at least, a part of the national wealth, etc.—all of these issues prove that the journal managed to attract the representatives of the Tatar intellectuals, who clearly understood processes in Tatar society. Indeed, a lot of problems discussed by the journal authors were the centre of attention for all Tatar intellectuals. Thus, the issues of establishing Islamic charity organisations, about the need of which the 'Iktisad' wrote so much, had not only economic but also political aspects. That is why there could be different points of view, and sometimes opposing.

At first sight, Tatar society was supposed to be free from an ideological discordance of opinion concerning charity organisations. As R. Salikhov justly noted, 'since the collapse of the Kazan khanate, in the conditions when the Russian state treasury totally ignored the interests of the heterogeneous population in the region, charity was the only source for Tatars to finance their social, spiritual and educational needs' [Salikhov, 1998, p. 87].

Step by step, by the end of the 19th century, the idea of concentrating the national charity capital under the aegis of the charity organisations had acquired another incarnation. The

developing national bourgeoisie also made use of these organisations to set up cultural and educational institutions, modern madrasahs that could found the ideological basis. It is no coincidence that the Kazan Governor in 1912 paid attention to the mahallahs, where the trustees were "often the initiators of the reforms in the confessional school on the principiums with new methods" [National Archive of the Republic of Tatarstan, Fund 2, Inventory 2, File 8961, Sheet 52] (detailed see: [Salikhov, 1998, pp. 134–149]). The conservatively tuned part of Tatar society were obviously dissatisfied with these changes in the activities of charity organisations. Their point of view was clearly defined by the journal 'Din Va Magishat': 'The reformers opened... different communities called "Muslim charity communities..." They spend money on setting up the mektebs to teach common people to read and write and arithmetics... The communities give preferences to those mektebs where education is carried out with sound method but at the same time they categorically refuse to give money to the old mektebs and try to get rid of them in this way... If the children are asked now about main Muslim fundamentals, they will answer that they do not know as they have not been taught them... And, all in all, they completely ruin the words "charity" and "Muslim", and they keep only one word "society" [Mir islama, 1913. Vol. 2, issue 9, p. 626].

There were also furious discussions about the problem of poverty, which was thoroughly covered on the pages of the journal 'Iktisad'. Although, in this case most of the discussions were caused not by a social perspective but by a theological interpretation. For example, Z. Kamali in his book 'Religious Structures' considered that the condition of the faithful Muslim was his material welfare (detailed see: [Kamalov, 1994, pp. 40–49]).

The Hadith, famous but not recognized by all the Islamic legal scholars, about poverty being a point of praise for a person, was explained by him as a need for Allah's mercy. M. Bigiev thought that 'poverty in its specific meaning is not unbelief (qurf)' [Şura, 1914. No. 4, p. 108]. However, to perceive the social and

political background of such approaches is not complicated.

The problems of economic development in Tatar society were quite naturally in the center of attention among the representatives of the newly-born national bourgeoisie. Those phenomena, which were the obstacles for the society to function, were negatively accepted, and they were looking for ways to eradicate them. Within this context, the attitude of some Tatar bourgeoisie representatives towards the ancient holiday Djien is quite interesting. In 1887, the members of the district council, famous Tatar merchants A. Saydashev and M. Galeev at the following meeting introduced a proposed petition for the Minister of the Internal Affairs 'about eradicating the Islamic celebration of the "Djiin" as it had a harmful influence upon the economic state of the Mahomeddan population and was strictly revived by the Sharia law' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 3, File 7233, Sheet 1]. The district meeting, where there were 16 representatives of the district Muslim population out of 52 members, in actuality passed a resolution 'to initiate a petition about eradicating the Islamic custom "Djiin" by governmental measures' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 3, File 7233, Sheet 1]. Pointing to 'the huge damage from this popular Muslim custom', Saydashev and Galeev highlighted that 'urban peasants, mainly the most poor from hand-workers and time-workers try to do their best to earn or, if there is no wage, to pawn anything in order to join common celebrations. Rural peasants also prepare to receive expected guests. But as "Djiin" coincides with the most destitute period among the peasants, ... the peasants sell sheep, or calves, or the last cow or horse. In case of no cattle, they even sell their own clothes. Lacking this or that, they sell land, bread, firewood, even the last of their farming tools' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 3, File 7233, Sheet 2]. During the holiday, both adults and children crowd the fields, make up a kind of fair, spend time in amusements... 'it

is especially harmful to the young generation, who shake off the habit to work and get addicted to indolence and laziness' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 3, File 7233, Sheet 3]. Social aspects of societal functions were also of importance to the Tatar thinkers. Thus, the famous Tatar lawyer S. Mukhammedyarov, by underlining the importance of class division in society, highlighted that 'as the history of any people shows, it is divided into three or four classes' [Mukhammedyarov, 1914, b. 7]. However, at the same time, the Tatar thinkers emphasized the specific conditions of Tatar society. In the appeal to the Muslims, accepted at the meeting of the executive committee of the All-Russian Muslim Council in June 1917, it is noted that 'among the millions in the Islamic world the social differentiation and, thus, class struggle as its result do not play the role that they play among the European nations. That is why the All-Russian Muslim Congress, consisting of 900 delegates, the representatives of all the layers of the Muslim population from different places and ethnic groups, did not get divided into constituent parts: neither into classes, nor into any other aspects but kept its cohesion' [Fakhrutdinov, comp., 1992, p. 80]. The first All-Russian Muslim Congress (1–11 May 1917) highlighted that the Muslim peoples 'have extremely few representatives of capital and huge land ownership; our proletariat has just started to become educated. Class differentiation in Islamic surroundings was weak. This is our advantage and also our disadvantage. Class differentiation leads to intensive political life and this is its advantage, but it decreases the general energy of a nation and this is its disadvantage. Let's weaken the disadvantage and strengthen the advantage' [Fakhrutdinov, comp., 1992, p. 63]. G. Gaziz claims that 'our century is an epoch of national relationships and class struggle' [Gaziz, 1913, b. 22]. Dzh. Validi thinks that 'today, practically in all the states, policy is built upon national principles. Policy and national character are tightly interconnected' [Validi, 1912, b. 23]. Though, this issue among thinkers was not understood

in the unanimity of opinions. For example, F. Karimi was sure that 'peoples are divided into classes, and they have different economic interests. But among people of the same nation and faith, ideological and spiritual kinship is so strong that all the material interests of the world are not able to overcome them. Though, class interest is quite natural. Yet, the Russian Muslims cannot ignore this unity and orient themselves only to class interests. During the formation of independent nations and their development, it will be time to define their own attitude towards class interests. However, it mustn't be done yet' [Karimi, 1906]. By this, F. Karimi and other Tatar intellectuals admit the priority of the national interests. From this point of view he criticises G. Iskhaki, F. Tuktarov, and S. Mukhamedyarov for urging the peasants and workers to a class war (like the Russian socialists did) and for not being satisfied with spreading the education and introducing ideas from Western Europe in the field of organizing an economy or making use of scientific achievements according to the spirit of Islam. In this issue, Yu. Akchura highlighted another aspect. He thought that 'every society is in need of class opposition. Classes cannot be socially balanced' [Akchura, 1911, b. 48]. That is why, according to Akchura, 'across Russia, there is a spirit of revolutionary sentiment, which logically leads to revolutions' [Akchura, 1911, b. 48].

As mentioned above, at the beginning of the 20th century, new forces appeared in the social arena and qualitative changes occurred regarding social awareness. On the basis of education, religious reformation, jadidism and other liberal movements, the main directions of social ideas were being formed. It was the period when new social forces became aware of national ideas, the politicalisation of religious ideas and the radicalisation of political ideas.

At the beginning of the 20th century, Tatar social thought was combined with the entire trend of political radicalization, which manifested itself in different aspects: from revolutionary democratism and late populism (socialist revolutionaries) to Marxism (bolshe-

viks and mensheviks). Although these directions in scientific literature are studied quite thoroughly (mostly, with ideological distortions towards bolshevism) (see, for example: [Nafigov, 1964; Faseev, 1971 and others]), it is necessary to draw attention to some principal methodological features. First, it should be taken into account that they considered themselves as a movement of intellectuals. Second, despite the apparent integrity of the perception of the social ideal, they had a quite blurred philosophical orientation and overemphasized the necessity of grounding and propagandizing revolutionary ideals. That is why it can be reasonably stated and verified with regard to cosmopolitanism that, in relation to philosophy, these trends did not take precedence over the enlightenment ideology of the 18th–19th centuries. It is pointed out by researchers claiming that 'the theoretical basis in the historical development of revolutionary democratic ideology in general and the Tatar case in particular was rationalist philosophy and the humanistic culture of the Enlightenment' [Abdullin, 1991, p. 125]. That is why political radicalism in the Tatar social thought, without having its own philosophical basis, quite freely evolved either to the right or to the left. It can be seen in the example of the Tatar socialist-revolutionaries—the 'tangists', G. Ibragimov and other thinkers at the beginning of the 20th century. As for the fate of Marxism in Tatar society, it can be said that the political awareness of the few Tatar Marxists did not carry any trace of philosophical creativity and only used the prepared philosophical systems, unsuccessfully trying to employ them for ideology. By A. Rorlikh, the Tatar bolsheviks and their supporters, 'despite their continuous propaganda', did not have noticeable success. Moreover, the tsarist government did not see them as a political danger to Russia anymore. In the opinion of the inspector of people's colleges, Ya. Koblov, 'if the Muhammadans side with left-wing parties, it is again because of their national aspirations. Some committed Mahommadan social democrats or socialist revolutionaries get lost in the general mass and do not play a signifi-

cant role. That is why there is no cause to be afraid of the new Mahommadan methodologists from this side' [National Archive of the Republic of Tatarstan, Fund 92, Inventory 2, File 8777, Sheet 62].

Obviously, it does not mean that Tatar social thought at the beginning of the 20th century did not share new ideas that were truly widespread in this period, including the ideas of socialism. Within this context a huge interest is presented in the statements of Zaki Validi in the 1910s, which were typical of one of the tendencies in Tatar social thought at the beginning of the 20th century: 'I admired ideas about the necessity of the critical study of the historical events of our century, about the harm of theocracy, about the importance of national principles in history... another approach to life and today's scientific research became hopelessly outdated... Having acquainted myself with the works of the social democrat Plekhanov ("About a materialistic understanding of history" and "To the question the role of personality in history"), I saw that it is exclusively useful to study history from the point of view of economics... Having read Plekhanov, I became infused with the idea of socialism, to which I was prone before!.. However, I totally shared... the point of view that materialism is a method to study history and an ideology that is in Western countries with a developed industry, that is why the materialistic method is very difficult to apply in the Orient' [Togan, 1997, p. 65]. Perhaps this is why ideas of socialism were perceived by the Tatar national intellectuals, first of all, not as a mainly class ideology of the proletariat but as a part of the idea group of the national movement. That is why the main conceptions of socialism were based on the postulate about the integral connection between social principles and national values. Dzh. Validi points out that 'socialism, which has recently strengthened its positions in Europe, is not directly related to the national. Its main aim is to ruin the basis of capitalism and exploitation, and to eliminate classes. However, it creates new conditions to develop a national language and school, and opens new possibilities for progress in the national sphere' [Validi,

1914, b. 45]. The admission of socialism of the 'national' sort presupposed the union of political, social, national and religious perspectives. Islam was given a special role in reflecting a new social ideal as, by numerous Tatar thinkers, from the beginning its principles correspond to socialistic ideals. Within this context, Karimi points out that 'in Europe, welfare from day to day comes into the same hands, and the number of poor is increasing'. Thus, the social economic base for spreading socialism was expanding. 'But for Muslims, if they consciously follow the fundamentals of their religion, there is no danger of socialism invading their surroundings. This is because fundamental Islamic principles such as equality, justice, mercy are the main principles of socialism and democracy' [Karimi, 1906]. At the same time, Karimi warns against blindly following the Russian socialists [Karimi, 1906]. This point of view was quite widespread among Tatar intellectuals. Even representatives of the radical wing of social ideas such as G. Tukay and Fatykh Amirkhan related their ideas about socialism to religion. In this regard, Tukay wrote the following: 'Until the capitalist system collapses and socialist reorganization sets itself up and capital stops being the curtain of truth, I see no sense in considering myself a Muslim. I would like to say that the one who is truly satisfied with this reality, is neither a true believer, nor a Muslim nor a human being' [Tukay, 1961, pp. 37–38]. This period is noted for a certain transformation of social and valuable criteria and of Tatar psychology, especially among the youth. In their surroundings, the weakening of the nuclear family became noticeable. Daily life affairs and the events of the political and national significance attracted more attention than traditional and religious rituals. The main emphasis was placed on studies and work. The youth tried to make plans for the future in accordance with their own intentions but not taking into account the opinions of their relatives. The demonstration of the elements of this rationalisation in worldview and psychological attitude was undoubtedly a result of fundamental changes in social life.

As it is seen, the social and economic changes at the beginning of the 20th century, especially the Revolution of 1905–1907, accelerated the development of Tatar political awareness and facilitated the birth and strengthening of national self-identification and adherence to democratic principles. The orientation of Tatar social thought was more than ever defined by the correlation and interaction of national and international factors on the basis of a specific group of ideas inherited from the past and behavioural adjustments. Tatar social thought developed its attitude towards its national cultural legacy and traditions as well as to values

of other nations. Typical of it is the union of different and contradictory ideas reflecting the movement on the ways of the regeneration of society, which in its turn sped up the process of secularising of social thought. Social awareness can be ascertained as a weakened influence of religion. However, it should be taken into account that social awareness always, to a greater extent, depends on ideas, cultural values and traditions inherited from previous epochs. Society makes use of ideological material from the past as the basis for rethinking over life circumstances by exploiting them to support ideological positions.

§ 3. The Movement of Converting Baptised Tatars to Islam in the Beginning of the 20th century

Ildus Zagidullin

Legal principles of the conversion from Orthodoxy to Islam. The Imperial edict 'On the strengthening the principiums of tolerance' from 17 April 1905 marked a new epoch of interfaith relationships in Russia. For the first time in the history of the Russian Empire, granting freedom of religion to every Russian citizen was publicly affirmed [O veroterpi-mosti, 1905, p. 7]. The conversion from Orthodoxy to Islam was permitted to the nominal Christians, officially considered Orthodox and actually practicing Islam, which they or their ancestors had belonged to before being converted to Orthodoxy (Art. 3). This provision by Senate edict no. 5982, from 2 June 1906, was also spread to those, who wanted to come back to non-Christianity from Heterodox faiths, and the MIA—on those, who wanted to convert from Christianity to paganism [Spravka o svobode sovesti, 1906, p. 5]. As it is seen, the indigenous peoples of the Middle Volga region obtained a possibility to return to the faith of their pagan ancestors one year later.

According to the MIA circular from 18 August 1905, those who wanted to convert from Orthodoxy to another faith, applied to the governor, who confirmed the fact that these people

or their ancestors are Muslim. In case of any difficulty precisely to define this circumstance, the administration was obliged to be limited to the revision of whether the applicant used to weasel out of the Orthodox rituals before the edict from 17 April 1905 (one was not at confession, etc.). After clarifying this issue, the governor notified the religious authorities for conditional directives about excluding the applicant from the Orthodox parish registers [RSHA, Fund 821, Inventory 8, File 797, Sheet 5].

22 March 1906. The MIA informed the local authorities that according to point 4 of the circular from 18 August 1905, the solution about excluding one from Orthodoxy totally depended on the governor, without waiting for the report from the clerical authorities [Kobzev, 2007, pp. 210–211].

Specific details of the movement of converting to Islam in the Kazan guberniya. The work of the institutes of the religious anti-Islamic and anti-pagan missionary, district missionaries and 'St. Guria Brotherhood' introduced some peculiarities in the review order of the questions about being excluded from the church documents at a local spiritual consisto-

ry. A regular review of the applications started at the end of 1905. The requests were directed by the consistory to the diocesan missionary, who went to these settlements, engaged district missionaries for admonition and local clergy, and, according to the results of the missionary admonishment of the 'departed', Ya. Koblov presented his conclusion for a final decision. In 1907 Koblov went to serve in the educational department. That is why the drawing of conclusions was given to the Council of the 'Brotherhood of St. Guria', which held meetings with long breaks, and it slowed down the review and the acceptance of the final decision.

'New Muslims' notified the OMSA about their dissatisfaction, caused by slowing down the life-changing issue. On 11 November 1905, the Orenburg mufti M. Sultanov appealed to the Kazan and Simbirsk governor with a request for reviewing the petitions sent to the province administration by the 'Orthodox Christians and pagans'. In his opinion, at 'the present anxious time', the inertia of the authorities affected the Muslim population in an especially annoying way. It was undesirable and may 'encourage unrest and riots' [National Archive of the Republic of Tatarstan, Fund 4, Inventory 1, File 120758, Sheet 21; Iskhakov, 2008, p. 184].

In its turn, the Synod with its decision on 30 January 1906 instructed the clergy to take steps for strengthening Orthodoxy in the 'heterogeneous dioceses' of Eastern Russia and "for improving missionary work, in general" [National Archive of the Republic of Tatarstan, Fund 4, Inventory 1, File 122760, Sheet 48–reverse].

After the declaration of the edict of 17 April 1905, at first the 'departed' did not believe the intentions of the government. Only after seeing that they were not persecuted either by the spiritual authorities or by the police, they started fulfilling the Muslim rituals in public, making secret schools legal and open new mektebs [National Archive of the Republic of Tatarstan, Fund 4, Inventory 1, File 122760, Sheet 37–reverse].

The first and main wave of the applicants in 1905–1906 was presented by the children

and grandchildren of the 'departed' in the 19th century. The legal part of the issue for them was just their official exclusion from the church documents, where they were already unregistered, and official acquisition of Muslim rights.

The anti-Muslim missionary S. Bagin pointed the second group of the 'departed' in 1910, the residents of the settlements where there were no Muslims, who had started applying for conversion to Islam at the end of the 19th century. In 1908, the Mamadysh uyezd obtained the 'new Muslims' from the residents of the following settlements: Bolshiy Savrushy (266 people), Staraya Ikshurma (379 people), Yanyl (145 people), Tri Sosny (246 people), Verkhnye Otary (526 people), Zhuvut-sebe-Usadom (73 people) and Satlygan Klyuch (85 people). In the Kazan uyezd, they were from the settlements of Apazovo (599 people) and Kreshchenye Yanasaly (24 people). In five of the named settlements, there were churches, an Orthodox clergy and obviously a missionary school. It caused some tension between the clergy and the fellow remaining Orthodox settlers, on the one hand, and the 'departed', on the other hand [Bagin, 1910, pp. 10–11].

The third small group of the applicants was presented by those, who felt likings for Islam and practiced the Islamic rituals secretly but were forced to support contacts with an Orthodox clergy and formally carried out the church rituals until a certain time. In new social conditions, they applied for conversion to Islam.

The official statistics reflect the total number of people, converted to Islam, the year of registering them as Muslims and their assignment to the nearest mahallah. In 1910, in the Volga–Ural governorates, about 50,000 people converted to Islam: 'newly-baptised' Tatars, who were the majority among 'new Muslims', local groups of 'old-baptised' Tatars as well as pagans and Christians from the Chuvash, Udmurts and Mari. The percentage of 'departed' in 1905–1909 was about 40–45% of all the baptised Tatars [Iskhakov, 1993, p. 97].

Table 1.3

**Backslide to Islam in the governorates of the
Volga-Ural region from 17 April 1905 to
1 January 1910**

Governorates	The number of the 'departed' (both genders)
Kazan guberniya	38,999
Ufa guberniya	4505
Simbirsk guberniya	4360
Penza guberniya	866
Orenburg guberniya	539
Vyatka guberniya	427
Samara guberniya	71
Saratov guberniya	38
Tambov guberniya	23
Astrakhan guberniya	6
Ryazan guberniya	4
Nizhny Novgorod guberniya	1
TOTAL:	49,839

Missionary activities of Muslims. The Muslim Tatars provided the moral and material support for their brothers who returned to Islam. Analyzing the faith situation in the 'old-baptised' settlements of Satlygan Klyuch, Staraya Ikshurma, Yelyshevo, and Savrushki, the clerical missionary Koblov wrote as early as 1902: "the reasons for the secession of the baptised Tatars to Islam are hidden in the intention of all the Tatars to become united" [National Archive of the Republic of Tatarstan, Fund 4, Inventory 134, File 4, Sheet 4–reverse]. The residents of the mentioned settlements literally announced the following to him: "If we remain Christian, without wearing taqiyahs, the Tatars will not give us work, and we can't do anything else but tailoring. We have the same language and tribe with Tatars; it seems that God orders us to go there" [National Archive of the Republic of Tatarstan, Fund 4, Inventory 134, File 4, Sheet 4–reverse].

Muslims spread the lithographic sheets where it was claimed that 'everyone must follow the faith of their ancestors', and the printed sheets of the request to be excluded from Orthodoxy into Islam [National Archive of the Republic of Tatarstan, Fund 4, Inventory 1, File 122760, Sheet 48–reverse]. The application was added with a form to write a list of people (family members), who were going to be converted into Islam and assigned to a certain mahallah and a mullah [National Archive of the Republic of Tatarstan, Fund 4, Inventory 138, File 12, Sheets 150, 157 and others].

In 1906, in Kazan, the publishing house of the Karimov brothers issued the leaflet 'Islam Dine' ('Religion of Islam') in Tatar in the Russian transcription, developed by N. Ilminsky, which contained an appeal to the brothers, 'who had been forced to leave Islam'. It explained how to behave after coming back to Islam, provided a short overview of Islamic doctrine and the main Muslim responsibilities. The recommendations of arranging religious and ritual life in small communities, which were the majority among 'new Muslims' also attracted attention. In particular, it was advised to invite a shakird before building a mosque and registering a mahallah, and to hold prayer meetings after learning prayers from him. After learning their religious responsibilities, men were obliged to teach their wives. After electing a shakird for being a public mullah and getting a girl who one could teach, it was advised to involve her in teaching other girls to read and write [Bagin, 1909, pp. 11–14]. Thus, owing to the given instruction, 'new Muslims' became familiar with the ways to arrange the religious and ritual life in small communities.

Besides the confessional aspect of the issue, there were a set of social and economic factors, which sufficiently influenced their decisions. The crucial one was seasonal work to sew clothes in the guberniyas of Ufa, Orenburg and others, their living from autumn till spring in Tatar and Bashkir settlements, the residents of which thrived on ordering clothes from tailors who practiced Muslim rituals.

Thus, the success of earning money was determined, to a large extent, by the faith of the tailor. The other important factor was the possibility of getting divorced and married to another woman, which was practically impossible for Orthodox Christians. Then, there was a possibility to gain a loan at any time from fellow villagers or from the Tatars of neighbouring settlements and to be in hospitable relations with them, which was important to the 'departed' [National Archive of the Republic of Tatarstan, Fund 4, Inventory 138, File 12, Sheets 40–40 reverse]. The reasons of the 'departure' by the priests were, as well: 'common ethnicity with the Muslim Tatars, their conversational language and their world view'; propaganda by the Tatar mullahs and Muslims in general, close distances between their settlements, etc. [National Archive of the Republic of Tatarstan, Fund 4, Inventory 1, File 122760, Sheets 48–reverse].

The senior lecturer of the Moscow Archaeological Institute, S. Kuznetsov, visited the guberniyas of Vyatka, Kazan, Perm and Ufa by order of the Ministry of Internal Affairs in 1911–1912 in order to study the religious and everyday conditions of the local peoples influenced by the Muslim Tatars, and pointed out: 'Every Muslim tries somehow to expose their affection and love to the proselytes; they are gifted with presents and are constantly invited to the houses of rich Tatars; and sometimes it happens that the guest reception lasts weeks. If the recently converted is in need, the Muslims help him with the cattle, poultry, bread and even money. A lot of Tatars try to give some help secretly, and then they deny admitting anything as theirs when it is introduced to them. This is the so-called 'secret alms', to which the Muslims give an important meaning. The Tatars also vigilantly keep an eye on the recently converted in order for them to strictly follow the Mahomeddan rituals and not to remind others by their appearance of their origin from another tribe' [RSHA, Fund 821, Inventory 133, File 576, Sheets 235–235 reverse].

As a rule, in case of the family head's decision, the other family members turned to

Islam, although in a number of cases, as the priests pointed out, their wives wanted to stay in the previous faith. Their behaviour was explained by the fear of being abandoned by their husbands and the risk to stay alone with young children without a piece of bread to their name [National Archive of the Republic of Tatarstan, Fund 4, Inventory 138, File 12, Sheet 40–reverse]. Islam was often accepted by the parents, brothers, sisters, nephews and nieces of the teachers from fraternal schools and of the priests [National Archive of the Republic of Tatarstan, Fund 4, Inventory 1, File 121818, Sheet 5–reverse].

Some conflicts between family members or settlement residents were pointed out by the missionaries in: Verkhnye Otary, Savrushki, Yelyshevo, Satlygan Klyuch, Tri Sosny, Staraya Ikshurma, Zhuvut-sebe-Usadom, Yanyl, Vazheshur and Bier (Mamadyshev uyezd); Apazovo and Kreshchenye Yanasaly (Kazan uyezd); Kiyazly, Chuvash Maina, Novo-Chuvash Adam, Shama and Saltakayevo (Chistopol district), etc. [Bagin, 1910, p. 27].

The ethnic make-up of 'new Muslims'.

The majority of the 'departed' movement were 'newly-baptised' Tatars, the ancestors of whom got baptized for different reasons and causes, mostly in the second third of the 18th century or the following decades. The main part of the 'old-baptised' Tatars, who had accepted Christianity before Peter I, owing to the successes of Ilminsky's missionary system, kept their confessional identity.

In an ethnic aspect, the 'new Muslims' included local groups of the Tatarized Chuvash and the representatives of the Finno-Ugric peoples. During the Kazan Khanate, in the Middle Volga region, the Tatar language was a means of international communication for indigenous peoples of the region. From the 19th to the beginning of the 20th century, to a larger extent, this tradition was preserved. Islamification continued during the 19th century. They themselves called the conversion to Islam as the 'exodus to Tatarland' [Bagin, 1909, p. 21]. Among them were two groups: pagans and nominal Christians. Intensive Islamifica-

tion was carried out among the residents of the following Chuvash settlements: Kukshim, Belaya Voloshka, Uteevo-Bikovo, Suguty (Tetyushi uyezd), Tatarsky Suncheley, Saldakayevo (Chistopol uyezd, Kazan guberniya); Staroye and Novoye Surkino, Kazyabash, Novoye Serezhkino, Alekseevka, Abdikeyevo, Rysaykino, Staroye Gankino, Nikol'kino, Bulantamak, Sumeli Stepankovo, Nizhny Nurlat, Vorony Kust, Iglaykino, Sabakeevo, and Kalmayur (Samara guberniya) [State Archive of Saratov oblast, Fund 32, Inventory 1, File 3243, File 3257; Inventory 3, File 36; Samar'skie eparxial'ny'e vedomosti, 1906. No. 17, p. 790–798]. The Chuvash of the following villages 'departed' to Islam: Tenevaya (with a constructed mosque), Plevaya Baybakhina, Vodoyal (Uty) (Tsvil'sk uyezd, Kazan guberniya) [Koblov, 1910, p. 370], Staroye Afonkino, Artemyemka (Bylantamak) (Samara guberniya), the Besermens of the following settlements: Yukamen, Dosase, Imanayevo, and Kashchur (Glazov uyezd, Vyatka guberniya) [State Archive of Kirov oblast, Fund 237, Inventory 222, File 463, Sheets 92–92 reserve]. In 1905–1913, Islam was accepted by the Udmurts in Novy Kumor, Maly Yum, Ish-tuganov, Soutter, Vezheshur, Nizhnyaya Rus, and Lyya Poikino (573 people) (Kazan guberniya) [National Archive of the Republic of Tatarstan, Fund 2, Inventory 2, File 3960, Sheets 25, 36]. In the first decade of the 20th century, Islam was officially accepted by 702 Chuvash from the Ufa guberniya, 574 from the Samara guberniya, 305 from the Penza guberniya, and 187 from Saratov guberniya [Yagafova, 2009, p. 55]. In 1911, in the Simbirsk guberniya, the number of the Muslim Chuvash, settled in 16 villages, reached 600–800 people [Kobzev, 2007, pp. 278–281].

The conversion of Russians to Islam was a very rare case [RSHA, Fund 821, Inventory 8, File 801, Sheet 165].

Organization of religious and ritual life. Owing to the caution of the OMSA and its circular from 12 September 1905 under No. 5017 in the petition about converting to Islam, the 'departed' pointed out the precise

mahallah and the surname of the imam of that mosque and attached the list with the names of the members of all the families and their ages. In fact, since official conversion, all the 'new Muslims' found themselves as the members of the current mahallah in a religious and administrative aspect. Several types of their organization of religious and ritual life should be pointed out.

1) *Assignment to the mosque of their native settlement.* In case there were several Islamic temples, they became members of a congregation of the mosque which was most convenient for them to attend. The qualities of the imam and the relationship formed with them earlier were also taken into account. In the communities, where villagers increased the number of people in the mahallah, there was a later 'wave' of constructing new mosques with a new mahallah. For them, the most important factors were to follow the norm of 200 men per each new meeting house and to possess the means for constructing a temple.

2) *Assignment to the mosque of the neighbouring village, in case there was no mosque in their native settlement.* The authorities did not interfere in this problem, did not pay attention to the distance for the mosque chosen by them, and that's why the petitioners made their choice quite independently, although sometimes it was forced. The location of the mosque in the neighbouring settlement meant going there for a Friday afternoon service, bringing a mullah every time for naming a newborn baby, carrying out marriages and funerals and other needs, and having problems in the organization of children's education. In the settlement with multi-confessional residents, the main obstacle in setting up new Islamic meeting houses was a lack of people in the religious community that did not correspond to the normal requirements (200 men). In particular, as an exception, on the basis of the 'highest' permission from 18 April 1907, the right to build a mosque was granted to the Muslim returnees from the newly-baptised Tatars in Yangildino village in the Sviyazhsk uyezd (160 men) [RSHA, Fund 821, Inven-

tory 8, File 703, Sheet 23]. In the same year of 1907, the residents of Baymurzino, Staryye Kurbashi and Polevaya Buva (totally 154 men) from the Tetyushi district also obtained the 'highest' permission for constructing a mosque in the first of the villages [RSHA, Fund 821, Inventory 8, File 703, Sheets 30–31]. In this field, a row of rural communities acquired the benefits from the edict of Nikolay II from 18 February 1908, which allowed the Internal Affairs Minister to permit the construction of a mosque by arranging the mahallah in small (below 200 men) rural communities.

3) *Establishment of an independent mahallah by constructing a mosque.* Here, there are two groups of settlements.

Before announcing the edict of 17 April 1905, there had already been praying houses with public mullahs in several rural communities [Bagin, 1909, p. 12]. After their exclusion from the Orthodox copies, the residents drew up a public resolution about establishing an autonomous mahallah, constructing a mosque and electing spiritual people. Thus, the rural communities from Yelyshevo, Azyak, and Kobyak-Kozi set up a religious way of life within the traditional religious establishment.

The situation was different in the second group of the settlements, in the poly-faith settlements, where 'new Muslims' lived together with Christians and/or pagans. The spiritual consistory took Christians under its patronage by declaring the temptation of constructing a new mosque a danger. In the new social and political conditions, only the heads of the provinces of Simbirsk, Vyatka and Perm stopped addressing the local spiritual consistory about the given issue by assigning police authorities to deliver the required data about the 'temptation'. In other provinces, the previous kinds of state and church relationships were still followed [Zagidullin, 2007, p. 128–129].

It seems that it was easier to construct a mosque in the settlement where Tatars lived together with Russians. Thus, in 1907, on the second attempt and as an exception from the general rules, the government approved the petitions

of the communities in Blagodatnaya village, the Sidelkino volost, and the Chistopolsk uyezd, about the permission to construct a mosque for 102 Muslims (men) living together with Orthodox Christians (198 men) [RSHA, Fund 821, Inventory 8, File 703, Sheets 36–36 reserve].

In the Kazan guberniya, the only case of constructing a mosque in a settlement where there was a church happened with the 'highest' permission from 4 December 1907 in Kreschenye Yanasaly of the Kazan district, where the departed (112 householders) were earlier assigned to the mahallah in Kainsar village, 4 versts away [RSHA, Fund 821, Inventory 8, File 703, Sheet 58].

The following years, the attitude of the authorities towards religious problems of the 'new Muslims' toughened. The pretext of 'the danger of temptation' was made use of to reject the petitions of the returnees to Islam in Staraya Ikshurma (162 men) living side-by-side with Christians (1908, 1909), and in Satlygan Klyuch (100 men), who wanted to set up a mahallah together with the residents of Nizhny Shittsy (104 men), because in the latter settlement there were 29 men and 27 women in Orthodoxy, 'hesitating to the ones prone to change' the confession of the baptized Tatars, in Tokhtamyshevo (1908), and in Sosnovy Mys in the Mamadysh uyezd (1909) [RSHA, Fund 821, Inventory 8, File 704, Sheets 27–27 reverse, 144–145, 156], etc.

In such settlements, children's education was carried out by an educated Muslim (a man or a woman) from a neighbouring settlement, and the classes were given in the houses of the residents.

Conclusions. In summary, the main part of the returnees to Islam were the 'newly-baptised', the parents of whom split with Christianity in the 19th century and the majority lived together with Muslims. That is why this act for them meant the legal acquisition of the the rights of Muslims, the members of mahallahs. The main part of the 'new Muslims' managed to align themselves with the religious and ritual life by Islamic canons within a short period of time. When there

were no Orthodox residents in the settlement, they managed to get an autonomous mahal-lah registered much faster.

They were accepted by the Muslim Tatars as their brothers in faith and members of the integral part of the Tatar society, and they received moral and certain material support. At the beginning of the 20th century, the official change of faith, together with the religious aspect, acquired a clearly defined ethnic context and was associated with the record 'in Tatars'. The movement of the official conversion into

Islam became a part of socio-cultural processes within the formation of the united Tatar ethnicity.

The beginning of the 20th century saw the ethno-faith identification of the 'old-baptised' Tatars. In the Kazan guberniya, over ten settlements went through the conversion to Islam. In these settlements, the presence of churches and/or missionary schools and the preservation of Orthodoxy by part or most of people brought about serious obstacles in arranging a traditional religious way of life for 'new Muslims'.

CHAPTER 4

Education and Culture in the Kazan Guberniya and of the Tatars of Russia

§ 1. Kazan Guberniya as a Region of Education, Culture and Science in the Russian Empire

Lyudmila Bushuyeva

The Kazan guberniya at the beginning of the 20th century was one of the largest regions in the Russian Empire. The location between the East and the West of the Imperial space and the complicated ethnic structure determined the uniqueness of its cultural life. The first decades of the 20th century for Kazan guberniya were an important period of educational, scientific and cultural development. The processes and changes in these fields were tightly related to the social changes in the country, caused by the Revolution of 1905–1907.

The first decades of the 20th century were a dynamic period in the history of educational development in the region. Kazan was the centre of a huge educational district, which includes the governorates of Kazan, Samara, Saratov, Astrakhan, and Viatka. The centre of the educational district was Kazan University, one of the oldest higher educational establishments in the country, a recognized centre of science and pedagogy. For a long time, it was the only higher education institution and scientific centre in the entire Eastern part of the Russian Empire, coordinating the studies of the region. Thus, Kazan University enormously influenced the intellectual and daily life of residents in the governorate. At the beginning of the 20th century, it continued successfully developing scientific schools, established prior in the 19th century. Social changes in the country, changes in the structure of the university management, the liberalization of the university life, and the inflow of young staff helped in setting up and developing new scientific approaches in Kazan

University [Ermolaev, edit., 2004, pp. 226–253; Korbut, 1930].

The beginning of the 20th century was a blossoming period of the humanities in Kazan University. In that period, such famous historians as D. Korsakov (the author of works on Russian history in the 18th century), N. Zagoskin (a researcher of the history of Russian law and the author of works on the history of Kazan University), N. Firsov, M. Khvostov, and V. Piskorsky all worked here. N. Petrovsky, a researcher of the history and culture of the southern Slavs, also worked in Kazan. A. Selishchev, obviously influenced by N. Petrovsky, made his first forays in science. Later, he became a well-known Soviet Slavic specialist [Ermolaev, edit., 2004, pp. 226–228]. The beginning of the 20th century was marked by the activities of N. Katanov, a historian, Orientalist, ethnographer, and linguist [Ivanov, 1973, pp. 62–63]. He studied a lot of Turkic languages [Katanov, 1899], took part in a set of expeditions to Eastern and Western Siberia and Mongolia [Information about Kazan university condition in 1906 and the first half of 1907 (Extract from the report), 1907, p. 51], and was an author of works on the history of Kazan and the Kazan Khanate. N. Katanov fruitfully worked as the chairperson of the Society of Archaeology, History and Ethnography and the Head of the Kazan city scientific-industrial museum [The yearly record, 1909, pp. 32–34].

The Kazan linguistic school also actively developed and included the work of one of its

brightest representatives, Professor V. Bogoroditsky, a follower of the well-known Russian linguist I. Baudouin de Courtenay. A bright philologist at the end of the 19th to the beginning of the 20th centuries was E. Budde, known as a founder of the historic dialectal studies of the Russian language in the history of domestic linguistics.

At the beginning of the 20th century, the University also successfully developed other scientific fields. The representatives of the Kazan chemistry school, the followers of the famous chemist A. Butlerov, went on with their active research. That period is related to the beginning of the professional work of the famous chemist, the founder of the school of phosphorus organics, A. Arbuzov (a student of A. Zaycev and F. Flavitsky). During World War I, the Kazan chemists played an important role in the activities of the Kazan military industrial committee [National Archive of the Republic of Tatarstan, Fund 977, Inventory Council, File 1204, Sheet 116]. Under the supervision of Professor A. Bogoroditsky, the chemical section of this organization worked on the means against asphyxiating gases [National Archive of the Republic of Tatarstan, Fund 977, Inventory Council, File 1204, Sheet 118].

The Kazan geography school continued its successful research and pedagogical work. One of its outstanding representatives was P. Krotov, who was widely recognized as a researcher of East European Russia, the Urals, Kazan, Vyatka and Simbirsk guberniyas [Information about Kazan university condition in 1900 and the first half of 1901 (Extract from the report, 1901, p. 62; Dedkov, 2002, pp. 1–10)]. The medical department of Kazan University was one of the strongest medical centres in Russia. It trained medical workers in a vast region of the country, including the Volga and the Cis-Ural regions. Many renowned scientists worked in the department: physiologist N. Mislavsky, surgeon V. Razumovsky, surgeon A. Vishnevsky, neuropathologists L. Darkshevich and A. Favorsky. At the time, mathematicians and mechanics, such as F. Suvorov, D. Zeylinger and A. Kotelnikov, taught in the physics-mathematics

department at Kazan University. One of the renowned physicians of the late 19–early 20th centuries and the first Russian researcher of the electromagnetic theory of light, D. Goldammer, continued working in Kazan, as well as A. Vasilyev, a famous public figure who initiated publication of the first complete collected works on geometry by the prominent mathematician of the 19th century, N. Lobachevsky.

The scholars of the law department at Kazan University had a well-marked place among the jurists of Russia. That included V. Ivanovsky, one of the premier researchers of criminal law, and A. Piontkovsky, author of works on the issues of probation and abolition of the death penalty. One of the activists in the Kazan law community was the authoritative scholar of civil law, senior lecturer A. Zavadsky. Kazan University was a starting platform for the pedagogical and scientific work of the famous researcher of administrative law, A. Yelistratov [I. Ermolaev, edit., 2004, p. 249].

While Kazan University taught in Russian and primarily targeted the Orthodox youth, the students of Turkic origin were also studying there, including Tatars, Bashkirs, Azerbaijanis and Kazakhs [Mikhaylova, 2006, p. 206]. The potential in the Russian market and the striving to be represented in the elective agencies and governmental institutions required from a high level of education from the Tatar intelligentsia. While in the 19th century, young people from Tatar families could receive higher education only abroad (Turkey, Egypt, European countries), in the early 20th century they had an opportunity to study in Russian educational institutions. The 1905–1907 Revolution brought about a slight increase in number of Muslim students. Thus, in 1908, the number of Tatar students receiving education in various departments at Kazan University came to 13 people. In 1913, their number increased to 27 people. In 1912 A. Teregulov graduated from Kazan University with honours. As a result, a medical faculty graduate and a student of famous medical Professors S. Zimnitsky and A. Kazem-Beg, A. Teregulov became the first Tatar Doctor of Medical Sciences and Professor.

After the Revolution of 1905–1907, Kazan University contributed to the development of higher education for women in the governorate. It was a sign of the times, a kind of symbol of social liberalization. A new educational institution was created on the initiative of university professors K. Arnstein, A. Vasilyev, N. Sorokin, M. Khvostov, and G. Shershenevich, which was called Higher Courses for Women, where young women could receive higher education. The coursework followed the programs of the historical and philological university departments in 'history' and 'Russian philology' specialties. The graduates of the Courses were able to teach in secondary educational institutions for women and, starting from 1911, in secondary educational institutions for men. Most of the teachers of this educational institution were the Kazan University professors, such as A. Aleksandrov, V. Bogoroditsky, D. Naguevsky and N. Petrovsky, to name a few [Spravochnaya knizhka, 1910, p. 35]. It conditioned the high level of education received in the Higher Courses for Women. In 1911–1917, 19 young Tatar women were studying there, including M. Gubaydullina, A. Mukhitdinova, Z. and R. Gabitovs.

The level of interrelation between the university and cultural life of the region was not determined merely by the development of science and education. Kazan University was the centre of social life in the region. At the time, the scientific societies of the university, formed back in the latter half of the 19th century, were successfully continuing their work. The representatives of the national intelligentsia of the region were actively involved in their work. In the early 20th century, the Society of Archaeology, History and Ethnography collaborated with 30 Tatars. One of the members of the society was a prominent Mordovian educator and linguist, M. Evseyev. The Society of Archaeology, History and Ethnography contributed to the collection and research work not only in the Kazan guberniya. In their 'Izvestiya' (Journal), the Society published methodical guidelines on conducting archaeological and other kinds of research. Being influenced by such guidelines, the members of the national intelligen-

tsia started their own regional associations in the Vyatka, Samara and Simbirsk guberniyas [Sidorova, 2008, p. 11].

The work of the professors from Kazan University led to Kazan becoming one of the most important museum centres of the country. The professorial community created the Kazan Municipal Museum, which became one of the biggest regional museums of Russia, both in quantity of exhibits and the contents of collections.

One of the four Spiritual Academies of the Russian Empire was based in Kazan, which was opened there in 1842. This educational institution had a high scientific potential in theology, philosophy, linguistics, oriental studies and ecclesiastical law. In the early 20th century, the Academy was a working ground for the prominent specialist on ecclesiastical law, Professor I. Berdnikov, and the famous orientalist, Professor N. Katanov [Maurer, edit., 2009, p. 461].

The system of secondary education was based on gymnasiums, and mektebs and madrasahs for Tatar children. In the beginning of the 20th century, the Tatar community were coming to the realization of the importance of secular education. For that matter, one of the important changes in this area was the development of new-method (Jadid) schools [Amirkhanov, 2002, p. 146]. The majority of the subjects offered was of secular nature. They taught such subjects, as arithmetic, geography, logic, geometry, Russian history, the Russian language, jurisprudence, pedagogy, psychology, Oriental languages, medicine, and ethics. Some madrasahs had drama and literature clubs and published handwritten newspapers. In the early 20th century, especially after the 1905–1907 Revolution, the period when the restrictions were being eased by the authorities, more and more Tatar children were studying in Russian gymnasiums, as the number of Russian-Tatar training schools, Russian-Tatar schools and Russian classes in madrasahs was increasing.

The 1905–1907 Revolution had a positive impact on the development of secondary education for Tatar women. Girls from the Tatar intelligentsia families had an opportunity to

study in Russian educational institutions, such as Mariinskaya Gymnasium for Girls, and the gymnasiums of Shumkova and Kotova.

A whole range of Tatar educational institutions started flourishing under the impact of social changes. The most well-known among them were schools of L. Khusainova, F. Aitova in Kazan and of F. Adgamova in Orenburg, as well as the schools of F. Gainutdinova, which were successfully functioning in Orenburg and other cities of the governorate. They taught secular subjects, such as Tatar literacy, arithmetic, geography and history.

However, regardless of its explosive development, the Tatar school system was still challenged, as it was opposed by Kadimists, protagonists of the scholastic system in education and upbringing, local authorities and officials who were responsible for approving school programs and teacher staff [Amirkhanov, 2002 a, p. 148]. A big part of the Tatar population, primarily rural, did not have access to education [Rustyamova, 1957, p. 421].

As the socio-political situation in the country was changing and the level of education was increasing, the national intelligentsia of the region was progressively showing interest in European culture. It is proved by development of various types of art, namely literature, music and theatre.

The beginning of the 20th century marked an important stage in the development of Tatar literature. This period was a productive time for many Tatar writers. The first decade of the century witnessed a peak in the careers of many renowned wordsmiths and the emergence of new young writers. As a result, many of them became classics of Tatar literature. The work of Tatar writers vividly showcases the introduction of national literature to the worldwide literary movement.

It was the time of transformation for the traditional genres and of emergence and development of new literary movements and artistic methods. The Tatar writers and poets actively used the experience of Eastern, Russian and West European literature. The Tatar literature featured schools and movements of world liter-

ature, such as realism, romanticism, naturalism and modernism. The tradition of enlightenment and critical realism was supported by G. Tukay, G. Iskhaki, G. Kamal and M. Gafuri. Romanticism was embodied in the works of G. Ibragimov and dramaturgy of M. Fayzi. Along with realism and romanticism, the Tatar literature of this period features lineaments of modernist art as well. For instance, symbolism had a great influence on the poetry of Dardemand and works of G. Gubaydullin [Minnegulov, 2006, p. 618].

The essential part of the literary movement of the 20th century was Tatar literary criticism. It was formed and separated into a stand-alone scientific field after the 1905–1907 Revolution with the emergence of Tatar printed media. G. Tukay, R. Fakhretdin, F. Amirkhan, and G. Iskhaki played a huge role in the development of Tatar literary criticism. Their manuscripts and reviews disclosed its theoretical bases, discussed the issues of national identity in Tatar literature, and defined and consolidated the principles of critical realism methods.

The period of the 1905–1907 Revolution was also the time of the explosion of Tatar printed media [Amirkhanov, 1988, p. 3]. In 1905–1907, all over Russia: in Kazan, St. Petersburg, Moscow, Orenburg, Ufa, Simbirsk, Astrakhan and other cities, there were 33 periodical publications in Tatar, 21 of which were newspapers and 12 which were magazines. It included the newspapers 'Fiker' ('Thought') and 'Azat' ('Freedom'). Tatar printed media played a crucial role in establishing the general norms of the Tatar literary language. The credit for development and establishment of these norms goes to Tatar illuminators K. Nasyri, G. Ilyasi, G. Tukay, G. Iskhaki, G. Ibragimov and others [Khakov, 2006, p. 621].

The early 20th century was the time of development for Tatar book publishing. The centre of Tatar book printing was Kazan. During that period, the number of typographies in Kazan grew bigger and there were even whole companies specializing in publishing and selling books. For instance, the Karimovs book-trading company, 'Sabakh' and 'Magarif' ('Enlightenment'). The typographies printed lit-

erary works of both Tatar authors, such as M. Gafuri, F. Karimi, M. Fayzi, N. Dumavi, and Russian and foreign poets and writers, such as A. Pushkin, L. Tolstoy, I. Turgenev, D. Defoe and others. The Russian typographies made a significant contribution to the Tatar book publishing industry. Only from 1910–1913, they published around two thousand books in Tatar.

Kazan was one of the centres of literary development for the region's other nations as well. For instance, during the 1905–1907 Revolution, a group of Mari litterateurs living in Kazan was releasing the annual 'Mari calendar'. The editor of the publication was famous Mari illuminator, V. Vasilyev [Mikhaylova, 2006, p. 159].

Kazan was the place of development for theatre. Theatre was a leading source of entertainment for the citizens of the governorate's capital, a symbol of supreme spiritual needs. During the first decade of the 20th century, there were between 7 and 8 professional drama troupes in Kazan. They performed in the municipal theatre on Teatralnaya square, New Theatre, Bolshoi Theatre of G. Rosenberg on Bolshaya Prolomnaya street, Alafuzov's Theatre, as well as in the Kupecheskoye Sobranie and Vostochny (Eastern) club. There were also a lot of amateur groups. In addition, the city hosted operetta troupes [Blagov, 2001, pp. 45–46].

In the beginning of the 20th century Tatar theatre became professional. 1906 marked the first public theatrical performance in Tatar, whereas, in 1908, Ilyas Bagatyrgaevich Kudashiev-Ashkadarsky founded the first travelling troupe of 'Muslim dramatic artists' in Russia, which was later called the Tatar theatre troupe 'Sayar' ('Wanderer').

Tatar theatre was developing under the beneficial influence of European and Russian dramatic art. The work of the first Tatar dramatists, G. Kamal, Sh. Kamal, K. Tinchurin and others, was heavily influenced by the works of the leading Russian writers and dramatists, such as A. Ostrovsky, M. Gorky, N. Gogol and A. Chekhov [Ilyalova, 1986, pp. 5–30]. Similar to productions of the Russian theatre maestros, Tatar performance art primarily followed the traditions of theatrical realism.

The musical culture of the new European type was formed in Kazan in the late 19th–early 20th centuries. It is witnessed in the numerous performances of concert-philharmonic and opera combination companies, the opening of musical schools for professional music education, as well as in the work of musical social organizations. The active concert life of the governorate's capital featured tour performances of outstanding musicians such as S. Rakhmaninov, A. Skryabin, L. Sobinova, A. Nezhdanova and others. Kazan was the starting point of the artistic career of the famous opera singer, F. Chaliapin.

The development of Tatar national music in the early 20th century was in many ways connected to the formation of professional Tatar theatre. At first, Tatar music was performed by instrumental groups during the entr'actes in the productions of the theatre troupe 'Sayar'. Soon enough, Tatar music concerts were included in the programs of literary evenings of the 'Vostochny club' in Kazan and performed in Moscow, Saint-Petersburg, Ufa, Orenburg and Saratov as well. The first professional Tatar musicians were Fatakh Latypov, F. Gumerova and Kamil Mutygi. S. Gabyashi, one of the first Tatar composers, who wrote amazing instrumental, vocal and musical theatre pieces, was actively promoting the musical enlightenment. Russian musicians were also interested in Tatar music, for instance, violin player I. Kozlov and conductor A. Eichenwald performed original adaptations of Tatar folk songs at their concerts.

The formation of the artistic culture in the region featured new tendencies compared to previous periods. The visual arts had an important place in the artistic culture of the region. Its growth was conditioned by the long-term successful functioning of the Kazan art school, founded in 1895 with the support of the Academy of Arts [Rosenberg, 2001, pp. 122–155; Klyuchevskaya, 1990, pp. 36–40]. The school trained professional painters, graphic artists, architects and specialists of decorative and applied arts. The institution of the provincial art school provided the opportunity to involve wide social and national categories of the population in artistic education. The student body

of the school covered different nationalities, including Udmurts, Mari and Chuvash. The diverse environment encouraged the invention of new styles in visual arts. The main movements, that influenced Kazan artists of the first decade of the 20th century, were the late Peredvizhnik's art and 'Mir iskusstva' ('World of Art'). Kazan was a place where at the time new artists such as N. Feshin, A. Rodchenko and D. Burlyuk evolved into famous, outstanding artists [Rosenberg, 2001, p. 130].

The cultural needs of the governorate's educated citizens were also satisfied by the development of various forms of intellectual socializing. 1907 marked the opening of the Vostochny (Eastern) club in Kazan. The chairman of the club, I. Teregulov, and other institutors established it to 'organize musical and literary evenings and dramatical performances' [Mikhaylova, 2006, p. 176]. The club became, in a way, a cultural headquarters for Kazan's Tatar intelligentsia. It had a functioning library and a reading room, it started a string orchestra and carried out literary evenings with performances by G. Tukay, F. Amirkhan and G. Kamal. The establishment of musical social life was greatly influenced by the Kazan branch of the Russian

musical society, the Kazan club of music lovers, the Kazan society of fine arts lovers and the Kazan society of people's universities.

Thus, in the early 20th century the culture of the region went through serious growth and changes. The development centre of its cultural life has always remained the capital of the Kazan guberniya. Being the biggest educational and scientific centre in the country, Kazan University continued playing a crucial role in the educational, scientific and social life of the region. The cultural development of Kazan guberniya was heavily influenced by the 1905–1907 Revolution. The liberal reformations in the country encouraged the evolution of literature, printed media and different types of art in the region. The national educational system changed its course towards a secular approach, as the higher education institutions became more accessible to Tatar youth. The national literature rose to a new height, whereas the national printed media and the Tatar professional theatre were first brought into the picture. The early 20th century became the time of active introduction of the Volga River and Cis-Ural regions intelligentsia to the European cultural space.

§ 2. Tatar National Education

Rafik Mukhametshin

The Tatar national education, as a network, was formed back in the Volga Bulgaria, the traditions of which were further developed during the periods of the Golden Horde and the Kazan Khanate. As Tatars had lost their sovereignty, they lost all the factors for a highly developed culture. It involved national education as well, which was left with no state or financial support. The chances for its restitution appeared only in the late 18th century. While there was a lack of educators and people were losing their local traditions, the educational institutions were revived from an analogue of the Middle Asian ones. First, the reasoning behind it was that by that time, Middle Asia, composed of

several independent khanates, was one of the main centres of Islamic education, with the epicentre of it being in Bukhara. Although the scientific ideas within the Islamic world had already lost their progressiveness and were stuck in clerical and scholastic exceptionalism, "the hunters for Islamic light and Eastern philosophical wisdom" were coming here not only from Russia, but from other Islamic countries as well [Validov, 1986, p. 26]. Second, by that time, Tatar merchants were gradually restoring their trading relations with Middle Asia. They brought in many manuscripts and books that were then highly regarded among the Kazan Tatars. The merchants witnessed how

highly knowledge was valued in the Islamic countries and how respected scientists were by the society. So they essentially became the first patrons of Tatar educational institutions. A person who received education in Bukhara was held in high esteem, was granted a large mahallah (parish) and given the title Damullah, which means Great Mullah. The Bukhara madrasah graduates did not just fulfill the duties of imam in mahallah mosques, they opened madrasahs, gathered students, shakirds, and trained common clerks for mahallahs, while some shakirds of these madrasahs continued their education in Bukhara. As early as the end of the 18th century, I. Georgi noted that every Tatar village had 'its own prayer house and school, and the large villages even have girls' schools of this kind'.

The Tatar educational institutions were divided into two types: maktab (primary) and madrasah (secondary and higher). Every mosque had a maktab, similar to a primary school, which was managed by the mullah of its mahallah. There were no classes or departments or any specific curriculum in a maktab. The teacher taught each pupil individually from books composed of religious articles and moral tales, usually from the life of holy prophets. The term of study was also not specified. The majority of pupils were boys from 8 to 14 years old. Girls studied in the mullah's house, where they were taught by his wife, who was called ostabika or abstay. The teaching methods were the same as in maktab, but it was forbidden to teach writing to them.

Maktabs were funded by the residents. The buildings were just ordinary village houses with one or several rooms, which served as both classroom and dormitory for many students. They cooked for themselves, did the housekeeping, slept and spent their free time there. The mullah and the main khalfa teachers did not receive any payment. They lived off students' donations and offerings.

Madrasahs, like maktabs, were attached to mosques and managed by mahallah clergy. But not every mahallah had a madrasah. They were opened only in cities and villages with rich residents capable of and willing to maintain

them, as well as an educated mullah capable of organizing such an educational institution. For instance, every mahallah in Kazan had its own madrasah; however, not all of them were regarded as highly. In the late 18th to early 20th centuries, the most popular one was Apanay madrasah. Large educational institutions were opening in villages as well, and were as popular and qualified as the ones in the city. This was the case with madrasahs in the villages of Kshkar, Bolshiye Saby, Satysh, Asan Ile, Tutmutuk, Urussu, Bajryaka, Nizhniye Chershily and others.

The majority of shakirds were boys from 10 to 20 years old. Similar to maktabs, madrasahs had neither a strict curriculum nor a specific term. The subjects and teaching methods in madrasahs were purely confessional up to the middle of the 19th century. However, along with theological disciplines, students learned the basics of arithmetic, geometry, and gained some knowledge of geography, astronomy and medicine. But the level of teaching secular subjects did not go beyond the Medieval theological perception of the world, and the latest scientific and technological discoveries were virtually ignored.

The teachers, as in maktabs, were mainly khalfas. The head of a madrasah was a mudarris, who usually had substantial theological education in Eastern countries.

The financial situation of madrasahs was difficult. The ill-equipped rooms often served as both as classrooms and a dormitory. The situation was worsened by the fact that zakat (one fortieth of the wealth of rich people, allocated for charity according to Sharia law), as it was explained by scholars, was considered genuine only when it was given to poor individuals in need. Since social welfare was not considered a type of zakat, wealthy people gave their zakats to poor people and allocated only modest amounts of money to madrasah maintenance. Although a madrasah was never left without zakat, it was given to shakirds, not according to their needs, but by course year, meaning the higher it was, the more zakat a shakird was paid. Hence, the Tatar intelligentsia had good reason to be interested in establishing chari-

table organizations that could somehow accumulate and rationally distribute at least some of the national wealth belonging to the people, including zakat. In fact, starting in the latter half of the 16th century, when the state practically ignored the interests of the country's non-Russian population, charity was the Tatars' only source of funding for their social, spiritual and educational needs. The social life of Tatars started changing in the latter half of the 19th century. But before that, the Tatar madrasahs were traditional Islamic educational institutions of the Bukharan type. This type of educational institution played a crucial role in the formation of the educational system for Muslims in the Volga River and Cis-Ural regions. Especially when there was no national identity, educational institutions of the Islamic Orient to some extent encouraged a regeneration of the intellectual foundations of Tatar society. Graduates of these institutions brought Islamic learning in its classical form to the region. It did not meet the requirements of the new reality, but it maintained the Islamic identity of the Tatars. The authorities had a good reason to believe that 'mullahs with Asian education were the most harmful factor for Russification of Tatars' [National Archive of the Republic of Tatarstan, Fund 92, Inventory 2, File 8777, Sheet 74]. Since 'Bukhara, Samarkand and Cairo were sacred sites for Muslims: they had the oldest madrasahs, many Muslim scholars lived and created their theological works in those cities, and their names are associated in the Muslims mind with the glorious era of Islam and theological philosophical Arabic science. That is why Tatars, who studied in those places, were valued so highly' [National Archive of the Republic of Tatarstan, Fund 92, Inventory 2, File 8777, Sheet 74]. However, 'when Russia conquered the Islamic centers in Middle Asia, the number of Volga Tatars going there to improve themselves decreased somewhat, but the allure of former glory and traditional striving of intellectual views toward the Orient was far from disappearing in Russian Islam' [National Archive of the Republic of Tatarstan, Fund 92, Inventory 2, File 8777, Sheet 74]. By

the middle of the 19th century, there were 430 maktabas and 57 madrasahs in the Kazan region, while in the Volga-Ural region, there were already 1482. These educational institutions 'were attended almost all (up to 80%) Islamic youth..., where they developed not only their religious views, but also their views on life and the world around them' [National Archive of the Republic of Tatarstan, Fund 92, Inventory 2, File 8777, Sheet 68]. Students of maktabas and madrasahs 'asserted their belief that there is nothing better or higher than Islamic science, that a Muhammadan school is superior to any others..., all aspects of the cultural life of a Muslim were directed and regulated by clearly formulated rules and laws of Sharia' [National Archive of the Republic of Tatarstan, Fund 92, Inventory 2, File 8777, Sheet 68].

By the middle of the 19th century, the educational institutions of the Bukharan type no longer suited the needs of Tatar society. They had to adapt to the new Russian reality and ideological needs of the Tatar community, first and foremost, of the incipient bourgeoisie. The old method (Kadimist) school could no longer remain the same, because it had to improve the quality of education in secular sciences in order to prepare the new generation for the world. Thus, the main objective of national educational system reform was to find a solution to this problem. The new method ('Jadid') madrasahs first of all aimed at using a new teaching method (phonics) and giving adequate knowledge of secular subjects. But it must be acknowledged that although the new method educational institutions initially had ideological functions that were different from the Kadimist ones, they cannot be contrasted, because they had become parts of a single national educational system. It must also be kept in mind that the rural Tatar communities that nearly 95% of all religious educational institutions were focused on, remained a pillar of traditional Islamic society. Moreover, it cannot be forgotten that a community, according to Ismail Gasprinsky, 'is a miniature state, where all of its parts are strongly connected as one, and it has its own laws, customs, social orders, establishments

and traditions, supported by the constant power and spirit of Islam. Such a community has its own authorities represented by elders and the entire parish, which does not need acknowledgment from above, because their authority is religious and moral... This community has fully independent clergy, who do not need any sanctions or ordinations. Any trained Muslim can become a teacher, muezzin, imam, akhun or other, when approved by the community' [Gasprinsky, 1881, pp. 25–26]. Hence, the educational institutions found themselves in the epicenter of quite a tough ideological battle for the minds of the new generation, as they were the most effective (almost the only, up to the beginning of the 20th century) leverage on social conscience. In 1912, there were 779 madrasahs and 8,117 maktabas in Russia with 267,476 students [Amirkhanov, 1986, p. 82] and fairly definite trends appeared in this environment. For example, by 1910, up to 90% of all maktabas and madrasahs of Kazan guberniya were using phonics, thus opting for not only a new educational system, but also the ideology of national social renewal. As noted in a government form letter to governors of Russia back in 1900, supporters of the new method encouraged 'the Tatar population of Russia to get an education and gain practical knowledge in crafts and industry, as well as in learning foreign languages, so it (the population—M.R.) would be cultured and prosperous' [Karimullin, 1974, pp. 187–188]. N. Bobrovnikov, a government official and well known specialist in the national educational system for non-Russians in Russia, pointed out that official reports refer to 'maktabas and madrasahs as religious schools... This qualification is not accurate today; I dare to say, that there are probably no strictly confessional schools left now. Even the most backward, remote maktabas always teach at least the alphabet by the phonics method... almost every school teaches arithmetic and elements of geography, sometimes Tatar history, music and so on.... thus, maktabas to some extent come close to Russian secondary schools... We can call such madrasahs confessional only if we start calling all the educational institutions under the Orthodox clergy confessional

as well' [Journal of the Ministry of National Education, 1917, May, p. 62].

Large Jadid madrasahs were opened in almost every region with a Tatar community, and they became the centers of Tatar culture: 'Galiya', 'Usmaniya' (Ufa), 'Khusainiya' (Orenburg), 'Rasuliya' (Troitsk), 'Muhammadiya', 'Marjani', Apanay (Kazan), 'Bubi' (Izh-Bobya) and others. These educational institutions were mainly opened with the help of the Tatar upper class, as it was concerned about the education of youth and perceptive of the changes occurring in Tatar and Russian reality. For example, Akhmat Khusainov, a prominent Tatar industrialist and philanthropist, built a new type of madrasah, 'Khusainiya', in Orenburg for 100,000 rubles that provided education for 200 students, 100 of whom were fully dependent on the madrasah. At the same time, he annually allocated scholarships for Tatars studying in Kazan teacher's school (for 2 students), Kazan and Orenburg vocational schools (for 6 students from each) and Kazan business school (4 students) (for details see: [Şäräf, 1913; Fäxretdinov, 1911]).

The establishment of the 'Galiya' madrasah in Ufa was largely funded by large Tatar merchants and industrialists, such as the Khakimovs, the Nazirov brothers, the Yagudins, Gibadulla Usmanov, Sufiya Tevkeleva and others. The Troitsk madrasah was supported by merchant L. Yaushev, the one in Yekaterinburg by merchant Agafurov, and the 'Muhammadiya' madrasah was funded by the Galeev brothers.

Meanwhile, implementation of the Russian national policy and missionary plans included opening schools for baptised Tatars and the non-Russian population, in general. The old system built on the principles of forced Christianisation did not prove itself. The system developed by N. Ilminsky was focused on promoting Orthodoxy among the non-Russian population in their own language. Therefore, they published textbooks and religious books in the students' native languages based on the Russian alphabet. The ultimate goal, according to N. Ilminsky, was 'Russification of foreigners and their complete integration with Russians by faith and language' (quoted from:

[Vorobyov, edit., 1967, p. 385]). A substantial network of schools was organized on the basis of this system. In order to train teachers and priests to work in missionary schools, a central school for baptised Tatars was opened in Kazan in 1863, followed by a teacher training seminary for foreigners in 1872. Teacher training schools were also opened in Simbirsk, Ufa and Birsik. By 1870, there were already 39 schools for baptised Tatars.

Besides purely missionary schools for children of baptized nationalities, other schools called Russian-Tatar opened for Muslim Tatars. These were primary schools supported by the treasury, where students were taught Russian grammar, and all the general subjects were taught in Russian. The first Tatar teacher training school opened in Kazan in 1876 to train teachers to work in these schools. However, the Tatar population reacted negatively to Russian-Tatar schools. Hence, these schools met with little success and their number was extremely low. In the early 20th century, the entire Kazan educational region, which included six governorates, had 57 Russian-Tatar schools, whereas there were only 11 of them in Kazan guberniya.

The Tatar intelligentsia took active measures to transform these schools into new method educational institutions with mandatory classes in the Quran, the pillars of faith and Sharia. Thus, between 1870 and 1915, 14 Russian-Tatar schools and Russian madrasah courses opened in Kazan, which were run under the auspices of progressive Tatar merchants.

One of the features of Tatar education of the late 19th–early 20th centuries was that this same period saw large-scale development of women's education, which highlights the progressive changes in the issue of women's right in Tatar society. Thus, by the beginning of the 20th century Kazan had a number of girls' schools, such as Aitova, Khusainova, Mushtarieva, Sayfullina, Gabitova, Amirkhanova and Mirkhaydarova, among others. In 1907, a school for girls was opened in Izh-Bobyta village, and in Troitsk, Orenburg and other places in 1909.

Nonetheless, in the early 20th century the education system required some serious changes that were driven by many factors. The new method madrasahs, which by this time were the basis of the system, were also in need of improvement. It was necessary to define the main principles that would determine the prospects of the educational system. First of all, this concerned the status of Tatar educational institutions. Were they strictly confessional, or did new method educational institutions change into something secular? This problem was not as simple, as it would seem. Although the legal status of Tatar madrasahs only fit into the system of confessional educational institutions, the reality was much more complicated. The opinions of authorities were also divided. As N. Bobrovnikov noted, reports on the Kazan educational region refer to maktab and madrasahs as confessional schools. But 'today this qualification is inaccurate;... I dare to say, that right now there are probably no strictly confessional schools left. But 'this qualification is not accurate today... I dare to say, that there are probably no strictly confessional schools left now. Even the most backward, remote maktab always teach at least the alphabet by the phonics method and have a reader containing secular articles... Along with Islamic subjects, madrasahs teach many secular sciences; thus, maktab to some extent come close to Russian secondary schools' [Journal of the Ministry of National Education, May, 1917, p. 62]. Tatar maktab and madrasahs were all opened as confessional educational institutions in parishes (mahallah) without exception. If the state gave permission to establish a parish, opening both a madrasah and a maktab was also allowed.

This situation suited the Muslims of Russia quite well, as they could open new educational institutions quite easily. But their confessional nature undoubtedly restricted the process of their modernization. Perhaps that is why, in the early 20th century, the Tatar print media launched a full discussion on defining the content of confessional education. One of the reasons for this controversy was an inquiry

of the Department of Foreign Confessions to the Orenburg and Tauric Spiritual Directorates in October 1913 on the view of the Sharia law regarding maktab and madrasahs. The Department's inquiry received responses from all Tatar newspapers. The main message in the publications was that Islam does not divide educational institutions into confessional and secular: while being essentially confessional, throughout the entire history of Islamic civilization, Islamic educational institutions did not limit the curriculum they were teaching, as long as they did not contradict the main canons of Islam, of course. The newspaper *Koyash* (Sun) noted that 'Our religion is not a religion expressed only in prayers; it instructs us to acquire the knowledge that is necessary in life' [Koyash, 11 October, 13 October 1913]. The newspaper *Vakyt* (Time) commented on this, saying that 'our notion of science means secular and religious knowledge', which is why 'our maktab are not divided into confessional and non-confessional categories' [Vakyt, 2 November 1913].

The answers prepared after a preliminary discussion, basically showed the general feelings of Tatar society. As the newspaper *Bayanelkhak* (Journal of Truth) noted, 'All imams who were on the council acknowledged the importance of teaching secular subjects in our maktab and madrasahs' [Bayanelkhak, 27 December 1913]. To the question of 'what are Islamic confessional maktab and madrasahs, according to Sharia?' the council formulated the following response: 'They are institutions that teach the laws and canons of Islam and give the knowledge that is needed for earthly and heavenly well-being' [Bayanelkhak, 27 December 1913].

This unanimity in the ideologically diverse Tatar community was a sign that different strata of Tatar society were concerned about the fate of the educational system. On the one hand, everyone was fully aware of the need for, if not drastic, at least significant changes in this area. On the other, they were wary of the fact that it was the government that was attempting to reform the educational system. Tatar intellectuals were fully aware that the education system for

Tatars was the main source of keeping spiritual values in society, which is why drastic transformations in this area required heavy responsibility and caution. As the newspaper 'Yulduz' (Star) pointed out, 'neither the state, nor society has created anything that could replace Islamic educational institutions. So the matter concerns not only members of the clergy, but the entire educational system as a national problem. That is why Muslim society emphasizes the importance of reforming confessional educational institutions' [Yulduz, 3 January 1914].

The changes that occurred in the educational system were undoubtedly positive. The reforms '10–15 years ago were only on people's minds, as these plans were suggested only by progressive people of the nation. At the time, it seemed that implementing these alterations could lead to quite substantial changes in Tatar society' [Koyash, 29 September 1913]. But 'partial transformation of our madrasahs could not change our life significantly. Our previous madrasahs were behind the times, and so are the madrasahs today; previous madrasahs graduated people as unprepared for life as those graduating from modern madrasahs. Madrasahs and life go their own separate ways. The graduates of our madrasahs, like commoners with no madrasah education, can comprehend neither the outer world, nor the spiritual world. Our madrasahs continue to graduate a special type of people, called shakirds' [Koyash, 29 September 1913]. According to representatives of the progressive intelligentsia, even the new method educational institutions were unable to meet the demands that the world set for Tatar society, especially youth, either by their status, legal position or organization. The fact is, there actually 'was an attempt to introduce secular studies to the reformed spiritual educational institutions. But then they appeared to be on the borderline: they had almost lost their former role as confessional schools, but had not yet received the status of secular schools. The students entering were not interested in becoming members of the clergy or studying theological laws. They wanted to find their way into secular professions though madrasahs. Whereas society mainly wanted to gain well-educated,

theologically trained clergy from the reformed madrasahs' [Mektep, 1913, No. 3]. Eloquent proof of this is the fact that in 10 years of existence of the Galiya madrasah, only 38 out of 950 graduates become mullahs, while the rest of them mainly became teachers²⁵.

Thus, it is safe to say that by the 1910s, the Tatar intelligentsia's perception of the potential for national system reform underwent drastic changes. The illusions about the possibility of implementing it within confessional schools faded away. A confessional school, as implied by its status, could train only clergy capable of serving the needs of the Muslim community, as well as educated people who could navigate through the twists and turns of their modern life, but not specialists capable of finding their place in different sectors of society and with the ability to blend easily into one social group or another. The intelligentsia were concerned that Tatars, who were quite highly educated people compared to other Russian nationalities, continued to end up in the most unskilled and underpaid groups of society. A certain Iskander al-Khamzavi drew attention to this problem in the newspaper 'Vakyt' (Time), saying that 'it is now commonly believed that madrasahs have to provide education for the nation by training mullahs and mugalims suffused with ideas. The madrasah reforms were implemented within this perspective. The programs of large, successful madrasahs such as 'Galiya' and 'Muhammadiya', were developed along this very line. But today the programs and objectives of madrasahs are no longer satisfactory, because national life itself is now far ahead of them' [Vakyt, 24 August 1914]. This is why, according to the author, 'it is not enough just to be a committed and educated mullah and mugallim. To become a leader of the nation, it is also important to be a person of action (my emphasis—R.M.). At one time, having ideas was the most important thing, but now it is useful only for philosophizing. Today,

a person who wants to be useful and become a role model for his nation, besides having ideas, has to actually do something to help it' [Vakyt, 24 August 1914].

In this case, relying entirely on the Russian state educational system could have some unwanted consequences: the intelligentsia did not rule out the possibility of losing the most educated class of the nation, who would not care about its people's interests. There were certainly some reasons for these concerns. The 'Rules on Education for Foreigners Living in Russia' of 1870 made it clear that 'Muhammadan Tatars... are a tribe, fanaticized by numerous clergy, with a lot of mosques and Muhammadan schools, and it is strong in its faith. Therefore, Russification of Muhammadan Tatars can be carried out only by spreading the Russian language and education' [Mir islama, 1913. Vol. 2, Ed. 4, p. 260]. At the same time, it was no secret that 'the ultimate goal of educating all the foreigners, living in our country, is clearly their Russification and merger with the Russian people' [Mir islama, 1913. Vol. 2, Ed. 4, p. 261]. The government attempted to use the part of the national intelligentsia that could be its ally in this issue as well. As noted by censor M. Pinegin in 1905, 'recently, when the Tatars started their intellectual awakening and when they divided into two parties: the young, dreaming about some kind of national identity, and the old, only fighting for equality in religious and social rights' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 1, File 1649, Sheet 7]. Government officials were fine with the second movement, as they focused their efforts 'mainly on improving the religious situation, equal rights and promoting education, rather than supporting national identity' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 1, File 1649, Sheet 7]. Most importantly, many members of this group support the idea of teaching Tatars 'the Russian language in common educational institutions as well', and believe that 'knowledge of the official language is what will allow Tatars to gain the required real knowledge and a European education as

²⁵ Madrasa rector Zia Kamali wrote about this in his report on the activities of the institution over 10 years. See: [Tormysh, 1916, Nos. 566, 567].

a guarantee of their further cultural development' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 1, File 1649, Sheet 7]. However, the Russian government did not abandon its initial goal and occasionally called meetings of the highest level, where it made numerous, but compromise decisions. During the council meeting on 1 June 1913, State Duma member Enikeev addressed this problem quite harshly: 'Restrictions and tyranny towards foreigners have reached the utmost limit. The right to control schools has been turned into an instrument of continuous and harsh repression... The Ministry is pursuing a policy of Russification against foreigners, because they raise a specter called foreign separatism... For the sake of the state's interests and dignity, we must demand the banishment of this policy from the sphere of national education' [Mir islama, 1913. Vol. 2, Ed. 5, p. 303–304].

In this case, it was clear that the reformation of education needed a radically new approach. As time has shown, the confessional school reform planned as an optimal and effective solution for all the problems accumulated in this sector turned out to be only the first stage of major transformations. It was important to move forward and take other steps. But Tatar society, which still functioned on the principles of a confessional community, had almost no financial or intellectual means, and most importantly, no legal framework for creating a completely new system of secular education. In turn, the Russian state understood the risks of drastic measures from Muslims, who seriously endangered the ideological integrity of Russia.

Reformation of the educational system had to be in the empire's interests. The noticeable revitalization of Russian official circles in 1910 is evidence that the state had outlined a specific development model of the educational system for foreigners: primary school was supposed to be separate and confessional, whereas secondary and higher education had to be universal for the whole empire. The Tatar intelligentsia considered such prospects to be very dangerous for the integrity of the nation.

As Kh. Atlasi noted, 'nations that have schools win the worldly battle for existence, as every individual is armed with knowledge, while nations that have no schools have no power, due to the ignorance of its compatriots. A search for the reasons for the defeats inflicted up the Islamic world by other nations in the last few centuries comes down to the fact that Muslims had no knowledge and no schools, whereas their rivals had knowledge and schools' [Mehtep, 1913, No. 1, p. 19].

This problem was constantly and seriously discussed in the Tatar community. There was no unanimity of opinion, but they realized the need for reforms in this area: 'some claim that maktab and madrasahs must be strictly religious educational institutions, while others argue that they must be purely secular or mixed, and still others write that maktab should not be separated from madrasahs and both of these divisions... are parts of the same educational institution; some others argue that maktab, along with religion, must provide basic knowledge of general subjects and so on' [National Archive of the Republic of Tatarstan, Fund 420, Inventory 1, File 297, Sheet 13]. But they were all united by the idea that state education for them had to conform with religious and social specifics of Muslims. That is why they strongly insisted on introducing the subjects of native language and Tatar literature in schools for Muslims' [National Archive of the Republic of Tatarstan, Fund 420, Inventory 1, File 297, Sheet 13]. According to N. Katanov, the Russian intelligentsia did not have a clear idea about which language would be used in educational institutions for Muslims: 'some of them believed that by establishing European-style institutions, even with the Tatar language, Muslims would stop avoiding European knowledge and might eventually stop being Asians at all' [National Archive of the Republic of Tatarstan, Fund 420, Inventory 1, File 297, Sheet 13]. Others 'did not share those hopes and assumed that after getting out from under government control, Muslims, supported by Islam and European knowledge, would become even worse enemies of European Christians than they were before' [National

Archive of the Republic of Tatarstan, Fund 420, Inventory 1, File 297, Sheet 13]. Official circles took a stand, as they were wary not of the opening of 'special gymnasiums for Muslim boys or even for girls' [National Archive of the Republic of Tatarstan, Fund 420, Inventory 1, File 297, Sheet 58], but of the language in which these educational institutions taught, because 'if teaching in Tatar is allowed, then Tatarization will sweep Meshherjaks, Bashkirs and Kirghiz on an even larger scale than it did before, since there are a lot of Muslims who are willing to take European studies, but are not studying them because they are taught in Russian' [National Archive of the Republic of Tatarstan, Fund 420, Inventory 1, File 297, Sheet 58].

Educational system reform had indeed become one of the major problems of Tatar society. The Bureau of the Muslim Faction of the State Duma had a good reason for issuing a special decree stating that 'Muslims need new types of educational institutions that could be established on the general basis suggested by the educational committee of the Third State Duma. But the decree emphasized that it would be possible only when 'the amendments demanded by Muslim deputies are passed' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 4, File 4485, Sheet 1]. Those demands included: '1) primary schools in the Muslim occupied regions must teach in the language of Muslim children studying in school. 2) Primary schools must meet the interests of the state, but at the same time satisfy the religious and national interests of local population, their traditions and rights. 3) Teaching the Russian language in schools of areas with a Muslim population must start only at the beginning of the third year of education' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 4, File 4485, Sheet 1]. Since Islamic educational

institutions essentially remained religious even after reformation, the decree noted that 'they have to be excluded from the sector of the Ministry of National Education and be under the control of the Ministry of Internal Affairs, and the oversight of the educational process and internal regulations, as well as the management of teachers has to be assigned to spiritual assemblies' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 4, File 4485, Sheet 1]. However, members of the Islamic faction were no longer satisfied with the existing system of technical subordination of Islamic educational institutions to spiritual assemblies. Hence, the decree specified that further subordination would be possible only by reforming the spiritual assemblies, which would assign teachers and at the same time 'their responsibilities and rights would be defined and they would be paid' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 4, File 4485, Sheet 1]. The members of the Islamic faction were implying financial support for primary educational institutions as well, 'because Muslims are generally poor... This help is especially needed where there are no vakufs or the income from a vakuf is not enough' [National Archive of the Republic of Tatarstan, Fund 1, Inventory 4, File 4485, Sheet 3].

The situation in the religious educational system revealed many problems inherent in Tatar society. A society that turned towards secular values was unable to create an intellectual base for introducing and spreading it. The educational system, which was designed to consolidate the intellectual power of society, was restricted to confessional education. On the one hand, this position had some positive aspects: it consolidated the Tatar society around the Islamic ummah. On the other hand, a lot of opportunities for creating a civil society could not be turned into reality.

§ 3. National Press and Book Publishing

Alsu Akhtyamova

The beginning of the 20th century marked a critical stage in the formation of the Tatar nation and development of the national culture. The national press, that is book publishing and the press, which was an integral part of Tatar culture, had an essential role in the spiritual life of Tatar society. When distinguishing several stages in the development of Tatar book publishing, D. Iskhakov defines the period from 1901 to 1917 as the final one, when the formation of the national book publishing industry was completed [Iskhakov, 2010 b, p. 44]. Meanwhile, the establishment of the Tatar print media started only as a result of of the 1905–1907 Revolution.

Due to increasing demand for printed products, book publishing was becoming an important industry. Remarkably, Tatar businessmen achieved great success in this field as well.

Kazan was still the main center of the Tatar book publishing industry in the early 20th century. The leading book publishers were the printing house of Karimov brothers, Kazan University and I. Kharitonov (Table 1.4); from 1901 to 1917, Karimov brothers published half of the entire editions of Tatar books printed in Kazan, and one-third of the number of publications.

It should be emphasized that the opening of the Karimov brothers printing house early in 1899, which started operating on 1 March 1900, marks a new page in the national book industry, characterized by an increase in Tatar publications and a decrease in their production cost and selling price, which made printed goods more affordable to the general public [Karimullin, 1974, pp. 27, 42]. The company not only printed books, but also did typesetting, issued publications by lithography and had multicolor printing [Karimullin, 1974, p. 28]. National book printing made even greater gains during the years of the First Russian Revolution. For example, the printing house of the Sharaf brothers started operating on 1 November 1906 (opened in the house of V. Kazakov, in rooms

of the 'Bolgar'), but in mid-1908 it was closed down by order of the Kazan governor out of court and without an investigation. After G. Sainov 'purchased' the printing establishment, it was called Sainov's Printing House, and it was soon given the name 'Urnyak' (Example) (1908–1911). By an unspoken agreement, 'Urnyak' was acquired by V. Kazakov, who received a license to open a printing house on 29 March 1911. However, it was able to operate only until 26 June. Starting in 1913, 'Magarif' (Education) became the legal successor to the Sharaf brothers printing house ('Urnyak', Kazakov).

The printing house of the Idrisov, Galliev and Co. Trading House partnership was opened in September 1908, and, from then on, it operated in the publishing and bookselling business as the company Millyat (Nation) (license dated 25 November 1908). The 'Umid' printing house and type foundry was officially opened on 8 June 1911. These printing institutions, as well as Kasimov brothers printing house, played a crucial role in improving the artistic design and polygraphy of Tatar books [Karimullin, 1974, pp. 42, 119–125]. The significant contribution of I. Kharitonov, G. Kamal, M. Idrisov and I. Yuzeev to the development of Tatar typeface must be emphasized [Karimullin, 1997, p. 122]. In 1907–1912, Tatar books were also printed in the 'Bayanel-khak' printing house of A. Saydashev (license dated 17 March 1906) [Karimullin, 1974, p. 130].

Along with Kazan, Tatar books were published in other cities of the Russian Empire as well. Orenburg had printing establishments that were quite large for their time: F. Kari-mi's printing house (1917–1922), and printing houses of the 'Karimov, Khusainov and Co.' (1907–1915), 'G. Kusainov and Co.' (1915–1917) partnerships that often functioned both as editors and publishers. Within these companies, there were independent publishing companies, namely 'Belek', 'Khezmet' (Work) and 'Faida' (Benefit). According to A. Karimullin,

in the early 20th century, Orenburg had published about 400 Tatar books with a circulation of around one million copies, in addition to orders in the Kazakh and Russian languages [Karimullin, 1999, pp. 235–236]. The smaller towns of Orenburg region were also involved in the Tatar printing industry. In Troitsk, Tatar books were published in a printing house that belonged to F. Selyanikin, which was later acquired by the 'Khezmat' ('Work') partnership. There are some known cases of Tatar books printed in Uralsk.

Semipalatinsk had the 'Yardam' ('Help') partnership that was first involved in selling Tatar books, and later started publishing them as well. We note that the 'Yardam' publishing was organized by the Nigmatullin brothers in 1911 [Karimullin, 1974, p. 160].

In late 1905, the Tatar typefaces were acquired by the printing house of the Ufa guberniya administration. The first Tatar printing house also appeared in Ufa: the division of the Orenburg 'Karimov, Khusainov and Co. Partnership', known as 'Sheryk Matbagasy' ('Eastern Print', 1908–1917), and 'Tormysh' ('Life', 1914–1916). A publishing and printing company named 'Nur' ('Light') was founded in Sterlitamak. There were partnerships that were only publishing and bookselling businesses, such as 'Akcha', 'Irshad', 'Kitap' and 'Chulpan'. They placed their orders in the printing houses mentioned above. Altogether, according to Karimullin, Bashkortostan published 260 Tatar books with circulation of more than 725,000 copies [Karimullin, 1999, p. 226].

In Astrakhan, from 1908 to 1914, the publishing house of 'G. Gumerov and Co. Partnership' published 58 Tatar books (total of 123,400 copies). The Tatar printing industry regained its momentum only after the February Revolution, as Tatar print found its polygraphic base in the 'Nashriyat' printing house established on the basis of the 'G. Gumerov and Co. Partnership' printing house. At the start of the new century, the 'Type Foundry Printing House of I. Boragansky and Co.' continued publishing Eastern books (including Tatar books) in St. Petersburg. During the First Russian Revolution, Boragan-

sky became partners with St. Petersburg Akhun G. Bayazitov, who then founded the Nur printing house. The total number of Tatar books, estimated by A. Karimullin, printed in both printing establishments in 1901–1910 came to 148,400 copies [Karimullin, 1974, p. 179]. Another Eastern printing house opened in the capital in 1906 was known as 'Ulfa' ('Friendship'), which also printed a newspaper. A third Tatar printing house belonging to Usmanov appeared in 1909, and according to A. Karimullin, its legal successor was the Tatar printing establishment of M. Maksutov, founded in 1914 [Karimullin, 1999, pp. 183–184]. Moscow printing houses, such as those of O. Gerbek, the Lazarev Institute of Oriental Languages and M. Attay, printed single editions in Tatar. Some of the orders of Tatar editors were printed in other Moscow printing establishments as well, mainly by lithography. According to A. Karimullin, 14 books with total run of 28,000 copies were published in the city [Karimullin, 1974, p. 184]. But as a whole, according to a bibliographer, in the early 20th century, Tatar books were in third place after Russian and Latvian books in the number of publications and in second in circulation among national books of the peoples of Russia. He believes that such extensive development of the Tatar book industry was encouraged by the demand from other nations and publishers of Kazakh and Uzbek books, who joined Tatar printing houses at that time [Karimullin, 2005, p. 205].

Tatar publications included a wide range of literature, both by content and by the type of polygraphic design. They included were reference books, calendars, dictionaries, encyclopedias, the Nations of the World series (translation), textbooks, and works of philosophy, linguistics and other topics. However, literary works, including translations of works Russian and Western European classics, were one of the main components of the Tatar book collection. Books in Arabic published by Tatars not only displayed traditional texts of canonical literature (the Quran, Hadith and others), but also presented a large number of religious and social debates on particular local issues [Safiul-

lina, 2001]. There is no doubt that Tatar businessmen saw the national book publishing industry not just as a source of income but also as a canvas for educational and reformist ideas.

As national book publishing developed, the significance of Tatar periodical print media as a kind of printed source of the latest information became increasingly obvious. At the start of the century, the initiatives for establishing print media in the native language were first expressed by members of the Tatar intelligentsia. Notably, at that time, publication of the Turkic newspaper 'Tardzheman' ('Translator', 1883–1918) continued in Bakhchysaray. In St. Petersburg, a prominent social activist, R. Ibragimov, published the almanac *Miryat* (*Mirror*, 1900–1909²⁶) in Tatar [Battalov, 1996, p. 133].

The first newspaper in Tatar called 'Nur' ('Beam') was published on 2 September 1905 in St. Petersburg by the above-mentioned Akhun of St. Petersburg garrison, G. Bayazitov. The second by time of foundation in Russia was the Tatar newspaper 'Kazan Mökhbire' ('Kazan herald'), published in Kazan on 29 October 1905. Permission to publish it was issued to an attorney at law, member of the Kazan City Duma, S. Alkin, and at first, the newspaper was published in two languages, according to order, but later only in Tatar. Two more newspapers in Tatar appeared in the same year. On 27 November, K. Mutygi-Tukhfatullin from Uralsk published the first issue of 'Fiker' ('Thought') newspaper, and on 11 December, the above-mentioned R. Ibragimov published 'Ulfat' ('Friendship') newspaper in St. Petersburg [Gaynullin, 1983, pp. 12–13; Amirkhanov, 2005, pp. 121–122].

By the end of 1906, the national press was represented by twenty publications; hence, the plans of the establishment, who discussed the possible number of Tatar newspapers and magazines at the turn of the 19–20th centuries did not come about, and they came to the conclusion that there would be no more than 3 or 5 [Karimullin, 1983, p. 232]. It should be emphasized that Tatar print media had its ups and

downs from the time it was established. For example, in 1907 there were 28 Tatar periodicals, while in 1908–1909 their number decreased to 19, whereas in 1910–1912, there were no more than 15 of them. There were 24 Tatar newspapers and magazines in 1913, and 25 in 1914. There were 19 operating Tatar print media outlets in 1915, and 18 in 1916, while magazines dominated (11 and 12, accordingly). After the February Revolution, Tatar newspapers were announcing their opening one after another, so in 1917, there were at least 50 publications, including 14 magazines [Amirkhanov, 2002 b, pp. 47–51]. Experts note that, according to incomplete data, from 1905 to October 1917, 100 newspapers and magazines were published in Tatar in different years [Amirkhanov, 2002b, p. 15; Karimullin, 1983, p. 233]. Thus, according to R. Amirkhanov, Kazan had 29 print media outlets (including 11 magazines), Orenburg had 15 (10), Ufa 14 (5), Astrakhan 13 (4), Uralsk 6 (2), St. Petersburg 6 (1), Moscow 6 (1), Troitsk 2 (1), Petropavlovsk 2 (0), Tashkent 2 (0), Samara had 1 magazine, and Tomsk, Menzelinsk, Semipalatinsk, Kokand, Saratov and Simbirsk each had one newspaper [Amirkhanov, 2002 b, p. 52].

Especially popular were newspapers 'Kazan Mokhbire' ('Kazan Herald', Kazan, 1905–1911), 'Yöldiz' ('Star', Kazan, 1906–1918), 'Vakyt' ('Time', Orenburg, 1906–1918), 'Bayanel-khak' ('Herald of Truth', Kazan, 1906–1914), 'Idel' ('Volga', Astrakhan, 1907–1914), 'El-islakh' ('Reform', Kazan, 1907–1909), 'Koyash' ('Sun', Kazan, 1912–1918), 'Tormysh' ('Life', Ufa, 1913–1918), 'Il' ('Country', St. Petersburg–Moscow, 1913–1915), 'Syuz' ('Word', Moscow, 1915), 'Beznen il' ('Our Country', Moscow, 1916–1918), 'Il' ('Country', Moscow, 1917), magazines 'Din ve Magishat' ('Religion and Life', Orenburg, 1906–1918), 'Şura', ('Advice', Orenburg, 1908–1917), 'Iktisad' ('Economy', Samara, 1908–1913), 'Yalt-jolt' ('Sparkle', Kazan, 1910–1918), 'Ang' ('Conscience', Kazan, 1912–1918), 'Syuyumbika' (Kazan, 1913–1918), 'Ak Yul' ('Lighted Path', Kazan, 1913–1916), among others [Amirkhanov, 2002b, pp. 50–52; Gaynullin, 1983, pp. 18, 34, 45, 60, 64, 86–88; Gaffarova, 2006, pp. 36–39]. Among

²⁶ This was published in Kazan, and there were 22 issues in total starting from No. 17 (1903).

the characteristics of print media, their professional orientation was an important aspect. Tatar newspapers and magazines included socio-political, religious, satirical, literary, pedagogical, children's, business and economics, legal, women's and other publications.

It is also very important to define the ideological focus of print media. Analysis of literature shows that there are several classifications of the national press. In particular, in his latest works R. Amirkhanov suggests a differentiated approach (classification according to periods connected with the history of development of the entire Russian society): 1) years of the First Russian Revolution, 2) before the February Revolution, 3) before the October revolution [Amirkhanov, 2002 b, p. 59].

The researcher roughly divides Tatar print media of the 1905–1907 Revolution period into the following movements: 1) social-democratic (newspaper 'Ural'); 2) revolutionary democratic (newspapers 'Tang Yulduzy', 'Azat khalyk', 'Karchyga' magazine etc.); 3) radical democratic (newspapers 'Fiker', 'El-islakh', magazines 'Tup', 'Uklar', 'El-gasr el-Jadid' etc.); 4) liberal democratic ('Idel' newspaper, magazines 'Chukech', 'Tarbiya-i etfal', 'Chikertke', 'Islakh'); 5) liberal bourgeois (newspapers 'Kazan mokhbire', 'Yulduz', 'Vakyt', 'Ekhtar', 'Burgany Tarakki'); 6) moderate conservative (newspapers 'Nur', 'Ulfat', 'Bayanel-khak', 'Nezhat' magazine); 7) conservative (clerical monarchical) ('El-galyami el-islami' newspaper, 'Ed-din ve Eledep' and 'Donya ve Magishat' ('Din ve Magishat') magazines) [Amirkhanov, 2002b, pp. 60–62].

As we can see, Tatar newspapers and magazines covered a wide spectrum of ideological views. Notably, the turn of the 19–20th centuries featured a sharp upturn of activism of the Tatar nation in social life and, consequently, polarization of the community. The ideological battle between two Tatar social movements, Kadimists and Jadids, was building. During the years of the First Russian Revolution, Jadidism acquired a political tone, and the movement was developing in two directions—liberal and socialistic. The

liberal political party of Russian Muslims Ittifak el-muslimin (Union of Muslims), where Tatars had great influence, was established as a result of three All-Russian Congresses of Muslims (1905–1906). The period also featured the establishment of political organizations of Tatar socialist revolutionaries, such as Tangychlar (led by G. Iskhaki, F. Tuktarov) and social democrats Uralchylar (headed by Kh. Yamashev), while the mass radical democratic movement of Tatar youth El-islakh (ideological leader F. Amirkhan) was gaining momentum. Tatar print media had become an important center of consolidation of all these socio-political forces. In particular, 'Din ba Magishat' magazine was the mouthpiece of Kadimists. The members of the Central Committee of the 'Ittifak' were in charge of the following newspapers: 'Ulfat' (editor R. Ibragimov, founder and employee M. Bigiev), 'Kazan Mokhbire' (editor S. Alkin with the involvement of Yu. Akchura) and 'Yöldiz' (editor Kh. Maksudi). For instance, 'Tan Yoldyzy' covered the strategies of Tatar socialist revolutionaries (see for example: [Tan Yoldyzy, 1, 15, 27 June 1906]). During the period of the first State Duma, 'Tan Yoldyzy' politically leaned towards the labor faction. The newspaper criticized the work of Muslims and Tatar liberals, in general, emphasizing the impossibility of uniting all Muslims into a single union, primarily due to incompatibility of the political and economic interests of the bourgeoisie and working class [Tan Yoldyzy, 1906, 23 June]. Thus, the pages of these newspapers and magazines quite clearly expressed the political leanings of the publishing staff.

R. Amirkhanov characterizes the second period with the same list of publication types, except for the social democratic movement. The list is completed by another movement. He describes the newspapers 'Il', 'Syuz' and 'Beznen il' published during this period as media 'with a strongly pronounced national patriotic approach'. According to him, they denounced the colonial policy of tsarism towards non-Russian nations, and in opposition to this, advocated slogans of national and religious

unity [Amirkhanov, 2002 b, p. 65]. Another distinct feature of the Tatar press of the period from 1908 to the February Revolution was the explosive development of liberal bourgeois printing establishments, as well as revival of liberal democratic publications. Significantly, the notion 'liberal' had been somewhat transformed; hence, the boundary between these two directions was quite transparent [Amirkhanov, 2002b, pp. 63, 69].

R. Amirkhanov roughly divided the press of the post-February period into six movements: liberal democratic; national religious; national patriotic; military national (military press); revolutionary democratic; social democratic [Amirkhanov, 2002 b, p. 69].

Here we see the return of the social democratic movement represented by only a single publication, *Alga* newspaper. But at the same time, it featured diverse political reporting; for instance, the newspaper supported implementation of the principles of federalism in combination with national cultural autonomy [Amirkhanov, 2002 b, p. 74]. New ideological movements appeared: national religious ('Mokhtariyat' magazine, 'Kher Millet' newspaper, etc.) and national military (newspapers 'Beznen Tavvysh', 'Soldat Telege', 'Soldat Yalkyny', etc.). The defining attribute of the first type of press was natural coexistence of national and religious ideas; for example, 'Mokhtariyat' magazine published in Ufa advo-

cated the religious autonomy of Muslims and national unity under the auspices of Islam. The military press pursued the objectives of mobilizing soldiery to solve national problems with military actions. When analyzing this body of publications, the researcher noted the closeness of their positions to various other movements of national print media [Amirkhanov, 2002 b, p. 72].

Thus, all of the above proves that the Tatar book industry in the early 20th century was mainly in the hands of Tatars themselves. The establishment of new national printing institutions in a competitive environment reduced the production cost of Tatar books, and therefore, reduced their selling price, making them more affordable.

Along with the growing quantity, the quality of Tatar books had also improved, which is expressed in expansion of the collection and sophistication of the polygraphy and artistic design.

The rise of the national press was a new phenomenon and a major achievement in the spiritual life of Tatar nation. This abundance of print media in the Tatar language of various professional directions was proof of the high level and maturity of Tatar journalism in the early 20th century. The ideological diversity of the national press was a result of political activation of the Tatar bourgeoisie and intelligentsia and the development of a national movement.

Thus, the early 20th century marks the final formation stage of the national printing industry.

§ 4. The 'Golden Age' of Tatar Culture: Tatar Literature at the Beginning of 20th Century

Daniya Zagidullina

The early 20th century can be rightly considered as a time of the rise of a new Tatar literature, rapid development of Tatar culture and a 'Golden Age' in the national literary movement. The explosive development of Tatar print media, the publishing industry, a new course towards secular education, and change of cultural focus from East to West all gave momentum to the formation of new cultural tendencies.

Tatar secular literature of enlightenment, which formed relatively late, only in the latter half of the 19th century during the rise of national self-awareness, was focused on the need for reform of a specific national society. The enlightenment movement coincided with the secularization process, which is why the genres and styles went through changes towards European culture. As a whole, it was dominated by enthusiasm, motivation of the aspirations and actions of the central figures, themes of interrelation between moral perfection and enlightenment, the importance of family in social reforms, emancipation of women from the family and spiritual oppression and so on. These fea-

tures did not contradict one another, but rather were in sync with the aspirations of the young Tatar intelligentsia who appeared on the literary scene in the early 20th century.

The literature of enlightenment was developed and enriched in the early 20th century: in drama with the first plays of G. Iskhaki and G. Kamal; in poetry by M. Gafuri, young G. Tukay, S. Ramiev, Sh. Babich and others; in prose by R. Fakhrutdinov, F. Karimi, G. Iskhaki, G. Chygtay, Z. Khadi, Sh. Mukhamedov, and so on. Research of recent years has proven that the enlightenment paradigm did not lose its role in Tatar literature in 1905, but remained relevant up to 1917 and maintained its importance in the national culture of the entire 20th century. This explains many features of the literary movement.

Tatar literature of the early 20th century can be divided into two periods: 1905–1911 and 1912–1917. Up to 1912, the enlightenment paradigm remained central, and G. Ibragimov called this period the 'period of first steps' [Ibragimov, 1910]. The general formula of

progressive enlightenment was expressed in opposition between educated and moral characters and uneducated and immoral characters ('Eternal Mosque' ('Mäñgelek Mäçet', 1901) Ya. Vali) in order to promote the idea of the importance of education, becoming an educated and harmoniously developed individual ('Love is Gone' ('Ütkän Mäxäbbät', 1905) by A. Biktimirov), and portraying an ideal role model ('Excellent Education' ('Yaxshi Täربیya', 1909) by Ya. Moradi). The literary works take on the theme of a battle between new and old (Jadid and Kadim), where good is usually represented by a supporter of the new and in a tough battle defeats evil. For instance, *Riza Fakhretdin* (1858–1936), a notionalist, social activist and writer, suggested an ideal of a Muslim woman with a European education, who could become not only the mother of a family, but of a whole nation.

Sentimentalism was the category that gradually led the literature of enlightenment away from didacticism, improving its accessibility and guiding the national literature towards psychologism. The dramas 'Poor Child' ('Kizganiç Bala', 1898) by G. Kamal, 'Pity' ('Kizganiç', 1913) by M. Fayzi, 'The Last Hello' ('Soñgi Sälam', 1917) by K. Tinchurin; short novels 'Meeting, or Gulgizar' ('Oçraşu, yaki Gölgiyar', 1902–1903) by G. Iskhaki, 'Life Passed in Poverty' ('Fäkiyrlek belän ütkän Tereklek', 1902–1904), 'Lean Year, or A Corrupt Girl' ('Açlık Yel, yaki Satlik Qiz', 1907), 'The Poor' ('Yarlılar, yaki Öydäş Xatin', 1909), and 'Love Letters' ('Mäxäbbät Xatlari', 1912) by M. Gafuri represent individual subjective forms of the psyche and conscience, thus broadening the axiological and aesthetic boundaries of the pieces.

While pointing out the strengths and weaknesses of the enlightenment literature, G. Sagdi wrote that those ideal images, which were supposed to awaken new thoughts and ideas in the people, 'resembled celestial rather than worldly characters' [Sägdı, 1926, p. 113]. The most true to life were negative characters, because they 'embodied the most negative aspects of Tatar society' [Sägdı, 1926, p. 112]. It also explains the increasing criticism of the existing order: novelists draw attention to the poverty of ordi-

nary people ('Life in Poverty' ('Fäkiyrlek berlä Tormış', 1902) by M. Gafuri), judge the irrational actions of uneducated mullahs ('Miserable Girl' ('Bäxetsez Qiz', 1905) by Z. Khadi), describe old method madrasahs as a place of degradation ('Magsum' ('Mäğsum', 1906) by Z. Khadi, 'Expulsion of Zaki Shakird from Madrasah' ('Zäki şäkertneñ Mädäsädän Quilui', 1907) by G. Ibragimov). This holds true to the publicistic and moralising pathos. Satire gained unprecedented popularity, as it served as a basis for critical realism. These processes are clearly showcased in the works of Sh. Mukhamedov.

Shakir Mukhamedov (1865–1923) was a writer, illuminator and journalist. His first short novels 'Ignorance, or Uncle Galiakber' ('Cähalät, yaxud Ğaliäkbär ağay', 1901), 'Under the leaf, or Makaryevskaya market' ('Yafraq astı, yaki Mäkarca yarminkäse', 1901) describe the lives and morals of Tatar merchants. While criticizing them for their ignorance and greediness, Mukhamedov promotes educational ideas. He compares the records management of his characters with the order in the offices of merchants of other nationalities, and encourages readers to get educated and master the fundamentals of the profession. The topic of enlightenment is particularly prominent in the didactic poem 'New Badavam' ('Yaña Bädävam', 1903), in the short introduction to which the author writes '*Our nation is ill... Our illness is ignorance. And ignorance can be cured only with knowledge and education*'. While his first short novels earned Sh. Mukhamedov respect as an excellent satirist, in the famous short novel 'Japanese war, or Volunteer Batyrgali ağaj' ('Yapun suğışı, yaxud Dobrovoleç Batırğali ağay', 1905) satire intersects with a lambent humour that often turns into cutting irony. The tale ridicules the printed media industry that was driving people crazy with its political slogans and clamour, and the false patriotism of Tatar and Russian merchants during the Russian-Japanese war. By juxtaposing the 'volunteers' Batyrgali and Shubin to the real heroes of war from the peasantry, the author exposes the anti-humanity of military operations. The engaging storyline, accurate characteristics, an understanding of

the human mentality and techniques taken from adventure fiction made this short novel so popular. His pen was known to create romantic pieces as well. One of the writer's last short stories was 'The Khan's daughter' ('Xan qizi', 1908). It focuses on a love story between the Khan's daughter, Fatima, and the Khan's prisoner, the son of the Iranian Shah, Shirin. The name of the young man, the way the characters meet and their escape all resemble the storylines of Medieval Tatar literature ('Khosrov and Shirin', 'Sukhaji and Guldursen'). In his story the author created the ideal of a strong and freedom-loving woman. The original ending of the story, the cowardice of the prince, and the allegorical image of the dragon that ate the brave girl, makes the story work in two levels: traditional, as in how the 'disobedience of children leads to fatal ending', and philosophical, as in how 'human flaws can spoil happiness, end love and lead to death'.

Satiric literature gradually transformed into conditional allegorical imagery. For instance, the central image in the poem 'Bedbug' ('Kandala', 1916) by Sh. Babich is created in the symbolic allegorical key: the author uses the image of a bedbug to show his attitude towards the initiators of World War I. Another poem by Babich 'Gazazil' (1916), written as a parody of Medieval stories about prophets, using detailed stylisation rejects the value system of didactic literature and indicates the emergence of a secular poetic genre.

The formation of critical realism was greatly influenced by sayakhatname (travel notes), which vividly reflect the radical reformation of the national genre system. At that time, Tatar literature witnessed the emergence of travel notes that combined historical and biographical time in equal parts, where the synthesis of literary and publicistic elements was supported by author reflections on the burning issues of Tatar society or human values in general. Usually a romantic protagonist-traveler told about distant countries, the nature of foreign lands and the life of people living in those lands. But in addition, the retrospect of historical events in the past enriched the story with mythologi-

cal, philosophical and specific historical details that increased the emotional allure of travel essays. Sayakhatname started losing its integrity as a genre by turning more into a literary than a publicistic endeavor. Along with the description of a journey, these pieces often narrated a tragic love story or a story about untimely death, etc. Nonetheless, the position of the author-illuminator was crystal clear in his aspiration to enlighten Tatars. After studying violations of the canon in the works of G. Rafikiy, G. Monasyrov, Sh. Akhmediev, A. Biktimirov and other novelists of the early 20th century, we came to the conclusion that the reason for the changes in the nature of sayakhatname was the tendency to mythologise the history of Turko-Tatars [Zahidullina, 2003, p. 178 b.].

The work of one of the founders of the Tatar professional theatre, dramatist G. Kamal was developing towards the incrimination of the moral state of some members of Tatar society. Galiygar Galiyberovich Kamal (1879–1933), dramatist, publicist, theatre and social activist, against his father's will chose the path to serve the enlightenment of his nation. In his first literary works 'Miserable lad' ('Bäxetsez yeget', 1900), 'Three villains' ('Öç bädäbäxet', 1900) and others, the dramatist criticises the patriarchal structure of Tatar families. The following years discovered his talent as a comedic dramatist. In his comedies 'The first performance' ('Berence teatr', 1908), 'For a present' ('Büläk öçen', 1909), 'Bankrupt' ('Bankrot', 1911) and 'Secrets of our town' ('Bezneñ şähärneñ serläre', 1911) he satirically recreated the lives of some Tatar social categories of the early 20th century and touched upon issues of fathers and sons and general familial relationships. The comedies of G. Kamal brought about an entire incriminating movement in national dramaturgy. By ridiculing certain aspects in the lives of some social categories, authors sought for affirmation through negation (comedies 'Fight' (1907) by G. Iskhaki, 'Model madrasah' ('Nizamli mädräsä') by S. Ramiev, 'Lipstick issue' ('Pomada mäsläse', 1908) by I. Bogdanov etc.); short novel 'Fatxulla xazret' (1909) and dramas 'Youth' ('Yäşlär', 1909), 'Unequal'

('Tigezsezlär', 1913), short story 'Samigulla abzyj' (1916) by F. Amirkhan; plays 'Hell' (1909–1910), 'Society' ('Cämgiyat', 1909–1910) by G. Iskhaki etc.) by making the social and moral ideological diseases of society a part of an artistic idea. In the drama 'Teacher' ('Möğallim', 1908) by G. Iskhaki, the comedy 'Live, Zubaida, I live' ('Yäşä, Zöbäydä, yäşim min', 1907) by S. Ramiev and others, the authors did not just show their attitude towards the characters, but didactically revealed the harmfulness of the old order.

During this period, Tatar dramaturgy developed new genres: tragedy ('Zulejxa' by G. Iskhaki), historical drama ('Homeland Heroes' by F. Tuikin), melodrama ('Teacher' ('Möğallimä') by G. Iskhaki); touched upon new themes: the intelligentsia's attitude towards revolution ('Two opinions' ('Ike fiker') by G. Kulakhmetov), the moral and intellectual freedom of the young generation ('Youth' ('Yäşlär') by F. Amirkhan) and others. The prose vividly featured publicistic works (short novels 'Prison' ('Zindan', 1907) by G. Iskhaki, 'Prison memories' ('Mäüqufiyat xatiräläre', 1907) by Y. Akchury); nominal symbolic (the drama 'Two opinions' (1906) by G. Kulakhmetov) and existential ('World book' (1910) by N. Dumavi) aspects. The short story was starting to become a separate genre: authors were writing social, socio-political, historical, satirical, psychological and romantic short stories. The growing interest in Western culture made them experiment with the genre's subject matter and forms. People were interested in the social status and personal qualities of human beings, for which authors found new forms, for instance, short stories/nazires, which were parodies of Medieval literature ('Yaña äsxabe qäxaf' ('New cave-men' (1908) by Z. Khadi). On the one hand, the publicistic and satirical pathos was being reinforced ('Holidays' ('Bäyrännär', 1909) by F. Amirkhan, 'Simurg' ('Sämrug koş', 1910), 'Deputy' ('Deputat', 1910), by Sh. Kamal). Some short stories that were based on true life events were presented to readers as essays. The new themes of, for example, provocation ('Black spot' (1912) by K. Baker, 'Great curse'

(1912) by Gubaydullin); 'little man' ('Kalosh' (1909), 'Bashkir's happiness' ('Başqort baxete', 1909) by G. Iskhaki, 'Old farmworker' ('Qart yalçı', 1912) by G. Ibragimov); 'superfluous people' ('Extinct hell' ('Uti süngän cähännäm', 1911), '... from the deceased's notebook' ('... Märxümneñ дәftärennän', 1914) by G. Ibragimov, 'Life of Khamit' ('Xämitneñ xäyati', 1911) by M. Gafuri) and war ('Victim of the weak grandam' ('Zägiyf qarçıqniñ qorbani', 1914) by F. Amirkhan, 'Wooden leg' ('Ağaç ayaq', 1916) by N. Dumavi, 'Uncle Khakimdzhan' (1916) by K. Tinchurin) appeared through an understanding of the escalating contradictions between an individual and society, material and spiritual aspects of the world, and the real and ideal intelligentsia of the early 20th century, and gave Tatar literature a great social edge. On the other hand, the growing interest in human psychology ('In the blizzard' ('Buranda', 1909), 'Tramp' ('Suqbay', 1909), 'Awakening' (Uyanu', 1909), 'In the crow's nest' ('Qozğınnar oyasında', 1910) by Sh. Kamal), including the inward feelings and emotional struggles of characters so accurately described by authors, marked the emergence of the psychological short story. Sh. Kamal, Sh. Mukhamedov and F. Amirkhan created stories that were composition-wise suitable to be novellas. This phenomenon was continued in the 1930s as well (collection of novellas 'Pearls' ('Märcännär', 1936) by K. Tinchurin).

In the beginning of the 20th century prose was gradually getting closer to the real everyday life of Tatar society, but was also changing its aesthetic direction. Socially and nationally accentuated and focused on the main problem of Tatar reality (the fate of the nation), the short novel by G. Iskhaki called 'Disappearance two hundred years later' ('Ike yöz yeldan soñ inqıyraz', 1902–1904) with its fantastic publicistic form, playful elements and symbols is an example of a nominal metaphoric prose piece, which allows for socio-cultural generalisations. The author explains the fall of the Bulgars to be the result of fageyism and fanaticism, and blames it on uneducated mullahs.

The first literary pieces that featured marks of this ideological aesthetic switch could be the

novel 'Beggar girl' ('Telänçe qiz', 1901–1908) and short novel 'Is this life?' ('Tormışmi bu?', 1909) by I. Iskhaki, the short stories 'Sleep on the holiday's eve' (1907), 'I grew old' ('Qartaydim', 1909) by F. Amirkhan; 'Awakening' ('Uyanu', 1909) by Sh. Kamal and others. They carry a new aesthetic system oriented towards psychologism. The social/psychological novel 'Beggar girl' by Iskhaki for the first time follows a Tatar woman in her battle for the nation's future, and brings up the issue of social equality. The psychological novel written in the form of a diary 'Is this life?' (1911) by Iskhaki from a position of self-irony unfolds the entire tragedy of the blind imitation of out-dated obsolete religious canons and dogmas in the education of the younger generation. Another remarkable theme is the fate of the national intelligentsia, where a Muslim protagonist is portrayed in search for beauty and perfection and his place in life (F. Amirkhan 'On the crossroad' ('Urtaliqta', 1912); G. Ibragimov 'Young hearts' ('Yäş yöräklär', 1912) etc.), and in search for happiness ('Country teacher', 'Seagulls' by Sh. Kamal). The life of seasonal workers 'travelling' in pursuit of earnings has become a background for portraying spiritual contrasts and the complicated emotional struggles of Sh. Kamal's characters ('Father', 'In the crow's nest', etc.) The works of G. Ibragimov and M. Gafuri feature heavy social themes ('Old farmworker', 'Shepherds' by G. Ibragimov; 'The poor...' by M. Gafuri) and an ambition to depict an ideal harmonious image of a common person. One of the central themes remains the life of a Tatar woman diligently striving for freedom ('Beggar girl', by G. Iskhaki), whose inner soul is full of the romantic dreams of a happy and free life with her loved one ('Khayat' by F. Amirkhan and others).

The writer who led the ideological aesthetic search in Tatar literature was *Fatikh Amirkhan* (1886–1926). His works combined national artistic tradition with the achievements of Russian and European verbal art. Along with all Tatar literature of the early 20th century, the writer switched to realism through a deepening of the psychological line, as the origins of ro-

manticism and modernism intersected with the aspiration to comprehend the individual and general in one single key.

The contrast between the real and the ideal, the old and the new, the beautiful and the ugly in the short stories 'Holidays' ('Bäyrämñär', 1909), 'Lunch during uraza' ('Köndezge säxär, yaki ruzasızlar', 1911), 'How to contribute to the progress of the nation' ('Millätne täraqqiy itterü', 1908), 'Blissful day' ('Räxät kön', 1910), 'Mullah came to preach' ('Xäzrät ügetlärgä kilde', 1912) and others reflects the writer's dream of reforming the old social order of everyday life, and his resentment at ignorance, fanaticism and all that stands in the way of the social, cultural, spiritual and moral progress of the nation. In this regard, the author has a remarkable satirical short fantasy tale 'Fatxulla xazret' (1909), where he brings the protagonist, Kadimist Fatkhulla, back to life in the Kazan University laboratory 40 years after his death. The fantastic elements of the plot allow the author to grotesquely show the aspects of his current reality opposed to the ideal future. In the enlightened utopia created by the author, the Tatar people are shown to be civilized, possess high morals, and are financially and spiritually wealthy: Kazan has 20-storey buildings and mosques that can fit 200 thousand people at once. People are served by robot machines, they use wireless phones with displays, automatic cooks, air ships with a capacity of 700 people, doctors can bring the dead back to life, and so on. 'Similar to how a dark spot seems even darker on a white background, the background of a highly civilized world makes the retrograde image of Fatkhulla khazret even more accentuated, more visible' [Nurullin, 1971, p. 133].

In the short story 'Humiliating love' ('Xäkarät sanalğan mäxäbbät', 1908), the author focuses on the analysis of the protagonist's mental state, whose love interest confessed to him that his love is nothing more than shameful for her. The feelings of bitterness and humiliation lead him to a deeper conscious understanding of himself and the ones around him. At the same time, while describing the protagonist's emotions the

author shows how the highest meanings and eternal values become a part of human life: they have to do with youth, the aspiration to be happy and the capability to love. These categories reconcile and generate opposite spectrums of human life, happiness and suffering, joy and despair. The main protagonist of the short story 'I grew old!' ('Qartaydim!', 1909), a 29-year-old man named Mustafa, seems to have achieved everything he wanted: he earned his high school diploma and was accepted to university. But Mustafa is depressed, he is far from feeling happy and is disappointed and unsatisfied with his life. The reasons for the protagonist's mental crisis are complicated and diverse. They are obstacles that were in the way of his goals; the stress over the fact that he does not have a real job he could dedicate himself to, the realisation of how short human life and happiness in this world are, and his doubts on the absoluteness of supreme moral and spiritual values and social ideals. Mustafa is almost in despair because of how old he feels: 'Give me back my youth, my innocent youth! I will give up everything I have achieved in return!' [Ämirkhan, 1984, p. 45], the protagonist cries. Thus, the writer integrates different levels of motivation, from mundane and social to the transcendental.

But the highest peak of F. Amirkhan's prose and of all Tatar literature of the early 20th century is the short tale 'Xäyät' ('Khayat', 1911). The writer focuses on the psychological drama of a young girl torn apart by two opposites: her brain and heart, her awakening sense of self, new attitude to the world and moral commandments of the old Tatar society. The internal struggles come from Khayat's external relationships with her closest surroundings and, first and foremost, her family. Khayat's parents try to raise their daughter according to traditional religious views on the behavior of a Tatar girl: she has to read Namaz and religious books and is not allowed to meet men on her own (even when it is an accidental encounter, she has to cover her face). At the same time, Khayat has been friends with Lisa Myasnikova since she was a child, she knows her family and her brother Mikhail. The life of the Myasnikovs is a lot different from her fam-

ily's: Liza and Mikhail, unlike Khayat, receive a secular education and they often throw dance parties with a lot of guests at their house. Her interaction with the Myasnikovs does not go unnoticed for Khayat. She learned to read in Russian, which broadened her mind, and she is quite confident when speaking with Russian students. Yu. Nigmatullina calls F. Amirkhan a founder of the socio-psychological short tale in Tatar literature: 'His heroines stand up to their surrounding world not with their social aspirations or the breadth of their views, but with the integrity of their character, nature and pursuit of happiness' [Nigmatullina, 1970, p. 67].

The inward emotional arc of the short tale is the heroine's pursuit to harmonise her surrounding reality. Khayat finds this harmonising instrument in love, which is shown in her last call to God: 'God, give me love! Oh God, I'm begging you, give me love for my whole life!'. Each event that holds subjective meaning for the heroine, such as Mikhail's love confession, meeting a student from Moscow named Gali Arslanov, being matched with a young boy, Salikh Fatykhov, cause contradicting thoughts and feelings in her soul, which turn into agonising sorrow and anxiety. The emotional outbursts and desire to make her own decisions transform into a rational realisation that she will never be happy and free. The principles and devices of literary generalisation used by F. Amirkhan make Khayat's story a reflection of the life of the entire Tatar youth and nation in general.

In his novel 'On the crossroads' ('Urtalykta', 1912), F. Amirkhan unfolds the mentality of a person in the transitional era who is torn with doubts and cannot find his place in the world. The writer synthesises principles of typification that are characteristic of the literary epic and lyrical genres. He presents a wide panoramic picture of the national historical reality of the early 20th century, including urban life, Kazan cultural life and the environment of democratic intelligentsia and students. Khasan has a reflective analytical way of thinking, which is why the main features of the protagonist are self-contemplation, self-analysis and self-cognition. The subjective inner world of the character is

displayed in direct confessional form. Khasan has broken up with his past, does not accept the old life, contemplates on the future of the nation and its culture, tries to figure out the reality surrounding him, dreams of a reformation of the Tatar nation's life geared towards joining the Russian-European enlightenment. At the same time, he finds a lot of weaknesses and faults within himself, such as the incapability of focusing on achieving his goals, and no will power and self-discipline that could help him to make up for gaps in his education, etc.: '... through picturing the everyday life of the protagonist, through his emotions, Fatih Amirkhan tries to unfold something deep, something of social significance: the search of the Tatar youth in 1906-1911 for ideals that can transform the Tatars' social and spiritual life' [Ganieva, 2002, p. 92].

The prose of F. Amirkhan, along with the devices of realistic literary writing, also has various forms of symbolisation, nominal metaphorical imagery and poetics of antinomies and contrasts, which allowed him to expose the disharmony of national existence, its tragic contradictions and conflicts. His short story 'Tatar girl' ('Tatar qizi', 1909) was perceived by contemporaries as a new phenomenon in the Tatar literature [Ämirkhan, 1984, p. 428]. Later, G. Tolymbai would refer to this piece and the short story 'Among the ruins...' ('Ber xärabädä...', 1913) as the appearance of symbolism in the Tatar literature [Tolymbai, 1936, p. 81]. Indeed, the writer builds in 'Tatar girl' a system of images that answers to the aesthetic of symbolism. In picturing the fate of a Tatar woman, the writer calls for the universalism of generalisations. The story of the Tatar woman is not just an allegorical portrayal of the lives of all the Tatar Muslim women; the image symbolises Life, Sincere Dreams, Beauty, Holiness. The Dark Power is a symbolic model of the typical widespread circumstances that fetter life, that are the evils of social reality. It strips humans of their freedom and kills beauty, dreams and hopes.

The author consequently follows the process of 'burial', or the transition into a living

doll: the girl had lived freely until she turned 7, which is when her isolation starts. From then on her life at home is associated with the fate of a prisoner, and there is only one way to escape: marriage. However, family life is also portrayed in a context of captivity. The Tatar girl is destined to become a toy for her husband, his slave. The Tatar girl finds herself locked away in 'four walls'; the sphere of life turns into the sphere of oblivion, death.

The writer juxtaposes fatal generalities to the phenomenon of life as the supreme value. His hope and faith in the possibility of bringing the 'living doll' to life and transforming the Tatar girl's personality is linked with the girls of the Islamic Orient who do not want to be buried alive. This literary piece is dedicated to the 'girls of the Islamic East who do not want to be buried alive'.

Modernism was developing forms of exchanging and blending different forms of art, which has been expressed by the notion of artistic fusion. One example of the dialogue between literature and plastic arts is Lecomte du Nouÿ's picture 'A Eunuch's Dream', a reproduction of which was published in the first issue of 'Soznanie' magazine (1912) as an illustration to the 'The East sleeps' näser by F. Amirkhan. The picture shows a peacefully sleeping man from the East. He lies on a luxuriously soft bed in a shabby hovel with a hookah beside him, waiting for him to wake up. The picture has been interpreted the following way: the sleeping man is the Islamic East dreaming of paradise and houris. Meanwhile, the ones who are awake are dividing his country, stealing its treasures and planning to enslave it. They long for knowledge, engage in trade and confidently put all their plans into practice. The opposition of two allegorical images (sleeping and wakeful) expresses the author's worries and anxiety about the fate of his nation.

In an attempt to make sense of the current events in their historical perspective and in their projection on the past and future, the writers of the early 20th century turn to mythological images and plots. In 1913 F. Amirkhan created a series called 'Tatar qizlari' ('Tatar girls'), which

included three short stories: 'Zuhra girl on the Moon', 'Syuyumbeka' and 'Gambled away Zulkhabira'. The plots from mythological traditions change their nature and content and unite into a new individual and original mythopoetic idea. The writer assumes that a certain distance in space and time gives the opportunity to unite opposites and overcome antitheses.

In search for the new artistic devices to intensify the expressiveness of written words, the Tatar writers of the early 20th century turned to impressionistic devices. The elements of impressionism in the works of F. Amirkhan are not only a stylistic phenomenon, but also a part of his general artistic world view. Amirkhan The orientation towards recognising the substantial basics of existence manifested in the empiricism of life, conjoins with such an inherent urge to capture the outside world with its inconsistencies and record the colours of a unique momentary impression (short story 'Intoxicated by spring' ('Yaz isereklegendä', 1916).

There are some significant elements of typological similarity between the plays of F. Amirkhan and West-European and Russian dramas of the early 20th century, nominally referred to as 'new drama'. In his play 'Youth' ('Yäşlär', 1909), F. Amirkhan, continuing the traditions of I. Turgenev, portrays a conflict between 'fathers' and 'children', an ideological opposition between the members of two generations. But the young characters of the drama often have arguments about the historical fate of the nation, social progress and the paths leading to it as well. By juxtaposing the ideological positions of the characters regarding the old and the new, F. Amirkhan shows the inconsistencies of the young generation, turning the dramaturgical action into a line outside of events. The subject matter is ideological battles that showcase the dramatic dissociation of the main socio-historical forces of the era. The distinctiveness of theatre as a drama of ideas determines the ways the author expresses his position. The questions of how to change life and who carries the ideal of national progress remain unanswered. But the collision of different points of view, the 'voices' and 'truths' of the characters, unravel the author's belief that only

the younger generation is capable of rebuilding the old world, stagnated in its habits and prejudices.

F. Amirkhan turns to the traditions of the Russian literature in his other play 'Unequal' ('Tigezsezlär, 1914), subtitled 'New people'. The drama follows two central conflicts. The first one is the conflict between the old and the new, between parents and children, between Safyi Nasybullin and his son Gumer, who are members of the Tatar trading bourgeoisie of two generations. Another conflict involves two types of the Tatar national intelligentsia, the new one, pursuing all progressive things but not denying the Tatar national culture and their origins (represented by Suleiman, Salime, Rakiya), and the 'westernists', for whom progress means giving preference to all Russian things and despising everything that is native (Zakir, Gabdulla). The theme running through the entire play is the author's idea that the basic premise for true progress and prosperity in the Tatar nation is not the absolute denial of everything native and favouring all Russian, but combining and choosing the best out of the both cultures.

Thus, in the Tatar literature of the early 20th century, romanticism established itself as an independent movement in the works of F. Amirkhan ('Precious minutes', 1912, 'On the crossroad', 1912); G. Ibragimov (novel 'Young hearts', 1912, short stories 'In the sea', 1911, 'Love-happiness', 1912, 'Mullah-thief', 1911); M. Fayzi (dramas 'Fate's joke', 1913, 'Galiyabanu', 1916); Sh. Mukhamedov (short story 'Khan's daughter', 1908), and in the poetry of S. Ramiev, G. Tukay, N. Dumavi, S. Sunchali and others. The main theme of the romantic literature and the Tatar literature in general, was the nation's fate. Works of that period are suffused with dramatical contemplations about the future of the Tatar people, about the nature of the Tatar character developed through national history. In order to awaken national self-consciousness, authors turned to history ('Zuleikha' (1912) by G. Iskhaki), legends ('Bulgar girl Ayslu' (1910), 'Khan's daughter Altynchech' (1914) by M. Gafuri, 'Daughters of the nation' (1912) by F. Amirkhan, 'Khan's

daughter' (1914) by Sh. Ahmadiyev, etc.), and symbolic images of dreams ('Let it disappear' (1911) by Sh. Sattarov). The main tendency was the attempt to reproduce an entire picture of the time period. The long forms of romantic prose ('Young hearts' (1912) and 'Our days' (1914-1920) by G. Ibragimov) are full of dramatic feelings of worry caused by reality and feature deep psychological analysis. The idealisation of the nation's life, of the canons of Islam, of the religious figures and their wives, praising family happiness and love for children added up to an idyllic picture in the novel 'Mullah babai' (1910) and in the tale 'Osatzbike' (1910) by G. Iskhaki. Historical short stories return to the literary scene in the form of historical episodes or biographical stories of famous figures, such as Idegei, Chinggis Khan, Chura Batyr, Nurutdin and others ('Warrior Satysh efendi' (1912) by F. Tuykin, 'Tatar people' (1911) by Sh. Sattarov, 'Chinggis' (1911) by A. Tangatarov). The main themes of the historical pieces were the ruthlessness of the past and the fatal predetermined nature of history.

Tatar literature of the early 20th century is abundant in philosophical short stories based on the degradation of the world and humanity that has lost its understanding of the meaning of existence. They evoke a range of associations ('Bulgar girl Ayslu' (1910) by M. Gafuri, 'In a slum...' (1913) by F. Amirkhan, 'Therefrom' (1913), 'In the flower garden' (1913) M. Khanafi, 'My fantasy' (1913), 'In search for a companion' (1916) by G. Gaziz, 'In the cemetery' (1916) by N. Gasryi). The elements of the Tatar romantic literature are the elements of perfection, beauty and harmony (short stories 'Hope' (1914) by A. Tangatarov, 'Mysterious-mysterious fairytale' (1913) by G. Rakhim). The romanticists picture love as a power that brings people together and is capable of standing up to war and violence ('Magical drops' (1914) by N. Dumavi). Love elevates people, inspires them (short stories 'Two good people' (1910) by Sh. Kamal, 'Iskander' (1915) by K. Tinchurin, etc.).

The opposition of perfection and life is reflected in the ambivalence of the protagonist's

soul and conscience. The genre of the Tatar short story develops a special way of portraying the phenomena of the world and the spiritual movements of a person through contrasting comparisons. The sorrow of loneliness and the longing for perfection expressed through the romantic protagonist intensify the eschatological orientation of the Tatar literature (poems 'We' (1908), 'Hopes' (1912) by Dardmend, 'I am dying' (1908) by S. Ramiev, poem 'Korkut' (1916) by F. Burnash, short story 'Therefrom' (1913) by M. Khanafi, etc.), which is wrapped up in a unique philosophy of death.

Salvation from hostile reality is found in an escape to nature and exotic lands ('In the sea', 'Children of nature' by G. Ibragimov), childhood memories ('Old days' (1903) by Dardmend), the imaginary world of utopia ('Village' by S. Ramiev), one's inner world ('Soul' (1909) by G. Tukay), death ('Therefrom' (1913) by M. Khanafi), love ('Love-happiness' by G. Ibragimov) and faith (religious poems by G. Tukay, etc.). For instance, G. Tukay sees childhood as a time of innocence, purity and freedom for not just the period in the life of a person, but for humanity in general ('Time of celebration and childhood' (1908), 'I remember' (1909), 'I stopped wishing' (1909). Poets animate nature and find harmony for their feelings and emotions within it. People who live with strong connections to the nature are idealized as well ('Children of nature' by G. Ibragimov).

The unique romantic protagonist, crafted according to the Eastern traditions, including Medieval Tatar poetry, and attempts to poetise the protagonist's idea of reviving the nation contributed to the formation of a special movement in the Tatar romantic literature called gisyanizm. The origin of gisyanizm goes back to the phenomenal philosophy 'Ana-al-khak', which promotes the divinity of the human beings expressed in Sufi poetry, and declares that every person's soul has a bit of Divinity in it that keeps harmony and improves the person and society, as well as to one of the main doctrines of Sufism, asceticism, which is interpreted as a way of saving humanity and finding salvation from the imperfections of worldly ex-

istence. The cornerstone of gisyanizm is a rebel protagonist who raises his voice against worldly laws, God and religious canons for the sake of individualism. The protagonist considers his goal to destroy material and spiritual values, to destroy ideals and even to destroy the world, as he acknowledges only one true value: spiritual freedom. He rebels against all the constraints of personal freedom.

The enlightenment poems of M. Gafuri feature the first indications of gisyanizm. The author encourages the reader to be proud of being human and tries to bring out the reader's faith in the self ('If everyone will win...' (1907), 'On the roads of existence' (1913), 'Power' (1916), 'You are human!' (1916), etc.). Similar exhortations appear in the poems of G. Tukay, for example, 'Sin' (1911). The movement finds its ideological and aesthetic basis in the works of S. Ramiev. His poems focus on the conflict between perfection and reality: having experienced the injustice of worldly life, the protagonist longs to reach heaven ('I see: divine...', 1908). He is irrevocably alienated from the world and declares the falseness of worldly existence ('Decieved', 1908), but does not find peace in heaven as well, so he is angry both at heaven and earth as he realizes the irreconcilable contradictions within himself ('Prophet', 1909). The ambivalence of reality on a metaphysical level leads to an understanding of the world as a single living organism, where the skies and the earth, humane and divine, good and evil are intertwined, and the only way to salvation is the fight against it all.

The protagonist who took the path of gisyan has to be incredibly bright and passionate: the elevation of a human leads to the conflict between human and society, which allows him to escape from the ambivalent world. S. Ramiev removes the distance between human and God, and emphasises his right to be a master of earth and heaven ('I', 1907). His traditions are continued in the poetry of Sh. Babich ('Pities', 1912, 'I want', 1916). In some ways, the riot is considered a self-sacrifice for the sake of the nation, but the irrational perception of existence in the works of Babich is carried from the tragic point of view to the ironic one. The

grotesque aspiration of the protagonist to 'clean' the world in just one minute ('One minute', 1914), for instance, seems like an exercise in fantasy. The denial of worldly (social) canons and rules is explained as a state of mind ('To the world', 1915, 'Live your short life fighting', 1915). He states that only soul and mind can lead to happiness ('In the dark', 1916). These themes are strongly accentuated in the poetry of M. Gafuri, N. Dumavi, B. Mirzanov and in the prose of Sh. Akhmadiev ('Human', 1913).

The structural semantic elements of the Eastern genres of the early 20th century poetry, such as ghazal, madhia, marcia and qasida, limited to the expressing of the civil emotions of the protagonist, lose their relevancy, and poets are gradually switching from arud to syllabic verse. The genre system of the western literature is heavily favoured. Poets are seriously interested in folk verses and folk traditions, as the alignment of the national poetry with folklore made the language of literary pieces pure, and poems began to 'get rid' of excessive Arab-Persian and Turkish loanwords. The great example of that are the works of one of the founders of the new Tatar literature, poet *Gabdulla Tukay* (1886-1913), who formed the basis of the new national poetry and created its classical style. While studying the role of G. Tukay in the history of the Tatar poetry, G. Khalit came to the conclusion that he aligned poetry and its function with the essence of the artistic subject: 'Tukay's poetry was the first to strip the Tatar word from its national colouring. The poetic speech of Tuqay gives the words freedom to transform from one key to another, so they are no longer the attributes tied to a certain theme or image. The emotional potentials and musical nuances of the native word have broadened and enriched. The poet put a lot of effort into his poetical plasticity. <...> Tukay's poetry was the first where intimate lyrical, socio-publicistic and the exposing satirical edges of the national poetic style sparkled together as one' [Khalit, 1990, pp. 66-67].

The central themes of Tukay's works are the nation's fate and serving for its good, which were the main ideologies of the national conscience for those years. They became crucial

in the value system of the social ideology, and their priority above other interests was unshakable. An individual was able to fulfill his potential only as a servant of the nation. They captured the idea of the necessary development of the Tatar society through introducing itself to the experience and achievements of the European culture, and the realisation of the importance of national traditions, as well as the brutal truth of reality, utopian hopes and historical experience. The paradigm of enlightenment was a push towards the reformation of the traditional picture of the world found in national literature where the dominating opposition was 'God vs. human'. For instance, one of the first poems of G. Tukay 'Alla ğiyyəqina' ('Out of love for God', 1905) uses a modification of this dichotomy: 'God vs. nation'. Traditional oppositions are used to express a new meaning: the speaker encourages his people to live by God's canons. They contain a high morality, thirst for knowledge, education, the supreme idea of human beings and their duty in life and society. Thus, Islamic philosophy becomes redefined from an ethnocentric position: serving the nation is perceived as a necessity for Muslims (*farz*). A person's character is constructed by the logics of enlightenment. Such qualities as arrogance, adulation, conservatism, ignorance, resistance towards enlightenment and an adverse attitude towards other people are valued negatively and acknowledged as harmful for the nation's future, thus apostatical. The opposite qualities lead to the nation's progress, and are therefore considered pious.

Traditional structures appear in a new way in romantic poems as well, being generally the motive of creativity. In the poem 'Xäzerge xalemezä dair' ('Regarding the current situation', 1905) the author consolidates the divinity of the literary word and builds a chain of associations: the author's pen is a guide for the words of God to the people, the Quran was written with it; writers are pillars of Islam showing the path to perfection. The protagonist explains his questioning attitude towards Tatar society by the fact that it is contaminated by ignorance, envy and a hunger for revenge, and

he sees the 'cure' in honouring God, which is equal to honouring the art of declamation. In the poem 'I qaläm!' ('Oh, quill!', 1906), written in the form of a prayer, the protagonist, full of hopes, addresses the quill: he believes that the power of the art of declamation is the only thing that can cure the nation, save it from humiliation and destruction, lead it to the path of happiness, and establish the borders between good and evil, truth and lies; the rhetorical address to God is replaced by an address to the quill. In the poem 'Millätkä' ('To the nation', 1906), the famous Sufi theme of madness from love transformed into the theme of love for one's nation, emphasises the level of emotional intensity: this love can drive people to madness. This feeling is the highest value in the world, and serving one's nation is the highest joy and happiness. So in his first poems, young Tukay decodes the traditional images, and starts a conversation about the nation's problems from the position of an illuminator and Muslim, a poet and an empathic human being. The same ideas appear in his publicistic writings as well.

Tukay's satirical works of the period are aimed against ignorance ('Yaponiyane möselman idäçäk ğolyama nărădä?'—'Where are the scholars who want to islamise Japan?', 1906), immorality ('Keçkenä genä ber köyle xikäyä'—'A short rhythmic story', 1906, 'Xatiräi 'Bağırgan'—'Reminiscing 'Bakyrğan', 1906), religious fanaticism ('Möritlär qaberstanynnan ber avaz'—'Voice from the Murid cemetery', 1906, 'Soriqortlarğa'—'To parasites', 1906, 'Pi-yala baş'—'Glass head', 1906). Moving forward, his poems start to express his social and political position more intensely as a supporter of democratic reformations ('Gosudarstvennaya Dumağa' ('To the State Duma', 1907); 'Kitmi-bez!' ('We will not leave!', 1907). G. Tukay contemplates on the tragedy of a nation that does not have present, and where its future depends on the firmness and commitment of its people. The majority of his poems are dedications, in which the main idea is formulated as a rhetorical message for members of the different categories of the Tatar society, and the overriding theme remains the fate of the nation.

The poet effectively uses the romantic style, fantastic and allegorical devices of the Medieval Tatar literature, and such devices as sarcasm, hyperbole, irony, parody and grotesque. Tukay proved himself a master of the *nazyire*, a variation on a given storyline. Tukay's most satirical work is a poem called 'Pechen bazary, yaxud Yana Kisekbash' ('Sennoy Bazaar, or New Kisekbash', 1908), and was also conceived as a parody on a 13th century literary work called Tukay 'Kisekbash' ('A cut-off Head'). The poem's nature is mostly epic: it has a plot describing events presumably taking place at the Sennoy Bazaar in Kazan. The cut-off head, whose body was eaten, son swallowed and wife taken by Div, tells the story of its misfortunes. The fantastic plot based on a repetition of similar, typical images, makes it possible for the author to recreate an image of the Tatar society that is far removed from reality, and which lives only to expect miracles and spectacles, 'circus entertainment'.

In the works of the Tatar writers of the early 20 century, the birth of the new form of authorship characteristic of the poetics of the artistic modality, coexists with the elements of a traditional artistic consciousness, which manifests itself in the domination of the objective beginning over the subjective in the structure of the artistic image. The admission that the 'Self' as an autonomous and independently valuable subject can possess the truth, is supplemented by the idea of the intermediary function of the author, where the individual creative beginning interacts with the traditional, canonic one. For example, in the poem 'Ike yul' ('Two Paths', 1909), the traditional antonymy of 'Enlightenment vs. Ignorance' acts as the mean of interpretation of two options of human life: the path to spiritual perfection and the path to stagnation. The paradoxical idea that the aspiration for enlightenment makes a person unhappy completes the creative concept of the literary work: the enlightened people, fighters for the future of their nation, are doomed to live for other people, for their problems and cares. Their lives are shown as eternal strife, but even the sufferings of a poet are full of light: the feeling of hopelessness, despondency, loneliness, the

acute understanding of the transience of life are overcome by faith in the bright future of the nation. Or, in his poem 'Omid' ('Hope', 1908), the poet, while building up the oppositions of light and darkness, sunrise and dusk, future and present, friend and enemy, desperation and optimism, reaches the conclusion that life is the victory of 'the sun of the mind' over 'the darkness of ignorance' (*'Pray, rise, the beacon of thought! The cloud, leave at once! Oh sun, do resurrect the dead conscience, and warm it with your rays!'*, translated by A. Akhmatova). 'The sun of thought' is opposed by 'the dead conscience', or the darkness of false concepts, beliefs, ideas. Even 'the light of the universe' cannot be compared to what offers hope: *'No, the soul cannot be low—its destiny is height'*. In the poem 'Kunel' ('Soul', 1909), the protagonist turns to his soul, encouraging it to suffer and live through the grief and problems of others. The reason for his existence is to devote himself to others. Only the ultimate descent into darkness and despair, cold and emptiness, pain and suffering can lead one back to light and to the feeling of harmony with the universe.

The poetic idea of many other poems develops based on the same principle: 'Serleuxesez' ('Without a title', 1909), 'Milli monnar' ('National melodies', 1909), 'Ometsezlek' ('Without hope', 1910), etc. In them, the dramatic and sometimes even tragic feelings of the main character are related to the lives of people and history of the nation. In the poem 'Serleuxesez' (1909), while highlighting the need to sing 'a song of woe': *'Kuzgatmakchy bulsan xalyk kunelleren, / Tibiretmekche bulsan in nechke kyllaryn, / Kejleu tiesh, elbet, achy xesret keen, / Kirek tugel meg'nese yuk kelke, uen'*, the poet offers a philosophical assessment of the basics of existence: the imperfection of existence gives rise to the feelings of bitterness, dissatisfaction and hopelessness in a person.

In the philosophical lyrics of the poet, overcoming the tragic nature of life is irrevocably connected with an affirmation of the ideal and the ideal's category. This is what Tukay uses to assess all the events of the contemporary life. In poems where the motif of yearning for the past dominates, life is divided into two

halves: the time when the main character believed himself quite happy, and the time he understood the impossibility of happiness. For example, in the poems 'Bejrem ve sabyjlyk-vakyty' ('Time of celebration and childhood', 1908), 'Isemde' ('I remember', 1909), signs of the past are idealised: the clear and disinterested laughter and games, the expectation of ethereal happiness, first love, the delightful tears of spiritual feelings, and the overwhelming feeling of love. They are opposed to the coldness and indifference of the present. The protagonist despairs over his 'forever frozen' soul and lives only in his memories. Memories of the past in all of their harmony, beauty and animated life concentrate the essence of the poem. Memory becomes a valuable object that preserves the feeling of harmony and beauty of the universe.

The ideal, or the truth sought by a person who has devoted themselves to the service of people, the truth that will help him to light his life, comes to the fore in many of Tukay's poems. The ideal of a tireless fighter, 'honest and clean as a pearl', is celebrated by Tukay in the marcia entitled 'Xermetle Xeseen yadkare' ('To the cherished memory of Khusain', 1912), devoted to the memory of Kh. Yamashev. The dedications of 'Shixap xezret' ('Shigap-xazret', 1913), 'Ulmy?—Ul' ('Who is he?', 1910) and 'Mexerrirge' ('To the writer', 1906) recreate the ideal images of the illuminator Sh. Marjani and writer G. Iskhaki. Tukay aims to have his ideal character personify the substantial powers of the people and nation.

The truth juxtaposed to the material values is read as both the state of the soul of a person who 'has left in search of fire to light the living world' and the longing for spiritual freedom ('Daxige'—'To the genius', 1913). Truth is compared to the brightest star ('Kunel joldyzy' – 'Star of the soul', 1909) supporting a person during the hardest moments in life and allowing him to help others:

I feel the heaviness of hands,
the touch of dark forces,
But my enemy has not managed to
extinguish

the holy star in my heart.

No, no, my star is still ablaze,
and its golden gleam does not dim,
And, undoubtedly, at least a single lost one
has been saved by that star.
(Translated by V. Tushnova).

In G. Tukay's love poetry the feeling of infatuation is interpreted as a sublime category, as a source of poetic inspiration ('Mexebbet'—'Love', 1907), happiness ('Kuly'n'—'Your hand', 1908), and a stimulus for self-improvement ('Ge'—'Dedication', 1908), as an unreachable ideal ('Ber resemge'—'To one portrait', 1908), and as the meaning of life ('Ixtida'—'Comprehension of truth', 1911). The motif of love is intertwined with the motif of creative activity, where a semantic equivalence is established: according to Tukay, love and creativity are both of a heavenly origin and are pre-determined.

In his landscape lyrics, where the motif of enjoyment of beauty prevails, the nature of his native land is idealised, and beauty is seen in simple occurrences, the national identity of Tukay's poetry comes forth clearly. He was able to communicate the perception of nature typical of the Tatar people ('Ay xem koyash' ('Moon and Sun'), 1909, 'Kyshka ber suz' ('A word on winter'), 1909, 'Zhejge tan xatirese' ('Remembrance of the summer dawn'), 1910, etc.). The 'unspoiled' beauty of nature in verses and poems is matched against the 'cruelty' of historical development. Moreover, the duality of existence is expressed in the antithesis of the heavenly and the earthly, nature and man ('Doshmannar' ('Enemies'), 1912).

Hope is another vestige of the ideal in Tukay's lyric poetry. Whereas the past is a happy time, the gloomy present is a time of lost hope; it is associated with Hell and with death ('Omidsezlek' ('Without hope'), 1910, 'Telej bette' ('The time for hope has gone'), 1909). Mercy, as well as hope, is able to support a person during the most intense trials of his life ('Katile nefeske' ('To the self-killer'), 1910). The imperfection of existence is explained by the inability of man for compassion. However, when speaking of the il-

lusionary nature of expecting assistance from others, the poet insists that when speaking of his grief, man overcomes the feeling of loneliness. Communication purifies the soul and thoughts ('Achy tezhribe avazy' ('Voice of bitter experience'), 1910). For example, Tukay's most tragic poems express faith in the high ideals of love, mercy, beauty and hope for their consummation.

Philosophical lyric poetry forms one of the central motifs of Tukay's poetry—the motif of tragic loneliness and alienation. This is primarily represented as loneliness among an indifferent crowd, the cause of which is the devotion to the fight for the freedom of the spirit, for a better future for the nation, for the change of the world. In his poem 'Kytga' ('Fragment', 1913), the feeling of regret of the protagonist, whose life contained 'black days' and the fight to 'whiten, cleanse the world', arises as a result of the comprehension of the unattainability of this goal. However, loyalty to the ideal and the perseverance of the human spirit prevail: despite loneliness and despair, the protagonist stays true to his endeavor to change society and the world for the better.

The confessional nature and the longing for internal self-analysis in such poems are united with the feeling of crisis, of drama of personal destiny, the loss of friends, destruction of everything of value, and the comprehension of the unattainability of life most important goal. For example, in the poem 'Ozelgen omid' ('Broken hope', 1910), the life-long tenet of the poet is to 'bring life to the national trees' with his song and creative works, to 'wake up' the nation, to change the world and to find light and warmth along the way. The poem is set against the tombstone of his mother's grave, an image that adopts a symbolic meaning. When the unattainability of the ideal is finally realised, the sole value for the protagonist is the stone that symbolises the succession of generations, perpetuity of existence, traditions of his people, and the meaning of life related to this succession that is common for all of humankind. Thus, alienation and immersion inside oneself discloses the innermost secret of a person's purpose in the world.

The motif of prayer, the motif of love for God pierces through many poems focusing on moral questions related to the fate of man ('Mig'razh' (1910), 'Kader kich' (1911), 'Tef-sirme? Merzhememe?' (1913)). Prayer as a sacrament through which a person expresses his inner world acts not only as an appeal to God, but also as a 'conversation' with their soul, their own selves ('Ana dogasi' ('Mother's prayer'), 1909). 'There', where the Almighty resides, a man can always find peace, support ('Kinesh' ('Advice'), 1909), purity and truth ('Tayan Allaga', 1909), since a man carries a piece of the divine within himself ('Nesyjxet' ('Edification'), 1910).

Tukay was one of the first authors in the Tatar literature to specifically study the aesthetic principles of folklore and its relation to written literature. In 1910 at the famous Oriental Club, the poet delivered a lecture entitled 'Xalyk edebiyaty' ('Folk literature') after proclaiming the motto: 'Hail to folk literature, hail to the popular language!'. In his creative work, he used the plot structure of fairy tales, such as in the poems 'Shurale' ('Shurale', 1907), 'Su anasy' ('Water nymph', 1908), 'Kezhe belen saryk xikeyase' ('Tale of a goat and sheep', 1910). He also communicated the characteristics of the folk world's perception and world reflection, like in 'Milli monnar' ('National melodies', 1909), the images, details and creative expressive means typical for the Tatar oral folk tradition: 'Par at' ('A pair of horses', 1907), 'Eshten chygarylğan tatar kyzyna' ('To a humiliated and offended Tatar maiden', 1909), and wrote pastiches of folk songs: 'Avyl zhyrlary' ('Village songs', 1908). Relying upon the traditions of the oral folk tradition, G. Tukay achieved a complete transformation in the phraseology and form of the Tatar poetry and was crowned the creator of the national literary poetic language 'free from any foreign influence of Arabic, Turkish or Uzbek' ('Folk literature'). In Tukay's creative works, ancient traditions are correlated with his contemporary artistic consciousness, its criteria and orientations. At the same time, the traditional structures and images, motifs and details recognisable and readable in the

context of the Eastern literature, became tools for enlivening the creative memory, including as it concerns genre. The civil, love and landscape lyric poetry of Tukay preserved the memory of the Eastern genres, such as the ghazal, qasida and marcia, but made them relevant for the expression of the national idea formed in the early 20th century.

Tatar poets and writers of the early 20th century strove to transform the Tatar literature in the footsteps of the European and Russian literature, but at the same time wanted to preserve their national verbal identity. The problem of the preservation, development and improvement of the nation became a key trend in the new secular literature.

§ 5. The Rise of the National Theater

Aygul Salikhova

The development of the capitalist relations caused material changes in the political, economic and spiritual spheres of the Russian state. In the late 19th—early 20th centuries, the entire public life of the country acquired characteristic dynamics that could not but influence the traditional mode of the Turkic peoples in the Empire. The national capital grew and consolidated, and the economic and cultural links of the Tatars with other peoples strengthened. A new, progressive national ideology was proving itself; proprietary public institutions started to pop up, including political parties and the press. Secular forms of culture, literature and art started to develop.

The birth of national theatrical works was also a result of the uprising of the Tatar dramaturgy. The first Tatar plays appeared in the final quarter of the 19th century: 'Unhappy girl' by G. Ilyasi dates back to 1887, while the play by F. Khalidi entitled 'Against the unhappy girl' was published in 1888. The earliest dramatic works also include 'The comedy in Chistopol' (1895) and the first version of the play by G. Kamal 'An unhappy youth' (1898). Translations of plays (primarily from Russian and Turkish languages) were published at approximately the same time.

The first Tatar performances were played on stage in rich private houses by amateur groups as well as by the students of advanced madrasahs, such as 'Muhammadiya' in Kazan, and 'Usmaniya' and 'Galiya' in Ufa. However, as early as at the beginning of 1907 in Orenburg,

the 'First Russian troupe of Muslim dramatic actors under the management of Ilyas Kudashev-Ashkazarsky' came on the scene. In this troupe, many actors who later became famous—Vali Murtazin-Imansky, Akhmet Kulalae, Bari Bolgarsky, etc.—first started their creative careers. In the summer of 1907, the company went on its first tour around the towns of the Volga region, during which the first female actress, Sakhibzhamal Gizzatullina-Volzhsкая, joined the troupe, followed by Gabdulla Kariev. The troupe's repertoire included such works as 'Morat Salimov' by F. Khalidi, 'The proposal' by A. Chekhov, 'Hangover at Somebody Else's Feast' by A. Ostrovsky, etc.

The manager of the company, I. Kudashev-Ashkazarsky, was known for his energy and outstanding artistic talent, though evidently he lacked a liberality of views and simple organizational abilities. It was not long before he left the company and started other independent creative work. The company was then headed by a young, talented individual utterly devoted to the art named Gabdulla Kariev. The multifaceted personality of G. Kariev had such a great impact on the subsequent development of the Tatar scenic art that the national artistic school is even now still known as 'the Kariev school'. He served as the creative manager, director and theatrical pedagogue all at once. At the same time, the organisation of the activities of the troupe was collegiate by nature. Each of its members was responsible for a specific sphere of matters: Kariev handled general

management, Murtazin and Gizzatullina were directors, Kulalaeв drew and posted the posters, and Khayrutdinov copied down the roles and prompted. All this indicates that a spirit of solidarity, mutual help and equal partnership reigned in the company.

In the spring of 1908 when on a tour in Tiflis, the Tatar actors were joined by the Azerbaijani actors, the fact of which was mentioned in the city's press: 'A Tatar troupe has arrived in Tiflis. Mr. Arablinsky and the Tatar actors met in the editor's office of Molla Nasretdin newspaper and decided to go on a tour after uniting the troupes' [Letopis' azerbajdzhanskogo teatra, 1975, p. 163]. For their collective performances, they selected plays by both the Azerbaijani and Tatar playwrights—the tragedies 'Nadir Shakh' by N. Narimanov, 'Fakhretdin's Grief' by N. Vazir-Zade, a drama 'Unhappy Youth' by G. Kamal, etc. The joint work of the two national companies materially enriched the creative range of each individual party. The Tatar artists demonstrated the little-known theater of domestic, psychological realism, to their Azerbaijani colleagues, while they themselves, on the other hand, closely studied the art of great passions, lofty feelings and heroic pathos, and assimilated the elevated, romantic manner of acting. Moreover, the collective work enriched the repertoires of both national companies. Since then, plays by N. Narimanov, M. Akhundov and other Azerbaijani authors have entrenched themselves on the scene of the Tatar theater.

After the tour, in the autumn of 1908, the companies separated. Starting from that time on, the Tatar troupe adopted the name 'Sayyar' ('Wandering'). Indeed, as a company that did not have its own premises, it was forced to travel around a lot. The Volga region, Crimea, Caucasus, Middle Asia, Kazakhstan, Siberia—the actors found a thankful audience everywhere, even though the living conditions of a wandering troupe obviously had an impact on their creative successes. The lack of a theatre, the need to perform a new play every week, and the enormous expenses of leasing a building, newspaper advertising and posters, accompanied by a difficult and unstable financial

position, all significantly complicated the work of the first Tatar actors. It is hardly surprising that researchers of the pre-Revolutionary theater indicate this period as the first, most difficult stage of development in the national theatrical arts [Makhmutov, 1988]. Nevertheless, it was fruitful in its own way. The repertoire was enriched by works of the different genres and styles—the actors performed domestic comedies and vaudevilles, dramas and high tragedies, works by Russian, Azerbaijani and Turkish authors as well as new, original plays by the Tatar authors I. Bogdanov, G. Kamal and G. Iskhaki. Therefore, the Tatar actors accumulated life and creative experience, built up their skills, and expanded their worldview.

Starting from December 1911, "Sayyar" company was included in the staff list of the Oriental Club [Yöldiz, 1911, November 1]. This meant regular pay to the entire creative team during the winter season, as well as a permanent facility. At the same time, the troupe hired an artist, S. Yakhshibaev, who was placed in charge of scenery. All this signalled the commencement of the second stage in the development of the theatrical art, which lasted until 1917: the stage of active creative growth.

In 1912 the second professional troupe known as "Nur" started its operations in Ufa under the management of S. Gizzatullina-Volzskaya, and in 1915 V. Murtazin-Imansky formed the "Shirkyat" troupe in Orenburg.

Speaking of the characteristics of the national performing school, it is worth mentioning that Tatar actors were pioneers of the art who did not have any special education; they studied the basics of the profession on the job in the process of day-to-day acting. They received tremendous support from the plays of other troupes, in particular, those of the Russian urban theaters of Kazan and other cities. They frequently used the device of imitation and copying when a true, living prototype was found for a stage character, in order to completely transfer them to the stage while preserving the minute details of external characteristics. Evidence of the above can be found in the memoirs of Z. Sultanov, G. Bolgarskaya and others. The researcher of Tatar stage direction

M. Arslanov offers a description of the artistic method of G. Kariev: 'For him, life was an irreplaceable inventory, a source of untold wealth and creative potential. If his emotional memory did not contain the necessary materials to work with, he visited the places where the people of the class depicted in the play could be found. Only after a careful study of the realistic prototypes of characters did he continue his work again, teaching what he learned to his actors. Since the theater was continuously on the road, and as a result of the lack of a well-equipped stationary stage, Kariev was unable to see his ideas completely through to the end. This is why he devoted all his strength and attention to working with the actors. Kariev would tell interesting anecdotes from his personal life, offer literary parallels in attempts to arouse the creative fantasy of his actors and, lastly, used demonstrations when a performer was struggling with some part of their role. G. Kariev, a realistic director, aimed to recreate "slices of life" in their completeness while on stage' [Arslanov, 1992, p. 61]. Despite the naiveté and certain primitivism of such an approach, it was extremely beneficial for beginner performers and became a solid step in the development of scenic realism.

Some researchers delineate two schools in the art of acting—the genre/domestic school and the lyrical/romantic school—represented by the names of G. Kariev and S. Gizatullina-Volzhsкая [Ilyalova, 1981, pp. 25-26]. In our opinion, one can only speak of the individual characteristics, personal preferences and creative tendency of any performer. In fact, pre-Revolutionary Tatar theater brought together very different actors, each of whom was known for their strong personality and shining individuality, which was undoubtedly reflected in their performances. It is interesting that even in 1910 theater critic G. Karam pointed this fact out in his articles. In particular, he wrote that G. Kariev is a 'reasoner and domestic performer' and 'cannot play the roles of lovers' [Ang, 1913, June 1], and K. Tinchurin 'performs well in the translated works and achieves the desired results, but he does not demonstrate

any particular talent in national plays'. While he valued and sincerely admired the first Tatar actress, S. Gizatullina-Volzhsкая, Karam still remarked that her true stock character is the dramatic heroine, and 'her performance in comedies frequently reminds of a drama, so the spectator's impression is not always correct' [Yöldiz, 1910, December 23]. The same critic mentioned the amazing vastness of the artistic range of G. Bolgarskaya: 'There are no stock characters she has not mastered... Undoubtedly, Ms. Bolgarskaya is capable of playing the entire repertoire alone—she has enough of both experience and master' [Yöldiz, 1913, April 4]. All in all, it can be said that even before the Revolution of 1917 the Tatar theater boasted a group of bright, original, talented actors who went from amateur imitation to independent, full-blooded creativity, from enthusiasm about the superficial, external characteristics to a psychological depth, and from specific, detailed plausibility to poetic and social generalisations.

This was to a great extent promoted by a rich repertoire with varied styles, genres and trends. Since it was difficult to change the opinions of the deeply and sincerely spiritual Muslims, the attempts of the theatre enthusiasts were first met with caution. The decisive argument in favor of the new innovation was the recognition of its positive educational role. In fact, the early Tatar plays by G. Ilyasi, F. Khalidi, G. Kamal, G. Iskhaki fully conformed to the spirit of Islamic enlightenment in their condemnation of vices, ignorance and immorality. Muslim works also at first held a dominant position among translated plays, mostly by Turkish and Azerbaijani authors. Gradually, the nation was becoming more open and dynamic, and interest in Western, European and Russian culture was on the rise. This also had an influence on the repertoire. Similar to the way Tatar newspapers published examples of foreign literary works and reproductions of international masterpieces of fine arts, the theater troupe was introducing the public to works by Moliere, Heine, Gogol, Ostrovsky and Chekhov. By enlightening their spectators, the actors also understood themselves as students as well.

Every staging of plays by a national playwright was a joyous, long-awaited event. The comedies of G. Kamal were particularly popular. Later, Soviet scientists would call them stinging social satire of the rich, exploitative upper class. In fact, the nature of this satire was purely domestic in nature—he composed small, humorous sketches, where he merrily and easily described the merchant world so well known to him and scoffed at human vices like greed, stupidity and artifice.

F. Amirkhan wrote only two stage plays, the dramas 'Young People' and 'Unequal Ones'. They amazed contemporaries with their artistic perfection, richness of ideological content and beauty of language, and became instant classics. S. Ramiev, I. Bogdanov, F. Saifi-Kazanly and others also wrote for the theater.

However, the brightest and most diversely talented playwright of them all was, without a doubt, Gayaz Iskhaki. The path he covered in the course of his artistic evolution is truly revealing. His enlightening drama 'Life with Three Wives', published before 1900, was successfully staged on the Tatar stage until 1916. His later dramas and comedies touched on the urgent problems of the time and could be classified as works of critical realism. However, his tragedy 'Zuleykha' can rightfully be considered the zenith of his creative work. Its epic scope, depth of philosophical generalisations and strength of emotional impact have no equals in Tatar dramaturgy even now. It is not surprising that its staging in March 1917 was met with an unprecedented rapturous welcome, with aftershocks being felt even abroad. However, after Gayaz Iskhaki, who was unable to accept Bolshevik rules, immigrated to Turkey, he was stigmatised as a 'bourgeois nationalist' (which is a paradox, as before the Revolution he was exiled and imprisoned as a 'socialist'). The new ruling regime declared that

'Zuleykha' was a mystical, anti-Russian, ideologically harmful work and prohibited it. In fact, this masterpiece, which was created over the stretch of many years, based on true historic events and characterised by its extremely complex and serious nature, does not contain a shred of domestic, vulgar nationalism, which is further supported by the presence of several positive Russian characters. When speaking of the fate of forcibly baptised Tatars, the writer broached the issue of not only physical suppression, but that of the more horrible, spiritual kind; he portrayed the suffering of people beaten down to the state of powerless cattle, as if they had no souls, feelings or minds. With pain and suffering he writes of his fellow believers who endured enormous grief and deprivations. Apart from the scale and epic nature of the work, the depth and originality of its ideas, and the fact that the dramatic fabric of the play for the first time organically includes the folk songs and dances, the scene of the folk wedding deserves particular attention. For the first time ever music was written specifically for a stage play by a composer named Sultan Gabashi. It is safe to say that the tragedy 'Zuleykha' cleared the way for a new scenic genre—musical drama.

The pre-Revolutionary history of the Tatar theatre spans a little over ten years. However, even this small period of time was enough to make enormous progress not just concerning the mastery of the art of acting. Aside from specific commercial goals (the attraction and entertainment of the audience), actors also established more important, significant, noble goals, such as promoting the distribution of culture and education, developing literature and art, and increasing national self-awareness. The theatre itself was considered to be a symbol of progress and united a wide swath of the young Tatar intelligentsia.

§ 6. Development of Tatar Music and Fine Arts before 1917

Lilia Gabdräfikova

Tatar fine arts is a comparatively new artistic phenomenon. The development of Tatar pictorial art is impossible to imagine without a secular background. It was the withdrawal from religious values, the establishment of an atheistic world-view and new possibilities in the educational sphere that promoted growth in professional artistic culture.

Nevertheless, an interest in fine arts, amateur artists and the first professional painters first appeared in the Tatar community long before 1917. At the turn of the 19th—20th century, young Muslims started taking a particularly keen interest in Russian culture, including its pictorial art. For example, the curriculum of the Kazan Tatar Teaching School included draftsmanship and drawing, where in addition to rudimentary knowledge, the students were taught about perspective and the effects of light and shade [Goritskaya, compiler, 2005, p. 63]. For many years, these subjects were taught by Shakirjan Tagirov, an alumnus of the school himself.

A certain influence over the young generation of the Tatars was also exerted by the culture of the Ottoman Empire, where fine arts had been developing since the Middle Ages in the form of miniatures. Starting in the middle of the 19th century a number of Turkish artists received training in Europe, the first artistic exhibitions were held in Istanbul, and in 1882 the School of Fine Arts—Sanayii Nefise Okul (currently known as Mimar Sinan's University of Visual Arts)—was opened. The first Turkish paintings were mostly landscapes that were as often as not copied from photographs. Images of people were also representative of the time. For example, the works of artists Osman Hamdi Bey and Şeker Ahmed Pasha [Çağdaş türk resmi].

The first forays into the fine arts in the Tatar community at the turn of the 19th–20th century acted as a supplement to the publishing business and theatre performances. The designs of

Tatar books (and newspapers and magazines after 1905) first used ready-made Russian stamps, and later original artistic samples were created. In the pre-Revolutionary periodical press, the caricature genre enjoyed particular success. Critical, emotional articles of the time were augmented by witty images. A recognised master of the caricature genre was a writer by the name of Galiaskar Kamal. He also designed stage sets for theatrical performances [Cher-vonnaya, 1987, p. 288]. However, book illustrations and play backdrops were only a remote approximation of visual art itself, as landscape drawings did not include people, and portraits were out of the question.

The attitudes of Tatar Muslims towards images of living creatures, primarily people, changed after the widespread popularity of photography. Among city dwellers, photographic services became particularly popular in the latter third of the 19th century. This was related both to the delayed development of this market segment in provincial regions of Russia and to the specific characteristics of the Muslim worldview. Still, almost every well-to-do Tatar family owned photographic images. 'Some people have their own portraits in their homes, but they never hang them up on the walls', remarked Kayum Nasyri [Nasyri, 2005, p. 232]. In the early 20th century, when portable cameras first appeared and the popularity of photography reached a fever pitch, Tatar families started compiling photographic albums.

The popularity of photography in the Islamic environment was connected not only to people's natural curiosity: it had turned into a practical necessity. Photographs were now taken for service documents. For example, when taking their Russian language examinations, the mullahs also provided their photographs [National Archive of the Republic of Tatarstan, Fund 2, Inventory 2, File 6081, Sheet 8]. Examinations for the imams had been being held since early 1890s, and photographs in their per-

sonal files first appeared a little later. Therefore, even the most orthodox classes of Islamic society were involved in this new form of visualization. This was perceived as a permission of sorts for the rest of the population, a certain portion of which was still avoiding cameras for religious reasons. Sometimes, views on photographic art differed even within the same family. In the early 20th century, photographic images of a person were also necessary for travel documents and diplomas at certain educational institutions [National Archive of the Republic of Tatarstan, Fund 142, Inventory 1, File 338, Sheet 2].

The development of photographic services promoted the occurrence of new variations in 'visual' business. For example, even before 1917, masters of photograph enlargement had established their businesses (this service reached its popularity peak during Soviet times). For instance, Sabit Yakhshibaev, an amateur artist and decorator for the 'Sayyar' troupe, was fascinated with photography during the Kazan period of his life (from 1912 to the 1920s) and drew portraits at his home [Rämi, 2001, p. 325]. In the article entitled 'Muslim Artist', published in the *Yulduz* newspaper in 1912, Galiyasgar Kamal wrote that Sabit Yakhshibaev, 'a Katay Bashkir' (the Katay is one of the Barshkir clans), had arrived from the Verkhneural'sk uyezd of the Orenburg guberniya to join the Kazan School of Fine Arts. Yakhshibaev However, he was too late to take the entrance examination. 'Sabit efendi is very poor and needs material support', the playwright appeals to readers of the newspaper. 'If there are people among our compatriots who are not indifferent to art, they ought to provide him even moderate assistance' [Kamal, 1981, pp. 263-264]. Sabit Yakhshibaev never managed to enroll in a fine arts school; he languished in poverty, and in the 1920s created the paintings 'Village', 'Tatar Peasant Woman', 'Tatar Man' and 'Izba' in Kazan, but later returned to his native land and worked as a theatrical artist of the Bashkir Theatre of Drama in Ufa.

Development of national fine arts in Bashkiria is connected with the name of Ka-

sim Devletkil'deev. This native of the Kugul (Maryino) village in the Ufa uyezd (currently the Blagovarsky region of the Republic of Bashkortostan), according to Soviet tradition, is referred to as the first Bashkir artist. Although in the 1877 reference book 'List of Residential Communities' for the Ufa guberniya, the residents of Kugul' are recorded as Tatars [Bashkortostan settlements, 2002, p. 149]. Kasim Devletkil'deev descended from a family of impoverished Tatar nobility. His elder brother worked as a teacher in Ufa, and Kasim's adolescent years were spent in the centre of the governorate, where he graduated from Ufa Male High School. After a brief period of study at the Kazan Tatar Teaching School, in 1908 he departed for St. Petersburg. This was a bold act for that period of time—the Devletkil'deev family was against the enterprise, and some relatives (for example, those residing in Kazan) renounced him. His dream was to study at the Academy of Arts, but in 1914 he graduated from Baron Stieglitz's St. Petersburg School for Technical Drawing. Family circumstances and material difficulties did not allow Kasim Devletkil'deev to continue his education with the Academy, and he returned to Ufa [Bondarenko, 2002, pp. 158-167]. Khusain Badaninsky and Mirzajan Baykiev (for many years he worked as a sculpture restorer at the Hermitage) also graduated from the Stieglitz School. On the eve of World War I, Khadicha Akchurina studied at the Stroganov School for Technical Drawing in Moscow. Her first engravings were published in the children's magazine 'Ak yul'.

However, by 1910 the day-to-day perception of the world by Muslim Tatars changed drastically, a statement that can be proven by photographs, illustrations of books and periodicals and theatrical decorations. The attitude towards professional employment in the fine arts remained critical. In fact, almost no parent wished an artist's destiny for their children. Still, according to the newspaper 'El Islakh', in 1908 two Tatar students in Kazan were enrolled in the art school for that school year [Amirkhanov, 2004, p. 536]. With the exception of these singular cases of professional artistic educa-

tion, this niche in general continued to get narrower and narrower. According to G. Kamal, even in 1912 the Kazan School of Arts did not have a single Muslim student. Moreover, there were none willing to enroll in this educational institution. As early as in 1909, members of the Tatar intelligentsia decided to establish a scholarship for one Muslim student. The office of the Yulduz newspaper offered 50 rubles for the purpose, and the Orenburg newspaper Vakyt allocated the same amount. Attempts to amass the needed sum were unsuccessful, and no applicants came forward either.

In 1912-1913 the first small artistic exhibit was held in the Sharyk Kazan library, showing portraits of Tatar writers (G. Tukay, F. Amirkhan, etc.). One of the sponsors of the exhibit was Sabit Sabit Yakhshibaev [Urmanche, 1960, pp. 138-142]. Tatar magazines and newspapers also performed significant support work for the promotion of visual arts. Ang magazine holds a prominent place among them. In 1915 it published an album with examples of world art as a supplement to the magazine. In 1916 its publisher Ahmetgarey Khasani also published and distributed an image of Queen Süyümbike (reproductions of the 19th century painting). In the Kazan Gendarmery this fact was interpreted differently: if he distributes the images free of charge, it means that his aim is 'to prepare the masses for the idea of a possible recreation of the Kazan Khanate' [Amirkhanov, 2005, p. 70]. Even though the publisher was driven only by the idea of 'national progress'. The Yulduz and Koyash magazine offices also promoted an interest in fine arts, as they were always searching for talented artistic youth and providing them with financial support [Mähdiev, 1987, pp. 52-54]. The trends of the new times, as well as constant agitation in the national press, also influenced the curriculum of Tatar madrasahs. In the early 20th century, they started paying more attention to drawing [Vakhapov, 2010, p. 121].

Therefore, due to a number of factors, the attitude towards fine arts in the Tatar community had changed even before 1917. The

development of bourgeois national culture—publishing books, newspapers and magazines—required new forms to present the material. The competition caused the proposed publications to take a step back from earlier minimalism and supplement their pages with the latest artistic fads. However, the arrival of photography to the day-to-day lives of Tatars played a significant role in the depiction of a Muslim person. While in world history photography developed under the influence of painting, in THE HISTORY OF THE TATARS the reverse was true: the spread of photographic services influenced the development of fine arts. Thanks to photography, certain stereotypes of the visual perception of the world disappeared. Images of Tatar public figures were published in books, magazines and certificates of graduation from madrasahs; the Tatars were enlarging their own photographs for domestic use, painting their first portraits and arranging for their public exhibition. Some young Tatars in the early 20th century enrolled in higher artistic schools. Among their number were K. Devletkil'deev, Kh. Badaninsky, M. Baykiev, Kh. Akchurina, etc.

The musical culture of the Tatars remained private for many years, as the public performance of melodies was frowned upon by Islamic spiritual leaders. However, even in the late 19th century there were musical clocks in private houses, and in the later years various music boxes, with the Stella and Ariston models being the most popular. At the turn of the 19th-20th century two repair specialists for musical mechanisms were particularly known in Kazan, Garif Minkin and Gilyazutdin Sayfullin. They not only fixed boxes, but also recorded Tatar folk melodies on copper plates [Rämi, 2001, pp. 179, 229]. The catalog of master Sayfullin's music included over 200 titles of Tatar songs. Residents of the New Tatar sloboda called him 'ergen Gilyaz' (Pipe Organ Gilyaz). Certainly, the mullahs approved little of the activities of Gilyazutdin Sayfullin, and still less of that of his predecessor, Garif Minkin. They were boycotted and cursed [Gabyashi, 1994, p. 50].

In the early 20th century, music boxes with their metal disks were being replaced by the radically new sound-recording equipment appearing around the time. Gramophones came into daily use. They had been known since the late 19th century, but became widely spread only some time later. Amateur Tatar singers started recording their songs for gramophones. For example, in 1910 the Orenburg newspaper 'Vakyt' reported that a singer named Muhammejan Gabidullin recorded his songs in Moscow with the Grammofon company [Gafuri, 1983, p. 348]. In addition to his work, the gramophone records of Maryam Iskandarova, Nafisa Pozdnyakova, Khusain Yusupov, Mirfayza Babadzhanov, Kamil Mutygi, Ibragim Adamantov, Khadicha Gambitskaya, and anonymous female solos and duets became popular during that period. The new Tatar urban culture was essentially imitative because it included Russian songs re-sung in Tatar style. Apart from vocals, the gramophone records also contained instrumental compositions. They enjoyed particular popularity. One of the leading recording firms, Grammofon, as early as in 1910 published a catalogue entitled 'A Complete List of Kazan-Tatar Zonophon Records, Old and New, by Grammofon'. Therefore, this market segment was rather well-developed.

According to modern music researcher Idris Gaziev, 'the records of some Tatar singers demonstrate the unusual timbre of performers characterised by a certain artificiality, the shrill, semi-falsetto sound in the high tessitura reminiscent of a female voice' [Gaziev, 2009, p. 178]. For example, such a shrill manner of performance was typical for Khusain Yusupov. He was one of the Pate company's most frequently recorded performers. Mirfayza Babadzhanov sang in the same style. Kamil Mutygi stands out in this list: he possessed a low voice timbre and performed songs in the modern style, without artificially high notes.

The quality of gramophone records of Tatar performers was subject to continuous criticism on the pages of the national press in the early 20th century. Sagit Suncheley, Shagit Akhmadiev, Gabdulla Tukay and other authors

mentioned this phenomenon. For the most part, male and female singers were chastised for corrupting songs, as their somewhat vulgar manner of performance was not to everyone's taste. Moreover, their musical material was mostly comprised of folk songs, while the listeners, especially the progressive audience, wanted to hear original songs and works by Tatar composers [Sünçäläy, 2005, pp. 235-238; Tukay, 1986, pp. 53-54].

It is a well-known fact that at the turn of the 19th-20th century Tatar amateur musicians were only able to demonstrate their art at restaurants and inns, as well as at other entertainment establishments. Even when they performed at public gardens or more respectable places they were stigmatised as tavern singers. The same attitude was applied to the discussion of gramophone records.

The low quality of performance widely criticised in the press was not always such during live performances. The very technique of sound recording was actually to blame, as it distorted sound even at the tiniest wrong movement. Microphones that could adjust vocals did not exist at the time. The singer sang into a mouthpiece connected to a membrane that made a groove on a wax plate using a needle. The plates were then used to make impressions and print real records. If there were strong sound vibrations, the membrane rattled so badly that it made the song sound like 'mating cats', as Gabdulla Tukay put it. It is possible that so soon after the appearance of gramophones not very many people knew about the deficiencies of this equipment, making the performers subject to a storm of criticism. It is not surprising that after a while the word 'gramophone' became synonymous with any bad singer [Kolbasiev, 1931, p. 109].

The distribution of music media and the ongoing discussion of all the pros and cons of this type of recreational activity coupled with the development of stricter demands for them create a united cultural environment that undoubtedly played a significant part in consolidating the Tatar nation. Gramophone records became an alternative that united public performance with private listening. For example, not all

Tatar women could afford to visit restaurants and taverns or public gardens. Thanks to sound recording, this type of cultural recreation that was previously accessible only to men, seeped into the domestic environment as well.

According to Sagit Suncheley, while the entirety of the 19th century was spent under the oppression of folk music, in the beginning of the following century gramophones were available 'in every village, and everyone from peasant to mullah had one' [Sünçäläy, 2005, p. 236]. The impersonal, 'mechanised' performance was considered by Muslims admissible according to the Quran, so the number of people interested in these 'boxes' and, consequently, music itself increased exponentially.

Early 20th century Tatar society is characterised by an unprecedented interest in music. This is supported by the profusion of literary and musical soirées, the popularity of gramophone records and discussions on the pages of national periodicals. Most authors held the view that Tatar songs had lost their uniqueness and were vastly inferior to the folk art of the Bashkirs and Nogais. The originality of their musical culture was explained by the relative isolation of their domestic lives from foreign influence and a semi-nomadic lifestyle. In the opinion of writer Gayaz Iskhaki, not only the melodies, but the very national spirit of Tatar and Mishar songs had been forgotten. 'The entirety of our musical strength now lies in singing Russian couplets in Tatar style. Bashkir melodies are the sole outlet for us. The Kazan songs that had been passed down from khan times had either been forgotten or are already disappearing', he wrote in the article 'Our national melody and music', published in *Mektep* magazine in early 1914 [Iskhaky, 2005, pp. 279-281]. The impact of Russian music on Tatar folk art was also noted by other authors. Another researcher of the issue—historian Gali Rakhim—attributed the separation of Tatars from folk music to the development of their urban culture. 'These days, there are few among us who sing beautiful ancient melodies. Now the people prefer new songs, without deep meaning, and those

are being written one after another', he said regretfully [Rakhim, 2008, p. 76]. It was at the turn of the 19th-20th century when the Tatars started separating country ('avyl koe') and urban ('shekher koe') motifs.

Heated discussions, to a certain extent provoked by gramophone records, caused the change in the general attitude towards music. For example, in 1908 Tatar youth created a 'Music Society' in Kazan, whose goal was 'to advance national music among common people and create a national orchestra' [Amirkhanov, 2005, p. 134]. Young Tatar men and women enrolled in musical schools, and Muslim educational institutions had their own choirs and orchestras. People from a very wide social spectrum were all becoming singers. For example, one of the famous performers of the time, Kamil Mutygi, was the son of an influential religious figure named Mullah Mutyulla Tuhvatullin from the town of Uralsk.

In fact, after 1905 madrasahs following the new method and the liberal clergy demonstrated a stronger loyalty to music. Madrasah Galinya opened in 1906 in Ufa and stood out among them in particular. This educational institution allowed for various musical instruments to be played, and what is more, students created their own orchestra. The head of the madrasah himself, theologian Ziya Kamali, also loved singing. However, only his nearest and dearest were ever aware of this fact. In his memoirs, his son mentioned that his father sometimes used to perform old Tatar songs such as 'Kara urman', 'Zilyaylyuk' and other melodies, and his children joined him [Central Historical Archive of the Republic of Bashkortostan, Fund R-4767, Inventory 1, File 2, Sheet 71]. There was also an active musical society in the Orenburg madrasah Khusainiya [Rakhimkulova, 2010, p. 153].

In the collection devoted to Shigabutdin Marjani (1915 edition), former pupils and other researchers of the legacy of this outstanding theologian explain his opinions on poetry and music in detail [Marjani, 2001]. Even in the middle of the 19th century, Shigabutdin khazrat became one of the pioneers of reformed Is-

lam, and he promoted his idea that music does not contradict Sharia. 'He insisted that there was no difference where the sound came from, be it from a nightingale or an inanimate object', his student Gabdrakhman Gumari wrote about him. 'It is another matter if actions that do not conform to the norms of Islam take place at literary and musical evenings. This, however, does not concern the poems or music proper' [Märjani, 2001, p. 55]. Hasan-Gata Gabyashi also stressed the special attitude of Marjani towards music. It is worth noting that both authors, representatives of the leading Islamic clergy, did not just protect issues related to music and Sharia in a theoretical sense, but faced them in their day-to-day lives as well.

For example, the Astrakhan imam and publisher Gabdrahman Gumari published the collection 'Nogai Songs' in 1912. The qadi of the Orenburg Mohammedan Spiritual Assembly and historian, Hasan-Gata Gabyashi allowed his son to learn how to play piano. Later, Sultan Gabyashi became one of the first Tatar composers. He took lessons at home, in Ufa, from his teacher Nina Sokolova. The teacher was encouraging her student to continue his education at a music conservatory. 'But my father could not allow that, and he cannot be blamed', the composer wrote in his autobiography. 'At the time, it was not customary for Tatars to study music and become professional musicians, since there was no such profession, nor a demand for it' [Gabyashi, 1994, pp. 33-35].

Thanks to the literary and musical soirées and clubs, it had become popular for Tatars to form orchestras and choirs, and these types of events started happening on a wide scale after 1905. They were principally arranged by young people. The Tatar intelligentsia was gradually introducing the idea that the literary and music soirées, or 'Edebiyat akhshamy', offered the possibility of listening to national music not just at some dubious place, but in respectable halls. 'While music invoking adultery is haram, music calling for progress is mandatory', Gabdulla Tukay wrote about literary and musical evenings [Tukay, 1985, p. 225]. Such events largely promoted the increase of posi-

tive attitudes towards music. For example, the 'Oriental Club' in Kazan (in operation since December 1907) had its own orchestra including such talented musicians as I. Galiakberov, G. Zaypin and V. Apanayev. The group mostly performed Tatar folk works, meaning that they attempted to develop good musical taste in the public.

The promoters always stressed the confessional nature of these events. Obviously, this was done to somehow rehabilitate this new cultural occupation in the eyes of the older generation as well as the more religious public. In the Tatar press, many authors spoke in favor of the Muslim evenings, pointing to their educational nature.

Soon, orchestras and choirs were being put together at educational institutions. For example, in 1914 in the town of Buguruslan of the Samara guberniya, the town's Muslim community founded a music school for children. At first it operated in the building of the madrasah, but later was transferred to a separate facility. There, twenty pupils were taught how to play the mandolin, violin and guitar [Gibadullina, 2009, pp. 173-175].

The girls school of Fatykha Aitova in Kazan (opened in 1916) had a choir made up of its pupils. Apart from singing, they were also allowed to dance and play musical instruments. The pupils arranged concerts at the school, visited the city theater and went to other performances together [Yavgildina, 2007, p. 205]. However, a democratic attitude towards the musical past-times of pupils was not established overnight. This fact is obvious enough if one considers the example of one of the school's pupils, Sara Sadykova. 'Friends liked the voice of young Sara, and they brought her to the children's choir under the management of the editor of the children's magazine Svetliy Put, Fahrelislam Ageev (at the Oriental Club—A.N.). While in the choir, she sang the folk song Rokiya gul'keem, which was well known at the time. After hearing her performance, the director of the school Fatykha Aitova became very angry since she believed the collective singing of girls and boys together indecent. She even expelled the girl from the school', her

daughter, Alfiya Aydarskaya, recalled. 'However, later she had a change of heart, and she invited the "singer" back to the school because Sara had been an excellent pupil' [Aydarskaya, 2002, p. 175].

Therefore, starting from the latter half of the 19th century until 1917, the Tatar community underwent such a massive change of attitude towards music that what was at first an

intimate event blossomed into the province of the public. New sound-recording technologies, the educational activities of the Tatar intelligentsia, and the literary and musical soirées of the time played an important part in this phenomenon. The cultural potential amassed before 1917 proved an excellent starting point for the development of Tatar musical art during Soviet times.

CHAPTER 5

The Kazan Guberniya and Tatar People in the Years of World War One

§ 1. The Socio-Economic and Political Situation in the Kazan Guberniya in the War Years

Aydar Khabutdinov

When World War One began in August 1914, there was an uprising of patriotic sentiment in all classes of society, but it was rather short lived. The Orthodox clergy and the imams led prayer services, and patriotic telegrams were sent [Medvedev, 1948, pp. 6-7]. Tatar society also reacted loyally to their general civil duty. The elite considered the entrance of Turkey in the War as a sign of its government's inability to assess the geopolitical situation. The Tatars of Kazan marked the beginning of the War by a mass patriotic demonstration in which more than 500 people took part. Telegrams were sent to Emperor Nicholas II and the High Commander-in-chief Grand Duke Nikolay Nikolayevich [National Archive of the Republic of Tatarstan, Fund 1, Inventory 6, File 862, Sheets 26-28, 36-37].

On behalf of the Islamic faction, its chairman, a delegate from the Ufa guberniya named K-M. Tevkelev stated in connection with the start of World War One on 26 August 1914: 'The Muslims of the Russian Empire considered and consider themselves Russian citizens not only when they fight for their rights, but also when they have to carry out their duty to their country'. At the same time he pointed out that 'the Muslims cannot assert that their civil sentiments have always been justly evaluated by Russian state power. They cannot conceal from themselves that even now, in such a serious moment, the government sometimes strikes very sensitive blows at their religious and national feelings'[State Duma, 1915a, col. 34]. It was this political and civil inequality, aggravated by anti-Turkish and generally anti-

Islamic sentiments, that would later create an environment for the development of oppositional feelings among Russian Muslims. The Tatars of the Kazan guberniya were not represented in the Fourth State Duma. This is why the patriotic feelings of the region's population were expressed by a deputy of the Governorate, Octobrist I. Godnev: 'all non-Slavic people of the region, like all of us, Russians, being completely united with them, are ready to sacrifice our lives and all our possessions, if necessary, to defend our homeland' [State Duma, 1915a, col. 35].

The militarization of the region's industry started with the beginning of the war. The Governorate's industry was almost entirely concentrated in one centre, Kazan. According to the data of a factory inspection, there were 388 factories and plants with a total of 18,300 workers in the Kazan guberniya in 1914. The shoe and garment factories of the Alafuzov Factory Company were the biggest, with 8,800 workers. On 1 January 1916, there were 19,900 workers in the Kazan guberniya. Forty-three factories with 43 workers were engaged in defense jobs in Kazan alone. Due to the mass conscription of men, 59.4% of the workers in the Alafuzov factories were women, children, and teenagers [Medvedev, 1948, p. 5].

For the bourgeoisie, the war meant super-profits. If in 1914, the profits of the Volga-Kama Bank came to 4.3 million roubles, in 1916, they amounted to 7.6 million roubles. The manufacturer A. Shabanov received 185,000 roubles in 1915, but 817,000 in 1916. The factories and plants working for the army gained the big-

gest profits. The Alafuzov factories occupied first place [Amirkhanov, ed., 2004, p. 65]. The above-mentioned A. Shabanov, who owned only a sheepskin-coat making shop before the war, managed to set up a military uniform factory in Sukonnaya sloboda in Kazan, and opened 15 branches in different parts of the city. At times, the number of workers he employed reached 8,000. In 1916, because of the difficulties in the supply of materials, fuel, and workers, production volumes started to decrease, and some factories, working to provide for the needs of the population, ceased operations. Thus, by 1917, the Krestovnikov soap factory had cut its production by 65% [Khalikov, 1988, p. 331-332].

The war was most unpopular among the vast layers of the common workers, for whom it meant mass conscription, death on the front lines, lower living standards, worse working conditions, and uncontrolled actions of management and factory owners. As early as August 1914, a large strike took place at an Alafuzov factory, and the protests by Kazan workers continued in 1915. The factor which strengthened the influence of radical activists, was the evacuation in 1915 of the population from western regions occupied by the Germans. Natives of the Polish territories played a big role, both in the workers' movement and in the general revolutionary movement in Kazan. Workers were inevitably pushed to strike by a continuous rise in prices. Some help was offered by consumer shops and consumer societies, the most developed of which were at the Alafuzov and Krestovnikov factories. They baked bread and sold flour and sugar at near-cost [Amirkhanov, ed., 2004, p. 64]. However, these measures were evidently insufficient. An economic strike took place at the Alafuzov factory in January 1916, and the next big walkout started the following September. Kazan Governor P. Boyarsky assessed the situation accurately, pointing out the direct animosity of the population towards governmental bodies, which 'under favourable conditions will immediately take the form of such large-scale complications that the events

of 1905 will seem insignificant.' [Medvedev, 1948, p. 9].

Autonomous agencies and charities introduced activities to help families of front-line soldiers, the wounded, and the disabled. The Kazan City Duma allocated 400 000 roubles only for the support of families of reservists, those mobilized from the reserve forces, for the two years of the war. Under the chairmanship of the city of Kazan's leader, V. Boronin, operated a city committee for assistance of sick and wounded soldiers and a committee to equip hospitals. Besides money and ration benefits, the former committee also engaged in arranging canteens and day nurseries, collecting warm clothes and other items, and buying firewood. On 14 August 1914, the Kazan guberniya committee for the assistance of sick and wounded soldiers opened at the Governorate's zemstvo board. In all, more than 150 charities operated in Kazan. In only one year of the war, over 50 wounded were brought there.

By the summer of 1915, the issue of accepting evacuated refugees, first from the Polish territories, had arisen. A city committee to help them was organized in Kazan that August. It consisted of representatives of the Polish, Jewish, Latvian, and Muslim national committees. By January 1916, the committee had over 80 shelters for refugees, five food stations, and several special hospitals, and had given them about 30,00 items of clothing and shoes. [Dimitrieva, compiler, 2003, pp. 4-7]

Public activity of the Tatars was concentrated on establishing field hospitals and gathering funds for wounded Muslims. The Muslim field hospital opened on Moskovskaya Street in Kazan on 2 November 1914. Governor P. Boyarsky, city leader V. Boronin, and the chairman of the committee organizing the hospital, Imam G. Galeev (Barudi), attended and spoke at the ceremony. Of Kazan's Muslim public figures, S.-A. Alkin and S. Maksudi also spoke [Yöldiz, 1914, 5 November].

The All-Russian Congress of Islamic Charities took place in St. Petersburg on 6-11 December 1914. It was the first congress after the death of I. Gasprinsky and the last one

before the revolutions of 1917. Despite the fact that invitations were sent to 87 organizations, 35 representatives of 20 organizations participated in the congress. Ibn. Akhtyamov was elected chairman of the congress. The Central Committee of Russian Islamic Social Organizations, which was charged with 'the management of the work of Islamic social organizations in helping wounded soldiers', was elected. Despite a series of behind-the-scenes discussions, the congress refrained from taking political decisions. Not a single prominent national leader served on the Central Committee. [Arsharuni, 1990, pp. 91-92; Teregulov, 1926, p. 52, manuscript 3881 from the Manuscripts and Rare Books Department of the Kazan State University Lobachevskiy Scientific Library; Khabutdinov, 1997, Part 2, pp. 36-37]. In accordance with the decisions of this congress, the Temporary Islamic Committee on Helping Wounded Soldiers and Their Families was established in Petrograd. On 28 February 1915, it was allowed to establish a central body and local branches. General Gabdulgaziz Davletshin was the committee's chairman [Vakyt, 1915, 24, 25, 27 February; 3 March]. On 9 May 1915, a meeting of the members of its Kazan branch took place, which elected S.-G. Alkin as chairman [Dimitrieva, compiler, 2003, p. 94].

In January 1915, the representatives of the Transcaucasian Muslims addressed the Muslims of the Volga-Ural region with a request for help. On 25 January, the Kazan newspaper *Yöldiz* published an open letter to the board of directors of the Society for Benefits to the Poor Muslims of Kazan, describing the dire situation of Muslims in the Karsk region, where military actions were taking place. This question was considered during a 29 January meeting of the board, held in the house of its chairman, B. Apanayev. The board decided to organize a performance and send the collected money to the Muslims of the Karsk region [Dimitrieva, compiler, 2003, pp. 80-84]. The Committee on Helping Muslim Russian Citizens Suffering from the War was established in Orenburg on 24 February 1915. The main goal of the committee was to collect funds for the Muslims of

the Karsk region [Vakyt, 1915, 3, 6, 8, 10, 14 March, 10, 17, 19, 24 April].

The Committee to Help Muslim Refugees was organized in Kazan in August 1915. Its initiators were S.-G. Alkin and V. Tanacheev. On 6 September, the committee held a meeting with the Muslim youth of Kazan, where 14 people were elected to assist it. In September, the commissions of the committee on hygiene (A. Teregulov), reception of refugees (S. Gabyashi), and food and clothing supply (S. Akhmerova) were organized [Dimitrieva, compiler, 2003, pp. 111-112, 115-117].

In 1915, due to increasing losses on the front, especially after the loss of Poland in the summer, the activity of different social and political groups intensified. According to the data of the chief of the Kazan guberniya's Gendarme Administration, Colonel K. Kalinin (22 August, 12 September 1915), the idea of the 'Ministry of Public Trust', responsible to the State Duma, got unanimous support from the Kazan intelligentsia. At the same time, there were no clandestine party groups after the April 1915 defeat of the Coalition Committee of Kazan University students, which united the Bolsheviks, Mensheviks, and the SRs [Amirkhanov, ed., 2004, pp. 352-353]. In September 1915, the Military-Industrial Committee was established and its working group elected. Part of the workers called to boycott these elections, which led to arrests at the Porokhov, Krestovnikov, and Alafuzov factories [Medvedev, 1948, p. 9].

In the autumn of 1915, the revolutionary society was organized again, augmented by Warsaw University students evacuated to Kazan. Warsaw student G. Olkenitsky played an important role in restoring Bolshevik orthodoxy in Kazan. In February 1916, a proclamation was issued announcing the organization of a new Coalition Committee, which started to regularly distribute leaflets of revolutionary content [Medvedev, 1948, p. 13]. In September 1915, the first student meeting with anti-war slogans during the war years took place [Khalikov, 1988, p. 336]. A general student meeting against conscription of students into the army was held on 18 March 1916 [Medvedev, 1948,

p. 14]. A new student meeting was held on 5 November 1916. In its resolution, the students demanded the establishment of a 'responsible ministry' and the introduction of political freedoms [Amirkhanov, ed., 2004, pp. 360-361].

In the summer of 1916, three members of the Coalition Committee travelled to Ufa, where they established a connection with the Bolsheviks of Samara and Orenburg. That same summer, two prominent Bolsheviks, V. Tikhomirnov and V. Molotov, arrived in Kazan. They promoted Bolshevism among the workers of V. Tikhomirnov supplied the Kazan Bolsheviks with the Social Democrat newspaper, published in Geneva [Medvedev, 1948, p. 15]. By the beginning of 1917, the students, workers, and Kazan Garrison soldiers had been gripped by revolutionary propaganda.

The onset of the war gave a new impulse for unification to Islamic political leaders as well. In 1915, they decided to organize a centre uniting all Turkic regions of Russia, the Islamic Faction Bureau. G. Iskhaki, the editor of the newspaper *Suz*, was the centre's main initiator. Meetings took place in Moscow, Ufa, and Kazan. Kazan candidates to the bureau were S.-G. Alkin, S. Maksudi, and F. Tuktarov. The members of the bureau had to help the faction coordinate the activities of Russian Muslims. The commission to organize the bureau was created, and included S.-G. Dzhantyurin (representative of Ufa and member of the First Duma), G. Enikeev (deputy to the Fourth Duma), and former leaders of the *tangchylar* movement Sh. Mukhammedyarov and G. Iskhaki [National Archive of the Republic of Tatarstan, Fund 199, Inventory 1, File 1112, Sheet 1].

In 1915, representatives of the national intelligentsia started gathering in the editorial office of the *Yöldiz* newspaper. Those were the newspaper's editor, A.-H. Maksudi, and his brother S. Maksudi; newspaper contributors G. Battal, G. Kamal, and F. and I. Amirkhanovs; the editor of *Ang* magazine, G. Khasanov; the editor of *Yalt-Yolt* magazine, A. Urmancheev; the owner of the printing house, Gilm. Sharaf; Sh. Akhmerov; V. Tanacheev; G. Kariev; the editor of *Ak Yul* magazine, F. Ageev; the editor

of *Rusiya Seudese* magazine, V. Shagidullin; and Gimran Sadykov [National Archive of the Republic of Tatarstan, Fund 199, Inventory 1, File 1112, Sheet 1-1 reverse]. Thus, the national activists in Kazan, first of all, concentrated on educational activities.

The Tatar elite hoped that Muslims, who had spilled their blood on the front lines, would obtain equal rights. On 20 July 1915, K.-M. Tevkelev, on behalf of the Duma representatives of the Latvians, Lithuanians, Estonians, Armenians, Jews, and Muslims, declared: 'We express... profound confidence that in the matter of resisting the enemy and defeating him, one of the main conditions for success is raising the spirit of the peoples inhabiting Russia, and the possibility for them to freely place their efforts into the common goal of fighting the enemy, and that such a situation can be best achieved when all the nationalities in Russia are granted civil and national equality of rights'. The declaration was denied by 190 votes against 162. It was the last real attempt of non-Russian peoples to compromise with the Duma majority [State Duma, 1915b, column 187, 196].

In 1915, Muhammad-Safa Bayazitov was appointed mufti of the OMSA. If the Clerical Assembly was earlier considered by national leaders a neutral body, after Bayazitov's appointment, they aimed at making a secular nationwide body not connected with the assembly. In the beginning of 1916 a meeting took place in Petrograd, where it was decided to create a bureau at the Islamic Faction. Sh. Mukhammedyarov, G. Iskhaki, I. Bikkulov, and S. Maksudi participated in the meeting. The bureau was supposed to consist of representatives of Kazan, Orenburg, Moscow, Astrakhan, Troitsk, and Chelyabinsk. In reality, the Tatars were represented by Kazan, Orenburg, and Ufa. Akhmet Tsalikov (North Caucasus) was elected chairman of the bureau, and Ismagil Lemanov (Crimea)—its secretary. The bureau assumed the role of an information and coordination centre for the Muslims of Russia. The faction and the bureau ever increasingly perceived themselves as the sole

lawful representatives of Russian Muslims. At the same time, the issue of joining the oppositional Progressive Bloc of the Duma was being discussed. The most zealous supporter of this idea was S. Maksudi. The leaders of the Ufa murzas and the Tatar Socialists showed opposition on principle to the alliance on the national political scene, which would unite the right and central parts of the Duma deputies. That was why the representatives of Kazan, who were looking for political partners, did not take an active part in the activities of the bureau. [Khabutdinov, 2001b, pp. 254-259]

In 1915, Kazan students then in Petrograd (Galimdzhhan Sharaf, Ilyas and Dzhigangir Alkins, and Sultanbek Mamliiev) established the society Tatar Uchagy (Tatar Hearth), which was based on the activities of Yu. Akchura's Turkic Hearth, and had as its goal the growth of the Tatar nation's political culture and its modernization. All of them except for Sharaf were conscripted into the army, and later became the key figures in uniting Muslim soldiers and establishing Harbi Shuro [Khabutdinov, 1997. Part 1, pp. 28-29]. The leaders of Tatar Uchagy publicly expressed their positions for the first time in the beginning of 1917. The young men declared that in the discussion about the existence of the Turkic or Tatar nation, voicing the thoughts of all the young generation, were fully on the side of the existence of a separate Tatar people and a fully legitimate Tatar language. This language had to be used officially in the courts and local institutions [Koyash, 1917, 14 February].

During the war years, Kazan was the centre of Russia's biggest home-front military district, with 98 garrisons located on the territory of 10 governorates and 2 Volga-Ural regions. The garrison of the city itself amounted up to 50,000 people. March companies for the front lines were formed in the district. In 5 alone, five mobilizations had been carried out in Kazan guberniya. According to some data, the population of the governorate decreased from 2.8 million to 2.2 million over 18 months [Medvedev, 1948, p. 4].

In the first three months of the war, a popular patriotic upsurge, which was evident from the

letters of front-line soldiers, could be observed. For example, Grigory Vostryshev wrote on 10 September 1914: 'a Russian soldier can endure it all, he is not afraid even of the Devil himself. The Russian heroes will stop at nothing and will win the glory for our Father Tsar and dear Mother Homeland. We will be able to defeat the damn Germans, so that they will remember it for the whole century.' [Maksimov, compiler, 1932, p. 17] However, according to censorship office information, already more than half of soldiers' letters had no references to the war, but were filled with worries about home, family, and household.

In 1915, the war was already perceived as a national tragedy. Thus, an unknown soldier of the 30th infantry regiment said in a letter to Nina Prosvetova in Kazan: 'The soldiers in general view the war correctly, as a great disaster not for separate individuals, but for the whole country, as much an economic as well as a moral disaster, and see the German soldiers as their fellow-sufferers.' An important factor was that the war was waged far from home and from the ethnic territories of the region's peoples. In the same letter, the writer attacked the half-company commander: 'He has forgotten that the homeland is dear to us only because of our homes and relatives, not because of the history books by Ilovaysky or Ostrogorsky.' [Maksimov, compiler, 1932, p. 24] The soldiers were outraged not only by their own lack of rights, but also by the lamentable condition of the working masses in Russia. M. Petrov ('1st park, 20th Martirny park of artillery division') wrote to E. Petrova in Kazan on 31 January 1916 that the peasants lived in the dirt and the cold, because they were not allowed to use the forest lands. On the contrary, 'when the Germans capture our territory, they let the peasants take as much wood as they want for restoring houses and for fuel.' He wrote with special pain about the fate of children: 'As many of these kids die and wither away, it is the governorates of Minsk, Grodno, Vitebsk and others. And I think that the Germans have the right to consider us savages.' [Maksimov, compiler, 1932, pp. 64-65] In 1916, information appeared about soldiers killing officers. In

a letter by Gavriila Romanov dated 25 March 1916, it is indicated that 'officers in the Kuban and Derbent regiments were attacked.' [Maksimov, compiler, 1932, p. 91]

By the beginning of 1917, military censors of the Kazan military district had marked a sharp rise of anti-war sentiments in the soldiers' letters, especially of the Tatars. The list of Muslim soldiers' complaints to the government included the impossibility of observing religious rites, a lack of press in their native languages, disunity among Christians, impossibility to freely associate in their native languages, and preconceived attitude of a part of their fellow soldiers to Muslims. [Maksimov, compiler, 1932, pp. 100, 106, 186-196]. The distinctive feature of the major part of the letters cited was the dissatisfaction with the humiliating position, the feeling of being separated from their compatriots, and not the negative attitude towards war and civic duty. By 1917, desertion in the Kazan Military District had become a mass phenomenon.

At the beginning of 1917, Kazan public leaders concentrated on elections to the City Duma. The 'progressive group' (that is, the national liberals) proposed a list of 16 candidates in Kazan in February 1917. On 13 February 1917, a meeting under the chairmanship of S. Maksudi took place in the 'Amur' Hotel, where the question of proposing candidates to the City Duma, making an alliance with Russian parties, and the conditions of such alliance were discussed. After A. Mustafa presented his report, the following conditions were defined: Muslims in each commission of the Duma, introducing Muslims into City Administration, the Administration of the City Society Bank and Pawnbroker, and transferring one of each of the town girls' and boys' schools to Muslims. The list consisted of: 1 mullah (G. Apanay), 9 representatives of the bourgeoisie (including S. Aitov) and 6 representatives of the intelligentsia: 1 teacher (G. Gubaydullin), 2 doctors, 1 publisher and 2 barristers (S. Maksudi and V. Tanachev) [Koyash, 1917, February 16]. In general, this list shows an absolute preponderance of the

secular liberal elite, as a rule, of the period of the Russian Revolution of 1905-1907, as well as the preponderance of the bourgeoisie among the urban figures of Kazan.

However, the attempts to partially solve the problems at the local level did not satisfy the needs of the population, which was becoming more and more radical. As early as 17 October 1915, the Governor P. Boyarsky reported to the Police Department that in Kazan 'there are signs of dissatisfaction and animosity, especially because life was becoming more expensive, starting with apartments and fuel, and ending with the most essential provisions. The blame for this expensiveness is mainly put on the speculation of the merchants. The efforts of the City Administration to bring down expensiveness by competition, could not be implemented due to a lack of money, and the city's petition for a loan of one million had been declined.

Dissatisfaction had been noted even in circles, where it could least of all be expected, and talk of revolution as the outcome of the war became commonplace' [Amirkhanov, editor, 2004, p. 59].

The machinery of the Russian government was obviously not able to cope with both the difficulties on the front lines and on the home front. By the beginning of 1917, the irregularity in provisions supply, including even the norm of black bread, lack of firewood, absence of raw material for some factories, the threat of closing down the factories and mobilisation to the front lines became more and more of a mass phenomenon [Amirkhanov, editor, 2004, pp. 67-70]. The crop yield in the countryside of Kazan guberniya dropped from 6.2 centners per hectare (average in 1905-1914) to 5.3 centners per hectare in 1917 [Medvedev, 1948, p. 4]. The situation was made worse by a reduction in areas placed under crops, the decrease in working livestock, the mass mobilisation of men to the army, heavy taxes, and the increasing confiscation of provisions. A member of the Islamic faction, parliamentarian from Ufa guberniya G. Bayteryakov rightfully stated on 24 March 1916: 'Our peasants had to and

have to support their existence under difficult circumstances. You all are well aware of the position of our village working population, deprived of its civil rights' [State Duma, 1916, column 3951].

In the cities, during wartime, the salaries of Kazan workers increased by 81%, while the cost-of-living rose by 600% [Khalikov, 1988, p. 334]. In response, on 30 January 1917, a strike began at the Alafuzov factory. In the beginning it involved only women, because they were not afraid to be conscripted

into the army. On 5 February 1917, the strike spread to other factories of the city, but on 8 February, it was put down by the police and the army [Khalikov, 1988, p. 338]. Governor P. Boyarsky offered to expel the women on strike from Kazan and its suburbs, and to send their husbands and other relatives, liable for military service, to the front lines with the first echelons [Khalikov, 1988, pp. 360-362]. A fragile truce reigned in the city and in the governorate, which lasted until the February Revolution.

§ 2. Tatars in the Russian Army

Khalim Abdullin

The Tatars as a military force have always been in demand in the Russian State. Service Tatars as a special privileged class kept their importance throughout 16th–17th centuries. The military valour of the Tatars especially revealed itself during the Livonian War and during the Time of Troubles. On the whole, by 1630, the military people from the Middle Volga region amounted to 555 men, that is 20% of the total number of the Russian Army (92,555 men) [Nogmanov, 1994, p. 49]. However, the transition to a regular army at the beginning of the 18th century made their role in the Russian armed forces less significant. From 1722, recruitment duty was extended to the yasak Tatars, because recruitment into the army fell on the shoulders of the state peasants. However, when the representatives of other Volga region nationalities were recruited on the same terms as the Russians, the recruitment of the Tatars acquired a barbaric form: 'They are taking underage Tatars, that is, from 10 to 12 years old, for the garrisons, from whom one third are to be made servants to the General Quarters and Headquarters, and some part are to be made sailors' [PSZ-1, 1830, p. 483]. In the same year, the recruitment obligation began to be extended to the service Tatars, assigned to The Admiralty. In the 18th century, the recruited Tatars were sent to the Baltic regions to carry out their service—in the navy and the infantry.

As opposed to the yasak and service Tatars from the Central Russian regions and the Middle Volga region, the Tatars, residing in the Cis-Ural region and in the east and south-eastern fringes of the Empire, were relieved from recruitment obligations. Special ethnic and class groups of the Tatars were formed there, which were irregularly called up for military service—the Teptyars, Meshcheryaks, and the Tatars, who entered the social class of the patrimonial Bashkirs, and the Tatars, who were enlisted in the territorial Cossack forces.

In 1790, the Teptyars were assigned to the Cossack class, and together with the landless peasants of Ufa and Vyatka guberniyas, they formed a Cossack regiment. On 23 July 1791, it received the name of Ufa Regiment, and in 1798 it was divided into two: the 1st and the 2nd Teptyar Regiments [Kazin, 1992, p. 235]. The regiments were given the task of participating in military campaigns and carrying out frontier guard duties at the Orenburg Line [Rakhimov, 2002, p. 67]. Those regiments actively participated in the Patriotic War of 1812. In March of 1835, the 1st Orenburg Cossack Regiment, formed from the 1st and the 2nd Teptyar Regiments, was added to the Orenburg Cossack Army. In 1841, its old name, the Ufa Cossack Regiment, was restored, but in 1845, the regiment was abolished [Kazin, 1992, p. 235]. In 1855, all the Teptyars and landless

peasants of the Orenburg region were added to the Bashkir Army.

Since 1798, the Bashkirs and the service Tatars of the Urals, had been called by the special term 'meshcheryaks', were also added to the Cossack class and made up the separate Bashkir-Meshcheryak Cossack Army. The main battle goals, set before the army, were identical to the ones for organising the Teptyar Cossack Regiments. The Cossack troops also actively took part in the Patriotic War of 1812, in particular, the 1st and the 2nd Meshcheryak Regiments, and also the 3rd and the 5th Bashkir Regiments, formed from among the inhabitants of Menzelinsk uyezd in the Ufa guberniya. Besides this, the army engaged these regiments during the Coalition Wars, during the Russo-Turkish War in 1828-1829, for putting down the Polish Rebellion in 1830-1831, in the Khiva Campaign in 1839, and during the Crimean War in 1853-1856. In 1856, the Bashkir-Meshcheryak Army was renamed the Bashkir Army, and in 1865, the Army was passed under the control of the Ministry of Interior [PSZ-2, 1866, p. 753]. From 1874, the Teptyars, the Meshcheryaks and the Bashkirs began to be conscripted into the regular army on common grounds.

The Tatars were present from the start in many territorial Cossack armies, and later they also supplemented the ranks of the Russian Cossacks. Thus, on 11 February 1736 Cossacks from among the newly-christened Ural Meshcheryaks and other categories of Cossacks were established in the newly built towns of Orenburg and Tobynsk [Kazin, 1992, p. 235]. This date is considered to be the beginning of the official history of the Orenburg Cossack Army. Another example is the Siberian Cossack Army, which was officially founded in 1760 'from the Don Cossacks, the Bashkirs and Meshcheryaks, who constituted the frontier line in Siberia and wished to stay there for good' [Kazin, 1992, p. 272].

The Tatars repeatedly enlisted in the Orenburg Cossack Army—in 1799, the yasak peasants and the Tatars of Orenburg guberniya were enlisted, in 1817, the Army was joined by the service and yasak Tatars of the same Gov-

ernorate [PSZ-1, 1830b, p. 464]. By the beginning of the 1890s, the number of the Tatars in the army amounted to 21,581 men, which was equal to 6% of all army personnel [Starikov, 1891, p. 155].

The Ural Cossack Army included the Muslim Tatars as well as the Nagaibaks—Orthodox Tatar Cossacks. According to the data, in 1853 there were 3,407 Muslims in the army [Arapov, 2003, p. 8]. Originally, the leading place among the Muslims belonged to the Tatars, but in 1838, the 9th Bashkir Canton was assigned to the Army, which was, however, later removed from the Army. By the middle of the 1870s, the number of the Muslims in the Ural Army reached 15%, however, only 4810 men, or 5%, belonged to the army class [Krasnov, 1877, p. 273]. Tatars made up the absolute majority of them. The share of the Muslim Cossacks had a tendency to grow, as was the case in the Orenburg Cossack Army: in 1885—5,378 (5.4%), 1897—6,304 (6%) [Dubovikov, 2000, pp. 21-22].

Originally, there were the Mishar Tatars and the Bashkirs in the Siberian Cossack Army, who served at the frontier line in Siberia, however, the Muslim backbone of the Army consisted of native Siberian Tatars. In 1822, seven town Cossack regiments were formed from various Cossack troops. An especially large number of Tatars served in the Tobolsk and Siberian Tatar Mounted Regiments [Kazin, 1992, p. 327]. In 1849, the Tobolsk and Siberian Tatar Town Regiments were passed under control of the military department, and new units were formed from them. At the same time, a part of the Tatar Cossacks was transferred to the category of the yasak peasants [PSZ-2, 1850, pp. 115-127]. According to information for the year 1853, there were not many Muslims in the Siberian Cossack Army itself—only 261 people. However, in the Tobolsk Battalion and the Tobolsk Mounted Regiment already 6247 Muslims were serving [Arapov, 2003, p. 8]. According to the information for the year 1908, a total of 2243 Tatar Cossacks lived in just the one Tobolsk guberniya [Fayzrahmanov, 2002, pp. 401-402].

The Tatars of the Cossack class participated in the First World War as part of regiments of their troops. Other categories of the Tatar population, who had been conscripted on common grounds since 1874, were conscripted into all kinds of regular army battalions and the navy.

It is also necessary to note that from 1797-1833, the Tatar Mounted (later Uhlan) Regiment, made up of Polish-Lithuanian Tatars, served in the Russian Army. The Crimean Tatars, annexed by Russia at the end of the 18th century, were relieved from recruitment obligations and had their national military formations in the Russian Army until the collapse of the Empire [Abdullin, 2007, pp. 49-54].

It is interesting, that even at the beginning of the 20th century, the Military Department divided Tatars on the basis of their ethnicity and class (Tatars, Meshcheryaks, Teptyars), but however took them into account as a whole group, putting them together with the Bashkirs. Before the First World War, 38679 men from the mentioned categories served in the lower ranks, which made up 3.1% of the total of the lower ranks [Military-Statistical Annal, 1914, pp. 374-375]. In contrast to the 18th century, only 14 Tatars were chosen from them for serving in the navy, the rest served in the infantry. No such national separation existed among the officers and generals, there is only information about their religious affiliation, a total of 269 Muslims.

However, after the beginning of the War, the number of Tatars in the army increased dramatically. As the literature has noted, during the course of the war, 1 to 1.5 million Turkic soldiers had been mobilised, which made up 10% of the total number [Iskhakov, 2003, p. 245]. The major part were the Tatars. The number of Tatar officers also increased.

The attitude of the Tatars to the war that had just started was not unanimous. On the one hand, the national press was filled with loyalist articles, the clergy, the nobility and the merchants echoed the patriotic sentiment. On the other hand, the main part of the Tatar population, the peasants, perceived the war as something inevitable, fatal, and only tried to avoid participating in it as far as possible. The letters

of military men should be considered the most valuable historical source, reflecting the true situation of the Tatars on the front lines [Maksimov, compiler, 1932; Vakhrusheva, 1972, p. 77; Sharangina, 1998, pp. 177-184]. A well-known specialist in Turkic philology N.I. Ashmarin, who during the war served as a military censor in Kazan, marked in his report that 'the letters of the Muslim soldiers are written based on one template, and carry very little information about what is going on in the war. The tone of the letters was muted... The war, apparently, is seen by a Muslim as an unforeseen disaster, which is fatal for some, while others survive; he does not go deep into the tragic connection between the events, and is dissatisfied [that] something has disturbed the peaceful course of his everyday life' [Iskhakov, 2003, p. 260].

The questions that worried Tatar soldiers at the front lines were the usual ones: cold, hunger and losses, as well as specific ones, such as: national oppression and the observance of religious rites. The Tatars of the lower ranks were prohibited to speak in their native language, were rarely appointed to command positions, subjected to insults and attacks on national grounds by fellow soldiers, and often from officers as well.

The Tatars reacted most acutely to the violations of their religious rights. As early as 1908, the positions for Islamic military clergy, abolished in 1896, were restored in the Military Department. According to the legislative act, the positions of military mullahs were available only in the District Headquarters of the Wilno (Vilnius), Warsaw, Kiev, Amur and Moscow Military Districts, where 3000 or more lower rank Muslims served before the war. The same legislative act gave equal rights to the Muslim clergy as those enjoyed by the Catholic and Lutheran military clergy [Abdullin, 2009, pp. 111-112]. However, in the difficult situation at the beginning of the war, the matter of spiritual care of representatives of religious minorities among the front-line forces remained unsolved, which caused a natural dissatisfaction on the part of Muslim soldiers. The Kazan Governor wrote in one of his reports, that it had been noted in the correspondence of the Tatar soldiers,

how discontented they were with the war and, in particular, with the impossibility to observe their religious rites. Thus, one soldier wrote: '...the Russians at War have priests, who serve their soldiers, but we, Muslims, do not have this. No mullahs are appointed for us, despite the fact that more than a half of the soldiers are Muslims, who die without a mullah and are buried with the Russians in one grave, in our opinion, the government should pay attention to this' (cited in: [Arsharuni, 1931, p. 98]).

In 1914, the question about appointing mullahs to the front-line forces was discussed by representatives at the All-Russia Congress of Islamic Societies, which took the decision to petition for the appointment of one mullah to each division [Kaspy, 1914, No. 281, p. 4]. However, in 1915, the military mullahs were present mostly in the Headquarters of the Armies and in the national regiments [Decreets to the armies of the South-Western Front, 1915]. In 1915, about 30 military mullahs were appointed to these positions by decrees of the Ministers of Interior and the Military Department. Finally, on 15 July 1916, in accordance with the edict of Nicholas II the staff positions of Divisional Mullahs were introduced into the army [Zagidullin, 2006a, p. 45].

Despite all contradictions, the Tatars, in general, as in all previous wars of the Russian Empire, remained loyal to their oath and carried out their military duty irrespective of rank. Thus, Major-General Zulkarnayn Shagingireevich Dashkin commanded the 14th Orenburg Cossack Regiment, which battled its way to the town of Sukhodol to the towns of Czestochow (Poland) and Vilkomir (Lithuania) [Semenov, 2001, pp. 166-189; Denisov, 2005, p. 233]. The commander of the 166th Infantry Regiment of Rovno, Major-General R. Syrtlanov died in battle on 20 July 1916 near Skrobovo. He was posthumously awarded with the highest award for an officer—the Order of Saint George, 4th class [Iskhakov, 2003, p. 254]. Another Tatar Major-General was the commander of the 152nd Reserve Infantry Regiment Hajji-Ahmet Iskhakovich Izhbulatov [General Composition of Kazan Military District Officials, 1917, p.

66; Izhbulatov, 2005, p. 534]. It was in this war that the first Tatar Captain of First Rank, Iskhak Ibragimovich Islyamov, was promoted to the rank of Major-General [Akhmetshin, 2003]. The Commander of the 306th Mokshansk Regiment, Colonel M. Ibragimov, was awarded with the weapon of St. George; he captured the high ridge near Zagroba village on 14 May 1915 and held this position for three days against the enemy's superior forces [Iskhakov, 2003, p. 254]. Muhamedzhan Khosyanovich Vishnyakov, Ensign of the Chechensky Mounted Regiment, died valiantly in battle on 19 April 1917, and was posthumously conferred the rank of Second Lieutenant and awarded the Order of Saint George, 4th class [RGVIA, Fund 409, Inventory 1, File 180661, Sheets 52-54; Fund 407, Inventory 1, File 2254, Sheet 73 reverse]. Akhtyam Musalimovich Bakhtizin was one of the many Full Cavaliers of Saint George from among the Tatars Bakhtizin [Nabiev, 2002, p. 318].

After the February Revolution of 1917, a significant number of questions, which worried the military Tatars in the first years of the War, were resolved. Islamic military organisations began to be established everywhere along the front lines. It is remarkable that the first organization of this kind was the Kazan Islamic Military Committee, founded on 8 March 1917. On the whole, 4 front-line, 13 army, 12 district, 98 garrison, more than 150 divisional, and in total around 300 Islamic Committees had been established by December 1917. There was no army or district left without a functioning Islamic Committee. The Tatar and Bashkir soldiers, dispersed all over the country, could unite, having created numerous interconnected organisations, that strove to form national units [Iskhakov, 2003, p. 275]. During less than a year, significant results were achieved in forming separate military units from among Muslims. By the end of 1917, the following military units existed, made up mainly of Tatars and Bashkirs: two Crimean Mounted Regiments, Muslim Rifle Corps on the Romanian front, 1st Muslim Rifle Corps in Orenburg, 2nd Muslim Reserve Regiment (144th) in Ufa. Be-

sides this, there were several squadrons and numerous companies and battalions. The reorganisation of the 95th Infantry Reserve Regiment in Kazan, the 32nd Infantry Reserve Regiment in Simferopol and two divisions at the front lines was being completed [Iskhakov, 2004, pp. 436-437].

The experience of organising the army on 'national bases', was later adopted by the Bolsheviks, who skillfully used the centuries-old aspiration of the Tatar people to preserve their national identity, even under the severe conditions of the Tsarist army. Since the times of Peter I, the Kazan Tatars were the only people of the 'Islamic faith', who had been subjected to heavy recruitment duty. From the latter half of the 19th century, general conscription was extended to other ethnic and class groups of the Tatars. Service on a lower rank

in the regular army of Tsarist Russia was not perceived positively by any of the population categories of the country. However, the representatives of national and religious minorities most acutely faced this problem, the conditions of their service, which besides everyday and services issues, were complicated by the manifestations of national and religious oppression. At the same time, common difficulties of army service brought together the representatives of various nationalities. Besides this, the majority of the Tatars, bound by their religious oath, served honestly and patiently, and with bravery fulfilled their military tasks, assigned by the army authorities. In the end, none of the other 'Muslim' peoples of Russia in the army was perceived as being on the nearest mental level by the Slavic majority, like the Tatars.

CHAPTER 6

The Revolution and Struggle for Power in the Kazan Guberniya and in Kazan in 1917-1918

§ 1. February Revolution in Kazan. The Formation of the Soviet (Council) and Establishment of Dual Power

Indus Tagirov

Tsarist Autocracy fell as a result of triumphant uprising of soldiers and workers in Petrograd on 28 February 1917. Telegram about the victory of the revolution arrived in Kazan on 1 March, and was a signal for the start of the democratic coup. The first months of revolution were marked by the romantic mood of the population and general enthusiasm concerning the revolution. This is especially highlighted in the thousands of telegrams addressed to the new regime and newly formed the Petrograd Soviet of Workers' and Soldiers' Deputies. The following was written in the 'Kamsko-volzhsкая rech' newspaper: 'New government, formed by the will of people, has become a legitimate power. We know who is in power right now. All important ministerial positions are in the hands of the people' [Kamsko-Volzhsкая Rech', 4 March 1917]. An article called 'People are the builders' by V. Sasonov, published on 5 March, contains the following lines: 'Governments are crashing down, thrones are falling, and yesterday's ruler becomes an ordinary person or—even worse for him—a person deprived of rights. People are the Builders. They are facing now a challenging task, for they have inherited a heap of ruins from the great temple called the state'.

Indeed, at that time, everybody seemed to be a friend of people. At that time, it was not the time to determine who was a friend and who was an enemy. However, this was certainly going to happen in the coming months of the revolution. And this did happen. However, for the time being, meetings and protests, that the

country was stricken with, were full of common joy, hope and wishful thinking.

Telegrams were sent from the all corners of Russia, from all the peoples that inhabited it. In this work we are going to show just some of the telegrams sent by the Muslim, and primarily, Tatar population. At the protests and meetings of the Muslim population, strong feelings of joy were overflowing with national feelings. As it was mentioned in a telegram dated 18 March, at the meeting of the Muslims in the village of Baysarovo, Menzelinsk uyezd, Ufa guberniya, they expressed hope and wished to have 'the gratifying feeling of a dawn rising over Russia', shining 'over all the nationalities of new Russia' [RSHA, Fund 1278, Inventory 5, File 1338, Sheet 142]. The Muslims considered the revolution to be 'a sun of truth, shining over Russia and its multi-ethnic population' [RSHA, Fund 1278, Inventory 5, File 1338, Sheet 216]. 'Now we feel as citizens equal with all other nations of this great state, which is proving its political maturity, with the deep certainty that the case of emancipation of the country and liberation of oppressed Russia from the age-long tyranny, which has made it as weak as a youngster'. That is how the attitude of the Kazan Muslims to the changes following the fall of autocracy was expressed in a telegram signed by Saidgarey Alkin [RSHA, Fund 1278, Inventory 5, File 1338, Sheet 2].

2 March was marked by a political demonstration of students and workers in the Theatre Square. Several small groups of soldiers also participated in it.

On the same day, the Council of Workers' Delegates was formed; it was headed by the Mensheviks from the working group of the Military Industrial Committee. The Menshevik working group of the Kazan Military Industrial Committee headed by Efimov, Denike and Chekunov called a meeting with representatives of health insurance funds. Following discussions about the political situation in the country, the meeting of the group approved an appeal to workers, students and encouraged them to '... invite representatives of health insurance funds of small factories and plants into the newly formed organization'. It contained a call to hold at plants meetings concerning elections of Workers' Delegates. Authors of the appeal thought that the Council was supposed to work 'in consort with all organizations strongly supporting the Provisional Government'. Soon the Council was enlarged by new delegates elected at workers' meetings. Chekunov, later exposed as an agent provocateur, was appointed the Head of the Council.

The greatest event that occurred during the democratic revolution in Kazan was the revolt of the garrison on 4 March 1917. The 94th Regiment was the first to rebel. In that regiment, there were especially many soldiers that had been to war. Deputy adjutant of the regiment was the war-time officer Novikov Vasily Ivanovich, a member of Russian Social Democratic Workers' Party (bolsheviks) since 1904. Fedotov, Popov and other democratic-minded warrant officers were serving in the same regiment. Kapralov, a member of the Bolshevik Party, played an important role in the regiment. Revolutionary propaganda in the training team of the regiment was carried out by non-commissioned officer Mosolov.

Later V. Novikov wrote the following: 'Our regiment was the first to go to Kazan to establish the revolutionary authority. I was among the first who marched... in the regiment...' [See: Ionenko, 1957; Silaeva, 1958]. Later it was reported that a provisional revolutionary committee was established on the day of the rebellion, and Novikov was appointed its

secretary. Following the rebellion of the 94th Regiment, the 95th rebelled, then other infantry regiments and 2nd Artillery Brigade supported the rebels.

On the night of 4 March, the Kazan garrison rebelled. Generals Sandetsky, Faydysh, Komarov, and Yazvin were arrested; commanders of the 94th, 95th, and 164th regiments, and other hated officers were suspended from command. Soldiers started establishing their own committees and sending representatives to the Soviet (Council) of Soldiers' Deputies. Those officers who participated in the uprising against Sandetsky, personifying the tsarist regime, understood the impossibility of holding control over soldiers without organizing military committees and councils.

Together, they were all trying to control the situation. This was a period of dual power, or in the words of L. Trotsky, a multi-power period. National enthusiasm and confidence in the new authorities and in the consciousness of people were intertwined with grievances against the policies of its local bodies.

Prince Boyarsky was brought down in Kazan. Commissioner of the Provisional Government, landlord Molostvov, took office on 8 March. The city militia started to function on 10 March. M. Bukhov was appointed the head of police. Warrant officers I. Alkin and P. Golanov were appointed his deputies. The Committee of Public Security, fully established by the middle of March, was supposed to be a representative body of democracy. Analogous bodies were also established in the uyezds.

In March 1917, during the mass revolutionary movement, factory committees and labour unions were established. The overthrow of Tsarist regime did not improve condition of working class. The Provisional Government carried on with the criminal imperialistic war. The struggle of workers for an improvement in their living conditions was growing day by day all over the country. Economical demands of workers were intertwining and consolidating with the political struggle. Pay increases, eight-hour work days, recognition of rights of factory committees and labour unions, atti-

tudes to the Soviets, the Provisional Government and the war comprised the main range of questions raised by the working class after the February revolution. Factory committees and labour unions were appearing everywhere during workers' strikes, and later started taking leadership roles in movements at factories and various industrial sectors. Usually, the leading role in creation of factory committees and labour unions belonged to the Bolsheviks. Kazan workers had intensified their struggle even more following the information from newspapers about the introduction of an eight-hour work day by the resolution of Moscow Soviet of Workers' and Soldiers' Deputies. A provincial factory inspector anxiously reported on this issue, noting that '...the situation at the factories had dramatically changed, and for this reason... we can expect more complications at local manufacturing plants'. A factory committee at Alafuzov plants and factories was formed in early March. It was formed by the initiative of the Bolshevik I. Gladilov. The factory committee consisted of 35–37 people, the company representatives.

During the first few days, a temporary workers' committee functioned at the Powder Mill. The first meeting of this newly elected committee was held on 18 March. Bolshevik A. Grishanin was elected the head of the committee.

In the following days, factory committees were formed at the majority of factories. They started playing a crucial role in the organization of workers, in taking over control over production and distribution. These days were also marked by the establishment of labour unions. A labour union at Alafuzov's factories was formed on 10 March, earlier than at other plants. It also accepted workers of the Powder Mill, and the enterprises of Ushkov, Yartsev and Shabanov. Starting from the latter half of March, the movement for the organization of labour unions already involved all industrial enterprises of the city. Meetings, rallies and protests of metal-workers, craftsmen, bakers, etc. took place everywhere. Even waiters created their own labour union, and its first activ-

ity was to organize a movement against the payment of tips.

Local political parties intensified their activities. One of the first meetings held was a meeting of the Social Democrats in room No.10 on 26 March. Representative of the Central Committee of the Russian Social-Democratic Labour Party (Bolsheviks) Viktor Tikhomirnov spoke at that meeting. Around 70 people were in attendance. A committee of 16 people was elected and headed by V. Tikhomirnov. This was a joint organization of the Bolsheviks and Mensheviks-internationalists.

At the same time, a local group of Socialist Revolutionaries held its own meeting. K. Shnurovsky, V. Zhilinsky and other university Socialist Revolutionaries from the coalition committee initiated creation of a Socialist-Revolutionary organization in Kazan. They turned to party members Dravert, Burgalyshinsky and others. These seasoned activists managed to become the leaders of the Socialist Revolutionary Committee. Sharp contradictions were raised in the course of the formation of the Socialist Revolutionary organization, mainly, related to the issues of war and peace. The lower party members were mainly internationalists, while the leaders were ardent defenders. The Kazan Socialist Revolutionary Organization split in the April 1917. This split resulted in the formation of the separate so-called 'Committee of the Elders', consisting of defenders and the 'Committee of the Young', consisting of Socialist Revolutionary internationalists. This was the first split among the Socialist Revolutionaries in the country. For peasants, members of the 'Committee of the Young', the left Socialist Revolutionaries, were the most authoritative. It was they who led peasants' struggle for land distribution in the Kazan guberniya.

Kazan students actively participated in revolutionary activities. At the meeting of students on 4 March, by a special resolution, the students decided to 'urgently take up the initiative to organize public protests' [Georgievskaya, 1957, p. 21]. 'The revolutionary wave that rolled into Kazan on March 1 placed the student community at the head of the local life until the revo-

lutionary bodies of municipal government and civil society organizations were formed. Villages located hundreds kilometers away from the city, various military units, factories, plants, all of them needed in-person explanations, and the student community was sending their fellows to explain what was going on, with the corresponding evaluation of the situation, with a call to support the already started liberation movement'. '...We were faced with the question of closing the university', ...because'masses of students enthusiastically took up the work of agitation all over the city'. These lines are taken from a memo of students of Kazan University addressed to the Minister of National Education. At the same time, the student community was trying to achieve autonomy in their participation in the university's administration. 'The views of professors and the student community on university life differed dramatically... The logical result of such mutual misunderstanding was termination of relations with professors, which according to the decision of student community, would last until the professors recognized their new autonomy based on democratic principles' [RSHA, Fund 733, Inventory 226, File 222, Sheets 2-4].

The soldiers' movement was an integral part of the revolutionary struggle. Military committees and Soldiers' Soviets created in the very first days of revolution were a result of revolutionary endeavours of the troops of the Kazan Garrison. The military command was trying to restrict rights of the soldiers' committees in every possible way. According to the special order for the district, these were to be formed with an equal number of officers and soldiers. The same order also defined the functions of committees, which came down to examination of 'arising needs and misunderstandings of everyday nature'.

Soldiers were careful against any attempts to nullify their first achievements in the democratization of the army. Taking into consideration growing excitement in the garrison, the Mensheviks and Socialist Revolutionaries decided to create a delegation to visit the military minister and discuss the issue of Sandetsky. A

delegation headed by Lieutenant-Colonel Ruynet was sent to Petrograd. According to his report on their trip to Petrograd, when it was discovered that the military command had ordered to release Sandetsky and make him a member of the Military Council, '...the soldiers became excited and made a deal with the executive committee of railwaymen, who agreed to detach from the train the coach in which Sandetsky would be traveling on the first station after Kazan if he left the city, and the soldiers would take him into custody'.

On 11 April, the Soldiers' Section of the Soviet of Workers' and Soldiers' Deputies made a decision to examine the health of Generals Sandetsky and Yazvin for the second time, and if they were feeling better, to send them to the guardhouse. On 1 May, a crowd of armed soldiers, about 300 men from the 95th Regiment, approached the Red Cross Hospital (Krasnaya St.) and demanded General Sandetsky to be handed over for his immediate transfer to the guardhouse. The City Commander Grigoriev wrote in his report that, 'under coercion, they were forced to hand over the general'. On the way to the guardhouse, the epaulets of the general were torn off, and one of the warrant officers hit him in the head shouting 'insignia off'. At the guardhouse, the general was put into a soldier's punishment cell. Generals Komarov and Faydysh, arrested earlier, were put into the same cell.

Colonel Grigoriev asked the Soviet of Soldiers to investigate this case with the involvement of representatives of all soldier' organizations and indicated that '...the delegates (of committees and Soviets) do not have the necessary authority in the eyes of most soldiers'. Indeed, the supporters of the Mensheviks and Social Revolutionaries from regimental committees, the Provisional Organizing Committee and Soldiers' Soviet did not have anymore the same moral authority they had in the first days after the February Revolution.

The so-called 'Sandetsky case' stretched out for a while, up until his transfer to the Prosecution Office of the Moscow Military region in August 1917.

As a kind of response to revolutionary demands of the majority of delegates at the conference, the District Commander General Myshlyaevsky on 6 June, the conference's closing day, sent to all military units and teams a telegram demanding to 'Report to me names of those whose activities did not correlate [with] the decisions of the Provisional Government, Petrograd Soviet of Workers' and Soldiers' Deputies and the All-Russia Congress of Peasants [about] the necessity to bring the war to a triumphant end'. The telegram raised a storm of indignation among the soldiers, and commander had to withdraw the order dated 6 June. Soon General Myshlyaevsky was discharged from the position of district commander, and a new commander, Colonel Korovichenko, former commandant of Tsarskoye Selo, arrived in Kazan.

Struggle for obtaining official leave to join field works was of great importance in spring and summer of 1917. The Military Minister Kerensky banned leaves in May and ordered those who were on leave to get back to their units. However, the majority of soldiers did not return. They were trying hard to be elected to volost executive committees or other elective bodies in order to avoid returning to their military units. At the garrison meeting on 2 May, the district commander was told to release 10% of soldiers for farm work.

The struggle of soldiers to leave for field work was an integral part of struggle for the end of the imperialistic war. The push back of soldiers against an attempt of the military command to send the 94th and 240th Regiments in full to war was an evidence of growing anti-military mood. These regiments were the most revolutionary-minded units, and authorities simply decided to dispose of them. However, this attempt failed ignominiously. In line with the schedule, 8,000 men from the 94th regiment were to be sent out on 3 May. However, only 300 people turned up on the boarding day. As a sign of protest against the refusal of soldiers to go to front, second-lieutenant Poplavsky resigned as the Head of the Kazan Soviet. This was a significant victory for the soldiers.

The anti-war actions of Kazan garrison soldiers especially increased following the publication of the 'Freedom Loan' and the decision of the government to launch an offensive at the front. The 'Worker' newspaper issued on 8 June contained a statement, signed by 14 soldiers and addressed to the garrison, calling for a resolute resistance against the policy of continuing the imperialistic war. The same issue of the newspaper published a response of soldiers of the 240th reserve infantry regiment to soldier Poltev, who, in the 'Kazan workers' newspaper', belonging to the Mensheviks, made a call for support of the 'Freedom Loan'. It contained a resolute denouncement of the imperialistic war.

The military command announced a protest march of the gunners and evacuated soldiers in honour of the 'Freedom Loan' on 11 June. A group of anti-war minded soldiers, headed by N. Andronov undertook an agitation campaign in military units, trying to disrupt the march. As a result, even soldiers of the 1st Battalion Training Team refused to participate in the march. On 13 June, at the demonstration of soldiers of the 4th Battery, Andronov announced that '... one has to be a bourgeois to continue this war', and made a call for opposing the 'Freedom Loan'. This agitation spread over all the infantry regiments and acquired such proportions that regional military commander ordered to arrest Andronov. However, the soldiers refused to comply with this order. This mass insubordination to the top military authority created a tense and critical situation in Kazan. It became even worse due to deterioration in the workers' material conditions. There was a catastrophic lack of bread in the city. It is no coincidence that on that same day an excited crowd, consisting mainly of poor Tatars, stormed food stores and arrested the head of the Provisioning Committee M. Boronin. 'On 1 June at 13.30, a small group of people gathered around the Provisioning Committee, but after a while dispersed. Just 20 minutes later, a crowd of several thousand people turned up, holding a banner of the MSC, mainly composed of Muslims, workers,

soldiers, dealers and women'. This was written in the official document. On behalf of the gathered people, the well-known social activist lawyer Fuad Tuktarov addressed the committee members. He demanded all available bread be distributed to the people and 200 poods of flour be purchased from Harbin by paying a deposit to a dealer that was in Kazan. The crowd, not getting a satisfactory answer, demanded the arrest of Boronin. City major Bukhov's interference did not help the situation either. Boronin was arrested and sent to the garrison guardhouse.

Events that occurred in Kazan on 11–13 June were a sign of the dual power coming to the end. It was obvious that the Menshevik-Socialist Executive Soviet was yielding to the administration of counter-revolutionary Provisional Government.

The Provisional Government, formed after the fall of Tsarist regime, left intact the landlords ownership of the land. Peasants were asked to wait for the Constituent Assembly, which supposedly was going to resolve the land issue. However, working peasants did not want to wait for the Constituent Assembly. Everywhere and without authorization, peasants started seizing private lands, breaking up volost administrations and forming their own freely elected committees and Soviets.

The Kazan guberniya was in first place by the size of agrarian movement. Spassk, Laishevo, Mamadysh and Cheboksary uyezds were regions of the most intense peasant movement. Influential groups of peasant activists were working in a number of the districts. The Spassk group was headed by G. Gordeev; the Mamadysh group, by Davydov and Busyrev. A similar group under the leadership of N. Gordeev was working in the Sviyazhsk uyezd.

The left Socialist Revolutionaries from the villages were gravitating towards the Bolsheviks. Gordeev's group in Spassk included Mokhov, Khusnutdinov, Emelyanov and others, who considered themselves to be left socialists. This group reigned supreme in the villages. It consisted of twenty people. Gordeev was elected the head of the district provisioning

committee; Mokhov, the head of local police; Emelyanov, the head of district police, etc. At the meeting on 9 March, the Provisional Government reviewed 'oral suggestions of the Military and Navy Minister... 'about actions to suppress agrarian unrests that arose in the Kazan guberniya'. However, at that time, it considered 'unacceptable to use weapons to suppress the agrarian unrest' [Gorokhova, 1973, p. 34].

The seizure of private lands reached its culmination in May. The First Provincial Peasant Congress was held right at that time. It started its work on 6 May in Kazan. The Congress was opened by the soldier-peasant Agapov. In his opening address, he said the following: 'The authority of the people is you all; the village does not recognize any other authority than the authority elected by the village itself'. The congress formed the Governorate Soviet of Peasants' Deputies.

As a result of the bitter struggle over the land issue, the Bolsheviks and the left Socialist Revolutionaries won at the congress. Of key importance was the resolution dated 13 May, concerning handover of private lands and estates to the control of volost committees 'for the sake of the success of the revolution and provisioning of the country, up until the land issue is resolved by the Constituent Assembly. Following the creation of the volost and village committees, the Soviet of Peasants' Deputies found it necessary to hand over all croplands and landlord meadows, state, crown, monastery, church and city lands to the control of volost committees' [Georgievskaya, 1957, p. 286]. This became known all over the country and had a significant impact on the development of the peasant movement in other regions of the country. That was also when a decision was taken about the non-recognition of the Provisional Government's right to assign district commissars in the Kazan guberniya and recognition of District Soviets' right to do that. The Chairman of the Governorate Peasants' Soviet was a left Socialist Revolutionary A. Kolegayev, whose views were close to those of the Bolsheviks.

The newspaper 'Kızıl Bayrak' wrote that the decision of the Peasant Congress had realized the age-old dream of the peasantry, and that this was not only the voice of the Kazan guberniya peasants, but 'the voice and legitimate claims of the downtrodden by the absence of land through robbery peasant masses of the whole Russia' [Georgievskaya, 1957, p. 300].

Creation of the Peasants' Soviet in Kazan led to intensification of the revolutionary democracy front and the establishment of favourable conditions for supporting the working peasantry in their struggle for land. The newspaper of the Peasants' Soviet in the Kazan guberniya widely covered development of the agrarian movement in the Governorate. Soon it was democratized without prior permission.

§ 2. Political Groups and Struggle for Power in the Kazan Guberniya in the Years 1917–1918

Indus Tagirov

Ceremonial meeting of Soviet of Workers', Soldiers' and Peasants' Deputies with the involvement of representatives of regimental, squadron and factory committees opened on 26 October 1917. N. Yershov spoke about the armed rebellion. He and other speaker emphasized the heroic involvement of Tatar workers in the armed rebellion. The following proposal was put forward: '... to replace two positions: the military and civil ones (commander of Kazan Military District and the Governorate Commissar), but for now, to elect a Soviet Executive Bureau consisting of 15 people...'. However, because they had received troublesome information about troops' possible approaching to Kazan, the meeting urgently decided to elect a Revolutionary Headquarters consisting of 20 people. N. Yershov announced 15 names as candidates to the Revolutionary Headquarters. Out of the 15 candidates, 9 were military men. There were 8 Bolsheviks, 4 Left Socialist Revolutionaries, 2 Menshevik-internationalists, and 1 non-party candidate on the list. Lack of prominent leaders from the Kazan Committee of Russian Social Democratic Labour Party (Bolsheviks) on the list was explained by the formation of the Revolutionary Headquarters from those who directly lead the uprising. They were the most active members of the Bolshevik military organization in the Kazan Garrison. Meeting participants unanimously adopted the list put forward by Yer-

shov, but instructed him to add four more representatives [Krest'yanskaya gazeta, 1917, 28 October]²⁷ of military units and one representative of the Powder Mill.

At the meeting, Muslim organizations that recognized transition of power to the Soviets were given the right to send their representatives to the Revolutionary Headquarters. The Xärbi Şura and Muslim Socialist Committee representatives appointed to the Revolutionary Headquarters were also mainly military men (Ya. Chanyshhev, K. Yakubov, etc.). Only M. Vakhitov was not a garrison soldier.

Kazan Bolshevik Committee and Muslim Socialist Committee did not officially nominate candidates into the Revolutionary Headquarters, as the handover of revolutionary power to military authority, in that situation, was considered to be a matter of course, because its popularity allowed, in the shortest possible time, to set the revolutionary order in the city and provide a basis for proper election of the Soviet Executive Committee and hand over to that committee the entire power over the city and Governorate in general. The new

²⁷ N. Yershov's list included: Masalsky, Yershov, Grasy, Frolov, Olkenitsky, Konyushkin, Milk, Kortov, Kazakevich, Venetsianov, Badayev, Karpov, Zhestyannikov, Ponomarev, Ginzburg. Of the eight Bolsheviks six were members of a military organisation. According to the memoirs of K. Shnurovsky, the secretary of the Revolutionary Staff was G. Olkenitsky.

transitional body was supervised by the Kazan Committee of Russian Social Democratic Labour Party (Bolsheviks), headed by K. Grasis, I. Volkov, A. Karpov, and G. Olkenitsky.

The Revolutionary Headquarters turned to the population of the city and Governorate with an appeal. It contained information about the victory of the armed rebellion in Petrograd and Kazan, overthrow of the Provisional Government and establishment of Soviet power. 'The horrible days of struggle are gone. The revolutionary troops won. This victory marked the handover of power to the people, represented by its competent authority the Soviet of Workers', Soldiers' and Peasants' Deputies. The power of the bourgeoisie, capitalists and landlords was overthrown not only in Kazan but also in Petrograd and in a number of other cities. This does not mean that the struggle against the bourgeoisie is over. The struggle goes on and will continue until democracy is established and completely secured' [Znamya revolyucii, 1917, 29 October].

The following was mentioned later in the appeal: '... From now on, people will build their own lives, will determine their own fate. It cannot be otherwise; only the people will help themselves out of the difficult position that the bourgeois rulers and guardians had plunged them into. We are deeply convinced that people have enough creativity to create their own bright future, free of oppression, tears and pain'. The appeal called on the people to stay alert, to support the revolutionary power. It was published in the 1st issue of the Banner of the Revolution newspaper and pasted up on the city streets.

During the first meeting of the Revolutionary Headquarters, commissars of the State Bank, telegraph, post office, telephone office, water supply system, etc. were appointed. The Revolutionary Headquarters limited the amount of money that could be withdrawn using a cheque to 500 rubles. Transfer amounts could not exceed 5000 rubles. Deposits could be withdrawn only for the most compelling reasons. These measures were to be in force only until 30 October. This time period, though

short, allowed to bring the banks under control. From now on, money for the needs of companies were provided only with the permission of the factory committees. On 29 October, by the decision of the Revolutionary Headquarters, 27,000 rubles were withdrawn from the State Bank: 15,000 rubles were allocated for the establishment of the new power; 10,000 rubles were provided for the publication of the Banner of the Revolution newspaper; and 2,000 rubles were allocated for business trips of the Revolutionary Headquarters managers [Kazanskoe slovo, 1917, 31 October].

The issue of provisions loomed large. The city had a month's supply of food: around 100,000 poods of white flour and 30,000 poods of rye flour. One of the first activities of the Soviet authority was a shift towards workers' control over production and consumption. On 9 November, a meeting of factory committees, workers' section of the Soviet and the Military-Industrial Committee was held. The following issue was on the agenda: organization of control over production. Reports were heard from the delegates of the All-Russia Conference of Factory Committees, Bolsheviks I. Derunov and S. Rudov. They were followed by the head of the Soviet A. Karpov. He said that workers' control shall be exercised by a special Soviet, possessing executive authority, compulsory for the capitalists, and the Soviet of Workers' Control should continuously keep in touch with the labour unions. At the meeting, the Soviet of Workers' Control was elected from among the representative of factory committees and labour unions. This was an important step in the preparation for nationalization of major private factories.

Changes were made in court procedures. The Revolutionary Headquarters arrested the general prosecutor Karasev and his deputies and appointed commissars for all institutions. The establishment of the Investigating Commission headed by G. Olkenetsky, Frolov and Izraylovich was of particular importance. The Commission began active work on prosecuting counter-revolutionary minded bureaucrats of the Provisional Government. The former dis-

trict commander Colonel Arkhipov, the former head of the Kazan Soviet Lieutenant Poplavsky and others appeared before the Commission. The Banks Nationalization Commission began operating.

These activities were followed by attacks on the leaders of the Kazan Bolsheviks. N. Yershov and K. Grasis were called usurpers. Sabotage was widely practiced by state civil servants across the entire country, including Kazan. Strike of post-office and telegraph workers expressed their naked hostility towards the Soviet power. On 31 October, the so-called 'Kazan Strike Committee' of post-office and telegraph workers protested against the actions of the Revolutionary Headquarters and in particular against appointment of commissars to the post offices and telegraph offices. The committee demanded the removal of commissars, otherwise they threatened to go on strike.

At the same time, a split in the Revolutionary Headquarters became apparent, and that made the difficulties being faced during the process of establishing the new power even more complicated. On 28 October some of the left Socialist Revolutionaries and the head of the MSC M. Vakhitov resigned from the Revolutionary Headquarters. Military District Committee expressed its dissent with the actions of the Revolutionary Headquarters. It regarded illegal the appointment of Nikolay Yershov to the position of Interim Military District Commander.

Members of the Military District Committee did not support the armed rebellion. One of them said: 'If power is on the other side now, we should not resist in order to prevent bloodshed'. Prominent Socialist Revolutionary Arsentyev wrote the following in the 'Revolutionary tribune' newspaper on 31 October: 'Recognition, integration were out of the question; just subordination was in question'. Thus, the Military District Committee, while condemning the Bolsheviks, did not dare to go against the rebellion, for it did not have enough authority in the garrison. However, the Military District Committee did not sit idle. Garrisons located in the Volga and Cis-Ural regions were asked about

their attitude towards transition of power in the district centre of Kazan to the Soviet of Soldiers and its head, warrant officer N. Yershov. It was planned to call a congress of the District Soviets of Soldiers, but before the congress, to become fully engaged into the district administration '... in order to keep it under control'.

Negotiations with the Military District Committee started right after the establishment of the Revolutionary Headquarters and appointment of warrant officer N. Yershov as Interim Military District Commander. Representatives of the military district committee expressed sharp criticism against N. Yershov and K. Grasis and tried to replace N. Yershov with warrant officer Fedotov.

On 28 October, the Military District Committee made a decision that 'transition of power to the Revolutionary Committee in Kazan does not mean transition of district power to one of the garrisons; the Military District Committee considers it wrong for the Revolutionary Committee to appoint a new commander'. The need for calling a district military congress was also mentioned in the decision. Members of the Military District Committee also demanded cancellation of restrictions on the amount of money that could be withdrawn from the bank, imposed by the Revolutionary Committee. Representatives of the Military District Committee walked out of the Revolutionary Headquarters after the refusal to fulfill their demands.

Under the circumstances, on 4 November, the Revolutionary Committee stepped down from office. The Kazan Soviet of Workers', Soldiers' and Peasants' Deputies took over. N. Yershov managed to hold onto his position until 19 November, that is, until the opening of the Congress of Kazan Military District Soviet of Soldiers' Deputies Representatives. At the congress, instead of a sole commander-in-chief, the District Management Soviet was elected, and N. Yershov was not among the elected. The reason behind this was strong dissatisfaction with the dictatorial manners of N. Yershov and K. Grasis. Even the Brigade Committee of the Second Artillery Brigade, headed by Andronov, refused to support their recent idol.

Name of K. Grasis was mentioned again in Cheboksary. He had struck terror into the city. Anyone who, in his opinion, was suspicious was put under surveillance; he conducted mass executions [Novoe Kazanskoe slovo, 1918, 19 August (1 September)]. Afterwards, his 'heroism' continued in Astrakhan. As was previously reported, being a representative of the Front-line Extraordinary Commission in 1918, E. Bosh discredited many local workers by accusing them of either counter-revolutionary acts or misdeeds. For no good reason, he arrested the head and two members of the Extraordinary Commission of the Governorate. The protest of the head of the Astrakhan Guberniya Soviet against such an outrage was

responded in the following manner: 'I will arrest you as well'. And he did arrest him, this resulted in pitting the Muslim part of the garrison against the Soviet, the Soviet against the Muslims, and sailors against the soldiers. Everything that was happening was a kind of copy of what happened in Kazan in October 1917. He would have totally messed things up if a higher level authority did not gain an understanding that 'for the sake of the revolution, for the sake of socialism, such heroes should leave the Extraordinary Commission'. Even those trying to support K. Grasis admitted that he is 'selfish', 'rash', and 'sometimes shows lack of judgment' [RGASPI, Fund 17, Inventory 4, File 52, Sheet 23].

§ 3. Victory of the Revolution in Kazan

Indus Tagirov

Transition of power to the Soviets across the country happened mostly in a peaceful way. Armed conflicts were mostly an exception rather than the rule. Kazan was one of these exceptions. This was determined by its exceptional position as the centre of the biggest military district in Russia, which included 10 governorates and 2 oblasts. District headquarters, two military schools and a garrison of 40 men were located in Kazan itself. Four reserve infantry regiments, the 94th, 95th, 240th, 164th, and 2nd Artillery Brigade were preparing units to sent to the front.

In the summer and autumn of 1917, an extensive propaganda campaign was unleashed in units of the leading garrison. One of the active anti-war agitators was a soldier of the second artillery brigade Nikolay Andronov, who became an idol for the soldiers and was elected the head of Soldiers' Brigade Committee.

There were many adventurers in the units, trying to play on anti-war mood of the soldiers. They were welcomed by Andronov. One such adventurer was the warrant officer Nikolay Yershov, who was sent to the Kazan Military District following the disbandment of the sec-

ond machine gun regiment in Petrograd for its involvement in the July events. Military command appointed Samara as his next duty station. However, Yershov ignored the order and stayed in Kazan and illegally remained in the 1st Battalion of the 2nd Artillery Brigade. Criminal proceedings were initiated against him for ignoring the order of military command. Yesterday's Socialist Revolutionary Yershov quickly took the side of the Bolsheviks and unleashed an extensive anti-war agitation campaign in the units. Soon he was elected to the Soviet, where he was appointed the head of its soldiers' section, and soon became the leader of the military organization of Bolsheviks and Left Socialist Revolutionaries.

It was at this time that the Second Lieutenant Grozdov showed up; previously, he had been arrested in Saransk for loosing a substantial sum of state money playing cards, later he escaped from the guardhouse, insinuated himself into the soldiers' favour and was giving anti-war speeches to them. He admitted his guilt in his report to the commander-in-chief; the report contained his request to be sent to the front 'to atone for his recent shortcoming in

Saransk'. Moreover, the report shows that this was not his first shortcoming, as there is the following wording: 'I hope that you, Sir Colonel, will do me a favour again and give me a chance to rectify my mistake'. However, he did not wait for the favour of the commander-in-chief. On 2 July, an excited crowd of soldiers released all soldiers, including Grozdov, from the guardhouse. On 31 July, he illegally left for Saransk, where he was arrested again and sent to Kazan. He escaped from the guardhouse and joined the gunners of the 2nd Artillery Brigade. On 12 October, Grozdov organized a mass protest of soldiers at a square in front of the barracks of the 1st Battalion of the 2nd Reserve Artillery Brigade calling for resistance to the Provisional Government and conclusion of peace [Georgievskaya, 1957, p. 400].

Already at the end of September, the Kazan Soviet, represented by its soldiers' faction, began to take over the functions of the district command. In his message to the Minister of War, dated September 28, the Commander-in-Chief of the Kazan Military District Colonel Karaulov wrote the following: 'Kazan Soviet of Deputies, in spite of my warnings, adopted a resolution about the urgent dissolution of Kazan Garrison soldiers for field work; information was sent to all garrison units, informing about and announcing a garrison meeting, resulting in discontent among the soldiers, especially in the 2nd Reserve Artillery Brigade' [RGVIA, Fund 1720, Inventory 15, Sheet 8].

Colonel Sedletsky, the predecessor of Nikitenko in the position of commander of the 2nd Artillery Brigade, also had bad luck. On 20 October, soldiers, with the active involvement of N. Andronov, armed themselves in reaction to an attempt to arrest Grozdov. Subsequently, they arrested their commander and sent him to the commander-in-chief. As it was mentioned at the meeting of the garrison representatives, called on 22 October for investigation of the events related to Grozdov, these developments resulted in the creation of an 'unbearable situation' with growing confrontation occurring between soldiers that were protecting this adventurer and the cadets that were sent to arrest him.

Fire at the Powder Mill and its consequences aggravated the situation. Fire began on 14 August, at 02.20 a.m. with a fire at Porokhovaya Station, where bags with saltpeter had ignited. Within a short time, the fire spread to boxes of ammunition, and then two powder magazines exploded. One magazine contained five thousand poods and the other one, nine thousand poods of smokeless powder. The force of the explosion was such that windows of houses many versts away were broken. It was said that horsemen several versts away from the centre of the explosion were knocked off their horses. Then the oil burst into flames. Ammunition was continuously exploding. The explosions and fire continued for several days. People run for their lives. Soldiers of reserve regiments, garrisoned in the Zarechye, fled away [See: Ionenko, 1967, p. 126]. Out of the 2,524 people enlisted in the 95th Regiment, 648 people were on the run. Over 240 soldiers of the 240th Regiment were also on the run. The district military command imposed martial law in the city, but this just aggravated the situation. Numerous facts show that discipline in the garrison was weak. Rallies calling for ending the war were held all over the place; hated army officers were beaten. Ammunition and weapons from storage rooms were seized.

An all-garrison rally, chaired by N. Yershov, took place on 15 October, on meadow lands behind the train stations; a Bolshevik resolution demanding the end to the war and transition of power to the Soviets was adopted at the rally.

On 23 October, in their report to the Minister of War, commander-in-chief and district commissar wrote that 'Kazan is in a state of tension, garrison units have split into two camps: one camp still supports the Provisional Government and is ready to execute the orders of commanders, while the second camp entirely follows the Soviets headed by reckless people calling themselves Bolsheviks and demanding transition of power to the Soviets'; they also mentioned that the 'leaders of soldiers are two demagogue-Bolsheviks, already convicted and under investigation' [Gorokhova, 1973, p. 119]. They meant Grozdov and Yershov. What stands

out in this report is the words of the District Military Commissar Captain Kalinin: 'An uprising is likely; extensive agitation has been unleashed across the majority of the garrison... The commander-in-chief is doing his best to resolve the conflict peacefully...' [Gorokhova, 1973, p. 120]. However, events escalated with unprecedented speed and not towards a peaceful resolution of the conflict.

During an evening meeting of the Kazan Soviet of Workers' and Soldiers' Deputies on 23 October, a resolution was adopted to disband soldiers called up in 1899. At that meeting, Yershov said that 'representatives of the local authority will not dare to veto our decision', and that 'artillery and infantry showed that they are not joking, and not the Provisional Government but the Soviets have authority for them', and that the 'commander-in-chief is helpless because he does not have any power'. And several times he said 'we are not afraid'. He was supported by Grasis, who blamed the cadets for supporting authorities and called on soldiers to ignore them. 'We', he said, 'have the power on our side and that is why we can do whatever we want' [Georgievskaya, 1957, p. 425]. Following the break, the Socialist Revolutionaries, Mensheviks and independent Socialists made a statement that they refused to vote for the disbanding of soldiers called up in 1899. Yershov told them that the 'Bolsheviks do not care'. Then the opponents of the Bolsheviks left the meeting, and their representative headed to the meeting of the Revolutionary Headquarters.

Thus, only the Bolsheviks voted for the resolution. A total of 230 people voted for the resolution, 1 voted against, and 21 abstained. Following the meeting, K. Grasis was arrested. The military command ordered to arrest Yershov and Grozdov. It is unlikely that in this situation one of the first actions of N. Yershov would have been to organize a soldiers' rally demanding the release of Grasis. On the contrary, this arrest would have served as a pretext for a decisive implementation of the rebellion plan if such had existed. However, this did not happen. Moreover, after the transition of power

to the Bolsheviks, they initiated proceedings against K. Poplavsky, accusing him of 'provoking bloody confrontations'.

Following these events, the District Military Command ordered to arrest Karl Grasis and Nikolay Yershov. K. Grasis was arrested in his apartment. However, he managed to inform Nikolay Yershov. The latter immediately headed to the 1st Battalion of the Artillery Brigade.

In the morning, warrant officer Yershov organized a rally of the 1st Battalion of the 2nd Artillery Brigade on the subject of the arrest of Grasis. Soldier Alexander Palomozhnykh rushed into the meeting and told that Second Lieutenant Poplavsky had phoned the Commander-in-Chief Arkhipov and demanded several armoured vehicles and the cavalry. Poplavsky said that he 'did it to protect himself following consultation with officers and his closest soldiers' [National Archive of the Republic of Tatarstan, Fund 526, Inventory 5, File 1, Sheet 66—reverse].

Since 1934, following the publication of the book 'Kazan Bolshevik Organization in 1917', a completely groundless point of view that the guidance had been imposed by the Centre was approved. For many years, it became a tradition to write that the meeting of party committee was held on 23 October 1917, at which its secretary Olkenitsky supposedly read a resolution of the Central Committee dated 10 October. Meanwhile, there was no meeting of the Bolsheviks Party Committee in those days. The events that occurred in the Kazan Garrison on 23–24 October were a total surprise for the garrison and the majority of its members. This was mentioned at the party committee meeting on 30 October 1917, after the transition of power to the Soviets. A. Karpov, who presided over the meeting, in his opening address said that '...events of the previous days, before receiving information about the coup [in Petrograd—I.T.], did not happen under the leadership of the entire committee, but under the leadership of some of its members and did not have any political basis, just military one'[Znamya revolyuczii, 1917, 2 November].

The statement of Grasis that there was a plan of an armed rebellion, which supposedly 'following the coup... was approved' by some colonel supporting the revolution, is not true either [National Archive of the Republic of Tatarstan, Fund 1875, File 24, Sheet 71]. The question arises: if the colonel supported the revolution, then why was he not shown that plan before the rebellion? Obviously, there was no plan, and there could not have been such a plan. Firstly, neither Petrograd nor Moscow gave any instructions about the necessity to conduct an armed rebellion. Moreover, the quoted decision of the Moscow District Bureau of the Russian Communist Party of Bolsheviks directed local organizations towards peaceful resolution of the issue of authority. However, apparently, it did not get to Kazan either, because Mantsev from the District Bureau was supposed to come to Kazan. But for some unknown reasons he did not come to Kazan. One thing that can be said for sure is that the general line of the party was well-known in Kazan. Secondly, rebellion had been brewing for a long time, and it had started with a conflict within the garrison, not according to a plan of some Bolshevik leaders.

Memoirs of Yershov, where he explains actions he took following his arrival at the 2nd Battalion of the 2nd Artillery brigade on 24 October, after the arrest of K. Grasis, also prove the idea that there was no plan. Firstly, he writes that 'having learned about the arrest of Grasis', he explains that 'meant the beginning of an attack and disarming of the entire garrison', secondly, he suggested to 'issue a resolution demanding to release Grasis and send a proposal to other military units to adopt the same resolution' and ordered military units to prepare for battle. In his report to division officer, dated 31 October, the duty officer of the 2nd Division Vilnyansky wrote that Yershov was speaking about 'rescuing Grasis in an orderly manner, but warned that there should not be a military uprising' [National Archive of the Republic of Tatarstan, Fund 526, Inventory 5, File 1].

For this reason, it is worth mentioning the following words of the adjutant of the

commander-in-chief Leontyev: 'Counter-intelligence delivered a message that Arkhipov was going to be arrested for rejecting the resolution of the Soviet about disbanding the 1899 recruits... Cadets were summoned not to act against the units, but to prevent the arrest'.

Indeed, Commander-in-Chief Colonel Arkhipov also leant towards a peaceful resolution of the conflict. However, Military District Commissar Captain Kalinin was assertive. It was his initiative to arrest Grasis and Yershov. By his order, his deputy Mints, together with a detachment of cadets, accompanied by armoured vehicles, arrived at the Artillery Brigade and gave an ultimatum to hand over Yershov. By his order, several shots were fired at the barracks where supposedly Yershov was staying. However, he was already not there. Accompanied by two soldiers, he moved to the 1st Battalion of the Artillery Brigade located in Arsk Field. There he was met by the head of the brigade committee N. Andronov with a report about preparation of forces for the rebellion. 'Indeed', N. Yershov wrote a little later about this, 'guns were moved to Arsk Field... and every battery was manned'. Plan of armed resistance against the authorities was discussed at the meeting of the brigade committee, which was called even before the arrival of N. Yershov.

From the 1st Battalion, located in Arsk Field, N. Yershov headed for the city to inform the Bolshevik Military Organization about recent developments. By that time, Bolsheviks from the 2nd Artillery Brigade I. Shelykhmanov and Ya. Krylov were already there. Warrant officers Frolov and Zhestyannikov were there as well. N. Yershov brought members of the organization up to date on the latest developments and ordered them to be ready for an armed uprising. It was decided to form a revolutionary headquarters out of the representatives of the 240th Regiment to lead combat operations.

On 24 October, at 11.00 a.m., the first shrapnel shell shot by gunmen of the 1st Battalion of the 2nd Artillery Brigade exploded over the city. Combat against cadets, lancers and the 6th Finland Battery began in the latter

half of the day and ebbed only on the night of 25 October. By the order of district headquarters, a detachment of cadets headed to Arsk Field again in the evening. An armoured vehicle, hidden behind trams, was moving ahead of the detachment. However, the soldiers at Arsk Field were expecting them. As soon as the cadets reached the building of the Higher Courses for Women, they were shelled and machine-gunned. The gunmen were supported by the 685th and 686th militia units. The cadets were forced to retreat. First two shells hit the building of the District Military Commissariat causing considerable damage. Shellfire was intensifying across the city. Several shells hit the building of the District Military Headquarters. Shells were exploding in the city centre. One of them damaged a column of the university building. Shops and public establishments in the city were closed. Schools were closed. Scared inhabitants hid in basements.

Soon Kazan commander-in-chief declared martial law in Kazan and suburbs, and that order was distributed around the city. The punitive detachment, consisting of all three branches of the armed forces, intensified its efforts. Cadets' patrols began to control dikes connecting the city centre to workers' districts.

The former chairman of the Soviet, P. Golanov, headed the military committee located in the building of the Military Academy in Kremlin. Colonel Dobryansky headed the field headquarters, established in the building of the Veterinary Institute. Chief of Police M. Bukhov mobilized all of his personnel and thus helped the cadets with intelligence gathering. However, the police, consisting of 200 men, on the whole, was not actively involved in the events. Dragoons and Cossacks did not take an active part in the events either.

All day long on 24 October, members of the Bolshevik Military Organization held rallies and meetings in military units, informing soldiers about armed clashes with cadets and explaining their meaning. Soldiers of all garrison units joined rebel gunmen. That is how the armed rebellion began in the Kazan Garrison.

As we can see, it had nothing to do with getting a signal from Moscow or Petrograd.

At noon on October 25, the struggle acquired a political character. Things were coming to the head. The 240th Regiment from the meadow side of the Kazanka River basin was approaching Kremlin, where the cadets were located. A part of the 164th Regiment, using pontoon bridge, crossed the Kazanka River and headed to help the gunmen. Breaking the enemy's resistance, a separate battalion of the 95th Regiment arrived from the Osokin's barracks at the same place. From the direction of Arsk Field, the attack was pushed not only by the gunmen but also by three infantry battalions. A total of 11 batteries were involved in the bombardment of the city.

At the same time, the 6th Battery of Poplavsky was sent to the city. The day before, Colonel Arkhipov personally ordered inclusion of that battery into the punitive detachment. The detachment, constituting the backbone of the counter-revolutionary forces, consisted of all three branches of the armed forces. There were total 2,000–2,500 men at the disposal of the District Military Command, including cadets of the military academy, two schools for warrant officers, a hussars squadron, a hundred Cossacks and four armoured vehicles. However, soldiers of Poplavsky's battery started to leave as soon as the rebellion began and by the latter half of the day, only a handful of soldiers remained bearing guns.

In the first half of the day of 25 October, there were three main areas of fighting: at Arsk Field, near the fortress in the direction of the river basin and at the railway station. Two companies of soldiers began to move towards the Kremlin from different directions. At about 3 a.m., a telegram was received about the victory of the armed rebellion in Petrograd and the removal of the Provisional Government. The cadets laid down their arms upon hearing this news; the Commander-in-Chief Colonel Arkhipov ordered all military units to go to barracks. That was his last order, meaning the recognition of the coup and submission to the Kazan Soviet of Workers' and Soldiers' Deputies.

The October armed rebellion was victorious in Kazan, and from the morning of 26 October, power in the city was in the hands of representatives of revolutionary workers and soldiers, who lead the rebellion. Commissar Kalinin, Colonel Arkhipov, Lieutenant Poplavsky and others were arrested.

The rebellion won almost without shedding blood. From both sides, about 10 people were killed or injured.

Following the surrender of the cadets located in the building of the Kazan Soviet (former Governor's Palace in Kremlin), members of the Kazan Bolsheviks Committee and Left Socialist Revolutionaries Committee, members of party factions of the Soviet at an emergency meeting adopted 'Appeals' to the population with information about the victory of the revolution in Petrograd and Kazan.

The National Archive of the Republic of Tatarstan contains a set of documents for Act No.52 of the Revolutionary Tribunal under the Kazan Soviet of Soldiers', Workers' and Peasants' Deputies (start: 21 December 1917; end: 11 January 1918), which entirely disproves the prevailing conceptions about events of October 1917 in Kazan. The very name of the act already tells that the Bolshevik Party Committee could not have initiated those events. It is called an act on 'Second Lieutenant Poplavsky being charged with provoking a bloody confrontation and injuring a sentry'. According to the information in the file, Bolshevik leaders Karl Grasis and Girsh Olkenitsky acted as the prosecutors. In their view, it was not they who initiated the October events but Kazimir Broneslavovich Poplavsky. In March, being influential in the garrison, Poplavsky was elected the First Chairman of the Soviet. He voluntarily left the office of the Chairman of the Soviet and focused on education of the soldiers. In October, he commanded an artillery battery of the 6th Finland Brigade. He would read newspapers to soldiers, take them to museums. He tried to keep away from politics. But it was impossible to keep away from politics in the mad year of 1917. He found himself involuntarily in the centre of those politics.

However, he was not the main 'hero'; this honour went to Nikolay Yershov. This can be seen even from his letter to a friend, dated 14 November 1917, where he, in a boastful and offensive to the Tatars manner, wrote the following: 'Hello from remote Kazan. Kazan for the second time was conquered by the Russian people, however, it was besieged not by Ivan the Terrible but by a warrant officer Yershov. The October rebellion in Kazan began earlier than in Petrogr[ad]. Maybe the first shot of the Oct[ober] revolution rang out by the initiative of Yershov. Following seizure of the city, the cadets and lancers laid down their arms. The rebellious people elected me the Commander-in-Chief of the Kazan Military District'.

Nothing is mentioned about either the Russian Social Democratic Labour Party (Bolsheviks) Committee or the military organization. And he was elected commander-in-chief not by rebellious people but by the Revolutionary Headquarters established at the meeting of the Kazan Soviet on 26 October according to the list proposed by Yershov and headed by Grasis, that is, by a narrow circle of his people. In a message from Kazan entitled The Kazan Directorate, one Yekaterinburg newspaper wrote the following: 'Local circles are discontent with the seizure of the position of Commander-in-Chief of Kazan Military District by an unknown warrant officer Yershov; no one either appointed or elected him to rule the Kazan Military District. Those, who know the new Commander-in-Chief of Kazan Military District, warrant officer Yershov, describe him and his colleague Grasis very negatively' [Zaural'skij kraj, 1917, 15 November].

The Bolshevik Committee did not organize an armed rebellion in Kazan. There were no instructions from Petrograd or Moscow either. Facts show that armed activities could had been avoided. Balance of power in the city was such that nobody could have hampered the peaceful proclamation of Soviet power. The commander-in-chief did not have enough troops.

However, things that could had been avoided did happen. And they happened not as a result of a command from the Central Committee of Russian Social Democratic Labour Party but due to the situation in the garrison.

§ 4. Muslim Tatars and the Russian Authorities in 1917–1918

Dilyara Usmanova

Autocracy came to an end, and a new authority was established across country in late February–early March 1917. Establishment of the Provisional Government (on the night of 1–2 March 1917) was a result of a compromise in the course of long and tough negotiations between leaders of the Petrograd Soviet, leaders of the Constitutional Democratic Party and members of so-called 'Provisional Committee of Members of the State Duma', and it was an important milestone during these events. Involvement of the deputies in the establishment of a new authority was required for the legalization of the authority. Following the abdication of Nicholas II and the actual termination of functioning of the majority of state institutions, the legislative power of the State Duma was the only legal inheritor of the former Russia. Presentation of the governmental declaration of 3 March 1917 was one of the first acts of the new democratic authority. It declared a transformation programme and determined the basic principles of formation of new statehood based on democratic principles.

For the Muslim people, just like for the majority, the February events in the capital were a total surprise. For instance, members of a rather small and weak Islamic faction did not take active part either in the removal of the old or in the establishment of the new authority²⁸, which they greeted with fervour, though [Usmanova, 1997, pp. 164–170]. On 8 March, members of the Islamic faction of the State Duma sent an application to the Provisional Government expressing their approval of the declared programme, but at the same time, calling on the

new authority to avoid making the same mistakes, and to a greater extent, to follow the instructions of representatives of the Islamic community when making decisions concerning the Muslim population of the empire [Iskhakov, 2009c, pp. 257–260]. Among the Tatar figures that had active contacts with the new authority, it is worthwhile to mention Ibn. Akhtyamov, who, in the very first spring months (11 March), was appointed as commissar of the Provisional Committee of the State Duma and Provisional Government of the Ufa guberniya, as well as Supervisor-Commissar of the OMSA. Muslim deputies were appointed as commissars or representatives of the new authority to the Caucasus (M. Dalgat, M.-Yu. Dzhaifarov) and Turkestan (A. Bukeikhanov, M. Tynyshpayev, S. Maksudi). Chairman of the Kazan Zemska Uprava V. Molostvov (who would soon devolve his powers to a new head of the Uprava A. Plotnikov) was appointed Commissar of the Kazan guberniya, partly for the reason that there were no Muslim deputies elected from the Kazan guberniya to the Fourth Duma. The function of Muslim commissars and members of various newly-formed committees was familiarizing the new authority with the concerns and desires of the Muslim population. Generally speaking, Muslim people played a marginal role in the events of the first spring months, honestly greeting and supporting the new authority in the hope for a renewal.

One of the important points of the declaration (3 March 1917) of the Provisional Government was a promise to cancel all religious and national restrictions. However, the government's declaration was just a symbolic gesture towards the non-Russian population. Practical implementation of the declared principle required hard work of the legislative and executive branches. In the period from April to June 1917, the DRAFF developed a list of restrictive rules and articles of law that were canceled because of the accepted declaration. Out of more than thirty items, one third were

²⁸ Galimdzhan Ibragimov, criticising his political opponents, wrote that 'throughout the events of February and the fighting of the populace on the streets of the capital the members of the Muslim faction passed the time playing card games and slept through everything.' Even if these accusations were groundless and, essentially, ideological reprisals against his political opponents, they reflected the reality that the revolution and the fall of the autocracy came as a surprise to most politicians. See: [Ibragimov G., 1925].

related to the position of the Islamic clergy, one third addressed issues of the education of the Muslims, and one third covered general issues [RSHA, Fund 821, Inventory 133, File 622, Sheets 4–6 reverse].

Among the canceled restrictive rules or democratic changes, the following were the most important:

- introduction of the elective principle, empowering higher Islamic spiritual organizations to appoint [subordinate elective staff];
- abolition of certificates of political reliability of candidates for jobs;
- empowerment of the parish population to determine the number of their clergymen;
- empowerment of Islamic spiritual organizations to carry out internal correspondence in local languages on condition that correspondence with state organizations was done in Russian;
- abolition of all circulars, comments and restrictive rules applied to the decree dated 17 April 1905;
- abolition of a quota for public zemsky institutions;
- abolition of restrictions for the utilization of the native language, and allowance of mother-tongue based teaching;
- empowerment of the Muslims to wear traditional head-wear in public places;
- handover of mosque schools (madrasah and mektebs) to Islamic spiritual organizations, and abolition of restrictions imposed by the existing laws;
- authorization of people that studied abroad to teach in Islamic schools (that is, abolition of the circular of the year 1911);
- abolition of restrictions on allocation of zemsky funds for the needs of the non-Russian population (abolition of the resolution of the Governing Senate of the year 1915).

Apart from abolition of the legal rules directly restricting legal capacity of the Muslims, the legislation underwent certain changes extending the rights of the Muslim population in the political and social spheres and offering the Islamic faction an actual role of an all-Muslim political centre:

- establishment of the Higher Spiritual Board in Petrograd;
- establishment of a publishing house and periodical of the Central Board;
- creation of parish 'believers union' (a project of a member of the State Duma G. Enikeev);
- provision of a salary to Islamic clergymen;
- establishment of a muftiate in the North Caucasus, Turkestan and Steppe area (among the Kirghiz population) and reorganization of Orenburg, Taurida and Trans-Caucasus spiritual boards and standardization of Muslim Spiritual Boards;
- empowerment of the Islamic faction of the State Duma 'according to its printed desire' to recommend people for positions both in the Central Board and at places with prevailing Muslim population [RSHA, Fund 821, Inventory 133, File 622, Sheets 4–6 reverse].

In the period from 15 June to 15 July 1917, around a dozen additional acts concerning the Muslims were pending at the DRAFF. They addressed the following issues:

- providing a one-time allowance in the amount of 5000 rubles to the OMSA from the State Treasury because of lack of money at the Assembly (petition by I. Akhtyamov);
- allowing exemption from military service of the people elected to the Islamic spiritual positions and called up for national service prior to approval of the position by the Governorate Administration (petition by I. Akhtyamov);
- temporarily increase in staff of the OMSA;
- call a commission for Islamic issues under the DRAFF;
- convert from Christianity to the Islamic religion according to the submitted appeals;
- allow donations of peasant allotments to religious organizations (mosques) of the Muslims [RSHA, Fund 821, Inventory 133, File 622, Sheets 1–1 reverse].

List of issues reviewed by or pending at the DRAFF concerning the Muslim population shows that these issues were prepared jointly by the members of the Islamic faction and workers of the DRAFF. All of them were repeatedly raised by Muslim representatives in petitions and reform projects or were announced from

the Duma tribune and in the press. That is, in the period between the February and October Revolutions, the leaders of the Tatar national movement focused on implementation of the programme that had been developed before the revolution.

At the same time, there is a certain degree of originality, distinguishing the post-February situation from the pre-revolutionary one: Islamic leaders were not merely satisfied with a role of a supplicant and petitioner on Islamic issues but began to apply for a role of an important coordination and political centre. It is no coincidence that the Temporary Central Bureau of Russian Muslims (TCBRM, headed by Ibn. Akhtyamov), formed in the middle of March (15–17 March 1917), and later the All-Russia Muslim Council that replaced it following the congress in May (ARMC, headed by A. Tsalikov) declared that they are the only representatives of the Muslim population whom the government should address. However, development of relations between these powers was not an easy process, sometimes turning into conflicting opposition [Iskhakov, 2009a, pp. 52–54].

During the July crisis of the Provisional Government (3–5 July), when the climate in Russian society suddenly changed, and attitudes to the new authority evolved from euphoria and enthusiastic support to the predominance of sentiment of frustration and criticism, members of the ARMC were expressing ideas about the necessity of involvement of the Muslims in the coalition government and establishment of a special Ministry for Islamic issues (Sh. Mukhamedyarov, Sadri Maksudi, Islam Shagiakhmetov, Gayaz Iskhaki, etc.) or, at least, introduction of the positions of deputies in important Islamic institutions. For instance, S. Maksudi thought that it would be rather difficult for a Muslim to be appointed as a minister, and probably for this reason, one should try to get a position of a deputy in two ministries: that of internal affairs and that of national education [Iskhakov, 2004; Iskhakov, 2009a, pp. 52–54]. Among possible candidates there were Ibr. and Ibn. Akhtyamovs, A. Tsalikov,

S. Maksudi, Z. Walidi, G. Teregulov, etc. However, all attempts of Muslim figures to introduce their representative(s) were unsuccessful.

From the summer of 1917, nationwide priorities in the national movement were replaced by regional and national interests, and that quickly affected the relations with the central authority, which was also falling into a crisis. All-Russia Muslim Council was a multi-party coalition body with prevailing nationwide (Muslim-wide) concerns and positions. Leaders of the ARMC demonstrated striving for consolidation of efforts of the Muslims and consolidated support of the new democratic authority. However, party discords and class struggle were more pronounced at the regional level. While metropolitan leaders of the Muslims were mainly establishing contacts with the new authority and trying to put pressure on it, unifying Islamic movement (organizing Islamic congresses, resolving current issues, etc.), the Islamic leaders in the regions were dealing with other issues. They focused on determination of the real local authority (in governorates), political struggle and protection of interests either of separate nations (national leaders) or separate social groups (party leaders).

Apart from regional Milli Şura, there were also other political forces in the regions with prevailing Tatar population. In the Kazan guberniya, these were the Muslim Socialist Committee (MSC, headed by M. Vakhitov), Islamic military organizations with socialist-minded leaders (Xärbi Şura headed by I. Alkin and others); in the Ufa guberniya, these were the Tatar Left Socialist Revolutionaries headed by Galimdžhan Ibragimov. Considering activities of the aforementioned organizations, we can name a second determining tendency in the national movement, which became obvious in the summer of 1917, and this was a change of political elites, the nomination of new political figures (I. Alkin, G. Ibragimov, M. Vakhitov, M. Sultan-Galiev, etc.) and withdrawal from the political arena of some of the former very influential and active figures (K.-M. Tevkelev, Sh. Syrtlanov, A. Akhtyamov, etc.). Partly the changes were age-related, and partly they were

related to the fact that the ideas of social equality and socialist parties became very popular in the summer of 1917. New slogans brought new heroes.

There was one additional political power, trying to play a more active role in relations with the authority: leaders of the Vaisov's movement headed by Gaynan Vaisov. Following his return to Kazan because of the amnesty granted by the Provisional Government, G. Vaisov revived his community and started active work. In April 1917, a congress of 'God's warriors' was held in Kazan, which greeted the Petrograd Soviet of Workers' and Peasants' Deputies and the Provisional Government [Valeev, 2007]. A little later, G. Vaisov tried to speak at the All-Russian Muslim Congress (May 1917, Moscow) and describe the main principles of the Vaisov's doctrine. However, the congress organizers did not let him speak, and this deepened the emerging split. Probably, this occasion predetermined the shift of Vaisov's people to the left. In the summer of 1917 G. Vaisov planned to publish the 'Islam' magazine and other literature and to create his own political party [Vaisov, 1917, p. 23]. The period of the October Revolution was marked by a paradoxical situation: following the declaration of freedom of thought, the religious component of the movement took a back seat, while its politicization became irreversible. In the years 1917–1918, it was already a political movement, and its leaders did not hide their political interests and ambitions. In the autumn of 1917, having failed to find common ground with the leaders of the liberal-wing of Tatar national movement, the leaders of Vaisov's movement declared that they supported Soviet regime, and formed an alliance with Kazan Bolsheviks. However, for the Kazan Bolsheviks, this alliance was not so much deliberate coalition with another political force as an involuntary tactical move, which was also based on personal contacts of the leaders [G. Vaisov and K. Grasis respectively].

In the years 1917–1920, the attitude of the Bolsheviks and later of the representatives of Soviet power to Vaisov's people evolved from

cautious and kind, from striving to use them in their own interests on the road to power to suspicious and very negative in the end. As the Soviet power was strengthening and victories were being secured on the front (especially on the Eastern Front), the Bolsheviks became less and less willing to compromise and cooperate with various forces, especially religious organizations. For this reason, it is no coincidence that this alliance ended up with repressions against the leaders and the most active members of Vaisov's organization (starting from 1921), as well as with official prohibition of this organization in the mid-1920s.

Following the October Coup, the leaders of many political parties and factions, just like leaders of national movements, were faced with the issue of their attitude to the coup and the new Bolshevik authority. If we look at the attitudes of the leaders of the Tatar national movements towards the Bolsheviks, we will see a full range of opinions, with prevailing negative attitude. The National Meeting, held in Ufa from November 1917 to January 1918, almost unanimously (with the exception of a group of Left Socialist Revolutionaries headed by G. Ibragimov), spoke against supporting the October Coup, considering it a marginal group's attempt to take over the power and believing the Bolsheviks to be temporary pseudo-political figures not worthy of serious notice. The same attitude was expressed almost by the entire leading Tatar national press: 'Yöldız' and 'Kurultai' newspapers in Kazan, 'Turmush' newspaper in Ufa, 'Vakyt' newspaper in Orenburg, etc. However, leaders of the military organization Xärbî Şura İlyas Alkin, Yu. Muzaffarov, O. Tokumbetov, etc., including leaders of the Muslim Socialist Committee M. Vakhitov and M. Sultan-Galiev did support the Bolsheviks or at the very least were not against the transition of authority to the block of socialist parties.

The elections to the Constituent Assembly played an important role in the events occurring in late 1917–early 1918. In general, slightly less than 50% of the population took part in the elections; 40% of the voters voted for the Socialist Revolutionaries, 24% voted for the

Bolsheviks, 2.5% voted for the Mensheviks (plus 1.5% for Georgian Mensheviks), 4.7% for Constitutional Democrats (in fact the only right-liberal party in the elections), etc. Many votes were given to various small parties, independent candidates and candidates from various national groups.

Muslim leaders hoped that many of their deputies would be elected to the Constituent Assembly (proportional to the percentage of the Muslim population in country, that is, around 60 people) and intended to create separate Islamic faction in it. However, during the elections, the Muslim movement split not only on a national but also on a class basis. This is supported by the numerous lists containing names of the Muslims: lists of the governorate Milli Şura, lists of all groups of socialists (the latter had especially strong positions in the

Caucasus, Ufa and Kazan guberniya) (for more details, see: [Vserossijskoe Uchreditel'noe sobranie, 1930; Protasov, 1997]). As a result, only 37 Muslims were elected to the Constituent Assembly. Moreover, the majority of them were accepted by party lists of the Socialist parties and not through all-Muslim lists (local offices of Milli Şura). The creation of a united Islamic faction led to an immediate split among Muslim deputies into the Muslim nationalists (headed by F. Tuktarov and A. Tsalikov) and Muslim socialists (headed by G. Ibragimov and M. Vakhitov). That is, in both Muslim blocks the key role was played by the Tatars. It is difficult to say what the relations of these two Muslim groups would had been like if the Constituent Assembly existed longer than the time given to it by the Bolsheviks, or if the Bolshevism had a different fate in Russia.

CHAPTER 7

**All-Russian Muslim Congresses of 1917,
the National Assembly and Their Importance.
Declaration of National Autonomy in 1917–1918****§ 1. The Importance of the All-Russian Muslim Congresses of 1917***Aydar Khabutdinov*

Muslim committees and bureaus were established in all key Tatar-populated localities as national authorities common for all social groups. They included all national politicians and social activists. The liberal, moderate socialist, and left socialist wings of the committees focused their attention on the political development of the Tatar people, cultural and educational activities, laying the foundation of cultural and national and religious autonomy. The authorities were dominated by the secular intelligentsia, represented by the leaders from the period of the 1905–1907 Russian Revolution: liberals (S. Maksudi, F. Karimi) and moderate socialists (G. Iskhaki, T. Teregulov). The muslim committees and bureaus were generally national and not political bodies (except for Kazan and Ufa, where the socialist trend was dominant). These leaders played the key part in arranging and holding the All-Russian Muslim Congresses of 1917. Except for M. Vakhitov in Kazan, the committees were purely made up of socialists [Khabutdinov, 2008, p. 169].

On 17 March 1917, members of the Bureau under the Muslim fraction and local delegates formed the Provisional Central Muslim Bureau in Petrograd, headed by A. Tsalikov, to ensure preparation for the All-Russian congress and general coordination [II, 1917, 23 March].

On 23 March, the Kazan newspaper 'Qoyas' published an article by S. Maksudi titled 'How to gather a national congress?' on summoning the All-National Congress in Ufa under the Spiritual Assembly to transform it into a 'religious and national centre'. This was to be an

All-Russian congress, though dominated by representatives of the Muslims of Inner Russia. S. Maksudi maintained that the decisions taken by the 3rd All-Russian Muslim Congress of 1906 had to be implemented. He encouraged countrywide establishment of meetings and local bureaus, accusing the faction's bureau of being inactive in terms of working at preparations for the congress [Koyash, 1917, 23 March].

Regional representatives, a vast majority of them being Tatars, had formed a coordinating authority for Russian Muslims by April 1917. This was a large-scale regional representation, which ensured interaction and funding to enhance preparation work for the congress. 8 April 1917. The Central Muslim Bureau in Petrograd finally announced the calling of the Russia Muslim Congress in Moscow on 1 May 1917. Telegrams were distributed with the following agenda: method of state administration, national cultural autonomy, elections to the Constituent Assembly, attitude to the war, establishment of the All-Russian Muslim Council. The labour and land issues were added to the agenda of the Congress at the last moment, by a majority of four votes. The land issue was primarily viewed as restoring Muslim's ownership of the confiscated lands of the Crimea, the Caucasus, Turkestan, and Kazakhstan. In terms of attitude to the war, the Bureau supported the Petrograd Soviet's resolution on a defensive war until final victory. The Bureau was opposed to the Cadets in terms of the party's policy of controlling the Turkish straits and

was inclined to support the Russian Socialists [Koyash, 1917, 9 April].

A conflict arose shortly before the Congress, when the Bureau criticized S. Maksudi's actions at the 7th Cadet Convention and his speech, in which he allegedly expressed complete support of the Cadets on behalf of all Russian Muslims. All key Muslim newspapers published the Bureau's protest, in which it supported the policy of defending Russia but disagreed with the Cadets' claims to the Bosphorus and Dardanelles Straits. S. Maksudi departed for Tashkent, where he was appointed member of the Turkestan Committee [Koyash, 1917, 9 April; Ayda, 1996, pp. 90–93]. On 10 May 1917 the newspaper *Yöldız* published an article by S. Maksudi concerning his two speeches at the Cadet congress. In his second speech, S. Maksudi specified the terms on which support could be provided. The key requirement was that all peoples should be entitled to live according to their own will. Thus, S. Maksudi encouraged the Cadets to exclude the decision to occupy Istanbul and the straits from their programme. Having met with a refusal, he left the Cadet Party at once in protest [Yöldız, 1917, 10 May].

The protest thus was based on falsified data to politically isolate S. Maksudi. As a result, the last leader of the Tatar liberals who advocated evolutionary development of the Muslim community within Russia left Petrograd. The socialists, for whom S. Maksudi was a serious opponent, now had control over the Bureau. According to the initial version of the congress programme, Maksudi was to deliver a report on the national cultural autonomy, which A. Tsalikov undertook to prepare after he left. The issue of the Muslim military detachments was initially entrusted to K.-M. Tevkelev. The report was handed over to the representatives of the Moscow and Kazan branches of *Xärbi Şura* Galiev and G. Monasypov. Liberal advocates of Turkic unity thus lost control over two issues central to the Congress. All speakers, except for those supporting the establishment of religious autonomy in Inner Russia and Siberia, were socialists. Chairman of the

Bureau A. Tsalikov, secretary of the Bureau A.-Z. Validi and the leader of the Moscow Muslim Committee G. Iskhaki were responsible for arranging the Congress [Khabutdinov, 2008, p. 170]. The group also included the soon-to-be leader of the *Xärbi Şura* I. Alkin, who was in Petrograd at that time. A. Tsalikov and A.-Z. Walidi cooperated in the late March of 1917. A.-Z. Walidi recalled that it was critical for him to sow discord between the two most influential adherents of extraterritorial autonomy: A. Tsalikov and S. Maksudi. A.-Z. Validi established contact with representatives of the Caucasus, arranged a number of meetings with the Bashkirs, and arrived in Tashkent to recruit most of the advocates of territorial autonomy at the congress in Moscow [Koyash, 1917, 11 April; Togan, 1994, pp. 163–205; Sultanbekov, 1995, p. 56].

The principle according to which the delegates to the 1st All-Russian Muslim Congress in Moscow were elected ensured that cities dominated over rural localities and educated representatives over those lacking education. The same applied to the delegates to local self-governing authorities [Vakyt, 1917, 5 April].

Tatar Uçagı members presented an address in which they suggested an initial Tatar congress to address issues of national autonomy and sociopolitical requirements. Activists of the group maintained that the living conditions, requirements, and culture of different Turkic peoples were so different that each of them should have independent self-governing authorities. They restricted the objective of the All-Russian Congress to the adoption of the general programme previously approved at the national congresses [Koyash, 1917, 18 April].

On 4 April 1917, members of the meeting of the Kazan Muslim Committee approved by a majority of votes the suggestion by Tatar Uçagı to summon a Tatar congress in Kazan on 22 April [Koyash, 1917, 18 April]. During the Ufa Guberniya Muslim Congress, held on 14–17 April 1917, Z. Kamali, G. Ibragimov, and G. Baimbetov also suggested that a congress of the Muslims of Inner Russia should be held before the Constituent Assembly was summoned.

The Muslim Committees and Bureaus of Nizhny Novgorod, Zaysan, Tsaritsyno, Buzuluk, and even Baku supported the idea of holding a congress in Kazan. However, the Petrograd Bureau took the final decision to summon only All-Russian congress [Koyash, 1917, 9 April; Vakyt, 1917, 23 April].

The 1st All-Russian Muslim Congress in May 1917 was funded and largely controlled by the Tatars. The Tatars dominated the key boards of the Moscow Congress [Teregulov, 1926, p. 86]. The prevalence of the Tatars, similar to the situation at the All-Russian Muslim Congresses of 1905–1906 and 1914, was met with resistance on the part of most representatives of ethnic groups, each of whom wanted the interests of his community to prevail over the general interests of the Russia's Muslims. In fact, the radical and socialist majority of the congress shared with the conservatives the intention to prevent any efficient All-Russia authorities from being established. That congress put an end to the ideas of political, administrative, and economic unity of the Russia's Muslims, that is, to those of classical liberalism and the Islamic Turkic nation as developed by I. Gasprinski and his associates. The dominant idea of the Congress was not that of uniting all of the Russia's Muslims within a single nation but that of forming separate nations of the key ethnic groups. Thus, all resolutions by the Congress, except for the resolution on the type of autonomy, had turned into declarations without any mechanisms of implementation before the Congress even ended. A. Tsalikov failed to ensure a majority of votes for an extraterritorial autonomy at the Congress. The issue of power was excluded from the All-Russia agenda, and moved to the level of separate ethnic groups [Khabutdinov, 2008, p. 171].

G. Ibragimov provided the most comprehensive evaluation of the situation—he only failed to factor in the formation of a distinct Bashkirs ethnic group. He maintained that the unity of the Muslim peoples had to be political and economic, and not religious and cultural. G. Ibragimov suggested that five separate states should be created: Kazakhstan, the Cau-

casus, Turkestan, Tatarstan, and the Crimea [Irek, 1917, 15 June].

Thus, the 1st All-Russian Muslim Congress, held in Moscow in May 1917, was a double blow to the Turkic unity. On the one hand, the conservatives and part of the socialists proclaimed territorial autonomy and established the purely declarative All-Russian Milli Şura (National Council). On the other hand, the socialists took resolutions on equal rights for women and land allocation (socialization), which strengthened the intention of the conservatives from the Caucasus and Turkestan to ensure their isolation from the Muslims of the central regions. The congress elected G. Barudi Mufti of the OMSA. R. Fakhretdin, S. Urmanov, K. Tardzhemani, M. Bubi (the first and last woman), G. Suleymani, and G. Karashi were elected as qadis. Most of the Tatars believed that it would be impossible to reunite territories split among various governorates and populated with the Russians. F. Karimi predicted that the Tatars would constitute a minority in each state, so 'the Muslims' rights would be within the jurisdiction of their state parliaments, and being outnumbered, they would be unable to defend them'. Muslims would have fewer deputies in the federal parliament [Teregulov, 1926, p. 124].

The Tatars were able to establish representative (Merkez Milli Şura, Central (All-Russian) National Council) and executive (Executive Committee of Milli Şura-Iskomus) authorities of the Russia's Muslims, headed by extraterritorial autonomist A. Tsalikov.

Speaking at a meeting of Merkez Milli Şura on 25 June 1917, S. Maksudi encouraged its members to observe resolutions by the Muslim Congress, which had established it, and go beyond the limits of interests of separate ethnic groups and towards the common interests of the Russia's Muslims. The leader of Xârbi Şura I. Alkin criticised straightaway this statement by S. Maksudi [Davletshin, 1974, p. 109]. Therefore, even the Tatars had more than one opinion on the activities of Merkez Milli Şura. Representatives of other Muslim peoples appeared to ignore its work. During

the governmental crisis in July 1917, the Iskomus put forward an initiative to introduce the Muslims into the government. The Provisional Government rejected this suggestion [Davletshin, 1974, p. 109]. It is ironic that the only agreement reached between the Merkez Milli Şura and the Provisional Government was to increase the number of qadis in the OMSA from three to six [Iskhakov, 2003, p. 151]. When the Milli İdarä had been established and, more importantly, A. Tsalikov had been elected deputy to the Constituent Assembly to represent the Simbirsk guberniya and member of the Solix Xäyate (Peace Board) under the Milli İdarä (10 January 1918), he coordinated his activities closely with Millät Mäclese. This is why he refused to establish a Muslim Committee within the Council of People's Commissars in January 1918 [Khabutdinov, 2009, p. 268].

The only real enactment of Iskomus was the decision on the election procedure for the 2nd All-Russian Muslim Congress in Kazan. According to it, governorate Muslim meetings were to elect most of the delegates from among the representatives of district committees [Terregulov, 1926, p. 154]. In contrast to the Moscow Congress, where city dwellers and young students were represented on a large scale, the representatives of rural areas received a majority of votes in Kazan, which determined the relative conservatism of this congress.

The congresses held in Kazan in July 1917 and the establishment of a cultural and national autonomous government formed the dominant Tatar national movement (see participant lists: [Kurultai, 1917, 8 August]). National liberal and moderate socialist leaders had nearly full control over the Waqıtlı Milli İdarä (Provisional National Government) and focused their attention on administrative rather than political activities.

We should begin analysis of the national congresses in Kazan in July 1917 by studying the clerical congress, which raised the basic questions of relations between religious and secular authorities, as well as the settlement of conflict between conservatism and modernism

within the women's issue. We will then explore the key problems, discussions, and decisions of the 2nd All-Russian Muslim Congress, which adopted resolutions and created structures to determine the development of Tatar extraterritorial autonomy.

The All-Russian Congress that opened in Kazan on 20 July 1917 was the pinnacle event of the clergy (ğolyama) movement. Apart from the Tatar and Bashkir representatives, it was attended by clergymen from the Crimea, the Caucasus, Turkestan, Kazakhstan, and Siberia [Yöldız, 1917, 19 June]. Akhun Nurgali Khasanov from Buinsk encouraged the congress members to enhance the role of the clergy. S. Maksudi disagreed with him, saying that clerical activities should be confined to three issues: meeting the needs of the cult, meeting the needs of the clergy as a class, and using the clergy's spiritual power. He emphasised that the clergy should follow this path and not that of all-round influence. All the imams were opposed to this idea [Yöldız, 1917, 19 June]. A paragraph was entered into the Charter of the Clerical Society specifying its mission: 'To preserve the morals, customs, and religion of Islam' [Yöldız, 1917, 26 June].

The congress discussed women's rights at its meeting on 24 July. A conservative Murad Ramzi (Mekki) presented a report. He harshly criticized the decision to ensure equal rights for women as one inconsistent with the fundamental principles of the Tatar Islamic society. To the contrary, M. Bigi maintained that 'men and women are equal in every right, without exception'. He advocated autonomous families in order to prevent the Islamic states from collapsing. A majority of the congress members could not accept such radical ideas [Yöldız, 1917, 26 June, 27 July; Khabutdinov, 2000a, pp. 114–116].

Representatives of the clergy at the congress were generally able to counter the liberals with their opinion on the women's question. However, it was the Joint Meeting of the Kazan Muslim Congresses on 22 July 1917 which included the muftiate as a nāzārāte (ministry) in the national cultural autonomy government,

thus enabling the secular power to control the religious one. By giving up a number of liberal ideas (most importantly, by restricting women's equality), the secular leaders were able to build alliances with most of the spiritual ones [Yöldız, 1917, 27 July]. The leaders of the Ufa Social Revolutionaries, the Xärbi Şura and the MSC, were opposed to the concession [Teregulov, 1926, pp. 205–209]. The Spiritual Assembly acted to stabilize relations between the radical youth and the conservative majority of common people. This episode was one of the key reasons why the relations between the Turkist-controlled muftiate and the socialist Tatar youth deteriorated. The collision on the women's question was one of the key problems that caused the conflict between the majority of the Congress and the socialist minority. Its basic fault was unawareness of the structure of the Tatar community and the positions of its major groups, which was similar to the position of the Tangchylar and Uralchylar. The radical socialist group, which had formed in the context of the 1905–1907 Revolution, believed it reasonable to accept the opinion of the people's majority, though they advocated equal rights for women [Khabutdinov, 2008, pp. 186–189].

National cultural autonomy was proclaimed for the Muslim Turko-Tatars of Inner Russia and Siberia at the joint meeting of the congresses on 22 July 1917 [Yöldız, 1917, 26 July].

A discussion was held on 24 July concerning Muslim involvement in All-Russia political activities and relations with the Provisional Government. G. Iskhaki demanded on behalf of the congresses that 'the government view cooperation with central national organizations of the peoples of Russia as its duty'. The Milli Şura and Xärbi Şura sent telegrams to the Provisional Government to inform it that they would begin to form Muslim regiments without the government's approval if it did not grant permission.

G. Iskhaki reported on the tactics for elections to the Constituent Assembly. Three variants were proposed: a single Muslim list,

alignment with the Socialists, and a separate list for each governorate, developed by the governorate's Milli Şura. The last variant was adopted [Yöldız, 1917, 2 August].

A discussion began on 29 July that caused a conflict between the main wing of the congress and G. Ibragimov and M. Sultan-Galiev. In his report, G. Teregulov maintained that the decision to socialize lands and to return to the Ittifaq's traditional provision of confiscating without compensation state-owned, cabinet-owned, monastery-owned, and appanage lands adopted by the 1st All-Russian Muslim Congress should be cancelled. G. Ibragimov, who spoke on behalf of the minority, advocated the implementation of the land socialization provision. He even agreed to postpone discussions on the form of the autonomy but insisted that the land had to be socialized. The personal rivalry between G. Teregulov and G. Ibragimov as the leaders of the Ufa guberniya's most influential Muslim organizations made this debate especially fierce. It was the beginning of a discord between the agrarian socialists and the main wing of the Muslim movement of the Ufa guberniya. In the end, G. Teregulov's resolution was adopted.

M. Sultan-Galiev reported on issues concerning publishing activities. His suggestion was to identify ten regions, each with a separate network of publishing offices and book warehouses. G. Teregulov and F. Tuktarov, the leaders of the Kazan and Ufa guberniya Milli Şuras, rejected this proposal. Publishing issues were referred to the Department for Education [Yöldız, 1917, 4 August]. Thus, M. Sultan-Galiev was unable to gain a foothold among the national elite, and this led him towards an alliance with the Muslim Socialist Committee and M. Vakhitov.

On 19 July, the 'Kurultai' newspaper by the Kazan guberniya Milli Şura published an article by G. Shnasi titled: 'How to implement national cultural autonomy for the Muslims of the Volga region?' The author maintained that there existed two opinions for the type of relations between the All-Russian Milli Şura and the Spiritual Assembly. One was that the Milli

Şura had to function under the Spiritual Assembly, while the other viewed the Spiritual Assembly as a separate part of the Milli Şura. Shnasi suggested that the structure of the Milli Şura should include the following departments: Religion, Justice (to exercise supervision over courts), Education and Printed Media (to provide secular education within the religious school and publish educational literature), Organization and Propaganda (for elections to administrative bodies), Finance and Waqf, Statistics, and Xärbi Şura [Kurultai, 1917, 19 July]. Thus, issues of structural arrangement of autonomous authorities remained unsettled until the last day of the congress. Even the fundamental question of the relations between religious and secular authorities and their relations with the Xärbi Şura were not solved. Factual evidence confirms the account of the events presented by S. Maksudi's daughter Adile Ayda, who claimed that her father had developed by himself the autonomy structure and relations with the Spiritual Assembly [Ayda, 1996, pp. 100–101].

It should be noted, however, that the draft for the reform of the OMSA (further referred to as OMSA), which was presented by Yu. Akchura at the meeting of ğolyama jämgyäte under the auspices of the OMSA in Ufa in April 1905, suggested that the clergy should be classified into three categories: 'Akhuns, muhtasibs, and mudarrises have legal rights and responsibilities. Akhuns control (nâzâräte itep) justice—legal issues (gadeliä) within mahallahs; muhtasibs control financial (mäliä) and organizational (idariä) issues; and mudarrises are responsible for education (tağlim). Each is the leader of the local clergy on certain issues' (p.12). The OMSA consisted of a mufti and six qadis and was further subdivided into three departments: 1) the Legal Department (gadeliä) run by akhuns; 2) the Managerial Department led by muhtasibs; 3) the Department for Education run by mudarrises (p. 17) [Bigi, 1917, p.

44]. We see, as a matter of fact, the founding principles of the Milli İdarä (National Administration), which was established in 1917, reflected here. The OMSA laid the foundation for the three nâzâräte (agencies) within the Milli İdarä: the spiritual agency (diniä), the financial agency (mäliä), and the agency for education (mäğärif).

Even the last day of the congress was marked by a debate over the procedure for introducing national cultural autonomy. On behalf of his section, G. Shnasi advocated immediate introduction of autonomy. His principal opponents were Chairmen of the Ufa and Kazan Milli Şura G. Teregulov and F. Tuktarov, and Chairman of the Xärbi Şura I. Alkin. S. Maksudi and H.-G. Gabyashi supported G. Shnasi. As a result, the decision was approved by an overwhelming majority of votes [Yöldız, 1917, 11 August].

The congresses that took place in Kazan in July 1917 (the Muslim, Military, and Clerical Congresses) formed a government of cultural and national autonomy, and assured Tatar dominance of the national movement. The representative and executive bodies were the most active centres promulgating national cultural autonomy. While in May–July 1917, religious and secular authorities functioned separately and in parallel to one another, in July 1917, the muftiate became a nâzâräte (ministry) within the autonomous government thus putting control of religious matters under secular auspices. Concessions were ensured by giving up a number of liberal ideas: the most important of these resulted in limitations on women's rights. Thus, secular leaders were able to ally with most of the clergy while preserving the fundamental principles of the traditional community. The Waqıtlı Milli İdarä (the Provisional National Government) and Milli Şuras (National Councils) in the guberniyas, as well as local committees, became actual authorities [Khabutdinov, 1996, p.31].

§ 2. Organs of Tatar National Autonomy in 1917–1919

Aydar Khabutdinov

National cultural autonomy was proclaimed under the rubric of 'the Muslim Turko-Tatars in Inner Russia and Siberia'²⁹ at the joint meeting of Muslim congresses on 22 July 1917; a resolution was taken to the effect that it was to be implemented immediately (see coverage in printed media: [Usmanova, 1994]). The three prospective ministries of self-government established at the 2nd All-Russian Muslim Congress in Kazan in July 1917 by the *Waqıtlı Milli İdarä* (the Provisional National Government) represented, in fact, the three most powerful professional corporations in the Tatar world. The *Milli İdarä* was composed of three *näzäräte* (ministries): *Mäğäriif* (education), *Mäliä* (finance), and *Diniä* (religion). *Diniä Näzäräte* preserved its composition, elected at the 1st All-Russian Muslim Congress in May 1917. The two other *näzärätes* were made up of the members of *Mäğäriif* from 'Böten Rusiya Ukuıtuçılar cämgiyäte' (the All-Russian Teachers' Association'), while *Mäliä* members were mostly bourgeois representatives of local national funds. The three nation-wide centres: Kazan, Ufa, and Orenburg–Troitsk had representatives in each *näzäräte*. Thus, the national administration had to rely on existing corporations and their boards for new personnel. S. Maksudi was politically and administratively adept at using the authorities to solve common national issues and bringing them under control of the united national government. By establishing the *Milli İdarä*, the secular intelligentsia was able to remain in control of the nation's social movement (see: [Khabutdinov, 1999, pp. 95–99; Khabutdinov, 2000a, pp. 103–111; Khabutdinov, 2008, pp.191–196]). S. Maksudi, Ibn. Akhtyamov, G. Sharaf, A. Mukhetdinov, F. Karimi, K. Karimov, N. Khalfin and Kh. At-lasi were elected members of the Board for the Implementation of Autonomy. Kazan, Ufa, and Orenburg received geographical representation.

Simultaneously with moderate socialists like Akhtyamov, Sharaf and Khalfin, Mukhetdinova joined the Board as a representative of the Muslim Socialist Committee [Kurultai, 1917, 8 August].

The Board for the Implementation of Autonomy met for the first time in Ufa on 25 August 1917. The meeting was attended by most of its members and those of *näzäräte* boards [Tormış, 1917, 27 August]. The self-rule government took its first practical steps to develop a constitution and set up internal structures at that time.

Following the Kazan Congress, *Diniä Näzäräte* was finally established as one of the self-government authorities [Tormış, 1917, 16 October]. The Ufa guberniya Meeting of the Clergy (*ğolyama*) in September 1917 decided that all religious schools should receive funding from their respective departments of the *Milli Şura*. Religion Classes were established as compulsory in all schools [Tormış, 1917, 18 October].

The *Mäliä Näzäräte* met in Ufa on 10–13 October 1917 to address the issue of 'a national treasury of the Turko-Tatars of Inner Russia and Siberia'. The *Milli Xäzinä* (the National Treasury) was to ensure funding for the self-government authorities, hospitals, orphanages, and trade schools. A resolution was adopted that a minimum of 1% of property should be allocated for national needs. They considered various ways of raising funds, such as taxation, direct appeal to the wealthy, and subscriptions. The meeting led to the establishment of the Central Board of the *Milli Xäzinä* and the Consultative Board under the *Näzarat*, which consisted of 29 members [Tormış, 1917, 16 October].

A meeting under the *Mäğäriif Näzäräte* took place on 1 November 1917. Issues on the agenda included teachers' colleges, provisional courses, the establishment of non-classical secondary schools, upper-level courses, higher educational teaching institutes, and, in

²⁹ Self-designation: *Echke Rusia va Sibiria Turek-Tatar musulmannary*.

general, the question of national higher education. The most favorable situation was in Orenburg, where successful cooperation between self-government institutions and the provincial zemstvo ensured funding of Islamic education. They mainly opened national schools, mostly primary, on a large scale, created Muslim educational departments or jobs for instructors at uyezd's zemstvos, and set up provisional courses. It was difficult to establish secondary schools: out of 130 schools in the Chistopol uyezd of the Kazan guberniya, there were only two six-year schools. G. Teregulov advocated cooperation with the zemstvos, provided that an independent Muslim educational system would be introduced [Tormış, 1917, 3 November].

The Committee for Education was established in the Menzelinsk uyezd of the Ufa guberniya in August 1917. Its mission was to transform zemsky, ministry, and Kryashen schools into national ones; to establish six-year summer schools in 90 auls and teachers' courses in Menzelinsk; to provide training in the Tatar language and history for Muslim children in non-classical secondary school, in college preparatory schools and in local vocational schools. These goals were achieved in November [Tormış, 1917, 8 November].

We should analyze the structure of local governing bodies. Regional (governorate) authorities were established following the creation of local committees and bureaus in April 1917. After the Waqıtlı Milli İdarä had been established, the process of appointing representatives of Milli İdarä nâzâräte departments at the provincial level began. In April of 1918, they attempted to create national districts (milli wilayätlär) as self-governing territorial units.

In 1917, governorate-level Muslim congresses were held in Ufa on 14–17 April and in Kazan on 23–24 April to establish national councils at the governorate level. An administrative system was finalized in late August, when the following provincial agencies were established in the Kazan guberniya:

1) the Kazan Provincial Muslim Assembly (Kurultai), a congress;

2) the Kazan Provincial Muslim Council (Milli Şura), a representative body;

3) the Kazan Provincial Muslim Administration (Milli İdarä), an executive body consisting of the following departments: Religion, Education, Finances, Statistics, and Propaganda [Koyash, 1917, 22 August].

The Statistical Department of the Kazan Muslim Committee, headed by G. Sharaf, was established on 15 July 1917. Its responsibility was as follows: to find out the number and percentage of representatives of different ethnic groups; to calculate the number of school-aged children and the amount of Tatar-owned land [Kurultai, 1917, 16 July]. All maps displaying Tatar autonomous territory were based upon this data.

The Provincial Muslim Congress in Kazan took place on 16–19 August 1917. The following imams made up the idarä (administration) of the Kazan Provincial Milli Şura: Imam K. Salikhi, F. Tuktarov, M. Kurbangaliev, G. Gabaydullin, N. Khalfin, Gilm. Sharaf, and Kh. Safiullin. They were associates of F. Tuktarov, mostly moderate socialists [Koyash, 1917, 22 August].

Local authorities for the national cultural autonomy were established in the autumn of 1917. The Kazan Provincial Milli Şura was the first to act upon this decision. Meeting on 31 August, they resolved to establish Milli İdarä agencies across the governorate. Particular attention was paid to the establishment of educational departments and ensuring control over madrasahs [Koyash, 1917, 3 September].

At a meeting of the Ufa Provincial Milli Şura on 29–30 October 1917, they established a presidium, made up of the following members: G. Teregulov, Z. Kadyri, A.-Z. Validi, G. Ibragimov, F. Saifi, and F. Akhmadulin. Thus, the presidium's leadership included three representatives of ethnic majorities, two of the Socialist Revolutionary minority, and one representative of the Bashkir autonomists. Chairmen of provincial departments of Milli İdarä were elected: muhtasib Zyia Kamali; Head of the Department Mäliä Nâzâräte Khidayatulla Enikeev; and Head of

the Department Mägäriif Näzäräte Mardegalim Mukhamedov—they represented the majority [Tormış, 1917, 31 October, 1 November]. Similar administrative units were formed in every uyezd in Ufa guberniya a little later.

The Milli İdarä appointed the first muhtasibs in November 1917. G. Apanay was appointed muhtasib of Kazan; F. Murtazin (former editor of the *Iktisad* magazine), muhtasib of Samara. The government appointed muhtasibs loyal to the Milli İdarä to ensure control in non-central areas [Tormış, 1917, 1 November].

Usmaniya Madrasah, headed by mudarris Dzh. Abyzgildin, became the central madrasah of the national cultural autonomy in the autumn of 1917. It attracted a number of ulama, such as Mufti G. Barudi, H.-G. Gabyashi, G. Suleymani, Z. Kamali, G. Shnasi, M.-N. Tyuntyari, Z. Kadyri, and M. Khanafi [Tormış, 1917, 24 September]. Clerical leaders played a secondary role in nation-wide organizations. The Diniä Näzäräte ceased to address general national, financial, educational, and political issues. According to the constitution for self-government, it retained control only over the appointment of clergy, mosque construction, establishment of religious educational institutions and their curriculum, and over issues of marriage, including questions pertaining to registration and division of property. Waqf management was entrusted to the Mäliä Näzäräte. The Nizam-Name (Charter) of the Spiritual Assembly was adopted by the Millät Mäclese [Tormış, 1917, 31 December].

This session of the Millät Mäclese, the first parliament in the history of the Tatar nation, was the highest point in the national movement [Tormış, 1917, 22 November; Ayda, 1996, pp. 334–335]³⁰. Due to the realities of everyday life, there was no general election to the parliament. Instead, elections took place at the provincial Milli Şuras and at Xärbi Şura offices for those on active duty. The Millät Mäclese was

supposed to adopt the Constitution of the national cultural autonomy and form its government, which would have made the Tatar nation a legal and autonomous entity.

But before Millät Mäclese commenced its work on 20 November 1917, Sh. Akhmadiev, Chairman of the Salesmen` Union, deputy of the Millät Mäclese from Kazan and member of the Islamic Socialist Committee (MSK), suggested that a telegram be sent to the Council of People`s Commissars, as they had previously done to the Provisional Government, informing them of the opening session of parliament. The decision was rejected upon the insistence of F. Saifi and G. Battal.

S. Maksudi opened the meeting of the Millät Mäclese on 20 November 1917. The main part of his speech was devoted to the Board`s report on the implementation of national cultural autonomy. Maksudi stated that the Mäliä Näzäräte had established the Milli Xäzinä (the National Treasury), in which there was more than a million rubles, while the Mägäriif Näzäräte had established contacts with zemstvos and official institutions. The Board had worked out a number of bills for the Millät Mäclese to pass, and distributed information on the autonomy via the network of imams. Maksudi then elaborated on the importance of the Millät Mäclese and autonomy to the nation`s future: 'The northern Turko-Tatars have now declared their existence to the entire world'. In conclusion, S. Maksudi encouraged the nation to rely on itself and its people. Maksudi advocated in his speech, in fact, moving away from the notion of all-Russian Muslim unity and towards all-Tatar national unity [Tormış, 1917, 22 November].

The next report was presented by G. Iskhaki on behalf of the all-Russian Milli Şura. Iskhaki admitted that it was not actually functioning as an all-Russian authority. In response, I. Ramiev advocated, on behalf of the Ufa Military Council, which was connected with G. Ibragimov`s group, the creation of a federation of the Uralian Muslims that would include those from Bashkiria. I. Ramiev said that their main goal was to establish a state of their own and that

³⁰ The speeches and decisions of the participants in the Milliyat Majlis were only printed in their complete form on the pages of the Ufa newspaper *Tormysh* and were not translated. The transcript has not been preserved.

he would appreciate greater financial aid for establishment of national regiments [Tormış, 1917, 22 November]. However, negotiations with leader of the Bashkir autonomy A.-Z. Walidi were unsuccessful.

Two groups within the Millät Mäclese announced their intent to form parties: the Turkists and the Tatarists. The faction of Turkists had prerequisites for forming a united national party. Thus, an announcement concerning the formation of the 'Turkist Party' appeared on 8 December 1917. A group of five members (G. Iskhaki, G. Teregulov, Z. Kadyri, A.-H. Maksudi, and I. Bikkulov) was elected to develop the programme [Tormış, 1917, 8 December]. The Turkists maintained that 'In the development of national and cultural institutions, the Turks of Inner Russia and Siberia should avoid tribal divisions and go forth under the banner of Turkism, thus unifying cultural affairs under one banner'. In terms of territorial autonomy, they entrusted the Constituent Assembly to decide whether or not a state should be proclaimed on the Volga River and in the Southern Urals. National cultural autonomy was to be implemented regardless of how the situation in Russia developed [Tormış, 1917, 26 November]. The Turkists disagreed about the means of attaining the autonomy. In fact, power was redistributed among factions when decisions concerning territorial autonomy were handed over to the members of the Islamic faction of the Constituent Assembly. Other leaders of the faction, headed by S. Maksudi, focused their efforts on the Milli İdarä.

The Tatarists advocated territorial autonomy. However, there was discord between the Kazan group, which was centered around the Xärbî Şura and part of the Kazan Milli Şura, and the Ufa group, which had ties to the leftist faction of the Ufa Milli Şura. Each group struggled to gain control over the power within the state, and to proclaim Kazan or Ufa, respectively, its capital. Leader of the Muslim Socialist Committee M. Vakhitov did not visit Ufa at all.

On 25 December 1917, Yöldız published the article 'The Bolsheviks and Muslims',

which contained the first report on the negotiations that had begun in Petrograd between People's Commissar of Nationalities J. Stalin and A. Tsalikov, Chairman of the All-Russian Milli Şura. J. Stalin offered A. Tsalikov the leadership of a commissariat to be elected by a presidium of all Muslim peoples. A Muslim socialist was to be vice commissar. A. Tsalikov proposed the question to the Millät Mäclese and the All-Russian Milli Şura for consideration, but they refused to cooperate with the Bolsheviks [Yöldız, 1917, 25 December; Volobuev, edit., 1993, pp. 337–338]. Thus, all attempts by G. Ibragimov to bring his organization to the national arena were unsuccessful at the time.

On 3 January 1918 Tatarist G. Sharaf reported on plans to establish territorial autonomy. He announced that representatives of the nation, who were scattered among different governorates, needed to create a separate state [Tormış, 1918, 5 January] (see Idel-Ural concepts: [Khabutdinov, 2001a, pp. 50–59]). Turkist G. Iskhaki maintained that, in establishing a new state, they must focus on its economic sector: the Volga River must be its most important transport corridor. Since Azerbaijan and Turkestan shared borders with Turkey, it would be crucial to have access to these territories and the Caspian Sea. In response to the remark that this suggestion was unrealistic, Iskhaki proposed a referendum. If it should turn out that the population was opposed to this idea, they would give up their claim to Samara and Astrakhan guberniyas [Tormış, 1918, 9 January].

The Board for Territorial Autonomy (the so-called Board of the Idel-Ural State—BIUS) informed the Millät Mäclese of three plans aimed at establishing Muslim autonomy in the Volga-Ural region. According to one plan, the state should include all of the Tatar, Chuvash, and Mari people. Thus, 44% of the population would be the Muslims. The plan was known as Idel-Ural Map 1. According to the second plan (Idel-Ural Map 2), the state would encompass the entire territories of Kazan and Ufa guberniyas and part of Perm, Orenburg, Samara,

and Simbirsk guberniyas. In this manner, the Muslims would represent 51% of the population. According to the third plan (the Big Idel-Ural State), the state would be composed of the entire Samara guberniya and the Bukey Horde. Here, the Muslims accounted for 29% of the population, and the Slavs, for 56%.

In the same report, G. Sharaf suggested a six-point resolution proclaiming the Idel-Ural State. The first paragraph of the draft resolution proclaimed the state within the territory dominated by representatives of the different nationalities, but did so in the name of national and economic interests of all nations within the state. The state was comprised of Kazan and Ufa guberniyas in their entirety, and parts of Orenburg, Samara, Perm, Simbirsk, and Vyatka guberniyas, including the Chuvash and Mari territories. A legislative parliament responsible for all issues, with the exception of those referred to the federal parliament, was proclaimed the supreme authority in the state. The federation would have authority over the post, telegraph, railway and water communications, measures of weight and length, basic monetary regulations, basic civil, criminal, commercial, and exchange law, federal taxes, international loans, foreign policy, and customs. Only in these matters would laws adopted by the federal parliament prevail over those of local parliaments. Equality among ethnic groups, languages, and religions was declared in the state. The state's parliament was not expected to participate in the passage of federal legislation and in the work of federal organizations [Tormış, 1918, 7 January].

On 5 January 1918, the All-Russian Constituent Assembly adopted the Resolution on Russia's State Structure, in which 'the Russian State was proclaimed the Russian Democratic Federation, inseparably uniting peoples and regions, sovereign within the limits specified in the federal Constitution' [Vserossijskoe Uchreditel'noe sobranie, 1930, p. 113].

Earlier on 5 January 1918, A. Tsalikov had announced the Declaration of the Islamic Socialist Faction. It stated that 'the Council of People's Commissars had been unable to en-

sure among the Russian peoples the free development and unimpeded realization of national cultures'. The declaration demanded that 'Russia be recognized as a federal republic, and that the Constituent Assembly should...authorize the establishment of states', including that of the Volga region (Povolzhye) and the Southern Urals'. It envisaged socialization of land by means of special land codes for parts of the federation. The declaration provided for army nationalization [Vserossijskoe Uchreditel'noe sobranie, 1930, p. 113].

The following day after the Russian Federative Republic was declared on 6 January 1918, the Millät Mäclese proclaimed a constituent unit—the Idel-Ural State—and decided on the procedure for establishing the state. On that day, the leader of the Bashkir Autonomy A.-Z. Walidi conclusively rejected the idea of united autonomy when speaking at a session of the Millät Mäclese. The Board of the Idel-Ural State was to ensure that a congress was summoned in Ufa to adopt the state's provisional constitution and establish a provisional government. It had to be agreed with representatives of national organizations within the peoples' state. The Board of the Idel-Ural State was to develop a draft constitution, as well as define the state's borders and economic status. It was agreed that the Xärbi Şura would be accountable to the Board of the Idel-Ural State. It could not elect any additional Muslim members but was entitled to elect new Board of the Idel-Ural State members representing other nations.

On 8 January 1918, G. Sharaf, S. Engalychev, F. Mukhammedyarov, N. Khalfin, S. Atnagulov, G. Gubaydullin, I. Alkin, and F. Saifi were elected to the Board of the Idel-Ural State. Representatives of Kazan dominated the Board of the Idel-Ural State. G. Sharaf, N. Khalfin, and G. Gubaydullin represented the Provincial Milli Şura; I. Alkin, Xärbi Şura; F. Mukhammedyarov, the Islamic Socialist Committee. The only representatives of Ufa and G. Ibragimov's group were S. Atnagulov and F. Saifi. S. Engalychev did not participate in the Board's work. The other members of the Board of the Idel-Ural State arrived in Kazan on 21 January.

The Millät Mäclese accepted the Board's territorial autonomy project but added a supplementary paragraph. The third paragraph of the resolution read as follows, 'Being a people's republic in terms of its government, the Idel-Ural Ölkäse along with the other 'ölkä' (regions, states) constitutes the Russian Federative Republic [Tormış, 1918, 8 and 10 January].

Territorial autonomy was thus proclaimed for the Tatar nation. The autonomy was to be guided by the founding principle of equal rights for all peoples within the state, while adhering to their national cultural autonomy. The Idel-Ural State was viewed as a constituent entity of the federal republic. Just like Russia, the state was established as a parliamentary republic. In the absence of federal law and a constitution, the founders of the state were to determine its principal powers and those vested in the central government on their own. That was a draft document, which was to be amended during negotiations with the central government as decided by the federal parliament. In fact, neither of the bodies existed at that time, and power was transferred to the Soviet authorities. Millät Mäclese deputies established the state to preserve the parliamentary government as a counterweight to the power of the Soviets.

At that time, Muslims had to take sides in the conflict between the majority of the Constituent Assembly and the Council of People's Commissars [Tormış, 1918, 8 and 10 January; Yöldiz, 1918, 25 January]. Only G. Ibragimov supported the All-Russian Central Executive Committee and left the All-Russian Constituent Assembly along with the Bolsheviks and the Left Social Revolutionaries. The Tatars formed the so-called 'Islamic Socialist Faction' of A. Tsalikov, S. Salikhov, F. Tuktarov, Sh. Mukhammedyarov, Sh. Sunchalyay, A. Mukhametdinov, G. Ilyasov, and M. Akhmerov. F. Tuktarov and F. Mukhammedyarov fully supported the political stance of the Socialist Revolutionaries' leader, Chairman of the All-Russian Constituent Assembly, V. Chernov, and advocated the struggle against the Council of People's Commissars. J. Stalin, People's Commissar of Nationalities in the Council

of People's Commissars, met with Muslim deputies representing the Idel-Ural State in the building that housed the All-Russian Milli Şura. G. Ibragimov, M. Vakhitov, and Bashkir representative Sh. Manatov tried to entice A. Tsalikov to become leader of the prospective commissariat, but he supported the Islamic faction. As a result, G. Ibragimov, M. Vakhitov, and Sh. Manatov decided on the terms of cooperation with the Soviet government at a meeting with the Chairman of the Council of People's Commissars, V. Lenin, and J. Stalin, on 7 January 1918. Ibragimov and Stalin had arranged the meeting. The Council of People's Commissars gained partial control over the Tatar movement in Ufa and Kazan as well as the Bashkir movement [Ibragimov, 1922, pp. 140–143; Vakhitov, 1967, p. 116; Volobuev, edit., 1993, pp. 61, 203].

Millät Mäclese deputies refused to negotiate with the Soviet government and continued with the process of creating bodies for national cultural autonomy. On 5 January 1918, Sadri Maksudi was elected chairman of the Milli İdarä [Tormış, 1918, 9 January]. On 11 January 1918, the first session of the Millät Mäclese closed after proclaiming the autonomy's Constitution [Muxtariyat, 1918, 16 January]. The Milli İdarä was proclaimed the nation's only superior legislative body during the interim period. Qadis R. Fakhretdin, S. Urmanov, K. Tardzhemani, M. Bubi, G. Suleymani, M. Makhmudov were elected to the Diniyä Nāzaratı. G. Barudi remained the chairman. The real power in the Diniä Nāzārāte was still held by members of the Naqshbandiyya Tariqa: namely Sheikh Barudi and his murīds Tardzhemani and Suleymani, clergymen connected with Kazan's bourgeoisie. Zakir Kadyri, Mardelgalim Makhmudov, Ismagil Utyamyshiev, Gumer Teregulov, Gali Enikeev, and Ibragim Bikkulov were elected members of the Māğārif Nāzārāte, presided over by Nadzhib Kurbangaliev. Within the nāzārāte, N. Kurbangaliev represented Orenburg, four members represented Ufa, and I. Utyamyshiev and I. Bikkulov represented Kazan. The Māliä Nāzārāte consisted of Salim-Girey Dzhantuyurin, Garif

Karimov, Gali Kuramanaev, Latyf Yaushev, Gabdulla Bubi, and Nadzhib Khakimov, all headed by Shajhulla Alkin. The *nāzārāte* was dominated by Ufa bourgeoisie, represented by Sh. Alkin, S. Dzhanturyin, and N. Khakimov; G. Karimov represented Orenburg, and L. Yaushev represented Troitsk. An 'ilçelär xäyäte' (ambassadorial board) was elected as a representative body under the central government. The board included members of the All-Russian Milli Şura S. Mamliev, Z. Shamil, and G. Iskhaki [Tormış, 1918, 14 January].

Since it was impossible to summon a new session of the *Millät Mäclese*, the Milli İdarä resolved to establish 34 milli wilayäts (national regions). They covered territory from the Baltic region to the Far East. Ufa guberniya was split into five wilayäts, while Kazan and Orenburg guberniyas were made up of four [Yöldız, 1918, 22 April].

As a response to the dissolution of the Milli İdarä on 25 (12) April 1918, the 'Tormış' newspaper published an address to all local and aul Milli İdaräs by the autonomy's government. It maintained that it was illegal to dissolve Milli İdarä as a non-partisan all-national authority. Local Milli İdaräs were encouraged to ensure proper performance in religious, national, and cultural life, charity, national tax collection, and representation in zemsky and city organizations in accordance with the autonomy's constitution. Members of the Muslim Commissariat were proclaimed government officials who had wrongfully interfered in areas that should be the responsibility of nationally-elected authorities. The address was signed by Milli İdarä Chairman, S. Maksudi, and *nāzārāte* chairmen G. Barudi, N. Kurbangaliev, and Sh. Alkin [Tormış, 1918, 25 April].

According to G. Kasimov, the Milli İdarä had the following cost allocation from October 1917 to 23 April 1918: Ufa madrasahs 'Galliyä' and 'Usmaniya' received 25,000 roubles; the Board of the Idel-Ural State, 110,500 roubles; the Kazan Department of the Diniä Nāzārāte and the Muxtariyat Magazine, 22,604 roubles; members of the *Millät Mäclese*, the Milli İdarä, and officials, 184,533

roubles. The total costs amounted to 418,696 roubles [Kasiymi, 1918, pp. 43, 51].

Religious autonomy was formally restored after the Milli İdarä was liquidated in April 1918, as the leaders of the Muslim Commissariat did not contest the powers of the Spiritual Assembly. The resolution to dissolve the Milli İdarä specified that the Spiritual Assembly was to be preserved [Khafizov, 1960, p. 33]. However, Mufti Galimdzhan Barudi and the qadis still believed themselves to be members of the Diniyä Nāzaratı. S. Maksudi had to leave Ufa for fear of being arrested.

On 7 July 1918, the Milli İdarä of three *nāzārātes* resumed its work after troops of the Committee of Members of the Constituent Assembly took control of Ufa on 5 July. The chairman of the Māğarif Nāzārāte, Nadzhib Kurbangaliev, became provisional chairman of the Milli İdarä. A congratulatory letter on liberation from Bolshevik power was signed by chairman of the Diniyä Nāzārāte, Galimdzhan Barudi, Riza qadi Fakhretdin, Salikhdzhan qadi Urmanov, Kashshaf qadi Tardzhemani, and Gabdulla qadi Suleymani [Ufa heberlere, 1918, 26 June (O.S.)]. The Address by the Committee of Members of the Constituent Assembly 'To the Turkic-Tatar people of the Russian State' dated [6 September] 1918 proclaims the Milli İdarä in Ufa a 'provisional national self-government authority' [Vestnik Komucha (Bulletin of Komuch), 1918, 8 September].

Milli İdarä members signed the Constitution of the Ufa Directorate—the Declaration on the Establishment of All-Russian Superior Power—in September 1918. It referred to the Milli İdarä as the National Administration of the Turko-Tatars of Inner Russia and Siberia. S.-G. Dzhanturyin (Mäliä Nāzārāte member), G. Iskhaki, and S. Mamliev (both members of 'ilçelär xäyäte') were among those mentioned as its representatives. Ibn. Akhtyamov was on the list of representatives of the Congress of Towns and Zemstvos of Siberia, the Urals, and the Volga region [Gessen, cr., 1991, pp. 191–193].

Shortly before the Bolsheviks re-occupied Ufa on 31 December 1918, the leaders

of the Milli İdarä departed for Petropavlovsk. However, Admiral Kolchak, whose administration was opposed to the national governments, gained power on 18 November 1918. Still, throughout 1919, the white regime was required to maintain contacts with representatives of Tatar regional communities in the Urals, Siberia and Kazakhstan, which were in fact subordinated to the Milli İdarä and held a number of religious and educational events [Nam, 1998]. In Petropavlovsk, Milli İdarä Chairman (former vice chairman) İbnyamin Akhtyamov, Vice Chairman qadi Salikhdzhan Urmanov, and Secretary İbragim Bikkulov, also a member of the Mäğärif Nüzäräte, formed the core of the Milli İdarä. The Diniyä Nüzäräte was represented by Mufti G. Barudi; Mäğärif, by members Z. Kadyri and G. Enikeev; Mäliä, by

Sh. Alkin and members S.-G. Dzhantyurin and G. Karimov [Central State Archive of historical and political documentation of the Republic of Tatarstan, Fund 36, File 106, Sheets 137 reverse–138]. In 1919, S. Maksudi made an unsuccessful attempt at securing the nation's status at the Paris Peace Conference. After the Kolchak regime was defeated in January 1920, the Milli İdarä ceased to exist entirely (the last known document is dated 13 December 1919). G. Barudi returned to Ufa. R. Fakhretdin, unlike the mufti and other qadis, refused to leave Ufa in late 1918, and the Diniä Nüzäräte continued to exist. The Diniä Nüzäräte in Ufa was the only permanently functioning nüzäräte of the Milli İdarä during the Civil War in spite of repressions by the Soviet government and Kolchak's White Guard regime.

§ 3. The Kazan Muslim Congresses and the Proclamation of 'Cultural National Autonomy'

Dilyara Usmanova

A number of Muslim congresses took place in Kazan in the summer of 1917. Their participants, the nature of the work undertaken, and the resolutions made give a clear insight into the changed nature of the national movement. The 2nd All-Russian Muslim Congress was held in Kazan from 21 July to 2 August 1917. Two more Muslim forums took place in Kazan at the same time: the Islamic Clergy Congress (17–21 July 1917, about 250 delegates), and the Muslim Soldiers' Congress (17–26 July 1917, about 200 delegates) [Vserossijskie s'ezdy' musul'man, 2002, pp. 642–644].

The Islamic Clergy Congress was focused on two issues: religious institutions and women's rights. Once again, as with the Moscow Congress, the most heated debate was on the question of women because traditionalist sections of the clergy joined together to oppose the idea of granting equal rights to women. Mufti Galimdzhan Barudi was able to arrive at a compromise and relieve tensions during ne-

gotiations with representatives from women's organizations.

The Military Congress was summoned on the initiative of the Provisional All-Russian Muslim Military Council. Issues addressed by the Congress included: ethnicity-based military detachments, elections to the Constituent Assembly, question regarding women and agriculture, etc. In terms of the woman question, the delegates spoke out in favour of equal civil and political rights for men and women. The Military Şura's leaders's political platform was close to that of the socialist party bloc. The Military Congress established the All-Russian Muslim Military Council Xärbı Şura, headed by I. Alkin, and elected 36 of its 67 members. It also resolved to publish the *Bezneñ Tavış* newspaper.

However, the 2nd All-Russian Muslim Congress, which, with about 200 delegates, seemed small compared to the Moscow Congress, was the most important of the three Kazan congresses. Among the most well-

known delegates to the Congress were Akhmet Tsalikov, Ibniyamin Akhtyamov, Gayaz Iskhaki, Sadri Maksudi, and Usman Tokumbetov. However, the Congress was not attended by representatives of Turkestan, the Caucasus, and the Crimea, with some minor exceptions. The representation of the Idel-Ural region was incomparable with the May Congress, indicative of the changing situation in the country. The poor representation is probably attributable to the general deterioration of the population's finances caused by galloping inflation and the ongoing world war. The second reason was a clear drop in social activity during the summer of 1917, when disappointment and apathy replaced the euphoria of the spring. There was a third important factor. The summer of 1917 was the time when the 'all-Muslim' movement split into regional and ethnic ones, political forces became more disparate, and many forms of 'egotism' came to the fore, especially those based on class, ethnicity and group. Under such conditions the 'traditional' leaders of the Tatar national movement had to reconsider their future and the part that they were to play. The Kazan congresses, which for concrete reasons, became more of a 'Tatar' congress than an 'all-Muslim' one, determined the future of the Tatar national movement. Though the traditional general Muslim terminology was preserved, decisions were made that affected only the Tatar people. The uncertainty over the question of 'choice' ended in July 1917, when those who favoured 'extraterritorial' autonomy, undoubtedly led by S. Maksudi, made a decisive move.

The most important issues discussed at the Muslim Congress in Kazan were as follows: elections to the Constituent Assembly, cultural national autonomy, and the woman question. The key resolution taken was to proclaim 'cultural national autonomy for the Turko-Tatars of Inner Russia and Siberia'. On 22 July 1917, a joint meeting of the three Muslim congresses—the All-Muslim, Military, and Religious Congresses—proclaimed 'cultural national autonomy for the Muslims of Inner Russia and Siberia.' The meeting was declared

to be historic, and the day was established as a holiday. Reports on the issue were presented by S. Maksudi, Gumer Teregulov, Hasan-Gata Gabashi, and Gabdulla Shinasi [Koriltay, 1917, No.7, 28 July; Yulduz, 1917; Iskhaki, 1931; Daulet, 2008].

S. Maksudi was not only a leader but also an accepted authority and theorist who played a founding role in the development of the idea of 'culturalnational autonomy' as applied to the Turko-Tatars' situation in Russia. S. Maksudi's speech relied on the following key principles. Firstly, he recognized the right of all peoples, including the 'Muslim' nation, to self-protection and development. Secondly, he demanded that governmental non-interference with peoples' internal affairs should be enshrined in law. On the theme of what makes up national life, the speaker highlighted the following key aspects: 'Having often thought hard on this subject, I have reached a conclusion, become convinced, even, that the following three things are crucial to the preservation of our nation: language, religion, and customs (traditions)'. According to the speaker, these three notions incorporated literature, books, schools, etc. Each nation, including Russian Muslims, should be protected against governmental interference in their national affairs. The right of independence should be not only recognized by the government but also enshrined in law [Tormış, 1917, No.632, 30 July].

Other speakers supported the report and elaborated on its message. The most emotional speech was made by Gumer Teregulov, who spoke of the value to civilization of every nation and ethnic group, no matter how small [Koriltay, 1917, No.7, 28 July].

Guided by the principle that 'any business needs government, and any government needs organization', S. Maksudi, in his further speeches, presented in detail the three-tiered structure of the autonomy: community—regional national governmental bodies—central governmental bodies (National Administration) and the National Assembly as the supreme legislative body. The speaker then elaborated on each body's structure and objectives [Tormış, 1917,

No. 633, 1 August]. S. Maksudi's fundamental principles formed the basis of the prospective project.

Elected by the Congress, and composed of 12 members headed by S. Maksudi, a select committee for 'developing the fundamental principles of the cultural national autonomy' was formed to develop draft legislation on national autonomy and take all organizational and preparatory measures to summon the first ever Turko-Tatar National Assembly (the *Millät Mäclese*). On 25 August the members of the board arrived in Ufa, where an official ceremony was held to celebrate the newly-proclaimed autonomy [Tormış, 1917, No.708, 30 August; No.709, 31 August; Irek, 1917, No.34, 4 September; Soldat Telyage, 1917, No.13, September 14; Daulet, 2008, etc.]. 'The Fundamental Principles of Cultural National Autonomy' were soon published, which stated the basic principles and structure of the prospective autonomy [Tormış, 1917, No. 726, 3 October; Mokhtariyat, 1918; Davletshin, 1974, pp. 338–352; Fakhрутdinov, 1992; Tatarstan, 1992, No. 5/6, pp. 90–100; Idel, 1995, No. 5/6; Politika, 1995, pp. 93–105; Daulet, 2008]. These 'Fundamental Principles' were further approved by

the National and Constituent Assemblies and thus enacted in law.

If we compare the Kazan Congresses, their nature and resolutions, with the Moscow Congress, we can infer the following. Firstly, the 'Kazan' period became a time of regionalization, ethnization, and general fragmentation of the all-Muslim political movement. That is to say, the focus shifted from general Muslim issues to national ones. As a result, autonomy was proclaimed for the Turko-Tatars and not for all Muslims in Russia. Secondly, the balance of power within the Tatar national movement between those who supported extraterritorial autonomy and believers in territorial autonomy remained for the time being with the former group. Their advantages included a relatively well-developed programme, the backing of the cream of the intelligentsia, clear public approval for the idea of cultural national autonomy (one example of which is the content of the 'notes' containing people's requests to the Moscow Congress), and, importantly, the pessimistic opinions on the possibility of Tatar territorial national unity expressed by a number of leaders of the Tatar national movement (Sadri Maksudi, Gayaz Iskhaki, and others).

§ 4. The National Assembly and National Autonomy Projects

Dilyara Usmanova

The *Millät Mäclese*, or the National Assembly of the Turko-Tatars of Inner Russia and Siberia, was only active for 52 days, from 22 November to 11 January 1918 [Yana milli yul, 1933, No. 1, 2, 3; 1937, No. 12; 1938, No. 1; Battal-Tajmas, 1947; Tagirov, 1987; Usmanova, 1995, pp. 29–35; Usmanova, 1996, pp. 61–72; Tagirov, 2000; Iskhakov, 2004; Daulet, 2008, etc.]. Delegates were elected to it between October and early November 1917. Around 115–120 delegates were elected in total—1 delegate per 50,000 people (1 delegate per 25,000 at the front). Delegates were generally elected in two stages, at meetings of social organizations, regional congresses, etc. Some of the Muslim population was, for a number of reasons, ex-

cluded from the elections, which brought about a non-representative Assembly, incapable of adequately reflecting the structure of the Turko-Tatar population of 'Inner Russia'. Some major social groups were represented as an abysmally small minority. The Assembly primarily consisted of 'mullahs, teachers, editors, newspaper employees, reserve officers, military servants, students, a couple of lawyers, and two or three women' [Battal-Tajmas, 1947, p. 47], that is, representatives of those social strata that had been the most actively involved in the national movement. It is attributable not only to the election procedure but to the nature of the Assembly. A common opinion in the Tatar community was that the *Millät Mäclese* was a non-partisan,

all-national authority to address only internal, national issues and not solve political, party- or class-related problems of the Turko-Tatar people. This largely determined the social and personal composition of the Assembly.

The number of delegates who worked regularly and resided in Ufa was approximately 80–85 [Tormış, 1917, No.756, 21 November; No.758, 23 November, No.761, 28 November]. During its work, the Assembly established a dedicated board to collect delegates' biographies and photos, which it expected to be later published as an album. Further events probably prevented the idea from being implemented. In any case, no information is available on any such album³¹.

The provisional board headed by S. Maksudi took all preparatory measures for calling the Assembly. Maksudi was also elected Chairman of the National Assembly in the first days of its work. Ibniyamin Akhtyamov and Ilyas Alkin became Vice Chairmen; Gabdrakhman Fakhretdinov and Galim Akchurin were deputies. After I. Alkin and G. Fakhretdinov departed from Ufa, Fatykh Mukhamedyarov and Khalil Bakeev, respectively, replaced them [Sarai, 1917, No. 6, 27 November; Tormış, 1917, No. 763, 8 December, No. 758, 23 November].

The founders of the National Assembly expected it to be another step towards enshrining the ideas of 'cultural national autonomy' in law and implementing them among the Muslims of the Volga-Ural region. However, it became clear even before the Assembly commenced its work that the disputes on the prospective national and governmental structure of the country and the future of the Tatar people remained unresolved. The establishment of two main factions within the Assembly, the Turkists (Türkçüler) and the Territorialists (Tuprakçılar), proved this [Davletshin, 1974, p. 154]. They were divided by the issue of the most appropriate form of Tatar self-determination.

The two leading factions were approximately equal in numerical terms, each containing 40–45 people. The social composition of both factions is interesting. According to T. Davletshin, the Turkist faction mostly consisted of elders, people with right-wing views, and clergymen. G. Battal believed that the Turkists were represented by progressive mullahs (a total of about 30 people), intelligentsia, and politically moderate youth [Battal-Tajmas, 1958–1969, p. 193]. Ibn. Akhtyamov and G. Iskhaki headed the faction. It is beyond doubt that S. Maksudi was one of the ideologues. When he was elected Chairman of the Assembly, he submitted an application to leave the faction in order to remain 'neutral' according to the parliamentary tradition [Tormış, 1917, No. 761, 28 November]. The Territorialist faction, which was established at the initiative and under the aegis of I. Alkin and Galimdzhan Ibragimov, primarily consisted of members of the military, students, young writers, teachers, etc. In political terms, it was dominated by left-wing socialists led by G. Ibragimov. According to contemporary accounts, the Turkist faction enjoyed greater influence—its members determined the course of work and the nature of many decisions made by the Assembly [Koyash, 1917, No. 1188, 5 December].

The literature maintains that representatives of the two factions were irreconcilable antagonists. However, a comparison of the policy statements of both factions [Tormış, 1917, No. 757, 22 November; No. 758, 23 November] suggests that they were united on some key issues. In fact, the second paragraph of the Turkist programme included all the fundamental territorialist provisions. It recognized the federative structure of the country and admitted that territorial autonomy in the form of a state was acceptable for the 'Turko-Tatars of Inner Russia' and that the Constituent Assembly of all peoples within the state would be a reasonable solution. At the same time, the Turkists confirmed their adherence to the principles of extraterritorial autonomy, advocating sustained efforts to implement it. The controversy was revealed when they were discussing

³¹ However, according to the Tormysh, photographs were taken of the delegates. See: [Tormysh, 1917, No. 776, 31 December; N.A.G., 1918].

the state project. To quote Ahmad Zaki Walidi, a large part of the Tatar intelligentsia was 'wagging their tails between territorial and cultural national autonomy', trying to combine different forms and principles of solving the national problem.

Some personal autonomists, who in principle were not opposed to territorial autonomy in the form of a Turko-Tatar state, were guided by a unique concept of the nation (developed by Otto Bauer) as a purely spiritual, cultural notion (S. Maksudi, G. Teregulov, etc.). There was also another motivation. Its most vivid representatives were Tatars from regions that were too distant from the centre (Kazan and Ufa) to be included in the proposed state. For them to implement cultural national autonomy was the only opportunity to preserve their national authenticity and to stay within the Turko-Tatar world. Therefore, many of them did not speak out against neither a federation nor Turko-Tatar autonomy in the form of the 'Idel-Ural State' but advocated preserving 'cultural national autonomy'. Evidence can be found in non-central (peripheral) Tatar periodicals ('Muxbir' newspaper by the Ural Milli Şura, 'Sarai' newspaper by the Tatar community of Astrakhan, etc.).

When delegates to the National Assembly had to deal again with the problem of national autonomy, they were unable to simply undo their own previous decisions. Most delegates to the Assembly had attended the congresses (I. Alkin, Khadi Atlasi, Ibn. Akhtyamov, Ibragim Bikkulov, G. Ibragimov, G. Iskhaki, Z. Kadyrov, S. Maksudi, and others). Moreover, they were active members of regional Milli Şuras and could not help but take into account the real changes in the life of Muslim communities in Russia. All the more so because the changes satisfied the Tatars' old and enduring aspiration for educational and religious independence. The structure of the established Milli Şuras was also representative of these spheres of the people's spiritual life, as they traditionally consisted of departments for religion, education, printed media, finance, and statistics. Since low-level authorities of the 'cultural national autonomy' had been locally

established since the summer of 1917, the Assembly had to put this somewhat chaotic process straight. Firstly, it had to approve the developed principles of extraterritorial autonomy. Secondly, it had to form the central authorities of the national autonomy.

Discussion of the 'Fundamental Principles of Cultural National Autonomy for the Turko-Tatars of Inner Russia and Siberia' began on 16 December. It turned into a fierce debate, which lasted several days. The 2nd All-Russian Congress had approved the initial version of the 'Fundamental Principles'. But to become law, the bill had to be approved, following the introduction of certain amendments, by the legislative authority, the role which the Millät Mäclese was expected to play. The 'Fundamental Principles' presented by Nazib Kurbangaleev consisted of four parts. The first part ('General Section') contained general provisions. Part Two dealt with central national authorities (the National Assembly and the National Administration), their structure and functions, while Part Three was focused on low-level, first instance (district, town, and regional) authorities. Part Four of the 'Fundamental Principles' was dedicated to possible amendments. Since the document, especially Part One, was to be considered and approved by the Constituent Assembly of Russia, it was executed in two languages: Russian and Tatar.

In his opening remarks, the speaker, who represented the Legislative Board, justified the project in terms of 'personalization' of the national question. N. Kurbangaliev maintained that 'national autonomy' was the only solution to national problems regardless of the state structure (whether Russia was a unitary republic or a federal one). Territorial autonomy alone was not enough to realize national interests in a country like the former Russian Empire since national minorities would always remain in Russia, even as a federative republic. Moreover, the Tatars had taken great efforts to win control over the national affairs even before the February Revolution. But at that time the situation was finally favourable. According to the speaker, to secure national rights in Russia,

the Constituent Assembly had to approve and include in the prospective constitution of the country the fundamental principles specified in the project³².

N. Kurbangaliev's speech was representative of the opinion of Tatar activists who realized how difficult it would be to solve national problems in a country like Russia and tried to combine different versions. The discussion immediately revealed that many delegates did not support them and believed it impossible to combine territorial and cultural national autonomy, which they viewed as mutually opposed to the extent of negating the latter. In their opinion, territorial autonomy was the universal solution that would eliminate the need for the previously proclaimed autonomy. Delegates G. Amirov, H. Zufarov, Sh. Akhmadiev, and others expressed similar ideas. The discussion often shifted to minor issues instead of 'studying the extent to which the "Fundamental Principles" meet the national interests' (Shajhulla Alkin).

One of the last meetings of the Millät Mäclese in January 1918 elected members of the central authorities—S. Maksudi became Chairman of the National Administration; Ibn. Akhtyamov was appointed his deputy. Members of the three ministries were elected at the same time: those of Education (Nazib Kurbangaleev), Finance (Shajhulla Alkin), and Religious Affairs (Galimdzhan Barudi).

Further events prevented the national structures formed by the Assembly from having a long-lived existence. The key national organizations were liquidated in the spring: Xärbī Şura was dissolved along with the 'Trans-Bulak Republic' on 26 March 1918; the Moscow branch of Milli Şura followed on 15 April. Finally, on 21 April, shortly before the date when the National Assembly was to commence work, the National Administration was liquidated. All the financial assets were

confiscated; some activists were subjected to arrest and reprisals.

Even after the Bolshevik repressions, a number of leaders of the national movement in opposition to the new government refused to give up and tried to continue their activities. When the Whites occupied Ufa in the summer of 1918, they had an opportunity to restore, though for a short time, the Milli İdarä and establish a number of newspapers. It did not last long, and the Soviet government forced the opposition national movement out to Siberia after it had established control over Ufa.

When in Siberia, during the Civil War, the leaders of the national movement tried to establish cooperation with anti-Bolshevik leaders (both Socialists and Rights) and to persuade them to recognize the principles of 'cultural national autonomy' [Cultural National Autonomy, 1998, pp. 166–205] but failed. The key figures in the provisional governments (regardless of their personal leaders, whether dominated by socialists or monarchists) would not recognize non-state national structures, which they viewed as a threat to Russian statehood. For purely political reasons, they did not outright reject representatives of national organizations, which did not prevent them from interpreting any effort by them as claims against and a threat to their statehood [Cultural National Autonomy, 1998, pp. 188–189]. In a manner of speaking, the high priority of 'state-wide' interests as well as the traditional phobia of social or national initiative dominated the minds of representatives of the Russian government or those who wanted to obtain such power. Thus, any social initiatives contrary to the country's official policy (in fact, to the idea of 'united and indivisible' Russia) were always rejected [Cultural National Autonomy, 1998, pp. 231–248]. Feeling pessimistic about any attempts at establishing cooperation with various forces within the anti-Bolshevist coalition and rejecting the Bolshevik strategy, many leaders of the national movement chose to emigrate. These included a large portion of this wing of the national movement: S. Maksudi, G. Iskhaki, G. Teregulov, G. Battal, Zakir Kadyri, Niyaz

³² The final version of 'The Basis for Cultural and National Autonomy,' approved by the National Assembly and published in the 'Mokhtariyat,' see: [Cultural and National Autonomy, 1998, pp. 94–110].

Maksudi, F. Tuktarov, and others. Having returned to their homeland, some broke with their political past and gave up their political and social activism for teaching, research, or other occupations, as did G. Shinasi, Ibr. Bikkulov, G. Sayfulmulyukov, the Akhtyamov brothers, I. Alkin, and others. Most of them suffered in the repressions of the 1930s.

A number of emigré leaders made a last abortive attempt to protect the ideas of 'cultural national autonomy'. They were Tatar delegates to the Versailles Peace Conference. Shortly before the First World War ended in Europe, the victorious allies decided to hold a peace conference in Paris to work out and sign peace treaties and decide on future rearrangement of the world. The Versailles Conference took place in 1919–1920. The National Assembly resolved to send a delegation of three members—F. Karimi, A. Tsalikov, and G. Iskhaki—to represent the interests of the Turko-Tatars in the Volga-Ural region when Russia's future was being discussed [Tormış, 1918, No. 748, 14 January]. F. Karimi and A. Tsalikov were unable to attend the conference due to circumstances. Instead, S. Maksudi (who emigrated following the liquidation of the national authorities in 1918), F. Tuktarov (carrying a mandate by the National Administration of the Turko-Tatars of Inner Russia and Siberia, signed by Vice Chairman Ibn. Akhtyamov), and G. Iskhaki (representing the National Assembly) attended. Having arrived in Paris in early 1920, the three of them held a number of meetings and discussions with senior officials of the French administration and Turkish representatives. At a meeting with French Prime Minister and Minister of Foreign Affairs Millerand, S. Maksudi specified the main requests of the Turko-Tatar delegation. Speaking on their relations with the Bolshevik government, S. Maksudi said that, in spite of persistent distrust, they (that is, representatives of the national movement) could agree to negotiate and recognize the new government provided that:

1. Russia's government was guided by democratic principles and summoned a constituent

assembly to represent the entire people, like other democratic states;

2. Freedom of religion, language, speech, press, and assembly was ensured;

3. The 'cultural national autonomy' proclaimed by the Turko-Tatar people was to be approved, and their national authorities recognized as having equal rights as governmental institutions to the effect that equality of all peoples in Russia was recognized [Iskhaki, 1979, p. 219].

However, the international situation did not favour a policy under which the victorious powers would protect the interests of ethnic minorities in prejudice of their relations with the Soviet Russia. There was no chance that the programme would be implemented. It was made even more hopeless by the Bolsheviks' victory in the Civil War, which had become clear by 1920 and legitimized the revolution, thus leading the world powers to change their strategy. As the Unitarist Bolsheviks became firmly established within the country, they grew less cooperative with 'bourgeois' leaders. The project of 'cultural national autonomy' thus failed.

The National Assembly was established and summoned to address issues related to the implementation of the 'cultural national autonomy'. However, the forum was to proclaim territorial autonomy for the Turko-Tatars in the form of the 'Ural-Volga State', that is, to lay the cornerstone of the reascent national sovereignty based on the territorial principle.

Since the Moscow and Kazan Congresses were initially meant to be of a general Muslim nature, the issue of the future of the Turko-Tatar territorial autonomy in Inner Russia remained open throughout 1917. The issue was referred to the Muslims of the Volga-Ural region, as resolved, but no public discussion on territorial autonomy took place until the National Assembly was summoned. This is why, according to G. Battal, it was a 'striking surprise' for such leaders of the Assembly as S. Maksudi and G. Iskhaki when G. Sharaf presented the project of the state [Battal-Tajmas, 1958–1969, p. 40]. It was apparently not the very idea of

Turko-Tatar territorial autonomy but the existence of a project developed by young activists that was surprising.

It would be wrong to say that the idea had not been expressed before. Two meetings of representatives of all Muslim organizations of the town of Kazan, held in early November (6 and 12 November) 1917, elaborated on the same idea [Koyash, 1917, 8 November; Mukharyamov, 1969, pp. 79–80]. The latter, held under the aegis of I. Alkin, adopted the resolution suggested by N. Khalfin that 'meetings (of the National Assembly) should address the issue of territorial autonomy for the Tatars' [Koyash, 1917, 8 November; Mukharyamov, 1969, pp. 79–80]. It is thus no coincidence that I. Alkin, who presided over the meeting, became one of the founders and leaders of the territorialist faction, which raised the question, and later the key driver behind the idea of the 'Idel-Ural State'.

Members of the Executive Committee of Muslim Warriors of the 12th Army advocated territorial autonomy even more expressly in a special order to the delegates (Z. Malikov and I. Kaderliev) to the National Assembly in Ufa, which read as follows: 'Even though the mission of the National Assembly is to implement the resolutions of the congresses that took place in July, taking into account the failure of the proclaimed autonomy to fully represent the rights and interests of the Muslims of Inner Russia and Siberia, the Assembly must immediately proclaim territorial autonomy for these Muslims. It must specify the borders of the federation' [Sugış safı, 1917, No.4, 29 November].

Thus, by the time the National Assembly commenced work, most of its delegates had already come to be inclined to give a positive answer to the question of a 'Tatar federation' and, what is more, to settle the issue at that forum, seemingly called for another purpose entirely. What tipped the balance in favour of this decision? What events in the country or, perhaps, within the national movements caused the supporters to take decisive measures and those who were hesitant and uncertain to reconcile?

Tatar periodicals suggest that it was triggered by the actions of other Muslim and non-Muslim peoples (most importantly, the Ukrainians) in Russia aimed at obtaining autonomy or even independence. When the Bolsheviks came to power, it had a significant impact on the activity of the leaders of the Tatar movement. Yet, it is beyond doubt that the resolution of the Orenburg Bashkir Council, which 'declared Bashkir autonomy in the Bashkir-populated territories of Orenburg, Ufa, Perm, and Samara regions and began to implement the decision' on 16 November was the most powerful factor that influenced the sentiment among Assembly deputies [Tormış, 1917, No. 755, 19 November]. The news landed like a bombshell on 18 November, when preliminary meetings of delegates of the Assembly were being held. It set the tone for the meetings, which resembled an agitated beehive. Here is a description of the sentiment in the city: 'At present, the delegates are concerned about the proclaimed Bashkir autonomy most of all, even more than they are excited about the opening of the Assembly. Delegates at meetings discuss the Bashkir autonomy above all and, through this lens, the federation issue' [Tormış, 1917, No. 756, 21 November].

On 29 November, when ongoing organizational matters had been discussed for several days, the Assembly turned to the most challenging issue of autonomy and the future of the 'federation'. Editions of *Yaña Vakyt* newspaper describing the actions of the Bashkir leaders had been distributed among the delegates, which complicated the situation. Delegates were reading and discussing newspaper articles, which increased the tension and aggravated the Turkists' antagonism and the Territorialists' hesitation—the latter 'did not support Bashkir autonomy zealously but merely wanted to avoid an open conflict with the Bashkirs' [Tormış, No. 762, 1 December]. At first, the discussion seemed bound to end in a deadlock. The parties suggested two different resolutions, neither of which was able to score a clear advantage.

Following a long and fierce debate, both drafts were rejected and combined into a compromise version. The resolution of ten paragraphs included the fundamental provisions of both factions. Two paragraphs were essentially new. Firstly, that 'the autonomy must not contain separate states' (Paragraph 3). Secondly, 'regional bodies of the National Administration shall have full control over the Muslims' cultural national affairs in regions within the autonomy's jurisdiction, and no organization can deprive them of such power' (Paragraph 8) [Tormış, 1917, No. 762, 1 December]. It was the Turkists who insisted on the last sentence. In fact, the implementation of the paragraph was to be a formal recognition of the legality of principles of 'cultural national autonomy' and the superiority of national authorities to other organizations in terms of the Muslim community's national and cultural and religious life. However, the latter provision was inconsistent both with the fundamental principles of the 'Bashkir autonomy' and with the nature of the new governmental authorities—Bolshevik Soviets, who wanted to monopolize power over the country, thus making the ideas impossible to implement.

Therefore, 29 November 1917 was the day when the National Assembly adopted the historic resolution to recognize the necessity of creating a territorial autonomy of the Turko-Tatars of Inner Russia and Siberia as the 'Idel-Ural State'. On that date, the question of Turko-Tatar territorial autonomy ceased to be abstract and acquired the form of discussions on specific projects and real implementation measures. A dedicated board of 16 members, that is, containing 8 representatives of each faction, was established for this purpose—the Board for Developing the Fundamental Principles of Territorial Autonomy. Territorialist Sagit Engalychev was appointed Chairman of the Board to be later replaced by Fatykh Mukhamedyarov); Turkist Gabdelbari Battal became Vice Chairman; Territorialist Fatykh Saifi-Kazanly was elected Secretary, and Turkist H. Zayni, his deputy [Sarai, 1917, No. 9, 15 December; Tormış, 1917, No. 765, 12

December; Tormış, 1917, No. 769, 20 December].

In turn, the Board was divided into three groups to work on different versions of the state. The first group consisted of members who advocated a state based on regional autonomy. G. Sharaf developed the project. Regional autonomists who wanted to expand the territory of the state formed the second group. Sh. Gayfi and Selim-Girey Dzhantyurin co-authored the project. The third group comprised national territorial autonomists. The project was entrusted to Sagit Engalychev, Gani Abyzov, and Salyakh Atnagulov. Thus, the principles and borders of the state were the main criteria.

Three additional sub-boards were established to prepare the necessary materials and address relevant issues in:

- law (or the state's legal framework);
- economy;

– geography and cartography [Tormış, 1917, No. 765, 12 December; No. 769, 20 December; Sarai, 1917, No. 9, 15 December].

Preparation and discussions on five different options consistent with the specified principles (regional or national territorial autonomy, ratio of ethnic groups in the state, etc.) yielded five projects of the prospective state [Tormış, No. 780, 7 January]. By comparing the contents of the five projects, we can trace the evolution of the very idea of national sovereignty. More than anything, arguments presented by supporters of various projects in discussions are indicative of the extent (rather low) to which delegates to the Assembly understood the essence of the national idea.

The first project, titled 'Bashkir Autonomy' (or 'Malaya Bashkiriya') was based on the principle of national territorial autonomy. The Board rejected it immediately as it included a small part of the 'Muslim' (and mostly Bashkir) population of the region and contained no towns except for Zlatoust. The high percentage of the Muslims (75%) in the prospective state was mentioned as an advantage.

The second project, based on the same principles, had somewhat wider borders, which led to a low Turko-Tatar population percentage of

57–58%. The board rejected this project, too, as it excluded Kazan guberniya and Kazan, which was the economic, political, historical, and cultural centre of the Tatar people. The press reported that project won very little support among delegates to the Assembly. However, the Bashkir delegates insisted on this version, of which the resolution of the All-Bashkir Congress is evidence [Tormış, No. 765, 12 December, No. 769, 20 December].

Galimdzhan Sharaf authored Projects 3 and 4. They were based on the principles of regional autonomy. The difference between them was confined to whether the state included the land inhabited predominantly by the Chuvash and Cheremis people. The third version was broader but had a reduced percentage of the Turko-Tatar population of 43–44%, while the fourth (excluding the named territory) increased the percentage of the Muslims to 51% [Tormış, 1918, No. 780, 7 January].

The state became even larger in the fifth version, which included Samara and Astrakhan guberniyas, bringing about a reduction in the percentage of the Turko-Tatars (29%).

Intra-faction discussions of the five projects revealed that the Turkists were inclined to accept the fifth, while the Territorialists preferred one of the proposals from G. Sharaf [Tormış, 1917, No. 767, 17 December]. The board eventually rejected the last project in spite of its favour with the Turkists. The main argument against it was the fact that to accept that version meant reducing the Turko-Tatar population to a small minority: 29% of the Turko-Tatars as compared to 56% of the Russians and 8–9% of the Chuvash people [Tormış, 1918, No. 780, 7 January]. G. Iskhaki, Sh. Alkin, Daud Enaliev, Ibragim Bikkulov, H. Zayni, and other Turkists advocated the minority project, primarily citing economic reasons. However, the suggestion was rejected by a majority of votes in spite of their great efforts [Tormış, 1918, No. 783, 12 January, No. 784, 14 January].

Following a month of hard work, having discussed each suggestion and considered all benefits and disadvantages of each project, the Board decided in favour of a project by G. Sharaf,

which was to be discussed at the general meeting of delegates to the National Assembly on 3 January 1918. G. Sharaf and G. Amirov made statements on the matter (the latter spoke on the economic aspects of the issue).

In his report G. Sharaf mentioned all projects considered by the Board, highlighting their advantages and obvious flaws, and provided detailed statistics for the prospective state [Tormış, 1918, No. 780, 7 January; DerNeue-Orient]. According to the author, the state was to include the entire Kazan and Ufa guberniyas and separate districts of Orenburg, Perm, Samara, Simbirsk, and Vyatka guberniyas, which were predominantly populated by the Turko-Tatars. The report mentioned that the decision on whether certain volosts should be included in the state was to be made following a population survey in the districts. The Chuvash and Cheremis people were also expected to enter the state because they were 'incapable of establishing autonomy of their own'. Smaller states could appear as the cultural level of these small ethnic groups would rise. The board opted for a neutral name—'Idel-Ural region'—that contained no ethnic name in order to avoid possible complications.

So, what were the principles and fundamental provisions of this project of the prospective 'Idel-Ural State'? They were partly formulated during the preparation and discussion of the projects and laid down in final decisions, taken shortly before the Assembly ceased to work. This included the Resolution by the Congress of 6–7 January on Establishing the 'Idel-Ural region' and its Relations with other regions within the Republic of Russia, the Resolution of the Principles and Rights of Language and Religion of the Peoples within the 'Idel-Ural region', and the Resolution on the Establishment of the Board for the Implementation of Territorial Autonomy, Its Functions and Rights [Tormış, 1918, No. 781, 9 January].

All these resolutions contained the following provisions concerning the prospective state:

– Being based on the principle of regional autonomy, 'Idel-Ural' is a constituent republic with the federative republic of Russia;

– The superior authority of the republic (region) is the parliament to be elected through universal, direct, secret, and proportional voting, which shall be responsible for the region's internal affairs except for those listed below. It is the only authority which is entitled to adopt laws on the domestic life of the region's peoples;

– General affairs of the entire country, such as the following: post, telegraph, railway and water communications, the common system of measures of weight and other units, the monetary system, the development of civil, criminal, commercial, and exchange laws, federal taxes, foreign policy, customs, and similar issues shall be referred to the all-Russian parliament. Laws adopted by the all-Russian parliament shall prevail over local enactments in the matters above.

– All ethnic groups, languages, and religions have completely equal rights within the republic (region);

– To adopt laws on national issues and address such issues is the responsibility of the central authorities of the nations, and the regional parliament cannot interfere with such matters [Tormış, 1918, No. 781, 9 January].

Thus, all the state's/region's/republic's governmental authorities fell into two categories—'all-national' and 'national'. The former group included organizations responsible for the affairs of the state's entire population, that is, those of non-national nature: zemstvos, city dumas, etc., including the republic's parliament. If an ethnic group within such area constituted a specified percentage (25%), the ethnic language was to be recognized as official. The second group included organizations established according to the national principle. They were responsible for all cultural national issues. For convenience, the state was to be divided into ethnic regions. This applied to all ethnic groups within the area. This abolished the idea of a state, official nation. All ethnic groups were to have completely equal rights [Sarai, 1918, No. 15, 5 January].

Characteristically, all national authorities responsible for national issues would be ex-

traterritorial, that is, they would go beyond the limits of the state or republic, covering the entire territory populated by this or that nation (in this case, the Turko-Tatars) regardless of the location of the central authority [Tormış, 1918, No. 781, 9 January]. Thus, historians who maintained that the National Administration elected by the Assembly was the government of the prospective 'Ural-Volga State', while the 'cultural national autonomy' was 'confined to a certain territory', were wrong [Mukharyamov, 1969, p. 81; Khasanov, 1977a, p. 127]. On the contrary, the 'cultural national autonomy' and the scope of national authorities, all governed by the National Administration, was broader than the territory of the prospective state. The Assembly's decisions contained a special paragraph which stipulated that the scope of such national organizations was not to be confined to the territory of the autonomy where its central authorities were situated but had to cover all Turko-Tatar expatriate centres and communities [Tormış, 1918, No. 781, 9 January]. At the same time, the national authorities would have public law, that is, they would be public and not governmental organizations. These and other, more specific, problems were determined under the second resolution of the Assembly, adopted on 7 January 1918. The third resolution regulated the structure and activities of the board for the implementation of 'territorial autonomy'.

The project of the 'Idel-Ural State' by G. Sharaf and the relevant resolutions by the National Assembly were, in fact, a compromise, an attempt—a successful one—at combining territorial autonomy with the principles of personal autonomy, most importantly, by proclaiming governmental non-interference with the people's national issues by dividing the scope of governmental and public, national authorities. G. Sharaf's active participation in the work of the Board for the Development of the Fundamental Principles of Cultural National Autonomy, headed by S. Maksudi, as its secretary undoubtedly contributed to the project. This is why his variant of 'territorial autonomy' combined two different types of autonomy

(territorial and extraterritorial), thus ensuring opportunities both for territorialists and for personal national autonomists.

By approving the 'Fundamental Principles of Cultural National Autonomy', Delegates to the National Assembly enacted them as a law. They consequently elected members of central national authorities. However, for a number of reasons, they were unable and did not want to restrict themselves to cultural national autonomy alone and decided, partly

under external pressure, in favour of a Tatar territorial autonomy. Having discussed different options, they resolved to establish the 'Idel-Ural region', thus clearly supporting the idea of a 'territorial autonomy' based on the principle of regional autonomy with certain features of 'cultural national' or 'personal' autonomy. These efforts by the leaders of the Tatar national movement suggest that they wanted to turn Russia from 'a national state' to a true 'state of nations'.

§ 5. Attempts at Proclaiming the 'Idel-Ural State' and National Projects in the Spring of 1918

Dilyara Usmanova

In the spring of 1918, after the first session of the National Assembly closed on 11 January, Kazan, where the 2nd All-Russian Muslim Congress began its work in early 1918 (8.01.–3.03.1918) became the centre of events again. The spring period in the development of the national movement was also marked by the rise of the so-called pro-Soviet wing. Even though the Assembly included a group of Tatar socialists, led by Galimdzhan Ibragimov, Socialists in general were not crucial to the Muslim congresses of 1917. Moreover, they were a marginal force. The population began to become increasingly radical in the spring of 1918; the socialist movement gained momentum. It was partly caused by the establishment of Soviet government across the country ('the triumphant march of the Soviet government'), which caused the percentage of its supporters in the traditional inert population to multiply. On the other hand, all of Russian society—the Muslims were no exception in this respect—was captivated by the idea of social equality and socialist slogans.

After the decision-making centre was transferred from Ufa to Kazan, where members of the Board of the Idel-Ural State had moved, new factors and forces began to determine the future of the idea of national autonomy. The month following the closing of the Assembly

was a period of 'peaceful' confrontation and attempts at 'co-existence' between the Bolshevik-led Kazan Council and the leaders of the national movement. They were able to peacefully co-exist for a little longer than a month (from the middle of January to the end of February N.S.) until a preventative blow by one of the parties caused it to acquire the form of military struggle known as the 'Transbolaq Republic', which had a tragic outcome.

The dominant political forces of that period were the following: (1) the Board (BIUS) elected by the National Assembly for the implementation of the 'Ural-Volga State', (2) the management of the Military Şura and the Military Congress, (3) the Kazan Soviet of Workers' and Soldiers' Deputies, which initiated the calling of the regional Soviet Congress, (4) the Muslim Commissariat, established under the Kazan Council on 18–21 February after the radical part of the Left faction left the Military Congress.

The BIUS was to work in Kazan, where most of its members had arrived by the end of January. The most important task faced by the Board was to hold meetings and negotiations with representatives of different political and national forces in the region to reach a compromise concerning the prospective state. Taking into account the changes in the country,

the Board delegated three of its members—I. Alkin, G. Sharaf, and S. Atnagulov—to the Regional Congress of Soviets (21–22.02.1918), who were to form a united faction of Muslim delegates at the Congress.

The issue of the state was central to the 2nd All-Russian Muslim Congress, though it was officially number 5 or 6 on the agenda. It was generally understood, however, that other issues, including that of the future of national military detachments, directly depended on the implementation of the autonomy. Already at this meeting, the prospective state was declared to be an autonomous part of the federative republic of Russia. The authorities were to be established by state's constituent assembly through universal, direct, equal, secret, and proportional voting. Before the constituent assembly was called and the state proclaimed, a provisional government consisting of representatives of democratic organizations, delegated on the same proportional basis, was to have the power. Thus, the Muslim Military Congress denied the total power of the Bolsheviks, maintaining that all democratic (socialist) parties, both all-Russian and national, had to be represented in regional authorities. This alone, as well as the fact that the Military Congress admitted the necessity of implementing the decisions of the National Assembly, made its conflict-free cooperation with the Bolsheviks, who were reluctant to share power, questionable. It should be noted that the position of the leaders of the Chuvash national movement, which was rather weak and inert at that time, remained vague—they were hesitant about their preferences and decisions. Delegates to the Military Congress included stalwart advocates for the Bashkir autonomy model (Imakov, etc.) who believed the 'Idel-Ural State' to be a vain dream, an illusion of Tatar bourgeois nationalists. Finally, the Kazan Bolsheviks suggested the idea of a 'Kazan Soviet Socialist Republic of Peasants and Workers' as an alternative to the 'Ural-Volga State'. They were going to proclaim the alternative project at the Regional Congress of Soviets, which was to take place on 21–22 February 1918. According

to the official line, the Regional Congress was summoned to discuss the 'forms of settling the national issue as applied to the peoples of the Middle Volga region'. It was initially planned to be opened on 1 February. Approximately 700–800 delegates from 11 governorates were expected to arrive. However, poor preparation resulted in a long delay and only 144 delegates, numerically dominated by representatives of Bolshevik councils. According to Tatar periodicals, the organizers of the Congress, having invited all kinds of public organizations, even the smallest and least significant ones, did their best to limit the representation of Islamic national associations. It was no surprise that the Regional Congress rejected all resolutions by the National Assembly, including the project of the 'Ural-Volga State', which it declared to be of 'bourgeois' nature, by a majority of votes. At the same time, the Regional Congress suggested no alternatives as the organizers had not developed a single project. Having rejected all suggestions and projects by Tatar public organizations and forced the Tatar Bolsheviks to leave the Military Congress, the Regional Congress concluded its work with a non-committal empty resolution. All these actions by the Kazan Bolsheviks raised persistent suspicion among the Muslim participants that the Regional Congress was initially meant to be smoke and mirrors to gauge the public sentiment and 'prevent the state project approved by the National Assembly from being proclaimed' [Koyash, 1918, No. 1216, 26 February].

On 23 February 1918, Muslim delegates to the Regional Congress in opposition to the Kazan Bolsheviks published a resolution of their own, which consisted of the following nine paragraphs:

'1. Every nation and every ethnic group is entitled to proclaim cultural national and territorial autonomy through its proletariat. The only restriction is that they must not encroach on the rights of any ethnic minority within the territory of the state they establish. If the minority wants to establish an autonomy of their own, such opportunities must be provided to it.

2. Poor workers and peasants must have power over the region (republic and autonomy), as well as uyezds and volosts.

3. Re-election to the government must be arranged in adherence to the national-proportional principle.

4. The Idel-Ural region must be created.

5. The Ural-Volga region should be established in a way to ensure the largest Muslim population possible, while non-Muslim peoples should remain in adjacent autonomies where possible.

6. Full freedom and autonomy shall be granted for all languages and religions in the Idel-Ural region.

7. To ensure the fullest cultural and national independence possible, peoples can unite in a cultural national autonomy within the autonomous region.

8. Re-elections to the Soviet of Workers', Soldiers', and Peasants' Deputies, as well as to the Executive Committee and other authorities, must be carried out on a national-proportional basis.

9. Freedom, even to the extent of territorial autonomy, must be provided for ethnic minorities [Koyash, 1918, No. 1216, 26 February].

A brief analysis of the resolution suggests that, on the one hand, it contains modern terms ('proletariat', interests of ethnic minorities, national-proportional principle, etc.). On the other had, it indicates a persistent adherence to the idea of the 'Ural-Volga State' and cultural national autonomy, that is, to decisions of the National Assembly. At the same time, on 23 February advocates for national autonomy in the form of the state were intending to hold their official ceremonies no earlier than the end of April 1918.

The situation grew more difficult over several days at the end of February, and the events forced the Tatar leaders (BIUS members, leaders of the Military Şura, personally I. Alkin, and others) to take active measures: the ceremonial was developed urgently, and the proclamation was scheduled for 2 o'clock on 1 March in Theatre Square (today's Svobody Square, Kazan). The universal was to be read

out to representatives of public organizations, after which the cavalry and infantry national guard was to march across the square. Prayers from the Quran were to be read out in a dedicated place. The gathering was then expected to come to the Tower of Süyümbike, where the organizers intended to put up a crescent if they had enough time for preparation. Participants in the event were to go home after that. That was the plan for the ceremony. As we can now see, all events were symbolic and did not look like a takeover attempt. In addition, there was not a single so-called bourgeois or nationalist organization on the list of participants (like such religious organizations as Milli Şura and others): the Board of the Idel-Ural State, members of the Islamic faction of the Regional Congress of Soviets, the Muslim Socialist Committee, representatives of the Committee of Working Muslim Women, and representatives of the Central Teachers' Union. It is clear that the above organizations shared the socialistic platform. Moreover, Tatar periodicals ensured a large-scale coverage of the preparation for these events.

However, members of the Bolshevik Kazan Council were not satisfied with the expected course of events, and 'peaceful' resistance entered the active stage: preventive arrests of the leaders of the Islamic Military Council, brothers Ilyas and Dzhigangin Alkin, Usman Tokumbetov, and Yusuf Muzaffarov, took place on the night of 28 February 1918. The arrests were initiated by the leaders of the Kazan Council K. Grasis and Ya. Sheynkman in cooperation with Head of Islamic Commissariat Mirsaid Sultan-Galiev. This was the beginning of the so-called Trans-Bulak Republic³³.

³³ The 'Trans-Bulak Republic' ('Zabulachka') is a term used to describe the events of the spring of 1918, when the rivalry and conflict between the Bolshevik government (represented by the Kazan Soviet of Workers, Soldiers, and Peasant Deputies) and the Tatar national movement (Collegiate of the Volga-Ural State et al.) assumed the character of open confrontation. The central question, around which the events were unfolded, was the project of national territorial autonomy [Valeyev, 2005, pp. 399–400].

The arrest of famous politicians shortly before the ceremony escalated the situation in the city, especially among the Tatar population. All shops were closed. Peoples gathered in streets and squares. Numerous rallies took place across the city. Rumors were rife and the increasing anxiety posed a threat of mass disturbances. The most recent memories by M. Sultan-Galiev suggest that the Kazan Bolsheviks, supported by a small group of Tatar communists, ventured to trigger the negative scenario by provoking an open conflict—they were not even afraid of bloody confrontations [Sultanbekov, 1991, pp. 113–115]. However, the Bolsheviks did not have enough power and had to compromise (only K. Grasis and Ya. Sheynkman were opposed to the agreement) by releasing the arrested members of the Military Şura. The latter were released on bail of M. Sultan-Galiev on the condition that they had to sign the following obligation: to refrain from preventive proclamation of 'Ural-Volga States' or any active measures against the Soviet government and to dissolve Islamic military organizations (Xärbi Şura and its departments) [Mukharyamov, 1969, pp. 100–101]. This decision naturally caused dissatisfaction among the Tatar population and participants in the Military Congress. The latter finished its work on 3 March, having expressed support of the former leaders of Xärbi Şura and the idea of the 'Ural-Volga State', elected the 'Muslim People's Commissariat for State Implementation' (consisting of 15 members, headed by I. Atnagulov), and resolved that the 'İdel-Ural Olkese' newspaper was to be published to replace *Bezneñ Tavış*, which had been banned by the Bolsheviks. However, this was not the end of the confrontation: in early March the Tatar part of the city (the Tatar slobodas in the 'trans-Bulak' area) was encircled by troops and declared an anti-Soviet 'Trans-Bulak Republic' on the initiative of the Bolsheviks. The tragic resolution came a month later (27–28 March) when sailor detachments of the Baltic Fleet and other Red Army troops, having arrived in the city, entered the so-called 'Trans-Bulak Republic' and, meeting no armed resistance, established

full control over it. Soon all national authorities (Xärbi Şura/Military Council in Kazan on 26 March, the National Administration in Ufa, etc.) were banned, and a number of national politicians were arrested or had to flee from the city. The Bolsheviks were able to establish full control over Kazan and strike a heavy blow against the Tatar national movement.

Apart from using military force and repression, the Bolsheviks resorted to their traditional technique—demagogic promises, mostly borrowed from their opponents. That is, the Bolsheviks used the carrot and stick method. The army (sailors) and the All-Russian Extraordinary Commission acted as the stick; promises and insignificant concessions were the carrot. On 7 March, in the thick of events, the Kazan Council adopted the following resolution: 'The Council shall take urgent measures to organize the Ural-Volga Republic, which republic shall be organized as governed by the Council of People's Commissars on the proportional-national class basis. The Presidium must be instructed to cooperate with the Ufa and Orenburg Councils to urgently proclaim the Ural-Volga republic' [Mukharyamov, 1969, p. 96]. As we can see from the text of the resolution, it was fully borrowed from the bourgeois Muslim Military Congress. The Bolsheviks were ready to promise anything, even an Ural-Volga Republic, to buy over the masses. Moreover, the same meeting declared that 'the Council, having considered the requests of all national peoples and the local conditions, has predetermined a re-arrangement on the proportional-national class basis,' which had not been done [Mukharyamov, 1969, p. 102].

A telegram from Moscow, signed by M. Vakhitov, was a second 'carrot'. It said that the Tower of Süyümbike was to be transferred to the working Tatars of Kazan. The telegram was read out in public and consequently published in newspapers [Tagirov, 1987, p. 252].

The final carrot was a decree on the establishment of the Tatar-Bashkir Republic (the decree was signed on 22 March, sent to Kazan, Ufa, and Orenburg on 23 March, and published in newspapers on 24 March). What is the

principal difference between the Tatar-Bashkir Republic Decree and the Ural-Volga State project? None except for the name. The borders of the prospective republic, according to the decree, were nearly the same as the state's frontiers in G. Sharaf's project, which had been approved by the National Assembly, the Muslim Military Congress, and the Islamic faction of the Regional Congress. The only novel point was that the implementation of the project was entrusted to the Commissariat of Muslim Affairs in Central Russia, that is, to the Tatar Bolsheviks. It was crucial for the Bolsheviks to hold the initiative on this. History provided no opportunity to check how sincere the promises given to suppress the national movement under the banner of anti-Trans-Bulak struggle were: the Civil War broke out soon, and all projects of the kind were shelved.

It should be noted that the leaders of Kazan Bolsheviks and Tatar communists demonstrated extreme flexibility and even unscrupulousness during the events of February–March 1918 (what were the morals behind the behaviour of M. Sultan-Galiev, who not only advocated arresting the leaders of the Military Congress but bailed them out, or the borrowing of projects, the idea to put up a crescent of the Tower of Süyümbike, and more?). Most importantly, they were immensely, sometimes overwhelmingly eager to go to extremes, even spill blood, to achieve their purpose, that is, to establish total control over events. This is to say, the Bolsheviks outdid their opponents in their aspiration to win and keep power.

To sum up the development of the idea of Tatar national sovereignty in 1917–1918, the following can be said. Initially, the leaders of the Tatar national movement wanted to stay within the framework of the united Muslim movement and acted on behalf of the united Muslim nation. This partly resulted from the political tradition dating back to the late imperial period, which was revealed in the policy of the Islamic faction of the State Duma. As another factor, some of them were sincerely mistaken, believing the Muslims to be a single nation with common national interests.

Resolutions by numerous regional congresses and meetings, the work of the Moscow Congress, and, most importantly, the activism of the leaders of peripheral Muslims suggested that the situation was, in fact, much more complicated. Even though the basic vocabulary remained unchanged, the Tatar national movement made a significant shift from the all-Russian level to that of regions in the summer of 1917. Activists advocating 'cultural national autonomy' came into play. Even though the focus was to shift to territorial autonomy, the Tatars, scattered across the empire in dispersed settlements as they were and having a well-developed network of cultural-religious institutions, remained adherent to the principles of personal (extraterritorial) autonomy. At the same time, at the turn of 1917–1918, the situation in the country in general and in the Volga-Ural Region increasingly favoured local national territorial autonomies. The leaders of the Tatar national movement had to cover a long way from the Moscow Congress to the National Assembly in Ufa before a wide Tatar public accepted and supported the idea of territorial autonomy. It took Tatar Uçagı, headed by Galimdzhan Sharaf, over six months of hard work to develop the initially abstract idea of Tatar territorial autonomy into the specific 'Idel-Ural State'. The first half of 1918 was marked by failed attempts at implementing the project. They were generally fruitless. The notion of territorial autonomy was borrowed, with adjustments, by the Bolsheviks, who were able to achieve a convincing victory in their confrontation with liberals and socialists representing ethnic minorities and win control over the situation by demonstrating greater will and perseverance (we will not go into the moral and ethical details of the Bolshevik policy, which apparently was based on the principles that 'success is never blamed' and 'history is written by the victors'). As a result, the project of the Tatar-Bashkir Republic was presented as an alternative to national suggestions in the spring of 1918. The active stage of the Civil War began soon, opening a new chapter in the story.

Section II

Stages in the Formation of the Tatar Autonomous Soviet Socialist Republic

CHAPTER 1

The Establishment of the Tatar Autonomous Soviet Socialist Republic and the Tatar Community of the Soviet Russia in the Context of the Socio-Political Transformations of the 1920–1930s

§ 1. Projects of National State-Building and the Establishment of the Tatar Autonomous Soviet Socialist Republic

Ramzi Valeev

Following the February Revolution of 1917 in the Russian Empire, seismic socio-political changes took place that affected all strata of Russian society. The Tatar national democratic movement had formed by November 1917. A network of ethnic organisations covered nearly the entire territory populated by the Tatar people. The Milli Şura (National Council) and the Xärbi Şura (Military Council) were the hubs of the Turko-Tatar movement. The 1st and 2nd All-Russian Muslim Congresses and the 1st All-Russian Muslim Military Congress developed the basic principles of the Cultural-National Autonomy of the Turko-Tatars in Inner Russia and Siberia. Many leaders of the national movement viewed the acquisition of cultural-national autonomy by the Turko-Tatars as the first stage towards national sovereignty. In order to implement the cultural-national autonomy of the Turko-Tatars, the Muslim Congresses elected Millät Mäclese (the National Assembly) and the supreme executive body of the cultural-national autonomy of the Turko-Tatars, Milli İdarä (the National Administration of the Turko-Tatars of Inner Russia and Siberia), headed by noted statesman, Constitutional Democrat (Cadet), Sadri Maksudi.

On 20th November 1917, Millät Mäclese (the parliament) commenced its work. Approximately 110 deputies had been elected to the parliament, but some of them were unable to participate in its work. According to different estimates, between 67 and 96 deputies representing the intelligentsia, clergy, nobil-

ity, and petite bourgeoisie participated in it. The parliament first met on 22nd November to elect the Presidium, headed by S. Maksudi and his assistants, Ibniamin Ahtyamov and Ilias Alkin. The Millät Mäclese established the following commissions: the Commission for Legislative Proposals, the Credentials Commission, the Educational, Financial, and Religious Commissions. It was operating in a highly complex socio-political situation during the so-called triumphant march of the Soviet government.

The Millät Mäclese met to address various issues, including the establishment of a Turkic-Tatar state. It was put on the parliament's agenda in November–December 1917. The Turko-Tatar autonomy project initially came in three versions. The discussion gave rise to several splinter groups within the parliament. The bitterest dispute was between the advocates of a cultural-national autonomy and proponents of a territorial-national one. The former group, headed by parliamentary speaker Sadri Maksudi, also included Zakir Kadyri, Ahmethadi Maksudi, Gumer Teregulov, and others (totalling around 50 deputies). The latter was led by Maksudi's assistant Iliast Alkin (its members were Salyakh Atnagulov, Khadi Atlasi, Gabdelbari Battal, Salimgerej Dzhantururin, Galimdzhan Sharaf, and others, making a total of 37 deputies). The faction headed by S. Maksudi, named Türkçüler (Turkists), pressed upon parliamentary delegates the idea of cultural-national autonomy during the discussion of issues of Tatar national sovereignty.

They believed that the cultural backwardness of most Turko-Tatar peoples was a serious hindrance to their national-territorial autonomy. Their suggestion was therefore to confine the first stage of national state-building to the establishment of a Turko-Tatar national autonomy with broad powers. The proposed programme of cultural self-determination (incidentally, borrowed from the Cadets) seemed to safeguard the Turko-Tatars against revolutionary disturbance and favor peaceful acquisition of national sovereignty. They believed that their first-stage objective was to improve the cultural and educational level of the Turko-Tatar peoples, which would be followed by the creation of a Turko-Tatar territorial autonomy. The Turkists did not view the Tatar people as a bourgeois nation, and believed that the Tatar community was as yet unable to provide the necessary conditions for national sovereignty.

In contrast, I. Alkin's adherents, who to some extent promoted 'socialist ideas', argued that a Turko-Tatar territorial-national autonomy ought to be formed. The movement was named *Tufraqçılar* (Territorialists). It should be noted that some representatives of this faction had been studying the issue back during the First World War. For instance, members of the student group *Tatar Uçağı* (Tatar Hearth), which was active in Petrograd in 1915–1916, I. Alkin, G. Sharaf, and others met to address issues of national state-building for Muslim peoples in Inner Russia, Siberia, and the Caucasus, suggesting territorial-national autonomy as a form of Tatar sovereignty. They were already opposed to trends of Pan-Turkism in the national movement back then. I. Alkin's adherents were able to tip the scales in their favour through fierce debates at meetings of the *Millät Mäclese*—the parliament resolved to establish territorial autonomy in the form of *İdel-Ural ştatı* (the Idel-Volga State). The socio-political situation in Russia was favorable for them: when the Bolsheviks came to power, Cadets were outlawed and their organisations banned, to which the 'Bolshevik Declaration' on the right of nations to self-

determination to the extent of establishing a sovereign state.

The *Millät Mäclese* also addressed other burning issues of national state-building, in particular projects specifying the frontiers of the state, the composition and functions of the board for state implementation, state structure and government. The parliament adopted the project with minor amendments and resolved to establish the 'Ural-Volga State'.

In January 1918, the *Millät Mäclese* established the Board for the Implementation of the Ural-Volga State with the following membership: Ilias Alkin, Salyah Atnagulov, Gaziz Gubaydullin, Fatih Saifi, Nadzhib Halfin, Galimdzhän Sharaf, and others. The board's responsibility was to establish the state's borders, develop its draft constitution, call the founding conference for the Ural-Volga State, establish a temporary government, etc. When discussing government authorities in the prospective state, several left-wing members of the board suggested that soviets with national-proportional representation should be introduced as the basic body. At the board's first meeting following its transfer to Kazan, the Presidium was formed; I. Alkin was elected its chairman, and G. Sharaf—his deputy. G. Sharaf presented a report on the structure of power at the Presidium's meeting. Contrary to the *Millät Mäclese's* decision, he suggested that Soviet-type governmental bodies should be established, that is, each Soviet should be elected on a proportional basis in accordance with the population's ethnic composition. G. Sharaf's suggestion was accepted by a majority of votes following a long debate. G. Gubaydullin and N. Halfin ceased to be members of the board as they disagreed with such statement. Thus, almost the entire board issued the suggestion that the state should rely on the soviet (council) system, which incurred displeasure among right-wing deputies of *Millät Mäclese*—they criticized G. Sharaf's position in Tatar newspapers. He was accused of violating the prerogatives of the nationally elected *majilis* and rebuked in Tatar printed media in Ufa and Kazan, a reprimand which was signed by Vice Chairman I. Ahtyamov.

The board also specified the borders of the prospective state formation and its basic administrative units. The Ural-Volga State was to include the entire territories of Kazan and Ufa Governorates and the adjacent areas in Vyatka, Orenburg, Perm, Samara, and Simbirsk Governorates of the former Russian Empire with a predominantly Turko-Tatar population. The territory was mostly inhabited by non-Russian peoples: Bashkirs, Maris, Mordvin, Tatars, Udmurts, and Chuvashes. The board eventually arrived at a consensus between the Tatars and the Bashkirs. The Chuvash, Mari, and other peoples demonstrated willingness to enter the Ural-Volga State voluntarily. During the 2nd All-Russian Military Muslim Congress (January–March 1918), representatives of these peoples called the Tatars their elder brother, to whom they expressed appreciation for not forgetting them. However, the ill-judged actions of some Tatar and Bashkir politicians broke the fragile consensus between the Bashkirs and the Tatars. I. Alkin's harsh criticism of the Bashkir leaders and A.-Z. Validi fuelled tension between the Bashkir and Tatar representatives.

However, the board did not suspend its preparation for the establishment of a united Turkic-Tatar state in the form of the 'Ural-Volga State' in spite of the controversy between the Tatar and Bashkir national leaders. G. Sharaf prepared an universal on the establishment of the state. It was to be declared on 1st March 1918. On that date, delegates of the 2nd All-Russian Military Muslim Congress were to announce the universal on the establishment of the 'Ural-Volga State' during a ceremonial meeting in Kazan's central square. Thus, the 2nd All-Russian Military Muslim Congress was to shape the future of the prospective Turkic-Tatar state.

The Military Congress began in Kazan on 8th January 1918. It was attended by approximately 200 delegates, in particular 141 Tatars and 35 Bashkirs. Representatives of ethnic organisations from Ukraine, Crimea, Poland, etc. came as guests. The following issues were on the agenda: 1) position on the Constituent Assembly; 2) position on the Soviet government;

3) the 'Ural-Volga State'; 4) the Muslim army. At the time when the 2nd Congress was called, the number of Muslim soldiers in Kazan was over 20,000; in Orenburg, about 10,000; in Ufa, approximately 15,000. Moreover, Muslim troops were deployed in Astrakhan, Samara, Omsk, Irkutsk, Yekaterinburg, and other localities of Inner Russia and Siberia.

A number of ideological and political groups formed within the congress during its work. Yet, the bitterest dispute was between the Rights—adherents of the 'Ural-Volga State'—and the Lefts—advocates of the Bolshevik regime. On the first day of the Congress, most of the deputies supported the Constituent Assembly, which the Bolsheviks had dissolved. This fuelled the factional struggle. It was especially fierce between the two factions when it came to their attitudes to the Soviet government. The right faction of the Congress was opposed to the Bolshevik usurpation of power and struggled to establish a democratic state in the form of a federation governed by the rule of law, which was to include the 'Ural-Volga State' apart from other territorial-national autonomies. But its plans were fated to never be realised.

In order to prevent the establishment of the 'Ural-Volga State', the Kazan Bolshevik Organisation initiated intense political propaganda among the troops of the local garrison and industrial workers. Anarchistic delegates, representatives of left parties, had to leave the Military Congress under pressure from the Bolshevik's administration of Kazan exerted in the form of an ultimatum. On their departure, they declared that 'Any resolutions adopted by the Congress after 17th January shall not be regarded as binding' [Znamya revolyuczii, 1918, No. 39]. They thus increased political stratification in the Turko-Tatar national-democratic movement. In fact, two camps formed within it: left nationalist internationalists hewing to Bolshevik ideas and advocates of Turko-Tatar national autonomy.

The Congress of Soviets of the Volga region and the Cis-Ural region was called on 8th January 1918 on the initiative of the Kazan Soviet to commence its work at the same date as the

2nd Muslim Military Congress. The local Bolshevik administration was trying to reinforce its standing with the Nationals. It was attended by representatives of Soviets and Muslim ethnic organisations of Astrakhan, Vyatka, Kazan, Nizhny Novgorod, Orenburg, Penza, Perm, Samara, Simbirsk, Ufa, and some other governorates. The predominant issue on the agenda was possible solutions to the national question of the Turko-Tatar population. In spite of the heavy ideological and political pressure that Soviet and party authorities had been exerting on the delegates, the Congress adopted a resolution on the self-determination of the peoples in the region as the Volga-Ural Soviet Republic. In fact, the resolution supported the Milät Mäclese's decision. Following its political failure at the Congress, the Bolshevik administration of Kazan took aggressive measures—the Congress was dissolved on 9th January; in February 1918 the Bolsheviks established an independent state formation—the Workers' and Peasants' Soviet Republic of Kazan—on behalf of the so called 'working people', which included the working class and the poorest peasant groups, to combat 'counter-revolution'. Ya. Sheynkman was elected Chairman of the Republic's Council of People's Commissars with the following membership: S. Braude (People's Commissar for Labour), A. Karpov (Industry and Commerce), V. Mokhov (Internal Affairs), Sahipgerej Said-Galeev (Nationalities), Kazimir Shnurovsky (Agriculture), and others. This extraordinary state formation, headed predominantly by Bolsheviks and left Socialist Revolutionaries, had nearly totally power over the governorate. The first political action of the self-proclaimed Council of People's Commissars was the establishment of the Revolutionary Headquarters (presided by K. Grasis with the following membership: A. Ginzburg, M. Sultan-Galiev, Ya. Sheynkman, K. Yakubov, and others) Leaders of the Military Congress Ilias and Dzhangir Alkins, Yusuf Muzafarov, Usman Tokumbetov, and others were arrested on the night of 27th February; a state of emergency was imposed on the governorate on 1st March. The Military Congress

was thus suspended, and the announcement of the universal on the establishment of the Ural-Volga State, which was to take place on 1st March was prevented. The revolutionary headquarters adopted the following resolution: '1) to form military detachments of factory workers; 2) to reinforce the Red Army and to send propagandist to nearby villages [20 let TASSR, 1940, p. 43].

Aside from these political actions, the Kazan Bolshevik Organisation initiated a mass awareness-raising work among the workers and soldiers of Kazan. As a result, Tatar workers and Soldiers of the Alafuzov city district yielded to Bolshevik propaganda and issued a special resolution: 'Having considered the report..., we, workers and soldiers of Alafuzov District, declare that it is beyond doubt that such rumour is being spread by the counter-revolutionary bourgeoisie in order to sow discord between Russian and Muslim workers, soldiers, and peasants for the specific purpose of triggering a bloody confrontation and a fratricidal slaughter; by drowning us in our brothers' blood, the bourgeoisie hopes to wreck the revolution and the power of the Soviets. We declare that the interests of the proletariat of the Russians, Muslims, and others are the same. All workers regardless of their nation are equally oppressed by autocracy and capitalists. In view of the above facts, we hereby request the Kazan Soviet of Working Class, Soldier, and Peasant Deputies to ensure that all individuals who spread provocative rumours are arrested and put on trial by the revolutionary tribunal. Passed unanimously' [Znamya Revolyucii, 1918, No. 12].

At the same time, the Kazan Organisation of the Russian Communist Party (Bolsheviks) escalated its propaganda among soldiers and junior officers in Muslim regiments of the Kazan Garrison. The Bolshevik administration was able to draw part of the soldiers to their side. Tired of war and revolutionary upheavals, most serving in the military were against any military action. A large portion of Xärbi Şura leaders and delegates to the Military Congress had the same position. Unlike the Bolsheviks,

who had embarked on a military struggle for power, they were searching for peaceful ways of ensuring national self-determination for Turko-Tatar peoples and called their followers for a peaceful demonstration. Some of them were 'hot heads' advocating a forcible settlement of the national issue, like Gabdulgaziz Munasypov, who at the morning meeting of the Military Congress on 28th February (following Bolshevik arrests) suggested declaring the establishment of the Ural-Volga State, issuing a decree to conscript Muslims aged 18 to 40, taking the power, and arresting members of the Kazan Soviet of Working Class, Soldier, and Peasant Deputies and members of the Muslim Commissariat.

However, many leaders of the Tatar national democratic movement were opposed to any violence. This resulted in a peaceful Tatar demonstration in Kazan on 28th February 1918, which attracted over 10,000 people. Its participants sent their representatives to the Kazan Bolshevik administration to demand that the arrested leaders of the Military Congress should be released, which elicited no response. In turn, the Kazan administration relied on the Centre to enhance the extraordinary measures in the governorate and gather troops loyal to it in Kazan. As a provocation, Soviet punitive bodies (presumably the Cheka) murdered Vaisov's leader Gaynan Vaisov, who promoted peaceful and non-violent settlement of the issue. Thus, the local administration initiated active military struggle.

In spite of the strained situation, the delegates resumed the Military Congress in the barracks of the 95th Reserve Infantry Regiment, which lay in the Trans-Bulak part of Kazan, at the beginning of March. The Revolutionary Headquarters of Kazan Bolsheviks subsequently declared the Trans-Bulak part of the city (as small as several square kilometres) the 'Zabulachnaya republic', initiated active military preparations, and began to tightly encircle the Tatar Slobodas. Those leaders of the Military Congress who had not been arrested established the Muslim People's Commissariat headed by Ismagil Atnagulov (members: Ishak Almashev, Fahrelrazyj Basyrov, Akram

Biglov, Aftahetdin Gabidullin, Gabdulla Gabdrashitov, Sulejman Lovchitsky, Gali Morakaev, Fatikh Mukhammedyarov, Sulejman Poltarzhitsky, Ahmetsultan Tagirov, Kashaf Teregulov, Adam Yakubovsky) to coordinate the activities of ethnic organisations and the city's Turko-Tatar population as founded the Muslim Revolutionary Headquarters, headed by Gabdulgaziz Munasypov, and began to publish the *Idel-Volga Olkese* (Ural-Volga State) newspaper. They appealed to the Islamic section of the population, encouraging united action in support for the establishment of the Ural-Volga State, and expressed willingness to cooperate with all organisations which accepted the need of founding the State, and demanded that the local soviets should be re-elected with adjustment for the national composition of the population.

However, the Turko-Tatar leaders adherent to non-violence refused to start a military struggle for national sovereignty. The Kazan administration took advantage of their inactivity. By 27th March, its troops had fully encircled the Trans-Bulak part of the city. Its ultimatum to the Muslim Revolutionary Headquarters was as follows: hand over all weapons and ammunition in your possession. When the ultimatum period expired on 28th March, the Revolutionary Headquarters brought a detachment of seamen from Moscow and other military units to the Trans-Bulak part of the city. Having entered the Tatar Sloboda, they used rifles, shotguns, and cannons to disperse the so-called 'Zabulachnaya republic'. No serious military confrontation followed. The Muslim military detachments deployed in the Trans-Bulak part of Kazan had to surrender. The 'Temporary Revolutionary Headquarters for the Tatar Part of the City', established to suppress the disturbance, searched and arrested members of the Muslim People's Commissariat and the Muslim Revolutionary Headquarters. On 1st April 1918, a Kazan Bolshevik leader M. Milk reported to Moscow that the authorities of the 'Zabulachnaya republic' have been abolished. The Xärbi Şura and the Kazan Council of People's Commissars agreed to release the previously

arrested leaders of the Military Congress; Muslim military units were assigned to Kazan Military District. The Xârbi Şura undertook refrain from any specific measures to establish the Ural-Volga State.

The active ethnopolitical movement of non-Russian peoples, especially the Turko-Tatar population of Inner Russia and Siberia, made the Soviet government take a new look on the national questions, take certain steps towards its settlement across the territory of the former Russian Empire, and the establishment of national entities. The Soviet government began to take a series of practical measures to sow discord within national democratic movements when the 2nd All-Russian Muslim Military Congress commenced its work in January 1918. In late January 1918, the Central Muslim Commissariat headed by Mullanur Vakhitov was established under the People's Commissariat of Nationalities, which was headed by Joseph Stalin. The establishment of an Muslim commissariat was a turning point in the history of the Turko-Tatar national democratic movement. At the same time, the Council of People's Commissars of Nationalities resolved to establish Muslim commissariats under local soviets. In February 1918, regional Muslim commissariats were founded in towns at a quick pace. The same commissariat was established under the Kazan Soviet of Working Class, Soldier, and Peasant Deputies with departments for labour, peasants, military issues, and culture and education. It embarked on a fierce struggle against supporters of the Ural-Volga State on the first day of its existence.

On 26th March 1918, in the thick of the struggle against the Turko-Tatar national democratic movement, a resolution signed by People's Commissar of Nationalities, Joseph Stalin, and Chairman of the Central Muslim Commissariat, M. Vakhitov was published to the effect that the All-Russian Xârbi Şura was liquidated. It read as follows: 'The All-Russian Military Office and the related garrison and regional committees and any other military organisations regardless of their name are hereby abolished. Any cases, documents, property,

and capitals shall be assign to local Muslim Soviet commissariats, which are accountable to the Commissariat for Muslims of Inner Russia, People's Commissariat of Nationalities. Those found guilty of misappropriation of property during the liquidation of the above committees shall be tried by the revolutionary tribunal. Any unauthorized organisations established to tear the power from the hands of Muslim commissariats under the Council are hereby announced counter-revolutionary and shall be liquidated immediately [News of Central Executive Committee, 1918, 28 March]. On 1st May 1918, the Central Muslim Commissariat issued a special decree on the abolishment of Milli İdarä, under which governorate, uyezd, and district organisations and the Milli Fond (the National Treasury) were to be abolished and all their property, money, and documents disposed of by the Commissariat. By the end of May 1918, nearly all Turko-Tatar national democratic administrative bodies elected at All-Russian Muslim Congresses had been dissolved.

Thus, the 'Zabulachnaya republic' was a tragic chapter in the history of the struggle of the Turko-Tatar population of the former Russian Empire for national sovereignty, during which Tatar national democratic organisations were banned, the peaceful attempt at solving the problem of Tatar national self-determination was stamped out, and the Bolshevik model of national state arrangement imposed on the people.

The activities of the Millät Mäclese and its organisations was clearly indicative of the political maturity of the leaders of the Tatar nationalist democratic movements and the aspiration of a wide Turko-Tatar public to establish a national sovereignty. The project of the 'Ural-Volga State' was the first application of the idea of establishing Soviet Socialist Republics (States) in Russia. Leninist ideologists of Soviet national state-building could not help but admit it. For instance, People's Commissar of Nationalities of the RSFSR, Joseph Stalin, wrote in an article in Pravda dated 23rd March 1918: 'It has been two month since the 3rd

Congress of Soviets, which declared the Russian Republic to be a federation, but peripheral territories still engaged in establishing Soviet government at the local level have not come up with any specific federation forms. The Tatar-Bashkir region seems the only area where revolutionary organisations have developed a clear plan of forming a federation with the Soviet Russia. We envisage the precise general outline of the arrangement of the Tatar-Bashkir Soviet Republic which has been on the tongue of men, developed by the most influential Soviet Tatar and Bashkir organisations' [Stalin, 1951, pp. 40–41].

The question now arises of what national organisations developed the original project of the Soviet Federation. Even though Stalin maintained that it was Tatar-Bashkir revolutionaries who had implemented the idea of rearranging the former Russian Empire as a federation, this is not true. The concept of the federation was developed at the meetings of the *Millät Mäclese*, the first democratic national parliament in the new Russia. Therefore, the Bolsheviks borrowed just another ideas from their political opponents—the leaders of the Tatar national democratic movement, as they had previously done to left Socialist Revolutionaries' projects. It is no wonder that the Bolsheviks, advocating a united and indivisible Russia and opposed to federation after a series of international conflicts in the Turkic Tatar world, became federalists. This all motivated them concede to the Tatars and the Bashkirs by issuing the Regulation on the Tatar-Bashkir Republic. The suggested state formation covered most of the territory of the unrealised 'Ural-Volga State'.

Thus, the Turko-Tatar national democratic force achieved the establishment of the Tatar-Bashkir Republic in spite of their defeat at the hands of the Bolsheviks. The Soviet government had to initiate Turko-Tatar national state-building and suggest an alternative to the Ural-Volga State that would satisfy the Tatars and the Bashkirs. It was not the Central Muslim Commissariat but the *Millät Mäclese* and the Board for the Implementation of the Ural-Volga State which were politically essential in this

respect. The Muslim Commissariat betrayed the interests of the Tatar and Bashkir people by helping the Soviet government to dissolve all Turko-Tatar organisations established by the All-Russian Muslim Congresses.

On 22nd March 1918, the Regulation on the Tatar-Bashkir Soviet Republic People's Commissar of Nationalities of RSFSR, Joseph Stalin, and Chairman of the Central Muslim Commissariat, M. Vakhitov was published. It read as follows, 'referring to the principle of national self-determination of the working masses, which was approved by the 3rd All-Russian Congress of Soviets, the People's Commissariat of Nationalities in concord with the Commissariat for Muslims in Middle Russia has developed the following regulations of the Tatar-Bashkir Republic: 1. The territory of the South Urals and the Middle Volga region is hereby declared the Tatar-Bashkir Soviet Republic within the Russian Soviet Federation. 2. Its borders shall be established according to the project developed by Bashkir and Tatar revolutionary organisations (the entire Ufa guberniya, the Bashkir part of Orenburg guberniya, Kazan guberniya except for the Chuvash-Cheremis part [the Chuvash and Mari people.—R. Sh.], and the adjacent Muslim parts of Perm, Vyatka, Simbirsk, and Samara guberniyas). The final establishment of the republic's borders shall be the responsibility of the Founding Congress of Soviets of the republic in question. 3. Any political and economic relations of the republic's western part and Bashkortostan shall be determined by the Founding Congress of Soviets of the Tatar-Bashkir Republic. 4. It is the responsibility of the Commissariat for Muslims in Middle Russia to establish a commission for calling the Founding Congress of Soviets' [20 let TASSR, 1940, pp. 45–46]. The Bolshevik's administration was able to deceive not only the wide public but even many representatives of the Turko-Tatar intelligentsia with this regulation.

It is noteworthy, however, that the regulation was not authored by the most powerful leaders of the Soviet State—Chairman of the Council of People's Commissariat, Vladimir Lenin, and Chairman of the All-Russian Cen-

tral Executive Committee of the RSFSR, Yakov Sverdlov. The state-establishing document was only signed by People's Commissar of Nationalities, Joseph Stalin, and Chairman (in fact, Vice Chairman) of the Central Muslim Commissariat, M. Vakhitov. It is thus safe to say that the regulation was no guarantee of national sovereignty for the Tatar-Bashkir population. Most probably, the Bolsheviks needed it to sow discord in the Turko-Tatar national movement and thus put an end to it.

In the above context it appears important that not all peoples in the Urals and Volga region welcomed the Regulation of the Tatar-Bashkir Republic, as the Soviet press presented it. For instance, it raised bitter disputes at the Meeting of Minor Ethnic groups of the Volga region and the Cis-Ural region on 13th June 1918. The Chuvash and Mari representatives were opposed to the project of the Tatar-Bashkir Republic. They believed the arrangement forms of the prospective republic to be inconsistent with the household, economic, and national situation of the peoples of the Volga region and the Cis-Ural region. Kryashen representatives, I. Petrov, Gavrilov, and Kuptsov, joined them in expressing a negative attitude to the Tatar and Bashkir republic. Even G. Sharaf was unable to persuade them by saying that 'they are not going to enslave anyone by establishing the republic. The only thing they aspire for is cultural-national autonomy. There is nothing chauvinistic about the idea of the state. The Soviets of the Russian Republic largely represent the Russians; few positions were available for ethnic minorities, which is a heavy blow to their interests. Complete autonomy is necessary. It is impossible for Muslims alone but very likely to be achieved in cooperation with other ethnic groups. Any Tatar-Bashkir hegemony is out of question— all peoples will be equal. The language of each ethnic group must be an official language, even though it would require a large number of officials at institutions. There is no reason to be apprehensive lest the Tatars dominate the state— they will only constitute 44% of it. We are guided by the principle of equality and cultural-national au-

tonomy exclusively. The state shall include the following governorates: Ufa, Kazan, Orenburg (including the Tatars and the Chuvash people), and Perm. In percentage terms, its ethnic composition is as follows: Chuvash—12%, Mari—4–5%, Great Russians—33%, Muslims—43%, Tatar Christians—1.1–2%. The name 'Tatar-Bashkir' is not final; it is up to the Founding Congress. Shall any ethnic group refuse to enter the republic, the territory will be excluded provided that it is a majority. Otherwise, it will remain within the republic. The state is about Tatar-Bashkir cultural independence, which is why they will never give up on realising this idea. The state will ensure independent cultural development for everybody; the Tatars have no aggressive ambitions.' The Chuvash, Mari, and Tatar Christian representatives remained unconvinced by G. Sharaf's strong arguments and encouraged all participants in the forum 'To refrain from participating in any attempts at establishing a state according to any current projects developed by Tatar-Bashkir congresses under the aegis of the central government' [Obrazovanie TASSR, 1963].

Therefore, the Regulation on the Tatar-Bashkir republic was a turning point in the national state-building of the peoples of the Volga region and the Cis-Ural region. That was the beginning of the so-called 'Leninist-Stalinist national policy'. Having gained ground in most of the regions of the former Russian Empire, the Bolsheviks tried to summon their forces against national autonomies to obtain economic and political dominance over the peoples, which they did under the slogan of national unity. By resolving to establish the Tatar-Bashkir Republic, the Bolshevik government tried to give the impression that the key aspects of their party programme were being implemented. Thus, national state-building in Russia became an exclusive prerogative of the Bolshevik government, while the masses were almost completely excluded. Depending on the socio-political situation in the country, various forms of national sovereignty were imposed on non-Russian peoples. It was the case with the Tatars and the Bashkirs.

Quotes by Joseph Stalin are clearly indicative of the type of autonomy which the Soviet government found preferable [see: Stalin, 1951, pp. 86–87]. He needed a Soviet autonomy essentially deprived of rights so that party officials could fully control the country's peoples. The Soviet government could not authorize the full-fledged Tatar-Bashkir autonomy with wide powers of authority for which the wide Turko-Tatar public aspired. The Soviet government could not grant an autonomy in which the people would enjoy complete power, thus restricting the role of the Centre significantly, to the Nationals. This is the reason why two Meetings on the Tatar-Bashkir Republic, held in Moscow on 13th–15th April and 10th–16th May 1918, were very unproductive and failed to make any fundamental decisions or documents on the issue.

However, a commission was established at the later meeting during a bitter dispute between attendants opposed to the idea of the Tatar-Bashkir Republic (K. Grasis, F. Syromolotov, I. Tuntul, and others) and its advocates (M. Vakhitov, G. Ibragimov, K. Yakubov, and others) to prepare and summon the Founding Congress of Soviets of the Tatar-Bashkir Republic, which was instructed, in particular, '... to develop a procedure for arranging uyezd and district congresses... To delegate propagandists to raise public awareness of the prospective republic and all before the congresses are opened and to introduce the issue of the Tatar-Bashkir Republic to all national propaganda courses' [Pravda, 1918, No. 101]. In the summer of 1918, the Commission adopted a series of controversial decrees: it entrusted the settlement of the autonomy issue, as well as that of its competence and territorial borders, to the Founding Congress of Soviets, while the date of summoning the congress was to be agreed on between People's Commissariat of Nationalities and the local deputy councils. Thus, it shed all responsibility for the future of the prospective republic. For some reason, Ufa was where the congress was to take place and not Kazan, in which adherents of the 'Ural-Volga State' were still numerous. This fact aggravated tensions between the Bashkir and

Tatar leaders. It was probably initiated by Joseph Stalin, for he was satisfied with the situation and he toyed with inter-ethnic conflicts to delay the establishment of an autonomy. His other actions indicate that this assumption is correct. For instance, in the summer of 1918, when delays occurred in the funding of preparation for the summoning of the Founding Congress of the Tatar-Bashkir Republic, Tatar senior officials turned to Moscow. However, I. Falin prevented the cost estimate which K. Yakubov brought to Moscow from going any further. Speaking to M. Vakhitov, Stalin's assistant S. Pestkovsky attributed the delay to Stalin's instruction not to force the preparation for the congress. M. Vakhitov had to approach Vladimir Lenin. When Lenin asked why the cost estimate had been delayed, Pestkovsky said that Vakhitov's cost estimate was sure to accelerate the calling of the Founding Congress of the Tatar-Bashkir Republic, while Stalin had instructed him not to hurry before departing. On 17th July 1918, the Council of People's Commissars of the RSFSR adopted a decree to allocate some advance funding to the Central Muslim Commissariat, but the Board of the People's Commissariat of Nationalities challenged the decision. Therefore, the Soviet government, headed by Vladimir Lenin, reconsidered fund allocation to the Central Muslim Commissariat on 20th July and approved the previous funding. This fact indicates that Stalin was doing his best to prevent a powerful and legitimate Tatar-Bashkir autonomy from being established.

The Soviet government took its own way through a masterful political play with Tatar-Bashkir leaders, which enabled it to take the lead and leave behind the Nationals, thus bolstering the Centre's position in terms of the national question. Lenin's government had to reconsider the issue during the hardest days of the war, when the white army had surrounded the Soviet Russia with General N. Yudenich's army advancing from the north-west, that of Admiral A. Kolchak from the east, and that of General A. Denikin from the south. On 20th March 1919, the 'Agreement of the Central Soviet Government with the Bashkir Government

on the Soviet Autonomy of Bashkortostan' was signed in Moscow. The autonomy was confined to the so called Little Bashkortostan and included the southern, south-eastern, and north-eastern territories of today's Bashkortostan. In fact, the Soviet government took the advantage of the difference between Kolchak's administration, which aspired for an united and indivisible Russia, and the Bashkir nationals led by A.-Z. Validov. The Bolsheviks granted autonomy to the Bashkirs, who, in turn, recognized the Soviet government, so the Bashkir corps that had been previously fighting within A. Kolchak's army attached the troops of General N. Yudenich in September 1919. That is, the Bolsheviks took the decision to put a stop to implementing the regulation on the Tatar-Bashkir sovereignty.

However, many Tatar-Bashkir national leaders would not accept the political action of the Soviet government. The issue of the Tatar-Bashkir autonomy was raised again on the 2nd All-Russia Congress of Communist Organizations of the Muslim Peoples of the East, which was held in Moscow from 22nd November to 3rd December 1919. The Congress stated in its resolution that '...the fact that the Little Bashkortostan was declared Autonomous Soviet Republic by no means cancels the Regulation on the Tatar-Bashkir Soviet Socialist Republic by the Council of People's Commissars and provides no formal solution to the Tatar-Bashkir problem in the whole, since the republic only includes one third of the Bashkir population of the Soviet Republic... The best solution to the Tatar-Bashkir problem, in terms of politics, natural history, and socio-economic aspects, is to create a common Soviet Republic to unite the entire Tatar-Bashkir proletariat; the republic shall include the following governorates of Ufa, Kazan, and the adjacent Tatar-Bashkir-populated parts – Samara, Simbirsk, Vyatka, and Perm Governorates... The Tatar-Bashkir issue is an urgent priority in the national policy of the Soviet Republic. Referring to the principle of self-determination of nations declared in the RSFSR Constitution, All-Russian Congresses of Soviets, and the 8th Congress of the

Russian Communist Party (Bolsheviks)..., the Congress finds the following necessary: 1) To implement the Regulation on the Tatar-Bashkir Soviet Socialist Republic by the Council of People's Commissars within borders exclusive of the autonomous Little Bashkortostan. 2) Refer the issue of including the autonomous Little Bashkortostan to the Tatar-Bashkir Soviet Socialist Republic to the proletariat of the Little Bashkortostan. 3) To entrust the execution of the Congress' resolution to the special revolutionary committee established by the present Congress as agreed with the CC WPP (B), instructing the latter to summon the Founding Congress of Soviets of the Tatar-Bashkir Soviet Socialist Republic' [20 let TASSR, 1940, pp. 57–58].

It is characteristic that, while Tatar-Bashkir national leaders advocated the autonomy, Stalin's government embarked on a policy to combat it. On 13th December 1919, it was able to impose a decision to cancel the Regulation on the Tatar-Bashkir Republic dated 22nd March 1918 on the Political Bureau of the CC WPP (B). Even after that, the issue of Tatar-Bashkir autonomy was discussed at many forums with the direct participation of Vladimir Lenin and Joseph Stalin. A new special commission was established to finally solve it. However, the situation in the country had changed by that time. The broader public was no longer able to openly state its demands. The Soviet government took the lead in national state-building completely. During the 9th Congress of the RCP (B) in April 1920, the Council of People's Commissars had a special meeting presided by Vladimir Lenin (attended by Joseph Stalin) with representatives of party and Soviet organisations to discuss the establishment of a Tatar Republic. Several representatives of the Russian-speaking Kazan governorate administration spoke against the establishment of a separate Tatar Republic, maintaining that the Tatar people could not provide well-prepared communists to govern the republic. They believed that establishing a Tatar Republic under such conditions would cause the Soviet and eco-

conomic apparatus to malfunction and eventually deteriorate. In spite of their disagreement, a majority claimed that it is necessary to establish a separate Tatar Republic.

In the middle of May 1920, the Political Bureau of the CC WPP (B) held a special discussion on this issue. The Commission for the Development of a Draft Decree on the Establishment of the Tatar ASSR, headed by Joseph Stalin, was founded at the meeting, led by Vladimir Lenin. On 27th May 1920 the All-Russian Central Executive Committee and the Council of People's Commissars of the RSFSR issued the Decree on the Establishment of the Autonomous Tatar Soviet Socialist Republic and on the establishment of the Provisional Revolutionary Committee of seven members, which was signed by Chairman of the Council of People's Commissars Vladimir Lenin and Chairman of the All-Russian Central Executive Committee Mikhail Kalinin. The All-Russian Central Executive Committee resolved that the Tatar Republic should be established within the territory specified in the Regulation on the Tatar-Bashkir Republic by the People's Commissariat of Nationalities dated 22nd March 1918, except for the territory of the existing Autonomous Bashkir Socialist Republic. In fact, it was not only Little Bashkortostan but Krasnokokshaysk, Cheboksary, Tsvil'sk, and Yadrin uyezds, Kazan guberniya, Ufa and Birsk, Belebey and Ufa uyezds, Ufa guberniya, which were specified in the Regulation of the Tatar-Bashkir Republic, what was excluded from the Tatar ASSR. As for Belebey and Birsk uyezds, the issue remained unsolved until the working masses of the two uyezds made a decision. It was probably a tactical subterfuge to which the Soviet government resorted. In late 1922, Ufa and Birsk, Belebey and Ufa uyezds were declared part of the Bashkir ASSR, thus forming Bolshaya Bashkiriya.

Noteworthy, a bitter dispute over the territories was maintained during the meeting on the establishment of the Tatar ASSR. The Tatar representatives, who agreed to the establishment of the Tatar Republic, had to argue with the Centre on the inclusion of the city of Ufa as

well as Menzelinsk, Ufa, and Belebey uyezds in the prospective republic. It was permitted to include several volosts within Samara, Simbirsk, and Vyatka guberniyas in the Tatar Republic. Ufa uyezd was excluded from the republic; attempts were made to prevent Menzelinsk uyezd from becoming its part. 'We,' Burundukov said, 'maintain that the majority of the population of Menzelinsk uyezd and the inhabitants of Menzelinsk are Tatars and Bashkirs, the two ethnic groups with similar traditions, and they won't mind it. That is why we requested that Menzelinsk uyezd should be included in the Tatar Republic. Yet, the request was denied' [Kizil Armiya, 1920, 6 June]. However, the inhabitants of Menzelinsk insisted, and the Centre could not but agree to its inclusion in the Tatar Republic. A referendum was to be held in order to decide whether Ufa should be included in either of the republics. In this context, M. Sultan-Galiev found it possible to establish a republic including Ufa and Birsk near the Little Bashkortostan, having its capital in Sterlitamak, and call it the Tatar-Bashkir Republic.

Stalin's government thus accomplished its end. A small, economically weak republic was established, while a large part of the Tatar people remained beyond Tatarstan. The percentage of Tatar population in the Tatar Republic was as low as around 50%. The second largest group was the Russians. This all enabled the central government to interfere with the internal affairs of the Tatar ASSR.

On 25th June 1920, the powers of the Kazan Governorate Executive Committee were vested in the Provisional Revolutionary Committee. The date went down in history as the day when the Tatar ASSR was established. While Tatar national leaders disputed fiercely with representatives of the People's Commissariat of Nationalities, S. Said-Galiev was elected Chairman of the Provisional Revolutionary Committee. Many national senior officials wanted the well-educated, proactive, vigorous, and daring M. Sultan-Galiev on this position. They associated the future territorial expansion of the republic and the development of Tatar sovereignty and culture with his name. How-

ever, Said-Galiev was preferable to the Centre both in terms of social origin (working-class) and on the level of 'business qualities' (poorly educated, weak-willed, lacking initiative, pliable, vindictive, etc.).

A number of bodies were established within the Provisional Revolutionary Committee, including the Departments for Internal Affairs (headed by Gasy'm Mansurov), Healthcare (Kashaf Mukhtarov), Land (Yunus Validov), People's Education (Karim Khakimov), Justice (A. Nekhotyaev), Labor (A. Dogadov), Social Welfare (Valej Iskhakov), and Finance (A. Gordeev); the Soviet for People's Economy (M. Roshal'); the Military Commissariat (Itelson); the Governorate Commission for Foods (Barabarchuk) and the Extraordinary Commission (G. Ivanov). The main candidates for positions of power within the committee were also imposed by Moscow; their appointees occupied all the key economic and power structures. The Provisional Revolutionary Committee was preparing to call the Founding Congress of Soviets of the Tatar ASSR from July to August of the year 1920. The Congress commenced its work on 25th September. It elected the Central Executive Committee of the Tatar ASSR of 59 members (G. Bagautdinov, A. Dogadov, K. Ismaev, B. Mansurov, K. Mukhtarov, S. Said-Galeev, M. Sultan-Galiev, and others). The government in the form of the Council of People's Commissars was formed at the first Plenary Meeting of the Central Executive Committee on 28th September. Presided by S. Said-Galeev, it included the following 15 members: Galeev Yu. Validov, A. Gordeev, A. Dogadov, A. Izmaylov, A. Izyumov, V. Iskhakov, K. Mukhtarov, A. Nekhotyaev, M. Roshal', and others). The Presidium of the Central Executive Committee of the Tatar ASSR of 7 members was founded (Chairman B. Mansurov, members: Kh. Gaynullin, A. Denisov, A. Kopnov, A. Samokhvalov, A. Tanyaev, and N. Yarullin).

In the autumn of 1920, nearly all of the republic's power structures were established.

And here the Centre once again interfered. The community had to defend a number of applicants for public office, sometimes unsuccessfully, as it was with M. Sultan-Galiev. The composition of superior power structures was unstable and changed often. The central government wanted it because intense rotation in the administration enabled them to manage the republic through their appointees in the Provisional Committee. This category of governors had neither common republican nor common national interests. Many of them viewed their position purely as a source of income, which they were willing to maintain by fulfilling any order by the Centre. The central government would send opinionated and intractable administrators to minor offices in other regions on the pretext of promotion. The Tatar Regional Committee as well as the Secretariat and Organisational Department of the CC WPP/CPSU(B) were also crucial to this process. According to the principle of democratic centralism, rank and file party members were subordinated to the party elite.

Thus, the Tatar national autonomy developed under extremely challenging conditions—during a socio-economic and political crisis in the country, in times of a fierce socio-political struggle between national and Bolshevik leaders. The Tatar sovereignty emerged and got established in the context of struggle against nationalist internationalists and great-power chauvinists, who were opposed to any national state formations. The leaders of the Tatar national democratic movement made an enormous contribution to the establishment of the Tatar national autonomy. Owing to their effort, the Tatar people became a state-forming nation again, though in a violently abridged and restricted way. Yet, it was a major victory that could lay the foundations for a future struggle to restore a full-fledged state. Several national autonomies, in particular the Tatar ASSR, emerged eventually in the region initially allotted to the Ural-Volga State and later to the Tatar-Bashkir Soviet Republic.

§ 2. The Formation of Soviet Government Institutions in the TASSR

Indus Tagirov

The people won their republic at a heavy price. Famine befell it in the very first year of its existence. Its cause was not only and not so much objective conditions as the food policy of party authorities and the republic's administration.

At first, 10,120 poods of Prodravverstka were imposed on the republic. The issue was discussed at the republic's first party conference.

Honored party official Ivan Derunov said openly in his speech that the republic was unable to fulfill the Prodravverstka target. 'However,' he said, 'you can only publish it with other party officials.' Aware of the conditions in Kazan guberniya, he said that its old uyezds had long been drained and that he could only rely on uyezds from different governorates within the republic. To his credit, the party official also said that the peasantry had not yet been paid for the previous harvest and mentioned the lack of salt and not imported dry goods [SA HPD TR, Fund 15, Inventory 1, File 3, Sheet 13]. Unfortunately, his speech was of uncommon nature. Chairman of the Council of People's Commissars K. Mukhtarov preferred to omit the fact by elaborating on the prospects for global revolution. Aggressive measures to ensure that the food policy was implemented were the dominant idea of the conference.

In his report at the Meeting of the Bureau of the Regional Committee, Chairman of the Governorate Emergency Committee, A. Denisov emphasized the practice of collecting warm clothes from the population. In fact, party officers were ordered, 'Exercise compulsory withdrawal of warm clothes by means of searches' [Ibid., Sheet 51]. Apart from Prodravverstka, which amounted to 15.4 million poods due to the republic's pliable conformist administration, headed by Said-Galiev, the population had to carry the burden of meat, oil, vegetable, egg, wool, honey, hay, poultry, and other taxes. To supply all these would mean a death sentence not only for the peasantry, but for the

entire population of the republic. To ensure that the Prodravverstka target was achieved, 1,500 people were conscripted and a number of revolutionary tribunals were established, which, to quote documentary records, 'had moral influence on the peasant masses and reinforced their awareness of how necessary and mandatory it was to fulfil the Prodravverstka' [SA HPD TR, Fund 15, Inventory 1, File 202, Sheet 23].

On 20th August 1920 the Tatar People's Commissariat for Food issued an order to declare governmental crop and fodder razzavverstka 'mandatory and unconditionally binding, even in the prejudice of the established food standards.' The following procedure was introduced: District commissariats for food were to carry out volost Prodravverstka with reference to standard values, taking into account the statistics regarding area under crops. Prodravverstka by settlement was entrusted to volost executive committees, while village soviets were responsible for providing household Prodravverstka in adherence to the following principles: 1) duty was to be imposed on the whole household depending on its area under crops; 2) imposing duty on a per mouth or per capita basis was unacceptable; 3) responsibility for fulfilling Prodravverstka was collective, but not individual. Penalties were specified, too. The principal penalty was judicial punishment. Dedicated military detachments for food could be used for immediately crop confiscation as an additional enforcement measure.

The punitive measures to be taken to the peasant population were not new. They had been practiced since the first days of the Soviet regime. Arsk volost, where peasant dissatisfaction during crop inventory in November 1918 led to disturbance. A military team was used to suppress the peasant disorder. The same was done to the population of the village of Shumkovo, Laishev uyezd, on 16th December.

The government resorted to even more cruel measures to suppress the Black Eagle peasant

rebellion. Thus, the population had no reason to doubt the authorities' determination to apply a similar approach to Prodravzverstka.

The first plenary session of the republic's Council of People's Commissars took place on 30th September 1920. Aside from developing a procedure for governmental work, another issue on the agenda was to publish the Appeal to the population of the Tatar Republic to encourage it to fulfil Prodravzverstka. Shamil Usmanov refused to sign it and said that he did not want to 'rob his people'. His close associate People's Commissar for Agriculture Yunus Validi called those who insisted on adopting the Appeal 'Moscow's toadies' and 'traitors of the nation'.

This was remarkable behaviour and certainly influenced their fate.

It was an appeal in name only—it was in fact a decree. The document not only encouraged peasants to fulfil Prodravzverstka no matter what but gave them the ability to apply repressive measures.

It is hardly possible that the republic's administration, in particular Said-Galiev, were unaware of the threat of famine and the population's continuously deteriorating situation. He had been regularly receiving reports from the Emergency Committee. But the head of the republic believed that it was 'necessary to save the revolution' and that 'the Tatar people are nothing when compared to the global revolution' [SA HPD TR, Fund 36, List 2, File 3, No. 21].

According to Kh. Gabidullin, 'they could have imposed a much smaller Prodravzverstka from the Tatar population. Nobody can deny it. You can justify Said-Galiev by claiming that he did that out of revolutionary conscience, but not a single worker can deny that the Tatar Republic was mere fiction' [Ibid., Inventory 1, File 8, No. 7a, Sheet 21]. This contests the idea that one should accept death of hunger for the republic's sake, in return for its establishment. The republic was fiction, while Prodravzverstka was the crude reality. This is how those to be later enlisted as the right opposition within the Tatar Party Organisation viewed the issue.

The Republic continued to develop in the meanwhile. The issue of translating minutes of meetings of uyezd executive committees and accepting applications in Tatar was also discussed at the aforementioned meeting of the Revolutionary Committee on 20th July. The recommendation was to keep the Revolutionary Committee's minutes in Tatar beginning from 25th June. Uyezd executive committees were 'to begin to accept applications in Tatars, for which purpose a translation bureau should be established under each uyezd executive committee.' Another resolution was to use the same office for receiving telegrams in Tatar.

Some uyezds did not hesitate to implement the decision. On 2nd–3rd August, the 4th Bugulma Uyezd Conference took place, at which Shingareev's report on the organisation of the Tatar Republic was followed, on a suggestion by Galaktionov, by a decision to 'take every effort to reinforce the spiritual and economic power of the working people of the Tatar Republic in close unity with the workers of the Russian Soviet Republic and the entire world.' On 6th August, the Uyezd Executive Committee met to discuss the implementation of the Revolutionary Committee's decision of 20th July. The Muslim Section of the Uyezd Committee of the RCP (B) was instructed to establish an office to receive applications in Tatar.

Starting on 15th September, Uyezd's Soviet Congresses took place in every uyezd to celebrate the establishment of the Tatar Republic and elect delegates to the 1st Congress of Soviets of the Tatar ASSR.

The 1st Founding Congress of Soviets of the TASSR was working in the building of the Drama Theatre from 25th–27th September. 348 delegates attended the congress: 150 Tatars, 167 Russians, and 29 representatives of other nations. Reports on the current situation and the activities of the Revolutionary Committee were presented. The food and land question as well as the issues of public education and general labor and cart duties were addressed. The delegates adopted a resolution on each issue. Vladimir Lenin and Chairman of the All-Russian Central Executive Committee

Mikhail Kalinin welcomed the congress. The resolution on the current situation emphasized the sentiment in the West, where 'the working masses of the West follow the model of Russian workers and peasants to prepare for a decisive struggle against the bourgeoisie and for establishing a Soviet regime under the banner of the 3rd Communist International', and in the East, the peoples of which the resolution claimed to 'associate their liberation movement with the future of the Russian revolution.'

The concluding part of the resolution, titled 'Every Effort for Victory', emphasized the fact that 'a peaceful development and the very existence of the Tatar ASSR is only possible provided that the socialist revolution in Russia and other countries wins.' The resolution on the Revolutionary Committee's report was brief and generally approving.

By contrast, the resolution on the food issue was severe and uncompromising. It consisted of nine provisions, each rather like a policy statement. It declared the food policy of the Soviet State to be 'the only possible policy and the only right one'. It mentioned emphatically that 'the correct economic development of the Tatar ASSR can only be ensured provided that food production and supply is centralized completely across the RSFSR.' It also declared that 'to completely fulfil Prodravzverstka is the responsibility of each peasant.' Another noteworthy fact is that the congress recognized 'Prodravzverstka as the minimum set of requirements', denying 'any attempts at partially reducing or fully abolishing it in advance.' The fifth provision sounds especially harsh: 'The Congress believes that society in general should be liable for failure to fulfil Prodravzverstka. Thus, the amount of food not provided by one member of the society shall be compensated for with the supplies of the entire society.' Finally, the last provision of the resolution sounds like an order: 'Each member of the Congress must proceed to coerce peasants to fulfil their Prodravzverstka completely as soon as they arrive.'

Delegates to the Congress did execute the order of the newly created republic's superior governmental body.

The land resolution was a sensible approach, as it raised the question of land, arable land, meadow and forest management. It also mentioned the necessity, as well as the available methods, of fostering agricultural growth. The authors also gave due attention to the development of agricultural education and encouraged advanced industry methods, in particular for animal breeding.

The resolution on popular education emphasised the problem of the development of professional training for adults. The highest priority was given to schools and their teaching staff, as well as to the translation of specialised books into Tatar and Chuvash.

The resolution on general labor and animal duty is also harsh, and the following phrase taken from it is extremely representative of that fact: 'Workers must improve the productivity of labor. Peasants must fulfil the duties that the government imposes upon them.'

Congress elected a Central Executive Committee of 56 members presided by Burkhan Mansurov.

A plenary meeting of the Central Executive Committee of the TASSR took place on 28 September to address the issue of the composition of the Presidium of the Central Executive Committee and the Council of People's Commissars. Apart from B. Mansurov, the Presidium of the Central Executive Committee included six people: Samokhvalov, Tanyaev, Denisov, Yarullin, Kopnov and Gaynullin.

A government comprised of the following 15 people was elected: Said-Galiev, Izmaylov, Izyumov, Roshal', Sultanov, Nekhotyaev, Iskhakov, Bochkov, Dogadov, Mukhtarov, Validov, Gordeev, Ivanov, Khakharev and Veytser.

Yet this Congress failed to stabilise the situation in Tatarstan. Discord among the republic's government escalated until it peaked during the implementation of Prodravzverstka in 1920, which brought about innumerable losses and immense suffering to the people.

When a newspaper report appeared on 11 October saying that nationalists and the bourgeoisie had attempted to assassinate the Chairman of the Republic's Council of People's

Commissars Sakhibgarej Said-Galiev, it only aggravated the situation. A series of bizarre arrests followed suit. The Head of the Millät Printing House N. Mukhtarov, who shared an apartment with S. Said-Galiev and Vali Shafigullin in 1919, was arrested. In his report on S. Said-Galiev, he wrote that he saw no nationalists or bourgeoisie in the cellar of the Special Department where they had brought him. It appeared to him that somebody else was using him to settle their affairs with somebody else. 'As for the attempts at assassinating comrade Said-Galiev,' he wrote, 'I cannot say anything for sure; but rumor has it that it was Russian nationalists and members of the Russian bourgeoisie. But rumor also has it that he did it himself because of his career. But this is all rumor, and it's no business of mine whether it's true or not.' This document is suggestive of a rivalry between different groups of the republic's national intelligentsia.

Even though arrests were often arbitrary, it was not G. Ibragimov, S. Atnagulov, F. Saifi, G. Baimbetov, and others (i.e. Said-Galiev's followers) who played the central role in them, but rather political forces of a higher level. The commission sent from Moscow to investigate the attempted assassination did not produce any formal statement concerning its activities. Yet, a series of telegrams of condolence expressing contempt for the mastermind of the attempted assassination of the leader of the Tatar proletariat are to some extent indicative of a political motivation behind the action.

In his report to the CC WPP (B) concerning the incident, Sultan-Galiev wrote that it was 'an artificial history', since 'it was pointless to assassinate Said-Galiev, as it would pave the way for counter-revolutionary disturbances', and 'if any assassination had been attempted, it would have been well-coordinated, and Said-Galiev would not have escaped with just a mere scratch' [Sultan-Galiev, 1998, p.290].

In any event, the struggle between the Rights and the Lefts among Tatar activists grew more violent. As a result, S. Said-Galiev was withdrawn from Kazan to be appointed Chairman of the Council of the People's Commis-

sars of the Crimean Republic. The republic's administration was dominated by the Rights, which means mainly Mirsaid Sultan-Galiev's associates. Burkhan Mansurov headed the government, but this was far from the end of a political saga. It instead acquired a different nature and brought forth new political changes concerning the case of Mirsaid Sultan-Galiev. During its time, both the subject and name of Sultan-Galiev as an enemy of the people were taboo. However, investigations into Sultan-Galiev's case enjoyed a new wave of effort following his rehabilitation to provide a truthful account of the dramatic events of the 1920s–1930s.

Mirsaid Sultan-Galiev, a member of the Small Board of the People's Commissariat of Nationalities and a representative of the Tatar Republic in Moscow at the same time, enjoyed great respect and prestige among workers in national republics. He was constantly acting as the protector of individuals, national organisations and republics as a whole. The leaders of the Soviet government, especially Stalin, also accounted him due attention.

But while appreciating him as a tireless activist and a gifted theoretician and coordinator, officials nevertheless treated him with caution. To a certain extent, we have already mentioned Lenin's respect for him. Here it would be useful to refer to Sultan-Galiev's written appeal to Lenin dated 7 August 1919, in which he complained that Lenin had never agreed to a meeting in person, while Zaki Validov, Musa Bigiev, and Indian activist M. Barakatullah all enjoyed free access to him.

Letter to V. Lenin to Request an Audience on August 27, 1919

Dear Vladimir Ilyich,

I am one of the key initiators of and active participants in the struggle against Islamic bourgeois organisations pursuing a policy of accommodation in the Soviet Russia.

The elimination of the All-Russian Islamic Military Council, the All-Russian Islamic National Council, and the National Parliament of Muslims in Inner Russia at a time when they posed the threat of turning into active oppo-

nents of Bolshevism is my key merit as a revolutionary.

These institutions were abolished during the revolutionary struggle at the first stage of the October Revolution, so decrees on their abolition were not issued until it had taken place, when the petite and large Muslim bourgeoisie that had been in opposition to Bolshevism had finally been suppressed. The fact that the leaders of the revolutionary movement Muslims in Inner Russia have not been honored by an audience with you after the death of Mullanur Waipitov, while Islamic nationalists (Z. Validov, Barakatullah, Musa Bigiev, and others) enjoy free access to your office, hurts me and my Tatar communist colleagues.

I believe that this note of mine will persuade you to receive me and hear me out in person.

I am more entitled to this than Z. Validov, M. Bigiev and others, if even for just the sole reason that you have never received me.

Please receive me once and only once, and I will never bother you again.

Yours truly,

Chairman of the Central Islamic Military Board, Commissar for Muslims in Inner Russia, Member of the Revolutionary Military Council of the 2nd Army M. Sultan-Galiev' [Sultan-Galiev, 1998, p.197].

One possible reason why Lenin would not receive Sultan-Galiev was because of Stalin, who had apparently been providing corrupted information on him. The fact of the matter is that Stalin envied Sultan-Galiev's exceptional abilities and had been seeking incriminatory evidence against him, in particular with the help of E. Stasova. However, he was soon able to overcome his artificial isolation from Lenin. After about a month after his letter, Lenin agreed to a meeting with Sultan-Galiev.

The Secretary of the Central Committee E. Stasova was the first to develop a suspicious attitude towards Sultan-Galiev because of his active involvement in negotiations between the Soviet government and Little Bashkortostan. Sultan-Galiev was suspected of being in collusion with Z. Validov. It remains unclear what Stasova's ultimate contribution to this matter was, but Lenin developed a mistrust for Sultan-

Galiev, which as we have already mentioned, manifested itself during the establishment of the Tatar Republic. They followed him closely and made reports on him.

Mirsaid Sultan-Galiev was dissatisfied with the policy of the CC WPP (B) regarding eastern republics, especially in terms of the establishment of the USSR, when the autonomous republics found themselves deprived of rights. He wanted rights equal to those of other Soviet republics and a higher status for them. He therefore criticised Stalin many times in letters and notes to his associates. Part of them were intercepted as evidence, which to quote his friend and associate Firdevs, consisted of 'two idiotic letters'. But just a few words said to Stalin in the wrong tone were enough to make the evidence come into play. Sultan-Galiev was arrested. His expulsion from the party as an anti-party and anti-Soviet supporter followed on 4 May 1923. The letter in defense of M. Sultan-Galiev by the government of the Tatar Republic delivered to Zinovyev, Kamenev, Trotsky, Bukharin, Radek and Kuybyshev had no effect. The 4th Meeting of the CC WPP (B), which was attended by key political figures of the national republics, was summoned to criticise Sultan-Galiev in public.

Members of the Regional Committee of the CPSU(B) met in Kazan on 19 July 1923 to discuss the outcome of the 4th Meeting. They sat for three days and 130 people were present. The Chairman of the Tatar Emergency Committee S. Schwartz presided over the meeting.

The Secretary of the Regional Committee D. Zhivov began his report as follows: 'It is a common fact that M. Sultan-Galiev represented the Tatar Republic in Moscow, exercised certain powers on our behalf, enjoyed our trust, was intimately associated with our workers, was representative of certain trends in a number of matters, and was treated as the chief of the Tatar working masses, though I find it difficult to say that the latter treatment was just.' To sum it up, he said that Sultan-Galiev had lost everything.

Not a single question followed the report, which was attributed to a lack of 'awareness concerning the contents of the report'. It was

resolved to deliver the shorthand record of the 4th Meeting to party organisations in cantons.

Sh. Usmanov provided the following commentary on the report: 'Comrades! The report by comrade Zhivov fell on us like a bombshell. Our workers had been excluded from the boiling pot of the national question, as we have kept it a secret like a venereal patient conceals their disease. The result of this is the ugly popped abscess among us'. He described the draft revolution suggested by the meeting's attendees as follows: 'The Bureau has suggested a draft resolution on combating the alleged 'Sultangalievshhina' (Sultan-Galiev policy) in Tataria. That would only fuel the flame. It is not only the consequences but the causes that we should combat. The ultimate display of chauvinism and power is the cause of Sultangalievshhina. This must be emphasised. Otherwise, everybody will start calling Sultan-Galiev their opponent.' He also accused Said-Galiev, who had kept the letter by V. Lenin containing, 'in fact, an order that the republics must last long and that Russian comrades should not act as their nurses, but as assistants of local communists' without referring to it. Usmanov rebuked the leaders of the Regional Committee for having taken 'an unusual approach to combating the Lefts and the Rights.' He claimed that the Lefts enjoyed the Regional Committee's pity 'as people aggrieved for no reason and helpless', while excluding 'some of the Rights who are more active in national terms from work by preserving them as reserve political officials of the Red Army'.

Sh. Akhmadiev delivered a similar report criticising Sultangalievshhina. Unlike Sh. Usmanov, he attributed it not to Russian chauvinism, which 'Russian communists, who have extensive experience and a variety of time-tested approaches, can easily defeat'. He reminded the public of the fact that the 4th Meeting expressed regret that 'local organisations had been unable to expose the clandestine organisation', accusing the Regional Community of resembling 'a village community that for some reason cannot catch its own horse-thief until the neighboring village does.' He arrived at the following con-

clusion: 'We would like to request the Regional Committee, which remains the superior party organisation of authority, to straighten up and act in accordance with the resolution of the 10th Party Convention and that of the Party Meeting on the National Question'.

Commentators on the report in one way or another fell into two groups. To quote Yakubov, 'those who defended Sultan-Galiev and those who rejected him'. In the opinion of G. Ibragimov, 'some events, and even the meeting itself, were marked by residual Sultangalievshhina'. He added the following, 'When Comrades Usmanov, Taneev, and Validov spoke, I felt scared. Even though Sultan-Galiev himself has been neutralised through expulsion from the party, hearing some people speak makes you think it is Sultan-Galiev's shadow'. He claimed conviction and coercion as the correct methods for correcting such people.

In fact, M. Sultan-Galiev's supporters were not as pugnacious as G. Ibragimov depicted them to be. For instance, B. Mansurov merely warned the public against discussing the issue through the prism of Said-Galiev or Sultan-Galiev. Enbayev only reminded the gathering that the discussion should not acquire an investigatory form or be held to settle old scores. M. Brundukov also admonished them to not stigmatise all Tatars as Sultan-Galiev's adherents, effectively 'tarring everyone with the same brush just because they have shaken hands with Sultan-Galiev'. The Lefts were only reprimanded for having an opportunity to 'fish in troubled water and capitalise on the case'.

Yet, it was not the Lefts and not the Rights who had been fishing but other forces, who D. Zhivov mentioned in his reply to M. Sagidullin: 'There is nothing for us to be afraid of, comrade Sagidullin. The proletariat party has apparatuses at its disposal which should, do, and will keep an eye on anyone who might harm the power of the proletariat'. This was a warning to anyone who had forgotten that the Tatar Republic was not a shield in the struggle for Tatar people to obtain their rights, and that there were forces out there to cut them down to size.

Bronstein rightfully noted that only 10% of speeches were aimed at ensuring the correct national policy, while the remaining 90% resembled 'either those of prosecution or those of defense'. The Head of the Emergency Committee S. Schwartz summed up the discussion: 'Are comrades who used to be connected with Sultan-Galiev and are currently in power guilty? We cannot say that they are not. It is clearly our duty to declare them guilty. But can we really group them in with Sultan-Galiev? Of course not. Sultan-Galiev is a traitor who betrayed the working class, aligned himself with the basmachi rebels, etc. Our reliable Tatar communists are guilty of having not been watchful enough of Sultan-Galiev. I have no reason to say that they were aware of his plans, but they trusted him too much'. The shorthand record of the meeting contains an intervention: 'We are people of little mark. The Central Committee trusted him more.' However, nobody seemed to hear these words. The final speech was a conviction of local Sultan-Galiev supporters.

Soon afterwards in 1924, K. Mukhtarov, G. Mansurov and A. Enbayev were transferred from Kazan to Moscow as resolved by the 8th and 9th Regional Party Conferences. However, as fate would have it they were to encounter Sultan-Galiev once again. Six years later, they were accused of nationalism and called betrayers of the proletariat. At this point Lefts replaced them in the Tatar administration.

The Russian practice of creating powerless national autonomies also affected the Crimea, which had tight connections to a number of Kazan political leaders, primarily M. Sultan-Galiev and S. Said-Galiev. It was all the more difficult to develop Crimean autonomy because army General Suleyman Sulkevich made attempts at establishing national sovereignty under the aegis of Vrangl during the preceding Civil War. In addition, the Tatar population of the Crimea was as small as 126,000 out of a total 740,000. This ratio had many causes, including the famine that befell Crimea during the Civil War. However, it is largely attributable to the tsarist government's regular measures to force Tatars into Turkey.

Therefore, Tatar activists took efforts to ensure that the Tatar population could return home. They also found the idea of establishing a Jewish autonomous area in the Crimea extremely bothering.

In short, the situation in the Crimea, in particular relations between leaders of the Crimean Tatars, was marked by tension.

Some political forces in Moscow had always found Sultan-Galiev's connection to national republics suspicious. A clear attempt was made to isolate Sultan-Galiev from Tataria and Bashkortostan. The government paid tireless attention to his relations with Crimean Tatar workers. For instance, one document terms Sultan-Galiev 'a pan-Turkist who has been able to worm himself into the Bolshevik party', while referring to Ismail Firdevs, an influential Crimean Tatar Bolshevik, as a person working under his ideological influence.

There was a party called Milliy Fırqa that existed in the Crimea, and its active members joined the Bolsheviks after the revolution. The document read: 'The more influential representatives of Nationals M. Sultan-Galiev and Shagimardan Ibragimov tried to establish ethnic Communist Parties, or a single Muslim communist party, to formalise the double party membership of local National Communists. M. Sultan-Galiev, I. Firdevs, and other Tatar Left Social Revolutionaries were the masterminds behind this plan. When the Tatar, Bashkir and Crimean Republics were being established, the movement for an 'independent national Communist Party' acquired serious form and a conspiratorial nature. M. Sultan-Galiev was the leader, while local executors included I. Firdevs in the Crimea and A. Enbayev in Kazan. Milliy Fırqa members reportedly formed a group in the Crimea headed by I. Firdevs and O.A.G. Deren-Ayerly'.

The document mentions the criminal movement allegedly led by Crimean Tatars that emerged following Vrangl's defeat as one of the reasons for Milliy Fırqa's influence. The movement was also reported to be headed by White Guard officers and associated with clandestine counter-revolutionary groups, 'naturally including M.F'.

Moscow sent a dedicated commission headed by Shagimardan Ibragimov to eradicate 'the uneasy situation in Crimea created by criminal groups'.

The document also expresses an appreciation of Sh. Ibragimov's measures to stabilise the situation in Crimea: 'The arrival of Ibragimov's Commission solidified the agreement between the Regional Committee and M.F. Thanks to their measures, the foundation was laid for eliminating organised crime'. The specific results of the Commission's work reportedly included the signing of a capitulation agreement by major gangs on 3 July 1921, followed by the progressive surrender of criminal groups. The Commission can also boast of a series of measures to ensure agreement between the Regional Committee of the Russian Communist Party (Bolsheviks) and Milliy Firqa.

The document then specifies the facts that did not sit well with Moscow. Firstly, a large number of meetings with Milliy Firqa had been found to have taken place without the knowledge of the Party's Regional Committee. Secondly, Sh. Ibragimov reportedly used his position as a representative of the Central Committee to apply for the position of Chairman of the Council of the People's Commissars of the Crimean Republic. Quite naturally, Moscow could not accept someone so closely associated with the nationalist leaders of Milliy Firqa. Therefore, Moscow chose Said-Galiev, who had been uncompromisingly opposed to Sultan-Galiev.

Sh. Ibragimov's letter to Crimea he wrote on returning to Moscow provides an account of the events. It reads as follows: 'Dear Comrade Ferdevs, Hello and kindest regards. Unfortunately, I cannot inform you in person of everything taking place in Moscow. You will see why from the letter attached hereto. A greeting telegram Stalin did not let me work in Crimea, as Said-Galiev is heading there. I know you will be displeased, but what can I do if the Central Committee wants him to go? I think Said-Galiev will try and say that he attempted to refuse, but he did not. In any event, you should not be apprehensive about his ar-

rival. Comrade Stalin instructed him properly in this respect, and I insisted that not a single worker should be taken along'.

However, Sh. Ibragimov was sadly mistaken to think that he enjoyed trust and confidence. The further text of the letter is indicative of this fact: 'You should know that the Centre is on my side. If you are able to achieve something, I will support you. It is essential that you should try and attract Tatar Communists and the [non-partisans] of Milliy Firqa. They will gradually change their attitude to you.

Keep an eye on Said-Galiev during the regional party conference because there is a lot of incriminating evidence against him available. If he works well, let him work. Please send regular reports. I am looking forward to hearing from you. With communist greetings, Sh. Ibragimov. The letter is dated 31 November 1921. It ended with an expression of confidence: 'Perhaps I'll chance to be in Crimea some day'.

The fact that the Emergency Committee eventually received the letter is suggestive of Sh. Ibragimov's credit. It further stated that members of Milliy Firqa as 'the only group in Crimea capable of operating' had obstructed the Crimean Soviet government headed by Said-Galiev. The Head of the Tatar Section of the Party's Regional Committee Deren-Ayerly, who was shortly afterwards elected Chairman of the Council of People's Commissars, was presented as the main culprit.

The All-Russian Emergency Committee/Joint State Political Directorate deliberately forged a tie between many different people. They were working on a new case of what was known as 'the Moscow Centre', which is described below.

Indeed, new hardships stood ahead for the country as a whole, in particular for the Tatar Republic.

But no matter how difficult it was to carry out the Tatar national autonomy project, regardless of what paltry rights the Tatar Republic had, it was the foundation of the further struggle for national independence.

§ 3. Ideological Struggle Over the National Question in the Country in the 1920s

Damir Sharafutdinov

The ideological struggle over the national issue in 1918–1920 was the most violent part of establishing autonomous republics within the RSFSR and the USSR with union republics. Back in 1917–early 1918, attempts were made at establishing the 'Idel-Ural State' as part of the Russian Federation [News of all-Russian Muslim military shura, 1918, February 26(13)] with reference to the Declaration of Rights of the Peoples of Russia, dated November 2, 1917 and signed 'in the name of the Russian Republic' by the Chairman of the Council of the People's Commissars V. Lenin and the People's Commissar of Nationalities J. Stalin, which declared 'equality and sovereignty for the peoples of Russia' and the 'right of peoples of Russia for free self-determination, including secession and the formation of a separate state' [Dekrety' Sovetskoj vlasti, 1957, No. 29; Obrazovanie TASSR, 1963, pp. 24–25]. The 2nd All-Russian Muslim Military Congresses summoned by the All-Russian Islamic Military Council (presided over by Ilias Alkin) resolved that the declaration of the 'Idel-Ural State' was to be announced on 1 March 1918 [Ilias Alkin, 2002, p. 6]. However, the leaders of the Military Şura were arrested shortly before they started. It is noteworthy that the Military Şura had over 50,000 bayonets at their disposal at the time [Davletshin, 2005, p.162], including 20,000 soldiers and 30,000 officers in Kazan and Ufa [Gizatullin, 2002, p. 103], while the Chairman of the Military Şura I. Alkin enjoyed the trust of such influential military commanders as 37th Corps General-Lieutenant Suleyman Sulkevich, General-Lieutenant Jakub Yuzefovich of the 12th Army, and others who were willing to cooperate with him [Ilias Alkin, 2002, pp. 9, 77–79]. The central and local bodies of the Soviet government did not want to have such a large republic in Russia, capable of influencing general RSFSR policy, which would disadvantage the Bolshevik administration [Gizatullin, 2002, p. 126], while the leaders of the Military Şura lacked the deter-

mination to defend the idea of the state. This prevented the plan of establishing the 'Idel-Ural State' from actually occurring. In addition, it should be noted that to settle such a pressing national problem without spilling any blood was a unique solution both for that period and for later times as well.

As a political measure against participants in the ideological struggle over the national question, the Central Islamic Commissariat under the People's Commissariat developed a draft Regulation for the Tatar-Bashkir Soviet Republic dated 13 March 1918 [National Archive of the Republic of Tatarstan, Fund 2648, File 17, Sheet 6.], which was approved under the Decree by the People's Commissariat of Nationalities dated 22 March 1918 [Izvestiya VCIK, 1918, p. 394; Obrazovanie TASSR, 1963, pp. 39–40]. Several days later, the People's Commissariat issued a decree to dissolve the Xärbi Şura (Military Council) [SARF, Fund 1318, File 25, Sheet 57]. Both documents were signed by the People's Commissar of Nationalities J. Jughashvili-Stalin and the Commissar for Muslims in Inner Russia Mullanur Vakhitov [Mullanur Vakhitov, 1986]. Importantly, both Mullanur Vakhitov and Mirsaid Sultan-Galiev trusted the Bolsheviks and believed in the sincerity of their leaders, with whom they maintained close contact back then. For instance, in his speech to summon the Founding Congress of the Tatar-Bashkir Soviet Republic, M. Vakhitov expressed deep gratitude to comrades Lenin and Stalin for adopting said Regulation and stated that 'when creating the Tatar-Bashkir Republic, the Islamic proletariat will give their lives to protect the gains of the October Revolution' [Ibid., p. 43].

The issue of granting soviet-based autonomy to the Bashkir people was for the most part settled in early 1918 [Raimov, 1952, p. 254]. On 20 March 1919 the Council of People's Commissars and the All-Russian Central Executive Committee approved the establishment of the Bashkir Autonomous Republic under a

bilateral agreement between the Soviet government and Bashkortostan on the Soviet Autonomy of Bashkortostan. On 19 May 1919, the All-Russian Central Executive Committee and the Council of the People's Commissars adopted the Decree on the State Structure of the Autonomous Soviet Bashkir Republic [Raimov, 1952, pp. 255, 324; *Izvestiya VCIK*, 1919, March 23; *U istokov bor'by*, 1997, p. 232; Kulsharipov, 1992, p. 157].

The issue of establishing a Tatar Republic separate from Bashkiria thus made the agenda. M. Sultan-Galiev took an active hand in this matter, as he was strongly assured that the two republics were to unite in the future.

When M. Sultan-Galiev became Chairman of the Central Islamic Committee after his mentor M. Vakhitov died during the Czechoslovakian occupation of Kazan in August 1918 [*Tatarskij e`ncziklopedicheskij slovar`*, 1999, p. 108], he became fully engrossed in Tatar and Bashkir national sovereignty. Well aware of the socio-economic situation in the Ufa and Kazan guberniyas and the affinity between the Tatars and Bashkirs, their almost common language and shared culture, and with the realisation that there was no way to separate the Tatars from the Bashkirs and the Bashkirs from the Tatars without losses, as Tatar villages were geographically mixed with Bashkir settlements, Sultan-Galiev believed the best solution to be the establishment of a united republic, and took various measures to implement the Regulation on the Tatar-Bashkir Soviet Republic approved under the Decree by the People's Commissariat of Nationalities dated 22 March 1918. He did not give up the idea, when the Bashkir ASSR (Little Bashkortostan) was established in March 1919. On 28 November 1919, while speaking on the Tatar-Bashkir issue at the 2nd All-Russia Congress of Communist Organisations of the Muslim Peoples of the East, Sultan-Galiev maintained that it was necessary to establish a Tatar-Bashkir republic that would include parts of the Ufa guberniya, that had been excluded from the Bashkir ASSR and were home to 356,000 Bashkirs and over 1.3 million Tatars [*Obrazovanie BASSR*, 1959,

p. 521]. Following an exhaustive and lively discussion, the congress adopted the resolution by a majority of votes to the effect that the Regulation on the Tatar-Bashkir Republic was to be implemented within borders that excluded Little Bashkiria. As the entire Bashkir delegation voted against the resolution, the issue was referred to the Political Bureau, which resolved on 13 December 1919 that the Tatar-Bashkir Republic shall not be established and party members shall not campaign for it [*Ibid.*].

Another noteworthy fact is that I. Alkin, who was to later become a professor at the Communist University for Workers of the East and be executed by shooting at the hands of Stalinists in 1937, had by that time become Chief of Staff and Deputy Commander in Chief following an ultimative requirement crafted by the Bashkir troops [Murtazin, 1927; Ilias Alkin, 2002, pp. 137, 140–142, 146–147].

The issue of establishing a Tatar Republic separate from Bashkiria thus made the agenda. Sultan-Galiev participated in developing the draft Regulation on the Tatar ASSR as a member of the commission established by the Council of the People's Commissars to develop materials on the establishment of the republic. When the republic was eventually established, he was elected as a member of the Central Executive Committee of the Soviets of the TASSR in 1920 and 1922.

On May 25, 1920, Sultan-Galiev was appointed a member of the Board of the People's Commissariat of Nationalities at a meeting of the RSFSR Council of People's Commissars.

The Central Islamic Commissariat, headed by M. Sultan-Galiev, was transformed into the Tatar Department of the People's Commissariat of Nationalities, when the Tatar ASSR was established. The Representative Office for the Tatar Republic under the People's Commissariat of Nationalities was established within the department. As Head of the Tatar Department, Chairman of the Representative Office for the Tatar ASSR, and a member of the Board of the People's Commissariat of Nationalities, Sultan-Galiev had the opportunity to get a closer look at Stalin, a man whom he respected. It is

most likely that J. Stalin appreciated his expansive knowledge, analytical mind, businesslike character, fidelity to principles, managerial qualities and high esteem among workers of the eastern republics. The more Sultan-Galiev learned about Stalin, the more disappointed he grew; they clearly had different opinions on the critical aspects of national policy. This difference became apparent when they discussed the national question at the time, when the USSR was being formed.

It is now a common fact that Stalin never had any mercy for his opponents. Sultan-Galiev was no exception. In the summer of 1922 Stalin tried to go through the Secretary of the Central Committee of the Party and Chairman of the CSC V. Kuybyshev to kick Sultan-Galiev off the Board of the People's Commissariat of Nationalities. He was even sent to work in Transcaucasia, but was then transferred from the Caucasian Office of the CC WPP (Bolsheviks) to the People's Commissariat of Nationalities and reinstated as a member of the Board upon a petition by the representatives of a number of autonomous republics and regions of the RSFSR in September 1922 [Mirsaid Sultan-Galiev, 1998, pp. 409–410]. He was appointed a member of the Small Board of the People's Commissariat of Nationalities in April 1923.

Speaking on the unification of Soviet republics at the 10th All-Russia Congress of Soviets on 26 December 1922, Stalin said that the USSR contained the RSFSR, the Transcaucasian Soviet Federal Socialist Republic, Ukraine, and Byelorussia, which were the only constituent entities of the USSR. Sultan-Galiev made the following statements at a meeting of the fraction of the Russian Communist Party (Bolsheviks) within the Congress: 1) autonomous republics within the RSFSR and the Transcaucasian Socialist Federative Soviet Republic should be direct constituents of the USSR; 2) it would be reasonable to have an authorised representative of the autonomous republics in the Central Executive Committee and the Council of the People's Commissars of the USSR (he emphasised, that the practice of dividing nations into sons and stepsons was abnormal) [Ibid.].

Other delegates raised the question of upgrading the status of the autonomous republics as constituent entities of the USSR, too. Yet these suggestions were rejected under pressure from Stalin.

During a report on the national aspects of the party and state construction at the 12th Congress of the Russian Communist Party (Bolsheviks) (April 17–25, 1923), Stalin reduced the solution of the national question to establishing a chamber of nationalities along with a Union Chamber in the Central Executive Committee of Soviets of the USSR. A number of delegates to the meeting of the national section of Congress criticised Stalin's report. 'In my opinion,' Sultan-Galiev stated, 'the approach suggested by comrade Stalin does not offer a solution to the national question, so we will have to face this issue once again, unless we address it in a more comprehensive way'. Emphasising, that local nationalism in response to great-power chauvinism was in fact not nationalism, but rather an anti-chauvinist measure, Sultan-Galiev maintained that it was necessary to combat any nationalism manifested as a nation oppressing relatively weak ethnic groups [Mirsaid Sultan-Galiev, 1998, pp. 435–437; *Istoriya VKP(b)*, 1952, pp. 250–252].

Sultan-Galiev's speech put Stalin out of temper. He decided to use the party apparatus and punitive authority—the State Political Authority of the People's Commissariat for Internal Affairs—to finally get rid of him. Eight days after the speech on 4 May, the Party Board of the CSC resolved to expel Sultan-Galiev, whom they had not invited to speak at the meeting, from the party, remove him from any governmental and party offices 'as an anti-party and anti-Soviet supporter', and refer his case to the CPA. Paragraph 9 of Minutes 6 of the Meeting Party Board of the CSC on 4 May 1923 presents the situation as if Sultan-Galiev attended the meeting and even personally commented on the accusations. He was arrested and escorted to the Lubyanka.

Many years later, L. Trotsky in his book Stalin quoted L. Kamenev concerning this episode: 'Remember the arrest of Sultan-Galiev, the former Chairman of the Tatar Council of

the People's Commissars (the position mentioned is incorrect. – *Cr.*), in 1923. It was the first arrest of an influential party member at Stalin's initiative. Zinovyev and I unfortunately agreed to it. It seemed like Stalin got a taste for blood after that...' [Trotsky, 1990, p. 260].

On the same date, 4 May, the Party Board's decision was approved by the Organisational Bureau, and on 10 May the Political Bureau of the CC WPP (Bolsheviks) approved it.

The arrest of Sultan-Galiev left the local administrations feeling perplexed. As soon as the rumor reached Kazan, a group of the republic's senior officials wrote the 'Letter of 39' to the Party Central Committee, stating that if Sultan-Galiev had really been arrested, it was purely a mistake, and asked to release him. When their suspicions were confirmed, Kazan officials wrote a second letter, demanding that the Central Committee release Sultan-Galiev on bail.

All signers of the letter were eventually repressed.

As we have emphasised before, it was Stalin, who summoned the 4th Meeting of the CC WPP (Bolsheviks) with senior officials of the republics and regions held in Moscow on June 9–12, 1923. The 'Case of Sultan-Galiev' was the first issue to be addressed. In his report, composed with the help of Stalin, V. Kuybyshev groundlessly accused Sultan-Galiev of being an enemy of the Soviet government. The meeting was in fact a clash of two trends in the national question, two opinions of the prospective development of inter-ethnic relations.

The public now knew that the case of Sultan-Galiev was considered by the Political Bureau before the meeting, and that the Political Bureau had authorised Stalin to destroy Sultan-Galiev politically.

Stalin was not intending to physically end his life at that time. At that point he thought his political destruction to be more important. To sum up his speech, Stalin said: 'I said it before the meeting and I say it now: comrade Kuybyshev is right to think that he should be released. This person has admitted all of his sins and repented. He has been expelled from the party and naturally has no chance of

returning... He is finished as a political force. What else do we need?' [The fourth meeting of the CC WPP, p. 69].

Stalin wanted to use the case of Sultan-Galiev to teach his opponents a lesson in national terms, and thus reinforce his position. It is the only explanation for the fact that the shorthand record of the meeting was urgently printed as a Top Secret book and delivered to party organisations. Similar meetings were held at the local level to take resolutions, criticising Sultan-Galiev. In particular, one meeting took place in Kazan on 19–21 July 1923. Characteristically, the Head of the Tatar Department of the CPA S. Schwartz was presiding [Tajny' nacional'noj politiki, 1992, p. 294].

Before Sultan-Galiev was released, he was informed of his expulsion from the party and removal from all offices.

The reason why Stalin and his adherents needed to flagrantly violate the effective Party Charter while expelling Sultan-Galiev, falsify the minutes of the meeting of the Party Board of the CSC, and prevent Sultan-Galiev from attending the 4th Meeting on his 'case' is that they wanted to conceal the true motivation behind why they expelled, arrested and accused Sultan-Galiev of crimes he had never committed from other party members [Istoriya VKP(b), 1952, p. 252].

A new case was fabricated in 1928 against Sultan-Galiev's adherents as agents of international imperialism. Sultan-Galiev was once again arrested. Many crucial figures of the Tatar, Bashkir and Crimean Tatar intelligentsia were arrested. The proceedings were even more expansive than the notorious political trials of 1936–1938 in terms of how many people were brought before the court. In 1930 Sultan-Galiev was sentenced to execution by shooting, which was reduced to 10 years in prison after six months. He was set free on parole in 1934. In 1937 he was arrested again, subjected to the cruelest of physical torture and killed on 28 January, 1940 [Neizvestnyj' Sultan-Galiev, 2002, p. 384]. The bloody tyrant Stalin thus destroyed the glorious son of the Tatar people Mirsaid Sultan-Galiev for asserting the

equal rights of all peoples of the country and the improved status of autonomous republics, for wanting to turn the USSR into a union of truly sovereign republic and daring to criticise Stalin's discriminative national policy. Sultan-Galiev's wife and two children also died in Stalin's torture chambers.

M. Sultan-Galiev's close associates—Mikdat Burundukov, Arif Enbayev, Kashaf Mukhtarov, Rauf Sabirov, Shamil Usmanov, Izmail Firdevs and tens of thousands of innocent 'Sultangalievetses'—were repressed and executed by shooting for no reason. However, the ideological struggle over national culture continued in the country even in the latter half of the 1920s.

In an attempt at creating a united front for the ideological struggle over the national question, the Department for Nationalities under the Presidium of the All-Russian Central Executive Committee and Vice Chairman of the Council of People's Commissars of the RSFSR T. Ryskulov summoned a meeting of representatives of ethnic units within the RSFSR on November 12–14, 1926. This came to be known as the Ryskulov Meeting. T. Ryskulov maintained that autonomous republics and regions should be directly included in the USSR.

The meeting revealed a general dissatisfaction with the status of autonomous units within the RSFSR, as their rights had been restricted to those of governorates, and with the fact that they had no influence in the governmental authorities of the RSFSR and the USSR.

The government took measures to prevent ideas of improving the status of republics from spreading. A campaign was initiated to discredit the Ryskulov Meeting as not representative of the opinion of local party organisations and to criticise the suggestion to include autonomous republics in the list of union republics and autonomous regions in the list of autonomous republics, and also to establish a Russian republic.

M. Sultan-Galiev called the meeting arranged by Ryskulov, with whom he shared views on the national question, a nationalist demonstration of dissatisfaction with the na-

tional policy of the Party and the Soviet government [Tagirov, 2005, p. 104].

Many adherents to Sultan-Galiev were rehabilitated following the 20th Congress of the Communist Party of the Soviet Union. However, any attempts at doing the same for the leader of the movement and his closest associates were rejected: 'he has been an enemy, and he will remain one.' In fact, to rehabilitate him would have required the authorities to reconsider a number of historical and theoretical postulates and principles, in other words to 'give up', which would threaten the established perception of the global liberation movement and the prospects of socialist development. Sultan-Galiev's ideas differed radically from the dominant concept, developed by Stalin and his successors. This is why the official party leaders could not accept him.

It was not until 1990 that M. Sultan-Galiev and his associates were completely rehabilitated following a thorough analysis of his multi-volume 'case' by law enforcement authorities. All charges brought against them turned out to be false [SA HPD TR, Fund 8237, Inventory 1, File 12, Sheet 67; Fund 8237, Inventory 1, Sheet 12; News of Central Committee of Communist Party of the Soviet Union, 1990, No. 10, pp. 75–88].

The republic's newspapers and magazines contributed greatly to restoring Sultan-Galiev's reputation—they began to publish works by the repressed leader and articles on him long before he was rehabilitated. As the periodicals were active read, civically conscious, and aware of their responsibility towards society, they were able to bust decades-old stereotypes regarding Sultan-Galiev's personality, and raise public interest for his personal and professional life, the tragic turn it took, and his theoretical legacy. It required not only authors but, most importantly, editors to demonstrate extreme resolution. The disapproving party resolutions, regarding Sultan-Galiev, had not been nullified at that time.

The republic's periodicals published profound articles on Sultan-Galiev and suggestions that he should be rehabilitated by such Kazan scientists as I. Tagirov, B. Sultanbekov,

M. Abdullin, I. Gizzatullin, R. Khakimov, D. Sharafutdinov and others.

The Middle Asian Studies Centre, Oxford University, UK was the first to publish a collection of works by M. Sultan-Galiev in English and Russian in 1984.

The book 'Mirsaid Sultan-Galiev and the Ideology of the National Liberation Movement: A Scientific Analytical Review' by A. Sagadeev (Moscow, 1990) was a milestone in research on the personal and professional biography of this influential member of the liberation movement. The author of the present work published a collection of articles and speeches in cooperation with the famous historian I. Gizzatullin in 1992 [Mirsaid Sultan-Galiev, 1992, p. 518] and a selected works by M. Sultan-Galiev in 1998 [Sultan-Galiev, 1998, p. 720].

So what is the key message of M. Sultan-Galiev's spiritual legacy?

His articles published before 1917 dealt mainly with Tatar culture and popular education, and the national/colonial issue became central to Sultan-Galiev's works in 1918. After studying the matter profoundly, he presented a hypothesis on the relations between the oppressing peoples and those oppressed that was of great theoretical and practical importance in late 1917–early 1918. He revisited the subject many times in later articles and speeches to expound on the issue. He viewed peoples in colonies and semicolonies, in particular the most disadvantaged Muslim peoples in the East, as those under oppression. He also included non-Russian peoples in the Russian Empire, among which there were Tatars and Bashkirs in the category. The oppressors were metropolitan peoples, who got rich on the sweat and blood of the people they colonised. M. Sultan-Galiev indirectly classified the West European working class as a consumer of the riches, that the imperialist bourgeoisie had obtained by exploiting the colonies as the oppressors. This statement underlay another theory by Sultan-Galiev of no less importance: the West European proletariat was not ready for the socialist revolution, as capitalists in those countries had been able to meet their workers' economic re-

quirements at the cost of the colonies, and thus nip revolutionary stirrings in the bud. Sultan-Galiev presented his theory at a time when Bolshevik leaders were delusionally expecting the West European proletariat to start a socialist revolution in the nearest future. According to Sultan-Galiev, the oppressed East was prepared to revolt provided its colonial dependence was eliminated. Therefore, he attached great importance to an anti-colonial revolution at the national level. He maintained that a nation aspiring for independence and sovereignty had no right to split into classes and parties, while united national revolutionary democratic forces can ensure victory.

Sultan-Galiev believed it untimely and unacceptable to release socialist slogans and ideas of class struggle at the anti-colonial revolution stage in order to prevent national unity, as such slogans and ideas could turn the national bourgeoisie against the revolution and cause them to ally with their mother countries, which would bring about a rise of individualism in the colony and eventually defeat the revolution.

The concept of united national revolutionary-democratic forces was a valuable contribution to the anti-colonialist and anti-imperialist struggle. This is why Sultan-Galiev is renowned as the father of the revolution in the third world.

Sultan-Galiev had a special opinion of the seemingly axiomatic definition of imperialism suggested by Lenin. He did not agree that imperialism as an economic and political category was confined to the monopolist stage of capitalism. On the contrary, he associated it with capitalism as such, regardless of the stage of its development, and believed it possible, both in theory and in practice, that a socialist or communist imperialism would develop with a colonial economic system (the exploitation of national peripheral territories as a source of industrial raw material for central areas, underdeveloped, if any, plants to process local raw materials on the marginal areas of the country, their complete reliance on the centre for the supply of critical industrial goods, food, etc.).

It hurt Sultan-Galiev to acknowledge, that the victory of the revolution and the establishment of the USSR had been unable to put an end to Russia's imperialistic development.

This is why, being strongly assured that the empire as such was doomed to collapse, he viewed the USSR as an empire, albeit modified, and predicted the unity as unstable and bound to collapse one day. As we have already mentioned, the country's hypocritical national policy brought about the ranking of ethnic groups and their state formations.

The resulting inequality was formalised in the USSR Constitutions of 1924, 1936, and 1977. Only the union republics were entitled to secession from the USSR, which was virtually impossible in practice. Autonomous republics and autonomous national regions and districts were deprived of important rights and economic, educational and cultural opportunities. Instead of settling ethnic differences, the government suppressed the disturbances they caused. Stalin's unsound national policy, which his Bolshevik successors maintained, was one cause of the dissolution of the USSR, civil wars in a number of republics, and the tragedy in Chechnya.

Sultan-Galiev doubted the core of Marxism—the concept of proletarian dictatorship. He maintained that to replace the bourgeois

dictatorship with that of another class, meaning the proletariat, was no good. Time has proven him correct in this belief.

Sultan-Galiev's ideas have spread globally. They are especially popular in countries that at one point joined a national liberation movement in order to break the chains of colonial dependence and have already succeeded.

Tatarstan celebrated the 100th anniversary of M. Sultan-Galiev's birthday on a large scale on 12th of June in 1992. The celebratory activities in his honour clearly indicate how important this historical event is for sovereign Tatarstan. A square in the centre of Kazan was named after M. Sultan-Galiev to celebrate the anniversary. A memorial stone was also erected on Sultan-Galiev Square, where a monument to the famous hero of the anniversary is to eventually be built.

To sum up, the comprehensive and unbiased study of ideological struggles over the national question in the 1920s is not only of scientific interest, but also has practical implications in terms of drawing a distinction between the positive and negative experience of implementing national policy during the formation of truly federalist relations in Russia. Even though these questions were first raised back in the previous century, they will determine Russia's development throughout the 21st century.

§ 4. The Establishment of the TASSR and Solving Indigenisation Issues

Zubarzyat Garipova

After the Tatar Republic was granted autonomy in the Decree of the All-Russian Central Executive Committee and the RSFSR Council of the People's Commissars dated May 27, 1920, it had to struggle for its autonomous rights. The introduction of the Tatar language to records management, and ensuring that the Tatar people were represented in Soviet institutions and had access to schools with instruction in their mother tongue, were objectives of primary importance. This was achieved under the Decree of the TASSR Central Executive Committee and Council of the People's Commis-

sars dated June 25, 1921, according to which Tatar was established as an official language. The introduction to the Decree contained the following excerpt: '...The Tatar Central Executive Committee and the Tatar Council of People's Commissars have resolved that the Tatar language shall be introduced as compulsory to all Soviet public institutions' [Kul'turnoe stroitel'stvo v Tatarii, 1917, p. 169].

It should be noted that even before the Decree was adopted, the republic's Council of the People's Commissars issued a resolution on May 24, 1921 to instruct the People's Commis-

sariat for Education to establish courses on the Tatar language in Kazan, along with cantons and volosts within three weeks [National Archive of the Republic of Tatarstan, Fund P-732, List 1, File 6, Sheet 45; Fund P-3682, Inventory 3, File 436, Sheet 44]. Such courses were soon established even despite the famine. The Tatar intelligentsia had also raised the question of translating records management documents into Tatar in periodicals before the Decree was adopted. For instance, in July 1920 the famous writer and politician Shamil Usmanov declared at a meeting of the Provisional Revolutionary Committee that a dedicated system shall be introduced to receive telegrams in Tatar. Another measure to be taken was the indigenization of the republic's judiciary authorities. The Tatars were not allowed to speak and appeal to justice agencies in their mother tongue until the TASSR was formed. None of the 83 judicial sub-districts was Tatar-speaking in 1920–1921. Then a minor change took place in 1922 when three Tatar investigation sub-districts were established. The central magazine *Novy' Vostok* (New East), run by the Scientific Association for Oriental Studies, reported that the judicial system had been 2.8% indigenised in 1922; the percentage increased to 22.8% in 1924, 30.8% in 1926, and 38.5% on July 1, 1927 [Oshhestvlenie politiki korenizatsii, 2009, p. 41].

Deliberate attention was paid to the state apparatus, which were unfit to meet Tatar needs at that time. The percentage of Tatar officials in the republic's central institutions was

as small as 7.8% as of January 1, 1921 [Rezolyuciya, 1924]. The bureaus, plenary sessions and secretariats of the Tatar Party Regional Committee and the Tatar Central Executive Committee issued a series of resolutions aimed at implementing the Indigenisation policy and eliminating any shortcomings or mistakes in it. The growth percentage of the number of Tatar senior officials was monitored; institutions had to provide reports every six months. It must be admitted that the results were significant. For instance, the percentage was 18.6% as of October 1924, 20% after 6 months, meaning on April 1 of the same year, and 22.4% in September 1925. However, the share of Tatar senior officials and industrial managers in Kazan was somewhat smaller than the average figures for the republic: 14.1% as of September 1, 1924, 17.1% as of April 1, 1925, and 17.5% as of September 1, 1925.

See Table 2.1 for more details on the extent of Indigenisation in the administrative apparatus as of 1925 [National Archive of the Republic of Tatarstan, Fund P-732, Inventory 1, File 766, Sheet 20].

Of great interest in terms of dynamic development is the information we have on indigenisation in the Central Executive Committee and the Council of the People's Commissars as well as the People's Commissariats of the Tatar Republic. For instance, a total of 40 employees worked in the TASSR Central Executive Committee in 1936. Tatar senior officials accounted for 17.5%, and senior executive officers and

Table 2.1

Condition of control apparatus indigenisation in TASSR in 1925

	Absolute	%
Number of volosts providing services in the Tatar language	42	33.6
Number of central institutions switching to the Tatar language	138	2.2
Number of executive officers in Soviet administrative offices of Kazan	138	2.2
Number of canton executive officers	319	31.0
Number of technical employees	612	17.0
Number of volost ranking officers	208	49.3
Number of technical employees	713	34.5

experts held a share of 25%. The Council of the People's Commissars employed a total of 98 people. Tatar senior officials accounted for 3%, and senior executive officers and experts held a share of 10%. The percentage of Tatar senior officials in all ten People's Commissariats was 2.3% to 20.1%, and senior executive officers and experts held a share of 5.21% to 40% [Osu-shhestvlenie politiki korenizacii, 2009, p. 247]. A comparison of the 1936 and 1926 statistics yields the following general findings: the Tatar share of the central apparatus increased from 18.7% to 38.5% over 10 years, that of senior officials increased from 23.4% to 47.1%, and that of senior executive officers and experts from 14.9% to 36.1% [SA HPD TR, Fund 26, Inventory 1, File 202, Sheets 159–163]. However, the total percentage (38.5) was somehow behind the figures for the general population, if we take into account that the share of indigenous people there was 52%.

The authorities of the Tatar Republic were determined to ensure service in their mother tongue for the Tatar population. In particular, the Central Commission for the Implementation of the Tatar Language was responsible for carrying out this policy. To quote Vice Chairman of the Presidium of the Central Executive Committee of the TASSR Sh. Shajmardanov, the general line originally consisted of the following aspects: a) 'the aspiration to ensure complete and real equality between the Tatar and Russian languages in institutions and companies; b) to implement active records management in the mother tongue of the majority of service consumers while preserving passive records management in the language of the minority; c) introducing the Tatar language at once in institutions dealing directly with the lower class masses', and they remained the main policy of the Central Commission for the Introduction of the Tatar Language even in the latter half of the 1920s [National Archive of the Republic of Tatarstan, Fund P-732, Inventory 1, File 766, Sheet 20].

The Tatar language was introduced to institutional records management in the 1920s. The basic laws, i.e. the Criminal, Civil, Criminal Procedure, Land and Labor Codes were

translated into Tatar. Court trials attended by Tatars were held in Tatar. The measures taken under Decree by the TASSR Central Executive Committee and Council of the People's Commissars dated June 25, 1921 gradually yielded results: the ratio of elected bodies from village and volost soviets to canton executive committees and the central authorities of the Tatar Republic was almost completely even. The Tatar language was being gradually introduced in lower-level Soviet apparatus, village soviets and volost executive committees. The Tatars were also receiving wider representation in the republic's educational and administrative institutions.

The Tatar inflow to Kazan increased in the 1920s. While in 1920 Tatars accounted for 21.9% of the city's population, in 1926 the percentage was 25.7% (44,000 people).

There is documentary evidence that the republic took effective measures to engage Tatars in industrial production and increase their population. However, the eagerness sometimes resulted in unsound sentiment, often causing some portion of Russian workers to resist openly. For instance, a 1926 report by the Tatar Regional Committee of the Party states that Tatar applicants for work often have to face excessive requirements that they are clearly unable to meet— apart from professional knowledge, they had to speak foreign languages and have a long record of practical service. For instance, the Gostorg (State Office for Export and Import) employed only 1 Tatar for a technical position out of the total 39 workers. The El'vodtram trust company rejected candidates suggested by the Central Commission on the Implementation of Tatar Language on various pretexts. A 1928 resolution by the Upper City Regional Committee of the Party in Kazan attributed the low number of Tatar workers at six enterprises, namely the Vakhitov Plant, the Krasny'j Put' (Red Way) Plant, the Krasny'j Vostok (Read East) Plant, Kazan and Yudino Railway Stations, and the State Agency for Steam Navigation, to insufficient indigenisation in their management [SA HPD TR, Fund 15, Inventory 1, File 1347, Sheet 44; Inventory 2, File 501, Sheets 27–28].

A report to the Nationality Department under the Presidium of the All-Russian Executive Committee by the Tatar Central Executive Committee dated 1931 mentions the regular rejection of Tatar applicants by the Kazan Sowing Factory, which had an insufficient number of employees. The document reported personal affronts and physical altercations based on ethnic grounds at the Silicate Plant of Kazan and the Clothes Factory of Naberezhnye Chelny. Group confrontations between the Russian and Chuvash took place in the Chistopol District. Female Tatar students were subjected to hounding and neglect, when skilled workers refused to teach them at the Needle Clothes Factory of Naberezhnye Chelny [National Archive of the Republic of Tatarstan, Fund P-732, Inventory 1, File 1931, Sheets 222–223].

The situation is partly attributable to insufficient governmental measures to raise awareness concerning the nature of indigenisation and its importance for the country's economic development. The resolution by the Tatar Regional Committee of the CPSU(B) dated March 20, 1931 included that the party group of the Tatar Soviet for the People's Economy had not taken efficient measures for the indigenisation of the management apparatus and had no plans for doing such, suggesting that a schedule should be developed in order to increase the percentage of Tatars in the apparatus compared to the Tatar share of industrial workers [SA HPD TR, Fund 15, Inventory 2, File 956, Sheet 48]. It should be noted that such schedules were developed, and practical measures were put underway. It would be a mistake to say, however, that nothing impeded this from running smoothly. In 35 Tatars accounted for a small percentage (35%) among large-scale industry employees. But it was still an improvement compared to 15.5% in 1921.

In general, the republic's government did not hesitate to rely on its autonomous status to take consistent and constructive measures to

implement indigenisation. The principles of indigenisation still applied in the 1930s, even in face of the repressions that marked the period of Great Terror. Inferior authorities remained accountable to their superiors, and institutions and enterprises continued to provide statistics on the number of Tatar employees on request in 1937 and 1938. The Tatar Central Executive Committee also occasionally heard reports by the people's commissars on the percentage of Tatars and the provision of public services in Tatar, which increased the executors' sense of responsibility. The republic's government took a notably reasonable approach to indigenisation, which they viewed as a general improvement to Tataria's economy and culture. The steps taken towards reconstructing agriculture were indicative of the government's awareness of how backwards the Tatar peasantry was, and thus primarily dealt with land management, settlement establishment, agricultural cooperation, and the allocation of credits, seed grains, and machines to Tatar and other non-Russian areas with adherence to the principle of support for the poor.

In industry, indigenisation was chiefly implemented in the form of training for Tatar and ethnic minority experts, skilled workers and academic employees. It was generally aimed at ensuring growth for the Tatar and ethnic minority portion of the population in excess of the number of Russians until their economic and cultural levels were equal, as well as engaging the masses, which tsarism had turned backwards, in building socialism. Many ethnic policies in the republic pursued this goal.

Nevertheless, Tatar was in fact rarely used in administrative and judiciary institutions in the 1930s, and officials ceased to study Tatar. The growth of the percentage of Tatar officials stabilized. As the totalitarian trend gained momentum, ethnic-oriented policies were scrapped.

CHAPTER 2

The Socio-Economic Status of the TASSR and the Tatars in 1917–1940s

§ 1. The Soviet Policy of Dismantling the Proprietary Classes

Irina Gataullina

A systematic approach to the analysis of historical phenomena, and viewing the subject within the framework of the study with specific thematic, chronological, and territorial limits against a wider backdrop of issues and events, is a crucial methodological requirement. It is thus important to remember that the subject represented in the title is part of a fundamental historiographic problem of military communism—an ideology predetermined by governmental economic regulation in 1914–1917 and resulting from the Bolshevik's utopian idea of how the global revolution might be started. Indeed, the military communist context allows us to view the policy of dismantling the proprietary classes¹ through the lens of problems in the country's socio-economic development and controversies in the public conscience. This policy, written by the new government's attempt at achieving doctrinal goals with a dramatic outcome for the country (enormous financial and human losses), raises the issue of the social 'cost' of transforming a traditional society into an industrial one. It is more important here to see whether the government can make responsible decisions to determine the country's historical choice, than to find the rights and wrongs of the matter. It was the Bolsheviks who implemented the policy of dismantling the proprietary classes, but are they really the only ones to blame for the dramatic outcome of the revolutionary process in post-October Russia?

¹ In the opinion of leading specialist of the IRH RAS A. Sokolov, the current concept of classes needs to undergo a methodological rethinking to reflect actual historical content [see: Sokolov, 2002, p. 104].

Why was the radical avant-garde, who sincerely aspired to establish a fair social order, unable to put up with the opposition, and why did thing take a turn towards totalitarianism by suppressing the 'old guard' and later destroying them?

In order to get insight into the logic behind historical development after October 1917 and provide an unbiased assessment of the policy of dismantling proprietors and their property, we should explore its origins with the Provisional Government during the period of diarchy, which gained ground with the Bolsheviks after they came to power and finally yielded their 'bitter' fruit in 1918–1921.

Taking into account Menshevik historian N. Sukhanov's opinion that the policy of military communism was introduced as soon as a wheat monopoly was established in Russia just after the February Revolution, we have to admit that the Provisional Government, at least for personal safety, had to regulate economic relations using coercion like European countries, who along with Russia found themselves embroiled in World War I. While in Germany governmental regulation was implemented immediately as a 'forced economy' in all branches of production through price fixing and the standardised allocation of not only industrial raw materials, but also direct human consumption, through the use of cards and daily allowances, Russia delayed these measures until they were needed in the most radical way. As Russian philosopher P. Chaadayev rightfully described Russia's complicated historical path, 'what other nations turned into habit and instinct, we had to hammer into ourselves' [quoted by: Nashe Otechestvo, 1991, p. 41]. The root cause of this is Russia's

belated transition to capitalism. World War I revealed the immaturity of its bourgeois relations, which meant that neither the bourgeoisie nor the government had learned the rules of using market mechanisms. This appears to be the reason why Russia's economy, which had become the world's largest crop exporter after the rise of 1914, relapsed into an imbalance of surging prices, troubled transport, and backdoor sales after only five months of war. Under such conditions, the main concern of the bourgeois landlord government was to drastically reduce large landowners' right to use their commodities, so it introduced the mandatory supply of crops to the treasury. The Provisional Government demonstrated its awareness of the problem and willingness to control all the country's crops except for food and housekeeping stores by issuing a decree on a state monopoly in the crops trade on March 25, 1917 according to the principles of *Prodrazverstka*, which was introduced in the autumn of 1916. However, the measure required a governmentally regulated market of industrial articles, for which purpose the Menshevik Social Revolutionary Executive Committee of the Petrograd Soviet passed a resolution on 'the government's regulatory participation' in nearly all industries in terms of raw materials, finished goods, and pricing. Yet the pressure the industrial community exerted in the government prevailed over the situation. The Provisional Government never adopted a programme for socio-economic regulation, which suggests its preference for populist actions, meaning when certain proprietary classes are supported to the detriment of national interests.

The bourgeoisie's uncompromising measures and unawareness of the temporary and forced nature of the governmental economic regulations laid the foundation for the advent of a political force that would have to use the hammer of military communism for governmental regulation.

This was logically caused not only by the liberals' blatant irresponsibility, but by the perilous self-assurance of the Bolshevik government, which free of any bonds of 'respect for sacred private property', formed a new so-

cial order in the context of property, aspiring to ascend beyond the limits of a commodified society and excluding the issue of governmental regulation as one of secondary importance from the scope of objectives related to the socialist revolution, to which the Bolshevik attached greater significance.

However, the dormant socio-economic and political problems of the pre-revolutionary period that had resurfaced in post-October Russia made the problem of governmental regulation even more pressing. Largely restricted to external causes (World War I) during the period of diarchy, the problem acquired an internal nature after the October Revolution. First and foremost, the food supply of the population continued to deteriorate severely enough to derail the government's benevolent intentions.

The ubiquitous Bolshevik slogans of peace, land and freedom were, indeed, widely recognised and welcome, and they ultimately did contribute to Russia's modernisation and integration with contemporary global industry. Yet the only way to keep promises closely associated with narrow class interests was through proletarian dictatorship, which V. Lenin defined as the primary form of class struggle during the stage of transition from capitalism to socialism [Lenin, 1970, pp. 14–15]. As the economic crisis gained momentum, the Bolsheviks were urged to resort to extreme coercion and violence.

The first manifestation of the Bolsheviks' political ultimatism was their dissolution of the Constituent Assembly, which democratic forces in post-October Russia characterised as 'the most dreadful crime against the Revolution'. By ordering soldiers to fire upon workers and officials participating in peaceful demonstrations in Petrograd and Moscow, the new government demonstrated its political intolerance, which consequently caused public resistance, followed by a civil war. V. Lenin said at the 3rd Congress of Soviets on 11 January 1918, 'Our response to any accusations of initiating a civil war is as follows: "Yes, we openly declared what no government had been able to declare... Yes, we waged war on the exploiters, and continue to fight' [quoted by: *Nashe Otechestvo*,

1991, p. 41]. It would be wrong to say, that the Bolsheviks neglected the importance of solving the problem of governmental regulation during the first months of the revolutions. However, the priority of narrow class interests and the complexity of the situation made it both crucial and urgent to 'suppress the resistance of the proprietary classes' to resolve any economic and food issues. The government's political orientation was met with the logical public response. In his diaries 'Cursed Days', I. Bunin copied verbatim one street dialogue between the 'formers' and representatives of the 'hegemon'. A worker's reply to the question 'who is better off with the Bolsheviks? Everyone is doing worse, especially us, the people', was as follows: '...We'll slaughter you all.' The soldiers agreed, 'Right you are!' and walked away [Bunin, 1988, p. 401]. This bitter tone is suggestive of despair behind the wrongful acts of workers and soldiers, even to the extent of physical extermination, though they were indifferent to the outcome. The moral indifference of the population caused by failed expectations, disorder and deprivation was the foundation the government laid to later justify civil slaughter.

Before political opponents of the Constituent Assembly were shooed off stage, the Bolsheviks embarked on a programme to eliminate the economic base of the proprietary classes as soon as the bourgeois government was subverted. Capitalist property faced its end in Russia on November 20, 1917, when the monetary funds of the Petrograd State Bank were expropriated. Private banks were nationalised on November 17 on V. Lenin's order. In January 1918, all securities in the form of shares were canceled, and all governmental loans of the tsarist and provisional governments were canceled in February. A campaign was launched at the same time to confiscate and nationalise bourgeois businesses. All state-owned factories and plants became property of the new government by default. The nationalisation of private enterprises began in November–December 1917, when Russia's largest industrial plants were confiscated: the Putilov, Neva, and Sestroretsk Plants, and a number of factories in the Donbass and Urals. The decree on the nationalisa-

tion of industry dated January 1918 put an end to attempts of commercial fleet owners to sell their plants to foreigners. The final blow to property came on June 28, 1918, when all large industrial plants and private railways were to be transferred to the Soviet government with no monetary retribution under a decree by Lenin. A week earlier, the government confiscated all private plants employing over ten workers (over 5 for those with a mechanical engine).

The industrialisation of industry acquired its own special form in non-central regions. For instance, it had a slower pace in the Tatar ASSR compared to industrially developed regions because of the active resistance of the proprietary classes and fierce opposition from the Menshevik Social Revolutionaries in local soviets. Many property owners from Chistopol and Yelabuga managed to flee abroad, while small-scale industry was able to avoid complete governmentalisation [Rabochij klass Tatarii, 1981, pp. 110, 112]. However, the nationalisation rate was higher than the country's average in the Tatar Republic starting in autumn of 1918. Around 60.9% of the total number of businesses alienated had been nationalised by that time, compared to 38.4% across the country [Ibid., p. 112].

Therefore, the Bolshevik government was able to implement their programme and eradicate private property in industry as the economic foundation of the proprietary classes in its entirety by relying on its political doctrine, which was guided by the principles enshrined in the Declaration of Rights of Working and Exploited People, which had been rejected by the Constituent Assembly but approved by the 3rd All-Russian Congress of Worker, Soldier and Peasant Deputies. It was expected that centralised control would improve workers' financial situations, increase their salary, and enhance their involvement in production management. However, the nationalisation campaign resulted in an industrial collapse, while the introduction of governmental grants in fact meant no funding at all. The government kept increasing emissions; inflation and unemployment were on the rise. The situation was so desperate that not only the general

population but governmental leaders repeated the slogan 'bread and more bread!' In February 1918 V. Lenin demanded terror and summary executions on the spot for peasants, who failed to supply foodstuffs on time [see: *Nashe Otechestvo*, 1991, p. 46]. It seems natural that in the same month the All-Russian Executive Committee adopted the Fundamental Law of Land Socialisation, under which peasants were to receive 150,000,000 desyatinas of land and be relieved of any bank debts and land payments according to the Decree on Land. However, the government supported poverty conditions when allocating this land, thus creating a resistance movement among wealthy peasants, who retained their crops. On March 26, 1918, the Council of the People's Commissars issued a decree on the management of commodity exchanges in order to solve the food problem in town and regulate free trade. But the measure proved inefficient—commodities were used not as exchange items but as a reward for the poor, who contributed to getting crops from wealthier households. The special instruction to the above decree adopted by the People's Commissariat for Food prohibited exchange with individual peasant households, as well as purchasing crops from organizations. Volosts and districts were only entitled to receive commodities, if they provided the specified amount of crops. The poor were the primary providers of agricultural services.

'Six months of peasant self-management in the country,' as some authors termed the period from October 1917 to the summer of 1918, caused a social resistance there and paved the way for the intensely repressive decrees of May and June 1918, which introduced food dictatorship, Committees of Poor Peasants, and food groups. High-priority class interests overshadowed the stabilising significance of commodity exchange. As a result, the new government was facing the issue of a crop monopoly that the Provisional Government failed to settle in 1917, a year later. Incapable of demonstrating any political will, the bourgeoisie left no choice for the Bolsheviks. The latter had to rely on 'using military force in case of resistance to the requisitioning of crops and other

foods.' Social struggle in the country continued on what was experienced in towns. The Soviet Menshevik Socialist Revolutionary opposition criticised food dictatorship and suggested that the government rely on representative peasant Soviets and embark on a programme to restore democratic values and democracy as such. They believed that the new convocation of the Constituent Assembly would be able to solve the issues as such. Yet no major changes seemed possible at that stage of institutional decay. The critical transformation had been too heavily delayed and too painful, since the time of the bourgeois government to hope for a peaceful settlement. The Czechoslovak Corpus rebelled at the end of May 1918 as a signal for all anti-Soviet forces in the east of the country to unite, thus initiating a standard civil war, involving great masses of the population taking part in the military action along its newly formed fronts.

Both governmental leaders, such as L. Kamenev, A. Rykov, and Yu. Larin, and Mensheviks R. Abramovich, V. Alter, and A. Beylin were opposed to food dictatorship. However, no open resistance to the Bolsheviks was apparent until the left Socialist Revolutionaries mutinied at the 5th All-Russian Congress of Soviets on July 6–7, 1918. In order to legitimise their actions, the Bolsheviks approved the first RSFSR Constitution at the same convention of worker, soldier, and peasant deputies to deprive representatives of the former proprietary classes, clergymen, police officers and agents of the right to vote, and consequently, participate in the country's politics. By introducing the priority of worker rights over peasant rights, the Bolsheviks formalised a system of elections that were exclusionary, indirect, and unequal. The class nature of the civil rights established in the Constitution were harshly criticised. In particular, the Menshevik N. Rozhkov described it as an anti-democratic and even reactionary law. He wrote that 'the republic is a socialist one. So it is therefore strange that its Constitution contains many things, which we have known since tsarist Russia. ...This socialist republic does not even have universal and direct voting.

The opposition is silenced and expelled from all authorities. All freedoms have been abolished. Blatant terror is plaguing the country. It retains all the features of the old order' [quoted by: Volobuev, Ilyaschuk, 1991, p. 48].

Thus, declaring the introduction of political freedoms like the right to free speech, print, assembly, meetings, and marches, which were all in fact being violated, Russia's first Constitution was clearly representative of the deep confrontation between the government and society. Committees of Poor Peasants could only withdraw the tiniest portions of food from peasant households in the summer of 1918. The 30 million pood of crops collected in the autumn came at the cost of mass disturbances and waves of peasant rebellions. After realising the absurdity of the situation and the need to relieve the pressure exerted by Committees of Poor Peasants, V. Lenin changed his tactics for the peasantry in early August 1918. Despite of the new policy aimed at an agreement with medium-income peasants, the country continued to derail state procurement because of the difficult crop exchanging procedures for industrial commodities, most of which came to town along illegal trade channels.

In the context of money emission, when the disparity between income and expenditures on a budget is too dramatic, the illegal exchange of commodities is critical for the population. According to a famous economist of the time named S. Pervushin, extensive studies yielded irrefutable evidence that the population received most of its food from the 'free market', of which not only common people, but also governmental institutions took advantage [See: Pervushin, 1921, p. 2]. However, the government attached greater importance to the struggle for pure class principles at that time. Therefore, after issuing another decision to abolish, what had remained of private trade on November 21, 1918 and vesting the functions of state procurement and providing the population with personal and household products to the Commissariat for Food, the Council of the People's Commissars struck a blow at profiteering as the people's only means of sustenance. The implementation of all these adopted de-

crees affected the Russian population dramatically. The activities of the Committees of Poor Peasants and the military campaigns waged against the country to alienate over 15 million desyatinas of land from wealthy peasants had especially tragic outcomes. The decree on the requisition of cereal crops and fodder dated January 11, 1919, was a logical extension of food dictatorship. By specifying the amount of crops required, it somehow restricted the government's demand and was formally interpreted as a concession. However, opponents of the Bolsheviks had a much different perspective. For instance, N. Rozhkov maintained that the Bolsheviks should have begun the transformation of their economic policy by canceling food dictatorship completely. 'Your entire food policy,' he wrote to Lenin on the same date as the decree, 'hinges on an incorrect foundation... Preserve your supply apparatus and continue to use it, but do not claim monopoly for any food, even wheat... abolish any barrier detachments, which you should even do by force if necessary... You cannot turn a 20th century country into a group of medieval, isolated local markets' [see: Simonov, 1992]. V. Lenin replied that the Bolsheviks did not doubt the success of the military communist policy, which was to lead directly to socialism [Ibid.].

Not only Mensheviks criticised food dictatorship, but also trade unions, which had been participating in the requisitioning policy, were aware of its negative effects, and were opposed to it. Yet advocates of military communism were relentless in their approach. N. Bukharin and L. Trotsky followed V. Lenin in encouraging relentless terror, demanding show trials with severe sentences, and signing a decree to the effect that 'class aliens' were to be exiled from the country. Even though they came to strongly support the New Economic Policy afterwards, their attempts at implementing the illusory concept of communism were violent and caused human losses in the very first year of the new regime. In the spring of 1918, 800 people were executed during the suppression of worker strikes in Perm. The Dekulakisation policy, implemented under the auspices of Ya. Sverdlov and L. Trotsky, claimed the lives of 2

million people starting in the autumn of 1918 [Melgunov, 1990]. The Romanov family were the first victims of capital punishment, which was restored by the Bolsheviks in 1918.

Thus, the Soviet government ruined the economic foundation of the proprietary classes, by abolishing private ownership and taking a series of measures towards the expropriation of expropriators. The monopolisation of all the assets of bourgeois Russia enabled the Bolsheviks to launch an attack on the opposition, which developed into a civil war where the proprietary classes were liquidated, that is, physically exterminated.

Domestic historians have different opinions as to when the civil war began. Some believe that it broke out in October 1917, while others name spring–summer 1918 as the real starting point, when the major centres of the anti-Bolshevik movement had formed and foreign countries began to intervene. The Bolshevik government formalised its 'right' of violence towards opponents in the Decrees on Arresting Leaders of the Civil War against the Revolution (November 1918) and on the Red Terror (September 1918). Anti-Bolshevik rebellions led by the Atamans of the Don Cossack Army A. Kaledin, and in the South Urals A. Dutov, were suppressed during what is known as the consolidation of Soviet power from October 1917 to May 1918. The Volunteer Army, which was to become the basis of the White Movement, began to form in South Russia and the North Caucasus under the aegis of Generals M. Alekseyev and L. Kornilov. From summer through autumn, English, French, American, and Japanese interventions followed the rebellion of the Czechoslovak Corps. The introduction of a food dictatorship and Committees of Poor Peasants brought about a mass counter-revolutionary base in the country. The 'democratic revolution' and the White Movement also joined forces against the Bolsheviks. When the East Front was established against the rebellious Czechoslovak Corps and the anti-Soviet forces of the Urals in Siberia and the Red Army launched an offensive in early September 1918 to force the enemy to retreat behind the Urals in October–November, the 1st stage of the

Civil War was over and the Soviet regime was restored in the Urals and the Volga Region.

The 2nd stage of the Civil War was marked by the most violent confrontation and lasted from December 1918 to June 1919. The fierce struggle between the Red and White Armies resulted in blatant red and white terror. Admiral A. Kolchak was appointed 'Superior Ruler of Russia' and came to power in Siberia to launch an offensive in the Cis-Ural region in November to merge with the army of General E. Miller, who was relying on the Entente for a coordinated attack on Moscow. After occupying Perm on December 25, Kolchak was checked by the Red Army on December 31, 1918. A. Kolchak launched a new offensive from the Urals towards the Volga in March 1919. Yet the troops of S. Kamenev and M. Frunze stopped the attack in April to force his army to Siberia in the summer. A powerful peasant rebellion and partisan movement against A. Kolchak's government enabled the Russian Army to establish Soviet power in Siberia.

The 3rd stage (July 1919 to November 1920) was marked by the crushing defeat of white armies as a result of the new Bolshevik policy for medium-income peasants. In July 1919, A. Denikin occupied Ukraine and initiated an attack on Moscow following a conscription campaign in the newly conquered territory. The South Front, commanded by A. Egorov, was established against A. Denikin, and the Red Army took the offensive in October. The peasant rebellion movement led by N. Makhno, who established a 'second front' in the rear of the volunteer army, supported it, leading to A. Denikin's army's demise in December 1919–early 1920. Soviet power was thus established in South Russia, Ukraine and the North Caucasus. Having assumed command over the remnants of Denikin's Volunteer Army, P. Vranghel was appointed 'Ruler of South Russia' and led the anti-Soviet struggle starting in April 1920. The South Front, commanded by M. Frunze, launched an attack on Vranghel's 'Russian Army' to crush it at the end of October; Red Army troops invaded the Crimea in November. Vranghel's defeat suggested that the Civil War was approaching its end. Finally,

the remaining centres of civilian opposition in the Far East, Middle Asia, and Transcaucasia were liquidated during the 4th stage (December 1920–1922). The surviving representatives of the White Movement and the Liberal Democratic opposition emigrated.

The question of who initiated this fratricidal war—representatives of the former proprietary classes who lost power and property, or the Bolsheviks who wanted to impose their method of social transformation on the population—remains controversial among experts. We agree with the authors of 'Political History: Russia–USSR–Russian Federation' that the Bolsheviks owed their victory not to support from workers and peasants during the Civil War², but to their tactics of conquering a split society incapable of national resistance, group by group [Politicheskaya istoriya, 1996, p. 103]. However, it seems reasonable to raise the question of the government's responsibility for its decisions. The Civil War as a national tragedy was a logical extension to the October Revolution of 1917. To speak of the masterminds behind it according to A. Sinyavskij, they were 'not Bolsheviks, but a small dissident' group, that could not hope for any real progress before the revolutionary boom. It was the liberals, whom historians tend to idealise today, who gave the Bolsheviks the means to victory. It was liberals of every stripe and color, who had been undermining the Russian state for many decades before the revolution, motivating the government to make decisions inconsistent with the current social situation and directly causing a subversion of the autocracy. That is, the subversion of a regime that at the time fit in the historical, socio-cultural, and social context... For reasons beyond anyone's control it was not a democracy, but an even more repressive and hard-line regime that was to develop into the 'totalitarian model', that eventually replaced it'. It seems that the root cause of this development was revealed as the government's inability to give priority to narrow classes over general national

interests. As a result, both the liberal government and the Bolsheviks are equally at blame for their national disaster.

The most influential Western historian of the Soviet period W. Chamberlain maintained that the period of military communism was a most dramatic and utter failure. It affected not only the country's economy, when the national income in 1921 amounted to 1/3 of that in 1913, but agriculture had dwindled by half and the transport system was in ruins. The revolutionary process that ended with the Civil War caused a decay among the Russian population that predetermined its demographic development for a long time to come. According to V. Zhiromskaja, Russia's population fell by 7.1 million people from the autumn of 1917 to 1920, by 10.9 million before 1921, and by 12.7 million before 1922. It is hard to calculate the share of proprietary class members, but there is indirect evidence that the bourgeoisie, merchants, tradesmen and kulaks, who accounted for 16.3% of the total population in 1913 and 8.5% in 1924, had been reduced to 4.5% of the population by 1928, and ceased to exist as a social group in the 1930s.

The anti-property, anti-capitalist sentiment in Russian society was the most dramatic outcome of the Soviet attempt at eliminating the proprietary classes. Systematically implemented by the Bolsheviks, it was reinforced through radical deinstitutionalisation in 1917–1921. The policy was naturally caused by the bourgeoisie's inability to solve a number of political, economic and social problems, which narrowed the historical environment where new, more radical forces could address them. To sum up, the short-sightedness of the Provisional Government in solving the problem of governmental regulation in 1917 gave rise to Bolshevism, which attached the highest priority to narrow class values, thus determining the further totalitarian development of Russian society. Bolshevism was not the country's only alternative, but the complex historical situation, analysed above determined a hard-line solution to major problems, which took a particularly dramatic form in the extermination of the country's population based on class.

² This view is echoed, not without good reason, by the authors of the publication 'Nashe Otechestvo' ('Our Fatherland').

§ 2. Peasantry in the State and Tatar Autonomous Soviet Socialist Republic

Rafael Shaydullin

A new agrarian order with a predominant small-scale peasant economy was formed in Russian villages as a result of agrarian reforms in the first years of Soviet power. The elimination of large-scale, semi-serf landed property—the main stronghold of the political reaction and conservation of traditional relations in the country—was the most striking result of these reforms. Russia, which in fact used to be a country with large landholdings, was transformed into a country of cropping agriculture. 'The Soviet poor man' became the main figure in the country.

The area of peasant plots of arable land increased during the course of the agrarian revolution of 1917–1918. As part of the agrarian reforms in Kazan guberniya, 714 thousand desyatinas of landowner, independent principality and church lands were nationalised and given to peasants [SA HPD TR, Fund 15, Inventory 1, File 1331, Sheet 58]. As a result, the average allotment increased by 10.4% (from 1.47 to 1.64 desyatinas) [National Archive of the Republic of Tatarstan, Fund R-4580, Inventory 1, File 118, Sheet 1]. The comparative analysis of land assigned to peasants shows that the average Tatar peasant plot area increased by 0.12 desyatinas, and for Russian peasants by 0.38 desyatinas [SA HPD TR, Fund 15, Inventory 1, File 1331, Sheet 58]. It followed from this, that Russian peasants found themselves in the most privileged position from the standpoint of land provisions. In 1920 the average allotment for Russians was about 1.89 desyatinas per mouth to feed, 1.52 desyatinas for Tatars and 1.51 desyatinas for national minorities [Ibid]. In some cantons mostly settled by Tatars, for example Arsky or Mamadyshsky, the area of arable land plots per head was 0,5 desyatinas [SA HPD TR, Fund 15, Inventory 1, File 1331, Sheet 58].

It is important to take into account the complicated character of the socio-economic situation observed in Tatar villages in the period of post-revolutionary agrarian reforms when

examining the reasons behind this matter. It is known that such an uneven distribution of privately-owned lands between different national groups of the peasantry during the agrarian revolution occurred as a result of the socio-economic and historical reasons of the past. Here it is not out of place to bring up the opinion of one of the contemporaries of the period when privately-owned lands were being divided up, the ranking officer of the People's Commissariat of Farming of Tatarstan A. Korzhets: Such an uneven distribution of landowners' lands occurred because of the fact, that they were "mainly located among the allotment lands of the Russian population, along large industrial centres and the waterways of the Volga, Kama", whereas the lands of the Tatar population were withdrawn from these centres as a result of historical reasons to deep in the country and, naturally, could not join the agrarian revolution" [Korzhets, 1925, p. 8].

After Soviet power had been established, the economic state of the Tatar peasantry started deteriorating day by day, and Prodravzverstka became the toughest burden for authorities to carry. The new power defending the interests of the proletariat and the poor demanded the strict collection of prodravzverstka from all members of village society. The system of mutual responsibility revived in a new form was especially pressing for the peasantry, as the entire village was responsible for poor people in payment arrears. Many other duties and special requisitions could be added to this: national service, cart service and labour service, revolution taxes and contributions. Administratively repressive measures towards 'unruly peasantry' were put into effect, simultaneously combining taxes, expropriation, prosecution and sentences to labour camps. The development of the agrarian sector moved towards a further decline in peasant activities and the devastation and impoverishment of villages.

In post-revolutionary years the dream of villagers to be land owners and be able to freely

handle its products provoked a sense of peasant self-consciousness, and encouraged villagers to proceed to live actively. All the individual consciousness and worldly psychology of the peasantry opposed not only the anti-religious policy of the atheist communists, but also the Prodravzverstka of the authorities, which forced them to be in opposition. They could no longer put up with the current policy of military communism, and declared an economic boycott of the governing regime through the reduction of crop and livestock areas, the transition to a consumer economy, and hiding grain stores and their feeding to animals. In addition to relying on economic forms of pressure on those in power, peasants gradually started taking political action. The events of summer/autumn 1918 indicated the beginning of the peasant war in the countryside when the conflicts between villagers and authorities, which often ended up with the interference of AEC detachments and military units, became frequent everywhere. In September–December 1918 a significant part of the territories inhabited by Tatars was in disturbance. For example, in September 1918 peasant disturbances erupted in Laishevsk uyezd [SA HPD TR, fund 868, Inventory 1, file 100, sheet 18–19], in November in Kazan uyezd [Chukanov, 2005, p. 388], and in December in Sviyazhsk uyezd [Ibid., pp. 334–342; National Archive of the Republic of Tatarstan, Fund R-98, Inventory 1, File 61, Sheets 19, 28, 29] of Kazan guberniya. In December 1918 in Kazan uyezd, distressed peasants rallied and decided to make demands to the authorities; representatives of 6 volosts were present at the peaceful gathering. The authorities countered by directing a punitive detachment to disperse members of the protest. They started shooting at unarmed people, resulting in casualties of more than 100 [National Archive of the Republic of Tatarstan, Fund R-98, Inventory 1, File 61, Sheet 16]. In spring 1919 peasant revolts burst out in the Volga and Cis-Ural regions. The Chapan war, covering a significant part of the Volga region, was combined with a series of peasant uprisings taking place in March 1919 in Sviyazhsk, Spassk [National Archive of the Republic of Tatarstan, Fund R-98, Inven-

tory 1, File 61, Sheets 46, 108] and Chistopol [Ibid, File 36, Sheet 5] uyezds of the Kazan guberniya. The authorities only managed to get the wave of peasant uprisings under control, by spring sowing time through the use of severe repressions and various economic concessions.

These uncoordinated peasant disruptions became the pretext for the Pitchfork uprising of 1920, which covered the uyezds of Kazan, Samara and Ufa guberniyas, and densely populated areas of the Tatar peasantry. The main pretext for proceeding to take action against Soviet power was a toughening of measures towards Prodravzverstka defaulters, as well as the numerous outrages of members of food detachments in rural areas. The slogan of the 1920 prodravzverstka campaign became the most offensive moment for peasantry suffering from famine: Prodravzverstka must be collected as soon as possible and to the maximum extent. The report of the head of the garrison of Bugulminsky uyezd I. Chujkov is evidence of this fact. It stated that 'we must take bread in the next two weeks according to Prodravzverstka so that the starving centre can breathe with relief, where they eat bread baked with hay, while here peasants eat as much bread as they want' [SA HPD TR, Fund 15, Inventory 1, File 389, Sheet 150 reverse]. Certainly, the author of the report overestimated the ability of the region to produce enough grain to collect. Local peasants did not eat their fill either, and many of them ate substitute bread.

A peasant rebellion, known as the Pitchfork Uprising, began on 4 February in Novaya Yelan village, Menzelin uyezd, Ufa guberniya, which later spread over to the Kichuy, Almetyevo and Ursalinsk volosts, Bugulminsky uyezd, Samara guberniya and some volosts of Chistopol uyezd of Kazan guberniya, and lasted 35 days. It is noteworthy, that sometimes it had an organised character involving all the national and social groups of the village and a pronounced anti-Soviet orientation. During the armed conflicts between authorities and peasants, manifestations of cruelty were reciprocal. For example, the detachment of the Head of the Bugulminsky military garrison I. Chujkov, which numbered 50 people, carried out numer-

ous atrocities in Tatar villages from Kichuy to Bugulma for 10 days (February–March 1920). Later, this became the reason behind inviting him to the party commission. Hungarian internationalists, headed by Zhigo, sent there to squash the pitchfork uprising killed and violated peasants, plundered and burnt down villages. Contributions were imposed on villagers at many places; mullahs, wealthy peasants, members of their families, etc. were taken as hostages, and threats of shooting were a familiar phenomenon. They were made to serve as guarantors for fulfilling Prodravzverstka and contribution plans, and were forbidden to take part in anti-government uprisings. The population of villages occupied by Red Army men and detachments of the AEC were robbed of their bread, grain, cattle, hay, firewood and other goods. For example, the inhabitants of Malye Chuti village in the Bugul'minsky uyezd of Samara guberniya were subject to Prodravzverstka equaling 14990 poods of bread and fodder.

The Pitchfork uprising was put down violently, and there were dead and injured among the rebels. According to the report of the head of the reserve army of the republic B. Goldberg, while his military units were heading in the direction of Bugulma through the territories of the Chistopol uyezd of the Kazan guberniya, the Menzelinsk uyezd of the Ufa guberniya, and the Bugulma uyezd of the Samara guberniya, 637 people were killed and 5,235 were arrested. According to incomplete data, about 3 thousand peasants were killed while the pitchfork uprising was being suppressed. Losses on the other side equaled 800 people [Shaydullin, 2000, p. 184].

After the local rebellions of multinational peasantry had been put down towards the beginning of the 1920 sowing campaign, it was mainly quiet in the main part of densely populated Tatar settlements. This lasted until the beginning of a new Prodravzverstka. After the Prodravzverstka of 1920–1921 had begun, a new wave of discontent swept the countryside. Peasants from many Tatar villages started saying that the authorities were stealing the last crumbs of bread from them and they apparently want them to die of starvation [SA HPD TR,

Fund 15, Inventory 1, File 197, Sheet 3]. The real outrage was carried out in the Salaushsk volost of Yelabuga canton, where the food detachment headed by A. Yashin from Menzelinsk almost completely confiscated the grains and belongings of the local inhabitants on 26 November 1920. 'He robbed people of everything they had... beat them with whips unmercifully, threw them in cold barns'. As a result the population had literally nothing to eat, but Prodravzverstka was nonetheless carried out flawlessly [SA HPD TR, Fund 15, Inventory 1, File 104, Sheet 104].

The total confiscation of food stocks and seed products from the peasantry in 1920–1921 resulted in an extremely unfavourable economic situation in many places, where the Tatar population density was high, especially in the Middle Volga region. Peasants deprived of not only bread stocks but also a significant part of other foodstuffs and seed products, were becoming gradually less and less concerned with the development of their own farms. Day after day their farms fell further into decay and arable lands shrunk in size, especially land connected with market crops. For example, arable lands in Kazan guberniya in 1920 shrank by 22.2% in comparison to 1913 (2.2 million desyatinas compared to 1.71 million desyatinas) [Shtutser, 1924, p. 3]. The rye yield fell by 2.5 times (in comparison with 1 desyatina), oats yielded 2.1 times less, and buckwheat 2.7 times less. The total harvest fell 4.3 times in comparison to pre-war levels [SA HPD TR, Fund 15, Inventory 1, File 1330, Sheet 23].

Wars and forced Prodravzverstka not only interfered with the normal course of development of the agrarian sector, it also required an economic policy that would serve the interests of war time. The Soviet government introduced government regulation of the agrarian sector of economics right in the footsteps of the imperial government. As a matter of fact, this decision was the first attempt to plan the number of arable lands and define the size of planted crops on a scale that matched Russia's size. The government then put forth a severe sowing plan in the form of an order and established a group of obligatory crops. In accordance with this plan,

each peasant household received strict orders regarding the provision of cereal to the state and the transfer of sowing materials to public barns. The government of the country tried to control almost all of the peasantry's economic activity in this way.

In spring 1920, the Soviet Government worked out special bodies called sowing committees in the countryside to achieve this goal. According to the plans of the Bolshevik's government, they played a significant role in the transformation of multinational villages. They had to provide practical assistance to peasants in finding seeds, acquiring the necessary land cultivation equipment and manpower, and thus had to actually ensure that each rural court met its planned sowing goals. Sowing committees laid special stress on helping the poor and sowers who had no power. But in fact, the only thing they did was extort the seed stores of peasants and pour them into public barns.

Nevertheless, the state measures aimed at regulating agriculture turned out to be far from efficient. All the attempts to solve this complicated problem in one fell swoop failed. The administrative delight of some workers on this account turned out to be especially destructive. An attempt was made for the quickest resolution of the food problem by defining a strict sowing plan with a binding list of crop products for each peasant holding, which turned out to be a pure utopia. The state regulation of agriculture could not bring about noticeable results. A significant portion of peasant fields remained fallow. As a final result, the Tatar villagers lost the stimulus of productive labour, and they gradually began to switch to more full-scale (consumer) forms of management [Sabanche, 1922, 24 August; 1923, 24 March].

The Prodravzverstka campaign of 1920-1921 was characterised by the wide spread of administrative coercion against the peasantry. As stated in one of the documents of those years, in 1920-1921 the "forced methods and decisive actions of food bodies and the entire subsidiary apparatus were distinguished by a special convexity and vividness" [Bulletin of People's Commissariat for Internal Affairs of Tatar Autonomous Soviet Socialist Republic,

1921, No. 4-6, p. 4]. The main reason for this unrest was the mass devotion of party and Soviet employees to the military/administrative method of problem solving. They accepted any task as if it were a party combat mission, and solved them 'energetically', and with 'krasnogvardeiskii attacks' of the means of the 'petty bourgeois masses of peasantry'. While describing the work of local authorities and the food department, one of the management supervisors of the Tatar republic N. Baryshev at the 2nd conference of the Tatar regional committee of the Russian Communist Party (Bolsheviks) (on 26 February 1921) noted: Today we can see what outrages are committed in the uyezd district food committees and in the management of the food department because the people who work there are extremely irresponsible, politically unknown and inadequate [SA HPD TR, Fund 15, Inventory 1, File 79, Sheet 55].

This is an illustration of the fact that local Soviet higher authorities did nothing, or they were observers of those events. In fact, their participation in this process was nominal: they limited all their work by composing countless instructions, as a rule, because the amount of food distribution was determined by the Centre, and it formed food troops for its collection. For this reason the majority of local leaders stood by idly, did not show any of their own initiative, submissively executed guidelines from the top and often did not consider whether or not these instructions were meeting the interests of the local population. The speech of the management supervisor of the local AEC for Combating Counter-revolutionary Activity and Sabotage A. Denisov made at the 2nd conference of the Tatar regional committee of the Russian Communist Party (Bolsheviks) (26 February 1921) testifies to the fact that: 'We have seen many written instructions since then. The instructions are positive. In business terms, the practical proposals were not implemented through direct visits to the areas of the members of the Bureau of regional committee themselves'. 'Common workers with no idea of party work' are sent to places to carry out instructions written in 1917 [SA HPD TR, Fund

15, Inventory 1, File 79, Sheet 60]. These leaders averted their eyes to the unrest of members of ration detachments and allowed them to rob peasants. When the peasants turned to them, they spread their arms in amazement and said it was not their fault, they were just carrying out the orders of the higher bodies.

As a result, different means of administrative, economic and political coercion started becoming possible. Tatarstan was one of the first regions in Russia that exceeded the Prodravstka plan by 103%, while in Russia only 58.7% of it had been fulfilled by 20 February 1921 [Polyakov, 1967, p. 54]. This lax policy of local authorities resulted in a large number of grains from the poor harvest of 1920 (more than 32 million poods [Economic conference report The Tatar Autonomous Soviet Socialist Republic, 1922, p. 52]) being confiscated and removed (more than 10 million poods, or 35% of gross grain output [Shaydullin, Valeev, 1995, p. 424]). This led to the mass starvation of the population and the deterioration of social tensions in villages in 1921. Peasant revolts were ignited because of starvation in late 1920, and especially in early 1921. The repressive measures of the Soviet government could not stop the movement of the entire peasantry. In a description of the political movement in the country at the 2nd conference of the Tatar regional committee of the Russian Communist Party (Bolsheviks) (26 February 1921), N. Baryshev stated that '...rebellions were taking place. Your hair stands on end when you look out at the countryside' [SA HPD TR, Fund 15, Inventory 1, File 79, Sheet 57].

In 1920–1921 the Tatar villages were going through an acute food crisis. A wave of revolts shot through the more densely Tatar populated areas of the urban population. In April–May 1921, peasant revolts took place in the Arborsk, Shubinsk and Atninsk volosts of Arsk canton, the Baisarovsk volost of Menzelinsk canton [SA HPD TR, Fund 15, Inventory 1, File 197, Sheets 17, 20], and the Alekseevo volost of Chistopolsk canton [Ibid., File 128, Sheet 481]. As a result, peasant seed grain kept in public barns was divided. The main reasons for discontent among the peasantry were the lack of

food, seeds, food-items and the high prices of goods among others.

In the end, the continuation of the 'military communism' policy was the reason behind the starvation of 1921–1922, when more than three million Tatars were condemned to starvation. In 1921 a horrific famine attacked the Volga and Cis-Ural regions, including the Tatar republic. In comparison with 1913, grain harvests in Tatarstan decreased by 94% (from 112 to 6.4 million poods) [Shalavin, 1923, p. 48]. A staggering 83.3% of the republic's population was doomed to starvation [Otchyot o deyatel'nosti CIK i SNK, 1922, p. 60]. The poor peasantry, after being left with nothing after the Prodravstka campaign of 1920–1921, demanded the government provide them with foodstuffs. But the local authorities were not in a hurry to provide food assistance to the rural population; on the contrary, they collected taxes and inoculum all the way up through November–December 1921. The peasants in distress decided that the Americans were their saviors. According to many people, 'the Americans have come and want to take power into their hands and then feed the masses' [SA HPD TR, Fund 15, Inventory 1, File 100, Sheet 13]. Indeed, the American Relief Administration and other foreign, non-government humanitarian organisations saved several hundred thousand Tatar peasants from starvation and epidemics.

In 1921–1922, famine gripped many densely populated Tatar areas. According to documents from the Penza governorate, which was officially recognised as the most prosperous region [State Archive of Penza Region, Fund R-298, Inventory 1, File 5, Sheet 18], the Tatar villages overcame the same hardships as the starving governorates of the Volga region [Sabanche, 1924, 22 December]. In this period, different emergency committees were formed in local areas to help starving people and provide them with mutual aid. On 21 June 1921, the emergency committee on starvation was formed on the basis of the Central Executive Committee of the Republic. The Tatar national section of aid for the starving was created in the Saratov guberniya along with German and Mordvinian mutual aid efforts [State Archive

of Contemporary History of Saratov Oblast, Fund R-27, Inventory 2, File 57, Sheet 12]. Epidemic diseases and the starvation death-rate in the Volga region governorates significantly decreased as a result of the activity of these commissions [State Archive of Contemporary History of Saratov Oblast, Fund R-27, Inventory 2, File 181 b, Sheets 9, 47]: in early 1922 it did not exceed 6% [Sabanche, 1922, 11 September].

Despite said measures, the years of the 1921–1922 famine were characterised by a high death-rate in some densely populated Tatar areas, and the mass flight of peasant to governorates, where grain was harvested. For example, according to the register offices (ROs) of Tatarstan in 1921–1922, the population decreased by approximately 600–700 thousand people including 300 thousand cases of death [Shaydullin, 2000, p. 168], the main part of which was among the Tatar peasantry. The death-rate of the Tatar population in Tatarstan was especially high in the first half of 1922. According to the data of the People's Commissariat of Internal Affairs of the Tatar Autonomous Soviet Socialist Republic, by the end of 1922 the rural population had decreased by 400 thousand people because of death and resettlement when compared to the 1920 census. As far as the data from the 1920 agricultural census is concerned, this difference totals more than 650 thousand people [Shaydullin, 2000, p. 169]. As a result, the death-rate of the Tatar population in comparison with Russians increased, and the birth-rate declined. In 1921–1923 the death-rate of Tatars was 6.6%, for Russians—4.1%, and the birth-rate of Tatars was 1.7%, and for Russians—1.9% [Tretij plenum, 1927, p. 35].

The difficult consequences of the bad harvest in 1921 left its mark on every aspect of the economic life of Tatar villages. During the famine, the number of peasant allotments decreased by almost three times in Tatar villages, which led to a significant growth in fallow agricultural lands. For example, in Tatarstan arable lands decreased by 39.8% (from 1.71 to 1.03 million desyatinas) in comparison to 1920 [Shtutser, 1924, p. 3]. The poor harvest in 1921 also adversely affected cattle breeding.

Many Tatar peasants were deprived of their livestock, which was eaten up or used to barter. It should be noted that horses were traditionally used in Tatar villages as both draught power and food. By 1922, in comparison to 1917 the livestock decrease in Tatarstan totaled 65% (horses), 65% (cattle), 91% (sheep and goats), and 97% (pigs) in comparison with 1917. The plough cattle found itself in a particular dilemma: according to a modest computation, the normal development of the agrarian sector of the republic needed approximately 400 thousand horses [Bulletin of the Council of People's Commissars of Tatar Autonomous Soviet Socialist Republic, 1923, 32, p. 4]. These significant losses in cattle breeding threw the Tatar peasantry into a quandary. It is known that in those years horses and cows were the bare minimum for peasants, and without them there was nowhere deeper to fall than to become a complete proletariat, 'a farm labourer contemptible in Tatarstan villages'. Peasant allotments also experienced the acute shortage of agricultural inventory. In 1922 in Tatarstan, each farmstead accounted for on average 0.6 carts, 0.4 ploughs, 0.3 plows, 0.6 harrows, 0.5 scythes, and 2 sickles [Averbukh, 1922, p. 56].

The same situation could be seen in other places where there was a dense Tatar population. Krivoozerskoi volost and the Penza guberniya, where by 1922 in comparison to 1917 the total number of horses had downsized by almost 70%, for cows—73%, and sheep—83% [State Archive of Penza Oblast, Fund R-298, Inventory 1, File 14a, Sheet 117], clearly prove the relatively comparative evaluations. In the other volost of the same governorate in Tatarstan villages, the total number of horses fell by 71%, cows—88%, and small cattle—91% [State Archive of Penza Oblast, Fund R-298, Inventory 1, File 14a, Sheet 112].

These data clearly prove in the years of shortage from 1921–1922, Tatar peasants from regions which were exposed to the cruelest drought, as well as more successful regions with dense Tatar populations, for example Penza guberniya, also strongly suffered. This allows us to conclude that 'peasant agriculture

must be restored and built up again from the ground up' [Ibid].

The transition to the new economic policy was a turning-point in the economic development of the country. This process was not only combined with social changes in the countryside, but also some qualitative shifts in the development of agriculture. First of all, this was shown in the increase of arable land, the growth of farming culture and the marketability of agricultural products. The summer of 1922 was productive in some regions of densely populated Tatar areas of the Volga and Cis-Ural regions, which contributed to their return to normal life. State agricultural and the material support of the peasantry intensified the drive towards agricultural work [Sabanche, 1922, September 1]. In 1923–1924, the growth of planted fields and peasant livestock could be observed in almost all densely populated Tatar areas [Roznitsky, 1925, p. 13]. In 1922–1923 the area of ploughed fields increased by 15% and the number of general livestock went up by 10% in the Saratov guberniya [State Archive of Saratov Oblast, Fund R-521, Inventory 1, File 948, Sheets 5, 9; Fund R-466, Inventory 1, File 57, Sheet 1a; State Archive of Contemporary History of Saratov Oblast, Fund R-27, Inventory 3, File 23, Sheet 84, File 32, Sheet 69; File 147, Sheet 64]. The same trends could be seen in the Republic of Tatarstan, where arable lands increased by 11.5% in 1923–1924 [Danilovsky, 1924, p. 3].

Nevertheless, the increase in arable lands combined with the reduction of crop capacity does not allow us to conjecture about the increase of the gross harvested yield. This is confirmed by the depressive character of the development of agriculture in Tatarstan. Unlike other regions of Russia, this was a republic in which there were no significant changes during the first several years of the new economic policy. A large swath of varying circumstances hindered this, including bad harvests in 1922 and 1923, mass starvation, and significant material and human losses. For example, in Tatarstan in 1923 gross grain harvests decreased by 20.8% in comparison to 1922 (29.5 million poods and 23.4 million poods, respectively) [State

Archive of the Republic of Tatarstan, Fund R-1066, Inventory 1, Dile 157, Sheets 69,66]. The insufficient harvest led to an acute food crisis and the mass starvation of the population. On 1 February 1923, 993,711 people were suffering from famine in Tatarstan [Ibid., Inventory 2, File 127, Sheets 130-131], in March 1924—340 thousand people [Ibid., Inventory 1, File 157, Sheet 80]. Only in 1924–1925 did the agriculture of Tatarstan gradually start to pick up the pace. According to our calculations, in 1925 gross harvesting increased by 306% compared to 1923, and by 426% in 1926.

And this situation was typical not only for the first half of the 1920s, but for the entire period under consideration. This state of affairs in turn was combined with a natural striving for intensive work. The regional authorities were doing all they could to support farmers [State Archive of Saratov Oblast, Fund R-521, Inventory 1, File 950, Sheet 3]. However, the desire for restoration faced a seemingly insurmountable range of barriers, one of them being a critical situation with draught power. It is necessary to note here the efforts of province and republican authorities concerning the provision of farming machines and tools, and working and productive cattle. The authorities helped repair peasant inventory, and managed agricultural machine rental stores at the local level [State Archive of Contemporary History of Saratov Oblast, Fund R-27, Inventory 2, File 10, Sheet 32]. For example, in 1922 the Soviet government allocated 45 million roubles to purchase plough cattle, 27 million roubles to plant new crops, and 10 million roubles for harvest time. The main part of this money was granted to the poor. Moreover, 19 million roubles were allocated for the directed crediting of the lower classes in the countryside [National Archive of the Republic of Tatarstan, Fund R-3452, Inventory 1, File 117, Sheet 14]. In 1924–1926, 70 thousand ploughs, 74.6 thousand harrows, 461 seeders, 1,437 threshing machines and 3,005 grain-cleaners were shipped into the Tatar republic to improve the peasantry's standing with agricultural machines and farming inventory. In 1927 agricultural machinery costing 3.0 million roubles was additionally brought into

the republic [Dyuvbanov, 1975, p. 18]. Starting in 1922, tractors started to make their way into Tatarstan along with an agricultural inventory. In 1922–1923, 13 tractors with an output of 495 hp were registered, but only 4 of them were used. On the Kiremetevskom Chistopol state farms of the Aleksandrovsky and Sviyazhsky cantons, with the help of the Region's Experimental Station, over 302 desyatinas of farmland were ploughed, and 20 thousand poods of grain [Trud i khozyajstvo, 1923rd, No. 6, page 123] were threshed. By October 1928 the total tractor fleet in Tatarstan numbered 135 units [Asanov, 1928, p. 48], although Tatarstan was behind many regions in this respect. For example, it yielded to the Volga German Autonomous Soviet Socialist Republic numbering 450 tractors in 1925 [Verbatim record, 1925, p. 202]. The Germans of the Volga region mainly used tractors for rural activities. The numerical growth of the fleet of tractors in Tatarstan did not lead to the qualitative improvement of farming. For example, at the 12th conference of the Tatarstan regional committee of the CPSU(B), S. Bashkirov noted that out of 110 tractors in Tataria, 12 tractors with different systems stood perfectly idle out of the impossibility to rationally use them in our conditions. Out of the remaining 98 tractors with the 'Fordzon' system, only half of them were being used because 25% required major repairs, and 25% needed operating repairs' [Verbatim record, 1927, p. 194].

The cooperative network was applied from the very first years of the NEP to provide the peasantry with material and technical assistance. It mainly concerned the provision of horses. Different governmental organisations (Central Committee of the Consequences of Famine, the People's Commissariat of Farming in Tatarstan, the Kazan Department of the State Bank, etc.) along with peasants themselves allocated money to purchase horses. For example, in 1923 3,500 horses were brought into Tatarstan using public and cooperative money, and 31 thousand horses came in on money from the peasants [Bulletin of the Council of People's Commissars of Tatar Autonomous Soviet Socialist Republic, 1923, No 2, p. 7]. By

1925 there were 402,256 horses in the republic, and their number increased by 26% in one year. And as a result, the number of horseless farmsteads fell by 50% [National Archive of the Republic of Tatarstan, Fund R-5874, Inventory 1, File 963, Sheets 2, 3].

In the 1920s peasant allotments of Tatarstan were in dire need of capital goods despite the significant material/technical assistance provided by the public and cooperative organisations. The shortage of inventory and draught power reinforced their load and deteriorated the quality of their ploughing. For example, in 1926 the load on a single ploughing tool in Tatarstan increased by 30% in comparison to 1917 [Sivogrivov, 1929, p. 44]. At the same time, it should be mentioned that in 1922 the average load on a horse was 15 desyatinas, in 1927—6 desyatinas, and in 1917—3 desyatinas [Trud i khozyajstvo, 1924, No 10, p. 22; News of Tatar Central Executive Committee, 1922, November 15; National Archive of the Republic of Tatarstan, Fund R-5874, Inventory 1, File 963, Sheet 3; Asanov, 1928, p. 48].

It is also relevant that a whole range of cantons in Tatarstan, especially Tatar villages, were in a sad state from the perspective of the farming tools at their disposal. Furthermore, peasant allotments in the Buinsk canton were provided with agricultural inventory much worse than in other cantons of the republic. In 1926 5.7 ploughs accounted for 100 hectares of arable lands and that number was 9.07 ploughs in Tatarstan. Primitive agricultural inventory—plows, roes and sabans—were used in a significant part of the peasant allotments of Buinsk canton. There were 34,673 wooden plows, 1,907 roes and sabans, and 15,173 ploughs in peasant allotments [Malkina, 1929, p. 7].

There were also problems with the provision of farming machines in other densely populated Tatar areas. The quantitative growth of complex agricultural machines was very slow because in 1922–1923 the number of tractors in the Penza region increased by just 9 units. By 3 May 1923, 7,442 agricultural machines had been brought into the Saratov guberniya [State Archive of the Russian Federation, Fund R-1066, Inventory 2, File 7, Sheet 122]. There

were 6 times fewer harvesters in the Penza guberniya compared to in the RSFSR [Rosnitsky, 1925, p. 19], which could be explained by the purchasing capacity of peasants. But even when policies for the provision of agricultural machines were being followed at the state level, the low level of awareness, lack of education, and the absence of skills for operating the farm machinery led to the fact that machines often broke down [Sabanche, 1926, 20 July]. With no experience in how to use them, the peasants of Tatar villages often broke their machines. The lack of storage facilities coupled with an irresponsible attitude towards the use of machines led to their shortage and disruptions regarding certain kinds of agricultural works.

By the 1920s, the small family unit had become firmly established in Tatar villages. If a large family consisted of three-four generations, a small family usually consisted of two generations, that is a married couple and their children, and it sometimes included parents. Traditionally, the Tatars had two types of partitions: individual and communal. The individual partitioning of property did not lead to the break-up of large families and meant that only one family unit had to leave it. These types of partitions usually took place while the father was alive. A separated unit was allocated for a person's own share of property. But the head of the family tried their best so that the break-up did not affect the economic life of the family. This principle of partition was maintained throughout the period under discussion [State Archive of Penza Oblast, Fund R-1336, Inventory 1, File 9, Sheet 3]. Therefore, the worst part of the property was always allocated to the separated family. The individual partition of property only partially led to a solution for the family contact. After one unit had left the family, the contradictions did not cease, and eventually led to an all-family partition.

Tatar villages mostly existed according to communal traditions. The fear of losing land and the threat of famine consolidated the commune of Tatar villages in the countryside. That is why the main part of the Tatar peasantry advocated for the preservation of communes and was against introducing private landholding,

and opposed peasant proprietors and individual settlers. The reasons (and forms) of this fight were quite varied. From an economic perspective, the exit of peasants from communities was often linked to a violation of typical crop rotations, as well as the entire agricultural work cycle, which had an extremely negative impact on the farmsteads of other commoners. Socially, the hatred towards people leaving communes can be explained by the fact that there were lots of new-comers among them who got the best lands, according to peasants. In this last case, the situation was worsened by the actions of authorities who often provoked the members of communes to initiate uprisings. Lastly, remnants of patriarchal communities stayed alive in the consciousness and behavior of peasants, along with the view of land as a gift from God and nationwide property one could transfer for private ownership, and played an important role. The struggle of peasants against 'individual peasants' manifested itself in both pressure on their rural gatherings and the direct sabotage of their allotments. This is why such an insignificant number of peasant farms separated from communes. Many peasants handing in an application to leave the commune had to revoke it under the pressure of commune members. Moreover, individual peasants had difficulties with livestock breeding because the commoners forbade them to use public meadows, pastures, and hayfields. Apparently, properly managed farmsteads actually functioned more efficiently than communal ones, but they could have hardly had an instantaneous, significant impact on the overall indicators of the farming industry. Research shows that their allotments were slightly different from those of commoners. The transition to divisional land far from everywhere led to progress in land cultivation, and was in fact a clear illustration for the surrounding peasant population. So it is not surprising that khutors and otrubs were not widespread in Tatarstan. By 1924 khutors only occupied 0.25% (283.2 thousand desyatinas) of common ploughed field [SA HPD TR, Fund 15, Inventory 1, File 1331, Sheet 61].

However, the Tatar commune was not at all inviting to modern agricultural measures and

farming techniques. As a result, the multifield agricultural system was adopted in many Tatar farming communities very slowly. In 1924, 100 thousand desyatinas of ploughed fields in Tatarstan were allotted for multiple crop rotation, in 1925—57 thousand desyatinas [Verbatim record, 1927, p. 148], in 1926—70 thousand desyatinas [Shestoj s'ezd Sovetov TASSR, 1925, p. 256], in 1927—100 thousand desyatinas or 4% of all area under crops [SA HPD TR, Fund 15, Inventory 2, File 323, Sheet 122]. In the Penza guberniya in 1923–1926, the area under crops doubled in size [Sabanche, 1923, 1 November]. Broadly speaking, it should be stated that multifield crop rotations were rather uncommon in Tatar farming communes both in this governorate and other densely populated Tatar areas. According to our calculations, this number is less than 1% of the entire area.

In the 1920s, there was a certain noticeable economic backwardness among the Tatar peasantry. The economic backwardness of this part of the republic's population compared with the average level of Russian peasants was in fact never under any dispute. In terms of sowing, the Tatar peasantry of Tatarstan lagged behind Russians by 7.5%; regarding the entire herd of livestock—17%, working livestock—7%, plows—32.3%, etc. [Iskhakov, 1929, p. VI]. The fact of differences in the economic development of Tatar and Russian villages itself has deep roots originating from the times of the Russian colonisation of Kazan land. In the latter half of the 16th century, the Tatar peasantry had to choose to either get used to the inexorably evolving process of the Christianisation of the non-Russian peoples of the region and accept orthodoxy, or leave their traditional homes and move to remote fallow lands, and in doing so losing their positions in the main trade and economic centers close to large waterways and highways. A significant part of the Tatar peasantry tried to preserve their religion, culture and traditions by sacrificing their well-being.

In the 1920s, the life of the Tatar peasantry was linked, just as before the revolution, mainly to small individual family households which that used mainly natural productive forces, land, livestock, and peasant manpower. The small

rural commodity producer engaged mainly in simple physical labour, exerted just like in nature itself, and the peasant holding was, as a rule, even the main consumer of whatever was produced on the farm. At the same time, not an individual member of a peasant holding, but the family labour group of individuals running the farmstead together was the bearer of land and proprietary rights. Family cooperation served as a sufficient condition for the use of the present means of production, which was in a direct relationship with the number and composition of a family because the common practice of equalisation/labour land redistribution limited the size of land allotments. Naturally, the nature of a significant part of Tatar farmsteads, like consumers and the economic non-sociability produced by their circumstances, as well as traditionalism, conditioned in the Tatar country the domination of a mode typical of pre-capitalist forms of management, where manufacturing power was not defined by goods/monetary relations. Tatar villages were more sensitive to any kind of changes in the current market situation.

The economic inequality between the Tatar and Russian peasantry becomes more apparent, if their budgets are considered. The Tatar peasantry lagged behind the Russians by 20–30% in terms of revenue. It should be noted that the decline of profitability among this group of farms did not just depend on said factors: not only the presence of livestock and inventory and the uneven distribution of landlords' lands, but also the development of market relations. The remoteness from waterways, railway lines, motorways and major trading cities left its mark on all the economic mechanisms of the Tatar villages. Moreover, transportation means were poorly developed, and they mainly relied on animal transport. For example, in Tatarstan 2.6 versts of railway lines, 17.1 versts of waterways and 1.8 versts of motorways accounted for 1 thousand versts of communication lines. The republic was 8 times poorer in terms of railways as the Penza guberniya (21.8 versts), 5.5 times as poor as the Ulyanovsk region (14.5), and 4 times as poor as the Saratov oblast (2.36) [Asanov, Berger, 1927, p. 36].

Certainly, the geographic position of the Tatar villages left an indelible mark on their economic development as well. The Tatar peasantry cultivated less intensive crops in their allotments, mainly gray cereals, such as rye and oats, and they hardly cultivated market crops like wheat, flax, hemp, sunflowers and others. In terms of crop rotation for the winter and spring, among the Tatar peasantry over 90% was allocated for grain crops. Moreover, fruit and vegetable gardening was all but insignificant in Tatar agriculture. Budget data of peasant farms in Tatarstan from 1927 are the brightest evidence of this fact. A comparative analysis of 100 Tatar and 100 Russian peasant farms showed that the area of allotment crops in Russia was 15 times larger than in Tataria. On average, allotment crops totaled 0.1% of ploughed fields on Tatar farms, and 1.5% on Russian farms [Ermolaev, Sharaf, 1927, p. 8].

The process of guaranteeing a real equality of rights for the Tatar peasantry began after the Tatar Autonomous Soviet Socialistic Republic had been formed. Many Russians, representatives of the dominate nation, found it difficult to get used to the equality of nations declared after the Bolsheviks came to power. Indeed, the transfer to a new economic policy gave a certain amount of hope for the actual equality of nations and religions. In those years, matters of land management stood prominently on the government's agenda. The necessity of a growth of productive forces and the intensification of the agricultural industry hinged heavily on land management use. In the 1920s in Tatarstan land was utilised over 2.3 million desyatinas, of which the Tatar peasantry accounted for 51.1%. In addition, out of 111 townships founded on state fund lands in 1923–1926, 84 belonged to the Tatars [Khafizov, 1960 a, p. 284].

The economic backwardness of Tatarstan villages also required action on behalf of the local leadership in the agricultural education of the rural population through the respective literature. It must be stated that for these purposes 26 publications in Tatar on 98 printed sheets with a total circulation of 51.1 thousand copies published by the People's Commissariat

of land cultivation of Tatarstan, and 10 publications on 27 sheets in Russian with a total circulation of 20.6 thousand copies were released just in 1925 [Otchyot CIK i SNK TASSR, 1925, p. 15]. However, many educational activities of the People's Commissariat of land cultivation of Tatarstan did not reach the main population of the Tatar peasantry. They still continued to manage their farms on the basis of obsolete technologies that were passed down from their grandfathers and great-grandfathers. Any innovation was met with a hostile reception. Sometimes the Tatar peasantry rejected even the most necessary measures to develop their farmsteads. For example, in 1923 they fought back against the extermination of locusts, saying that it was equal to fighting against God [SA HPD TR, Fund 15, Inventory 1, File 906, Sheet 101]. As a result, the agricultural enterprises of the local government were often ineffective.

The introduction of emergency measures during the 1927–1928 bread procurement campaign completely changed the attitude of the Soviet leadership towards the new economic policy. The group administration methods of agriculture management, which were widely used during the civil war and subsequently discarded following the transition to the new economic policy, began to be rebuilt: markets began to close, free trade was banned, protection detachments formed for the struggle against the bag people, and plans came down from the top for cereal rent in the form of food distribution, etc. After starting with soft forms of noneconomic coercion, the authorities, at the same rate the 1927–1928 bread campaign was forced, gradually reinforced its repressive orientation in terms of the forcible seizure of peasant property, livestock, and land cultivation equipment. After Soviet leadership passed a number of extraordinary legislative acts in densely populated Tatar areas, the situation of the national peasantry became even more aggravated. Every district and village received an obligatory grain delivery plan on the basis of the Decree of the All-Russian Central Executive Committee and the Council of the People's Commissars of the Russian Soviet Federative Socialist Republic, starting 29 June 1929. After

its announcement, the local authorities began to force peasants in villages and regional assemblies to make commitments for delivering grains. A large part of the 'cereal partition' was forcibly built in the well-to-do sections of a village regardless of whether or not they trade [State Archive of Penza Oblast, Fund R-1315, Inventory 1, File 1, Sheet 30]. The requisition of surpluses of grains, forage and seed material took place everywhere.

But even such emergency measures did not help the state and cooperative grain procurement institutions. According to the documents, bread procurement in the 1928–1929 campaign in many places densely populated Tatar areas remained unfulfilled [State Archive of Penza Oblast, Fund R-1315, Inventory 1, File 1, Sheet 60]. During this period, Article 107 and Article 58 of the Criminal code of the RSFSR on counter-revolutionary activity was being applied especially widely. Peasants started to be held liable for the non-fulfilment of tax, insurance, borrower and other obligations to the state, and also for hiding grain reserves and raw leather hides. In reality, the ban against the market corn trade was introduced by this act in the country [Kolganov, 1990, p. 108], the New Economic Policy began wrap up in the villages that were developing towards a public/political campaign on the transition to the forcible collectivisation of peasant holdings.

As the documents suggest, the process of establishing collective farm farms in densely populated Tatar areas during the New Economic Policy was extremely slow, difficult and spontaneous. For example, the report 'On the state of collective farms in the Tatar republic' presented on 27 September 1927 at the conference of the secretariat of the Tatarstan regional committee of the CPSU(B) by instructor A. Gudozhnikov, stated that on average 215 desyatins of land account for one kolkhoz. As for the national structure, 52% of their personnel consisted of Tatars. The availability of land totaled 3,16 desyatins per person, which is more than for an average peasant. There was less cattle and agricultural inventory in kolkhozes than on peasant farms. No collective experienced collectivisation in the proper sense

of the word, 20 out of them did not even have a hint of collectivisation, their everyday lives lacked a sense of collective purpose, and communal kitchens can only be found in four kolkhozes. On average, harvests in the kolkhozes exceeded harvests in peasant farms by 25%. Kolkhozes were not efficiently used, and 83% of them were economically inefficient [SA HPD TR, Fund 15, Inventory 2, File 23, Sheet 30]. According to other calculations, 12.5 farms and 163 hectares of agricultural holdings accounted for one collective on average [SA HPD TR, Fund 292, Inventory 1, File 553, Sheet 25]. It should also be remarked that the majority of kolkhozes operated at a loss, and the use of complicated agricultural machines was not profitable.

In 1927 around 100 thousand peasant farms in Tatarstan (19%) were engaged in the implementation of different forms of cooperation [National Archive of the Republic of Tatarstan, Fund R-4580, Inventory 1, File 403, Sheet 42]. Out of the total amount of united peasant holdings, 95% were joined by credit and procurement-sale partnerships, and 5% by industrial cooperation [Krasnaya Tataria, 1926, 17 October]. The speed of the development of kolkhozes in Tatarstan was slow. In 1928 the kolkhoz sector accounted for 0.5% of all peasant farms in the republic [Gusev, 1929, p. 25]. The process of the establishment of kolkhozes was most likely brought about by the ability to receive public credit, tax incentives and other material privileges, and not some belief in their 'bright future', which often caused the peasantry to form nominal collective farms. As a result, many kolkhozes failed to wrench themselves out of the mire of their state debt and their consumption of material resources. The harvest in kolkhozes was therefore a bit higher than on single peasant farms. But this growth was insignificant. After the needs of the members of kolkhozes had been met and other expenses had been covered, the remaining surplus did not guarantee the rate of saving needed. It was impossible to rely on the further development and the flourishing of the kolkhoz system without that. The majority of kolkhozes remained static at the stage of manufacture development.

During the transition to the mass collectivisation of peasant holdings in densely populated Tatar areas in order to manage the process of creating a collective farm system, people responsible for work with national minorities started to become actively engaged in this type of progress. As a rule, their main duties involved the agitation and distribution of propaganda to national minorities [State Archive of Penza Oblast, Fund R-1315, Inventory 1, File 4, Sheet 8]. For example, three instructors who provided assistance to peasants in economic and socio-economic matters worked in the Penza region in districts which were on average inhabited by the Tatars. Despite these organizational issues, the kolkhoz movement was not wide spread during the first years of collectivisation. In general the simplest forms of industrial and consumer cooperation still functioning, mainly in the form of associations. For example, as of October 1, 1928 there were 1282 different forms of cooperative societies in Tatarstan [National Archive of the Republic of Tatarstan, Fund R-4580, Inventory 1, File 403, Sheet 42]. On average each one of them accounted for 331.6 farms and 1072 people 32.8% of the rural population of Tatarstan was involved in cooperative economic activity. [National Archive of the Republic of Tatarstan, Fund R-3452, Inventory 1, File 29, Sheet 2]. The same situation could be observed in the Penza region where 46% of the population were involved in the simplest forms of industrial cooperation [State Archive of Penza Oblast, Fund R-1694, Inventory 1, File 13, Sheet 206]. The socialized kolkhoz sector in the villages of the Tatar republic remained insignificant: gross production in 1926–1927 amounted to 1.3%, and in 1928–1929, 2.8%. The commercial sector in 1928–1929 amounted only to 3.1% [National Archive of the Republic of Tatarstan, Fund R-4580, Inventory 1, File 336, Sheet 3]. According to documentary data from other compact Tatar settlements, the process of cooperation in the Tatar villages was very slow: in the late 1920's it amounted to 15.4%, in the early 1930s, 46% [State Archive of Penza Oblast, Fund R-1315, Inventory 1, File 13, Sheet 155].

The Tatar peasantry resisted the socialization of livestock, especially horses. The threat of being excluded from the All-Union Communist Party of Bolsheviks was not a convincing argument for Tatar communists. They openly declared to the state: 'Throw me out of the Party, I'm not giving you my horse'. [State Archive of Penza Oblast, Fund R-1694, Inventory 1, File 3, Sheets 143, 449]. At the same time, Tatar peasants suggested leaving livestock on the collective farms for individual use as a measure of safeguarding the individual rights of livestock owners [Ibid., Fund 13, Sheets 198-198 reverse]. Draught horse power was highly valued; for example, 133 farms of Bikmurzino village in Neverkinsky district of Penza region possessed 80 working horses [State Archive of Penza Oblast, Fund R-1315, Inventory 1, File 9, Sheet 5]. Due to unfavorable conditions in the grain market and the strict tax policy in the late 1920's to early 1930's, many peasants with horses found it more profitable to go to the city and earn money there. Suffice it to remark that the profit from the transport trade in the 1920s was quite impressive when considering the tariffs: 1–25 versts for 5 roubles, up to 25 roubles for a passenger with luggage [State Archive of Penza Oblast, Fund R-1694, Inventory 1, File 3, Sheets 143, 449].

At the same time the mass collectivization of peasant farms was combined with intensive migration of the Tatar population to Central Asia and Transcaucasia, especially from the Middle Volga Region. Leaving their farms and plots of land many peasants went to different building sites, oil fields and mines. For example, the Tatars living in the Penza region and adjoining areas resettled to Baku with their families to produce oil, while those living in Tatarstan went to the republics of Central Asia where they settled there and formed a large Tatar diaspora. The intensive migration of the rural population from 1930 to 1931 resulted in the mass outflow of kolkhoz peasantry from the collective farms. Thus the number of kolkhozes in the Penza region fell to 25.2% as a consequence of the mass outflow of villagers from kolkhoz collective farms [State Archive of Penza Oblast, Fund R-1694, Inventory 1,

File 13, Sheet 206]. The process of migration of the Tatar population to a certain led to delays in the introduction of a passport system in rural areas which would clearly have attached them to the system of kolkhoz collective farms and sovkhoz state farms. The document also provides data on sabotage, acts of arson and destruction of kolkhoz property, as well as assassinations of collective activists [State Archive of Penza Oblast, Fund R-1315, Inventory 1, File 13, Sheet 71].

Thus the process of collectivization of Tatar villages faced many difficulties. The percentage of Tatar peasantry assigned to collective farms, in many compact Tatars settlements in the Middle Volga Region and Cis-Ural region in the middle of the 1930s was much lower

than in comparable indicators for Russian villages. Nevertheless, Tatarstan unlike many regions of compact Tatar settlements was ranked third in Russia for the pace of collectivisation of peasant farms in 1930. The growth in the number of cooperative members was connected to peasants of average means and the poor. Tatars eagerly joined the cooperatives in the hope that the credit cooperation would allow them quickly to revive the economy and make consumer cooperation more reliable [SA RF, Fund R-1235, Inventory 120, File 100, Sheet 53]. As for industrial cooperation, it thrived with some difficulty in the Tatar villages. Only by the late 1930's did the kolkhoz economical system develop as a result of the forced collectivization in Tatar villages.

§ 3. The Policy of Industrialisation of the Country: Results in the Tatar Autonomous Soviet Socialist Republic and its Influence on the Position of the Tatars in the Republic and Beyond its Borders

Klara Nazipova

By the middle of the 1920's it had become evident that the expectations of the upcoming world revolution of the proletariat would not be met. In the conditions of intense economic difficulties, an intense power struggle for power and fierce discussion within the party, the following point of view prevailed: 'about the possibility of constructing socialism in a single country'. The party of Bolsheviks decided to construct socialism in the USSR using their own powers. Its main principle was the first-ever alternative capitalist forced socialistic industrialisation, to be implemented on a new basis—the socialistic ownership of tools and the means of production, as well as planned agriculture under the conditions of the state dictatorship of the proletariat.

The industrial course of the country was officially declared by CPSU(B) as the general line of the party at the 14th congress of the party held in December 1925. The essence of the policy was to transform "the USSR into an importer of machinery and equipment into a producer of machinery and equipment, to

avoid it becoming an economic appendage of the global capitalist economy being surrounded by capitalist states [KPSS v rezolyuciyax, 1970, p. 245]. The 14th congress of CPSU(B) also emphasized "the exceptional importance of the development of industrial life in every district, every Governorate, region, national republic, and the involvement of all the workers in active industrial work [Sazhin, Nalimov, 1960, p. 111].

The strategic course of the party envisaged the planned reconstruction of the national economy based on the development of priority branches such as heavy industry, especially mechanical engineering—its core. The industry of Tataria was in a critical situation as a result of the consequences of the First World War and the civil war; military actions which took place twice on its territory, as well as the significant damage caused to human resources and national economy as a result of the 1921–1922 famine. There was not enough money to restore industry. This was noted at almost all the Congresses of the Soviets of the TASSR, in

decisions of the regional party conferences and decrees of the regional party committee. The republic lagged behind other regions of the RSFSR in industrial reconstruction.

Heavy industry in the Tatar republic was operating at a loss until 1924–1925. It was not until the 1926–1927 economic year that a profit of 4.6 million rubles was achieved. This was restored in the 1927–1928 economic year. The gross production of heavy industry was 120% of the 1913 level [Sazhin, Nizamov, 1960, p. 111]. However, less electric power was produced. Some industries such as textiles, wood-working, food and clothing—provided more production than in 1913, but the volume of production in many soap manufactories, printing, construction and other enterprises had not yet been restored [Malkov, 1930, p. 20].

The restoration of industry was based on principles of the New Economic Policy (organization of industry into trusts, self-supporting running, etc.). The aim of the policy was to support small private businesses, to create favourable conditions for introducing private capital into the republic's industry. This enabled private entrepreneurs to aid in the reconstruction of large-scale industry. The state obtained supplementary resources from them in the form of lease payments and taxation. In addition to this, private entrepreneurs were able to produce the goods necessary for the population. For example, in the first half-year of the 1924–1925 economic year alone, the total leasing enterprises in the republic achieved production amounting to 850 thousand rubles, or 10% of all the republic's state production. In other words, a worker in a leased enterprise manufactured twice that of a worker in the workers' trusts [Tlevsky, 1925, pp. 41–43].

Due to the party's concerns about growing social differentiation resulting from the development of private property, the control of the state and public organisations was increased. Restrictions on the activity of tenants and owners introduced in 1924 ended in Tataria in 1928–1929, with the final elimination of private capital in the republic's industry [see Nazipova, 2000, pp. 305–324].

The industrial recovery took place using old technology and the entire resources of the existing enterprises, thanks to a more favourable raw material supply chain. The depreciation of capital assets of industry amounted to no less than 50–60% of their original cost [Industrializatsiya TASSR, 1968, pp. 144–145]. The aims of further industrial and economic development required not only the re-equipping of old factories and plants with new technology and technologies, but in particular the construction of new modern enterprises. In addition to the technological backwardness, significant problems were created by the shortage of material and financial resources, skilled workers, and engineering personnel with experience in heavy industrial construction.

There were opponents of industrialisation in both Tataria and the state as a whole. They could be also found in the republic's party organization and local government bodies. When referring to the economic backwardness of the republic, some of them stated that industrialisation was beyond its capabilities. Others believed that it could be carried out unilaterally only at the expense of light industry and food production.

They were opponents of accelerated growth, the creation of national proletarian cadres, grassroots ethnic policies (*korenizatsiya*) of the party, and the Soviet state economic apparatus. The difficulties of international relations were another obstacle to industrialisation [Tagirov, 2008, pp. 241–256].

The favourable conditions inside the republic were of great importance for the development heavy industry and turning Tataria into a heavy industrial centre: the presence of state industry, agriculture, forest raw materials, the reserves of hydraulic engineering resources of the Volga and Kama Rivers, a profitable transport position between the industrial areas in the Urals and the industrial centre at rail and water crossings, minerals, labour resources, skills in trade and industrial labour by population.

Resolution of the tasks needed to promote industrialisation required an intensification of all the efforts and resources, in the quick-

est possible time scale using internal resources and the strictest possible economic regime. The party, Soviet, trade unions and other public organisations in Tataria were all trying to foster the living creativity of the masses, and turn industrialisation into a nationwide activity.

The workers of Tataria took part in procuring and mobilising funds for industrialisation. Their aim was to reduce the number of personnel necessary, reduce expenditures required for the maintenance of enterprises, and achieve cheaper building costs. As a result of reduced costs for administrative personnel in industrial enterprises and on administrative bodies, in 1926–1927 year alone about 3 million rubles was saved and directed towards industrial development.

Workers, peasants, and the intelligentsia of the republic increased their cash deposits in savings banks, subscribed to bonds for industrialisation, and gave a significant part of their savings to the fund for industrialisation. For example, in 1927 the Tatar Autonomous Soviet Socialist Republic received 12 million rubles by implementing three 'loans' for industrialisation [Istoriya TASSR, 1968, pp. 408–409].

The export of grain is considered to be one of the main sources of accumulating income for industrialisation. V. Lel'chuk, L. Koshel'eva and other historians claim that the sale of grains seized from peasants at remarkably low prices did not provide enough money to purchase equipment, so it was not of great importance. The largest proceeds from the export of grain were earned in 1930 - 883 million rubles. In the same year the sale of petroleum products and timber provided more than 1 million rubles. Fur and flax inter alia amounted to another half a billion. In the ensuing years world grain prices fell. The export of a large volume of grain in 1932–1933, when the Soviet people was stricken with famine, earned 389 million rubles in total, the export of timber nearly 700 million rubles, and the export of petroleum products the same amount. Only fur sales in 1933 provided more profit than grain exports [Pravda, 1988, 28 September].

Realizing the benefits, the fur syndicate of the People's Commissariat of foreign com-

merce began the creation of a fur industry in the country by the construction of fur factories. In order to avoid selling raw material at a half-price to New York and Leipzig furriers and thus risk the loss of a considerable amount of hard currency, Pushnosindikat created a domestic fur tanning sector through the local offices of the State Commercial Enterprise - Gostorg. For example, in a village near Kazan where the fur industry was developed, local craftsmen performed the initial treatment of raw materials. This was then further processed at foreign fur factories. They needed their own factory. Kazan was chosen by People's Commissariat for Foreign Commerce as the location for building a fur factory. In spring 1927, work commenced on a fur factory in Kazan where the conditions were favourable. There were experienced master furriers and fur producers here. During construction a number of unused buildings were used as well as the equipment of former private factories in the Novo-Tatarskaya sloboda. The factory was built by local workers, technicians and engineers under hard conditions. At the end of 1928 the 1st Kazan fur factory was launched; it was called 'The 1st Tatar Factory'. It was the parent enterprise for the future Kazan fur industrial complex. In 1928–1929 gross production of the factory amounted to 8 million roubles [Skaz o kazanskix mexovshhikax, 1974, p. 57]. Its 'soft gold' was transformed into hard currency. The money was not allotted to the local budget.

In the Tataria forestry sector between 1927 and 1929, 6 operative factories belonged to the Forest Trust. About 70% of its produce was sold beyond the republic's borders. The report of the State Plan of the Tatar Autonomous Soviet Socialist Republic 'On economic development of the republic in 1925–1926 and 1927–1928' stated that the centre allotted 1584.5 thousand rubles over a period of three years which 'did not contribute to the improvement of the industrial state of the Republic of Tatarstan. From the designated sum for special purposes from the centre', '1082 thousand rubles was spent on financing the Forest Trust' [Industrializatsiya TASSR, 1968, p. 146]. In November 1926 a

new sawmill was built at the Vasilyevo station of Moscow-Kazan railways [Krasnaya Tataria, 1929, 9 May]. In 1929 the Volga plywood factory No. 3 in Zelenodolsk became operational. This high technology factory was the largest in Europe. All processes there were completely mechanized. The 'Red Kommunalnik' sawmill was opened. In 1928, saw-mills were built in Naberezhnye Chelny, Sviyazhsk, Alekseevsk district [Istoriya TASSR, 1968, p. 412; Rabochij klass Tatarii, 1981, p. 173]. Their produce was also exported. In 1940, hardwood exports amounted to 507 thousand cubic metres.

In 1928, The USSR still ranked fifth in the world and fourth in Europe in terms of industrial output. About two thirds of production was provided by agriculture and slightly more than one the third by industry [SSSR, 1982, p. 137]. "We are 50 years behind the US in terms of national income and capital intensity [Pravda, 1988, 28 October].

Beginning with the 4th quarter of 1928, the development of Soviet economy was based on five-year plans. The first five-year plan for agricultural development - 1928–1929 and 1932–1933 was a specific program for the reconstruction of the national economy including the industrialisation of the country. It was considered in April 1929 at the 16th conference of the CPSU(B) and then confirmed by the 5th Congress of Soviets of the USSR in May 1929. The plan stipulated the transformation of the agricultural of the USSR into a developed industrial power. The CPSU(B) became the only political power in the USSR to undertake public administration in the field of industrialisation. It developed policy, strategy and industrialisation methods, while providing guidance for their implementation.

The first five-year plan for the national economy and the social-cultural construction of the Tatar Autonomous Soviet Socialist Republic - 1928–1929 and 1932–1933 - was revised several times. Each new draft increased the rate of the national economy's reconstruction. Its final draft was considered and approved at the beginning of November 1929 by the plenum of Tatar regional committee of the party. In December 1929, it was

approved y the 2nd session of Tatar central executive committee at the 8th convocation and became law.

In 1928, Tataria was a region with poorly developed industry. The ratio of its industry made up 33.1% [National Archive of the Republic of Tatarstan, fol. R-100, § 4, file 1096, p. 103; SA RF, Fund 262, Inventory 1, File 549, Sheet 6]. The main task of the first five-year plan was to resolve the matter of economic and cultural backwardness. The main factor in solving this problem was the need for the rapid development of heavy industry, as well as increasing the volume and quality of the working class, while in particular the formation of national ethnic cadres and raising the level of their skills. To overcome the backwardness of industry, the plan envisaged higher rates of development than in the country on average. The building of 26 factories and plants was planned, TPP No 1. Investments of 86.6 million rubles was envisaged to construct new buildings and reconstruct existing ones.

In years of the first five-year plan the increase of industrial products and revenues of the republic had to occur at the expense of branches of light and food industry.

The first five year plan for Tataria was revised several times by the State Plan of Russia. For example, it did not include the Bondyuzhskii chemical plant named after L. Karpov which had all-union significance and which the Severokhimprom organisation planned to liquidate in 1929 without significant reason. The plant produced 405 types of salts manufactured in the Soviet Union, and it was the only manufacturer of such products as hyposulfite barium chloride. In addition the plant produced sulfuric, hydrochloric, nitric acid, chlorine, calcified and caustic soda [Kashin, etc., 1965, pp. 54–55; RGAE, Fund 4372, Inventory 9, File 1049 (g), Sheet 61]. Its produced was ranked first in the country in terms of quality and it was used in the defense, textile, paper, glass, and leather industry. It was delivered to enterprises in Moscow, Leningrad, Nizhny Novgorod, Saratov, Sverdlovsk, and other towns of the Central, Volga and Ural regions of the country, exported to other states [RGAE, Fund 4372, Inventory

9, File 1049, Sheets 46, 98]. The Bondyuzhsky plant was the first and oldest chemical enterprise in Russia. Three generations of chemists and EM worked there. The first-class personnel of the plant supported other enterprises in the growing chemical industry.

The personnel of the plant, the Tatar regional committee of the party, the government of the republic decisively spoke against the liquidation of the enterprise. They managed to preserve it.

It took about a year and a half for the collective of the chemical plant to increase labour productivity by one and a half times and abruptly reduce the cost price of production. At the end of 1930 the Bondyuzhsky plant became one of 11 best enterprises of the country [Krasnaya Tataria, 1988, August 28].

In the first two years of the five-year plan, the industry of Tatarstan was approaching the average level of the RSFSR in terms of growth rates. This can be explained by the possibility for expansion at the expense of the fixed capital of existing industries. For further development, additional investments to create new sectors of large-scale enterprises were necessary. When it came to new large-scale industrial construction, it was left to other regions of the country due to a lack of investments. This was connected to the fact that excessive capital investments in Tataria's local industry started only in 1926–1927, 'whereas a similar process to support the expansion of production in the USSR started from 1923–1924, that is 3 years earlier than in the Tatar republic'.

Significant investments and major repairs of existing enterprises required 3.5 million rubles in 1928–1929 (five-year plan, i.e. in the first year) [State Archive of the Russian Federation, Fund 1235, Inventory 125, File 332, Sheet 1]. In 1929–1930, 10 million rubles (not including house building) were directed to the development of industry according to the five-year plan of Tataria, but in fact they amounted to 7.4 million rubles, in 1930–1931 (not including shipbuilding), 14 million rubles. Investments envisaged by a resolution of Presidium of state planning of the RSFSR fell to 9.1 million rubles. That meant that investments

in the industry of Tatarstan fell in comparison with the five-year plan by 25% in 1929–1930 and 35% in 1930–1931. Moreover, the state plan of the RSFSR excluded the building of ten new factories and plants that had a great importance for industrial development from the final calculations. All these circumstances led to a situation in which the rate and share of investments in Tataria would be even lower than in Russia on average, such that the implementation of the five-year plan would be under threat.

The facts represented above refer to the 3 June 1930 The Council of People's Commissars of the Tatar autonomous Soviet republic for Department Of Nationalities of the All-Russian Central Executive Committee where the 'well-founded objections against reduction of limits of capital industrial construction for 1930–1931 performed by the Presidium Of State plan of the RSFSR' were presented. [Ibid., Sheets 1–2, 8–9 reverse].

the 14th All-Russian Congress of the Soviets which took place in 1928 in Moscow held discussions about the matter of national regions of the RSFSR. Representatives of the autonomous republics appearing at the congress talked about limitations on their independence and economic rights mentioning their economic problems.

The Chairman of the Council of People's Commissars of the Tatar Autonomous Soviet Socialist Republic, K. Ismaev, appearing in the congress said: 'The first issue is the question about the relationship of republics and regions within the government of the RSFSR... Despite having achievements in the field of ordering budget rights of autonomous republics, they do not have approved constitutions (I don't know how it is with the rest of the republics but this is definitely true for the Tatar republic). The Tatar autonomous republic has existed for almost ten years, and we still do not have a constitution confirmed by the centre. This complicates the work of local authorities and creates problems for normal interaction with People's Commissariats of the RSFSR. I would be able to provide many examples characterising relations between the autonomous

republics and central People's Commissariats. I'll say this much, sometimes several People's Commissariats treat autonomous republics just as governorates and sometimes even as districts. I think that is inadmissible. The People's Commissariat of Trade of the RSFSR, in particular, indicates that the warehouses involved in egg packing must be organised. Furthermore, the People's Commissariat of Trade considers this decision as final and not subject to change in the provinces. It seems to me that regulation of this kind, centralisation of this kind, is hindering the development of work and the manifestation of local initiative... When plans are composed, for example, five-year plans, they always apply us to one region or another and it complicates our work. We'd like the government of the RSFSR to issue a decree saying that the Republic of Tatarstan is an independent economic entity' [State Archive of the Russian Federation, Fund 1235, Inventory 123, File 4, Sheets 9, 12].

Nevertheless from the 1929–1930 economic year new industrial construction began in Tatarstan on an unprecedented scale. During the first five-year plan, the republic continued to lag behind the whole country in terms of the average level of electricity generation. In 1930, the USSR produced 57 kilowatts per person, in the Tatar republic 17 kilowatts. In 1932, the entire country was producing 100 kilowatts per person while Tataria was at the same level as it had been before [20 let TASSR, 1940, p. 73].

Building new factories and plants, development of industry and the social-industrial sphere is out of question without a sufficient power base and centralized electric power system in the republic.

In May 1930, construction of the Kazan state district power station, TPP No. 1, began in the southern suburbs of Kazan, in Zhirovka sloboda. The construction of an integrated, combined enterprise with the newest technology was being undertaken for the first time in the republic. Therefore during the construction stage many difficulties and problems were faced in the initial stages. The first project of the station was unsuccessful. The builders had to amend the designs, procure cement, iron,

and building materials. There was a shortage of specialists and workers.

They had to build despite the shortage of technical equipment. Spade, picks, wheelbarrows, and at best horses and carts were the main tools. Operating and life conditions were tough, especially at the beginning: workers lived in dugouts, temporary tents and barak huts. They had great difficulties concerning food supply. All these factors affected the pace of construction.

The construction of the Kazan Thermal power plant (TPP) No. 1 was at the centre of attention of the party, public and non-governmental organisations in Tataria and local media from the outset. The construction was declared as a national and republican project. It was included in the 518 most important construction projects in the country [Rabochij klass Tatarii, 1981, pp. 171–173; Istoriya Kazani, 1991, pp. 121–122; Belyalov, 1978, pp. 171–177]. Ali Ganeevich Ganeev was the head of the construction site.

The acceleration of the construction of TPP No. 1 was enabled by its inclusion in the list of items due to be commissioned by order of Chairman of Supreme Soviet of the National Economy G. Ordzhonikidze on 8 January 1931. This led to a significant improvement in the materials, equipment and machine supply. Material and human resources assistance also improved.

Brigades of concrete workers from Berzniki, boiler erectors from Magnitogorsk, workers and experts from other advanced building sites took part in building the TPP No. 1. They were mainly bricklayers, pipe fitters, form builders, other craftsmen and unskilled labourers with no qualifications from Kazan and all parts of the republic. Despite the low degree of mechanisation and the insufficient qualifications of the construction personnel, the intense rates of labour on the building site, allowed the first combined thermoelectric station to be built in record time (on 17 January 1933, the start-up trials of the first turbine unit took place in a ceremonial setting. On 18 January 1933, an article under the name 'Powerful electric factory' was published in the 'Soviet

Tataria' newspaper. It stated: 'KazTES is a new type of station. Almost all the achievements of world technology have been put to practical use here. There are 5 boilers at the station. Each of them produces 45–50 tons of steam per hour at a pressure of 36 atmospheres. Eleven first-class foreign companies and more than twenty Soviet plants have produced equipment for this TPP'. TPP No. 1 was equipped with mainly imported equipment. It was often the case that the engineers and workers were able to resolve problems faster than experienced representatives of supplier companies while assembling the equipment. Some of the foreign equipment was installed without the oversight of firm representatives. For example when an Austrian crane was installed in the turbine shop.

The launch of TPP No. 1 led to the development of the power system in Tataria, TPP No. 1 was a modern station at that time generating power and heat energy according to the most economic technological cycle [Sovetskaya Tataria, 1987, 2 July].

In recognition of the fast rate of work in constructing the station, its early commencement of operations and the labour heroism of the collective of builders and fitters, it was registered in 'Red Book' of new buildings of Tataria' according to the regulation of Central Executive Committee of the TASSR.

This building site provided systematic training for building electric power stations, new large factories and plants in the future. Workers, engineers and technicians for other building sites of the republic were trained there.

The fur industry developed rapidly in Tataria during the first five-year plan, in accordance with a decision of People's Commissariat of foreign commerce of the USSR to industrialise the fur industry. By the end of the five-year plan, investments in fur industry of the republic amounted to about 20 million rubles [Industrializatsiya TASSR, 1968, p. 324]. In 1928–1929 a dying-house and raw-material factory were built. At the beginning of 1930, the Council of People's Commissars of the USSR issued a special decree on the construction of the largest enterprise in Europe for a dressing sheep-

and lambskin factory as a priority construction project in the USSR.

The enterprises were provided with equipment and raw materials. They were built in accordance with the latest technological achievements and equipped with Soviet and foreign machines. In 1930 the enterprises were united and the Kazan fur plant was created. It was the largest enterprise of fur industry. It included: 5 main factories, 2 utilization plants, a mechanical plant, FTA, a fur technical school as well as large farms: raw material sources, material sources and transport equipment.

During the first five-year plan, 22 large enterprises were built in the Tatar Autonomous Soviet Socialist Republic, many of them were of all-Union importance (the first and only cat-cut plant in USSR; the largest felt footwear factory named after M. Razumov, factories of fur plant No. 3, 4, 6, 8). They also built more than 60 average factories and plants as well as lots of small enterprises. In 1932, the gross output of large enterprises amounted to 117,497 thousand rubles [RGAE, Fund 4372, Inventory 30, File 822, Sheet 13; SA HPD TR, Fund 15, Inventory 14, File 157, Sheet 2].

In total about 30 factories and plants were reconstructed during the first five-year plan. These included the 'Red Textile-Worker' factory in Kukmor, the V. Lenin linen factory, 'Spartakus', 'Hammer and Sickle', and M. Vakhitov, etc. Their gross output in 1928 amounted to 45 million rubles and 133 million rubles in 1932 [Ob`edinyonny'j plenum, OK i OK VKP (b), 1933].

After the first five-year plan had been fulfilled, Tataria became one of the most significant light industry regions in the Russian Soviet Federative Socialist Republic. For example, if in 1928–1929 the Kazan fur factory had produced goods worth 8 million roubles, in 1932 its gross output amounted to 128 million 614 thousand roubles. By over-fulfilling the export quotas for 1932, it had achieved the task set by the government of the Tatar Autonomous Soviet Socialist Republic 'On manufacturing consumer goods at the amount of 7,100,000 rubles' of 2 July 1932 ahead of schedule [Skazo kazanskix mexovshhikax, 1974, pp. 56–57].

The clothing, footwear and felt boot industries which used to be semi-handicraft sectors became large mechanized ones. The share of clothing industry of Tataria in this field in Russia amounted to 7.5% in 1932, 9.2% in the flax, 3.5% in fat [RGAE, Fund 4372, Inventory 31, File 1928, Sheet 113]. In 1932, 1646 thousand pairs of felt boots were produced in the republic and its share in the corresponding branch of industry of the USSR amounted to 34.5%. During the first five-year plan, leather footwear production increased by 3.4 times and linen cloth production increased by 1.1 times.

The republic became one of the centres of the woodworking industry [Dostizheniya TASSR, 1967, p. 16].

After the publication of the article 'How to organize competition?' by V. Lenin was published on 20 January 1929, mass socialist competition for the realization of the 1st five-year plan began to develop in the republic. Intensive work practices were the main form of competition in this period³. By the end of 1929, there were 305 shock brigades in the republic. 40% of workers in the industry were drawn into the competition. These are the main tasks which were put forward and solved: increase of labour productivity, cost saving, cutting the cost of products, reduction of wastage and solving the problem of lateness at work.

Plant workers proposed industrial and financial counter plans, reinforced control over their realisation. There were also other forms of competition: start-to-finish production teams, social towing, 'Best institution' contest, interplant competitions, and others. Slogan 'Five-year plan within 4 years' was the main one [Rabochij klass Tatarii, 1981, pp. 186-194; Istoriya Kazani, 1991, pp. 127-133].

Fixed assets invested in the consumer industry by 1930 led to a reduction in the times need for capital investment recuperation. It also accelerated the growth of the republic's revenue and contributed to the acquisition of resources for the development of manufacturing capital goods in the ensuing years. De-

spite great difficulties with raw material, by the end of the first five-year plan, consumer production in Tataria's large-scale industry had increased 3.5 times while the increase in the whole of the USSR amounted to by 87.3%. The gross output of light industry of Tataria in 1932 amounted to 221.3 thousand roubles in comparison with 59.6 thousand roubles in 1927–1928 [RGAE, Fund 4372, Inventory 31, File 1928, Sheet 110].

The growth of internal economic savings allowed for an increase in investments in heavy industry of the republic by redistributing a share of revenues. Thus during the first five-year plan they invested twice as much money in the development of heavy industry as was initially planned (57.9 million rubles instead of 36.0 million rubles defined by the plan, or 48.0% of investment).

In 1932, certain non-plan construction projects were undertaken in the republic. This was completely justifiable from the standpoint of the Tatar economy and the geographical allocation of such giants as: an aircraft manufacturing plant, synthetic rubber plant, film factory, and others.

At the beginning of 1933, the Soviet people started work on the implementation of the second five-year plan of economic development for 1933–1937 confirmed at the 17th congress (January-February 1934) of the CPSU(B). The completion of technical reconstruction of economy, mastering new technology and new industries were the main economic tasks of this five-year plan. The nation's economy was equipped with new technology which needed to be employed effectively. The plan envisaged the accelerated development of the eastern districts and national republics including the Tatar Autonomous Soviet Socialist Republic, and the creation of sustainable facilities.

The second five-year plan of Tataria envisaged its transformation into one of most advanced industrial centres of the country, and 'one of powerful industrial districts of the USSR' [RGAE, Fund 4372, Inventory 3, File 1933, Sheet 6]. This was to be achieved at the expense of development of branches of heavy

³ The terms 'shock workers' and 'shock work' denote honesty, initiative, and professional skills.

industry such as: metalworking and chemical industry. At the same time light industry, food and forestry had to be developed. 1,087.68 million roubles were spent on national economic and cultural construction during the second five-year plan. 703.2 million rubles of investment was directed at the development of industry of the Tatar Autonomous Soviet Socialist Republic [Industrializatsiya TASSR, 1968, pp. 477–478].

Two powerful Thermolectric Stations were built during the second five-year plan: Thermal power plant No 1 (the second phase of TPP No. 2). Facilities available for power generation grew by 117.8% in comparison with 1932. In 1937 they produced three times as much electric power in Tataria as in 1932. Electricity consumption doubled in these years [Rabochij klass Tatarii, 1981, p. 206].

The metal working industry in Tataria developed in the following directions: mechanical engineering, ship building, repair and engineering works in Kazan and Chistopol', nail-making and iron works. During the second five-year plan, the republic possessed 17 mechanical engineering and metal working enterprises; 11 of them were rebuilt, 4 of them (2 ship repair yards and 2 metal working plants) were reconstructed, all the rest were under construction [National Archive of the Republic of Tatarstan, Fund R-100, Inventory 4, File 2931, Sheets 24–29]. The 'Red Metal-Worker' shipyard increased its activity significantly. In 1932 it was named after A. Gorky. The factory specialized in ship repair and produced farm machinery: fanners, threshers, iron founding. After reconstruction in 1925–1926, they commenced construction of merchant ships (bulk-cargo barges, towboats) and naval ships (armoured vessels) from 1934 [Tatarskaya e`nczilopediya, 2005, p. 451].

The construction of the 'Kazmashstroy'—Kazan air manufacturing plant was rated among the most significant shock building sites of the second and third five-year plans. People's commissariat of heavy industry of the USSR made the decision to build it in 1931.

With ceremonial fanfares on 2 May 1932, in the presence of hundreds of people, the

first stones were laid in the foundations of a future giant mechanical engineering in the Karavayevsky fields in the outskirts of Kazan. They offered the following slogan: 'All Tataria is building Kazmashstroy' which found a broad response. The districts of the republic were led by future builders cadres. Enterprises and institutions sent their reliable comrades to manage economic, party, komsomol and trade union work.

The construction project was international. Workers from Chuvashia, the Gorkovsky region, Ukraine, the Mari Autonomous Soviet Socialist Republic, and others arrived there. It received different kinds of support [Sovetskaya Tataria, 1967, 7 July].

The foreign specialists and workers took part in building the aviation complex and lived in a hostel built specially for them. They lived in a commune called 'cement'. They worked as instructors and brigade-leaders teaching beginners building craftsmanship. Amongst them were winners of socialist competitions who had been awarded the title of 'Heroes of the Socialist Construction of Tatarstan'. The head of communist party of Germany Ernst Telman was awarded this title at the request of the workers of Aviastroy for providing assistance in building the air manufacturing plant and other enterprises [Sovetskaya Tataria, 1979, 6 October, 1981, 22 January].

The aviation manufacturing plant consisted of two integrated factories: an aviation manufacturing factory and motor-building factory producing airplanes, screw propellers, fittings and attachments. The additional industries were developed at the same time (TPP, surface water management, railways and conveyor tracks, lime-and-sand brick factory, mechanized bakery). The entire republic took part selflessly in the building project. As a result, in 1937, aircraft plant No. 124 specializing in repairing TB-3 all-metal bombers and manufacturing small series of DBA-A, TB-7DS-3 entered the list of active enterprises.

By the beginning of the great patriotic war they had mastered the production of Pe-2 light bombers. In 1940 the engine plant was

launched. The production of airskis was mastered at the train parts plant.

By the end of the 1940's, aircraft engineering, one of the most technically developed branches of mechanical engineering with a high degree of cooperative and productive concentration, had become Tatarstan's leading branch of mechanical engineering. It accounted for more than 85% of basic production assets, 70% of employees and 60% of production in this sector [Tatarskaya e'nczilopediya, 2002, p. 31].

The building of 'Pishmash' factory was still excluded from the first five-year plan by the state plan of the RSFSR. The Resolutions of the Defense Board of 21 April 1933, the Council of People's Commissars of the USSR of 24 October 1935, resolutions and decisions of Council of People's Commissars of the USSR of 20 February and 20 June 1936 were necessary for that [RGAE, Fund 4372, Inventory 31, File 1930, Sheet 44; Industrializatsiya TASSR, 1981, p. 494]. A new small-scale typewriter factory was built in Kazan. It was designed by Moscow organisation called 'Gipromash'. The creator of the first Soviet typewriter G. Elizarov was sent to America to study this industry. In 1937 he became the director of the plant and one of its planners. The former craftshop was transformed into a State typewriter factory producing 6,000 typewriters a year typing in the 42 languages of the different ethnicities living in the USSR. By December 1939, the plant had produced more than 30000 typewriters. In addition to Tatar font, it also produced typewriters with Chuvash, Kazakh, Uzbek, Mari, Udmurt, Bashkir, Kabardin and other typefaces. The produce of the factory went to Yakutsk, Ulan-Ude, Omsk, Frunze, Almaty, Tashkent, Dushanbe, Baku, Yerevan, Tbilisi, Kiev, Minsk, Leningrad and other cities of the country. In 1940, the 'Pishmash' plant started producing a typewriter called 'Progress' which became famous. Specialists considered it the best in the country [Rabochij klass Tatarii, 1981, p. 208; Evening Kazan, 1979, 1 December].

A large step on the path towards the further development of chemical industry in Tataria

was the construction in Kazan of one of four plants (SK-4) (the others were in Yaroslavl, Yefemov and Voronezh) where the production of synthetic rubber was carried out for the first time in the world. The building of the factory began in 1932. It had many problems. For example, in February 1933, opponents of the domestic rubber industry managed to delay the building of Kazan factory. Subsidies were reduced to 1 million rubles from the expected 20 million rubles. The building of the factory was frozen temporarily. Thanks to the efforts of the Tatar regional committee of the party and director of the plant F. Egorov, who met Sergo Ordzhonikidze, the construction of the plant was renewed. In 1934, the construction of the major technological workshops was finished thanks to the selfless work of the builders. During the construction of the Kazan synthetic rubber plant (total cost of 58 million rubles and productive capacity of 10 thousand tons) of rubber a year) the experience gained by builders of the Yaroslavl, Voronezh and Efremov synthetic rubber plants was taken into account. This allowed for the plant to be built with 2.5 times greater capacity [National Archive of the Republic of Tatarstan, Fund R-732, Inventory 1, File 2750, Sheet 52]. If the first plants were equipped with foreign machines, the Kazan plant was equipped with complex Soviet apparatus produced at local enterprises.

More than 60 enterprises and scientific and technical institutions of the country took part in building the plant. New highly-qualified specialists and workers for SK-4 were trained with the help of the Yaroslavl synthetic rubber plant. Engineering and technical specialists underwent specialised training in affiliated enterprises [Abramov, 1970, p. 42]. In August 1936 the first section of the plant was brought into operation and by 1940 its forecast capacity had been reached. The synthetic rubber plant named after S. Kirov was a pioneer of organic synthetic industry in Tataria. Its activity helped the country overcome the need to import a significant amount of expensive natural rubber. During the Great Patriotic War it remained the only enterprise

satisfying the needs of the front and national economy for rubber.

An important role in development of the film industry of the country was played by the construction of Factory No. 8 of the Kazan film and photo plant. According to the resolution of Council of People's Commissars of The USSR of the 30 April 1933, it formed part of the list of hero projects. Its rapid construction and implementation was of great importance [On the course of building, see: Abdullina, Ablyazov, 1970]. The capacity of Factory No 8 alone was planned to amount to 250 million metres of film per year, while the industrial capacity of two first Soviet film factories in Shostok and Pereslavl did not exceed 70 million metres per year [SA HPD TR, Fund R-732, Inventory 1, File 2750, Sheet 520].

By 7 November 1935 the factory released its first order. "The young collective of the Kazan research-experimental film factory", in the words of "Red Tataria" on April 17, 1936, gained a great victory. The film "We are from Kronstadt" has been printed on their first release of film. Its quality significantly surpassed films made at old factories in Shostok and Pereslavl. The Kazan factory produced several types of film: positive, negative, X-ray, amateur films, and others.

The film factory became operational in 1936 and the same year the Soviet Union ranked third in the world by film production [Sovetskaya Tataria, 1977, 25 May].

The 18th congress of the CPSU(B) held in March 1939 confirmed the plan of Soviet economic development for 1938–1942. The XVIII Congress defined the main task of the 3rd Five-Year Plan: to catch up with and overtake the most developed capitalistic countries economically; this means from the standpoint of per capita industrial production. The plan envisaged significant growth in all sectors of national economy, first of all the rapid development of heavy industry was in the spotlight. It planned to increase productivity twofold in comparison with 1937.

The third five-year plan of the USSR also defined planned tasks for all branches of economy of the Tatar republic as well. The plan

envisaged the investment of 1 billion 69.5 million rubles in industrial construction [SA HPD TR, Fund 15, Inventory 20, File 34, Sheet 42]. By the end of the 3rd five-year plan the gross industrial output of Tataria was envisaged to increase by 2.3 times in comparison with 1937. The third five-year plan envisaged the development of heavy mechanical engineering in the republic, primarily in Kazan as a basis for the mechanisation and automation of the whole national economy. Serious attention was paid to the further development of the chemical industry, the building materials industry, the construction of duplicate factories, as well as the energy sector and the consumer and food industries.

In addition to Kazan, the construction of large industrial enterprises was envisaged for Zelenodolsk, Chistopol, Kama Ustye and Bigilma. It also envisaged the creation of large-scale oil exploration works and conditions for the following new sectors: oil-producing and oil-processing industry. Thus it was planned that the republic take an active part in creating a new oil depot in the country, the second Baku [Krasnaya Tataria, 1939, 2 April].

In 1939, plans were made to spend 1,340 thousand rubles on oil exploration works in the Tatar republic. In 1940, 10,390 thousand rubles, in 1941, 11,610 thousand rubles [Sovetskaya Tataria, 1977, 29 May].

According to state planning documents of the USSR and the RSFSR, 'Tataria was defined as a district favourable for the development of precise and well-qualified mechanical engineering' demanding relatively low metal consumption and a 'technically perfect chemical industry' [Industrializatsiya TASSR, 1981, pp. 451–452].

In the years of the third five-year plan, the outbreak of the Second World War and the threat of war, led to the accelerated development of heavy industry and above all of its military industries. All existing enterprises and industrial sectors began manufacturing products and materials necessary for defence. The production of consumer goods in the republic decreased, leading to shortage and additional problems for the population.

The share of industrial products in the economy of Tataria in 1941 amounted to 86%. In large industry, 77.6%. That meant that industry became the main sphere of production and the republic which used to be agrarian-industrial became industrial-agrarian.

By mid-1941, 58 large industrial enterprises, small and medium-sized enterprises had been built and put in action, while pre-war five-year plans were being fulfilled. All old factories and plants were refitted. As a result, at the beginning of 1940 there were 805 factories in the republic, in comparison with 127 in 1928. In 1940, the gross output of heavy industry increased twelve times in comparison to 1913, mechanical engineering and metalworking by 71 times, the chemical industry by 24 times, wood processing by 21 times the building material industry by 12 times, light industry by 14.4 times, the food industry by 5 times. In 1940, the power output of electricity generation increased 7 times in comparison with 1928 and energy yield increased 17 times [Rabochij klass Tatarii, 1981, p. 210; Dostizheniya TASSR, 1967, pp. 17–19, 25, 29, 31, 77; Narxoz TASSR, 1970, pp. 28, 47, 50, 52].

The majority of factories built before the war had all-Union significance. The following branches of heavy industry were created: power engineering, mechanical engineering, production of building materials, the chemical industry. New branches of industry appeared: airplane manufacturing, production of synthetic rubber, film, photo gelatin, artificial leather as well as different kinds of defence products.

The 11-fold increase in Tataria between 1928–1940 of per capita industrial production per, which in 1913 was four times less than in Russia, allowed for this difference to be removed. [Dostizheniya TASSR, 1967, p. 30].

Separate factories and branches of industry of the republic were especially important in the scale of the whole country. For example, in 1939, 43% of typewriters, about 50% of fur products, 32% of felt and 27.9% of felled footwear, 8.6% of plywood produced in the USSR were produced in Tataria [Izvestiya, 1939, 4 June; Industrializatsiya TASSR, 1981, pp. 466, 473, 479].

The crucial task of training qualified specialists to manage the enterprises under construction and provide them with optimal conditions was resolved as follows: Engineering and technical personnel including those from the broader nation and who were able to use new technologies and improve them, were appointed to administer complex technological processes and move them forward. This had to be achieved as early as possible without trial and error in an economically backward and technically illiterate country.

There were problems with technicians and engineers in Tataria's industrial sector. By the end of 1926 there were only 43 engineers (2 women), 150 technically qualified people (1 woman), and 121 foremen (1 woman). There was the following number of the Tatars among them: 2 female engineers, 3 technically qualified men, 32 foremen [Rabochij klass Tatarii, 1981, p. 177]. In 1928–1929 the industry of the Tatar republic was behind the RSFSR in general in terms of engineers and technicians. If in the RSFSR the technical staff made up 2.5% of workers employed in industry, in Tataria they made up 0.87%, 0.27% of which possessed higher education and 0.60% possessed secondary education [State Archive of the Russian Federation, Fund 1235, Inventory 123, File 7, Sheet 44]. Old engineering and technical workers could not meet the demands of developing industry. There began a process of forming new industrial and technical intellectuals, engineers, designers and technologists from among workers and peasants. Large industrial enterprises of the Tatar republic became mass schools training highly qualified technicians and engineers in the hours after work. Some enterprises organized evening technical schools and even technical colleges.

On 16 December 1929 The Council of People's Commissars of the Tatar Republic issued an order about the organization of a technical educational institution on the basis of the Vakhitov factory. I. Neometov was one of its founders and first rector. The technical college was opened in January 1930. It was the first attempt in Tataria to establish a new type of technical educational institution. The college

trained specialists for the fat industry of all the country. They found premises for the technical college, equipped it properly and employed local lecturers.

A large group of factory workers enrolled in the technical college. They studied without taking time off work, but with a reduced working day of 6 hours. The factory trained engineers-technicians and heating engineers. The college produced 37 engineers-technologists, 20 machine engineers, 35 technical chemists and 11 technical mechanics including 20 engineers and 3 technicians who were Tatars. Many graduates of the college took up responsible positions at the Vakhitov factory and other factories. In 1936 the factory was transformed into a fat technological college.

I. Neometov was one of the first employees in the republic who was honoured with the title Hero of Socialist Labour of Central Executive Committee TASSR for production work, and he was appointed director of the Vakhitov factory. According to the resolution of the Central Executive Committee of Tatarstan of 30 April 1931 [Geroi truda Tatarii, 1974, pp. 203–204].

The construction of TPP No. 1 was also in process, its director Ali Ganeevich was the initiator of creating an energy institute in Kazan. In October 1930 a new college was opened in Kazan. Ali Ganeev became its rector. The creation of the Kazan Power Institute was the first attempt to establish an energy institute in the Tatar republic. In 1930, energy institutions were opened in Moscow and Ivanovo, in addition to Kazan.

The Kazan Energy Institute was established on the basis of the Kazan Polytechnic Institute (KPI). KIE trained engineers in two specializations: 'Industrial power engineering', 'Central electric power station management'. There was full-time and part-time education, a factory department, extramural semi-annual department training for engineers and technicians at the institution. On January 1, 1931 107 people studied here with an academic and teaching staff of 26. The KIE existed for five semesters and was closed in 1933 for reasons unconnected to the quality of training. This higher education in-

stitute accepted not only first year students but also older entrants from its early days. There were several graduating classes, and it left its mark on history of power engineering education and the electrification of Tataria [Kazan-skij gosudarstvennyj e'nergeticheskij universitet, 2008, pp. 5, 12; Geroi truda Tatarii, 1974, pp. 73–80].

The students did practical training while TPP No. 1 was being built. It became a laboratory where new equipment and technologies, working methods and industrial engineering techniques were implemented. The director of construction, A. Ganeev and K. Mukhitdinov, heating engineer and A. Smirnov, construction superintendent, etc. were among 11 the most outstanding builders of the power plant who were awarded the honorary title of 'Hero of the socialist construction of Tatarstan' [Geroi truda Tatarii, 1974, pp. 186–190]. In April 1933 The Kazan Energy Institute was transformed into an energy technical college.

The V. Ulyanov-Lenin Kazan State University was the cradle of many institutions including the A. Tupolev Kazan State Technical University. The aerodynamic department separated from KSU to lay the foundations of the Kazan Aircraft Institute. The first students of the new aviation institute were the students of the Aerodynamic department of the Faculty of Physics and Mathematics of KSU. Professors and lecturers of Kazan State University were the leading teaching staff of the institution. All the academic, research, scientific and organizational activities were led and directed by the most outstanding scientist, and specialist in the field of sustainability of motion, professor N. Chetayev. By mid-1932 there were two departments at Kazan Aircraft Institute, Aerodynamics and Aircraft Manufacturing. In total 618 students studied there.

KAI was created to meet the demands of the aircraft industry which started developing in Tataria from 1932 when 'Kasmashstroy' was built in Kazan. The graduates of the institute—scientists, aircraft constructors, and technologists—participated in the creation of generations of airplanes which symbolised the development of aviation science and tech-

nologies [Kazanskij universitet , 1979, p. 119; Sovetskaya Tataria, 1977, 7 May].

By the beginning of 1932 there were 6 technical institutes of higher education in Kazan: the Vakhitov Technical College, energetic, aircraft, chemical and technological, forestry engineering and communal-constructive institutions. There were 635 Tatars, or 29% of students studying in industrial IHLs.

By the beginning of 1939, 1,547 (352 women) Tatars were in full-time studies, 1,547 (352 women), Tatars studied part-time, 9,224 (4,436 women), FTA, 1,821 Tatars (587 women) were studying in the republic's higher education institutes [Istoriya Kazani, 2004, p. 29].

By the beginning of 1941, the institutes of higher technical education had trained 1,333 chemical engineers, 1,029 building engineers, 530 aircraft manufacturing engineers for the whole country and Tataria [Rakhmatullin, Stashkevich, 1970, p. 55].

By the beginning of 1939 the number of technical personnel had reached 8,305 people in the main professions thanks to engineering and mechanical specialists in full-time, part-time, evening educational institutions, mass schools, and other forms of training highly skilled engineers and specialists in technique in after work studies. They included 2,072 (406 women) engineers, 557 (117 women) designers, 2,558 (525 women) general technicians, 2,773 (446 women) foremen (excepting working foremen), 345 (7 women) construction superintendents.

The ratio of the Tatars among mechanical personnel increased from 9.6% to 25.1% between 1926 and 1939. At the beginning of 1939 there were 1,494. They numbered 300 engineers (75 women), 61 builders (10 women), 396 technicians (80 women), 737 foremen (143 women) (with the exception of working foremen), 13 construction superintendents (1 woman). Despite the absolute and relative increase of engineering and technical among the Tatars, their proportion among technical personnel was low. Most positions belonged to Russians. [Vsesoyuznaya perepis', 1992, p. 181]. The increased number of engineering and technical personnel meant their new role in the in-

dustry of the republic, especially in such leading branches as mechanical engineering, metal working and chemical industry. They directly operated production processes, took part in its organisational-technical administration, training highly skilled labour forces and the distribution of technical requirements.

Industrialisation changed the distribution of workers to branches of economics and their social structure. According to the census of 1939, the social structure of Tatarstan's population was as follows: 21.4% of workers (with their family members), 13.8% of clerks, 61.2% of individual farmers, 3.3% uncooperated handicraftsmen, 2.3 % other groups [Abramov, etc., 1970, p. 22].

The creation of large-scale industry in the republic was combined with the increasing share of workers (people employed in industry) from 1.16% in 1926 to more than 15% in 1939. In these years the number of workers in large-scale industry increased from 15,704 to 120,600. Of this number about 45,800 people (37.9%) were employed in heavy industry, 33,000 people (27.4%) in light industry, 13,500 people (11.2%) in the food industry, 23,600 people (19.6%) in wood processing and sawing [SA HPD TR, Fund 15, Inventory 22, sv. 156, File 531, Sheet 48]. The number of Tatars engaged in the large factory-plant network increased from 3.1 thousand people to 28.1 thousand people in 1937, that is by 8.3 times. Their ratio among the workers of large-scale industry increased from 2.16 to 34% [TASSR za XX let, 1940, p. 18].

Kazan was a large industrial centre. In 1940, the manufacturing output of Kazan factories stood at 897 million rubles in terms of gross output and 840 million rubles for commodity output. There were 80 thousand employees, EM and clerks working at 139 enterprises, more than 52 thousand people out of them were production workers [Istoriya Kazani, 2004, p. 171].

The unemployed were the main source of reinforcement of the working class in the 1920s. After 1931, due to the elimination of unemployment, the role of the village in satisfying the demand for workers in large-scale

industrial construction became more important. It was carried out at the expense of the inflow of villagers in the form of organised recruitment. Two thirds were forced resettlements. In 1931, 56,778 people were recruited for Tatarstan in villages [SA HPD TR, Fund 262, Inventory 1, File 549, Sheet 31].

Entire districts were assigned to such building sites as factory SK-4, factory of film strip, Aviastroy, and others. For example, 28 districts were assigned to Aviastroy. In 1932 alone more than 10 thousand people from the agricultural sector were engaged in the industrial sector, as a result of the organized recruitment of workers [SA HPD TR, Fund 15, Inventory 14, File 256, Sheet 5].

Building was a transitional stage in industry and the first industrial school for people recruited in the countryside. Here all of them beginning with a digger and ending with an unskilled labourer, could become part of a collective, acquire production skills and qualification at special courses and schools.

In the years of industrialisation, a network for professional-technical education and professional skills of specialists was formed to train qualified workers and guide them in terms of specialisation.

The stationary network of vocational-training education provided training in the following centres: young specialists were trained in FTA, SAMP, and vocational schools.

Between 1932 and 1935 Tataria's FTA trained 10 thousand workers of this kind [Rabochij klass Tatarii, 1981, p. 212]. Most of the workers studied and improved their professional skills after work, through individual brigade training, courses, workshops, etc. On 1 January 1933 28,658 people studied in the republic in after-work courses.

The implementation of scientific achievements and new technologies demanded not only professional skills but also broad technical knowledge from workers. The development of vocational competence and technical literacy were usually simultaneous and mutually enriching.

In 1932, 32 enterprises offered technical studies in Tataria, 328 technical societies were

opened. Almost one third of industrial workers were able to enhance their professionalism there [Rabochij klass Tatarii, 1981, p. 181].

In 1935, 10,815 were engaged in different types of technical studies including 4,681 Tatars. 5,571 people took courses providing the required minimum of technical knowledge, 1,299 people were enrolled on technical knowledge enhancement courses, 1,703 people for courses of socialist labour foremen [National Archive of the Republic of Tatarstan, Fund R-732, Inventory 1, File 2742, Sheet 262; Belyalov, Nizamov, 1969, p. 106].

Mass forms of industrial and technical studies also existed. Voluntary communities referred to as 'ZOT', (an abbreviation meaning 'for mastering technology'), were formed. The technical secondary school became the most widespread form of technical education during the implementation of the second five-year plan. On June 30, 1932 The Council of Labour and Defense of the USSR ordered the implementation of an obligatory technical minimum of knowledge for workers working with complicated units, settings and mechanisms. Members of the Komsomol (Communist Youth) working at the 'Hammer and Sickle' and 'Pish-mash' factories in Tataria were initiators of the movement to take social and technical examinations to allow them to operate machines. By the end of 1933, all workers had passed the social and technical examination at these factories which offered well-regulated technical studies. By the beginning of 1934, there were 2,871 people in Kazan engaged in production who had passed the social and technical examination out of 5,394 members of the Komsomol (that is 53.2%). In 1935, a state technical examination was introduced for workers studying for the technical minimum. It was not only a form of knowledge management but also that of controlling manufacturing activity, discipline and plan execution. The results of examinations influenced career opportunities, dismissals, etc. [Istoriya Kazani, 1991, p. 157].

In 1935, the movement of industrial innovators began in the USSR. It broke out-of-date technical norms and exceeded them by several times. It was named the Stakhanovite move-

ment after Donetsk miner A. Stakhanov, who set the world record for coal production in August 1935. His initiative was adopted in other branches of economics. The Stakhanovite movement was a breakthrough in the development of socialistic competitions. The movement was about increasing labour productivity achieved by advanced workers, mastering technology and organising their work and time in a rational way.

The industrial classes of the Tatar Autonomous Soviet Socialist Republic adopted this patriotic movement with enthusiasm [On the Stakhanovite movement, see Belyalov, et. al., 1976; *Rabochij klass Tatarii*, 1981, pp. 222-232; Istoriya Kazani, 1991, pp. 159-167; Petrova, 1985]. The first Stakhanovites appeared in the republic in September 1935. By the end of March 1936 there were more than 15 thousand Stakhanovites in industrial enterprises. 4,800 were engaged in heavy industry, more than 12,000 people in the fur industry, 3,260 in local industry, and more than 2,500 in the light and food industries. The number of Stakhanovites in Tataria increased from 28,986 people on 1 January 1938 to 31,586 people on 1 January 1940. The ratio of Stakhanovites among workers of light industry had reached 57% by the beginning of 1941 and 67.7% in the food industry [*Rabochij klass Tatarii*, 1981, pp. 227, 231].

The Stakhanovite movement created new forms and methods of technical training of workers and propaganda for shock methods of labour. The Stakhanovites stood behind workers who failed to cope with targets, passing on their experience and skills. During this period the transition from individual patronage to the organization of the public institute of Stakhanovite instructors took place. Each public instructor taught new methods to the whole brigade or district. Instructors took special and professional courses. After Stakhanov schools were created, workers were taught advanced industrial techniques and methods. Their work produced impressive results. Normally workers who failed to cope with output norms before entering Stakhanov schools, demonstrated 100–160% results when they graduated.

During the years of the second five-year plan, labour productivity in Tataria's industry increased by 1.5 times in total. In the metal working industry it increased by 4.5 times. The Stakhanovite movement played a significant role in this process.

The introduction of new techniques and technologies in all industrial branches and all the efforts made to master them brought about qualitative and quantitative changes in the professional structure of Tataria's working class. New jobs demanding high qualification and a broad technical horizon appeared. Machinery and metal working went through the most significant changes from 1926 to 1938. According to the All-Union Population Census of 1926, the republic had 3904 metal-workers of all kinds. There were 1,037 plumbers (7 women), 180 lathe operators working in local industries. By the beginning of 1939, the number of metalworkers had reached 13813 (1,063 women). There were skilled workers operating machinery and mechanical apparatus, including: turners, milling-machine operators, motor-mechanics, electricians as well as toolmakers, electric and autogenous welders, steel founders, casters and moulders, and others. The number of plumbers increased from 1,037 (7 women) to 12,953 (395 women), the number of lathe operators increased from 180 to 3,067 (251 women).

There were few metalworkers among the Tatars before the October revolution as the tsarist monarchy did not allow them to do this work. They were prohibited from being smiths, and not allowed to produce metal products, arms or knives. By 1939, the number of Tatar metalworkers had reached 5,770 (408 women), plumbers, 2975 (134 women), turners, 685 (93 women), milling machine operators, 105 (27 women). They made up 45.8% of steel founders, 32.7% of casters, 34.4% of milling machine operators, 26.5% of electric and autogenous welders, etc. [*Vsesoyuznaya perepi*, 1929, p. 378; *Vsesoyuznaya perepi*`, 1992, p. 182]. There were only 370 Tatar women among representatives of all the professions mentioned above. They were mainly among plumbers, turners and milling-machine opera-

tors. Tatar women even mastered men's professions such as a steel founders, smelter workers, moulders, electricians and autogenous welders and similar.

On January 1, 1937, skilled workers of local industry made up 53.3% of Tataria's population. The number of skilled Tatar workers increased from 22 to 35% during the first five-year plan. More than 50% of the Tatars obtained vocational qualification during the second five-year plan. By January 1, 1937, they accounted for 29.2% of the highly skilled group and 39% the medium skilled group [Nazipova, 1989, p. 38; *Rabochij klass Tatarii*, 1981, p. 213; *Istoriya Kazani*, 1991, p. 158]. Despite obvious shifts in training workers with professions requiring skilled labour, there was a larger group of unskilled workers in the ranks of the republic's working class at the least mechanised, organised, low payment level and heavy manual operations. This especially referred to the Tatar workers who still lagged behind Russians in terms of their professional qualifications and industry structure, despite the achievements in advanced training already made. A whole range of problems and disadvantages regarding training mostly rural qualified Tatar workers prevented this from being resolved. Mastering new specializations was hindered by the fact that some of them did not know the Russian Language, or were either illiterate or semiliterate. They also had difficulties because the alphabet of the Tatar language had been changed twice in ten years.

The Tatar Autonomous Soviet Socialist Republic was the largest supplier of labour for the building sites of the USSR, ports and the Donbass objects. In 1931, the republic surpassed the plan of organized recruitment and was ranked first leaving behind other republics and regions. In the same year it sent 125 thousand people to the Donbass, Central Russia, Ural, Baku, Moscow and other building sites. For example, 10,668 people came to Magnitostroy from the republic [*Rabochij klass Tatarii*, 1981, p. 195]. Tataria was ranked second in the country after the Ural region for providing Magnitostroy with workers [*Istoriya TASSR*, 1968, p. 436].

The number of people recruited in 1932 exceeded those of 1931. In 1932, they recruited 7214 people in the Far East, 1737 people in the Lower Volga district, 7644 in the Gorky region, 2872 in North Caucasus, 1737 in the Leningrad region, 6343 people in the Ural region, 4990 people in the Moscow region, 259 people in Yakutia, and others. Representatives of the Tatar republic made up almost one the third of workers of the Dnieper Hydroelectric Station when rock excavation, mud shifting and concrete operations were the most labour intensive operations [*Sovetskaya Tataria*, 1972, 18 Juny]. The republic remained the main supplier of labour in the ensuing years. Moreover, a whole range of districts were assigned to the People's Commissariat of heavy industry by decision of the Council of People's Commissars dating back to 21 July 1938. 10,550 people were recruited to this department in 1938 alone.

The authors of the 1937 All-Union Population Census divided the country into 5 regional classes: industrial areas and regions with massive growth of industry over the recent years, demonstrating very high rates of population growth and absorbing a significant part of the population of other areas. Moscow, Gorky, Sverdlovsk, Donetsk, Eastern Siberia, Krasnoyarsk district and the cities of Moscow and Leningrad were all listed there. Changes in population in the above regions above took place at the expense of regions in the 2nd group: Kaliningrad, Western, the BSSR, Northern, Kirov, Yaroslavl, Voronezh, Omsk regions, Tataria and Mordovia. The main drift of population was in Tatarstan. Thus the population of the republic reduced by 9.1%. Thousands of Tatars left their native places in 1937 and started living and working beyond them [*Vsesoyuznaya perepis*, 1991, pp. 27, 34]. There was the shortage of labour in building sites of the republic, and they had to attract it from other places. On 3 September 1931, at a conference of industrial employees of the autonomous national republics and national autonomies of the RSFSR during the presidium of All-Union Council of National Economy of the RSFSR, Chairman of Tatar Council of National Economy Yu. Pa-

perny said : 'We are in such a situation because tens of thousands of people are leaving Tataria every year to work beyond its borders. We are providing Donbass, Ural, and the whole range of other large building sites with manpower, as we always have, but to our great shame there is a whole range of enterprises for we can not provide mainly due to insufficient accommodation...' [State Archive of the Russian Federation, Fund 1235, Inventory 126, File 3, Sheet 37 reverse]. This trend could be observed in the ensuing years as well.

In 1926, about 90500 Tatar workers were beyond Tatarstan; they mainly settled in the Urals, Donbass, Azerbaijan, Central industrial region and other industrial regions of the country. According to the population census of 1939, there were 16,676 immigrants from Tatarstan in the Russian Soviet Federative Socialist Republic, 18,500 people in the Kazakh Soviet Socialistic Republic, 29,004 people in the Uzbek Soviet Socialistic Republic, 9,324 people in the Azerbaijan Soviet Socialistic Republic, 1,836 people in the Belorussian Soviet Socialistic Republic, 5,089 people in the Turkmen Soviet Socialistic Republic, etc. In total, there were 512424 Tatar workers in the USSR [Senyavsky, Telnukhovsky, 1971, pp. 335–336]. Tatars could be seen on many large-scale building sites of socialism where they worked devotedly and made great success [Näcipova, 1972, pp. 141–152; Nazipova, 1997, p. 3; Nazipova, 2004].

The industrialisation of the USSR was undertaken under complicated political, economic and international conditions provided the removal of technical and economic backwardness, achievement of economic independence, reinforcement of the defensive capacity of the country. The USSR reached the level of developed countries due to its structure of industrial production and it overtook England, Germany, France on the number of the main sectors of industrial production only yielding to the USA [Pravda, 1988, 18 October].

Historical experience shows that centralised accelerated industrialisation dictated from above is fraught with enormous objective difficulties, problems, errors, and subjective

miscalculations. For example, deficiencies in planning and project overruns were reflected in the incorrect assessment of the real potential of providing construction with human and material resources. This led to the dissipation of resources, cost increases, and delays and a deterioration of working conditions.

Accelerated industrialisation contributed to the formation of path of economic development in the country directed toward quantitative increases rather than qualitative improvements, an irrational use of human and material resources. Hasty actions, strict centralisation, an administrative-command distribution system of economic management with its absolute subordination to the centre, striving to succeed at any cost, created conditions for social tension in the country. This led to repressions, and brought much suffering to the people.

The course of industrialisation as a general line was declared by CPSU(B) in December 1925 at the 14th party congress. The growth of the USSR's national economy and the restoration of its pre-war level were noted. The restoration of industry of the Tatar Autonomous Soviet Socialist Republic was slower than in the Russian Soviet Federative Socialist Republic because of the civil and world wars, and the famine of 1921–1922. Industry was only restored in 1927–1928 economic year. Due to a lack of necessary investments, the republic lagged behind other regions after the beginning of new large-scale industrial construction. The government of Tataria hoped to reduce the republic's investment repayment period and accelerate income growth by investing mostly in production of consumer goods during the first five-year plan. The new resources were envisaged to be directed not only at the development of light industry but also that of heavy industry. From there, the main part of investment was directed at extending and reconstructing existing old enterprises and building new light and food industry factories and plants. The fur industry was expanding by leaps and bounds and soon made enormous advances in this sector throughout the country. Leather-dressing, sewing, felting, fat, foot-

wear and woodworking cottage industries also transformed. This managed to surpass the pre-war level of industry. After the first five-year plan had been fulfilled, the republic became one of significant regions for light industry in the Russian Soviet Federative Socialist Republic. Large-scale industrial building only began in from the 1929/1930 economic year (the second year of the first five-year plan). The construction of the Kazan state district power station, TPP No 1, was the first important project. It was planned to be a combined enterprise equipped with the most modern technology which had no analogues in the republic. The construction project was nation-wide. The entire republic took part in it.

Despite poorly-qualified builders, the low level of mechanization and many other difficulties and disadvantages, TPP No. 1 was constructed in record time due to the significant labour development that had prevailed there. Its launching laid the foundation for the development of the power-system in Tataria. Its building was a good school of erecting new electric power stations, large factories and plants. Technical and engineering employees were trained there.

The second and the third five-year plans became a period during which extensive heavy industry enterprises were constructed: mechanical engineering, metalworking and chemical industry. New modern branches of industry appeared: power engineering, aircraft building (one of mechanical engineering's most technically developed fields), shipbuilding, synthetic rubber, cinefilm, gelatin, artificial leather, instrument-making as well as producing different kinds of defence items and building materials. Several branches and enterprises had specific importance from a national point of view.

The specific weight of industrial goods as a part of the national economy in Tataria made up 86% at the beginning of 1941 and 77.6% in heavy industry. Industry became the main support and sphere of production and the republic had transformed from an agrarian-industrial to industrial-agrarian economy. The significant industrial gap with other regions of the USSR had been eliminated. The economic

potential and industrial basis of modern Tatarstan were created.

The number of specialists and workers able to master new technique and become proficient, was growing rapidly in Tataria, unlike the largest industrial states where this type of worker had been formed over decades. Their training and building of new enterprises equipped with new techniques progressed at the same time.

On the eve of industrialisation, the republic lagged far behind the Russian Soviet Federative Socialistic Republic, in general, from the standpoint of adequate provision with engineering and technical personnel. At the end of 1926 there were 43 engineers (2 women), 150 technicians (1 woman), 121 masters (1 woman) at factories and plants. There was the following number of the Tatars among them: 2 engineers (women), 3 technicians (men), 32 masters (men).

During the pre-war five-year plans, the process of forming modern production and technical intellectuals was also taking place. Large enterprises in the republic became mass schools training highly skilled technicians and detail engineers on a part-time basis. Some enterprises even founded technical colleges and schools.

New technical higher education institutes and colleges were created. By the beginning of 1932, there were 6 technical higher education institutes in Kazan: technical school at the plant named after M. Vakhitov, energy, aviation, chemical-technological, forestry engineering, construction colleges. 635 Tatars studied there. The rule of party-class approach was conceived while registering entrants as students. Children of workers and poor peasants were preferred. Technical higher education institutes in Kazan became training centres for chemical and civil engineers, engineers of aeronautical industry of the country and republic.

By the beginning of 1939 there were 8,305 technical personnel in Tataria. There were 2,072 engineers, 557 builders, 2,558 technicians, and others, among them. From 1926 until 1939 the proportion of Tatars among technical personnel increased from 9.6 to 25.1%. Despite the absolute and relative increase of

engineering and technical among the Tatars, their proportion among technical personnel was low.

Industrialisation was the material basis for the development of the working class. Its process affected the rate and character of this development, its radical quantitative and qualitative inter-class shifts. The accelerated growth of the industry and construction was combined with the rapid growth of personnel in large-scale industry, an increase in the number of employees engaged in the capital goods sectors (especially in metal working and mechanical engineering). Women were intensively involved in the ranks of industrial workers.

National growth rates overtook the growth of all working class of Tataria. The number of workers employed in large industry and mechanical engineering had been increased.

The process of further industrialisation of the republic went hand-in-hand with the trend towards grass roots nationalisation of ethnic personnel. The sources and forms of its replenishment had altered. The network of

professional education and advanced professional training was expanded in the years of pre-war five-year plans to train skilled specialists. The development of vocational competence and technical literacy were usually simultaneous and mutually enriching. Most workers studied and improved their skills after work in a variety of courses. The core of industrial workers of the modern type was formed in the republic.

Industrialisation changed the distribution of workers to branches of economics and their social structure. This was then combined with the growth of the urban population, especially in Kazan where construction work was especially active in the years of the five-year plans.

Workers, engineers and specialists of the Tatar republic who had grown up in a complicated and contradictory era managed to lead the republic out of technical and economic backwardness and create bases for its further industrial and cultural development, despite the absence of the economic conditions to satisfy material interest and personal initiative.

CHAPTER 3

Ethnodemographic situation in the Tatar Autonomous Soviet Socialist Republic in the 1920–1930s

Natalia Fedorova, Inara Khanipova

Soon after the Tatar Autonomous Soviet Socialist Republic was formed in August 1920, the Russian Federation held its first census of the population. It cannot be called universal in the full sense of the word because the armed forces personnel and the population of occupied and frontline territories were not taken into account. Nevertheless, its materials can be regarded as highly trustworthy for the Middle Volga region in general and the TASSR in particular, and considered as basic for the analysis of the population's demographic characteristics. According to its data, 2,892 thousand people lived in the republic's territory, 1,492,272 of them were Tatars amounting to 51.6% [Istoriya TASSR, 1960, p. 139]. The Russian population consisted of 40.4%, the Chuvashes, 4.3%, Maris, 1.5%, other ethnic groups, 2.2% [Istoriya TASSR, 1960, p. 139].

The absolute majority of inhabitants of the republic were concentrated in countryside—2,639 thousand people. the rural areas - 1,452,506 Tatars or 54.8% of the total rural population [Sharaf, Ermolaev, 1925, p. 25]. As it can be seen from the provided data, the Tatars were a rural ethnos at the moment of formation of the autonomous republic—97.3% of Tatars lived in the countryside.

Peasants representing the overwhelming majority of rural population preferred a compact mono-national settlement. Out of 3,548 inhabited localities, 42.2% were Tatar, 43.7%—Russian, 6.9% were mixed population. On average, 928 inhabitants accounted for a Tatar settlement in comparison with 583 inhabitants for a Russian settlement.

The 'nourishment coefficient' of the Russian and Tatar peasant in the republic was the same. That is, the ratio of the number of mouths to

feed per worker. That meant that one worker or an adult economically active man could provide five people with the product of his labour. Taking into account the number of family members, one can state that agricultural marketability was very low. Almost everything that was produced was consumed by family members and almost nothing was offered for sale.

As for cities, the capital of the Tatar Autonomous Soviet Socialist Republic, Kazan, was the largest and the most significant in all respects. The 1920 census recorded 146,495 inhabitants. It should be noted that it was a multinational city where the Russians dominated (73.95%), though in total there were more than 50 different ethnic groups. The Tatars occupied 19.43% [Atlas of the history of Tatarstan, 1999, pp. 48–49] (Table 2.2).

From 1921 to 1923 the republic was stricken by famine. Human losses were not calculated because a count was never organized. One more problem was the absence of a unified system for counting the victims of famine. People died of starvation, malnutrition, concomitant diseases (the 1918 flu pandemic, typhus and cholera), babies were stillborn, premature, died during the first days of their life, and people fell victim to crimes prompted by starvation. Organized and spontaneous migration should also be included in demographic losses. Even superficial calculations indicate the factors which led to changes in the population of starving regions and shows how difficult it is to make an accurate evaluation. According to official data, the total number of the rural population fell by 218.7 thousand people between 1922 and 1922 [20 let TASSR, 1940, p. 106].

The famine had not yet been overcome, and bearing this in mind the trend continued. Thus

Table 2.2

Distribution of Tatar villages based on the number of resident population (%)*

Number of the residents	Share
Less than 300	14.0
300–500	13.4
501–750	19.0
751–1000	16.8

3001–4000	0.6
More than 4000	0.2
Total	100.0

* Sharaf, Ermolaev, 1925, p. 26.

the mortality rate was four times the birth rate. [Olshamovsky, 1923, p. 130]. According to the census of 1920, there were 522.3 thousand peasant farms in Tataria and by 1922 there only 484,6 thousand farms were left [Tarkhanov, 1930, p. 20].

In 1923, an urban population census was carried out in the Russian Federation. Emphasis was placed on workers in industrial enterprises beginning with handicrafts and ending with large factories and plants. It took many years to process the results of the research and it was not completely finished. According to its data, 255,039 people lived in the cities of Tatar Autonomous Soviet Socialist Republic. There were 158,085 people (61.9% of townspeople) in the main city of the republic, Kazan [Itogi VGP, 1923, p. 19]. Tatars accounted for slightly more than 16% of the urban population.

Documents from the All-Union Population Census of 1926 provide a clearer and more accurate idea. It was the first complex research into the Soviet population as a whole and was held under relatively favourable political and economic conditions in December 1926, according to a unified and accurate programme [see Fedorova, 1991, pp. 17–47]. Its results were presented in all official statistical reference books. The census showed that a total of 2,916,536 people in the USSR considered themselves Tatars (1,413,027 men and

1,503,509 women), making up 1.98% of the USSR population. 2 people were registered in the towns of the USSR and 2,465,096 people in the countryside. It can thus be stated that Tatars accounted for 1.716% of the urban population of the USSR and 2.042% of rural population of the USSR [Central Statistical Administration of the USSR, 1929, pp. 8–9, 28–29].

The leading position among the cities of the republic belonged to Kazan. 63.8% of the total urban population was concentrated here. According to the data of the census of 1926, representatives of 49 nations and ethnicities lived in the capital of the Tatar Autonomous Soviet Socialist Republic. Russians made up the majority (more than 70% of people), the Tatars were the second most numerous group of population at 24.5%.

Comparing the materials of censuses of 1923 and 1926, it can be stated that the urban population grew due to the mechanical movement of population. The movement was mainly from the rural districts to cities (approximately 11 people a year). With regards to natural increase, the birth rate of the Tatar populations was higher than that of Russians (3.64 against 2.47 according to the data of 1926).

The Tatar population in the countryside amounted to 1,198,702 people. The Tatars amounted to 51.8% of all the inhabitants of the

Table 2.3

**Distribution of the Tatar population
by the republic cantons in the mid-1920s***

Kantons	Number of Tatars (absolute)	Number of Tatars (proportional)	Share of Tatars in a kanton
Arsky	220399	18.4	59.7
Buinsky	75540	6.3	54.6
Bugulminsky	142763	11.9	58.7
Yelabuzhsky	66391	5.5	49.1
Laishevsky	76161	6.4	46.9
Mamadysky	114820	9.6	69.8
Menzelinsky	122990	10.3	77.1

*Compiled from: Central Statistical Directorate of the USSR, pp. 372–417.

countryside [Central Statistical Administration of the USSR, 1928, pp. 193, 243] (Table 2.3).

The discrepancy of 1,574 in the total number of the rural population can be explained by the fact that some characteristics were calculated according to the data on the existing population while others according to the data on residential population.

The data provided in the chart shows that Tatars were settled on the whole territory of the autonomous republic, and they accounted for the ethnic majority of the population except for Chistopole, Sviyazhsk, Laishevsk and Spassk cantons.

The marital status of population was registered since the age of 16 without presenting any supporting documents. As far as the rural Tatar population was concerned, in the mid-1920's single young men dominated over single young women (103,457 young men to 100,284 girls). On the one hand, this can be explained by the local ethnic traditions that girls marry earlier. On the other hand, this is a sign of high birth rate. Civil status categories (family, widowed, divorced people, those who did not indicate their

family status), show a prevalence of the female population. This is evidence of destructive consequences of revolutionary events, world and civil wars.

The absolute number of widows is 11 times as great as that of widowers.

In the 1920's, the Tatars demonstrated a high level of literacy: 39.8% of men and 25.2% of women in the republic could read and write. The correspondent indicators were not much higher of the national state: 41.4% for men and 26.2% for women. It should be emphasized that the Tatars were especially literate when it came to the Tatar language: 98.7% of men and 99.6% of women among the literate Tatars were fluent in the written culture in the Tatar Autonomous Soviet Socialist Republic. The prevalence of women can be explained by active engagement of male population in social-political processes. This required learning Russian as a language of international communication.

In the latter half of the 1920's, the policy of the Soviet power was directed at improving literacy and the proficiency of representatives of non-Russian nationalities, or national mi-

norities. Official reports provide us with the following key statistical figures: the proportion of Tatars among students in the primary schools in the republic in 1928–1929 made up 54.2% (38.5% of Russians), 49.3% among college students (38.2% of Russians), 12% among students in higher education. At the same time 482 Tatars studied at factory institutes (rabfaks), accounting for 40% of the total number of such students [Tarkhanov, 1930, pp. 28–29].

In the 1930's, the Soviet government carried out two demographic censuses, in 1937 and in 1939. The data from the 1937 census, clearly did not coincide with expectations and were considered inaccurate. The organizers and some participants of the research were persecuted. The government of the USSR decided to hold a new population census which was adjusted to a previously planned schematic. The 1939, census data explicitly affirmed the progress in constructing socialism in the USSR, un-

like the materials from the 1937 census. Nevertheless, both the total and mean indexes can be calculated on the basis of the first and the second censuses of the 1930's. However, there are only insignificant discrepancies.

Administrative and territorial division of the Tatar Autonomous Soviet Socialist Republic. The cantons of the 1920's were replaced by districts. The regional administrative areas became smaller and that was evidence of greater governmental control over society.

In the 1930's, The Tatar Republic remained polyethnic (Table 2.4). At the same time certain changes took place in population distribution, as a result of political, social and economical causes. These changes mainly resulted from intensive migration processes including forced migration arising from the removal of kulaks (private farmers) from the rural areas. The resettlement policy and organized recruitment of labour to create industry in the USSR as a whole took place also in the

Table 2.4

National composition of the Tatar Republic in 1937–1939*

National ethnicity	According to census data for 1937		According to census data for 1939	
	Absolute	(%)	Absolute	(%)
Tatars	1,337,338	48.8	1,421,514	48.76

Others	6,569	0.23	8,423	0.28
Total:	2,739,778	100.00	2,915,277	100.00

*Compiled from: Russian State Archive of the Economy, File 1562, List 329, Act 145, Sheets 15–16; List 336, Act 348, Sheet 8. For more detailed information on the ethnic composition of the population of the Tatar Autonomous Soviet Socialist Republic in districts, cities and large settlements [see: RGAE, File 1562, List 336, Act 348, Sheets 50–53].

** In the census of 1939, to a significant extent, the Udmurts were combined with the Besermyans that they had assimilated and whose number totaled 10 thousand according to the 1926 census. [see: Vsesoyuznaya perepis', 1992, p. 246].

republic. That led to depopulation, especially in the rural population.

According to the census of 1939, the population of the republic consisted of 2,915,277 people (1,359,735 men and 1,555,542 women). Representatives of 36 nationalities lived in the Tatar Autonomous Soviet Socialist Republic. The Tatar population amounted to 1,421,514 people, or 48.8%. Out of these, 657,979 were men (46.3% or 48.4% of all male population of the Tatar Autonomous Soviet Socialist Republic) and 763,535 women (53.7% or 49.1% of all female population of the republic) [Vsesoyuznaya perepis', 1992, pp. 25, 181]. According to the census of 1939, the population of Tataria was made up of 2,853.3 thousand people, taking into account upward distortions and draft estimates (the percentage of upward distortion made up 2.2%, that is 62,000 people) [Zhiromskaya, 1997, p. 52].

In the 1930's, more than two thirds of the population of the Tatar Autonomous Soviet Socialist Republic continued to live in rural areas. The urban population numbered 614,293 people including 293,536 men and 320,757 women. The Tatars accounted for 28.4% of them (174,622). The majority of townspeople were Russians (66.9%, 410,844), Chuvashes (1.1%, 6,678), Mordvin (0.7%, 4,083), Udmurts (0.2%, 1,405), and other ethnic groups (2.7%, 16,661). According to the 1939 census, 64.8% of all citizens were concentrated in Kazan. Russians ranked first (65.2%, 259,387). They were followed by Tatars (30%, 119,282). [RGAE, Fund 1562, Inventory 336, File 349, Sheet 36].

2,300,984 people lived in the countryside including 1,066,199 men and 1,234,785 women. This included 1,246,892 Tatars. Their share in the rural population was 54.2% [RGAE, Fund 1562, Inventory 336, File 348, Sheet 50]. The percentage of the rural population in the Tatar population of the republic was 87.7% (Table 2.5).

Twelve districts (Aznakayevsky, Aktan-yshsky, Almetyevsky, Atninsky, Baltasinsky, Voroshilovskiy, Kalininsky, Kzyl-Yulduzsky, Kzyl-Yulsky, Sabinsky, Sarmanovskiy, Tumutskiy) out of 63 rural areas in the republic were

mainly Tatar. The Russian population dominated in Aktashsky, Bugulminsky, Yelabuzhsky, Verkhne-Uslonsky, Novo-Sheshminsky, Stolbishchensky, Tenkovsky and Yudinsky districts. The population of other districts was ethnically mixed. There was a significant number of Chuvashes in nine districts, Maris in four districts, Mordvin in three districts and Udmurts in two districts. In Bugulminsky district 3.9% of the inhabitants were Ukrainians [according to National Archive of the Republic of Tatarstan, f. R-1296, § 18, file 519, p. 64; also the Russian State Archive of the Economy, vol. 1562, § 336, file 348, pp. 50–53].

In the total population of the USSR, the Tatars were one of the largest national groups, ranking fifth by population. According to the census of 1939, the Tatars numbered 4,313,488 people (with families) including 3,212,455 villagers (74.5%) and 1,101,033 townspeople (25.5%) which made up 2.53% of the total population of the USSR. If the census of 1926, indicated several nationalities close to the Tatars such as the Mishars (243,000 people), the Kryashens (101,000), the Teptyars (27,000), the Nagaibaks (11,000), the census of 1939 defined all these groups as the Tatars. They also included the Crimean Tatars [Vsesoyuznaya perepis', 1992, pp. 57, 246].

According to the nationality and mother tongue ranking of the Soviet population provided by the census of 1939, 966 people out of 1000 Tatars considered Tatar language their mother tongue. Out of 4,313,488 Tatars, 4,167,363 people considered the Tatar language their mother tongue; 113,922 people listed Russian; 32,203 people listed other languages (Udmurt, Chuvash, and others). [Ibid., p. 80].

The mother tongue ranking of the Soviet population shows that 4,533,324 people called the Tatar language their mother tongue including 1,033,753 townspeople and 3,499,571 villagers [Ibid., p. 81]. This was about 2.66% of total number of population.

Tatars ranked second in the RSFSR in terms of population, numbering 3,901,835 people including 3,043,332 villagers and 858,503 townspeople, according to the census of 1939

Table 2.5

**Distribution of the Tatar population by the republic districts
based on the census in the 1939s***

Republic districts	Number of Tatars (absolute)	Number of Tatars (proportional)	Share of Tatars in the district
Agryzsky	23882	1.68	62.6

[Vsesoyuznaya perepis', 1992, p. 59]. Thus Tatars accounted for 3.6% of the population of the RSFSR.

On 1 January 1941, the population of the Tatar Autonomous Soviet Socialist Republic numbered 2,760.0 thousand people. As far as ethnic composition is concerned, the correlation shown by the 1939 census was preserved:

Tatars (48.8%), Russians (42.9%), other nationalities (8.3%) [National Archive of the Republic of Tatarstan, Fund TR-1296, § 18, file 538, p. 22]. The number of villagers significantly fell decreased over the period of two pre-war years.

According to the 1939 census, it was normal at the age of 15 for the population to en-

ter into family relations. As far as the Tatar population is concerned, by the late 1930's, unmarried young men prevailed over unmarried young women among townspeople aged 15–19 (10,883 young men and 9,791 young women) and 19–29 (10,127 young men and 9,348 young women). In all other age groups, especially villagers, women definitely prevailed. This was a consequence of the events of the revolution, world and civil wars, migration of the male population resulting from the policy of collectivisation and industrialisation (Table 2.6).

In the 1930's, the level of literacy of the population of the Tatar Autonomous Soviet Socialist Republic improved significantly. If according to the census of 1926, 48.2%, people aged 9 and older were literate, according to the census of 1939 it was 81.7%. The number

of literate people aged 9–49 made up 53.6% according to the census of 1926 and 90.4% according to the census of 1939. According to the census of 1929, there were twice as many literate people aged 50 and older in the republic, than according to the census of 1926 (22.5% and 43.5% correspondingly) [Vsesoyuznaya perepis', 1992, p. 41].

The population of the Tatar Autonomous Soviet Socialist Republic was divided by the level of education in the following way: of 1000 persons, 60.6% people possessed secondary education including 72.5% of men and 50.2% of women. of the inhabitants of the republic, 4.2% had a higher education including 5.7% of men and 2.9% of women. In total, 176,738 people (including 98,622 men and 78,116 women) had secondary education in the republic, 12,295 people (including 7,754

men and 4,541 women) had college education [Vsesoyuznaya perepis', 1992, p. 52].

The literacy of the Tatars significantly increased in the 1930's, in comparison with literacy indicators of the 1920's. According to the census of 1939, 79.7% of Tatars at the age of 9 and older were literate in the republic [RGAE, Fund 1562, Inventory 336, File 348, Sheet 10]. The literacy of the Tatars living in the city (87.9%) was higher than that of the Tatars living in the countryside (78.6%); 85.1% of Tatar men and 75.5% of Tatar women were literate. These indexes were slightly lower than those in the entire USSR. In general, 77.9% of the Tatars at the age of 9 and older were literate. The index of literacy among Tatar men was 84.7%, Tatar women, 71.5% [Vsesoyuznaya perepis', 1922, pp. 83–84].

The education level of the Tatars living on the territory of the USSR was the following: 216,965 people had secondary education (including 128,492 men and 88,473 women), 9,640 people had college education (including 6,613 men and 3,027 women) [Vsesoyuznaya perepis', 1992, p. 86].

Out of 1000 people, 50.3% had secondary education including 61.1% of men and 40.0% of women, 2.2% of the Tatars living in the USSR had higher education including 3.1% of men and 1.4% of women.

Tatars in the social structure of the USSR. The Soviet statistics of the 1920s registered the social status of a person based on his occupation and branches of national economy. Official documents contained classification of occupations according to 10 positions revealing the social structure of the society: workers, clerks, professional workers, landowners with hired workers (private entrepreneurs using waged labour), landowners working only with the members of their families and members of artels, independent farmers, members of the families helping the head of the family, people without occupations, unemployed and military men. The ranking was produced from the of 10, from the moment the state recognised the right to earn an independent wage. Children under 10 were considered to be dependent. This approach is evidence of the country's

low level of economic development. The later an individual commences labour activity, the wealthier a family and country in general. Reports show that children in Tatar families became independent later than Russian families. For example, the percentage of children under 10 with their own income amounted to 0.09 among the Tatars and 0.14 among Russians [according to the All-Union census, 1929, p. 231] (Table 2.7).

According to this data one can conclude that the Tatar population was less involved in the state political-economic system. Tatars amounted for 23.1% of workers who were mainly employed in the public sector of the economy. There were 3.7 times fewer women than men. The formation of a proletariat amongst the Tatar population was considered to be the main task of the government and party bodies. Labour exchanges, factory-and-workshop schools, structures of the Tatar council of trade unions and People's Commissariat of Labour were engaged in fulfilling that purpose. By the late 1920's, the percentage of Tatar workers in trade unions amounted to 26.3% [Ivanov, 1929, p. 22]. In total there were 4,316 Tatar workers (27.24%) on 1 July 1928; 1,279 of which were women.

There were almost no employees in the private sector. The percentage of Tatars among them reached 20% (Table 2.8), there were 2.6 times fewer women than men [Karimova, 2009, pp. 113–126].

The communist party implemented a policy of korenizatsiya (ethnicisation) of the cadres and the appointment of Tatars in the field of administrative management. According to reported data, only 4% of the Kazan city council (8th convocation) was Tatars, by 8 this index stood at 31.7% [National Archive of the Republic of Tatarstan, R-326, fol. 1, § 62, p. 1; Red Labour, 1924, 3 October]. In 1928, out of the six institutes of higher education in Tataria, three rectors were of Tatar descent [Tarkhanov, 1930, p. 29]. At the same time many Tatars were members of volost and canton executive committees. According to the data of 1921, 30.4% of employees of volost executive committee were Tatars out of 664 people and 35% of employ-

*Compiled from: All-union census, 1929, pp. 230–231.

ees of canton executive committee out of 172 people. At the same time, it is noteworthy that Tatars did accept executive posts on a full-time basis. Of 234 volost executive committees in the republic, there were only five or six Tatar secretaries and 20 to 25 Tatar office workers. The percentage of Tatars employed in service of uyezd and Kazan executive committees did not exceed 4% [Valiev, 2009, p. 59].

Even at the end of decade, in 1929, only 10 Tatars had been promoted to work in 22 central institutions [10 let socstroya, 1930, p. 111].

After the elections of 1922 the number of Tatar representatives reached 40% in volost executive committees and 47% in regional executive committees [Ibid., pp. 106–107].

In the late 1920's, the following situation could be observed: Village councils were made up of Tatars (52–52.8%), Russians (39.2–39.8%), Chuvashes (5%), Mordvinian (1.3%), Udmurts (0.9%), and Maris (0.5%). The number of Tatar representatives reached 56.5% in volost executive committees, 53.8% in canton executive committees, 25.4% in city and village councils and 40.7% in Central executive committee of Tatarstan [10 let socstroya, 1930, pp. 108–109].

Representatives of the Tatar ethnic group were actively involved in the communist par-

ty. According to statistics, in 1922, the Tatar party organisation was made up of .28.5% of Tatars and 64.1% of Russians. By 1 January 1930, the percentage of Tatar communists had reached 37.3%. Of the 6058 Tatar party members, 45.2% were peasants, 37% were workers, 17.4% clerks, and 0.4% belonged to other groups [Tarkhanov, 1930, pp. 54–55].

In the 1920's, seasonal work became widespread among villagers. Most of them had neither skills nor a profession and were ready to do any kind of work for any pay. Tatar peasants who had horses also worked as hauliers.

The absolute majority of economically active members of the Tatar population worked independently. Their level of life had always depended on their own effort, initiative and ability. Wealthy and rich peasants were engaged in trade as their main occupation or in addition to agriculture. Many peasants especially those who lived in the large villages were engaged in different distributive transactions mainly in the form of raw materials subsequently resold to city dealers.

The social state of society observed by the middle of the 1930's, was recorded in the population census of January 1937. Such social groups as workers, clerks, kolkhoznik collective farmers, individual farmers, cooperative

and non-cooperative handicraftsmen, professional workers, clerics, public dependents and pensioners, disabled people in nursing homes and residents of children's homes, rentiers earning their living by selling real estate and renting houses, rooms and other types of accommodations as well as the unemployed were mentioned in census schedules [RGAE, Fund 1562, Inventory 336, Part 1, File 242, Sheet 4]. The category of entrepreneurs 'owner with hired workers' was not reflected in the census¹.

Such categories as "landowners working only with the members of their families" or "individual landowners" found in the census of 1926 were absent in the census of 1937. Instead of these terms, others were used: 'individual' (yedinolichnik) and 'non-cooperative handi-craftsman'. These referred to, respectively, the operator of a farm without hired workers and someone engaged in a cottage industry on an individual basis. Comparing the data of the 1937 and 1939 censuses, we can see a tendency towards a fall in the number of individual farmers of the Tatar Autonomous Soviet Socialist Republic in both the Russian Soviet Federative Socialistic Republic and in the USSR².

The majority of former independent proprietors in agriculture and trades were now engaged in cooperative labour. However, there were relatively few cooperative handicraftsmen.

Such categories as professional workers, clergymen (or religious workers according to the terms of 1937), rentiers and the unemployed were mentioned in the census of 1937 for the last time. Their share made up much less than a

hundredth, or a thousandth of a percent, nevertheless they all had a place in the census.

Service personnel occupied a special position in the structure of the employed population of the Tatar Autonomous Soviet Socialist Republic. Their percentage was 13.8%. This is slightly lower than the percentage of economically active people in the RSFSR (17.7%) but close to the average indicator in the USSR (15.6%). Employees made up 8.2% of the republic's rural population (against 9.6% of the RSFSR) [RGAE, Fund 1562, Inventory 336, Part 1, File 374, Sheet 140; File 476, Sheet 163].

Employed persons in the countryside were made up of accountants, ledger clerks, cashiers, tally clerks, livestock specialists, agrotechnicians and agronomists. The number of administrative staff, which including chairmen of kolkhoz collective farms and farm directors had expanded according to the census of 1939. The predominance of men among them is clear. In particular, only 2.10% of those who administered kolkhozes were women and only 16.6% of agronomists and livestock specialists were women. [RGAE, Fund 1562, Inventory 329, File 144, Sheets 103–105 reverse].

A significant part of inhabitants of the Tatar republic were in the category of workers and clerks, since the sovkhoz state farms and the MTS - machine and tractor stations were equivalent to public enterprises and were under the charge of a special People's Commissariat. Their workers received salaries, and as such they were accounted in Soviet statistics not as peasants but agricultural workers. Secondly, many citizens were employed at industrial enterprises of the city although they continued living in the countryside.

Workers of sovkhozes accounted for 12.5% of the rural population of the Tatar Autonomous Soviet Socialist Republic. They were slightly different from collective farmers in terms of their work and their social status. Both of them depended on the state to a great extent. The kolkhoznik collective farmers were engaged in both the social sphere and private subsidiary economy, while the sovkhoznik state farmers were principally engaged in the social sphere

¹ According to Article 1 of the Constitution of 1936, the Union of Soviet Socialist Republics was a socialist state of workers and peasants, in which only small-scale private trading by individual peasants and craftsmen was allowed, based on their personal labour and precluding the exploitation of the labour of others [see: The Constitution of the USSR, 1999, p. 343].

² By the early 1940s individual farmers, peasants, and craftsmen accounted for only 2.6% of the population [see: Sovetskoye krestyanstvo (The Soviet Peasantry), 1970, p. 283].

although sometimes they worked on subsidiary personal plots.

There is no evidence regarding the number of workers employed in cooperative sector in the census of 1939. This can be explained by further growth of public sector. The overwhelming majority of employees worked in public enterprises.

Unfortunately the data of censuses of 1937 and 1939 do not allow us to reveal the social structure of the Tatar Republic from the national point of view (Table 2.8).

Based on absolute indicators, 1,286,703 people (686,963 men and 599,740 women) in the Tatar republic were employed accord-

ing to the census of 1939. Of these, there were 622,691 employed Tatars (318,435 men (46.4%) and 304,256 women).

The 1939 census examined in greater detail the composition of cadres in the Tatar Autonomous Soviet Socialist Republic, including from the national point of view [Vsesoyuznaya perepis', 1992. pp. 181–183].

According to the census, among the leaders of party organizations, cooperative and community offices and institutions there were 11,205 Tatars (42.8%) including 793 women. Representatives of the Tatar nation in executive positions at the level of the republic amounted to 38%. Tatars in charge of district

*Compiled from: Russian State Archive of the Economy, File 1562, List 336, Act 348, Sheet 15. The census data of 1939 in the reference books of the Soviet period is slightly different. The social composition of the whole republic was characterized by the following data: workers and employees: 35.2%; kolkhoz members: 59.8%; self-employed farmers: 2.5%; others: 2.5% [see: Agitatoru, 1957, p. 42].

and city establishments and institutions were 50%. The Tatars were successfully represented in village councils, 53.3% of Tatars were chairmen and deputy chairmen of village councils. Tatar directors of kolkhoz collective farms (chairmen and deputy chairmen) amounted to 52% of the total.

There were 5,607 Tatars among maintenance personnel (engineers, constructors, technicians, agronomists and agrotechnicians, livestock specialists, maintenance foremen, and others), this figure also included 1,140 women. The percentage of the Tatars employed in agriculture was much higher: agronomists (42.4%), livestock specialists (40.3%), agrotechnicians (56.2%), veterinary technicians (56.2%), and veterinarians (39.5%).

The number of Tatars employed in cultural and political-educational spheres was 14,908 (47.3%) including 6,990 women. Academics, professors and lecturers were in this group, of which 229 (17.2%) were Tatars including 53 women. As far as school teachers and course instructors were concerned, there were 10,607 Tatars including 4,686 women. A significant number of Tatars (59.9%) of those employed in this sphere, or 1359 individuals including 487 women, were directors of clubs and village reading rooms. There were 443 Tatars (40.2%) including 375 women among the chiefs of libraries and librarians.

The share of Tatars employed in other occupations was not high, for example: accountants (18%), economists (23.8%), statisticians (30.8%), lawyers and legal advisers (28.3%).

Tatars comprised only 25.8% of medical personnel (they were mainly women). The

share of Tatar doctors made up 16.5% of the common number of doctors in the republic, the share of the Tatars working as nurses and midwives made up 31%.

Positions in pre-school education (kindergarten teachers and directors) were completely occupied by women, 39.6% were representatives of the Tatar nation.

The percentage of Tatars employed in agriculture was much larger. Of kolkhoz farm managers - 53.6% were Tatars, 53.6% of foremen of field teams and 58.7% of other agricultural brigades, 53.7% of directors of laboratories and 60.6% selective breeders, 51.4% of foremen of tractor brigades and 49.3% of tractor operators, 47.5% of combine operators and drivers, 58.8% of engine drivers and operators, 51.3% of cattle workers, stablemen and milkmaids. The percentage of Tatars employed in gardening was larger (34.4%).

The Tatar nation was weakly represented in non-professional and building occupations. The percentage of Tatar oil drillers was 23.7%, turners (22.3%), plumbers (23%), assemblers and electricians (23.2%), mechanics (working) 22%, machine operators and woodworkers (27.9%), machinists (31.1%), fitters (32.3%), concrete layers (56.6%), excavator operator (16.7%). The percentage of Tatars employed in textile industry was greater: hosiery workers and knitters (23.4%), weavers (38%), textile apprentices (38%), spinners (39.6%).

The percentage of Tatars employed in the transport sphere was also rather small. Tatars made up only 15.1% of rail engineers and their assistants, helmsmen (17.3%), drivers (31.9%).

CHAPTER 4

Culture, Education, and Science in the Tatar Autonomous Soviet Socialist Republic and among the Tatars (1920–1930s)

§ 1. Formation of the Tatar Autonomous Soviet Socialist Republic and the Development of National Culture

Indus Tagirov

The Ratification of the Decree on the Formation of the Tatar Autonomous Republic was of great importance for the development of the culture of the Tatar people, despite the many negative facts accompanying this historical act, Which processes took place in spiritual life of Tatars from the 1920's to the 1930's?

Firstly a few words need to be said about the main problems of the formation of the republic, many of which had a negative influence on the spiritual state of the nation. First there was the "Pitchfork Uprising" which began at the beginning of February 1920 and lasted 35 days. Many peasants from Ufa and Kazan governorates took part in it. It was put down in the most merciless manner. Certain party figures, it had to be said, tried to define this tragic event as an Islamic rebellion, in an attempt to avoid the possibility of ethnic autonomy.

Second was the famine of 1921–1922 which resulted in significant human losses. By 1926 the population of the republic had decreased by 400 thousand. Thirdly, the systematic actions taken on the part of party departments with the intention of usurping the plenary powers of the soviet authorities of the republic need to be taken into account.

Nevertheless, the republic was founded. Deputy Chairman of Council of People's Commissars of the RSFSR Turar Ryskulov stated in one of his speeches in 1926 that 'the Tatar republic is conceivable as a national state', that the Tatars are 'a mature nation with mature social classes and social maturity'

[SA HPD TR, Fund 15, Inventory 2, File 183, Sheets 71–72]. In his opinion all other republics of the RSFSR only exist thanks to the federal authorities.

Indeed, the Tatars underwent a genuine renaissance at the turn of the 20th century, embarking on a course of state construction with their own education system, dozens of newspapers and magazines, their own theatre and a developing musical culture. Hundreds of talented writers, poets, journalists, and men of art worked in the cultural sphere.

The proclamation of the republic was perceived as a statement of restoration of statehood, giving a powerful impetus to the development of national culture. The entire cultural life of the people was undergoing reconstruction under the new conditions. This process, however, faced some difficulties.

Religion fell under the most difficult conditions. Everywhere madrasahs and mosques were being steadily closed, and clerics were persecuted. Of special interest in this context is the destiny of the outstanding theologian Musa Bigiev, who wrote the 'The Alphabet of Islam' in 1920, in response to the 'Alphabet of Communism' by N. Bukharin and E. Preobrazhensky. In the opening chapter, he bitterly criticized communist ideology and its founder Karl Marx. In the same year he presented its main theses to participants of the congress of Islamic clergy in Ufa. Then he went to Turkestan with the intention to publish his book. However, he was arrested in Tashkent at the beginning of 1921. He was arrested for a sec-

ond time in Leningrad after his book had been published by Kaviyani, in Berlin, and 1500 to 2000 copies had been distributed in Russia. It was edited by Gayaz Iskhaki. Bigiev was freed because he was well-known to the Islamic population and as a result of the intercession of Turkish, Swedish and Finnish state agencies [Bigiev, 2005, p. 13]. Galimdzhan Ibragimov wrote in praise of his civil courage, that while living in the proletarian centre of Leningrad, he published a book opposing the revolution and defending the principles of capitalism using money provided by the Tatar bourgeoisie [Giyumadiev, 2000, pp. 147–157].

The policy of Soviet power directed at the complete eradication of religion from social life faced the resistance of population. The organisers of the resistance were sanctioned with varying kinds of judicial penalties.

In May 1929, 36 people and their families were brought to trial for holding Kurban Bayram in the villages Bolshiye and Malye Truyevy Vershiny, Bolshoy and Maly Chirkley, Tatarsky Kanadey and Kumayevka in Penza governorate in cooperation with 8 thousand peasants. Ten of them were shot. All the rest were condemned to life imprisonment in a concentration camp.

From the late 1920's, to the early 1930's, the peasants of the Drozhanovsky volost of Buinsk uyezd who had grouped around ishan Safa Bikkulov and acted in opposition to forced collectivisation and the religious policy of the Soviet state suffered the same tragic fate. The most active role was played by women who disarmed the task force which had come to arrest the mullahs. About 800 people, armed with everything they could find, forced the aggressive task force to leave Novo-Chukaly village. Ishan Safa Bikkulov was executed by firing squad for his participation in these events and his family was sent into exile in Siberia. More than 60 people were condemned to different types of imprisonment [Tagirov, 1999, pp. 250–252, 266–272].

Beginning with 1923, when the so-called 4th Congress of the CC WPP was held to discuss the nationalities' question, a sword of Damocles hung over Tatar intellectuals re-

lating to accusations of nationalism. [Tajny' nacional'noj politiki, 1992].

Experienced and mature aksakaly (figures of respect) of Tatar literature – G. Ibragimov, M. Gafuri, G. Kamal – before whose eyes events of the same scale had occurred in pre-revolutionary period, searched for ways to obviate the barriers of this new era. Sometimes they succeeded. They created a range of talented works which received public acclaim. These included 'Red Flowers', 'Daughter of the Steppes', 'Deep roots' by G. Ibragimov, the novella 'Kara yezler' ('The Dark-faced') by M. Gafuri, 'Matur tuganda' ('When Beauty Appears') by Sharif Kamal and others.

Many talented writers and poets were influenced by these outstanding figures. The constellation of young literary men was represented by Kavi Nadzhmi, Musa Dzhalil, Fatkhi Burnash, Gali Rakhim, Shaikhi Manur, Khasan Tufan, Tazi Gizzat, Saifi Kudash, Nura Bayan, Salikh Battal, Tukhvan Chenekay, Abdrakhman Minsky, Mahmut Maksud, Afzal Shamov and many others, writers and poets.

This young generation searched for its ideals under conditions of turbulent and uncertain social life. Discussions and literary soirées became loud and torrid. The problems of spiritual legacy and prospects of literary creation were discussed. Mutual reproach and accusation were inescapable in such an atmosphere. According to G. Kutuy, cliques arose which 'brought together similar minded thinkers on a range of matters'. One group was represented by Fatikh Saifi, Zakir Gali, Ismagil Rameev, and another included Kavi Nadzhmi, G. Tulumbaysky, K. Tufan, Abdrakhman Sagdi, M. Gali. The third group consisted of Gumar Gali, Gaziz Idelle, Khadi Taktash, Gadel Kutuy [Gasirlar Avazi = Echo Vekov, 1997, No. 3/4, pp. 164–165].

The literary youth was keen on revolutionary class ideas and to some extent denied the cultural legacy of the past. According to G. Kutuy, they even made an attempt to create a coalition to fight against Tukay and his confederates. This coalesced around a group of young people in the so called Tatar Association of Proletarian Writers (TAPW). Certain

young people who were members of the Association disliked the fact that some considered Tukay the God of Tatar literature. There was also a group of writers bitterly criticizing Galimdzhan Ibragimov. This included Fatkhi Burnash, Shamil Usmanov, Sadri Dzhalyal. Adel Kutuy was criticised for being the son of Fatkhi Burnash, a bourgeois, was alleged to be yearning for the days of the khan. Many labels were attached to intellectuals at that time. It is probably hard to recall a writer or a poet who did not have one.

The literary trial held to condemn works by Fatkhi Burnash with the participation of students of Tatar communist university is remarkable. Discussions on creating proletarian literature were stirred up. The same processes took place in Ufa.

It resembled a childhood disease which needed to be overcome in tough conditions. Nevertheless it was difficult to surmount it.

The first expression of these difficulties were Dzhidegyan case. This was an organization alleged to consist of seven young writers. Gabdrakhman Minsky, Saifi Kudash, Naki Isanbet, Sagit Agish and Tukhvatulla Chenekaj were charged with membership of this organisation. Gadel Kutuy was considered to have put forward the idea of its formation. They failed to find the seventh member of 'Dzhidegyan'. The names of several literary men were called out. Editor of the newspaper 'Kyzyl Tatarstan', Safa Burgan, Bashkiri writer Sagit Agish denied these suspicions for a long time. Galimdzhan Ibragimov was also under suspicion. In 1931, A. K. Naumov wrote in the 'October' magazine: 'To be honest, G. Ibragimov is not a Bolshevik, he's a Tatar nationalist. He's an opportunist who expresses the intentions of Tatar nationalists and translates their purposes into reality through his cultural agents called 'Dzhidegyan'!'

It was an exaggerated, absolutely baseless case. The story started in 1928 with a trip which Gabdrakhman Minsky and Adel Kutuy took to Ufa. Tukhvatulla Chenekaj had arrived there a little earlier on his own. The purpose of the trip was to establish friendly

relations with Bashkiri literati. As a result, a literary soirée with the participation of Tatar and Bashkir writers took place. Madzhit Gafuri, Adel Kutuy, Gabdrakhman Minsky and Tukhvatulla Chenekaj recited their poems.

Young writers and poets debated with their colleagues from Ufa. There was no particular unity of views among them. Many of them were searching for like-minded thinkers and indeed they seemed to succeed in doing so. Of course, they sometimes had to make compromises. The outstanding and highly experienced writer Madzhit Gafuri, a citizen of Ufa, tried his best to reconcile all the literary men of Kazan and Ufa. It is plausible that A. Kutuy, A. Minsky, Naki Isanbet, Tukhvatulla Chenekaj, Saifi Kudash became close for a while. There may have been seven of them. There have been more or less. However, there was no such thing as 'Dzhidegyan'. There were amicable meetings during which active young writers worked out a common position concerning a whole range of literary figures. They probably promised to meet more frequently. In any case, the men from Kazan returned home satisfied with results of the trip.

However, someone informed that, a secret bourgeois organization called 'Dzhidegyan' had been founded in Ufa. Soon those charged with the case were arrested. An unbridled campaign against the arrested literary men expanded in the Kazan and Ufa press. With certain intervals, it was to last up to the 1960's. The writers were pitted against each other. Party agencies in both republics set the tone of the campaign. Newspapers and magazines stigmatized the supposed members of 'Dzhidegyan' and followers of Sultan Gali simultaneously. Five people mentioned above denied their belonging to this mythical organization and had to write revealing articles on pages of printed editions launching a campaign of slander against the seven possible members of 'Dzhidegyan'. The letters written by T. Chenekaj to the 'Bashkortostan' newspaper and by G. Minsky to 'Kyzyl Tatarstan' newspaper were of this type. These and oth-

er dozens of articles contained all manner of slander, some worse than other. Not only were the names of 'members of Dzhidegyan' mentioned, but also those of writers and poets as well. During this artificially-created mutual slander campaign, the relevant institutions maintained files on many cultural figures and literary men. The defendants G. Kutuy and N. Isanbet had to give written evidence of the same character [Gasırlar Avazı = Echo Vekov, 1997, No. 3/4, pp. 139–171].

The investigation lasted more than half a year. Naki Isanbet and Adel Kutuy were interrogated in Kazan. It goes without saying that they mainly gave evidence under duress. So it can hardly be considered trustworthy and reliable. Nevertheless it contained nothing significant enough to bring them to trial.

The conclusion of the Joint State Political Directorate of the Council of People's Commissars of the USSR of 11 September 1931 on the activity of 'Dzhidegyan' said: '...There are no materials confirming the corpus delicti concerning the defendant... because this activity is within the limits of Soviet legality... Case No. 114819 must be dismissed and the prisoners must be discharged from custody' [Zaynutdinova, 2008, p. 211]. Although they were freed, a nationalist stigma still attached to them.

On 25 July 1937, at the height of repressions, the secretary of Tatar regional committee of the party, G. Mukhametzyanov, ordered the agencies of the People's Commissariat for Internal Affairs (NKVD) 'to uncover the case on the counter-revolutionary organization "Dzhidegyan" in the archives, and provide the relevant reports about its members indicating measures that have been taken with regard to these people'. Remarkably the second point of the order said that the 'relevant materials concerning the writer Karim Tinchurin' needed to be found. [Väliev, 1999, p. 160].

It is hard to say what exactly the reason was for the arrest and further repression of Tinchurin. However, Mukhametzyanov did not escape a tragic fate either. In 1937, he was repressed along with many party and economic activists and cultural figures.

The authors of S. Kudash memoirs write that in 1941 Adel Kutuy was a candidate for the position of people's commissar of education of the TASSR. However, someone was alleged to have said during discussions that he had been a member of the counter-revolutionary organization 'Dzhidegyan'. The question was no longer relevant. It left a deep trace in the poet's soul. He volunteered for the army and never returned.

Young literary men began trying to write in different genres. For example, Khadi Taktash breathed new life into Tatar poetry combining romance with the difficult and far from romantic realities of Soviet life. Such is the tenor of his poem 'Centuries and minutes', 'Letter to Gul'chachak', 'Provocateur' and other works. They are considered to be the most valuable possessions of Tatar literature. Apart from the widely known works of great talent by Musa Dzhhalil, Adel Kutuy, Fatkhi Burnash, Abdulla Alish, M. Maksud, A. Shamov, fine poems by Tukhvatulla Chenekay, M. Krymov and other poets also appeared.

S. Usmanov occupied a special place in Tatar literature during those years. He was not only a passionate revolutionary but also contributed to the emergence of the Tatar republic on the political map. He wrote works expressing the pathos and pain of civil war: 'On bloody days', 'Under the red banner'. He also wrote a science fiction novel 'Radio from the Pamirs'.

Kavi Nadzhmi was also remarkable for his stories and poems which also reflected the difficult years of the civil war. His story 'Shobaga' ('Destiny') enjoyed wide popularity. A remarkable fact about 'Dzhidegyan' appears in his biography. When one of the defendants came to him, in his capacity as the head of the Tatar association of proletarian writers, to unfrock Adel Kutuy as the initiator of 'Dzhidegyan' organization, he threw him out of his office.

The playwright G. Kamal wrote a whole range of satiric stories and parodies in addition to his plays, which were of great success. While creating the New Tatar dramatic art, he based his work on traditions of folk culture

originating in Bulgar times. According to Professor Y. Nigmatullina, this mature literary man presented the life and customs of the main social classes in flux, 'in burlesque, using openly rough buffoonery to criticise them'. The language of his characters is characterized by exactness, precision and wit.

F. Amirkhan is G. Tukay's friend and confederate, an outstanding Tatar writer introduced optimism and joy of life into Tatar dramatic art.

The musical dramas 'Galiyabanu' by M. Fayzi, 'Bashmagym' by Kh. Ibragimov, and K. Tinchurin's 'Fading stars' and 'Kazan towel' were quite successful.

Tadzhi Gizzat became one of the leading playwrights. His plays 'Tashkynnar' and 'Free lance' came to the attention of the public not only in Kazan but also in Moscow, Simbirsk and a whole range of cities of the republic.

K. Tinchurin continued the fundamental dramatic principles of G. Kamal. He enriched elements of farce and the grotesque typical for his plays with elements of tragedy. The innovation in the works by Tinchurin is the new musical drama which he formed with Salikh Saydashev [Nigmatullina, 2000, p. 119].

Salikh Saydashev started his creative life with famous troupe 'Sayar'. He accompanied their plays on the piano and redeveloped Tatar folk songs for string orchestra. While he was serving in the army in Orenburg, he worked as a piano player at the Tatar drama theater organized by the 1st Army's political department. All his later life was connected with Kazan. He composed more than 30 plays. The first success of the composer was the performance 'Zenger shel' ('The Blue Shawl'). It was followed by 'The Hireling', 'Il' ('Motherland'), 'Kandyr Buye' ('At the Kandra'), 'Bishbulek', 'Kuzler' ('Eyes') and other works [Yunusova, 2006, pp. 156–159]. The creative union of Tadzhi Gizzat and the composer Dzhavdat Fayzi was an undoubted contribution to the formation of musical drama.

The creation of the mobile kolkhoz (collective farm) branch of the Tatar State Academic Centre in 1933 to serve the rural popu-

lation was an important event in the cultural life of the 1930's. Its first director was Gali Ilyasov. Actors G. Bolgarskaya, M. Ildar, G. Gimatov, G. Kamskaya, B. Galiullina, Z. Agisheva, F. Narimanov, E. Yagudin, A. Gatsulina, B. Akhtyamov and others were on the staff [Zabbarova, 2000, p. 232].

The Tatar opera 'Saniya' created by V. Vinogradov and S. Gabayashi was a large success in the musical culture of the republic. The leading vocal parts were performed by S. Aydarov, G. Kaybitskaya, M. Rakhmankulova.

The Kazan Oriental Musical College, formed from two already existing musical training institutes, contributed to the growth of musical art in Tataria.

In 1925, the republic had more than 150 public libraries, 211 clubs, 305 village reading rooms, and about 70 "krasnie ygolki" community activity rooms. From 1923 to 1924, Tatzdat published 107 types of books including 88 written in Tatar; Between 1924 and 1925, 150 types of books appeared, including 143 in Tatar. In 1925, six regional newspapers and seven magazines in the Russian and Tatar languages were published in the Tatar Autonomous Soviet Socialist Republic.

In 19 April 1921, the Academic Centre was founded at the People' Commissariat of Education. Galimdzhan Ibragimov was quickly appointed to be its director. By 1924, after completion of the process of forming collectives of authors, it became the main body to coordinate textbooks. The school programs of the 1st and 2nd grades were elaborated and published in Tatar and Russian. The Academic Centre coordinated the publication of works of history, archaeology, ethnography, the study of the history, culture and geography of Tatarstan, Turkology and children's literature [Gasırlar Avazı = Echo Vekov, 2000, No. 1/2, pp. 228–230]. It consisted of scientific, translation, artistic, the republic's archives and a museum.

The construction of museums was significantly expanded - something which had deep roots in society. In 1895 a museum was created using exhibits from a an exhibition "to

provide a picture of the natural minerals of the region and its productivity". The initiative for the museum arose from A. Likhachev, and by the beginning of the 20th century, it had turned into one of the largest cultural centres of the Volga-Ural region. Students of local culture, history and geography, including academics and amateurs gravitated around it.

In the 1920's and 1930's, the Kazan University Society of Archaeology, History and Ethnography, the Society for the Study of Tatarstan and the Scientific Society for the Study of Tatar Studies operated successfully. Their activity was broadly reported on the pages of the 'Bulletin of the Scientific Society for Tatar Studies'. In 1921, The 'Museum bulletin' began publication.

The formation of the Tatar Autonomous Soviet Socialist Republic gave the impetus for the creation of local museums. Museums in Sviyazhsk and Chistopol were opened in 1921. Active work on creation of museum in Arsk, Bugulma, Laishev and Mamadysh began [Sinitsina, 2002, p. 54–55]. By 1927, 10 museums had been opened in the republic. With every successive year, they became more and more popular.

It appeared that the situation prevalent in the mid-1930's presaged little danger. On 27 October 1936, the Bureau of the Regional Party Committee issued a decree on the work of the Tataria Writers' Union. It gave a high estimation of the novel 'Our days' by G. Ibragimov, also 'In the fog' by Sharif Kamal, 'Fine epoch' by Tazi Gizzat, 'Agidel' by Mirsay Amir. Note was taken of 'the positive work on organizational union around the Union of Writers... and discovering and engaging new young authors in literary activity.' G. Mukhametshin, L. Gilmanov, G. Razin and I. Salakhov were mentioned among the young writers.

However, the party group of the Union of Writers, and Kavi Nadzhmi personally, sus-

piciously received a warning 'for displaying liberal treatment towards hostile Trotskyist bourgeois-nationalist elements adhering to the literary front, for the absence of an active struggle against the ideological distortions taking place in the works written by some authors [Sultanbekov, 2006, pp. 98–99].

A few words need to be said about A. Lepa, Executive Secretary of the Tatar regional committee of CPSU(B). Despite systematic reports against representatives of the creative intelligentsia, he maintained a moderate policy and refrained from mutual insults and complaints. For example, seeing dark clouds getting thicker over the head of Galimdzhan Ibragimov who lived in the Crimea because of his disease, he tried to save him from possible punishment. Before his arrest, A. Lepa on three occasions refused to sanction Ibragimov's detention. Significantly after his arrest, he was charged with indulging bourgeois nationalists.

This is what G. Malenkov, the secretary of the Central Committee of Party of Bolsheviks, charged him with when he came before the Plenum of regional committee of CPSU(B) on 27–28 August 1937. The Plenum radically changed the social atmosphere in the republic and launched a repression campaign in the republic. A. Lepa was condemned and killed by firing squad on 9 May 1938. The total arrest of literary men and cultural figures began. S. Usmanov, K. Tinchurin, M. Galyau, M. Krymov and a whole range of other writers were arrested and shot following G. Ibragimov. Dzhamal Validi was arrested in 1932 and he died in prison. According to the book of political victims, about three thousand people were shot in the republic in the period between 1937 and 1938.

However, despite the tragic events of these years, the cultural life in the republic continued during the Great Patriotic war and later.

§ 2. The Formation of the Soviet Education System. Consequence of the Alphabet Change in 1927.

Zubarzyat Garipova

During the first five or six years after the October Revolution in 1917, the primary organisational structures of the new Soviet education system began to be formed. Its path of development was defined by a series of documents issued by the Soviet government of 1918. The decrees of the Council of People's Commissars of the RSFSR 'On liberty of conscience, clerical and religious communities' of 20 January 1918, led to anxiety among both Russian and Tatar intellectuals [Lenin i kul'turnaya revolyuciya, 1972, p. 49]. In connection with secularization and the prohibition of teaching religion, all maktab and madrasahs had to be closed. Nevertheless, they continued to exist for a number of years. The People's Commissariat of Education of the Tatar Republic was typically zealous during first period of its existence.

The Decree of Central Executive Committee and Council of People's Commissars of Tatarstan of 25 June introduced many new features related to the teaching process of the republic [Kul'turnoe stroitel'stvo v Tatarii, 1971, p. 169]. On 10 December 1922, the 3rd congress of the Tatarstan Soviets adopted the following resolution: 'The Tatar language must be taught at senior schools and vocational schools' [National Archive of the Republic of Tatarstan, Fund R-3682, Inventory 5, File 1, Sheet 27]. The same objective was formulated by the Academcentre in 1924. The People's Commissariat of Education became responsible for preparing school programmes. Work on the translation of new programmes from Russian into Tatar and enhancing them with materials on local tradition was entrusted to the Academcentre of People's Commissariat of Education. From 1927, they began to develop new textbooks for Tatar schools and appointed experienced teachers in their development.

The idea of introducing comprehensive compulsory children's education was more effective. By February 1931, the first phase of comprehensive education had been successfully completed. During the course of the 1930/1931 school year, Tataria engaged 40% more school-aged children in primary schools, a time when the average percentage in the country made up 28.8%. However, in 1940–1941 the number of schools did not increase, despite the great increase in the number of pupils up to 54,800.

In the 1920's and 30's, in addition to the development of schools for school-aged children, work on the abolition of adult illiteracy also began. During these years, this process had specific features. It began in 1928 with the translation of the Tatar written language from Arabic to the latinized Yanalif script, This was completed in January 1931. The Tatar language was translated into the Cyrillic alphabet by the order of the Presidium of The Supreme Council of the Tatar Autonomous Soviet Socialist Republic on the 5 May 1939. The two-fold changes in the Tatar written language was completed in two years. It certainly influenced the quality of the literacy of the Tatar population. The traditional Tatar system of education was completely destroyed in the process of the creation of the unified Soviet school system.

Nevertheless, it is significant that before the revolution, Tatar children mainly studied at madrasahs. They numbered at about one thousand with 80 thousand students. In 1939, 281 thousand Tatar children studied at elementary, junior high schools and secondary schools (49.5% of the average number of students of these schools) [Krasnaya Tataria, 1940, 27 May].

§ 3. Development of Professional Art and Culture

Zubarzyat Garipova

The revolution and the civil war was a complicated and tragic period for the development of ethnic cultures. All cultural figures approved the fall of the autocrat monarch. However, further events divided them into different political groups and tendencies. During the first years of Soviet power, the development of Tatar literature was specific and contradictory. A whole range of Tatar writers and poets stopped writing after the Bolsheviks came to power. These included famous poets who enjoyed popularity before October 1917: G. Iskhaki, R. Fakhretdin, poets Z. Ramiev (Derdmend), N. Dumavi, S. Ramiev, S. Sunchaley.

The emigration of G. Iskhaki was a great loss for Tatar Soviet literature. F. Tuktarov, G. Teregulov, R. Ibragimov, the poet Saniya Giffat preferred to stay abroad as they were opposed to Bolshevik politics.

In the early 1920's, a struggle began between different movements of Tatar literature, not only over form but also over content. During the civil war, literature focused on such themes as the front-line, war, the Red Army and war-time communism. Subsequently such themes as the new family, factories and plants, the working process, the psychology of the Soviet peasant, the mode of life of the worker and others became topical. The changes in literature affected not only themes and subject matter but also language and style. Many Arabic words were substituted for specific phraseology rarely used until then by the people, as well as expressions, words and 'international' terms.

The hope of a glorious future and spiritual enthusiasm encouraged many cultural figures to create interesting works of literature. Despite the changing social-political conditions, national literature continued to develop. G. Ibragimov was an outstanding personality of that time. In 1920, he published the first book in the trilogy 'Beznen kenner' ('Our days') (written in 1914), the drama 'Yana keshelar' ('New People'). His story 'Kazak kzyz'

('Daughter of the Steppe') was published in 1923, and the novel 'Tiren tamyrlar' ('Deep Roots') in 1928.

Fatikh Amirkhan and Galimdzhan Ibragimov were the most outstanding writers to come into Tatar literature after 1905. Fatikh Amirkhan revealed the social contrasts of his reality in his works, reflecting the problems facing Tatar society in the early 20th century. His satiric tale 'Shafigulla agai' (1926, published in 1991) ridiculed Bolshevik dogmatism and fanaticism. In his articles, he defended national roots and realism in literature and art.

S. Kamal, F. Amirkhan wrote on the theme of labour. In his novel 'Tan atkanda', S. Kamal depicted the participation of workers in the revolution. F. Saifi described typographic workers ('The Disabled', Kazan, 1928).

Works by M. Gali, G. Tulumbaysky, G. Gali, G. Minsky, A. Shamov, A. Tagirov were devoted to the reflection of peasant life [Väli, 1928, pp. 26–28].

In 1919, Sh. Usmanov began writing his stories and plays on the theme of military life. The playwrights T. Gizzat and M. Fayzi, the founder of Tatar musical dramatic art, the author of play 'Galiyabanu', the poet and prose writer Kavi Nadzhmi, the prose writer A. Shamov, satirist G. Tulumbaysky, poets A. Kutuy, M. Dzhilil contributed significantly to national literature. This was a period of more benevolent development, independent of the dictates of the authorities.

In the 1920's, drama took a step forward in Tatar literature. G. Ibragimov and Sh. Usmanov were the first to lay its foundations. Musical dramas by F. Burnash were of general interest.

K. Tinchurin brought musical comedies to the Tatar stage. Akhmet-Tazetdin Rakhmankulov brought the genre of adventure to Tatar dramatic art [Väli, 1928, p. 28].

Experts concur that the prose writer and playwright Khadi Taktash (1901–1903) was

one of the most promising literary men of that period. He was a literary critic and publicist of great talent. He opposed pressure, inequality and injustice but he was a lone-rebel rather than a revolutionary. He considered revolution a destructive power ('Volcanoes', 1923). His ideal was a hero liberating the oppressed. 'Gasyrlar kham minutlar' [Davletshin, 2005, p. 269].

In the early 1920's, writers were given relative freedom and they formed literary unions to take advantage of it. However, there were many contradictory and mistaken features in their activity.

The relatively free development of Tatar literature took place in the context of complicated and contradictory conditions. In the latter half of 1920's, the ideological pressure of the communist party on writers was becoming more and more intolerable. At the same time, the trend towards the Russification of Tatar culture and language began to appear. The nascent discussion about substituting Latin script for Arabic intensified in 1927. It also affected issues of Tatar culture and the course of its development in general.

The works of Tatar writers of the 1930's, were different from those of the 1920's. They are remarkable for their subject matter. Factories and plants, kolkhoz collective farms, acts of sabotage initiated by the kulaks and mulahs who are alleged to infiltrate kolkhozes and perform subversive acts. The literature of the 1930's was characterized between 1960 to 1980 in the following way: "In the late 1930's, the so-called 'commissioned' stories and essays appeared. Character development and conflict was often replaced by vain pomposity and popular slogans. The literature of the 1930's, grew as it participated in the construction of socialism. The theme of modern times is in the foreground in novels and tales, poems and dramas, and there is a growing trend towards the depiction of reality in an ethnic way' [Istoriya tatarskoj sovetskoj literatury', 1965, p. 242; Tatar ädäbiyatı tarikhy, 1989, p. 359]. The young writers selected themes from the lives of workers and peasants. However,

the sudden outbreak of terror paralyzed the creative life of writers.

One thing is clear: the new ideology dominated the literary life of the republic. According to the contemporary press, the old measured rhymed type of verses was dealt a serious blow. A group of young poets tried to create something new in the field of Tatar versification turning against old traditional forms of prosody. However, they had to work in an atmosphere of strict control and censorship.

Theatrical Arts. The 1920's were a period of intensive searching for new forms of work in the theatre. If in the first years after two revolutions, there was a noticeable revival of theatrical life in Kazan, (there were about ten professional and semi-professional troupes and about thirty amateur troupes from 1918 to 1920) [Garipova, 2004, p. 110], this theatrical enthusiasm began to decline in the ensuing years. Subsidies were removed and troupes began to disintegrate. Some theatre groups were ill-equipped for survival. Manifestly poor performances were staged. In 1923–1924, to find a way out of the crisis and enrich the repertoire, a contest for the best Soviet play corresponding to proletarian ideology was announced. This led to the appearance of a new genre called heroic-revolutionary drama.

From the summer of 1923 and throughout the entire 1923/24 season, the debate about the compliance of the aims of theatre to the requirements of ideology spread onto the pages of periodical literature. The following matters were discussed: How should Tatar theatre develop? How should the oeuvre of the past be used? Which stylistic trend should be preferred? The discussion was opened by K. Tinchurin's article entitled: 'What should the Tatar theater be like?' The famous playwright thought that dramatic art should not reject the realistic method predominant since the earliest days of the national theater [Arslanov, 1992, pp. 123–124]. Several personalities were extremely fond of new trends in dramatic art. Sometimes, this found expression in critical assessments in the media, de-

nying the repertoire and casting of the old theatre. Debates did not subside during the 1923/24 season. A heated exchange of views on the function of dramatic art and the form of new performances took place on the pages of newspapers and magazines. For example, A. Mazitov tried openly to oppose the realistic and modern theatres in his articles. He propagandised methods of constructive-experimental workshops of the modern type recommending it as a standard of revolutionary art [Tatar ädäbiyatı tarikhy, 1989, p. 241]. Discussions of this kind lasted until the late 1920's. Karim Tinchurin, the principal director of The Tatar drama theatre gave many explanations and recommendations on how to improve the model.

The 1925/26 season was a jubilee season for the development of Tatar theatre. Principal director Karim Tinchurin assigned the best actors to the troupe: M. Mutin, Z. Sultanov, B. Tarkhanov, Sh. Shamil, S. Aydarov, K. Urazikov, G. Bolgarskaya, F. Ilskaya. Gumer Devishev and M. Magdeev were appointed directors. Composer Salikh Saydashev, created an orchestra consisting of 17 musicians. During these year a series of interesting plays were staged, all of which were acclaimed by the public and critics. These included: 'Without Winds', 'Blue Shawl', 'American Man', 'Little Brother' by K. Tinchurin, 'Resettlement' by N. Isanbet, 'Sten'ka Razin' by V. Kamensky, 'Old Man Kamali', 'Wayward Girl', 'Landless', 'Khusain Mirza' by F. Burnash, 'Galiyabanu' by F. Amirkhan. Performances of 'Sennoy Bazaar', 'The Girl from Kazan' by K. Amir, 'Brothers-in-Law' by G. Tulumbaysky, 'Director Dzhamiliev', 'Sister-in-Law' by A. Kutuy, etc. were devoted to critique of the petty bourgeoisie.

The Tatar drama theater had an impressive repertoire in the late 1920's. In 1928 it numbered 12 new performances confirmed by its artistic council. There were new authors on the list. The theatre's repertoire also included works on the life of the Crimean Tatars and Uzbeks [Yanalif, 1928, No. 19, p. 10].

Such young directors as Gumer Devishev and others put on the stage works translated

from Russian and other languages. However, the theatrical arts created its masterpieces under the conditions of state terror, the peak of which was reached in the mid-1930's. Increased ideological pressure made demands on art as a whole, including theatre. The broad and diverse repertoire seemed to comply with the directive. However, the Tatar regional committee of the Party displayed vigilance and issued a decree on the 4 November 1933, in which it criticised the activity of the Tatar Academical Theatre. It recommended that 'greater administrative control be exerted over the work of playwrights'. The theater was advised to "invite a Russian artistic director as a consultant, and send plays to Moscow to be approved by the Central Committee of CPSU(B)" [National Archive of Republic of Tatarstan, Fund R-7239, § 1, file 1, p. 166]. These intentions were put into practice.

The Kazan Russian Drama Theatre was an integral part of Tatarstan's theatrical arts. Between 1924 and 1929 it was called 'The A. Lunacharsky Theatre', and from 1948 was named after V. Kachalov. The theatre operated on the principle of a single-show with a seasonal troupe until 1934, after which it began to operate on a regular basis. From the first years of the Soviet government, its responsibility was "to educate the working class in the spirit of Soviet patriotism". Thus performances on revolutionary themes were mainly staged. The theatre began to develop along the path socialist construction and the "new Soviet culture", staging politically topical plays covering the problems of party life and emphasizing the importance of Soviet man.

At the same time, the repertoire of 1940 demonstrated the diverse activities of the Bolshoi Drama Theater, created by such splendid actors as F. Grigoriev, N. Yakushenko, G. Ardarov, Preobrazhenskaya, etc.

In 1932, the creative biography of the Young People's Theatre (YPT) took its first steps. It arose from the Central City Pioneers Club.

In 1934, the Kazan puppet theater was created by an amateur group of the Central City Club of Pioneers as the first public in-

ternational puppet theater. Performances were produced in both Russian and Tatar.

The increased interest in the arts was a typical feature of that period. In particular, this was reflected in the growth of popularity of theatre performances. To a certain extent this can explain the appearance of the TRAM movement, which spread throughout the entire country in the 1920's and 1930's. The first TRAM ('Theatre of Working Youth') was opened in November 1925 in Leningrad [Mironova, 1977, p. 6]. Subsequently working youth theatres appeared in other cities. The first Tatar workers' theatre opened in 1929. The Kazan Working Youth Theatre was established in 1930. For a long time, they assumed a "middle" position between the professional theatre and the qualified amateur groups. Publications about the TRAM performances refer to the close contact between the audience and actors, animated debates and discussions during the intervals. These performances discussed topical and important themes. The repertoire of the theater reflected the labour and social life of various enterprises. Subsequently their performances would be considered archaic. The working youth theatre needed enhanced forms. However, it played an important part in the growth and development of amateur artistic activities. At that time amateurs groups were a powerful means of exerting influence upon the youth.

Cultural figures and the public were searching for answers to questions arising in the awareness of the young people during the complex years of the 1920's and 1930's.

Music. Tatar music began to develop as a professional genre after 1917. At the beginning of the 20th century, there were no musicians with professional education. The centuries-old music of the Tatar people only existed in the form of oral tradition represented by solo songs without accompaniment. Social and national oppression had given rise to lyrical songs about hard life. Not only was the Tsar's administration indifferent to the state of cultural development of foreigners, it even put obstacles in the way of the spiritual cul-

ture of national minorities. Professional music requiring special conditions for performance and distinctive social institutions could not be developed. The first Tatar musicians were mainly gifted self-taught composers (Z. Yarullin, F. Latypov, S. Gabashi) [Nigmedzyanov, 1980, p. 273], and their first creative experiments were to mark the beginnings of professional music. Works composed by these musicians laid the ground for creative development and performance after the October Revolution. This was a time when the spiritual revival of the people and the construction of its theatrical and musical culture became a state concern of the Tatar government.

In November 1919, the musical section of the governorate's department for national education and a music library providing the city with sheet music were established. Two comprehensive secondary music schools were opened the same year to promote music education. Their programmes included the rudiments of music, choral singing, voice training and familiarity with musical instruments.

Comparable schools were created on the basis of the 'Polar' and 'Victory' plants, under the Krestovnikov and Alafuzov factories. In September 1919, showcase concerts of the symphony orchestra began in Kazan. Tatar singers F. Latypov, M. Gamayev, A. Mukhtarov, K. Mutygi, composer and singer G. Almukhametov, G. Kaybitskaya, A. Izmaylova, and a chorus headed by S. Gabashi performed there with Russian musicians.

Performances of Russian folk orchestras under the guidance of Vali Anapaev and Ismagil Galiakberov, virtuoso accordionists Faizulla Tuishev, Fayzi Bikkinin, piano player Zagidulla Yarullin, violinists Khabibulla Ahmadullin and Muhammed Yaushev were also very popular.

The young Tatar Government created after the formation of the Tatar Autonomous Soviet Socialist Republic took active measures to train music teachers. For example, in 1921, the People's Commissariat of Education issued a decree on the organization of 4 to 6 month courses for future employees of music

schools, kindergartens and comprehensive schools. The Kazan Oriental Musical College created on the basis of two previously existing music colleges, in particular contributed to the growth of musical art in Kazan. By 1925 it had become a significant music educational institution of the RSFSR, concentrating the best music teaching resources of the city. In 1927, 59 Tatars studied there. In total, 258 people studied there [Garipova, 2004, pp. 117–119].

In the early 1920's, songs of a new genre began to appear. According to musicologists, they included elements of "upbeat urban music". 'Kom burany', 'Kaz kanaty', 'Balamishkin', 'Zamana', and others, are among them.

In the years between 1920 and 1930, the musical style of Tatar popular and lyrical songs began to take shape in works by S. Gabashi, S. Saydashev, M. Muzafarov, J. Fayzi, Z. Khabibullin, F. Yarullin, A. Klyucharev.

Theatrical performances used musical scores by S. Gabashi and S. Saydashev. Many songs from these performances became popular songs. Composers introduced new forms in atar music such as arias, duets, choruses.

S. Saydashev was one of the founders of Tatar popular orchestra music. Between 1920 and 1925, the composer wrote his 'Ballet Suite' for orchestra. Music critics remarked that in the early 1920's, he found a solution for many difficult problems in his music which had until then been real challenges for the young ethnic cultures. In the early 1920's, many aspects of music education were shaped by the passionate enthusiasm of the progenitors of Soviet culture.

In the 1920's, Saydashev wrote many works in the genre of marching songs. This was a mass phenomenon in Soviet music only in the 1930's. Musical scores composed by S. Saydashev for performances in the Tatar drama theatre in the early 1920's was a fundamentally important phenomenon in Tatar Soviet music [Salitova, 1983, pp. 266–267].

Vasily Vinogradov also made a significant contribution to the development of young Tatar musical culture. From 1921 to 1924, he wrote a number of large-scale symphonic

works such as 'Tatar Suite' and 'Shikhay'. The first Tatar opera entitled "Saniya" was a major success. The libretto was written by the composers themselves. The score was written by V. Vinogradov, S. Gabashy, and G. Almuchametova and it was staged by the Tatar State Academical Theatre on 25 June 1925.

In 1927 a clavier and photograph of the performers of the first Tatar opera "Saniya" were exhibited at an International musical exhibition in Frankfurt-am-Main. According to a communique from the Community of Cultural Communication with Foreign Countries to Kazan, the German press wrote of the special attention and public interest in the opera 'Saniya'. [Krasnaya Tataria, 1927, 23 July].

In 1927, the same group of musicians created the opera 'Eshche' (M. Gafuri).

Musicologists consider that Tatar Soviet songs in the 1920's contains the seeds of a mixture of typical folk elements and march intonations of Russian revolutionary hymns as well as new Komsomol songs. S. Saydashev's works reinterpreted these sources in a rather complicated form. First of all there was the influence of a type of melody involving, particularly, short, precise declamation [Saydasheva, 1995, p. 42].

Tatar professional musicology and musical study of folklore developed during this period. S. Gabashi was one of the outstanding theoreticians of national musical art. He made a series of interesting observations on the course of Tatar music course and its development. He was the first one to collect and popularize samples of folk music in a systematic way.

The opening of the Tatar State Opera Theatre in 1939 on the basis of the Edict of the Council of the People's Commissars of the Tatar Autonomous Soviet Socialist Republic issued on the 28 October 1938, was a real event in the musical life of Kazan. The creative group was set up by graduates of the Tatar opera studio at the Moscow State Conservatory.

The theatre was searching for new directions in the development of national arts. In 3 the theater had three performances in its repertoire. It began to rehearse a number of operas: 'Altynchech' (libretto by M. Dzhilil, com-

poser N. Zhiganov). 'Galiyabanu' (libretto by A. Erikeev, composer M. Muzafarov), 'Safa' (libretto by A. Fayzi, music by D. Fayzi). S. Saydashev worked on the opera 'The Hireling' (libretto by T. Gizzat); Z. Khabibullin on the opera 'Kara kyuzlyar' (libretto by M. Maksu-mov); F. Yarullin on the ballet 'Shurale' based on a libretto by A. Fayzi, Oransky on the ballet 'Hadzhi, Get Married' based on the libretto by T. Tagirov [National Archive of the Republic of Tatarstan, Fund R-6663, Inventory 1, File 17, Sheet 25].

In 1940, Moscow theater critics gave high praise of the operas 'Kachkyn' ('The Run-away') and 'Irek' ('Freedom') by the young composer N. Zhiganov, considering him 'an absolutely talented creative personality. Characterizing his two first operas, the magazine 'Theatre' wrote: 'They can successfully compete with numerous works by modern Russian composers due to their emotionality, depth of musical themes, orchestration and technical skill'. There was a lively discussion about N. Zhiganov's operas prompted by the erroneous opinion that the authentic national character can only express folk materials in a 'pure' form. The composer was criticised for deviating from this practice. "Theatre" journal wrote: "In terms of his emotionality, the depth of the musical themse, the orchestration and technical expertise, they can successfull compete with the many works of contemporary Russian composers" [Leskov, 1940, page 142].

One more great work is noteworthy - the first Tatar ballet 'Shurale' written by the young composer Farid Yarullin who was to become the founder of the national balletic art and propel Tatar music onto the international scene. The ballet 'Shurale' became one of the repertoire ballets not only in Tatarstan but in many countries around the world.

The Opera Theatre with its five new productions, thus, was able to prove the great creative potential of its collective.

Tatar State Philharmonic Society created in 1937, and the Ensemble of Tatarstan played an important role in the popularisation

of musical culture. 589 concerts performed by the Tatar State Philharmonic Society in 1940 is an impressive indicator of its activity [Kul'turnoe stroitel'stvo v Tatarii, 1971, p. 608]. The Kazan Cabinet of Musical Folklore created in 1938, was engaged in the academic study of Tatar folk songs and published them on a regular basis. Over the period of a year and a half, it managed to collect and create a phonogram of more than 300 Tatar folk songs of the pre-October and post-revolutionary periods [Klyucharev, 1939, pp. 74–78; Nig-medzyanov, 2003, p. 17]. In 1940, the Cabinet released the 1st volume of Tatar songs including 145 titles with academic analysis and comments [National Archive of the Republic of Tatarstan, Fund 4580, Inventory 33, File 1380, Sheets 69–81]. The January report of its director A. Klyucharev in 1941 stated that the activity of this institution was aimed at the study of the Tatars in the republic and localities of the USSR inhabited by them. Organised expeditions to Western Siberia allowed the collective to prepare popular academic essays on the history of Tatar musical culture [Istoriya Kazani, 2004, p. 611].

Despite hard times, the republic lived a bright musical life. The musical life was created by composers, performers, musicians and their audience.

Art and architecture. For a variety of reasons the art and architecture of Tatarstan could not develop until the late 19th century. In 1895, the Kazan artistic school was opened. The painters Pavel Benkov, Nikolay Feshin, Pavel Mansurov, Stepan Fedotov, and others taught there in the first decade. They determined the direction of realism which was to shape the professional art of Tatarstan.

The 1920's were a period of intense searching for new paths of development in art. Heated arguments on the tasks and functions of art took place from 1922 to 1924. Members of the Association of artists of revolutionary Russia (AARR) and members of the Left Front movement were at loggerheads.

Historically the Tatars did not have their old traditions in easel painting, sculpture and

graphics but they had deep roots in architecture and arts and crafts. In the early 20th century the first Tatar graphic artists, book and magazine illustrators M. Galeev, G. Gumerov, G. Kamal, and others, began to appear. The graphic artist Sh. Tagirov, graduate of St. Petersburg Academy of Arts, and first arts lecturers and theater artist Ch. Yakhshibaev were to become quite celebrated.

By the 1920's, the need for professional art education began to show. After receiving a special education in St. Petersburg before the revolution, the sculptors Mirzadzhan Baykeev, living in Leningrad, and painter Kasym Davletkildeev, living in Ufa, were to have a large influence on the development of Tatar figurative art.

The first Tatar masters to lay the foundations of modern national art studied at the Kazan Arts School. After the October revolution of 1917, it was to become the State Independent Workshops of Architecture and Painting and then into the Arts Technical College. Nikolay Feshin working at the Kazan School of Arts from 1908 to 1922 had much influence on the formation of the artists of that city. In the early 1920's, abstract painting was taught in the workshops of Stepan Fedotov and Pavel Mansurov in AAW. According to I. Galeev, the programmes of Kazan artistic workshops were created under the influence of P. Mansurov. In his opinion, a particular feature of Kazan art in the 1920's was the avant-garde aspirations of young artists in the area of graphics. [Arkhumas, 2005, pp. 15–16].

The number of young Tatars among students of the Art college increased in the latter half of the 1920's. S. Mukhamadzanov, G. Yusupov, and G. Musin, Gazizova were among them. This was the first generation of Tatar artists who graduated from the Kazan Art Technical College [Urmanche, 1985, pp. 69, 71].

The specific features of the 1920's were to have a strong influence on the themes of paintings and the form of artistic style. In these years, the students of the Kazan College were opposed to naturalism and advocated new realism in painting, 'economy of the means expression'. They claimed that modern

art should follow two paths: a) involvement of professional artists in production – posters, books (printed art), advertisements, clubs, etc.; b) the reform of easel forms, by adopting them to the needs of mass consumption (clubs, public institutions, streets) instead of parlour easel painting' [Arkhumas, 2005, pp. 15–16].

The famous arts critic, P. Dulsky, wrote that 1924–1925 marks the period of the rise of national graphics in the Tatar republic. It was only at the major jubilee exhibition of arts of the people of the USSR in Moscow (1927), when the Tatar artists began to lay the foundations for their book art. Having made a name for themselves there, Tatar artists were invited to take part in international exhibitions in Paris, Chicago, Philadelphia in 1931 and 1933. In 1931, 150 pieces of Soviet graphics by the best masters were displayed in Paris. Works by Bakir Yusupov (his initials appear in different ways in different sources: B., G., T.) [Chervonnaya, 1975, p. 201], Faik Tagirov, Shakir Mukhametzhano and Nikolay Sokolsky were among them. The foreign media remarked on this event highly estimating it on pages of the 'Times' [Krasnaya Tataria, 1933, 22 November].

Faik Tagirov, in the opinion of artists, created his unique style representing a peculiar, absolutely a particular eastern interpretation of of constructivism, combining avant guard European culture with ancient national origins, with Arabic graphics characteristic for the Tatars. As early as 1925, Tagirov was using photomontage in his works. It became the most important element of artistic language of constructivism and of great significance in the Soviet art of the 1920's and early 1930's. The artist worked in Moscow in latter half of the 1920's and became a full participant of the process of creation of Russian Soviet book [Arkhumas, 2005, p. 15].

In the latter half of the 1920's, Baki Urmanche played an important role in the Art College's training of students in painting and graphics. He was a painter, sculptor, founder of professional art and returned to Kazan in 1926, after graduating from The Higher Arts School Technical Workshop. One of his main tasks was to organise the work of the

graphic workshop. In 1977, a production collective was established at the Kazan arts college, consisting of: V. Badyul, Kh. Almayev, M. Mukhametshina, S. Mukhametzhano, G. Yusupov, A. Bashirov, E. Rozova, A. Goncharov, and others. A characteristic feature of this group was its use of propaganda leaflets and cheap popular prints [Ibid., p. 16].

In the 1920's, artists mainly turned to local themes, history, cultures of the Volga peoples, discovering particular features of Tatar art.

The 1930's, and especially pre-war years infused a fresh spirit into the republic's representational art. Arts critics noted that the growth of arts was beginning to slow down. Only in the works of certain artists could the development of social and civil themes be observed [Valeeva, 1999, p. 32].

An article by N. Mashkovtsev entitled the 'Artistic life of Kazan' appeared in the central magazine 'Creation', stating: 'The capital of the Tatar Republic has recently acquired the reputation of a city notable for its well-developed artistic culture. Exhibitions involving artists from Moscow and Leningrad were constantly held in Kazan. "Kazan's artistic 'present' is infinitely less joyful than its 'past', since the work of graphic artists in the area of easel arts and engraving masters is not being encouraged' [Mashkovtsev, 1940, p. 15].

The state of the representational arts art in Tatarstan was voiced at the 3rd plenum of Organization Committee of the Council of Soviet artists of the USSR on 4 April 1940. The resolution stated that Kazan which had been one of the outstanding centres of our artistic culture, has become a city deprived of real creative activity in the field in figurative art [Ibid., p. 14]. However, Kazan did have a significant group of artists with a serious creative culture.

After the creation of the Tatar Republic, there was a shift in city construction. A goal was set to preserve and maintain existing buildings, repair and restore the most valuable architectural monuments, erect new buildings, and equip the city with modern amenities. The first attempts to create schematic plans for further construction and

planning in Kazan were made between 1924 and 1926 by F. Gavrilov, the architect of the Directorate of Engineers of the TASSR. Architects were involved in the construction of Kazan and the city's slobodas. They planned to unite all sloboda districts and transform them into a united city organisation creating the new main square at the Kremlin, on the territory of the former fair (where the palace of sports and circus are now situated).

The council of architects of Kazan city council, Architectural Planning workshop, local staff and graduates of the Institute of Leningrad communal building contributed to the creation of many building projects: The Furrier's Club (architect Gaynetdinov), 'Dinamo' stadium (Speransky), the Commissariat of Internal Affairs building at K. Marx street (Fedotov), hotel 'Tatarstan' on Kuybyshev street, the Palace of Culture near Kaban Lake which was planned to accommodate a theatre, a museum, a library and other cultural institutions. The Kazan architects Gaynetdinov, Speransky, and Dubrovin also took part in the contest [Dulsky, 1935, p. 90; Dulsky, 1934 b, p. 81; Ostroumov, 1978, pp. 152–167]. However, these projects never came to life.

In 1933–1934, the city's main roads were intended for fast and convenient connection between all districts of Kazan. The city's central street network preserved the historically formed structural network. The general layout of 'Great Kazan' was finished and confirmed by the government on 19 June 1941, three days before the Great Patriotic war began.

However, specialists thought that the absence of large building ensembles in the city centre was a fault of the building of this period. Socialistic realism was to be expressed through architecture. According to publications, certain architects had attempted to restore the architecture of previous epochs which was considered to be a classical, unattainable ideal. However, the June plenum of the Central Committee of the CPSU(B) in 1931, ended these attempts. and specific proposals on socialistic reconstruction of cities were made. [Ostroumov, 1978, pp. 152–167].

In the area of sculpture, there were many famous names in Tatarstan. In the 1930's, greater attention was being paid to this art form as a stylistic element in the decoration of new 'socialist cities'. The first steps were made with the installation of two monuments: The statue of Bauman at the Ring (now this place is called Tukay Square) and Statue of Lenin in Zarechye (now it is Kirov district) by Moscow sculptors. In the early 1930's, Sadri Akhunov proved himself a talented sculptor. The following works belong to him: a bust of the poet Khadi Taktash and 'Kolkhoz-woman working in the garden' [Dulsky, 1934 a]. Kazan had to consult Moscow to install a monumental sculpture and to approve any building project. This circumstance as well as the absence of conditions for the development of art by Kazan specialists led to a high turnover of persons working in this field. Many of them left the republic.

Sculpture was also obliged to have ideological contents, and its themes had to correspond to 'the elevated style of the socialistic epoch'. The technology of the work needed to emphasise the resonance of volume and spatial relations, stress power and strength of figures and the image of the new man. The only possible 'realistic method' [Mashkovtsev, 1940, p. 14] became the basis for the forced consolidation of different creative groups within the Union of Soviet artists.

So art in Tatarstan took a complicated path. During these years it reflected all the tendencies and styles which were typical for the art of the country.

The first powerful manifestation of artistic life of Tatarstan occurred in the 1920's. New European types and genres appeared in the art of the Tatar people: professional music, professional pictorial art - painting, sculpture, easel graphic works. Outstanding masters appeared literally in every type of art.

§ 4. The Main trends in Scientific Research in the Tatar Autonomous Soviet Socialist Republic (1917–1941).

Zubarzyat Garipova

In the 1920's, the Republic of Tatarstan became one of large scientific centres of the Soviet Union. However, publications show that prior to this during the first years of Soviet power there had been a decline in scientific work. The main reasons were allegedly the "retirement" of many professors', a decreasing possibility to cooperate with the west, the total absence of new literature and facilities for research work. In the 1918–1919 academic year, Kazan University's Society of Physicists and Mathematicians, Society of Naturalists, Society of Lawyers, Pushkin Society, Society of Physicians, Society of Neuropathologists and Psychiatrists no longer operated. Works were no longer published due to the high cost of printing [Sotonin, 1922]. With the stabilisation of the political situation and the resolution of the consequences of the civil war and famine, the results of

their work once again became accessible to the public.

Many chairs of Kazan institutes, including Kazan State University, conducted research in many fundamental and practical directions. Moreover, specialised research scientific institutions were active, seven of them in the 1920's. Then new institutions started appearing, for example: the Regional Microbiological Institute (1925), the Zoological and Botanical Garden, the Regional Forestry Reclamation Station (1926), the Institute of Social Health Care and Hygiene (1926). Traditional scientific fields continued their work; new scientific schools appeared at the same time.

In the early 1920's, the number of people involved in scientific work in mathematics increased greatly. Their works covered almost all branches of modern mathematics. The scientific research institute of mathematics and

mechanics of Kazan university united mathematicians from different higher education institutes in Kazan. The Kazan Community of Physics and Mathematics was another centre of this type. Kazan mathematicians solved a whole range of important problems. They elaborated methods used in works written by other Soviet and foreign mathematicians. Kazan scientists conducted research in the following branches of mathematics: algebra, number theory, theory of groups of differential and integral equations, real variable theory, theory of analytic functions, theory of chance and geometry. According to B. Gagaev, algebra became the subject of study in the republic only in 1928 when Professor N. Chebotaryov came from Odessa. According to Gagaev, before Chebotarev arrived, nobody had worked in the field of mathematics after N. Lobachevsky. A series of works dedicated to distribution of formulaic roots belongs to Chebotaryov and his students. N. Chebotaryov solved a whole range of important problems connected with the theory of Lie groups. B. Gagaev wrote an entire series of works on the study of convergence and summability of orthogonal series.

It should be noticed that Tatar mathematicians became popular in this very period. Professor B. Gagaev's student—G. Maksudov (mathematical analysis), N. Parfentyev's students—K. Galimov, M. Almukhamev studying at the chair of mechanics were among them. Works on analytical functions written by N. Usmanov who developed his activities at Leningrad Air Force Academy were especially remarkable. Interesting works on integral equations were written by B. Gagaev's student G. Salikhov who proved the existence of solutions of linear integral equations, which were more general than those examined before, as well as the existence of their own values. He produced a whole range of interesting results on solving different classes of equations using private derivatives which are a generalization of classical formulas [Ucheny'e zametki KGU, 1946, vol. 106, ed. 4, pp. 3–13].

N. Chebotaryov wrote in 1938, that the developed theme of 'single-sheeted continuable polynomials' was extremely complex and it was of great significance to the theory of analytical functions. He wrote two monographs himself: 'The theory of Lie groups' and 'Algebraic Numbers'. M. Almukhamev wrote 'Special Features of Differential Equation Systems'. V. Yablokov studied geometrical couplings in a null system and Finsler manifolds, P. Shirokov specialized in Riemannian geometry. N. Chetayev finished his work 'On Stable Trajectories of Dynamics', K. Mushtari his doctoral thesis 'On the Stability of Thin Shells', M. Aminov studied aerodynamics of flapping wings and the theme of doctoral thesis 'Changes in Gaussian Elimination as Applied to Some Elements of Dynamics' [Chebotaryov, 1938, pp. 297–299]. It is evident from this short review of works written by Kazan mathematicians that Kazan had become one of mathematical centres of the Soviet Union.

Despite the difficulties of the 1920's, the scientists N. Parfentyev, N. Chetayev, A. Aminov, K. Mushtari, N. Chebotarev, E. Zavoysky, P. Shirokov, and others provided valuable research in the fields of physical and mathematical sciences. Works in mathematics, astronomy, physics written by Kazan scientists not only captured the attention of Soviet scientists at that time. Many scholar schools made use of their achievements.

It was no wonder then that international contests for the Lobachevsky Prize were held precisely at Kazan University. A whole range of Kazan mathematicians and engineers worked on stability theory from 1929, at the initiative of Professor Chebotaryov. This theory was of great importance for the development of mechanical engineering, aeroplane theory and high-speed trains. The results obtained by Chebotaryov, Persidsky and Malkin were later noted at the All-Union Mathematical Conference.

The struggle to achieve high durability, lightness and economy in construction led to the broad use of thin shells and coverings in

many technological spheres. Different combinations of plates and coverings are elements of construction in aeroplanes and ships. At that time many main parts of flying machines and high-speed turbines were made in the form of coverings. This required elaborating reliable methods for creating of thin-slab structures from the standpoint of solidity and firmness.

The non-linear theory of elastic plates and coverings was increasingly developed in the Soviet Union and abroad in the late 1930's, in connection with the importance of applying the theory of elastic plates and coverings. The efforts of Kazan's scientists in the post-war period were mainly aimed at the development of shallow shells theory [Surkin, 1957, pp. 27–29].

By the late 1930's, the mechanical-mathematical school established by N. Lobachevsky had developed scientific problems with defense significance.

The rapid growth of physics fell in the 1930s. Before the great patriotic war, the scientists E. Zavoytsky, S. Altschuler, B. Kozyrev were on the threshold of discovering the phenomenon of paramagnetic resonance which was of great importance.

Kazan astronomers continued conducting fundamental research in studying the Moon. It should be remarked that the development of astronomy in the region is connected with the foundation of Kazan university in 1804 and the training of professional astronomers at the astronomy faculty (from 1810). This was one of the first in Russia. Also important was I. Littrov's work in equipping the first Kazan city astronomy observatory. The publication of scientific magazines 'Works of Kazan City Astronomical Observatory', 'Proceedings of the Engelhardt Astronomic Observatory' and the opening of the Astronomic Observatory of Kazan University in 1901 contributed to the development of astronomy. In the 1930's, the Astronomo-Geodetic Society was founded.

The first director of the Astronomical observatory was D. Dubyago (until 1918). He made a large contribution to the theory of comet motion. Thanks to the work of D. Martynov and his students in the 1930's and 1940's,

Kazan became a leading centre in studying eclipsing variable stars. Kazan chemical school had been recognized throughout the world before the October revolution. After October 1917, the outstanding scientist A. Arbuzov conducted pioneering research in chemistry at Kazan university. In the 1920's, he wrote fundamental works in the field of oxygen-containing organic phosphorus derivatives. Concentrated phosphorous acids were discovered in the laboratory of Arbuzov as well as the means of phosphorocarboxylic acid syntheses. As a result Kazan became a world centre for organic phosphorus compound research. In this period A. Arbuzov started working on problems of national economic and defense significance: he studied resins of conifers, the structure of pine tar and turpentine. This was a first in the Soviet Union. This research established the difference between Soviet turpentine, on the one hand, and the French and American variety on the other. New methods applied by Kazan chemists made it possible to find the terpinkaren in turpentine which was previously unknown. Theoretical evidence gradually proceeded to practice. For example, Arbuzov's laboratory secured an order from the Dulevo porcelain factory. These discoveries could develop tapping in the east of the European part of the country as it was an important part of the forestry industry.

In the late 1920's, one more important economic problem was solved in the laboratory of A. Arbuzov. Researchers invented a method of obtaining furfural from agricultural waste as a raw material for producing plastic [Garipova, 2004, p. 101]. After 1929 intensive work on organic phosphorus derivatives started in the A. Butlerov Scientific Research Institute. After 1930, research into organophosphorus compounds was carried out in the faculty of organic chemistry of Kazan Institute of Chemistry and Technology. In 1929, A. and B. Arbuzovs discovered a new method of obtaining three aryl-methyl group free radicals. In the period before the Great Patriotic War new centres for the study of organic phosphorus compounds began to appear and develop. This research includes work

conducted at the Institute for Organic Chemistry of Soviet Academy of Sciences of USSR. [Arbuzov, 1957, pp. 35–36]. The role of the Kazan School of Chemistry in the emergence and formation of the Soviet chemical industry in the country has been recognized, while its influence on the world chemical industry has also been significant.

In the early 20th century, tectonic research was also carried out in Tatarstan. For example, A. Nechayev, A. Zamyatin and M. Noinsky provided especially significant data. Nechayev and Zamyatin discovered the outcrops of Lower Perm limestones in the core of Soksko-Sheshminsk dislocation which had not been described before. At that time they took them to be carboniferous calcareous sediments. Similar limestone was found at the Kama River in the core of the Izhmivodskaya structure by M. Noinsky. Professor B. Yusupov noted that the studies of tectonics in Tataria had more of an occasional than systematic character at that time. There was insufficient data to provide a generalized observation of separate tectonic phenomena.

The systematic study of Tatar tectonics only began from 1920. Important work was carried out by participants in the 1929 conference at the Polytechnic Museum in Moscow in planning work on the study of tectonics of the Ural-Volga region. M. Noinsky gave a report on the tectonic structure and prospects of Tataria's oil-bearing potential at the conference. The participants of the conference elaborated the plan of structural-geological survey which was to mark the beginning of a new period in tectonic research in the Tatar republic. S. Mironov, E. Tikhvinskaya, K. Chepikov, N. Gerasimov, S. Chernov, V. Butrov, B. Selivanovsky and others played the leading part in the realization of this plan.

In the 1930's, M. Noinsky carried out research at the Izhevsk mineral spring and E. Tikhvinsky studied oil migration in the soils of the TASSR. The All-Union Scientific Geological Survey Research Institute undertook important work on reviewing research in the oil exploration sector. In 1942 in particular,

they created a unified structural map of Tataria which delineated the horizons of the Upper Kama deposits edited by S. Mironov. In 1943, the structural map for the east of Tataria along the upper boundary of Lower Kazan deposits was published by A. Melnikov [Yusupov, 1957, pp. 71, 79].

Representatives of the Kazan Geological School developed stratigraphy, paleontology, tectonics and mineralogy of Upper paleozoic deposits of the east of European Russia, investigated for the presence of oil, gas and ore in the Middle Volga, Kama and Cis-Ural regions. Fundamental research in mineralogy is connected with the names of scientists working in Tatarstan in the 1930's—B. Krotov, L. Miropolsky, B. Yusupov, and others.

Tataria's physiologists were devoted to the issue of nerve activity as one of the central problems of their research. 'The understanding of many processes in human body, the causation of a whole range of diseases depended on its solution', wrote professor A. Kibyakov [Kibyakov, 1941]. The scientific activities of Kazan physiologists were devoted to this problem from 1858 when the Chair of Normal Physiology of Medical Faculty of Kazan university was headed by professor Ovsyannikov.

The physiological laboratory of the university was created by scientist of worldwide repute, professor A. Samoylov (deceased in 1930). His laboratory was considered to be the centre of electro-physiological knowledge for Soviet scientists.

The work of the Physiology Faculty of Kazan University headed by professor Samoylov was known beyond the USSR in the 1920's. His laboratory not only ranked first in the USSR in terms of the accuracy and precision recording electrical current of living organisms, it was also comparable on a global scale. At that time Kazan scientists were already aware that every moment of the life of the central nervous system was combined with the appearance of electrical current. They also knew every organ manifests its own electrical reaction which allows for the detection of new aspects in the functioning of the variety

of organs in the human body. The work of scientists in this field was published in a range of journals not only in the USSR but also abroad. Professor Samoylov himself gave lectures on research undertaken by his laboratory in Holland, the USA, the Physiological Society at Harvard University in Boston, and in Berlin, all by the invitation of foreign scientists.

It is remarkable that heart current was recorded for the first time in Tatarstan, in Samoylov's laboratory. Doctors from Moscow and other cities were sent to Kazan for advanced training. Famous Moscow institutions such as the Botkin Hospital and the Obukh Institute for Work-Related Diseases, as well as resort-based cardiological clinics created electrophysiological laboratories according to the methods and instructions designed by the Kazan scientist Samoylov [Garipova, 2004, pp. 101–102].

Professors Vorontsov and Kiselyov were Samoylov's worthy successors. In the late 1930's, research on the study of wave excitation along nerve conductors was carried out at the physiological laboratory of Kazan university. The director of the laboratory chief, Professor Rezvyakov, established a series of facts proving that excitation faces resistance as it runs down nerve stems. According to Professor Kibyakov, there is no consensus of opinions on what happens to the nerve impulse as it passes down the nerve stems. He came to the conclusion that the discovery of this process is of practical importance, allowing us to understand the cause of many peripheral nerve diseases.

One of the most important founders of the Kazan physiological school was Prof. Mislavsky, a scientist of world reputation. The following physiologists were educated there: the Associate Professor I. Validov, Professors Chebotaryov, Vishnevsky, Chirkovsky, Goryaev, Teregulov, Domrachev, and others.

During these years, the Physiological Laboratory of the institute proved for the first time that chemical factors also take part in interactions between separate neural elements.

The laboratory of the Pedagogical Institute was the newest physiological laboratory

in Kazan. New data concerning the impact of direct current on ventricular heart bands was discovered in this laboratory under Professor O. D. Kurmaev. This data was of theoretical and practical importance at that time (the restoration of cardiac work and mechanisms of electric anesthesia) [Kibyakov, 1941].

In 1920, the Clinical Institute was founded in Kazan (after 1925 it was renamed the Kazan State Institute of Advanced Training of Doctors - KSIATD). Although initially its main function was to enhance the level of the skill of medical personnel, later the Institute conducted research in the primary directions of medicine. During these years, specialized medical research scientific institutes (microbiological, tuberculous, trachomatous) also functioned. They made a special contribution to the development of medicine. Their purpose was to conduct complex research into the human body, search for new methods of examination, treatment and prevention of diseases on the basis of achievements of biology, physics and chemistry.

The Institute of Agriculture and Forestry founded in 1922 by merging the forestry faculty of the university and the agricultural faculty of Kazan Polytechnic Institute (The Kazan Agricultural Institute since 1930, Kazan Agricultural Academy since 1995) was a major centre for agricultural and forest sciences. The founding of this institute and the commencement of its activity were of great importance in saving agriculture from collapse, decline and poverty. The Institute's lecturers included Professors A. Vasiliev, A. Gordyagin, N. Parfentyev, M. Grachev, M. Noinsky, N. Livanov, V. Belyaev, and others.

It should be emphasized that forestry in Tatarstan has an earlier history. It began in 1911 when the Experimental Forest District was established. However, forestry at that time was limited only to the collection of knowledge through observations, but experiments were not carried out for a long time. Theoretical questions of forestry were not of primary significance during the Civil War and in the first years of the period of rehabilitation. Forestry thus remained in a state of stagnation. Scien-

tific research work in the Kazan Experimental Forest District was carried out from the end of 1922 under the direction of professor K. Voyt. The circumstances demanded that forestry adopt new forms of organization. A new edict establishing a experimental forest district of the Tatar Republic was issued on 12 July 1926. The Central Executive Committee of the Tatar Autonomous Soviet Socialist Republic established the Bureau of Experimental Forestry and the 'Tatarstan' Experimental Forest Station as part of the Tatar people's land commissariat.

In the 1920's, in addition to the experimental forest district and forestry test station, the faculties of the forestry department of the Kazan Institute of Agriculture and Forestry conducted important research. They conducted research into advanced pine sapling thinning, studied the dynamics of natural pine reforestation in cleared space. They tested tapping fir- and pine-trees according to chemical technology. Soil scientists studied the genesis of different kinds of soil. In the area of forest entomology, they conducted research into a variety of means of protecting forests from pests.

Between 1925 and 1930, the forestry faculties of the Institute were involved in research in 77 areas, 26 of which had been studied thoroughly by 1931. In our opinion, this was not insignificant work, indeed it shows that researchers were able to work in different fields. The results of their activity and research were published in 'The Proceedings of Kazan Institute of Agriculture and Forestry', in the journals 'At the Planting Front', 'Forestry and Forest Exploitation', 'Works of the Society for the Study of Tatarstan' and others. Researchers such as Professor A. Gordyagin, A. Yunitsky, L. Yashnov, A Tolsky and G. Sudeykin as well as B. Martynov, P. Troshchanin, B. Alimbek, N. Stepanov, and others [Bobrovsky, 1952, p. 3] were famous for their works in general forestry, forest plant pathology, ornithology, entomology, fruitification, standardization of seeds, and forest management. It should be noted that thematic plans were structured according to industrial demands and took into

consideration the national economic tasks of the government of the Republic. The activity of forestry scientists in the 1920–1930's enriched forestry science and left a practical mark on forestry technology.

Key matters of organizing and planning of agricultural production in kolkhoz collective farms and MTS (machine and tractor stations) were studied by the Tatar research-and-development institution of the socialistic reconstruction of agriculture created in March 1933. In the space of a single year, the institute was able to hand on the positive results and practical outcomes to kolkhoz collective farms and Machine Tractor Stations, or publish them in the press. For example, works by M. Safiulin, A. Trapeznikov, and others saw the light of day in the form of books or in the journal of 'Socialistic Economics of Tatarstan' [National Archive of the Republic of Tatarstan, fol. R-1076, file 1, § 68, p. 1].

The Tatar Scientific Economic Research Institute, which began work in July 1930, developed many economic questions and was able to implement the first results. During the first year of existence, the Institute undertook research into the manufacturing needs of the republic. It also carried out specific work on the raw materials needed for local industry. In particular, the scientific principles for oil well drilling were defined.

The team of the institute achieved similar results with regard to other natural resources. The republic was one of the most abundant regions for gypsum deposits, although its use was not discussed. In their research into gypsum, the institute showed that numerous construction materials could be produced from it. [Garipova, 2004, p. 103].

During these years research was also carried out into the use the gypsum and anhydrites deposits in Tataria. Several researchers including A. Bogoroditsky, A. Lunyak. V. Sobolev (1930) focused their attention to the possibility of producing of sulphuric acid and Portland cement. Recommendations on the need "to raise the matter of the production of Portland and natural cement in the Republic

using domestic limestones, dolomites and clays" were issued by the Kamstroy brigade (Baty, Trofimuk, Myasnikova) in 1932. In 1939, E. Tikhvinskaya noted the advisability of using Upper Kazan layer limestone indicating a whole range of possible uses for limestone [Nezimov, Sementovsky, 1957, p. 114].

The scientists of the The Tatar Scientific Economic Research Institute also raised the subject of copper, its exploitation for the development of the copper industry. Their interest was also based on the recommendations by historians, since Tatar territory was once a centre of the copper smelting industry.

The semi-annual report of the institute for 1930–1931 contained such works as testing copper ore in Mamadyshsky district, geological survey and registration of minerals in Bugulminsky, Rybno-Slobodsky districts, near the Bondyuzhsky chemical plant; geological exploration work on shale oil in Bugulminsky district; glass-melting sand at Vasilyevo station as well as argile cimolite in Chistopol district, natural red oxide of iron at Kizichesky swamp.

The essential needs of the TASSR and adjacent territories' economic development and the presence of real potential for the creation of a cement industry were the reason for numerous attempts to resolve this problem. The question of cement production in the republic was brought up for the first time as early as 1930/2, in the connection with major objectivities set for the whole country during the first five-year plan. S. Egorov noted the possibility of using Kazan limestone deposits near Yelabuga at the mouth of the Izh River for Portland cement production in a collection of works called 'Geology and minerals in the Tatar Republic' (1932). O. Khovanskaya in her studies of clays of different ages came to the conclusion that '... all researched samples of clay of Tataria are appropriate for the cement industry...' [Nezimov, Sementovsky, 1957, p. 114].

The scientists of Research Scientific Economic Institute worked on such subjects as the technical-engineering basis for building of a nitrogen compounds plant, the develop-

ment of Tatarstan's silicate industry, and the prospects of cost reduction of industrial goods.

The scientists of the transport economics section of the same institute developed the economic characteristics of planned railway lines in the republic and inspection of reinforced-concrete bridges [Garipova, 2004, pp. 103–104].

It should be emphasized that studies of subjects such as ecology, systematization of vertebrates, fauna of the land, water regime of plants, entomology, hydrological coverage of small rivers in the Middle Volga region elaborated in the post-war period were based on the theoretical work carried out in the 1920's and 1930's.

Hydro-geological research in Tatarstan has a long history. Similar research was carried out in connection with water supply of the ancient town of Bolgar. "However, the results of this work were not revealed in literature", wrote scientist M. Kaveev in 1957. In the late 19th century special works in studying underground waters were undertaken in connection with the problem of water supply in large inhabited localities. The materials of water supply drilling between 1883 and 1900 were published by professor A. Shtukenberg in works of the Kazan Society of Naturalists.

After the October revolution of 1917, hydro-geological research was linked to the design of hydroengineering structures, exploration of mineral deposits, the study of mineral water and engineering construction. After 1917, the process of drilling water wells was uninterrupted. Drilling rates increased more and more every year. In 1920, 27 wells were drilled, while in 1930 - 40.

Hydrogeological observations undertaken during geological surveying contributed to collating information about the regional hydrogeological features of the republic. From 1933, almost the entire territory of the TASSR was mapped by geological survey, for the purpose of studying the tectonic structures. The process defined the specific features of the hydrogeology of permian and later geological surface formations. The subterranean waters in the deep horizons of sedimentary rocks in

the Tatar Autonomous Soviet Socialist Republic were studied A. Zabirov, V. Sulin, and N. Tageeva. With the establishment of the Kazan Branch of the Academy of Science, the hydrogeological research of the Geological Institute was used in the elaboration of theoretical questions needed to resolve the practical tasks connected with oil exploration. [Kaveev, 1957, pp. 97–99].

In the area of history and linguistics, the first decade after the February revolution of 1917 provided quite beneficial conditions for the academic study of the history of the Tatar people. The academic and research projects of the Academic Collegium, the Academic Centre and a series of academic communities were dedicated to this work. The institutions included: the Tatar Pedagogic Society, Scientific Society of the Study of Tatarstan, House of Tatar Culture, and then the Tatar Scientific Economic Research Institute which was established in 1930 and remained in existence for about a couple of years. In the 1920's, the following fundamental works were published: 'Essays on History of the Kazan Khanate' by M. Khudyakov, 'History of the Tatar Classes' by G. Ibragimov, 'On the Origins of the Kama-Volga Bulgars' by V. Smolin. In 1925, the 'Introduction to Volga-Kama Bulgaria', 'the Real Dictionary of the Volga-Kama region' were completed.

Articles by Dzhamal Validi on the dialects of Glazov and Karin (or Nokrat) Tatars and Gali Rakhim's analysis of the epigraphic inscriptions of Tatar monuments during the epoch of the Kazan Khanate, which had not yet been an object of research were published by the Society for the Study of Tatarstan in 1931. Gali Rakhim examined more than fifty 15th century monuments of the Arsk canton and was the first to draw conclusion as their language (the language of the local Tatars combined with words of the Chygtays from Central Asia).

The conclusions of researcher A. Vasiliev based on the analysis of five silver coins in the Golden Horde with inscriptions in Tatar found on the territory of Tatarstan at Kirbi

village in Laishevsk district are noteworthy. The academic discovered that the coins related to khans who had reigned in quick succession (over one decade) – in 806–818, i.e. 1412–1413 AD. According to A. Vasiliev, they are rare coins, and one of them was mined in 'New Bulgar'. The author of the article poses the question: 'What is New Bulgar?' "Coins bearing the place of coinage are known: New Sarai, New Azov, New Astrakhan, New Gulistan, but New Bulgar had not been encountered on coins'. The eminent orientalist Fren also questions their definition and does not express his point of view [Trudy` OIT, 1930, p. 175].

E. Chernyshev, in his article 'Reason for the Emigration of the Crimean Tatars to Turkey' based on new archive materials, gives a new explanation for this problem. He saw the reason for Crimean-Tatar emigration as a consequence of the economic development of Russia in the middle of the 14th century, its interest in eastern markets for Russian goods and the corresponding agricultural policy of the tsarist government aimed at the expulsion of Crimean Tatars from their native lands. Trudy` OIT, 1930, p. 173]. It should be noted that the academic's conclusion was not only a new idea since other researchers considered the incitement of the Crimean Tatars to emigration by Turkey as the main reason for this emigration, but indeed a courageous act,

Amongst works on Tatar studies in 1930, special attention must be paid to the article by Professor N. Firsov on the work of Erenzhen Khara-Dovan 'A Cultural-Historical Essay on the Mongol Empire in the 12–14th Centuries' published in Belgrade in 1929. The Society for the Study of Tatarstan placed it on the pages of its collection under the title 'Genghis Khan as a commander and his legacy' [Trudy` OIT, 1930, p. 179].

In his assessment of the work, N. Firsov stressed the view of Dr. Erengene that 'Genghis Khan's Empire was governed at the expense of strict legal observance which was obligatory for everybody beginning with the head of the state and ending with its last subject'. Analyz-

ing the work by Erengene, N. Firsov wrote that the author had explained only the positive aspects of Genghis Khan's monarchy: "Of the cultural heritage bequeathed to other nations, in particular the nations of Eastern Europe, which incorporated the majority of the possessions of the Mongol state under the government of the new state structure (Moscow and Petersburg), religious tolerance was of particular importance". However, whatever the cultural benefits and technical prowess bequeathed by Genghis Khan through the Golden Horde to Russia, this circumstance does not give us any right to dream of the revival of the Great Mongol State' [Trudy` OIT, 1930, p. 180].

Another outstanding scientist F. Ballod also made great discoveries in the field of studying the history of the Tatars which were the result of excavations held in the ruins of former centres of the Golden Horde. This research raised the question or revision of established views about the Golden Horde as a nomadic and barbarian state (stated in works by Berezin and Sablukov).

The history of the Tatar people was given priority in the plans of the Tatar Economical Research Institution which was founded pursuant to an Edict by the Council of People's Commissars of the Tatar Autonomous Soviet Socialist Republic dated back to 18 March 1930 [National Archive of the Republic of Tatarstan, Fund P-516, § 1, file 4, p. 9] For example, the 1930–1931 plan for the History Office had the following subjects: 'Turkic influence on the history of Tatars', 'History of the main Tatar madrasahs of Kazan and Kazan governorate, Ufa and Orenburg'. The following topics were included in the plant of the Cabinet of Language and Literature for 1931: 'The Origins of Handicraft of Ural-Altai ethnicities according to the evidence of speech paleontology', 'Origins of farming of the Turks according to the evidence of the Turko-Tatar language', 'Ancient Tatar literary monuments', and others. The authors of these themes were well-known academics and writers, public figures such as G. Alparov, G. Sharaf, S. Atnagulov, G. Galeev, G. Rakhim, G. Tulumbaysky, A. Shnasi, and M. Fazlullin. [National Archive

of the Republic of Tatarstan, Fund R-516, § 1, file 137, p. 9].

Gradually new ethnographic research began to be undertaken. Kazan had been a major centre for oriental studies for a long time. Kazan University played an especially important role in this respect. Many outstanding scientists interested in the study of history and ethnography of peoples of the Volga region worked there. The peoples studied included: the Tatars, Chuvashes, Maris, Udmurts, and others. The work of local academics in the field of ethnography began almost immediately after the establishment of Kazan university in 1804. The first of these was Professor K. Fuchs who published an entire range of works in ethnography of peoples of the land, especially the Tatars, in 1814–1844. In the period between the 1840's and 1860's, V. Sbojev, A. Artemyev and other academics presented their valuable works.

The creation of Archaeological, historical and ethnographic society at Kazan University in 1878 gave important impetus to studying the way of life of peoples of the land. Its printed journal - 'Izvestiya' - became the centre of local ethnographic thought. The chairs of geography and ethnography at Kazan University (P. Krotov, B. Adler) opened in 1888 and the Kazan City Museum with its historical-ethnographic department headed for a while by N. Katanov gradually found themselves at the forefront of studying the way of life of peoples living in the land.

Even prior to the 1917 revolution, Kazan ethnographers, statisticians and economists collected materials on the characteristics of the pre-revolution way of life of peoples dwelling the Middle Volga region. 'All researchers were interested in non-Russian peoples with their peculiar way of life', wrote N. Vorobiov and G. Khisamutdinov, 'the Russians were considered to be the ordinary Slavs'. Kazan ethnographers were considered to be some of the most competent researchers in Russia. Examining the life and mode of life of non-Russian ethnicities they mainly defended the interests of these ethnicities against social and national oppression.

In connection with the formation of the Tatar Autonomous Soviet Socialist Republic, the people became interested in learning the language, history and ethnography of their nations. Nevertheless, the 1921 famine hindered investigative fieldwork among people. Thus prior to 1923, the concentration of available scientific materials, enlisting the services of scientists and training national scientific researchers took place mainly in Kazan. The Museum of Oriental Peoples began to collate its materials in 1920. Later on it was consolidated with the Central Museum of the Tatar Autonomous Soviet Socialist Republic. In these years it became the centre for local studies in the Republic. A whole range of expeditions was organized to explore the ruins of the ancient city of Bulgar and epigraphic monuments in the region.

The art critic P. Dulsky, a famous specialist in Mordvinian M. Evseev, an expert in the Chuvashes N. Nikolsky, the young historian M. Khudyakov and G. Gubaydullin, ethnographers, M. and K. Gubaydullin and M. Gubaydullina, arts critic and architect V. Egerev, geographer and ethnographer N. Vorobiov all started working in the field of ethnography at the same time. More methodical work in studying Tatar ethnography, under the guidance of N. Vorobiov, began after 1924. Ethnographic expeditions to different places of Tataria financed by local institutions were held almost every year. The following figures took part in expeditions: N. Vorobiov, K. Vorobiov, F. Teregulova, ethnographers Gubaydullins, historian Said Vakhitov, literary scholars Jamal Validi, Ali Rakhim (A. Abdrakhimov), historians R. and S. Tagirovs, certified photographers Kh. Apanayev, N. Zasytkin as well as the arts critic P. Dulsky. The results of these studies were published in the 'Bulletin of the Scientific Community for the study of Tataria' and the magazine 'Labour and Economics'.

The article by the Gubaydullins on the subject of 'The Raising of Children by Tatars in Russia' captured attention of the Italian magazine 'New East' and it was published in Italian in 1926. N.I. Vorobiov's book 'The Material culture of the Kazan Tatars' (Kazan,

1930) contains an ethnographic analysis of Tatar clothes in comparison with clothes of peoples with a kindred language or culture. The mode of life and material culture of the Kazan Tatars were described from historical point of view [Vorobiov, Khisamutdinov, 1957, pp. 163, 165–166].

In general, the period covering more than the first decade after the October revolution was a time for gathering academic forces and new materials for ethnography. From the late 1920's to the early 1930's the first attempts at revising ethnographic methodology were made. Ethnographers were required to learn Marxist-Leninist methodology and employ it in their research work. An ideological battle began in ethnography, numerous theoretical conferences and discussions took place.

The establishment of the History and Philological Faculty at the Kazan State University in 1939 and the creation of the Tatar Scientific Research Institute of language, literature and history in the same year helped to revive research work in the field of history of the local land. Nevertheless, it should be noted that ethnographic studies at that time were not conducted in the Tatar republic. Fundamental work in this direction was renewed only after the Great Patriotic War.

The study of Tatar folklore has a rather long history. The famous folklorist Prof. Khamir Yarmukhametov dated the beginning of recordings of Tatar folklore to the 18th century. He explained this by the fact that in the 18th century Russian academic literature contained evidence about the ethnography of the Kazan Tatars and their folklore. In his collection entitled 'The Russians in their proverbs', I. Snegirev (1834) included Tatar proverbs in Russian and Tatar for the first time. Folklore materials are subsequently presented in collections of works by Karl Fuchs (1844), selected readings by M. Ivanov (1842), 'A Russian-Tatar Alphabet Book' by G. Vagapov (1852), 'A Tatar Chrestomathy' by S. Kuklyashev (1859) and a whole range of other works.

Works by the famous Turkologist, the academician V. Radlov became an important

contribution to the study of Tatar folklore. He published a large-scale work devoted to the folklore of Tyumen, Tobolsk and Tarsk Tatars after he had lived with Siberian Tatars for a long time in the 1870's. K. Yarmukhametov remarked that the collection and study of Tatar folklore before Kayum Nasyrov and Gabdyllah Tukay was merely fragmentary and disparate. The activities of the academic Kayum Nasyrov implemented many new features in the study of Tatar folklore. The national poet G. Tukai not only collected samples of national poetry but also presented the first research on the character and specific features of Tatar folklore. The issue of the social function of folklore works and their class differentiation, the problem of copyright in folklore, the ideological orientation and structure of Tatar folk songs, all these matters were essentially examined for the first time by G. Tukay [Yarmukhametov, 1957, pp. 173–175].

In pre-revolutionary years, Khuzi Badygov's work in the area of collecting Tatar folklore occupied an important place. He published a whole range of works including proverbs, riddles, songs and tales (1912, 1913, 1919, 1926).

In the first years after the October revolution of 1917, there was no systematic attempt to collate Tatar folklore. This work only was only to begin in the 1930's. At that time, in addition to an increase in the collation of folklore, collections also began to be published. For example, 'Soviet songs' (1933), 'People's art' (1938, 1940), 'Folk songs' (1939), 'Folk fairy tales' (1940). Gumer Bashirov was the first person in the Tatar study of folklore to create a collection of Tatar fairy tales conforming to all the demands of the field [Yarmukhametov, 1957, p. 177].

Tatar linguistics has a rich history which encompasses many years. The Tatar language was an object of academic research before the October revolution of 1917, along with other Turkic languages. Such outstanding linguists as I. Berezin, S. Khalfin, Kayyum Nasyri, V. Radlov, N. Katanov, and others collected and examined materials on Turkic languages in general and on the Tatar language in particu-

lar. Nevertheless, according to specialists, the study of the Tatar language was not formed as an independent branch of linguistics before the Revolution.

As early as the period between 1918 and 1919, Tatar intellectuals began intensive work in all its areas. First the question of spelling reform of the Tatar language based on the Arabic fonts was raised during the III All-Russian Conference of Teachers in May 1918 in Kazan. In January 1919, the problems of Tatar language were discussed at the 1st All-Russian conference on type and spelling. Decisions made in the conference formed the basis for measures aimed at improving the type and spelling of the Tatar language. In 1927, Professor G. Alparov noted that the Tatar literary language had become scientifically well-ordered and independent [Zalyay, Amirov, 1957, p. 183].

In new textbooks of the 1920's, Tatar grammars for primary and secondary schools were published, in addition to manuals in the Tatar language. Different linguistic orientations, such as logicism and formalism, were finally formed in works by G. Alparov, J. Validi and other scientists.

Such outstanding linguists as Professor of Philology G. Saadi, G. Nugaybek, G. Alparov, G. Badigov, J. Validi worked in the Academic Centre. These scientists had begun their linguistic activities before the revolution. G. Saadi started publishing his works in 1911. His 'Morphology of the Tatar language in a new simplified form', 'Improvement of grammar of the Tatar language (morphology and syntax)', 'Tatar etymology' were released before the revolution. After October 1917, he published works on the classification of Turkic languages, history of language, script and literature, on principles of studying Turkic languages and composing their grammar, numerous works in literature and art.

The Academcentre organized a special commission to elaborate the scientific terminology required for study guides and studies. This commission developed about 15 thousand new native terms in different scientific fields (mathematics, physics, botany, chemistry, zoology, etc.). According to linguists, the

growth of using folk words, phraseology, and speech tokens in Tatar fiction was significant.

G. Alparov ('Tatar Grammar on a Formal Basis', 1926), S. Ramazanov (he published articles, textbooks and guides between 1930 and 1947, 'Grammar of the Tatar Language' (Part 1), 'Essays on the Tatar Language', 'Spelling of the Tatar Literary Language') made an important contribution to the development of modern Tatar. One of their successors in this field was V. Khangildin. His works in the Tatar language became very popular beyond the borders of the Republic. Between 1934 and 1957 his articles on the most topical issues of modern Tatar grammar were published. The work by V. Khangildin 'Grammar of the Tatar Language. Essays on Morphology' won the award of the Presidium of Academy of Sciences of the USSR in 1954.

Works by professor V. Bogoroditsky occupy a special place in the development of academic grammar and phonetics of the Tatar language in the Soviet period. He was the first to establish the Kazan Cabinet of Experimental Phonetics in the Volga-Kama Region which was highly appreciated in the USSR and abroad [Krasnaya Tataria, 1932, 10 June]. After 1920, the Correspondent Member of Academy of Sciences of the USSR, V. Bogoroditsky began studying the Tatar language using the comparative-historical method. He created such works known in Turkology as 'Essays on Tatar and Turkish Linguistics' (1933), 'Introduction to Tatar Linguistics in Connection with other Turkic Languages' (1933) as well as separate articles and essays: 'The Character of Turkic Synharmonism', 'The Evolution of the Geni-

tive in Turkic languages', 'Tone Movement in Two-Syllable Words in the Tatar Language' [Zalyay, Amirov, 1957, p. 187]

The successors of the Bogoroditsky school in the field of experimental phonetics were his students Galimzhan Sharaf, and others. A number of publications became famous beyond the borders of the TASSR, G. Sharafa's book 'Sonoric Length in Tatar Phonology', 'Palatograms Tatar Phonology', and the articles 'Palatograms in Tatar Phonology in Comparison with Russian' [Bulletin of the scientific society in Tatar jurisdiction 7 (1927), pp. 65–102].

In the first decade after October of 1917, active work in the field of Tatar lexicography began. By 1927, two parts of the 1st volume of the Complete Dictionary of the Tatar Language by J. Validi, as well as a whole range of dictionaries of terms were published. The systematic release of Russian-Tatar dictionaries of different kinds began from 1927 (1927, 1929, 1931, 1932, 1936, 1938). In 1939, the Russian-Tatar dictionary of terms in physics and meteorology was published. In 1941, the Russian-Tatar dictionary of political-economical terms was edited. However, the Great Patriotic war suspended work in the field of Tatar linguistics. A revival only took place after 1946.

At the same time it must be noted that unjustified repressions with regard to those who stood at the forefront of science, and who were its most prominent researchers inflicted serious damage upon the development of science in Tatarstan. The 1930's were filled with cruel persecutions and terror towards representatives of Tatar culture.

CHAPTER 5
**Religion and society in the Tatar Autonomous
 Soviet Socialist Republic under the Conditions
 of the Administrative Command System**

**§ 1. Muslim communities in the 1920–30's:
 Legal-Political and Socio-Economic Condition**

Ilnur Minnullin

One of the most dramatic periods in the history of Russia's Islamic community was the epoch of the social revolutions of the 20th century leading to the establishment of absolutely new political relations and the construction of the state on the basis of anti-religious ideology. The establishment of Soviet power and the consequent radical reforms in all spheres of social life had a profound effect on principles of organization and existence of the Islamic community and presaged the radical transformations of its institutions, destroying customary confessional ties and traditions of the Tatar people.

In pre-October period, the social life of the Tatars was organised around the local confessional community called mahallah. The following definition can be given to this social institution: 'A Tatar mahallah is a self-governing Islamic community which is localized by virtue of distinct historical and historical-architectural factors, and which in the context of a non-Muslim state organizes its internal life according to Sharia standards and provides its members with an opportunity to carry out their religious-moral duty' [Salikhov, 2004, p. 69].

Researchers analyzing the essence of the local Islamic community, its social forces and structural elements, defined its three integral parts. Firstly, it was a community of faithful living within a given territory united with professional, neighbourly and kindred relationship. Secondly a 'parish' cleric was the primary person responsible for the religious matters and the discharge of religious duties, in accordance with the rules of Islamic law. Thirdly, a local mosque

should simply resemble a building for religious rituals but a community club where the pressing problems of daily life of the mahallah could be discussed. [Sukhareva, 1960, p. 58; 1976, pp. 19–23]. The fourth most important institution of the community was also a religious education institution. This took on the role of an Islamic educational and pedagogical body training future Islamic preachers and pedagogues.

The development of the Tatar local Islamic community in the pre-October revolutionary period was characterized by the consolidation of local clerical positions, the creation of communal educational centre, as well as the formation of a charitable system satisfying the needs of the mahallah. The representatives of Tatar bourgeoisie who financed the spiritual and educational needs of their co-believers played an important role in this process.

The revolution of 1917 brought new changes to the lives of Muslims. The religious policy of Bolshevik power was aimed at the gradual and complete exclusion of religion from social life and ideology of the faithful.

Mahallah and Soviet legislation about religious communities. During the early years of Soviet power, the issues of legislation of religious communities were given much prominence. This was explained primarily by the real need for the practical separation of church and state. The legal status of religious communities and their new position in society were clearly defined in decrees, resolutions and instructions. The religious community in Soviet times was a union of the faithful which was completely de-

pendent on the state. Its legal status emphasized its lack of rights and even the nominal character of its existence. The legal status of religious communities allowed the state to control their activities entirely, prevent their registration and remove them if necessary. The logic of defining the legal and political status of the Muslim community within the Soviet state, particularly in the Tatar Autonomous Soviet Socialist Republic was consonant with the spirit of the Soviet legal system. There was no notion of a Muslim 'parish' in the laws of the RSFSR. The only document mentioning such an organisation was 'The Memorandum of the Spiritual Organization of Muslims of the Russian Soviet Federative Socialist Republic' (1923) [National Archive of the Republic of Tatarstan, Fund R - 732, § 6, file 133, pp. 107–110].

The parish was a union of Muslims organized to hold services and rituals, and to supply religious and moral needs of the faithful. Each mahallah was limited to a certain district, the borders of which varied depending on the region. For example, the population of a village could be included in a mahallah with a single mosque. Nevertheless, there were about 2–3 'parishes' in most villages and settlements. The 'parish' was represented by Muslim population of a given location, and included persons of both sexes of the full legal age (18). A general assembly the faithful would be convened to resolve internal problems. Their work was organized in the same way as that of meetings of other communities: the chairman of meeting and secretary were elected, the minutes were kept obligatorily.

The parish government or "mutavalliyat" dealt with all others affairs between the meetings of the faithful. According to the charter, its duties included providing for the material needs of the community and the management of its possessions, including supervision of cemeteries, the state of mosques and other religious buildings, concluding contracts on the exercising of possessions and implementing the resolutions of the general assembly. These duties were typical for a mahallah of the Soviet period, unlike that of the pre-Soviet one. The activities of the first were limited to religious

affairs, while the second was also responsible for social measures.

Nevertheless, each parish existed not only on the basis of the Statute for Religious Organizations. With the development of Soviet religious legislation, the activities of Muslim community were further defined. The notion 'parish' was substituted by 'community' (religious community) in law-making practice as well as that of other communities. Religious communities could be formed by no less than 50 persons of the full legal age (18). According to the Decree on the separation of church and state, religious organizations were deprived of the right of legal entity, their activities did not go beyond the satisfaction of the religious needs of the faithful, i.e. conducting ceremonies. Religious communities were obliged to submit to the administrative authorities the minutes from the meeting of founding parties, as well as founding charter and list of founders. After documents had been investigated, the religious community was registered with the NKVD.

Thus, the Muslim parish was a common religious community of the Soviet type from a legal standpoint. A mahallah was a union of Muslims intended to conduct divine service and rituals.

In general, the legal and political status of religious communities did not change until the late 1920's. A Decree of Presidium of All-Russian Central Executive Committee and Council of People's Commissars of Russian Soviet Federative Socialist Republic, issued on the 8 April 1929 'On religious communities' toughened the process of their registration, increased their dependence of the state, and made the process of their liquidation easier.

Establishing the legal bases of religious community, the Soviet state restricted its functions from the very beginning. The community could only arrange divine services, serve as a place of worship, take part in meetings and appoint worshippers. However, even these types of activities were not completely free from government interference. In fact, the community lost such important functions as those related to education, propaganda and charitable acts.

However, until the middle of the 1920's the state maintained an ambiguous position concerning religious organizations. The attitude of the state towards Islam in general was relatively tolerant. In comparison with such anti-Christian actions as the closure of monasteries and withdrawal of material resources from the Orthodox church, the Muslim parishes were practically untouched by Soviet expropriation. In general, prior to 1922, neither reports of Tatar regional committee of the Russian Communist Party (Bolsheviks) nor reports of local department of the CPA and other sources dealt with the 'Muslim question'.

Thus, when analyzing sources, it can be stated that in the 1920's, the Muslim community was still able to function under the former, pre-revolution conditions. For example, this affected the educational function of the mahallah.

Islamic Education. The confessional parish school was always a key element in the structure of a Tatar mahallah. In addition to producing professional clerics as a crucially important function for the Islamic world, it also played a critical role in the religious education of general Tatar population. Nearly every community had educational institutions, including cathedral mosques, and at some mosques where prayers (salah) were said five times a day.

Therefore, the development of Islamic schools was important for the mahallah's existence after 1917 as well. Once the civil war was over the clergy began to resume the system of Islamic education. During that time secular education was going through a period of difficulty. Soviet schools were no longer funded by the state and after transfer to local financing, they were funded by poor local budgets. In these conditions, the religious population led by the spiritual leaders of their communities refused to support the teachers and the operation of the Soviet schools.

It should be noted that, due to the necessity of rudimentary education as well as the closure of secular schools due to a lack of funds, the Muslim population positively viewed the idea of education in a religious school. However, during this period the local Soviet authorities torpedoed such initiative by administra-

tive measures. The resolution of the People's Commissariat of Education of the Russian Soviet Federative Socialist Republic on 3 January 1923 'On Overcoming Religious Doctrine in Islamic Schools' and Decrees of All-Russian Central Executive Committee struck a severe blow to the clergy [Nabiev, 1991, p. 83]. Nevertheless, illegal religious schools were opened, a new era of struggle for the freedom of religious teaching began, and the organizing of mailing letters on behalf of believers occurred.

Since the beginning of 1923 all mukhtasibats of the Tatar Autonomous Soviet Socialist Republic have conducted their own congresses. On the basis of the proposals worked out, it can be said that the priority requirements of Russian Muslims had hardly changed after 1917. The major ideas were, as before, independent education, full freedom of faith and non-interference of the state with the internal affairs of Islamic associations and organizations.

The Second All-Russian Muslim Congress conducted in Ufa in June 1923 demonstrated the complexity of the public and confessional (also Islamic) relations in the country and development of a compromise model of coexistence. Nevertheless, the significant achievement of the congress was the partial concession made by the state. The Resolution of the Central Executive Committee and the Council of People's Commissars of the USSR (October 1923) permitted the organization of group religious teaching in mosques and private houses in Muslim regions to persons who had reached lawful age according to Sharia and who completed 3 years of primary school during school recess [Yunusova, 1999, pp. 135–136]. Some representatives of the clergy began to establish religious schools even in 1924–1925, however the peak of this campaign was in 1926. According to official data, by 1 April 1926 the number of religious schools in the Tatar Autonomous Soviet Socialist Republic reached 684, which were attended by up to 17.5 thousand students [National Archive of the Republic of Tatarstan, Fund 3682, Inventory 1, File 1008, Sheet 129].

The period before 1927 is characterized by a proliferation of schools. Besides this, many religious devotees put forward a claim to be

allowed to profess Islam freely, without any limitations. The following demands were constantly being put forward at Mukhtasibat congresses: not to limit religious teaching to inside the walls of the mosque, to allow the use of special buildings for this purpose, not to limit the age or number of students, the program of the Central Muslim Spiritual Board (CMSB).

The activity of the Third All-Russian Muslim Congress in October–November 1926 clearly defined that further development of Islamic education was a priority in the work of the Spiritual Directorate. The demands of the congressional delegates on this issue came down to ensuring the complete functioning of the Islamic school institute. However, by the end of the year, party and Soviet bodies of the Tatar Autonomous Soviet Socialist Republic decided to gradually prohibit religious education. By 1927 the number of Islamic schools had decreased dramatically. According to varying statistics, in 1926 this number had reached 800–1000 with 30 thousand students, by 1927 it had fallen to 150–200 with 6 thousand students.

Such a decrease was caused by a host of reasons. Firstly, there were numerous administrative barriers that hindered the opening of religious schools as well as repressive measures provided for by the state. Secondly, there was shortage of personnel, teachers-muallims, who had no material incentive and were not satisfied by the program. These reasons were named in official sources. It is also stated here that the decrease in number of religious schools was affected by the natural withdrawal of the population from religion and their dissatisfaction with religious education. Parents who enrolled their children into *Makhtabs* were subjected to administrative and psychological pressure by the local party and state bodies, their children were deprived of the opportunity to continue their education. On the other hand, Islamic education did not make it possible for anyone to be an active citizen of the new society, and the commitment to religion took away the opportunity to use social benefits. Obviously, a lack of interest in religious education was the reason of its decline, though this factor is virtu-

ally ignored in unofficial sources. However, it is apparent that sooner or later, the mass anti-religious offensive, even without the application of prohibitive measures, the withdrawal of the mainstream population from religion and religious schools would have occurred.

The work of religious schools became an important condition for the further development of Islam in the atheistic state. The vital task of replenishing the cadre of teachers and theologians stood before the Muslims of Soviet Russia. Therefore, apart from opening religious schools, in 1920 the Islamic clergy tried to actively open secondary educational institutions or imam training courses.

At the end of 1924 the Kazan clergy created a special committee to arrange for the establishment of a *madrasah* in the city. However, due to persistent administrative pressure and control, religious leaders decided to only open imam retraining courses. Frequent meetings of the clergy were conducted in Kazan to discuss this issue, which could not go unnoticed by the state authorities. Thus, the local department of the Joint State Political Directorate considered it undesirable to open the courses because '1. this would help to strengthen the influence of the Kazan mullahs on village mullahs since nearly all of them would take positions of the teachers and village mullahs would find themselves being as students, 2. the main purpose of the courses was to show a practical way of adjusting religion to the present conditions [Archive of Administration of the Federal Security Service of the Russian Federation in the Republic of Tatarstan, Fund 109, Inventory 9, File 15, Sheet 3].

In April of 1925 the CMSB prepared a special instruction on the activities of *uyezd* religious courses which were organized for imams and muezzins and lasted one month in order to improve their professional and moral qualities. The courses were funded by voluntary donations and run by a *mukhtasib* and a special board. The management of the Spiritual Directorate developed a short-term training program for the courses [Archive of Administration of the Federal Security Service of the Russian

Federation in the Republic of Tatarstan, Fund 109, Inventory 9, File 15, Sheet 24].

In the summer of 1925 the question of opening a madrasah was raised again, and the Kazan clergy united with the clergy of some cantons for this purpose and began to raise money. This question was only solved positively in the middle of 1926 when the Tatar People's Commissariat of Education issued a notification to the Kazan mukhtasibat 'on the absence of encumbrances on its part'. However, this situation was not resolved ultimately, as the Joint State Political Directorate told the Tatar People's Commissariat for Internal Affairs that such a step was pointless [Archive of Administration of the Federal Security Service of the Russian Federation in the Republic of Tatarstan, Fund 109, Inventory 9, File 15, Sheet 16, 20 reverse].

Opening madrasahs was also planned in Buinsk, Naberezhnye Chelny, Yelabuga, and other cantons. One of the first madrasahs opened in 1920 was 'Islamia' in Buinsk which was attended by up to 70 people. However, under the conditions of famine of 1921–1922 and the well-known resolutions of 1923 the madrasah could not function properly. The canton congress in 1923 adopted a resolution on resuming the madrasah's activity, which was organized at the expense of the canton's Islamic parishes. Moreover, a considerable assistance was also offered by the Tetyushi mukhtasibat [Archive of Administration of the Federal Security Service of the Russian Federation in the Republic of Tatarstan, Fund 109, Inventory 9, File 1, Sheet 5]. At the beginning of 1926 retraining courses were to be opened in the Mamadysh canton and in Menzeliinsk, however, no permission was granted.

This matter was discussed actively by the local and central authorities throughout 1927 and the beginning of 1928. The All-Russian Central Executive Committee informed the government of the Tatar Autonomous Soviet Socialist Republic about the absence of legal encumbrances and asked them to give reasons for the local authorities' denial. The Tatar Central Executive Committee, on their part, referred to the resolution of the Bureau of the Regional Committee of the CPSU(B) dated 3 January 1928 in which the People's Commis-

sariat for Internal Affairs was suggested to give no permission to open the madrasah due to some formal grounds [Archive of Administration of the Federal Security Service of the Russian Federation in the Republic of Tatarstan, Fund 109, Inventory 9, File 20, Sheet 81].

The Forms of Activities of Islamic Communities in the 1920s. In 1920s Islamic communities, while developing historical traditions, tried to continue charity work within the makhallya, although this sphere was narrowed dramatically due to a great number of prohibitions on the part of the authorities and absence of the necessary means. Some Islamic parishes and the clergy created a special fund out of the parish income which was used to provide economic aid to poor families, widows and orphans.

In 1926 a mutual benefit fund was set up in Chistopol. It was used to provide monetary assistance to the poor who attended the mosque [Ukhanov, 1932, p. 44]. The Kazan mukhtasibat provided assistance to homeless children, which, for example, was clearly manifested at the congress of Islamic parishes and the clergy of the city on 20 May 1923. As early as 17 September 1922 the question of establishing an orphanage for Muslim children and a charity were discussed at one of the meetings of Kazan imams [SA HPD TR, Fund 15, Inventory 1, File 591, Sheet 52].

In order to strengthen their position in society Muslim communities and the clergy also conducted active outreach among the population. In the conditions of increased atheization and inculcation of ungodliness ideas in the society by the authorities such activities were very important. In this respect, the activity of the community, first of all, reached out to Muslim youth, that is to that layer of the society which was most prone to breaking off with religion. The elder generation of Muslims kept observing the traditional rituals and living according to the orders of Sharia. Religious schools were certainly the major channel which helped to attract young people to religion. Besides, active community leaders took other measures to attract the population to mosques. Thus, some of them used the mosque as a cult building and as a youth club at the same time.

The outreach work of the clergy among women played an important role as well. A notable result of this work was establishment of a women's mutavalliyat at the 12th mosque of Kazan. The outreach work of the clergy among women was also a form of social influence. In this regard the actions of the imam-khatib of this parish Gayaz Yakupov came to prominence. In order to attract women come to the mosque he gathered them weekly for preaching where he touched upon current issues of household activities: relations with the husband, the upbringing of children [SA HPD TR, Fund 15, Inventory 2, File 172, Sheet 20–21]. The women's mutavalliyat set up the tasks of educating women, equaling them with men when they attended a mosque. Imam G. Yakupov also encouraged his female believers to participate in elections.

Imam S. Imankulov practiced conversations with women as well. He gathered them in the mosque twice a week. The mukhtasib of the Agryz and Yelabuga district Ya. Adutov was known for his positive standpoint towards the protection of women's rights during discussions. In the mosques of Agryz, he regularly conducted meetings of women at which he encouraged them to attend the mosque and bring children with them, fast and observe other rituals.

Gatherings of women by mullahs' wives — abystais — was practiced at home. The state and party authorities considered such meetings as a new form of adversary activity of Islamic organizations designed to ideologically manipulate the population.

Thus, up to the end of 1920s, Islamic communities continued their activities in the conditions of relative freedom without limiting themselves to holding services in the mosque. The community strove for control over the system of education, influenced various layers of the society, took measures to improve the social and economic situation. As a whole, Muslim societies were very active.

In the 1920s such structures of a makhallya as the clergy and mosque were preserved. Despite the fact that the clergy was restricted in civil rights and subjected to intense taxation,

parish imams not only performed religious management but also participated actively in social life. The mosque kept being used by believers, although it was public property. Up to the mid of 1920s, the number of mosques and parishes continued to grow. The year 1927 was a landmark for building mosques. The number of parishes began to decrease thereafter. By that time the number of Islamic parishes in the Tatar Autonomous Soviet Socialist Republic was around 2 thousand and the number of imams and muezzins was around 4 thousand people.

The Economy of the Makhallya. Despite the intensive pressure on the part of the state, in 1920s the financial system of the makhallya was functioning. An important condition for an Islamic community to exist was always its economic solvency based on the mandatory confessional imposition and extensive charity of believers. Before the revolution a local Tatar Islamic community possessed a financial base and conducted spiritual and educational activities independently. The possibility to establish parish funds, donations of believers, absence of parish taxes, support from the business elite — all this allowed Islamic communities to function without direct public support.

The revolution of 1917 changed the financial base which had made it possible for Islamic communities to exist, the parishes lost financial independence. This was mainly caused by destruction of the makhallya funding institute in which an important role was played by the representatives of Muslim industrial and commercial bourgeoisie. As early as during the fledging years of the Soviet system they all were subjected to persecutions and repressions, their property and capital were nationalised, many of those from merchant families found themselves in emigration. The annihilation of the Muslim bourgeoisie as a class became a determining factor in the process of complete destruction of the former system of community economical self-sustainment. Government policy played a big role in the destruction of the makhallya's financial base, whether it was the regulation of the communities' activities or their taxation. In the 1920s the government

legislatively controlled the financial stream of confessional associations. However, due to various circumstances, the efficient control in this area was not possible yet. Generally, the source base used for studying the issue of religious gatherings in an Islamic community is very poor. It can be assumed that Muslims kept donating to the mosque and clergy during the Soviet period as well. This assumption can be proved by separate documenting materials.

For example, it was noted in information reports of the Joint State Political Directorate of the 1920s that the clergy was carrying on agitation for collection of the natural tax for different purposes. In summary, from 26 September 1922 it was reported that money was being raised in Kazan in favour of the MSB, with the city mullahs being especially active [SA HPD TR, Fund 15, Inventory 1, File 591, Sheet 52].

Due to the lack of material security in the majority of the clergy, in the summer of 1924, the CMSB was forced to issue an appeal suggesting that a religious fund be established. This fund was intended to distribute money for the needs of the clergy, the repair of mosques, and other religious needs [SA HPD TR, Fund 15, Inventory 1, File 918, Sheet 155]. In the same year the imam-mukhtasib of the village Bolshaya Atnya (now the center of the Atnya district of the Republic of Tatarstan) S. Maksudov suggested that the mullahs and population collectively give ushr (natural donation in favour of the mosque or madrasah, amounting to 1/10 of the harvest). He suggested that this money should be used to cover the needs of the Spiritual Directorate and mukhtasibat, and the rest should be shared proportionally among the clergy [SA HPD TR, Fund 15, Inventory 1, File 918, Sheet 155]. The tradition to give a part of the harvest yield to the mosque was common in villages where authoritative mullahs or ishans lived. Thus, this imposition was applied in many villages of the Buinsk canton, one of the most religious regions of the Tatar Autonomous Soviet Socialist Republic [SA HPD TR, Fund 15, Inventory 1, File 918, Sheet 208].

It was stated that when few people attended mosques, parish councils kept working, mullahs received payments, prayer buildings were heat-

ed and lighted [SA HPD TR, Fund 15, Inventory 1, File 1333, Sheets 186–187]. The writer and columnist F. Saifi, who made a trip to the Mamadysh canton, wrote that 'the collection of a tithe for mullahs was uncommon in other cantons, but it was thriving in Saby...' [SA HPD TR, Fund 15, Inventory 1, File 1347, Sheet 96].

In a summary report of the Joint State Political Directorate on political climate in the Tatar Autonomous Soviet Socialist Republic for April–June of 1925, it was noted that when large donations were given in favour of the clergy peasants refused to support the teacher and 'gave the most miserly sums for building a monument to Lenin' [SA HPD TR, Fund 15, Inventory 1, File 1378, Sheet 13]. Forcible collection occurred in the village Ashytbash of the Arsk canton where the mullah threatened to keep insurance contribution of non-payers out of the mosque [Ibid., Inventory 2, File 72, Sheet 36].

It can be said that in the early 1920s, financial contributions were still made by well-to-do peasants in the country and merchants in the city. The makhallya funding institute still existed, though in an altered form. The same F. Saifi noted that, nearly each of the 47 Islamic communities of Saby volost had 3–5 trustees: 'A trustee for the Islamic clerical movement is the strongest instrument. Usually trustees were elected from among the peasants who were good farmers and had authority among the population, very religious ones' [SA HPD TR, Fund 15, Inventory 1, File 1347, Sheet 96].

Much attention was given to the makhallya's affairs by representatives of the Tatar bourgeoisie in Kazan. So, in a summary report of the Joint State Political Directorate the economic committee of the Kazan mukhtasibat was named the 'official representation' of the national bourgeoisie in this religious body [SA HPD TR, Fund 15, Inventory 1, File 1378, Sheet 34]. At nearly all mukhtasibat congresses the issues of financial well-being of the mosque and mukhtasibat were raised. Thus, in the autumn of 1925, a cost estimate of keeping a regional directorate was approved at the congresses of mukhtasibats 2 and 4 of Naberezhnye Chelny canton [SA HPD TR, Fund 15, Inventory 2, File 72, Sheet 61].

Bulletins of the Joint State Political Directorate continued to provide information on financial streams in the makhallya. In March of 1927 the mullahs in Agryz mosques encouraged people to pay ushr and fitr. In the village Tabarli of the Yelabuga canton, the collection of 1/2 pood of bread per house was performed, with the members of the village council being involved. In the village of Tersi in the same canton the village council provided the mosque with 1,5 dessiatinas of timber. In the village Sluzhilaya Ura of the Arsk canton believers made a decision to collect in favour of the mosque 1 rouble from middle peasants and 50 kopeks from poor peasants. In the village Bulym-Bulykhchi of the Tetyushi canton, for the upkeep of the mosque and other needs a pood of grain per farm was collected in one parish, and 2–3 poods—in the other parish [SA HPD TR, Fund 15, Inventory 2, File 355, Sheets 7, 12, 14].

The limitation of the makhallya's Functions and Activities in the 1930s.

The drastic alterations in all areas of social life which followed in the late 1920s had a great impact on the existence of an Islamic community. By 1927 the authorities made educational activity of the makhallya impossible. In January 1927, the Agitation and Propaganda Department of the Central Committee of the CPSU(B) prepared a draft resolution of the Organizational Bureau of the Central Committee of the CPSU(B) 'On the Measures for Fighting Against the Islamic Religious Movement', which, in particular, suggested that the possibilities to teach Islam and train clergymen were drastically limited. In May of 1928, the Political Bureau of the Central Committee of the CPSU(B) took a decision to close Islamic schools [Nurullaev, 1999, p. 137], and then the Presidium of the Central Executive Committee of the USSR canceled the resolutions on Islamic instructions [Archive of Administration of the Federal Security Service of the Russian Federation in the Republic of Tatarstan, Fund 109, Inventory 9, File 19, Sheet 58].

In January of 1928, the Eastern Department of the Joint State Political Directorate in its let-

ter to the Presidium of the Central Executive Committee of the USSR actually derailed the hopes of Muslims for opening a madrasah in Kazan: 'As regards the struggle against the clergy we certainly do not see it as beneficial to establish a madrasah intended, first of all, to prepare the Islamic clergy for the struggle against us. However, tactical considerations that you are aware of compel us to resolve this issue positively. That's why in practice we should consider the question of establishing a madrasah with exceptional care — and this year only as an experiment. Hence our opinion is basically to permit opening a madrasah only in Ufa at the Central Spiritual Directorate so far. The permission to do this should be given in the name of a person who could show us at least some credibility...' [Archive of Administration of the Federal Security Service of the Russian Federation in the Republic of Tatarstan, Fund 109, Inventory 9, File 1, Sheet 76].

The resolution of the All-Russian Central Executive Committee and the Council of People's Commissars of the Russian Soviet Federative Socialist Republic 'On Religious Associations' of 8 April 1929, permitted the teaching of religion only at special theological courses which needed a special permit from the People's Commissariat for Internal Affairs and the Central Executive Committee to open. No meetings or religion study groups were allowed. But even this right could not be used by Islamic parishes since the repressions restrained the Islamic clergy as a component of Islamic education. Thus, the system of Islamic education was ultimately destroyed.

Generally, the resolution 'On Religious Associations' and the Instruction of the People's Commissariat for Internal Affairs of the Russian Soviet Federative Socialist Republic 'On the Rights and Obligations of Religious Organizations' drew a line defining a religious society. For the first time the Instruction listed the activities which were prohibited for the communities to engage in:

'a) to set up mutual benefit funds, asylums, shelter-care facilities, hospices, boarding houses, funeral funds, etc.;

b) to establish cooperatives, production enterprises and generally use property possessed by them for any purpose other than satisfaction of religious needs;

c) to provide financial support to members of a religious association;

d) to organize special children's, youth, and women's prayer meetings as well as other gatherings;

e) to organize general Bible, literary, handicraft, labor, religious instruction meetings, groups, clubs, departments, and so forth;

f) to arrange excursions and play grounds for children;

g) to open libraries and reading rooms;

h) to organize health resorts and medical assistance' [Bulletin of People's Commissariat for Internal Affairs of the Russian Soviet Federative Socialist Republic, 1929, No. 37, p. 691].

In this way, the scope of religious groups functions was narrowed down, within the framework of the law, to satisfying religious needs in a house of prayer. This squeezed out religious organizations from all spheres of public life, where they had functioned before. An analysis of the sources shows that in the 1930s such a narrowing of functions occurred not only legally but also in practice.

From that moment, large-scale economic and political campaigns were conducted in the country, which put religious communities into critical condition. It is impossible to speak about the active presence of religious communities in the 1930s. According to the analysis of documents, the basic activity of Islamic parishes was narrowed down to religious services in the mosque and observing rituals. The participation of the population in religious festivals and every day rituals was practically the only indicator of religious life. It is however noteworthy, that the population of all Islamic regions observed fasts, and butchered livestock for the holiday Kurban Bayram (The Festival of Sacrifice). In the meantime, the religious ritualism of Muslims could not be eliminated by administrative measures. Summary reports of the Joint State Political Directorate note a high attendance to mosques, especially during Islamic holidays. In 1935, during Kurban

Bayram, all the three mosques of the village Bolshiye Nurlaty were overcrowded. In the same year, during the holiday of Uraza Bayram, the Azimov mosque was attended by about 500 people, in the Novotatarskaya sloboda by 800 people, and the White mosque—by up to 1 thousand people, most notably that 20% of believers consisted of the Kazan youth [SA HPD TR, Fund 15, Inventory 3, File 865, Sheet 63].

In the absence of active forms of religious activity which were common in 1920s, the regional party committees reported even presence of a namazlyk (carpet) or a kumgan (jar) in Tatar families as manifestation of religiosity. The battle against such anachronisms was one of the major anti-religious activities. In 1936 the Central Council of the League of Militant Atheists suggested, for example, 'to resolutely battle with the ritual of circumcision' in the Tatar Autonomous Soviet Socialist Republic.

Since the end of the 1920s, information about the financial base and system of sustenance of the mahallya (congregation) is not available. It was gradually destroyed as a result of collectivisation, dekulakization, and repressions. These processes, firstly, eliminated the well-to-do class, which traditionally provided substantial financial assistance to the parish, secondly, subdued religious feelings of the believers who now could not (or did not want to) support the religious society even financially. In the 1930s information on any donations in favour of the mosque were rare. In the village Dyusum of the Sarmanovo district, there were many occurrences of disruptions of anti-religious lectures because the club, in contrast to the mosque, was neither heated nor lighted. The collection of money for payment of taxes by the ministers of religion for their own needs, for repairs of the mosque and its rent, to support the Spiritual Directorate and provide assistance to families of repressed mullahs was performed in the village Pshalym of the Arsk district in 1937 [SA HPD TR, Fund 15, Inventory 4, File 762, Sheet 16].

Thus, if in the 1920s there were still financial incomings to the communities in different forms, then in 1930s the economic independence of an Islamic community was brought to nought.

The mass closure of mosques. In the 1930s makhallyas certainly received financial assistance in places which had a mosque and a legally registered religious society. Therefore, the dedicated and mass campaign of mosque closure was also for the authorities a way of fighting against religion and the influence of the clergy, against the religious community.

The closure religious buildings began with from the first years of Soviet power. At the end of the 1920s regulatory acts made this process even easier. The regulatory documents were the resolution of the All-Russian Central Executive Committee of 8 April 1929 'On Religious Associations' and the instruction of the Permanent Committee on Cult Issues at the Presidium of the All-Russian Central Executive Committee of 16 January 1931. 'On the Procedure for Enforcement of Cult Legislation'. In fact, however, no law was observed during the execution of agreements and the closure of cult buildings, and this process was accompanied everywhere by an abuse of power by the authorities and party bodies.

The beginning and escalation of this process coincided with large-scale industrialisation and the mass collectivization of agriculture. Therefore it was critical for the Soviet system to destroy major urban religious centers which remained not only a unique stronghold of the spiritual opposition but also a hotspot of 'harmful' ideological influence on the proletarian masses. It should be noted that, for example, in Kazan, the closure of churches only started in 1928, and the Orthodox churches and monasteries were the first to experience administrative pressure. Thus, in October 1928—April 1929, 12 out of 52 churches and monasteries ceased their activities, but none of the 19 mosques were closed [National Archive of the Republic of Tatarstan, f. P-5852, f.a. 1, f. 784, s. 12 reverse].

It was exactly the quarters of the historical national district of the city — Novotatarskaya sloboda — in 1928 that became the field of the first large socialist construction site of Kazan, namely construction of a large fur production complex. The implementation of this

grand technological and, of course, social and political project required the complete destruction of the former way of life and household of the sloboda's residents who historically would group into confessional communities around the three local mosques. It is well known that, before the revolution all the makhallyas of Novotatarskaya sloboda stood apart by high social activity. It was a place where many well-known educational Islamic centers functioned, famous teachers and theologians preached and taught [Salikhov and others, 2004, pp. 294–295]. It can be said that such religious hotspot in the very center of the construction being launched was initially doomed. The 11th mosque in the Novotatarskaya sloboda was the first Islamic cult building of Kazan closed, taken away from the believers and 'transferred for cultural needs' [National Archive of the Republic of Tatarstan, Fund P-5852, Inventory 1, File 784, Sheets 5–12 reverse].

Once the construction of the fur factory was over, the local authorities began to receive petitions from labour collectives to close the remaining mosques in the Novotatarskaya sloboda. The last remaining prayer house of the Novotatarskaya sloboda — 'Iske Tash' mosque — was also on the verge of closing. In 1931 its imam M. Imankulov was arrested. Immediately after this a signature collection campaign for the closure the mosque started among workers of the fur production complex. However, apparently from the numerous complaints of believers from this industrial district to the highest public authorities suspended the closing process, which was only completed in 1939.

By that time, all the clergy of the Novotatarskaya sloboda had been repressed, and the two century history of its religious communities practically ended. However, out of the 19 city mosques only one mosque — 'Marjani' — was functioning at that time, which, of course, could not satisfy the spiritual needs of all the city's Muslims.

The mass closure of mosques continued up to the beginning of the Great Patriotic War. Only 100 out of 13.7 thousand Islamic parishes of Inner Russia functioned in 1941 [Yunusova,

1999, p. 189]. In early 1939, at a republic-wide meeting of the Political and Educational Department of employees and the League of Militant Atheists the Secretary of the Tatar Regional Committee of the CPSU(B) Mukhametov stated that the clergy of the republic sowed a rumour about the planned sweeping closure of prayer houses. Nonetheless, this fact proved to be true: the analysis of the materials shows that in 1939 only 698 prayer houses were closed, including 574 mosques and 124 churches [National Archive of the Republic of Tatarstan, Fund P-3610, f.a. 5, f. 3].

The campaign for the closure of cult building, launched in the late 1920s, marked the beginning of drastic destruction of traditional relationships in the Islamic communities and was intended to prepare the necessary ideological and social ground for performing the complete collectivization in rural areas. The mass closure of mosques resulted in the elimination of the most religious society which lost even the need of financial independence.

The Socio-Economic Status of the Islamic Clergy. Apart from these processes, the destruction of the Islamic clerical institute strongly affected the transformation of the Islamic community in the 1920–1930. Initially, the Soviet government set the task to neutralize and eliminate it from the society. Even the first decrees of the Soviet system restricted church servants in their activities and they became just ritual performers, immediately they were deprived of voting rights, which prevented them from participating in the social and political life of the country.

The restrictions in civil rights was not the only form of the pressure exerted on the clergy. In the 1920s the economic policy served as the main method of its neutralization. The unreasonably high tax rates for this population category allowed for the restriction the clergy financially. One of the serious consequences of the legal and economic restrictions imposed by the state was the wide-scale refusal of religious leaders to perform their spiritual duties. The departure of the clergy from religious activities is important for understanding the transformation process of the Islamic community in the 1920–1930.

This phenomenon was observed even in the early years of the Soviet system. As a rule, sweeping resignations from clerical positions was observed when public policy towards the clergy was being tightened, and the financial and social status of clergymen was declining. So the first mass resignations from spiritual positions took place immediately after October 1917. In Tataria, during the fledging years of the Soviet system over 200 mullahs resigned from their religious position [Matorin, 1929, p. 145]. This process acquired a new drive after the civil war was over, when new restrictions on the activities of the clergy were imposed and taxation policy was made more rigorous.

Concerning the reasons for the resignations from religious positions, it should be noted that the documents of the regulatory authorities, and particularly of the Joint State Political Directorate, barely mention any ideological split with religion. Such cases were isolated, and as a rule they were widely advertised in the press. The major reasons for the resignations were related to the social and economic status of the clergy. The clergy was charged taxes, deprived of voting and other civil rights, and social benefits were not available to members of their families. Resigning enabled their rights to be reinstated and meant that they could participate in public life. Therefore many of them preferred living on an equal footing with other citizens to being 'the deprived'.

The lack of social and material incentives associated with official spiritual service was the key reason for the clergy resignations. And as such some mullahs ceased to perform their duties in the parish forever. However, some of the clergy used this situation for informal religious worship. The history of this process is unclear due to the absence of statistical materials. According to the authorities, this process built up during the electoral campaigns when the official split with religion gave access to participation in public life. The same tendency was also widely used for discrediting the clergy [SA HPD TR, Fund 15, Inventory 1, File 1347, Sheet 92].

The leading social and economic reasons for the resignations was that it was impossible

to pay all the taxes. In this situation it was the people that sometimes provided financial support; allocating monetary or arranging payment in kind for their imams. However, in the parishes where this was impossible due to the poverty level of the believers or the active countermeasures of the rural authorities, resigning was the only way out of the situation. In the mosque of the village of Mellya-Tamak of the Menzelinsk canton imam-khatyb declared: 'We, the mullahs, serve you and serve to preserve religion in future. If we, the mullahs, due to the burden tax and burden of other levies, have to resign from our positions in the future, your mosque will be turned into a club. In this case funerals and marriages will not be performed' [SA HPD TR, Fund 15, Inventory 2, File 524, Sheet 99]. Very often the reason for resigning appeared to be the social limitations imposed on a mullah's family, particularly the fact that it was not possible to provide school education for their children.

This process was most widespread in the late 1920s. The Dekulakisation policy was the major reason for the clergy's resignation on a large scale. During this time new methods of fighting against the clergy were added to the social and financial deprivation. The official split with religion became the only way of saving oneself and one's family from dekulakization. The party bodies admitted that the resignations were primarily caused by social and economic deprivation: 'The material troubles and absence of civil rights, the impossibility to provide education for one's children in Soviet educational institutions, and, separately, the ideological withdrawal from religious beliefs led to some of the clergy abdicating from their religious positions and start a working life' [SA HPD TR, Fund 15, Inventory 2, File 524, Sheet 96].

In 1928–1929, 150 Islamic clergymen were registered as resigning. The mullahs themselves sometimes advocated for mass resignations. In their opinion, this would force the government to make certain concessions. The mullah Valeev from the village of Almetyevo of the Chelny canton stated: 'We, the mullahs,

should now resign all together and at the same time, there is no other way to get exempted from taxes' [SA HPD TR, Fund 15, Inventory 2, File 524, Sheet 100 reverse]. This tendency was observed in many cantons of the Tatar ASSR. In the Shonguty volost of the Buinsk canton 19 mullahs were ready to take this step.

Violations of religious law became standard practice in the late 1920s, and at that time they were practically legalised. At that time the clergy was subjected to further impingements on their social and economic rights. During the collectivisation and dekulakisation the clergy was officially classified as kulaks which meant that the livelihood of the clergy could be taken away and also the most active religious leaders could be 'neutralised' and eliminated. In the late 1920s–early 1930s the clergy, deprived of its civil rights and material resources, notably declined.

In the 1930s the campaign to close religious buildings inflicted another blow on the status of the clergy. Having lost the mosque the parish ceased to exist, and community servants lost their source of income and had to cease their spiritual work. Besides, tax legislation was not eased for the clergy and all social restrictions remained in force. To sum it up, the lack of civil rights, unreasonably high taxes, and dekulakisation gave rise to the drop in the number of clergymen and the decline of their role in society.

Repressions against the Islamic clergy. State repressions were one of the main factors which influenced the Islamic clergy in an oppressive way. The first wave of mass repressions against the clergy began at the very end of the 1920s, when forced improvements were begun in all aspects of country life. The authorities considered religion, priesthood and ordinary religious people an important obstacle in the way of the reforms. The consequences of that policy took the hardest toll on rural areas, where collectivisation and incidents related to it broke the traditional tenor of life, destroyed the worldview of the peasant community, as well as the population's devotion to religion.

The policy of the 'abridgment and displacement of the kulaks [peasant bourgeoisie]

through economic methods' was accompanied by repressive administrative measures during the economic and political campaigns. It was constantly emphasised that households belonging to representatives of the clergy were also kulak households. From that time, the punitive policies of the Soviet state was directed not against the clergy in general, but against its representatives as 'members' of the anti-kolkhoz movement. Almost all the clergymen convicted between 1929 and 1932 were accused of opposing the kolkhoz and other farming campaigns, and of organising kulak groups in favour of the opposition. In that time, religious activity was de facto equated with anti-kolkhoz activities, especially in cases where no evidence was found on opposition to the creation of kolkhozes.

At the end of the 1920s–beginning of the 1930s, the Joint State Political Directorate of the TASSR fabricated several group cases on the so-called 'mullah-merchant counter-revolutionary formations'. The repressions were started on the basis of the directives on mass operations to eliminate the kulaks, and it covered all regions of the republic. For example, in September 1931, the Tatarstan department of the Joint State Political Directorate performed the investigation of the case of the so-called 'counter-revolutionary bourgeois-nationalist religious insurgent organisation' in the Mamadysh, Sabinsk and Rybnaya Sloboda districts (former Mamadysh canton) [Archive of Administration of the Federal Security Service of the Russian Federation in the Republic of Tatarstan, Archival Investigation File No. 2–14047 (in vol. 4)]. One of the main points of the indictment was the attempt to associate the anti-kolkhoz mood with the religious movement in the kanton which was accompanied by the requirements to restore mosques and release the arrested clergymen.

According to the existing practice, the case was typically built around one important well-known person: all of his or her professional and non-professional contacts were revealed, and all of these targets were then united into a single organisation. This case was no different: the leader of that non-existing entity

was a well-known influential imam-hatib of Mamadysh, muhtasib of Mamadysh canton Mukhamet Berkutov. His activities as the imam and mukhtasib, as well as his contacts with clergymen of different positions were the subject of special interest on the part of security forces. For example, M. Berkutov participated in the work of the All-Russian congresses of the clergy between 1920 and the 1920s, was the organiser of the campaign aimed at opening religious schools in the kanton. He also actively advocated for the rights of the clergy and the restoration of mosques. It is natural that his acquaintances included not only representatives of parishes of the Mamadysh mukhtasib, but also Muslim leaders from Kazan, Ufa and other centres. On this basis, the local department of the Joint State Political Directorate built up the structure of the 'organisation'. So in the course of the investigation, this 'entity' united 70 people who lived in different villages, and allegedly comprised 15 groups. The Mullahs were made the leaders of each gang, and its other 'members' were said to be the kulaks.

The indictment extensively described the activities of each cell of the organization within the Mamadysh canton. However, at the kanton level, the scale of the organisation would be insignificant. Such 'organisations' were usually said to have connections with Kazan, in particular — with M. Imankulov. It was stated that their general management was performed by the CMSB. They were also said to be related to other regions, in this case — to Middle Asia. Any trip or a correspondence acquaintance could serve as a formal reason for establishing the connections of the 'organisation'.

The directives of the Joint State Political Directorate affected not only villages. Considering the 'revival of the urban counter-revolution', it was supposed to also intensify their activities in cities. At the same time, the Tatarstan department of the Joint State Political Directorate prepared a new repressive campaign against Kazan influential clergymen and the bourgeoisie who were united in the 'mullah-merchant gang of Kazan'. According to the typical scenario, this case was formed around a well-known public person — the Kazan muhta-

sib, imam-hatib of the 9th cathedral mosque, M. Imankulov.

As a result of the mass repressions at the end of the 1920s—the beginning of the 1930s, a significant number of clergymen of all confessions were executed throughout the whole republic. The 'trinity' of the GPU-NKVD [the State Political Administration at the People's Commissariat for Internal Affairs] of the TASSR alone convicted 802 representatives of the Islamic clergy of the Tatar ASSR between 1929 and 1938³. The Islamic clergy thus lost its most active and educated religious representatives whose place was occupied by non-professional imams, and this led to the loss of the Islamic heritage by the Tatar society. Although some mullahs returned to their motherland from concentration camps and exile, many of them did not continue to perform their professional duties. In the middle of the 1930s they were all victims of even severer repressions.

We can judge how enormous the losses among the clergy were if we look at the number of people who officially remained at their posts. As a result of natural decline, resignations and repressions, the number of Islamic clergy of the Tatar ASSR by the beginning of the 1930s was reduced fourfold: if by 1927, the number of Islamic clergymen fluctuated between 3.6–3.9 thousand persons (so was almost unchanged), by 1934 only about 1,000 registered imam-hatibs and muezzins (according to the official data — 1,555 persons remained, but this number also included 'lapotnys' ['wearing bast shoes'], 'vagrants' and those who were removed from their position).

The unprecedented attack began in 1936, when almost all representatives of the administration of Islamic organisations were executed. The destruction of the CMSB and its members enabled the elimination of the Islamic clergy to be initiated throughout the whole country. That same year, the criminal prosecution of the

clergy of the Tatar ASSR was initiated, with the 'case of Atlasov' being one of those most high-profile examples.

In 1937 the repressions intensified throughout the entire USSR. As before, the clergy of all confessions suffered greatly. In the course of the 'kulak operation' in the Tatar ASSR, a significant number of Islamic clerics were repressed. The following famous Islamic representatives of Tataria were condemned to death: muhtasib of the Dubyaz district F. Shamsutdinov, muhtasib of the Arsk district G. Urazgildeev, former imam of the 17th mahalla of Kazan S. Vakhitov.

By that time, the supreme clergy — the former administration of the CMSB — had been almost completely eliminated. In 1936, the kadi of the CMSB Mukhlisa Bubi was shot; in 1937 the imam of the cathedral mosque A. Shamsutdinov was also shot in Moscow; in 1938 almost all the leaders of the Spiritual Directorate were sentenced to death: Sh. Sharaf, Z. Kamali, Dzh. Abzgildin and others. Deputy mufti K. Tardzhimanov, who in January 1937 was sentenced to 10 years imprisonment, was sent in October of the next year to the prison in Ufa where he was subjected to interrogation for a year.

Despite a small general decrease in the scale of the repressions, 1938 saw new tendencies in punitive policies on religious and national grounds. During this time, the number of cases involving clergymen increased because of the elimination of the so-called 'branches' of the organisation 'Idel-Ural' in the Tatar ASSR. Since the focus was on the revelation of a plot throughout the whole republic, Islamic clerics were murdered for being 'ideological leaders' of these branches.

The repressions of the 1930s completely changed the social and cultural characteristics of the Islamic clergy and devastated their numbers. Arrests and shootings of thousands of imams caused a noticeable loss of the continuity of religious traditions between generations.

Therefore, the existence of Islamic communities between the 1920 and 1930s was dependent upon the logics of development of the Soviet state: any action it took was directed

³ Information provided according to: Bagaviyeva, 2003, p. 155. Unfortunately, no studies of the exact number of oppressed clergymen (not just by the three offices of the NKVD, the Special Council, and the Military Collegiate) have been carried out as yet.

towards breaking the former communal institutions. However, the specifics of such policies depended on the social, political and economic environment in the country. So before the middle of the 1920s, the state did not openly interfere in the matters of the communities, but forced them to limit their scope of activities. Technically, the community could only organise church services, monitor the safety of buildings of worship, participate in congresses and appoint clergymen.

An analysis of the available materials shows that before the end of the 1920s, Islamic communities continued their work in an environment of comparative freedom, without limiting themselves only to conducting liturgical services in mosques. The community fought for the ability to control the system of education, had an influence on diverse layers of society and took measures to improve their socio-economic conditions.

However, at the end of the 1920–1930, the state took a range of measures which brought the traditional Tatar mahalla with all of its social and economic functions to the verge of extinction. At the end of the 1920s, the state

took steps to eliminate the religious system of education. At first, severe administrative limitations were imposed upon it, and then it was completely eliminated. The tax pressure of the Soviet authorities destroyed the economic potential of the mahalla. In 1930s, the mass demolition of mosques was organised. The liquidation of the institution of the clergy led to the complete incapability of the Tatar mahalla in its previous form. If in 1920s the basic Soviet methods of neutralising clergymen were social and economic limitations, in the 1930s, the repressions led to the almost complete elimination of this layer of Islamic society.

The 1920–1930 marked a deep transformation of the Russian ummah. The mahalla itself ceased to be a self-managing Islamic community possessing a particular lifestyle. It turned into a religious group — registered or unofficial — which brought believers together with the sole aim of conducting religious rituals. Over the next long period of time, the existence of this kind of religious community was supported either via the presence of the mosque, or through the presence of a person who performed rituals.

§ 2. Political repressions in the TASSR in the 1930s

Ayslu Kabirova

The consolidation of I. Stalin's personal power in the Soviet state was accompanied by the planting of an atmosphere of suspicion and hostility in society, the activation of the JSPD's work to root out 'enemies' and take punitive measures. In the 1930s, large-scale political repressions affected all categories of the population. Undoubtedly, the political elite was the first to be affected. After the demonstrative educational trial of M. Sultan-Galiev, who was the test run for the subsequent systematic elimination of the Soviet opposition, other influential workers of the Tatar ASSR party bodies were also removed from their posts. The Chairman of the Tatarstan Central Executive Committee G. Baichurin and the secretary of the Tatarstan Regional Committee of the CPSU(B)

G. Mukhametzyanov were accused anti-Soviet activities. S. Said-Galiev, K. Mukhtarov, Kh. Gabidullin, Sh. Shaymordanov, A. Davletyarov, who occupied the position of the chair of Tatarstan's Council of People's Commissars in different years, and many commissars and senior commissariats were arrested and later shot [Politicheskie repressii v TASSR, 2011, p. 26]. As a result, it was established that workers of law-enforcement bodies applied illegal methods to these leaders, including beatings, torture and starvation, thus forcing them to 'confess' to crimes they had not committed.

The following cases trumped up by the NKVD became high-profile in Tatarstan: the cases of 'Dzhigedyan', 'State Publishing House', 'Novatory', 'Yana Kitap', 'Commissariat of Ag-

riculture', 'Peasant Ittifaq', 'Right-Trotsky Nationalistic Organisation', diverse diversionary-sabotage organisations within the defence industry, terrorist and insurgent spy organisations, the anti-Soviet formation 'Idel-Ural' and the like. According to the calculations of A. Litvin, between 1929 and 1938 the chekist trinitities of the Tatar ASSR reviewed over 20 thousand cases on an extrajudicial basis, and every fifth convict was sentenced to death [Litvin, 1995, p. 172].

The intelligentsia was considered to be influential and therefore a 'dangerous part' of society for the power structures. For this reason, the cream of the Tatar nation was repressed: Karim Tinchurin, Galiaskar Kamal, Baki Urmanche, Gaziz Gubaydullin, Khasan Tufan, Fatykh Karim, Gilm Kamay, Salakh Atnagulov and others. More fictitious reasons were found than necessary. Many widely known Tatar writers and scientists had displeased I. Stalin and his closest state figures back in the 1920s when they questioned the necessity of the reform of the Tatar language imposed by the supreme bodies, which suggested transferring from the Arabic script to the Yanalif ['the new alphabet'].

Lively discussions on this issue were erupted in the latter half of the 1920s. The Arabic script was proclaimed an 'obstacle' to the socialist reforms. The way to the 'glorious future' according to the authorities had to be secured by the internalisation of national cultures, which was to be achieved through the official mass introduction of the Latin alphabet. A discussion of these problems was included in the agenda of the First Turkology Congress held in Baku in 1926. The most ardent adherents and supporters of latinisation were the Azerbaijan leaders, while Armenia and Georgia by contrast considered that there was no need to hurry with its introduction.

The position of Tatar scientists and public figures was also divided. Shamil Usmanov supported the introduction of the Yanalif, suggesting that it would 'fundamentally solve all issues related to the orthography of the Tatar language'. Salakh Atnagulov and Fatykh Saifi agreed. However, other scientists such

as Galimdzhan Ibragimov and Galimdzhan Sharaf called for prudence and care when performing the revolutionary changes [Davletshin, 2005, pp. 362–363]. Many non-party representatives of the Tatar intelligentsia adhered to the same view, believing that the elimination of the Arabic script would immediately lead to the destruction of the centuries-old written heritage of the Tatars. Being afraid of such an outcome, they protested against the accelerated pace of the transfer of the Tatar alphabet into the Yanalif and sent a personal letter to I. Stalin. These protests went down in the history books as the 'Letter of 82'. The document was signed by: G. Gubaydullin, B. Urmanche, G. Kamal, A. Rakhim, F. Muhamedyarov, M. Gali and others [Sultanbekov, 1994, pp. 129–131].

After the 'expository' measures organised by the Party bodies, they had to withdraw their signatures, however, the very existence of the signatures was treated as a crime against Soviet power was grounds for prosecution.

The 1930s marked a new wave of repressions against the Tatar members of the intelligentsia. In August 1930, there was 'unveiled' a mythic organisation of Tatar writers named 'Dzhigedyan' ('Big Dipper') which had allegedly been created back in 1928. Its literati members were accused of attempting to fight against the authorities of the Communist Party through fiction, of not understanding the ways proletarian literature could develop, and of stirring class hatred among the Tatar people. In the meantime, the literary collection published for the 10th anniversary of the TASSR was also severely criticised, as its authors included defendants in the case of 'Dzhigedyan'. The edition was dubbed the 'collection of anti-Soviet rants' and its compilers headed by Tatar writer Tukhfat Chenakay were accused of belonging to the counter-revolutionary movement, while the Tatar publishing house which published the book was said to be littered with nationalists. Since the revelatory campaign against the followers of Sultangaliev or 'Sultangalievets' gained momentum in the republic at that time, the easiest thing was to attribute everything to their harmful ideological influence. And this is what was done. In

1931, all the members of the secret organisation 'Dzhigetyan' were categorised as Sultangaliev and thus a tragic fate awaited them.

In 1932, bodies of the CPA reported on the 'disclosure' in Kazan of the nationalist counter-revolutionary Trotskyist group 'Krestiansky ittfaq' [Tagirov, 1999, p. 224]. This organisation was said to have been managed by Galimzhan Aminov — the instructor of the Tatar publishing house, while Mingarey Sagidullin was proclaimed the mastermind of the organisation, as his friends would call him 'Tatar Bukharin' for his sagacity and extraordinary wit. Writer F. Saifi, head of garment factory No. 4 A. Nugayev, secretary of the Bavly District committee of the CPSU(B) Sh. Yakupov, head of the Menzelinsk Executive Committee Council G. Sultanov and others were close to this group.

In total, in March 1933, 13 persons from the list of the 'counter-revolutionary group' were excluded from the Party. The indictments give us an idea of how these cases were fabricated. M. Khuzeev was persecuted for 'having friendly relations with Sagidullin'; writer G. Galeev — the chair of the sector of Tatizdat ('the Tatar Publishing House') — was persecuted for his connections with disgraced writer G. Baimbetov whose Moscow apartments he used to visit; S. Bikushev — the chair of the Party branch of the newspaper 'Kyzyl Tatarstan' — was accused of 'not taking any measures to disclose the anti-Party activities of the counter-revolutionary gang'.

Even the famous Tatar commander Yakub Chanyshev was involved in the investigation of 'Krestiansky Ittfaq'. The investigative bodies reminded him that the general listened to L. Trotsky at the Marshall courses in Moscow, spoke of him positively, kept his portrait and even Trotskyist literature. Therefore, it was not necessary for one to be a counter-revolutionist so that the respective authorities could render judgment; it was sufficient to be acquainted with participants of undesirable organisations, communicate with persons disloyal to the state, behind the scenes agree with the activities of L. Trotsky, G. Zinov'ev, L. Kamenev and other repressed state and public figures, not engage in whistleblowing and the like.

The operation 'Novatory' conducted in Kazan in 1936 was to a degree a continuation of the case of 'Krestiansky Ittfaq', in which a large counter-revolutionary organisation of literary-publishing workers was 'exposed' [Sultanbekov, 1994, pp. 132–152]. The main actors mentioned were Salakh Atnagulov — an authoritative specialist in the field of Tatar literature and linguistics, an Associate Professor of Kazan Pedagogical Institute; Iskhak Rakhmatullin — the former Commissar of the enlightenment of the republic who later occupied different positions at the Tatar State Publishing House; Fatykh Saifi — a writer and public activist; Zaki Gimranov — the former head of the publicity department of the CPSU(B). All of them were arrested in 1936. The accused were charged with preparing acts of terrorism, spreading Trotskyist and nationalist-bourgeois elements while occupying responsible positions at the state publishing house, frustrating the plans to publish Marxism-Leninism classics in the Tatar language, publishing ideologically harmful literature with anti-Soviet contents, and the like.

Using inhuman investigative techniques, the chekists beat false confessions out of them and forced them to incriminate not only themselves, but also other people who belonged to the ideological elite of Kazan. In total, 34 persons were targeted in the investigation.

The 'Novatory' were to be judged in Moscow at the Military Collegium of the Supreme Court. A show trial was supposed to be held. However, later the procedure was fully simplified. In May 1938, during a visiting session which lasted just two days, over 100 people from Tatarstan and 18 from the Mari Republic were sentenced to death. These numbers included famous representatives of the Tatar nation: the chairman of the Kazan State Pedagogical Institute G. Kasymov; 'Izvestiya' reporter S. Burgan; the head of the Department for the Arts G. Almukhametov; the former rector of Kazan State Pedagogical Institute and then head of the Tatar theatre M. Yusupov; the former secretaries of the Kazan City Committee of the CPSU(B) B. Abdullin and A. Biktagirov; the prominent philologist and ethnographer N.

Khakimov and others. K. Nadzhmi, Kh. Tufan, G. Nigmati, S. Aydarov, A. Kutuy, N. Isanbet, A. Alish, S. Battal and others were categorised as nationalists during this investigation.

The year of 1937 is sadly known for the severe nature and large scale of the repressions, and it brought with it new misfortune. The 'Case of Narkomzem' was the most high-profile and large scale in the republic [Sultanbekov, 1994, pp. 152–164]. Heads of kolkhozes and MTS's, chairs of district land departments ('raizo'), workers at offices of 'Zagotzerno' [grain procurement office] were also prosecuted. They were accused of the collapse of the kolkhozes, the death of animals, lack of fuel, and the like. The majority of alleged offences were economic crimes, for which only disciplinary actions would have been imposed at another time. However, in the environment of the excessive revelatory campaigns, the court considered them to be various forms of political crime. In general, it is noteworthy that the reclassification of economic crimes from article 109 of the Criminal Code of the RSFSR (abuse of office) into one of the sub-paragraphs of article 58 on counter-revolutionary activities directed at undermining the economy became an ordinary and therefore terrible phenomenon.

'Agricultural diversionists' and 'pan-Turkists in cattle-breeding' were 'exposed' all over the country. The constant repressions affected many Tatarstan districts at that time: the 'Buinsk case' was high-profile, as K. Gafurov — the first secretary of the District Committee of the CPSU(B); G. Valeev — the chair of the District Executive Committee; Z. Sharafutdinov — the chair of the District Land Department were implicated in 'crimes against their people'. A similar case was filed against the leaders of the Kyzyl-Yulduzcha district. In this case the chair of the District Committee of the CPSU(B) B. Shaymardanov and the chair of the District Executive Committee Ya. Kuramshin and others were brought to trial. Similar proceedings were held in Bavly, Kukmor, Almetyevsk and other districts of the republic. The accused were excluded from the Party, arrested, brought to trial, shot or exiled to camps for long periods of time.

The mass wave of repressions also affected the Red Army (according to statistics, 90% of generals and 80% of colonels were executed in the 1930s) and this affected commanders of Tatar nationality. Khusain Mavlyutov was among them. In the days of the Civil War, he was the regimental commander of the first Tatar rifle brigade, and in the latter half of the 1920s, he had a successful career in the Soviet military intelligence. In July 1937 he was arrested and shot. The documents released in the course of his rehabilitation in 1957 showed that no *corpus delicti* were found. A severe fate awaited Adi Malikov who served as the chief of staff of the second Tatar rifle division during the Civil war and who in 1928 worked in the intelligence diplomatic service. He was accused of being a member of the 'right-Trotskyist counter-revolutionary nationalist organisation' which had supposedly existed in the Kazan garrison since 1931. A. Malikov was arrested in June 1938 and exiled to a labour camp. He was released only after 16 years of hard labour, in 1954, after complete rehabilitation. In the midst of the war with Nazi Germany, in 1942, Lithuanian Tatarian Alexander Talkovsky was arrested and executed. He participated in World War I as the battalion commander, and in the Civil war he served as chief of staff of the first Tatar infantry brigade and was later appointed to the position of chief of the joint Tatar-Bashkir military school in Kazan. He was accused of having relations with the Germans, who between 1928 and 1931 had attended the armoured tank courses in Kazan, and of espionage for the benefit of Germany. A. Talkovsky's assurance that he had never been involved in any military polts was not accepted by the crime investigator [Litvin, 1993, pp. 24–26].

It is noteworthy that in the latter half of the 1930s, accusations of espionage were the most wide spread reason for judicial punishment. On the eve of the Second World War, the search for foreign intelligence agents was intensified, who had allegedly skillfully infiltrated industrial, commercial and other organisations. The apotheosis of the false accusations was the 'participation' of the Tatar immigrants

in the so-called counter-revolutionary organisation, called 'Idel-Ural' [Stepanov, 1996, pp. 39–45]. It was considered that this organisation was managed by the Tatar immigrants of the White camp from Japan, Germany and Turkey and was simultaneously used for espionage and sabotage purposes to the benefit of these countries. Galimzhan Sharaf was considered to be the head of the organisation (he was the author of the project to create the state 'Idel-Ural') and former active leaders of Milli Shuro were said to head its branches. The members of the organisation were said to have conducted subversive activities aimed at weakening the defensive capabilities of the Soviet Union, undermined production plans, and conducted subversive and sabotage activities in industrial enterprises, collected secret materials, prepared militant terrorist groups aimed at attacking the Party and government leaders, and prepared an armed uprising against the Soviet authorities at the time capitalist countries intended to attack the USSR.

In total, 1000 'revealed' members of the organisation were under investigation. Out of them, 450 persons were subject to arrest via direct enrollment. According to the investigation file published in the modern period of historiography, prominent political figures were listed as agents of foreign intelligence services: Mirsaid Sultan-Galiev (an agent of the Turkish and Japanese intelligence since 1919), Kashaf Mukhtarov (served for Turkey and Japan since 1921), and others. The people accused of belonging to this organisation and later convicted included the famous Tatar playwright Karim Tinchurin; the popular Tatar poet Khasan Tufan (both were accused of espionage for the benefit of Japan); the former rector of Kazan Chemical-Technological Institute and former Commissar of Justice of the TASSR Gimaz Bagautdinov; the famous chemist Gilm Kamay (both were

named in the investigation as German spies); a senior professor of the Turkish language at the Institute of Asian Studies Fatykh Karimi, his agents were said to have been writer Shamil Usmanov, political and public figure Ilyas Alkin, and historian Khadi Atlasi (who allegedly transferred secret information to Turkey), and others.

So the campaign to exposure famous Tatar civil and political figures, well known representatives of science and culture, administrative workers, military men, leaders in agriculture who had been implicated in engaging in hostile activities — affected a significant number of people. Year by year, the repressive machine gained momentum. Workers, peasants, scientists and writers were sentenced to death. According to data provided by Tatarstan's edition of the 'Book of Memory', as of 2011, 54,727 inhabitants of the republic suffered political repressions (were indicted for state crimes under article 58 of the Criminal Code of the RSFSR) [Kniga Pamyati]. They included 17,188 Tatars (including the Kryashens), which amounted to 31% of the total number of the repressed [Politicheskie repressii v TASSR, 2011, p. 75].

Not only people suffered from the repressions, but also the cultural and scientific inheritance they had created: books and magazines were withdrawn from libraries; literature and music, as well as canvases were banned; scientific works were destroyed, while names which were undesirable for the state were exterminated. In Tatarstan alone, over 700 reference books were withdrawn from public use. So by the end of the 1930s, through these severe, pitiless methods the country absorbed the super-centralised command-administrative system of governance led by I. Stalin. The leader's authority was indisputable. So the totalitarian regime was established in the state.

CHAPTER 6

The Tatars and Tatarstan during the Second World War

On 22 June 1941 with the attack of Nazi Germany, the personal plans and hopes of tens of millions of Soviet people were broken overnight. Thus began the Great Patriotic War, which was to be a horrendous ordeal for our Motherland. All the peoples and nations of the Soviet Union stood to defend their common home, thus denying the fulfillment of the plans of Hitler and his henchmen who suggested that the USSR was 'a colossus on clay feet' and would not be able to parry the thrust due to the aggravation of ethnic conflicts. But the aggressor played the wrong card: in a severe battle to the last drop of blood, the consolidation of nations appeared to have been more important than all the divisive factors. The Tatars and inhabitants of the Republic of Tatarstan also made an important contribution to the destruction of the hateful enemy and the final victory.

§ 1. Participation of the Tatars and Tatarstan inhabitants on the war fronts

Ayslu Kabirova

Mobilisation in the country and the republic was launched immediately after the announcement of the beginning of the war. According to the Decree of the Presidium of the Supreme Council of the USSR dated 22 June 1941, all conscript citizens born between 1905 and 1918 were subject to mobilisation. The Tatar ASSR was part of the Volga-Region military district.

Bustling rallies were held throughout the republic, and their participants expressed their readiness to defend their Motherland. Gilmutdinov, and electrician at factory No. 27 in the Leninsky district stated in his presentation at a rally organised during the first days of the war: 'Brutal fascism has attacked our peace loving country. Our target now is to raise workforce productivity even higher and at the same time — be ready, if it is necessary, to take a rifle and defend our socialist Motherland' [SA HPD TR, Fund 26, Inventory 10, File 130, Sheet 22]. At a rally in the kolkhoz 'Dirizhabl' in the Almetyevsk district, Zakir Galiev emphasised: 'The Patriotic war is a sacred war... At this very moment my two sons are fighting for the Motherland, for Stalin. Although I am 53 years old now, I am ready to join my sons in the battle to destroy these fascist gangs' [Sočializmga ('Towards socialism'—Tat.), 1941, 6 July]. All the speeches given by the pre-

senters were imbued with a firm faith in the inevitable victorious end of the war.

The armed forces were formed not only by those people who were subject to mobilisation. From the very first days of the war, a wave of citizens who wanted to join the Red Army rushed to the Party and government bodies and to the military commissariat. Claims of the following content were typical: 'The villainy of the fascist pack which has dared to attack our Motherland, spurred a great hatred in me towards the bitter enemy... I kindly ask you, comrade military commissar, to send me for active duty. I will spare neither myself, nor my life for my beloved Motherland's victory'—wrote A. Lyvina, a woman working at the department of communications [Tatariya v VOV, 1963, p. 27]. The secretary of the Alkeev district committee of the Komsomol M. Mangushev declared: 'My dream is to serve in the army and be at the front right now — it is my highest ideal... I swear to be loyal to my Motherland till the very end and to withstand all hardships and misfortunes when fighting the Nazi German aggressors' [Zalyalov, 1975, p. 4].

Only 6 days after the beginning of the war (from 23 to 29 June 1941) over 5 thousand applications from the citizens of the republic

were received who asked to join the Red Army. By mid-July, the total number of volunteers throughout the TASSR exceeded 14,000 [Istoriya TASSR, 1968, p. 508]. However, due to the large-scale nature of warfare and the 1000-kilometer length of the fronts, mobilisation was the prevailing source of replenishment of the active army.

In the post-war years, historians and regional ethnographers repeatedly attempted to estimate the number of combatants from Tatarstan, as well as the amount of losses the republic suffered during the war. Large-scale, meticulous work in this respect was performed by workers of the republic's editorial board of 'The Book of Memory'⁴, created under the Cabinet of Ministers of the Republic of Tatarstan ahead of the 50th anniversary of the victory. Over years of research and search expeditions they clarified the main data concerning the overall participation of the Tatars and inhabitants of Tatarstan in the armed struggle against fascism. According to this data, in the years of the war, circa 700 thousand of our countrymen fought in the army. Over 350 thousand of them did not return to their relatives [Tatarstan v Velikoj Otechestvennoj voine, 2000, p. 3; Tatarstan v Velikoj Otechestvennoj voine, 2009, p. 3; Istoriya Tatarstana, 2001, p. 414] (every second fighter was killed!)⁵. This totals 11.5% of the overall pre-war population of the Tatar ASSR⁶.

The phenomenon of the mass heroism of the Soviet people, which the above stated numbers

reflecting the level of participation of the people of Tatarstan in the military operations attest to, is still a matter of admiration and study for both national and foreign specialists. However, public opinion in the republic cannot be presented as uniform. On the contrary, as shown by archival documents, opinion was quite contradictory. In the course of the mobilisation organised by the military commissariats and the creation of the people's militia, not everyone was eager to get to the frontline. Against the backdrop of the mass expression of patriotism, there were certain cases of desertion, self-maiming and evasion of service. This occurred, for example, in the Muslyumovo, Tyulyachi and Arsk districts of Tatarstan [SA HPD TR, Fund 7130, Inventory 1, File 9, Sheet 351]. According to sources, in just three months since the beginning of the war, the military prosecutor brought criminal proceedings against and sentenced to different terms 49 people for evasion from mobilisation and 27 people for desertion [Krivonozhkina, 2001, p. 204].

The so-called 'counter-revolutionary' sayings of the citizens were also widely spread during the war. In the reports to the Tatar regional committee of the CPSU(B) it was noted that conversations among the people were recorded such as: 'We have no bread, we are starving, while our husbands and brothers are forced to fight' (Drozhzhanovsk district); 'We cannot win, Germany will defeat us, we are sent there as cannon fodder... ' (Almetyevsk district); 'This war is good for us, we live poorly under the Soviet rule, if the government changes, we will live better' (Rybnaya Sloboda district) [SA HPD TR, Fund 15, Inventory 5, File 351, Sheet 350; Fund 273, Inventory 1, File 178, Sheet 19; Fund 15, Inventory 5, File 153, Sheet 78], etc.

Although such complaints were atypical, they were not isolated. They reflect a complicated range of feelings which people experienced during war time. Along with the majority of the population who sincerely desired to defeat the foe, there were certain categories of citizens in the country who were 'offended' by the Soviet authorities during the period of industrialisation and collectivisation, who could not accept destruction of churches and mosques and were in-

⁴ The names of dead soldiers and officers are listed in the book 'Pamyat' ('Memory'), published in Tatarstan. 27 books by this mournful martyrologist were published in the Russian and Tatar languages between 1993 and 2010. This multivolume work has become an essential printed historical and memorial monument, the main purpose of which is to immortalise the names of the fallen heroes. [See: Pamyat' (Memory), 1993–2010].

⁵ These works, devoted to the war period, reveal that 560 thousand men from the Tatar ASSR were sent to the front, 87 thousand of whom were killed in battles against the Nazi invaders [see: Gilmanov, 1981, pp. 4–5].

⁶ The percentages have been calculated on the basis of the total number of the pre-war population of the republic. According to a survey carried out in 1939, 2,914,200 people lived in the Tatar ASSR [see: The TASSR over 40 years, 1960, p. 15; The Narkhoz of the TASSR, 1970, p. 8].

nocent victims at the peak of the political repressions. Radically different positions and opinions co-existed in the mass consciousness. However, whereas during peacetime, people attempted to restrain themselves in expressing emotions, the war unveiled all innermost thoughts and even revived some hopes for restoration of the old order among some segments of the population.

Still, the majority of Soviet citizens did indeed treat the war as the Great Patriotic War. Feeling their belonging to the Motherland's destiny, battle-front veterans reconsidered such concepts as 'the nation', 'the Motherland', and also expressed their readiness to defend the integrity and independence of their country. The desire to protect the home where they were born and the lives of their families and loved ones captured their thoughts and motivated them to act.

From the first days of the war, the republic turned into a real foundry of the military reserve for the Red Army. Well organized efforts directed towards military education of the population significantly contributed to it. Osoaviakhim (Society for Assistance to Defense, Aviation and Chemical Construction), sports organizations, the Red Cross and the Red Crescent took an active part in it. In October 1941, a special decree of the State Defense Committee introduced compulsory training in military science ('vseobuch') for all citizens of the USSR. Between 1941 and 1945, Tatarstan trained a total of 350,000 people in over 30 military occupations (pilots, operators, snipers, machine gunners, radio operators, etc.) [Tatarstan v Velikoj Otechestvennoj voine, 2000, p. 125]. The Kazan tank school made a significant contribution to training tank officers. During the war, 23 graduation ceremonies were held at the school, which supplied the Red Army with 4,628 commanders and 832 political commissars [Panov, 2009, p. 206]. Seventeen alumni of the tank school became Heroes of the Soviet Union [Sovetskaya Tataria, 1970, 13 September].

Not only men, but also women also took up military occupations. Tatarstan's Vseobuch system trained over 23,000 women as radio, telephone and telegraph operators [Kabirova, 1995, p. 137]. The task of military education of women and girls as junior and senior medical work-

ers was fully traditional. Their training was usually carried out during short courses organized at businesses, offices and in districts. During the war, around 3,500 nurses and over 3,000 nursing assistants were sent to the front and field hospitals from Tatarstan [Pyanov, 1979, p. 23].

After completing military training, the staff would be immediately sent to the active army. However, despite a huge amount of work on organization and mobilization, the scale of the war made replenishment of the Red Army with new soldiers a necessity. Catastrophic defeats of Soviet troops at the initial stage of the war forced the country's leaders to search for new opportunities for forming significant military reserves. It was decided to recruit new divisions and forces directly from national republics, in the deep rear. By the beginning of the war, the 18th and 86th rifle divisions were already deployed in Tatarstan. Manning of the 352nd rifle division started in August 1941, followed by the 334th division in September 1941. Formation of the 146th and 147th divisions started in December 1941, followed by formation of the 120th rifle division in March 1942.

Altogether, during the war the republic sent 7 rifle divisions (the 18th, 86th, 120th, 146th, 147th, 334th and 352nd divisions) to different parts of the front along with the 91st separate tank brigade, a separate engineer-sapper battalion, two aviation divisions and dozens of separate regiments. These military divisions were multinational in their composition. At the same time, the work on forming them in the TASSR anticipated the fact that Tatars made up a significant proportion of them. For example, representatives of 33 nationalities served in the 334th rifle division, and Tatars made up 9.5% of the division. The 352nd rifle division was staffed with representatives of 27 nationalities, 7.9% of whom were Tatars [Dyuryagin, 1984, p. 88; Buzyakov, 1987, p. 63].

Tatars were represented to a considerable extent in military units formed in other regions and republics of the Soviet Union that were noted for dense settlement of Tatars before the war. For example, there were 1,945 Tatars in the 195th rifle division formed in March 1942 in Chkalovsk (now Orenburg) Region. In addi-

tion, Tatars made up 2.1% of the 8th rifle division, which was staffed in Kazakhstan [Artemyev, 1975, pp. 41–55].

Unfortunately, the condition of the source base still does not allow us to obtain accurate data on persons of Tatar nationality mobilized to fight at the front. Nevertheless, according to our estimates, during the war, about 390,000 Tatars were mobilized from Tatarstan, the area most densely populated by Tatars (numbering 1,419,400 people according to the 1939 census, they made up 48.7% to the total population of the republic [Narxoz TASSR, 1970, p. 11])⁷.

In addition, research carried out by the eminent Soviet historians Yu. Korablyov, G. Kumanev and A. Artemyev show that in 1943, Tatars made up 2.6% of the 200 rifle divisions they studied. Meanwhile, the share of the Tatar population in the overall number of Soviet citizens in that period was 2.54% [Korablyov, Kumanev, 1972, p. 200; Artemyev, 1975, p. 58] (according to the census of 1939, there were 4,313,500 persons of Tatar nationality in the USSR [Kozlov, 1974, p. 249]).

Tatar soldiers from the Republic of Tatarstan proved themselves as brave and courageous fighters at the front. The Chronicles of the Great Patriotic War is full of examples of their heroism and fearlessness.

Frontier outposts were the first to resist the enemy. By the time Germany attacked the USSR, it had fully equipped and technically trained military formations united into powerful offensive forces⁸, and expected to break through the resistance in the frontier zone with-

in an hour. However, from the very beginning of the 'blitzkrieg', German troops and some of Germany's allies faced fierce resistance from Soviet soldiers and officers. It turned out to be hard to drive the frontier guards from their lines.

Our countrymen were also among those who had to face the fascists in the first days of the war: Nikita Kaymanov, a native of Prosti village of Nizhnekamsk district of the republic defended the Motherland in the region near the border between the Soviet Union and Finland. He was later awarded the title of Hero of the Soviet Union; the future famous writer of Tatarstan, Gennady Paushkin, and his companions bravely rebuffed attacks of the Hitlerites near the Romanian border. Pyotr Mikhailovich Gavrillov, a native of Pestrechinsk district who was the commander of the 44th rifle regiment, brought honor to himself and the whole Tatar nation when defending Brest Fortress. He led the defense of the Eastern Fort of the Kobrinsky reinforcement of the fortress. For almost a month, a handful of fighters under the major's command held off the advance of almost an entire German division. Exhausted by the lengthy battle, hunger and thirst, the Fortress's defendants fought to their last drop of blood. On the 32nd day of resistance, the unconscious P. Gavrillov was captured. Russian doctors at the camp hospital for prisoners did everything possible to resuscitate the dying hero. Later they recounted how German officers visited the camp for several days to see the Soviet commander.

But there is a good reason for the saying 'a prophet is not recognised in his own land'. The paradox of history is that the man who amazed the Hitlerites with his tough spirit, remained 'under suspicion' for Stalin and all the Soviet people for a long time. After being captured by the fascists, it took a long time for P. Gavrillov to prove his innocence to the proper authorities. It was only after the death of the Supreme Commander, during the 'Khrushchev Thaw', that the legendary commander was rehabilitated, and in 1957 he was awarded the title of Hero of the

⁷ The author's calculations (based on the total number of Tatar soldiers forming part of the army and the percentage ratio of the Tatar and Russian population of the republic).

⁸ In their first offensive against the USSR the Nazi bloc employed 4.4 million soldiers and officers, 4.4 thousand aircraft, 4 thousand tanks and assault arms, and 39 thousand guns and mortars. The enemy was confronted by the combat forces of the western border districts. These included 3 million Soviet soldiers and officers, 39.4 thousand guns and mortars, 11 thousand tanks and assault arms, and 9.1 thousand war planes. It is the estimation of military experts that, although the Soviet troops had significantly more tanks and aircraft, the enemy had a number of advantages: their troops were on full alert, their military equipment was of better

quality, they were also superior in terms of road transport, etc. [see: The History of Russia 2008, p. 193].

Soviet Union [Sovetskaya Tataria, 1956, 28 August; 1965, 21 February; 1970, 18 January; 1979, 9 May; *Socialisticheskij Tatarstan*, 1970, 8 May, 28 August; *Geroi*, 1982, p. 99–101].

Soldiers and officers of operating units and fighting forces also proved their valor in frontier battles. At the Polish border, near the town of Ciechanowiec, the war reached the 86th rifle division named after the Presidium of the Supreme Council of the Tatar ASSR, which had been formed in our republic in the pre-war years. It had to take the brunt of the attack by elite German troops. People of Tatarstan led by Hero of the Soviet Union, Colonel M. Zabashilov not only managed to halt the enemy's offensive, but also drove the Hitlerites away from the state border.

The Battle of Moscow was the most important event of the first year of the war. The Soviet people had to pay a huge price to prevent the fascists from reaching the capital. However, it was there that Hitler's army, which had triumphantly marched through Europe, suffered its first major defeat.

Kazan native Ramazan Bikmukhamedov distinguished himself in the battles near Moscow. The rifle regiment in which he served entered the battle as soon as they arrived. When all the officers were killed, the injured R. Bikmukhamedov took command of the battalion. For his courage in battle, the commander of the 16th army, General K. Rokossovsky awarded him the medal For Bravery [Gilmanov, 1981, p. 50].

Baryi Yusupov, a native of Almetyevsk District of Tatarstan, was awarded the title of True Hero of the Patriotic War during the fierce battles near Moscow. The 'Katyushas' division, which was under his command, struck terror into Nazi soldiers when it appeared in one part of the front or another. In one of the battles near Staraya Russa, to which a fighting force was redeployed in order to rebuff the attack of enemy tanks, the colonel of the guard was wounded and blinded, but did not leave the line of defense. When the fighting was over, many soldiers thought that their commander had been killed; however the commissar doubted that and gave orders to bring Baryi Abdullov-

ich into an izba. The colonel was between life and death for ten days before he was airlifted to Moscow. The courage of the Soviet officer was highly praised. Member of the State Defense Committee A. Shcherbakov personally came to the hospital to award the hero the Order of Lenin, while the renowned sculptor V. Mukhina also sculptured his bust at the hospital [Sovetskaya Tataria, 1964, 17 April; 1966, 17 May; 1969, August; 1970, 27 March; *Socialisticheskij Tatarstan*, 1968, 23 February].

Fighters of the 18th, 146th, 334th and 352nd divisions from Tatarstan gained a reputation as brave and fearless soldiers in the battles near Moscow. Army General P. Kurochkin wrote when appraising the soldiers' feat: 'As the commander of the 20th army, I will always cherish the best memory of the 18th division, of all of its soldiers, commanders and political commissars. Kazan natives passed through the hardships of the initial stage of the war with honor' [Kazantsev, 1968, p. 4].

After the failure of the lightning war near Moscow, Hitler's headquarters envisioned the summer campaign of 1942 as the one that would determine the balance of power at the Eastern front. Taking advantage of the absence of a second front, the German command organized another strong offensive, as the result of which the adversary's armies managed to break through to the Caucasus foothills and the area of Stalingrad. The defense of the Volga Region stronghold is considered to be one of the most heroic chapters of the Great Patriotic War.

Entire military units formed in Tatarstan fought furiously without giving a moment's respite to the enemy in the battles near the Volga. Soldiers of the 147th rifle division fought bravely under the command of A. Volkhin as part of the 62nd army. The 91st separate tank brigade led by Ya. Yakubovsky caused major damage to the adversary. Fighters of the 38th rifle division under the command of Colonel G. Safiullin, a native of Arsk district, showed themselves as skillful and courageous fighters [Geroi, 1985, p. 38].

Many Tatar soldiers not only from Tatarstan, but also from other regions were involved in the battles near Stalingrad. By 10 September

1942, the troops of the Stalingrad front included 6,671 Tatars [Military and historical journal, No. 12, p. 20]. We can judge how they fought from the descriptions in various sources. A letter of a German lance bombardier to his brother has the following lines: 'Many Tatar people stand against us here. They are mad people, and I wouldn't want to meet a Tatar even in my dreams' [Za Rodinu, 1942, 3 November]. 'He's a Tatar, he will keep his end up' could often be heard at the front', as Ilya Ehrenburg noted in his correspondence about Tatar soldiers [Sovetskaya Tataria, 1970, 8May].

Awareness of the importance and the huge influence the national factor had on the soldiers made the leadership consider the possibility of using it in wartime. During the Battle of Stalingrad, the Supreme Command made the decision to organize publication of front newspapers in the languages of the nations of the USSR in order to unite the soldiers by nationality and thus consolidate their efforts in fighting the Nazi German aggressors.

Soviet historiography asserted that 8 Tatar front newspapers were published during the war [Muradyan, 1978, p. 84]. However, scrupulous investigations conducted by Kazan journalist and academic A. Ajnutdinov led to the conclusion that the number of the published Tatar newspapers was twice that. At present, we know about 16 front newspapers published in the Tatar language [Ajnutdinov, 1984, p. 8]. A group of writers from Tatarstan was sent in 1942 in order to reinforce their editorial offices. In particular, copy editors of the newspaper *Vatan Ochen* ('For the Motherland') at the Northwestern front included Kh. Usmanov, Sh. Mudarris and G. Nasry. Writers G. Bashirov and M. Amir took a creative assignment to work in the newspaper's editorial office. I. Gazi and A. Kutuy actively worked in the editorial office of the newspaper *Kyzyl Armiya* ('The Red Army') of the 1st Belorussian Front. A. Absalyamov collaborated with the newspaper of the Karelian front '*Vatan öChen Sugişka*' ('In the Battles for the Motherland').

Tatar frontline newspapers were published in a 30x42 format twice a week. Initially, their circulation fluctuated between 5,000 to 8,000

copies, and then it reached a level where one newspaper was read by 5 to 10 people. Despite the fact that frontline newspapers in the Tatar language had a Soviet populist character mainly fulfilling purely ideological tasks, they were extremely important and necessary for the soldiers, since reading newspapers and leaflets in their native language united battlefront soldiers, improved their mood and strengthened their spirit, and also helped them survive.

The historic Battle of Stalingrad ended in a resounding victory for the Red Army in February 1943. The military operations of Soviet soldiers and officers led to encirclement and complete elimination of a huge force of Hitler's troops.

During the Battle of Stalingrad, an event happened in the forests of Belarus which has not yet occupied a proper place in the history of the Great Patriotic War. On 23 February 1943, the 825th battalion of the 'Idel-Ural' legion sent to fight Belorussian partisans raised a rebellion, and after killing all the German officers, joined the Soviet forces near Vitebsk with full equipment and ammunition.

The general euphoria over the defeat of the German Wehrmacht at Stalingrad did not allow an assessment of this turn of events to the necessary extent. It is possible that it was only treated as an episode against the backdrop of the global history of military opposition to fascism. However, its significance went far beyond local battles, and most importantly, it was unquestionable proof of the Tatars' loyalty to their Fatherland.

Hitler's command came up with the idea of using captured Soviet soldiers not only at auxiliary (mostly excavation) works at the front, but also in armed divisions in the spring and summer of 1942 after their defeat near Moscow. The 'Idel-Ural' legion was formed in the Polish town of Yedlino near Radom, and among others (along with Georgians, Armenians, Azerbaijanis and others), included prisoners of war from German concentration camps representing the Volga Region nations: Tatar, Bashkir, Chuvash, Mari peoples and others. Since the bulk of the legion consisted of Volga Tatars, the fascists sometimes called it the Volga Tatar

legion⁹. Thousands of soldiers who had been signed up as legionaries involuntarily were immediately ranked with the number of traitors and betrayers after they returned to their Motherland. At that time, the black shadow of suspicion lay upon all Tatars. However, the legionaries were not what Stalin considered them to be. The first experience of using the battalions of the Volga Tatar legion against Belorussian partisans showed that the fascists' idea of turning the arms in the captives' hands against their own countrymen was a failure. As a consequence, the German command was cautious about sending battalions of the 'Idel-Ural' legion to the Eastern Front [Gilyazov, 2005].

In the battles between 1943 and 1944, the Soviet Union firmly held the strategic initiative. After the victory near Stalingrad, the counter-offensive of the Red Army developed into a huge offensive on a larger part of the Soviet-German front. In the operations that followed, the enemy was forced 600–700 km away from the Volga. In January 1943, the multi-month Siege of Leningrad was finally broken. Battles on many fronts were opened simultaneously. The fascist occupants started being driven away from the territory of the Soviet Union, which in 1944 continued in the lands of the adjacent countries.

Many Tatars distinguished themselves in these military operations as well. Among them were Zakiy Shaymardanov, a gunner and a native of Rybnaya Sloboda District of Tatarstan, who destroyed 12 fascist tanks in the battles near the village of Krasnaya Dubrava; Shamil Abdrashytov, a pilot and an alumnus of Orenburg Military Aviation School, who made 242 operational flights and personally shot down 16 enemy jets; and Nabiulla Yunysov, a shooter and a radio operator and native of Leningrad who proved himself heroically when breaking the blockade of the city on the Neva. All

of them were awarded the title of Hero of the Soviet Union.

An unparalleled feat, which became the paragon of service to the Motherland, was accomplished by Alexander Matrosov in February 1943 near the village of Chernushki of Pskov Region. After running out of ammunition, he covered the weapon port of the enemy's earth-and-timber emplacement with his body at the cost of his life, thus ensuring that the mission of his division was completed. Documents that were later found by investigators established that the 'Russian wonder bogatyr', as the mass media called him then, was Shakirzhan Yunusovich Mukhametzhanov, a son of the Tatar nation and a native of the Bashkir ASSR. After losing his parents at an early age, he was brought up in an orphanage of Ulyanovsk district and received a Russian name in the city of Melekess in the same district [Tatarskij e`nziklopedicheskij slovar`, 1999, p. 347].

Twenty-six natives of Tatarstan became Alexander Matrosov's brothers in military feats during the war years: Gazinur Gafiatullin, Baryi Shavaliyev, Khafiz Zaripov, Alexey Isev, Nur Idrisov, Nikolay Lipatov, Arseny Kartashov, Abdulla Salimov, Mingaly Gubaydullin, Mansur Valiullin, Salakhutdin Valiullin, Akhmet Mukhamedov, Afanasy Panarin and others¹⁰.

During the bloody battles near the Kursk Bulge, Tatarstan soldiers F. Sharipov, V. Khalikov, K. Urazov and M. Novikov fought as part of the 10th tank corps in the famous tank battle near the village of Prokhorovka. All the brigades of the corps were equipped with T-34 tanks with the inscription 'Kolkhoznik of Tataria' on their broadsides. The famous corps under the command of Lieutenant General Vasily Gerasimovich Burkov, a native of Yelabuga district, were also given 200 combat vehicles built with the funds of Tatarstan workers. Petlyakov Pe-2 light bombers attacked the enemy

⁹ Seven combat battalions of the Volga-Tatar Legion were formed in 1942–1943 alone, numbered from 825 to 831, as well as a sapper, staff, or reserve battalion, and a number of working battalions. According to various sources, between 8 and 10 thousand legionnaires served in these battalions [see: Failure of the Operation, 2010, p. 42].

¹⁰ It was previously assumed that feats like that of A. Matrosov were accomplished by 13 Tatarstan soldiers. The research of the Tatar journalist and local historian Sh. Mustafin has confirmed that there were twice the number of such heroes [see: Mustafin, 2008].

near Belgrade. The aircraft were given to the regiments of the 202nd bomber aviation division by citizens of the republic. The inscription 'Soviet Tatarstani' was placed on the fuselages of the bombers.

Special women's formations made a great contribution to the enemy's defeat during the war, including aviation regiments and rifle divisions. Female pilots of the legendary Taman women's night bomber regiment especially harassed the fascists. The pilots included representatives of the Tatar nation — Olga Sanfirova of Kuybyshev and our countrywoman Maguba Syrtlanova, a native of the city of Belebey in the Bashkir ASSR. Both of them were awarded the title of Hero of the Soviet Union. The archives of the destroyed imperial air fleet still contain the decrees of the Hitlerite command with a peremptory order to hunt the small manoeuvrable U-2 planes used by 'furious Russian witches' [Kabirova, 1995, pp. 142–143].

Tatarstan natives also distinguished themselves in the final stages of the war in Germany. The 76th guard division under the command of Kazan native Major General Alexander Kirsanov fought in the capture of the city of Prenzlau as part of the troops of the 1st Belorussian Front. The 146th Kazan rifle division freed over 100 sections of Berlin and ended the war at Alexanderplatz in the city center.

The storming of the Reichstag became a symbol of the complete victory over fascism in the consciousness of the whole Soviet people and each soldier of the Red Army in particular. Gazi Zagitov, a Tatar and a native of the Bashkir ASSR, together with a group of his military comrades-in-arms, was the first to plant the standard on the roof of the last citadel of fascism. Apart from Gazi Zagitov, the group included the following soldiers: A. Bobrov, A. Lisimenko and M. Minin, with V. Makov as its commander [Piskarev, 1996, pp. 92–107]. According to the extant documents, they set a red banner on the Reichstag several hours earlier than the 'flag bearers of the Victory' M. Egorov and M. Kantariya, who were officially declared to have done it as a concession to the political environment of the time. In 1994, taking advantage of the environment of the review of

many former unshakable postulates, the community of Tatarstan and Bashkortostan made a petition to award the highest title to the above-mentioned heroes — the title of Hero of Russia. Unfortunately, the petition was not supported by the Ministry of Defense of the Russian Federation.

Tatar soldiers proved themselves as heroes not only as members of Red Army divisions, but also in the enemy's rear. In Smolenshchina alone, guerrilla detachments included over 200 sons of Tatarstan. One of the divisions of the Gerchikov guerrilla warfare was led by Major Bari Kadyrmetov. The Sasha partisan regiment was organized by Akhnef Bikbaev. Tatar poet Zaki Nuri, Bugulma native Boris Pakhomov, graduate of Chistopol Secondary School Rita Zagirova, and former secretary of the republic's regional committee of the Komsomol Ivan Zaikin fought the enemy in the ranks of the Belorussian guerrillas. The riskiest and most dangerous operations of the Minsk guerrilla warfare were delegated to Kazan native Ivan Kabushkin, known to the fascists as 'Zhan'.

Soviet patriots never lost their nerve and continued their struggle even if they were captured by the fascists. An example of determination and fearlessness for all prisoners of war of the Auschwitz concentration camp was Tatar Dmitry Karbyshev, a famous lieutenant general of engineering troops. In the fascist camp in Munich, Tatar writer Khayrutdin Mudzhay (M. Khayrutdinov) initiated the creation of the Fraternal Cooperation of Prisoners of War. Tatarstan native Mikhail Devyatayev accomplished a feat that was unprecedented in the history of aviation and the war itself. An alumnus of the Kazan Aeroclub, he and a group of Soviet prisoners of war hijacked a German 'Heinkel He 111' aircraft and escaped from fascist captivity.

Thus, Tatars and other citizens of Tatarstan set examples of heroism, valor and patriotism at all stages of the Great Patriotic War. They left hundreds of inscriptions on the Reichstag's walls, evidence that they were directly involved in achieving the victory. 'We are among those who fought to the death at the walls of Stalingrad and stormed the fascist lair of Ber-

lin, P. Malkin, born in 1918 in Tataria,' — this inscription was signed by Pyotr Malkin, a full Cavalier of the Order of Glory. 'A Tatar woman from Kazan came here with battles from the Volga,'—this inscription was left by Kazan native R. Nasyrova, who served as the senior doctor of the guard regiment [Front hakiykätä, 1945, 12 July; Sovetskaya Tataria, 1968, 4 February; 1970, 12 May]. M. Akhmetshin, S. Akhtyamov, V. Bulatov, T. Ibragimov, G. Rashitov, S. Sadriev, M. Syrtlanova, F. Tukhvatullin, V. Shagiev, R. Khalitov, M. Khasan-shin and others marched through Red Square in the historical Victory Parade held in Moscow on 24 June 1945.

The government greatly appreciated the feats of its sons and daughters. By 1 November 1947, fighters of 193 nationalities were among those awarded orders and medals. Out of a total number of 9,284,199 awards, 174,886 were granted to Tatars [Artemyev, 1975, p. 176]. During the war, the title of Hero of the Soviet Union was awarded to 11,519 people representing 100 nations and nationalities. In the number of Heroes – 161 people – Tatars were in 4th place after Russians, Ukrainians and Belorussians. In 1984, the Military Publishing House issued a statistical essay entitled 'The Heroes of the Soviet Union' which presented numerical data on each period of the war. Thus, in the first period of the Great Patriotic War (between 22 June 1941 and 18 November 1942) 625 people were awarded the title of Hero of the Soviet Union, including 3 Tatars. In the second period of the war (from 19 November 1942 to 31 December 1943), a total of 3,658 people were awarded the Gold Medal of the Hero. They included 63 Tatars. In the third period (from 1 January 1944 to 9 May 1945), out of 7,008 people who received the award, 94 were Tatars. One more Tatar was awarded the title of Hero of the Soviet Union for participation in the guerrilla war in the enemy's rear [Geroi Sovetskogo Soyuz, 1984, p. 228].

However, life goes on. Thus, even after the war, historians and journalists continued their research. Students and pupils contributed to their investigations. A patriotic movement in

which 'Snezhny Desant' ('Snow Paratroopers') detachments, and the 'Dolina' ('Valley') and 'Otechestvo' ('Fatherland') youth movements were created, became widespread throughout the republic. Thanks to active investigative work, new facts about the feats of the sons of the Tatar nation continued to gain wide publicity. In the post-war years, the list of names of legendary Tatars was significantly enriched. As a result, according to the latest data, their number among the Heroes of the Soviet Union is 179 people¹¹.

As for the achievement of the republic's native people of all nationalities, all of them were distinguished in the following way: During the war, over 200 of our countrymen were awarded the Gold Star of the Hero of the Soviet Union; N. Stolyarov, the only pilot from Tatarstan, was twice awarded this supreme title; over 100,000 people were awarded orders and medals of the USSR [Gilmanov, 1981, p. 5]. Fifty natives of the republic out of a total of 2,457 were full Cavaliers of the Order of Glory [Istoriya TASSR, 1980, p. 179].

The war revealed the command talents of many Tatarstan citizens. Generals L. Govorov, A. Akhmanov, A. Kirsanov, I. Konev, V. Gordov, Z. Kutlin, Ya. Chanyshv, G. Safiullin and many others proved themselves as wise and brave commanders.

¹¹ The author's calculations are based on the book by I. Ismagilov 'The Heroes of the Tatar People.' I. Ismagilov states on page 166 that new heroes of Tatar nationality were identified during the preparation of the materials of the book. Thus, as he observes, 'the actual number of Tatar heroes of the Soviet Union, those participating in the Second World War and military events, was 184. Considering that this figure includes not only veterans of the Second World War but also participants in other military operations, we for our part have performed the necessary arithmetic operations, by calculating the difference between the figure given and the deductible specified by us in the course of the study of the text (we have excluded Nos. 1, 56, 171 and 182): 184 – 4 = 180. Further: N. Stolyarov, of Russian nationality, is erroneously included in the list on page 90 under No. 142. In total, the number of front-line soldiers, according to our calculations, amounts to 179 (including men who received this title during the pre-war period of 1938–1940, but who took part in the armed struggle against fascism) [see: Ismagilov, 2007, pp. 166, 15, 44, 90, 171, 182].

The heroism of the republic's soldiers did not go unnoticed by famous Soviet military leaders. Marshal of the Soviet Union R. Malinovsky wrote back in the days of the war: 'As an old soldier, I saw many Tatar fighters and commanders at the front and I have always admired their perseverance and iron will in battle. This nation has

won respect for extraordinary courage' [Knigazheroev, 1946, p. 25]. 'Natives of Tataria fight the enemy like lions', wrote Marshal of the Soviet Union I. Konev, who also duly appreciated the fortitude, self-possession and persistence shown by our countrymen in achieving the objective [Istoriya TASSR, 1980, p. 179].

§ 2. The Tatar ASSR as an important rear base of the USSR

Ayslu Kabirova

From the first months of the German attack against the USSR, the Tatar ASSR, together with other republics and districts of the Volga Region, Urals and Siberia, turned into one of the most important military-industrial arsenals of the Soviet state, supplying the front and the army with ammunition, weapons, equipment and provisions.

The Tatar ASSR had a population of 2,914,200 people on the eve of the war. Of this population, Tatars made up 48.7% (1,419,400); Russians, 43.0% (1,251,300); and the remainder included Chuvash, Mordva, Udmurts and other peoples [Narxoz TASSR, 1970, pp. 7–9, 11]. The large-scale economic and socio-cultural reforms carried out in the republic in the 1920s and 1930s, formed the basis for the powerful rear base formed in the east of the country during the war.

In the summer of 1941, the Council of People's Commissars prepared and accepted for execution a number of mobilization programs aimed at reorganizing the national agriculture of the USSR into a wartime mode. An important and very significant part of the organization of military manufacturing was the evacuation of manufacturing plants from the frontline zone to the deep rear [Direktiviy' KPSS, 1957, pp. 707–712]. In the latter half of 1941 alone, over 2,500 industrial plants were moved to the east [VOV, 1985, p. 802].

Since the TASSR already had industry-specific factories and plants, many similar industrial enterprises located in regions of the USSR that were vulnerable in military terms had already been evacuated to the republic

in the summer and autumn of 1941. They included the largest in their own industries: the Moscow Aircraft, Leningrad Aircraft, Leningrad Metalworking, Moscow Watch and other factories; the 'Bolshevik' Moscow Confectionery Factory, Vyborg Tobacco Processing Plant, Dnepropetrovsk Biofactory, Krenholm Manufacturing Company from the city of Narva and others. Out of 226 enterprises evacuated to the Volga Region, over 70 plants were accepted for transfer and relocated to Tatarstan [Gilmanov, 1977, p. 70], and the deadlines for recommissioning them were extremely short. Thus, the Moscow Aircraft Plant named after S. Gorbunov, which was reconstructed at the Kazan Aircraft Factory named after Sergo Ordzhonikidze, started producing Pe-2 dive bombers only two months after relocation. It took only two weeks for another aircraft factory from Leningrad to restore production of its legendary 'sky snails' — the U-2 aircraft that were widely used at the front as scouts, communication airplanes and carriers of the wounded. It took an average of 2 to 3 months for the relocated enterprises to settle into the new sites and start producing the goods necessary for the front in the quantities required by the State Defense Committee.

Local factories and plants lent them invaluable assistance. Moreover, many of them also proceeded to fill defense orders. For example, Kazan Film Factory No. 8 named after V. Kuybyshev mastered the production of new aviation film for taking pictures of the enemy's military facilities from high altitudes. The Hammer and Sickle factory increased the production of metal-cutting equipment by one and

a half times. Factories producing leatherette, typewriters and garage equipment switched to producing mortar bombs, missiles and photo-flash bombs. The Kazan Catgut Factory produced really unique goods and was the only facility supplying hospitals with life-giving catgut threads for stitching up wounds, without which it would have been impossible to carry out difficult operations. A fur factory started production of caps with ear flaps, gloves, high fur boots and headsets for soldiers. The 'Spartak' factory delivered army boots.

Mastering production of weapons and equipment for the Red Army was fraught with considerable difficulties. It required new technologies and clear organization of labor. However, the most critical factor was the lack of staff. Mobilization of men to the front aggravated the staffing problem. A whole range of measures was carried out in order to solve it: a seven-day work week was introduced, annual and additional leaves were canceled and replaced with monetary compensation; universal labor duty was introduced and then labor mobilization, along with criminal penalties for being late for work or for unauthorized leave. However, the gap between the needs of Tatarstan's industry and its provision with labor forces remained enormous. Moreover, even the existing workforce was constantly distracted from fulfilling their core functions at the plant. The republic's population was forcibly involved in different kinds of socially useful work: logging, peat cutting, and clearing construction sites. Construction of the Volga defense line was a difficult challenge for Tatarstan's inhabitants. It was built in four months between October 1941 and February 1942 in order to prepare the area in case of real danger of the enemy's penetration into the country's rear. The line was 331 km long [Tagirov, 1999, pp. 328–329].

Under the current conditions, the evacuation of staff from outside sources contributed to solving the personnel problem. Initially, according to the Decree of the Central Council for Evacuation, our republic was supposed to re-settle 165,000 people [Tatariya v VOV, 1963, p. 35]. But in reality, these numbers were repeatedly corrected. Several times, Tatarstan had

to accept citizens who could not be settled in other regions. Proof of this is found in the National Archive of the republic. It is a telegram sent by the Collegium of the People's Commissariat for Railways to the Council of People's Commissars of the TASSR dated 23 July 1941, which ordered: 'Two trains of 60 cars on the home road each directed to Ulyanovsk; two trains of 90 cars each directed to Sverdlovsk and two trains of 101 cars each directed to Omsk, with the evacuees unloaded within the TASSR [NA RT, f. P-128, l. 1, f. 3638, s. 49].

By mid-August 1941, 163,000 people had already arrived in the republic [NA RT, Fund P-128, Inventory 1, File 3635, Sheet 26], while by 15 January 1942, according to official data, 273,500 people had already been settled there [NA RT, Fund P-1296, l. 18, f. 508, s. 183]. As a rule, skilled workers, as well as engineering and technical personnel, arrived together with the evacuated manufacturing plants and were lodged in the cities. Evidence of this is the fact that the population of Kazan alone rose from 401,000 to 515,000 people in the first year of the war. The rest were settled in districts of the TASSR. For example, in July 1941, 3,451 people were sent to Kukmor District for temporary residence; 1,765 evacuated citizens were directed to Bavly District, while Tyulyachi District received 2,146 people, and so on. Eventually, with consideration of natural growth among the evacuees, the population of the Tatar ASSR on 1 September 1941 was 2,996,179 people. Of these, 771,671 people lived in cities and 2,224,508 in rural areas [NA RT, Fund P-1296, Inventory 18, File 508, Sheet 187]. After being provided with housing, the newly arrived citizens were immediately involved in public production thus helping to fill in the gap in Tatarstan's workforce.

The problem of the lack of personnel was solved to some extent by training young workers in the state reserve system. Annually, throughout the war, this system graduated more than 13,000 young skilled workers in 53 different specialties in Tatarstan. Between 1941 and 1945, 49,261 young workers were professionally trained at vocational and railway schools and FWT schools of the TASSR for the republic.

lic's defense industry [SA HPD TR, Fund 4034, Inventory 26, File 199, Sheet 5; Kalishenko, 1950, p. 68; Khanin, 1966, p. 84].

Most of the people who came to work in manufacturing were totally dedicated to their jobs and often overextended themselves. Shock work as a real contribution to achieving Victory over fascism as quickly as possible was a matter of honor in wartime. Various forms of socialist competitions became widespread at factories, such as movements of multi-tasking machine operators, innovators and inventors. The most popular wartime motto was 'work for yourself and on behalf of your comrade who is off to the front'. The whole republic knew the names of N. Khabibullina, who initiated the movement of dvukhsotniks [workers who fulfilled their production norm by two hundred percent during one shift] and was a Russian leather cutter at the Kazan 'Spartak' factory; M. Romanova and A. Bulaeva, who were trekhsotnitsas [workers who fulfilled their production norm by three hundred percent during one shift] at the '20th Anniversary of Tataria' work association; M. Yusupova, pyatisotnitsa [five hundred percent of the production norm] of the 'Svetoch' confectionery factory; and tysyachniks [one thousand percent] F. Abdrakhmanov, S. Khidiyatullin and A. Biryukov, who worked in shops of machine-building plants, and many others. By the end of the war, there were about 50,000 Stakhanovites working at factories and plants of Tatarstan [Molodost' drevenego goroda, 1970, p. 174].

Apart from individual forms, collective forms of socialist competition, in particular, the movement of the Komsomol youth brigades, were widespread. The title of front brigade was awarded to those who fulfilled their quota by 150–200% and delivered outstanding products. By 1 July 1942, 204 brigades were granted the title of front brigades; and by the end of the war, there were already 1,642 Komsomol youth front brigades in the republic [Istoriya TASSR, 1968, p. 183]. The brigades led by Z. Varlamova, A. Battalova, N. Ignatyeva, A. Zakirova, M. Buraykina, M. Pchelina and others were the best known.

However, not everyone endured the tough mobilization of industrial labor. Thus, forced and punitive methods were also used to motivate the workers' labor. In order to suppress violators of workplace discipline, so-called labor repressions were applied during the war. According to the archive sources, the number of offenders and deserters varied in the republic in different periods of the war. During the first months of the war, the administration of factories and plants strictly monitored violations of the work rules, pursuant to the Decree dated 26 June 1940, which stipulated criminal punishment of workers for unauthorized absence and being late for work. An audit of 39 plants and establishments of Kazan and districts in July 1941, which was especially organized by the prosecutor's office of Tatarstan, showed a downward trend in the number of offenders from 15 February to 1 July 1941: 11,552 cases were referred to judicial authorities, whereas in 1940, 25,081 persons were convicted for the same period [SA HPD TR, Fund 15, Inventory 5, File 147, Sheet 3].

However, by the end of 1941, the number of absentees rose again exponentially. The reasons for such 'unpatriotic' labor behavior of citizens are obvious: because of the mobilization of experienced personnel to the front, manufacturing plants were forcefully supplied with new population groups from the countryside and young people, which broadened the contingent of potential offenders.

Especially tough measures were applied against the workers who violated the main terms and conditions of the Decree of the Supreme Soviet of the USSR dated 26 December 1941: 'On the responsibility of workers and employees at military industrial enterprises for unauthorized departure from work' which stipulated criminal penalties of 5–8 years of imprisonment. By 23 February 1942, 176 cases of this kind were already in proceedings of the court martial of the NKVD of the TASSR [SA HPD TR, Fund 15, Inventory 5, File 472, Sheets 38–39]. But in general, 1942 was marked by somewhat of a decrease in the number of cases concerning labor discipline. An insignificant rise was noted in 1943, while

1944 again showed a decrease in the number of cases. For example, in two quarters of 1944, only 4,659 cases were filed against deserters [SA HPD TR, Fund 15, Inventory 5, File 147, Sheets 1–7], whereas in 1941, there were 2.5 times more such cases [Ibid., Sheet 3].

The reduction of desertion and disciplinary infractions at the republic's enterprises was related to the fact that since 1943, the issues of fighting these occurrences in Tatarstan had started being resolved comprehensively. Along with the application of repressive measures, there was a focus on improving the living conditions of workers at industrial plants. The decrees and resolutions adopted in numerous party committees and economic bodies directed the management of establishments and organizations towards solving current social issues related to housing, food and wage increases. The emphasis was on an individual approach to people, and consideration of their personal interests, talents and requests [SA HPD TR, Fund 15, Inventory 5, File 704, Sheets 92–93]. Owing to the improved organization, discipline in the republic's public production improved at the end of the war.

The result of the supreme efforts made by Tatarstan's workers was the creation of a mobile war economy in the republic. The front was supplied with over 600 units of weapons, ammunition and equipment: shells and fuses, bullets and bombs, aircraft instruments, landing craft, and communications equipment [Gilmanov, 1977, p. 128]. Kazan Aircraft Factory No. 22 named after S. Gorbunov (now 'Kazan Air Enterprise' JSC) was the only one in the country that manufactured Pe-2 and Pe-8 strategic bombers, which were considered to be the best examples of aircraft of this class in all the warring armies. The Leningrad Aircraft Factory (now 'Kazan Helicopter Plant') was involved in manufacturing U-2 (Po-2) night bombers, which were indispensable for carrying out military operations at low altitudes. In total, the republic produced 22,000 warplanes. According to specialists' calculations, every sixth plane manufactured during the war was given permission to fly from Kazan. About ten Tatarstan enterprises took part in the develop-

ment of various components for the famous 'Katyushas'. The Kazan powder mill alone sent a million charges for them. The Kazan catgut factory increased production of catgut by 5 times. Production of aerial photography and x-ray film at Film Factory No. 8 named after V. Kuybyshev (now 'Tasma' JSC) was increased by 4 times. This factory also served as a storehouse during the war for the unique State Film Foundation of the USSR, which was sent there from Moscow Region.

Overall, the gross industrial output of the republic in the war years increased by 2.2 times, to 219% in 1945, compared to 1940 [Narxoz RSFSR, 1957, pp. 109–110; Narxoz TASSR, 1970, p. 28; 50 years of the TASSR, 1967, p. 18]. These numbers significantly exceeded the overall results of industry of the RSFSR in the same period, the gross output of which in 1945 was only 106% [Sovetskij ty'l, 1986, p. 260]. The main volume gain of Tatarstan's industrial sector was achieved by commissioning the evacuated facilities and expanding production at the existing industrial enterprises. The heavy equipment industry predominated in the republic with a share of products amounting to 2/3 of all industrial products of Tatarstan. The geography of industry locations also changed. Along with Kazan and Zelenodolsk, new industrial centers appeared in the towns of Yelabuga, Chistopol, Mamadysh and Bugulma. As a result of the dramatic qualitative changes in the industrial scene of the Tatar ASSR, the republic, which had become an industrial agrarian region back in the latter half of the 1930s, was transformed into a region of developed heavy industry and mechanical engineering. The share of the industry manufacturing means of production rose from 48.8% in 1940 to 83.3% in 1944 [25 let TASSR, 1945, pp. 63–64; Gilmanov, 1977, p. 130].

Due to objective circumstances, light industry remained at the prewar level, although it provided the front with about 200 different items of clothing and uniforms for soldiers of the Red Army. During the war, nearly 1 million overcoats and 1.5 million all-weather raincoats were produced in the republic. Each working day, Tatarstan's factories produced enough

clothes for a regiment and enough boots for a division. Clothes and boots produced in the TASSR were enough to equip an army of three million.

An event of truly strategic importance in the war years was the discovery of commercial oil reserves in the Republic. On 6 August 1943 around Shugury, drillers G. Khamidullin and Ya. Buyantsev produced the first crude oil run. Within a year, in the summer of 1944, there was an even more powerful oil gusher at a second well [Kzil Tatarstan, 1944, 18 June]. Discoveries in wartime, which led to the start of 'black gold' production in the region, anticipated priority development of the oil industry in the republic.

Tatarstan's agriculture was in an extremely difficult situation in the war years. The collectivisation carried out in the republic eliminated private peasant farms, but the kolkhozes (collective farms) and sovkhozes (state farms) which replaced them did not have time to consolidate themselves. The physical resources of the republic's agricultural production were extremely poor, and with the start of the war, it stopped growing at all. There was a lack of tractors and machinery and the problem of fuel was acute. The number of horses decreased drastically, and therefore it was decided to use the draft power of bulls and cows. However, the most important problem was that there was no one to work in the fields. After mobilization, the republic's employable population was reduced by over one-third.

The problem of the labor shortage in the republic's agriculture was solved by intensifying labor and toughening discipline. In 1942, a mandatory minimum number of workdays was defined for kolkhoz workers (100–150 for adults and at least 50 for teenagers), and they could be brought to trial for failing to fulfill them. Implementation of this decree was delegated to the political departments revived in rural areas. Along with the district commissariats of the CPSU(B), they exercised political and economic control over kolhozes and sovkhozes.

Nearly everything produced in public production was handed over to the state. Ac-

ording to archival documents, the authorities used all means in order to fulfill state tasks and orders coming from above. Grain was delivered under threat of arrest, and searches were conducted in homes. It was not allowed to collect grains of wheat left in the fields, pick vegetables, or bring nuts and berries home, etc. Beatings of kolkhozniks 'for negligence' by the heads of kolkhozes and supervisors were not uncommon. Essentially, the task of providing food and raw material to the state assigned to the republic's agriculture during the war was mainly achieved by a strict system of state regulation, direct administrative measures and the use of force against the collective farm peasantry. And yet, at the cost of enormous efforts, the kolkhozes and sovkhozes of Tatarstan supplied the state with 131 million poods of grain, 39 million poods of potatoes and vegetables, 56 million poods of meat, 200 million liters of milk and other products necessary in wartime [Gilmanov, 1977, p. 175].

However, the quality of life of the population itself was extremely low. The problem of housing remained acute in the war years. It had been difficult in the pre-war period, and it became even more acute due to the arrival of the evacuees in the republic. Public and industrial buildings, school rooms and cottages were adapted for housing. Under pressure of the administration, the local population provided their own homes to the new arrivals. Due to the lack of housing, many workers and office employees had to live 10–20 km away from their work, and every day it took 2 to 4 hours for them to get to work. The average living space per person in Tatarstan was 4 square meters, but there were also cases when there were only 2–3 square meters per person [SA HPD TR, Fund 840, Inventory 1, File 387, Sheet 19; NA RT, Fund P–1804, l. 1, f. 66, p. 1].

Production of staple goods significantly decreased. Clothes, matches, salt, kerosene and the like disappeared from sale. The food problem was difficult to deal with. Prices on the free market were exorbitant. Theft and embezzlement in distribution, as well as officials' misconduct when reviewing citizens' claims

and complaints, acquired a mass character. A card system was introduced in order to provide the population with basic foods and industrial goods; however, it was unable to satisfy people's needs. In addition, the standard ration applied only to urban residents and members of the rural intelligentsia. Kolkhozniks were deprived of this support from the state. The supply of goods to peasants depended solely on the number of workdays they completed. It was also nearly three times lower compared to the pre-war period.

Hunger and cold were constant companions of the war years. The inability to feed themselves and their families was the reason for a terrifying epidemic of the septic angina, which affected most of Tatarstan's districts in the spring of 1944. Eating overwintered food grain, which had become a deadly poison, also caused mass diseases. By the end of June, 23,470 cases of disease had been recorded in the republic, and over 6,000 of them were fatal [Serebryannikov, 1997, p. 261].

The high mortality rate (up to 25% of cases) was due to the lack of medicines and doctors. The network of civilian medical institutions preserved in the Tatar ASSR suffered shortages of facilities and medicines, lack of space and personnel.

However, despite the difficult life circumstances, people believed in the Victory and brought it nearer in any way they could. The people of Tatarstan even managed to spend their modest amounts of money and food supplies so wisely, they were able set aside some funds to cover utilities, pay taxes and sign up for voluntary and compulsory loans. Of course, this was usually to the detriment of themselves and their families. However, people sacrificed the last they had to bring the day of Victory nearer, by participating in numerous movements in aid of the front. The citizens of the republic donated a total of 262 million rubles to the Red Army Defense Fund [Sovetskaya Tataria, 1970, 6 May]. Formation of the 'Krasnaya Tataria' ['Red Tataria'], 'Kolkhoznik of Tatarii' ['Kolkhoznik of Tataria'] tank columns, the 'Sovet Tatarstan!' ['Tatarstan Soviet'] aviation division, and the construction of armored

boats, armored trains and the like were personally funded by the republic's citizens.

The movement to collect winter clothes for frontline soldiers was one of the best examples of patriotism expressed by the citizens of Tatarstan. The republic's workers collected 23,000 fur jackets, 54,000 pairs of felt boots, 59,000 quilted jackets and cossack trousers, and 106,000 sets of long johns for a total of 10 million rubles [Krasnaya Tataria, 1944, 1 February]. The donor movement was widespread. Throughout the war, donors in Tatarstan donated 42,000 liters of blood, 12,000 liters of which were sent directly to the front. Those who distinguished themselves most of all included O. Kuritsyna (a housewife) who donated 14.5 liters of blood; M. Bukova (1st garment factory) who gave 13 liters; M. Pavlicheva (a nurse), who gave 12.5 liters, E. Bebozyorova ('Iskra' work association), who gave 10 liters, among others [Kabirova, 1995, p. 125]. The uninterrupted supply of the front and rear hospitals with donor blood made it possible to save the lives of hundreds of thousands of seriously wounded fighters and significantly reduce their periods of treatment. There were 50 hospitals deployed and equipped in Tatarstan alone, where 334,000 thousand injured and ill soldiers were treated during the war, and 207,000 of them were returned to active service [Ocherki istorii partijnoj organizaczii Tatarii, 1973, p. 475].

The moral and religious level of the republic's population increased noticeably during the war. Softening of the position of Soviet leaders towards religious organizations led to the restoration of prayer houses, cessation of violence against the clergy, as well as weakening of control over the activities of churches and mosques. In turn, religious institutions, which had increasing influence on the masses, started to carry out patriotic work in a more purposeful way, calling for active provision of financial assistance to the front. By September 1944, the savings bank of the TASSR had received 1,273,400 thousand roubles. Moreover, the republic's believers collected nearly 4 pounds of gold for the Defense Fund along with 476 items in aid of Stalingrad, as well as for presents to

soldiers and commanders of the Red Army [NART, Fund P-873, l. 1, f. 2, p. 26].

A special page in the history of the war should be devoted to the activities of scientific and creative intelligentsia to develop the spiritual potential of the Victory. In Tatarstan, the new tasks assigned to science were accomplished in close collaboration between local scientists and the best scientific staff of the country from the Academy of Sciences of the USSR. The decision to relocate academic institutions was made on 16 July 1941. Within a short time, the leading institutes of the Academy of Sciences of the USSR were transferred to Kazan. They included institutes of organic chemistry, inorganic chemistry, colloid chemistry, physical problems, fossil fuels, as well as physics, radium, power institutions and so on.

A total of 1,660 research fellows and 93 academicians and corresponding members of the Academy of Sciences of the USSR were settled in Kazan [Tatarstan v Velikoj Otechestvennoj voine, 2009, p. 195]. Among the scientists who received international recognition were A. Poray-Koshits, B. Grekov, E. Tarle, G. Krzhizhakovsky, S. Vavilov, A. Ioffe, A. Nesmeyanov, S. Obnorsky, P. Kapitsa, M. Keldysh, N. Zelinsky and others. The Presidium of the Academy of Sciences of the USSR was also located in Kazan from August 1941 up to its transfer to Sverdlovsk in May 1942.

The range of research of the evacuated scientists was very broad. During their time of residence in Tatarstan, they developed improved alloys for building motors (E. Chudakov, A. Dyachkov), proposed effective methods for calculating aircraft aerodynamics and ballistics of guns (L. Rusinov, L. Shestopalov), prepared equipment for remote detonation of mines (N. Andreev), approved the composition of the armor for the famous T-34 tanks (A. Bochvar, N. Gudtsov), continued experimental research on nuclear chain reactions on fast neutrons, which led to the creation of the national nuclear industry (I. Kurchatov), and so on.

A huge amount of work on perfecting military equipment was carried out in Tatarstan by the renowned Russian engineers A. Tupolev, S.

Korolev, S. Chaplygin, V. Petlyakov, V. Glushko and others. During the period of total repression of the 1930s, many of them were arrested on charges of forming German espionage and subversive groups. However, despite their death penalties, almost all scientists were left alive and were soon allowed to continue their work at the special design bureaus of Moscow and other cities with large aircraft factories. Many of them came to Kazan this way and worked here as members of the 'special squads' of Kazan prisons at so-called 'sharashkas' (secret laboratories staffed by prisoners) on the sites of local aircraft factories [Sultanbekov, Malysheva, 1996, pp. 252–253].

Thanks to their efforts, mass production of the Pe-2 dive bomber (V. Petlyakov) was started during the war; the US pulsating accelerator was developed (B. Stechkin, G. List); and new types of diesel engines for heavy aircraft (A. Charomsky) were improved. But the main achievement of aircraft designers in Tatarstan was the development and use of a jet engine on Pe-2 aircraft, which was designed as a result of the joint work of V. Glushko and S. Korolev. Their discovery marked the beginning of development of jet-propelled aviation in the USSR and a step toward space travel.

Kazan scientists also worked intensively during the war. Their activities were largely directed toward finding solutions to local industrial problems: more appropriate use of the region's natural resources, obtaining new materials and products necessary for the front and rear, etc. For example, the research conducted by the famous chemist, professor B. Arbuzov, made it possible to improve the quality and cold resistance of rubber, which was of great significance, as it ensured smooth operation of military vehicles in winter. Professors G. Kamay and M. Belyaeva were involved in improving the technology of deriving new types of catgut — an extremely important surgical suture material for military medicine. Academician A. Arbuzov worked on problems of organophosphorous compounds, which played an important role in the production of optical devices for artillery systems, as well as in the development of new types of medicines.

The discovery of electron paramagnetic resonance by Kazan physicist E. Zavoisky in May 1944 was an outstanding event in international science. He was awarded the Lenin Prize and was made a full member of the Academy of Sciences of the USSR for this discovery, which was of global importance. Electron paramagnetic resonance became a powerful research tool in physics and laid foundation for a new field — magnetic radio spectroscopy.

Research of the republic's geologists was also of great economic importance. Professor L. Miropolsky was an ardent advocate of intensive development of Tatarstan's mineral resource base. He was the first to attempt to identify the possibility of producing new building materials. In particular, he was the one who initiated more extensive use of gypsum both in construction and in agriculture for the production of mineral fertilizers. Associate Professor E. Tikhvinskaya, the first woman of the republic to defend her doctoral thesis during the war, was engaged in studying problems of oil-bearing resources of our region.

Professors V. Gusynin, F. Muhamedyarov and A. Teregulov proposed effective methods for treating the wounded. A real breakthrough in medicine was made by outstanding Kazan surgeon A. Vishnevsky who developed a method for local anesthesia and novocaine block.

Many of Tatarstan's production problems were solved thanks to the collective work of scientists from Kazan and evacuated institutes. The new form of organizing this collaboration during the war consisted of regional commissions that made it possible to solve any problems comprehensively and in depth. In June 1942, following the example of other regions, a Committee in Kazan was formed which was responsible for the mobilization of resources of the Middle Volga and Kama River regions for the purposes of the defence. The Committee was headed by vice-president of the Academy of Sciences of the USSR Ye. Chudakov.

The collaborative research of Kazan people and academicians, who were the leading specialists in their fields, contributed to the growth of the republic's academic potential. After the re-evacuation in 1943 of the majority of in-

stitutes and laboratories of the Academy of Sciences of the USSR, Kazan academics continued to work independently on the projects which had been begun as collaborative. The establishment in the republic of the Kazan branch of the USSR Academy of Sciences was recognition of the contribution of Tatarstan's academic community to the protection of the Homeland. This decision was taken by the Soviet government on 13 April 1945.

The activities of the republic's educational institutions were subject to radical reform. Due to the lack of space, school children studied mostly in three shifts and they did not have sufficient school supplies such as schoolbooks, notebooks, pencils. Due to a lack of resources, absence of clothes and boots, educational delinquency increased, and it could reach up to 40% in certain schools. There were also difficulties with the teaching staff. In 1941–1942, out of the 8444 teachers in Tatarstan working with pupils of the 5–10th forms, only 1517 teachers had higher education and 352 were not even secondary school graduates. Nevertheless, all efforts of the teaching staff were directed to complying with the law of the Vseobuch [universal education]. If possible, pupils were provided with social help. Students of senior classes repaired school equipment on their own and went to procure firewoods.

The educational programmes were also subject to changes. Their main focus was made upon strengthening the patriotic component in the activities of schools. In order to provide incentives for students, matriculation examinations were introduced and the system of award of gold and silver medals for successes in studies was established. In general, despite the war time, the system of public education was preserved. The number of schools in the republic was not reduced. Quite the opposite—it increased from 3510 in the 1940/1941 academic year to 3718 schools in the 1944/1945 year (1901 schools were Tatar). However, the school enrollment decreased to a certain extent from 445.8 thousand pupils to 409 thousand respectively [25 let TASSR, 1945, p. 82].

Industry-specific training at higher education institutions was in many ways reoriented.

Future doctors, chemists and geologists were provided with education in accordance with practical needs. In order to fill the gap in personnel at the beginning of the war, reduced study programmes were introduced. However, this measure was not justified and in 1942/1943, the prewar study plans were returned. In general, during the war period, there were 13 IHLs in Tatarstan, where 21.1 thousand of students studied. By the end of the war, due to unavoidable circumstances, the school enrollment fell to 11.2 thousand people. However, the number of highly qualified personnel was still high [Dostizheniya TASSR, 1967, p. 97]. Between 1941 and 1945, over 6 thousand specialists in various fields graduated from the republic's schools of higher education. There were mathematicians, physicists, meteorologists, chemists, biologists, doctors and other specialists among them [25 let TASSR, 1945, p. 54]. New institutes and faculties were also opened: in 1944, a special department of Tatar language and literature was opened within the History and Philology Faculty of the Kazan State University. In 1945 the Kazan Conservatoire was founded and the Kazan Institute of Engineers of Civil Construction was established.

Those people who were employed in the creative professions also played a significant role in the political mobilization to oppose fascism. Topics of the Soviet people's heroism at the war fronts and their selfless work in the rear represented the top priority for the national intelligentsia. Many Tatar writers-at-arms took a stand for their Homeland's independence. 25 out of 53 members of Tatarstan's Union of Writers went to the front in the first year of the war. Musa Dzhallil, Fatykh Karim, Abdulla Alish, Adel Kutuy, Sibgat Khakim, Khakim Dauli and others were among them. In 1942–1943, a large number of Tatar writers — about 15 — were sent to editorial boards of Tatar front newspapers.

Today, the name of Musa Dzhallil is known all over the world. He is rightly treated as the symbol of Tatar poetry of the war years. In the summer of 1942, when attempting to break through the encirclement near Myasnoi Bor station, M. Zalilov (Dzhallil or Cälil), who was

at the time working for the newspaper 'Otvaga' ['Courage'] of the 2nd Strike Battalion of the Volkhovsky front—was injured and captured by the fascists. He was held in a concentration camp, where he continued his struggle as a member of a conspiracy. However, betrayed by an agent provocateur, he was incarcerated. Sentenced to death, the poet while in detention wrote a cycle of poems called 'The Moabit Notebooks' with profound patriotic content. In 1956, Musa Dzhallil was posthumously awarded the title of the Hero of the Soviet Union, and a year later he became the first among poets who, for his literary achievements, was awarded the Lenin Prize.

Other 30 writers of the republic also sacrificed their lives for their Fatherland's liberty: M. Ableev, A. Aitov, A. Alish, M. Akhmetgaliev, K. Basyrov, N. Bayan, M. Vadut, Sh. Garay, M. Gayazov, R. Ilyas, Kh. Kaveev, A. Kamal, F. Karim, A. Kutuy, V. Miftakhov, Kh. Mudzhay and others. No other literary organization of the country suffered such losses. The reason for this was the lack of a mechanism designed to preserve the very best of the national intelligentsia. The brightest representatives of the Tatar culture and literature were sent to the war front as ordinary soldiers. Although we must recognize that efforts were made to attract public attention to the necessity of changing the current situation. Thus, back in November 1942, the chair of TASSR's Union of Writers Tazi Gizzat bitterly noted that 'the administration of our republic and city have never been interested in the creative activities of a Tatar writer... Tatar writers who fight at the front are not being used according to their specialty, since military commissariats of the Tatar republic send them to army units on a regular basis' [SA HPD TR, Fund 15, Inventory 5, File 547, Sheet 109]. However, unfortunately, his submission did not have a significant impact upon the widely spread practice of mobilization in Tatarstan of the national intelligentsia.

The work of writers who remained in the rear also suffered considerable changes. A significant part of their lives became occupied with ideological work among the population: litterateurs organized artistic receptions, made

presentations on the radio and via mass media. Moreover, they were actively enlisted to participate in a wide range of socially beneficial events. Nevertheless, writers did not cease their own literary work. During the war, the Tatar publishing house issued 220 books of writers and poets of the republic with a circulation of over 1.5 million copies.

During the war years, the prevailing form of Tatar prose was the small form of essays and short stories. The most famous among the population were short stories 'Artillerist Suleyman' written by K. Nadzhmi; 'Sergeant Khayrullin' by G. Bashirov; 'Night Meeting' of G. Nasretdinov; 'In a Winter Night', 'There Were Three of Them' by I. Gazi; 'Unity', 'Stronger Than Death', 'Soldier Khayrulla' by A. Aballyamov; 'In a Roaring Night' by A. Shamov; 'Marat' Sh. Kamal. Among larger literary works, we should mention tales 'Notes of a Spy', 'In a Spring Night' by F. Karim; 'Adventures of Rustem' by A. Kutuy.

Poetry was represented by over 20 poems and hundreds of verses, among which 'Son of the Volga', 'Sniper', 'Wife of the Partisan' written by F. Karim; 'Artillerist Vagap' by Sh. Mudarris; 'Front-Line Soldier', 'Before the Attack' by S. Khakim; 'Khayat-apa' ['Aunt Khayat'], 'Farida' by K. Nadzhmi; 'A Russian Girl' by N. Arslanov; 'Song of Brave Tanker Pyotr Novikov' by A. Iskhak, etc can all be mentioned.

Writers of the Russian section of Tatarstan's Union of Writers M. Yelizarova, B. Zernit, I. Subbotin, Ye. Vereyskaya also successfully worked on new works of literature.

Together with representatives of the local creative intelligentsia, the tasks of political character were fulfilled by Russian and foreign writers evacuated to the republic. They settled mainly in the cities of Kazan and Chistopol. During the war years, A. Fadeev, M. Aliger, B. Bakhmetyev, M. Isakovskiy, K. Trennev, L. Leonov and K. Fedin lived and worked in the republic. Here, the following famous anti-fascist writers were also provided with temporary accommodation: Jean-Richard Bloch from France, Giovanni Germanetto from Italy, Johannes Becher, Willie Bredel, Clara Blyum

from Germany, César Arkonada from Spain, Leon Pasternak from Poland. Subsequently, they fondly recalled Tatarstan. Plots related to their life in the republic firmly settled in the works of the war years and will forever remain in the chronicles of Soviet and world literature.

However, during the years of the Great Patriotic War, the cultural life of the republic experienced significant additions, but also acute losses too. They were mainly connected to the change of the vector in the ideological direction of the Soviet state. In the initial period of the war, the confusion caused by front-line failures and defeats led to the Stalinist state agreeing to a number of concessions of a political nature. This included using the national factor as an element in raising the patriotic spirit of different nations. Taking advantage of the given right, the Tatar intelligentsia addressed long forgotten themes carefully preserved in the memories of generation, as well as images of the heroic past, recalling a time when powerful Medieval Tatar states existed, as well as revived images of the national heroes. Famous writers: N. Isanbet, F. Khusni, Sh. Mannur, S. Khakim, F. Karim finally started to work on their masterpieces without a thought for the security institutions.

However, these ideological concessions appeared were short lived. Once Victory appeared on the horizon, the authorities began to restore order with the same zeal. In 1944, entire nations (Kalmyks, Chechens, Crimean Tatars, Ingushes, Balkars and others) were forced out of their homelands for political reasons. The presumed reason for their deportation was accusation mass betrayal. Any expulsion of the Tatar nation would have been problematic (the Tatars represent a dispersedly settled nation. — A.K.), so the authorities took a hard line with them, involving their spiritual enslavement and the destruction of its ethnic history. It found its expression in the decree of the Central Committee of the CPSU(B) dated 9 August 1944 'the conditions and measures of improvement of the overall political and ideological work in the Tatar Party organization'. The decree ostracized the republic's supreme bodies due to 'exaggerated attention' upon the national fac-

tor [KPSS v rezolyuciya, 1985, pp. 513–520]. The authorities expressed special disfavour towards the works of Naki Isanbet 'Edigü' in which they 'discovered' such mistakes as 'the embellishment of the Golden Horde', 'promotion of the khanate-feudal epos' and so on, although not so long ago, this work had been treated as 'politically correct' and reflecting the history of the Tatars.

This decree determined the landmarks in the national policy-making of Tatarstan's Party and state bodies for many decades. All academic and cultural institutions adjusted their activities accordingly. The slightest attempts taken by representatives of the intelligentsia in the sphere of the humanities to deviate from the established paradigm of Tatar history were declared nationalistic and severely punished. The authorities' interference in the creative processes during the war period laid the foundation for the further persecution of cultural luminaries in the post-war years.

Workers in the field of the visual arts made a significant contribution to the common victory. From the first days of the war, artists began the organized publication of political and military posters. They demonstrated the heroism displayed by soldiers, the labour feats of the people working in the rear, and exposed the myths of the fascist ideology. The Tatar State Publishing House created posters inspired by Kazan artists B. Almenov, A. Rodionov, N. Sokolsky, R. Sayfullin, E. Gelms.

In addition to the typographic posters, they produced about 170 posters of 'Okna Satiry' ['Windows to satire'] painted by hand in Kazan. Their publication was initiated by such artists as I. Bobrovitsky, N. Sokolsky and poet Bruno Zernit. 4 copies of 'Okna satiry' were published every month with the circulation of almost 300 copies. These posters were accessible to the general public and of strategic importance. They were displayed in all the crowded places of the city and reflected the latest events from the life of the country and the world.

The creation of new paintings also helped the republic's artists improve their skills. Most of them were military and patriotic in nature. 'Listening to the Communique of the Soviet

Information Bureau', 'To Slavery' were painted by V. Timofeev; D. Bulat painted 'The Unit of Hero of the Soviet Union Comrade Batyrshin in a Bayonet Assault'; G. Rakhmankulova — 'Portrait of Sarazeeva, the Mother of Veterans'; K. Maksimov — 'Provision of Peat', 'Helping Adults', 'Evacuated from the Kolkhoz'; I. Novoselov — 'Defence of Kazan'; G. Katkov — 'Vseobuch in Kazan'. The famous Tatar craftsman S. Akhun created indoor sculptures. His most significant works are 'Lägnät!' ('Damn!') and 'Çiñü' ('Victory'). During the war, Baki Urmanche lived in the city of Almaty. Much of his work was devoted to military topics, and in particular, he wrote such narrative canvases as 'Return with the Victory', 'At the Hospital', 'Portrait of Sniper Afanasyev'.

Significantly despite separate attempts by national artists not to lose face and continue the traditions of the pre-war years, Tatar decorative art notably suffered in the war period. Out of 46 members of Tatarstan's Union of Writers, 22 fought at the front and 14 of them were killed. Among those who did not return from the front were both experienced craftsmen and young artists who had just begun their lives and were full of creative plans. N. Valiullin, P. Baybaryshev, L. Aleksandrov, A. Silantyev, Yu. Zinovyev, V. Guryev, G. Musin died fighting at fronts in the war years. For those who managed to stay alive, the theme of war remained a defining element in their creative work. They included Kh. Yakupov, M. Usmanov, L. Fattakhov, V. Kudelkin. Time needed to pass before they managed to address other topics.

Along with the rest of the nation, composers also attempted to bring the end of the war closer. Their works were mainly of a military character. Of 108 works written during that period, 72 of them were military and patriotic. Similar to other fields of art during the initial stage of the war the small forms of work dominated composers' creativity, such as mass songs and marches. The most popular songs were 'For Motherland!', 'To the War, Comrades', the music for which was written by M. Muzafarov; 'Murder for Murder!' Dzh. Fayzi wrote the march 'Motherland' for symphony orchestra. 'Suvorov March' for wind orchestra was

written by S. Saydashev; 'March for a Military Campaign' by Dzh. Fayzi; and 'March of Militia' by V. Vinogradov.

At the same time, works by Tatarstan composers were marked by a range of genres and were addressed to large music forms. During this period, N. Zhiganov wrote his operas 'Ildar' and 'Tulyak'; M. Muzafarov created his 'Zulhabira'; M. Yudin — 'Farida'. The ballets 'Fatykh' and 'Zyugra' of N. Zhiganov were also created at that time. Symphonic music was also developed further and was mainly represented by works of M. Muzafarov, N. Zhiganov and Z. Khabibullin. Moreover, Tatar music was marked by the appearance of a new genre — the musical comedy. Composer Dzh. Fayzi created two works: 'Boots' written on the basis of a libretto written by Tazi Gizzat's and 'Seagulls' on a libretto by A. Fayzi's libretto.

Many composers also fought in army forces. With weapons in their hands, Kh. Abdulmenov, Kh. Valiullin, M. Latypov and Sh. Shamsutdinov fought against the fascists. There were also irreparable losses. Farid Yarullin, a young and talented composer, and the author of the first Tatar ballet 'Shurale' died heroically in the autumn of 1943 during a combat mission.

The theatres in Tatarstan led almost a front-line life. With the beginning of the war, new patriotic motives appeared in their repertoires: For example: K. Simonov's 'A Lad from our

Village', about the struggle of republican Spain, 'Field-Marshal Kutuzov' by V. Solovyev about the events of the Patriotic War of 1812. Plays on the topic of the Great Patriotic War, included 'Front' written by A. Korneychuk, 'Mariyam' by N. Isanbet, 'Minikamal' by M. Amir. Much of the activity of artists and performers was devoted to concerts held in kolkhozes, hospitals and at the front-line. In total, 18 creative brigades were formed in the republic which held over 2000 concerts at 11 fronts and performed almost 70 plays [Ivanov, 2010, p. 57]. The audience especially loved Kh. Abzhalilov, G. Bolgarskaya, M. Bulatova, F. Ilskaya, G. Kaybitskaya, M. Rakhmankulova, F. Tuishev and others.

In this way the citizens of Tatarstan withstood the difficulties of the troubled year with honour and dignity. The most difficult tasks which lay before the home-front workers were accomplished at the cost of their great self-abnegation. All day and night long, Tatarstan's inhabitants toiled in the factories, felled trees, ploughed, sowed and gathered in the harvest, while working on strengthening the spirit and morals of the people through realizing their creative potential. A hope for a better future, the feeling of love and loyalty to their Motherland, a deep faith in the Victory united people, invigorated them and helped them withstand the troubles.

§ 3. The Eastern Policy of Germany and the Volga-Tatar Legion — Legion 'Idel-Ural'. The Immortal Feat of Musa Jalil

Iskander Gilyazov

On 16 July 1941, at a meeting of the German senior management with the participation of Hitler, Rosenberg, Keitel, Göring and Lamers, the following statement was made: 'It must become and remain an iron rule: No one must be allowed to carry weapons, except for the Germans! And this is particularly important, even if it may seem easy at first to enlist foreign subjugated peoples for military aid — all this is not true! Sometime it will be inevitably turned against us. Only Germans may carry

weapons, not the Slavs, not the Czechs, not the Cossacks or the Ukrainians!' [Der Prozeß gegen die Hauptkriegsverbrecher, 1949, p. 88].

This as a very emphatic statement and there could be no revision of the strict prohibition. However, by the end of 1941 and during 1942 tens of thousands of representatives of the peoples of the USSR had been put under the banner of the Wehrmacht. They were hastily formed into the Ostlegionen (literally 'Eastern Legions'), the main impetus for the creation of

which was given by the obvious failure of the Blitzkrieg plan¹².

Other major circumstances also contributed to the creation of the Ostlegionen:

the huge number of Soviet prisoners of war in the hands of Germany;

the active German propaganda among the population of the occupied regions of the USSR and against the front units of the Red Army. The results was that many members of the civilian population of Ukraine, Belarus and the Baltic states cooperated with the Germans. A considerable number of soldiers and officers of the Red Army passed over to the German side, especially in the first period of the war.

The position of some foreign countries, demanded more humane treatment at least in relation to the Turkic, Muslim prisoners of war. Turkey's politicians expressed the greatest interest in this matter. This also should include the intensification of emigrant leaders from the representatives of the peoples of the USSR with the beginning of war.

When the 'Blitzkrieg' plan failed, these factors influenced the German government's position. In spite of the difference in points of view and serious contradictions between the tribal leaders and senior government and military institutions of the Reich, the German government decided to use these circumstances to its advantage.

The headquarters for the creation of the Ostlegionen was located from 18 February 1942 in Poland, in the town of Rembert. The summer of the same year it was transferred to the city of Radom under the name 'headquarters of the Ostlegionen', on 23 January 1943 it was renamed as the Command of headquarters of the Ostlegionen [Hoffmann, 1976, pp. 30–31].

¹² However, to explain the creation of the Eastern Legions exclusively in terms of the failure of the planned 'Blitzkrieg' is to over-simplify the problem. This tendency is all too apparent in our historiography [see, for example: Abdullin, 1985, p. 44]. Even the creation of committees for the selection of Turkic prisoners of war has been 'aligned' to the defeat of the Germans just outside Moscow, although these committees, which will be discussed below, were already in existence in August–September 1941 [see, for example: Mustafin, 1993, p. 73].

The Volga-Tatar legion (or Legion 'Idel-Ural') was set up later than all other legions. Although the actual representatives of the peoples of the Volga region were separated into special combined camps in the autumn and winter of 1941–1942. The documents at our disposal mention for the first time the creation of the Volga-Tatar Legion in 1 July 1942. On the same day, information about emerging legions, including the Volga-Tatar Legion, was sent to a number of institutions [BA-MA, RH 19 III/492, Bl. 232]. On 1 August 1942 an order, signed by Keitel, the chief of headquarters, was issued from Hitler's headquarters about the creation of the additional units to the existing Legion. They consisted of Volga (Kazan) Tatars, Bashkirs, Tatar-speaking people, the Chuvash people, the Mari, Udmurts and the Mordvin [Bundesarchiv-Koblenz, NS 19/2523]. The order instructed that the representatives of these peoples be separated into special camps, to intensify the efforts to recruit prisoners of war. It was noted that the status of the Volga-Tatar Legion was exactly the same as that of the first such groups, and that the use of the Legion was prescribed in the fields of military actions, but especially in the areas of guerrilla actions.

Keitel's order was practically given from the top and the actual order of the Supreme Command of the Wehrmacht was signed on 15 August 1942. It already contained more specific information:

1. Create a legion of Tatars, Bashkirs and Tatar-speaking peoples of the Volga region;
2. Transfer the Tatars assigned to the Turkestan legion into the Volga-Tatar legion;
3. Immediately separate Tatar prisoners of war from the others and send to the Siedlce camp (on the Warsaw-Brest railway line). Send them over to the military commander in the General Government (Militärbefehlshaber im General-Gouvernement);
4. Use the legion primarily in the struggle against the guerrillas' [BA-MA, RH 19 III/492, Bl. 172 oder RH 19 V/79, Bl. 8].

Practical work on the creation of the Volga-Tatar Legion began on 21 August 1942: the place of its formation was a camp in Jedlino

under the Radom, where uniforms and weapons for the Legion were supplied. This was also the place where the German executive staff arrived. The Siedlce camp, located near Yedlino, had previously become an assembly point for prisoners of war from the Turkic peoples.

A banner was presented to the Volga-Tatar legion on 6 September 1942, so the legionaries considered this as the date of the final formation of the union [Idel-Ural, № 36 (42), 05/05/1943].

On 8 September 1942 the Volga-Tatar legion was placed under the command of the Ostlegionen Headquarters, and the commander of the military district in the 'General Government'.

Tatar prisoners of war were concentrated mainly in the camp Siedlce A, where they were sent to prepare for the Legion in Yedlino. Subsequently, the camp in Deblin also fulfilled the function of a pre-camp (Stalag 307). In early 1944, after the transfer of the Ostlegionen to France, the general pre-camp was in Legionowo, near Warsaw [BA-MA, RH 53–23/44, Bl. 136], since March 1944—and again in Siedlce B (Stalag 366), and in the camp Nehrybka (Stalag 327) [BStU-Zentralarchiv, RHE 5/88–SU, Bd. 2, Bl. 143].

Major Oskar von Zekkendorf, a quite old and experienced man of war, was appointed as the commander of the Volga-Tatar legion. He was born on 12 June 1875 in Moscow, he spoke English, Russian, French, Chinese well; as well as Ukrainian and Spanish to a lesser extent¹³. Later, he was promoted to lieutenant colonel.

According to the available documents it can be judged that Zekkendorf, despite his age, took the tasks quite vigorously, above all paying attention to the issues of the combat training of legionaries. Perhaps one of the most serious problems for him (as well as for other German organizers of the Ostlegionen) was the problem of the training the national officers staff. This was a problem which was not to be

resolved before the end of the war, although it rose again many times.

According to the plan, the first battalion of the Volga-Tatar Legion, which received number 825, was to be established by 1 December 1942, but it was formed a little earlier — on 25 November. The date of the formation of 826 Battalion was established 15 December 1942, the date of 827 Battalion — 1 January 1943. In fact, it happened, respectively, on 15 January and 10 February 1943 [BA-MA, RH 19 V/110, Bl. 254; RH 53–23/38, Bl. 218; RH 53–23/51, Bl. 18; RH 58/42, Stammtafel der Wolgatarischen Legion]. All three battalions were first mentioned in the surviving documents on 3 November 1942 [Ibid., RH53–23/51, Bl. 28–29].

Tatar battalions, which were created in Poland, Yedlino, under the control and jurisdiction of the Ostlegionen Command in the German armed forces, and which are described in detail on the basis of available documents, were not the only ones. It is most likely that other Tatar unions were created in individual armies or groups of armies, at a later date during 1944. There were both fighting, and construction, and supply subdivisions among them.

825th Battalion. This the most famous of all Tatar battalions. The commander of the battalion was Major Caecus. The exact number of Tatar legionnaires in the battalion is not specified in surviving documents. However, by comparing it with other similar units, we can assume that there were approximately 900 people.

The 825th Battalion is especially famous for its armed action against the Germans at the end of February 1943. This fact is reflected in domestic publicistic literature [Zabirov, 1990, pp. 57–59; Mustafin, 1971 pp. 124–141]¹⁴.

It happened as follows. Judging by reports, on 14 February 1943 the battalion was officially sent to the front: 'Before the battalion left to fight guerrillas, a professor, his name was unknown, arrived in Yedlino village from Berlin to make a report.

¹³ Fragmentary biographical information on O von Seckendorff [see: Bundesarchiv-Potsdam, NS 31/45, Bl. 237; NS 31/55, Bl. 27]. In the book by S. Drobyszko his name has been distorted and appears as Zikerdorf [Drobyszko, 2004, p. 151]

¹⁴ This episode in the history of the war is described in most detail in the book compilation [Failure of the Operation, 2010].

The report was in a foreign language. In his report the speaker appealed to the legions to destroy the Bolsheviks, (speaking) about the establishment of the "Tatar state" by Hitler, about the creation of a new beautiful life', — the source of the Belorussian partisan environment reported [National guerrilla movement, 1973, p. 230]. On 18 February the battalion arrived in Vitebsk at night, after that it was sent towards the village Belynovichi on the Surazh highway. Then, the main part of it was located in the village Gralevo on the left bank of the Western Dvina. On 21 February representatives of legionnaires contacted the guerrillas.

As a result of the negotiations, it was agreed that on 22 February at 23 o'clock a general rebellion of the Legion would be raised, and it would go over with its arms to the side of the guerrillas. Obviously, the Germans became aware of the plans of the underground conspirators. One hour before the planned acts took place, arrests were made and the leaders of the rebellion Zhukov, Tadzhyev and Rakhimov were caught. Then the headquarters company commander Hussain Mukhamedov took the initiative. A signal was sent to almost all the battalion units located in different regions in the neighborhood, — the rebellion began. According to the source, the news could not reach two platoons of the second company.

The transferred legionnaires were distributed amongst the partisan brigades, commanded by Zakharov and Biryulin [Mustafin, 1971, p. 134]¹⁵.

Thus, the first entry into the battle of the first division by the Volga-Tatar Legion ended in failure for the German side. The reasons for this are clearly visible in the German documents, albeit in veiled form: firstly, the clear activities of 'certain intellectual Tatars' among

¹⁵ The partisan movement in Belarus at that time developed in extremely difficult circumstances: according to data on the partisans, it is a well-known fact, for example, that in February 1943 6,000 partisans were surrounded in the area of Vitebsk by enemy units totalling as many as 28,000 men with artillery, tanks, and aircraft at their disposal. The first Vitebsk partisan brigade was commanded by M. Biryulin, his commissary was V. Khabarov, and the chief of staff was L. Komeyev [see: Garayev, 2003].

the legionnaires who organized the transfer of the battalion to the side of the guerrillas. This might refer to the activity of Musa Jalil group, or his predecessors, but in any case, the legionnaires' actions had been organized and prepared in advance. Secondly, despite the long indoctrination, the Germans were still unable to enlist the support of the Tatar legionnaires. Their Soviet patriotism was much stronger. The Germans, in spite of their efforts, remained 'strangers' to the Tatar legionnaires, the latter saw the Belorussian guerrillas as their own comrades.

Former legionnaires, who transferred to the guerrillas, apparently, almost immediately took part in the battles against the German army. They were especially intense on 28 February 1943 and were intended to break the blockade. They later continued to remain in the partisan units in Belarus. This is confirmed, for example, by data from letters of the Belorussian Headquarters Partisan Movement dated 2 July 1943: 'After their transfer to the guerrilla battalion, their staff was really dispersed amongst the Partisan Brigades. They participated in the fighting against the German occupiers, and proved to be good. Some of the personnel of the battalion remained in the partisan brigades until the present time' [Garayev, 2003].

After these events, the legionnaires of the 825th Battalion who remained on the German side, were immediately sent to the rear and assigned to other units. The rebellion of the 825th Battalion was like a 'cold shower' for the German command. This event played a significant role in the future of the Eastern legions.

826th Battalion. The organization of the 826th Battalion planned for 15 December 1942 did not take place — it was formed in Yedlino on 15 January 1943. In March 1943, after the uprising of the 825th Battalion, the 826th Battalion 'was transferred out of harm' to Dutch territory in the city of Breda area [Tessin, 1976, p. 33]¹⁶. Here, apparently, they served as guards

¹⁶ Incidentally, the book by Yu. Karchevskiy and N. Leshkin notes that the 826 Battalion was 'triumphantly' despatched to France on 2 April 1943. The source of this information is unknown to me [Karchevskiy, Leshkin, 1982, p. 83].

and were involved into other works. The 826th Battalion was not involved in real military operations.

On 1 September 1943 the battalion may have been in France (there is no more precise indication) [Bundesarchiv-Potsdam, NS 31/55, Bl. 8]¹⁷, and on 2 October 1943 it was again relocated to Holland, where it stayed throughout 1943—the beginning of 1945. [Die geheimen Tagesberichte, 1988, p. 168].

R. Mustafin recounts an eloquent fact about the history of the 826th Battalion. An uprising had been planned in the unit, but the German secret service managed to break the plans of the members of the underground. 26 members of the underground organization were shot after that, two hundred men were transferred into the penal camp [Mustafin, 1974, pp. 199–200]¹⁸.

827th Battalion. The battalion was established on 10 February 1943 in Yedlino. Its field post was number 43645A-E. The commander of the battalion was Captain Pram.

At the end of June 1943 the 827th battalion was sent to fight the guerrillas in the Western Ukraine [BA-MA, RH 53–23/51, Bl. 88]. There legionnaires participated in several clashes with the guerrillas.

In early October 1943 the battalion was transferred to the city of Lannion in France and was placed under command of the 7th Army [Die geheimen Tagesberichte, 1988, pp. 233, 248]. The 827th battalion disappointed the German command during the actions against the partisans in Western Ukraine too. Moreover, the fact that the battalion remained in the area

only strengthened the guerrilla detachments, since many legionnaires went to them. After the transfer of the battalion to France, it did not become a 'reliable' unit for the Germans, since many legionnaires transferred to the French partisans as well.

828th Battalion. This battalion was created in the period from 1 April 1943 and was finally formed on 1 June 1943¹⁹. After the formation, the battalion spent a long time in Yedlino. [Bundesarchiv-Potsdam, NS 31/55, Bl. 8].

On 28 September 1943 the unit was sent to Western Ukraine instead of the 827th Battalion which turned out to be 'unreliable' [BA-MA, RH 53–23/42, Bl. 267]. The hopes of the Germans about the newly arrived legionnaires were in vain. Sources indicate clearly that during the stay of the 828th battalion in Western Ukraine, many of legionnaires transferred to the partisans.

829th Battalion. It was created on 24 August 1943 in Yedlino. As a result of the failures of the first battalions, the 829th battalion remained in Yedlino for a long time [Ibid., RH 53–23/51, Bl. 100]. However, the battalion was later also moved to Western Ukraine [Ibid., RH 53–23/44, Bl. 136].

The end for the 829th battalion came soon enough: Due to frequent cases of 'misconduct' in the battalion, it was dismissed by order of the commander of the military district in the 'General Government' on 29 August 1944 [Ibid., Bl. 164]. All these events were to take place prior to 18 September 1944.

That was how the story of the 829th Tatar battalion ended.

830th Battalion. There is no precise data on the formation of the 830th Battalion. Although the unit is already mentioned in documents after 1 September 1943 [BA-Potsdam, NS 31/55, Bl. 8], its existence on that day it is doubtful, since in a document dated 26 October, it is referred to as 'being formed' [BA-MA, RH 53–23/51, Bl. 100].

The Germans had already decided not to use the battalion against partisans: it served as

¹⁷ These details are most probably inaccurate. The battalion is likely to have remained in the Netherlands and was not transferred from one country to another.

¹⁸ Supplementing, as it were R. Mustafin's information, M. Cherepanov writes: 'The 826 Battalion also rebelled in 1944 and tried to go over to the side of the French (? — I. G.) partisans' [Cherepanov, 1991, p. 41]. But I have not been able to find this information in the sources either. I have, however, succeeded in finding another interesting observation regarding this battalion in domestic journalism. G. Kashshaf referred in his book to the diary of the German officer Walter Heisen, who reported on the complete disarmament of the remnants of the 826 Battalion on 6 September 1944 because of its unreliability [Kashshaf, 1984, p. 184].

¹⁹ S. Chuyev wrongly gives his name as 'Gaulinz' [Chuyev, 2004, p. 506]

guards in different towns of Western Ukraine and Poland. These transfers were carried out to check the 'reliability' and combat capability of the battalion, which gave cause for suspicion amongst the Germans, which was not unfounded.

In June 1944, the branch of the Gestapo in Radom managed to extract from one of the non-commissioned officers of the 830th Battalion, that he was looking for communication with 'communist gangs'. He seems to have managed to organize 20 legionnaires to kill people from the German staff during the night of June from 17 to 18, to open the armory, steal cars and weapons and to escape to partisans. However, on 12 and 15 June the initiators of the conspiracy, more than 20 people, were arrested. 17 people were subsequently released by the military court due to lack of evidence. Representatives of the secret police believed that the decision was legally justified, but its consequences could be unpredictable, therefore it was recommended to discuss the situation in detail with the commander of the eastern detachments [BA-Potsdam, Film 56636, A 196]²⁰.

Probably at the final stage of the war, the 830th Battalion existed as building and combat — engineering. In early 1945 it was located in the bend of the Vistula River, and later — in Pomerania [Ibid., Bd. 13, p. 38.].

831st Battalion. It was created in the fall of 1943 in Yedlino. Its existence is confirmed in the latter half of October. Judging by the text of the document, it provided protection for the main camp of the Volga-Tatar Legion in Yedlino [BA-MA, RH 53–23/51, Bl. 100]. The unit had to do practically the same in February 1944, when it was in Legionovo near Warsaw [Ibid., RH 53–23/44, Bl. 136].

Other references to the 831st Battalion in the known sources are not available.

Battalions 832, 833, 834 of the Volga-Tatar legion were due to be established in the autumn of 1943. They must have not been formed. No

references which would really confirm the existence of these Tartar battalions could be found.

On 29 September 1943 Hitler ordered the transfer of all the eastern volunteers from East to West [Neulen, 1985, p. 331]. This was reflected in the order of the German General Headquarters on 2 October 1943 (№ 10570/43) on the transfer of the Eastern legions from Poland to France at the disposal of the commander of Armies group West in the city of Nancy [BStU-Zentralarchiv, RHE5/88-SU, Bd. 3, Bl. 91]. The relocation was supposed to be carried out in the following order:

1. The Georgian Legion;
2. The North Caucasian Legion;
3. The Command of the Eastern legions;
4. The Officer's School in Legionovo;
5. The Volga-Tatar legion and the School of Translators;
6. The Armenian Legion;
7. The Turkestan Legion;
8. The Azerbaijanian legion.

This order then did not concern all the Eastern battalions, some of them remained on the site of their military service. All the structures of the Eastern Command of the legions, the so-called 'main camps', and a part of the battalions were transferred to France.

To implement this large-scale deployment a special liquidation headquarters under the command of Colonel Moeller was set up. The procedure prescribed by the order was observed in general: for example, the main camp and the command of the Volga-Tatar Legion left Yedlino on 19 October 1943, and command and headquarters of the Eastern legions set off on 24 October [BA-MA, RH 53–23/43, Bl. 36]. The transportation was carried out very quickly by special military echelons. Nevertheless, in the first half of November 1943 the relocation was largely completed: on 1 March 1944, 61439 foreigners and eastern volunteers, according to official data, were at the disposal of the commander of a group of Western armies [Neulen, 1985, p. 331].

The Command of the Eastern legions in France in October 1943, was in the city of Nancy (Eastern France), but at the end of November it was transferred further to the south to the town of Millau [BStU-Zentralarchiv, RHE 5/88-SU, Bd. 3, Bl. 98]. It is most likely,

²⁰ Excerpts from the document published by R. Mustafin [Gasyrlar Avaza = The Echo of the Ages, 1995, No. 3/4, pp. 142–143].

that due to the unfavorable development of the military situation for the Germans, on March 15, 1944, the command of the eastern unions from Millau returned to Nancy again (this concerns the former command of the Eastern legions, not of the command of all the volunteers unions) [Ibid., Bl. 101].

At the beginning of 1944 in France, there was a serious restructuring of the units of the eastern nations, which, most likely, was intended to strengthen control over them and maximize their battle readiness [See: Romanko, 2004 p. 204–206]. Here in February 1944 a new structure was formed. It was called The Main Volunteer Division (Freiwilligen Stamm Division) with the center in Lyon and was initially under the command of Colonel Kholste. In late March 1944, Kholste was replaced by Major-General von Henning. The division was divided into a number of regiments on a national basis, including units of Russians, Ukrainians and Cossacks. The Volga-Tatar legion, the commanders of which was located in Le Puy, belonged to the 2nd Regiment, and the union continued to be named the Volga-Tatar Legion as a part of the 2nd Regiment.

The Eastern battalions, located in different countries and regions of the Western Europe, were intended not only for the defense of the Atlantic Wall, but also to fight against guerrillas, as in the East. For example, three companies of the Volga-Tatar Legion took part in the German action against the French Maquis in Chantal department in early June 1944. In early August divisions of the Volga-Tatar Legion participated in similar actions in the areas of Issoire and Rochefort (in the city of Clermont-Ferrand area) [BA-MA, RH 36/509, Bl. 8].

The Eastern legions in France as a whole showed the same qualities as they had shown before in Ukraine.

The divisions of the Volga-Tatar Legion demonstrated clear 'unreliability'. On 13 July 1944 the Field Commandant's Office 588 in Clermont-Ferrand clearly stated in its summary with bitterness: 'The reconnaissance group of the Tatar Legion could catch no more than a few previously escaped Armenian Legionnaires' [Ibid., RH 36/509, Bl. 46]. On the night

of 29/30 July 1944 a Russian officer and 78 legionnaires of the Volga-Tatar legion, according to the same commandant data, transferred to the guerrillas, and the remaining were immediately returned to the barracks [Ibid., Bl. 61]. There were many examples when eastern legions transferred to partisans in the last period of the war. Many such cases have become widely known due to the publications in our press²¹.

Most of the eastern battalions of volunteers on the Western Front were divided and distributed into different regions and assigned to larger German units. This isolation from each other, no doubt, markedly enhanced the sense of confusion and depression among the majority of legionnaires. In general, the use of the Eastern legions did not bring the desired results in Western Europe either. Many of the legionnaires were very afraid of being captured by the advancing Soviet army, preferring in the end to find themselves prisoner of the allies. However, this fate was also unenviable. According to the agreements between the USSR and the Allied Powers, all Soviet citizens who found themselves in the hands of British and American troops, were subsequently transferred to the Soviet side. They returned to their homeland, where in most cases severe punishment awaited them²².

Thus, we see that the German plans to use units consisting of the Turkic peoples of the USSR, including Tatars, especially in 1942–1944, resulted in failure. The clandestine anti-

²¹ [Bronstein, 1995; Kashapov, 1994 b; Kashapov, 1992; Kashapov, 1994 a; Mustafin, 1992; Cherepanov, 1993, pp. 50–61; Cherepanov, 1995, pp. 86–93]. Although these publications often contain a considerable number of inaccuracies regarding the general history of the Eastern Legions, they provide important information on the war-time and post-war fate of many former legionnaires of Volga-Tatar Legion.

²² The fate of most of the former legionnaires and, in fact, of all Soviet citizens, who were on the side of Germany and ended up as Allied prisoners of war, is truly tragic [see: Tolstoy, 1996]. According to the author, in 1944–1947 the allies of the USSR released more than two million Soviet citizens (among whom were inmates of the camps, prisoners of war, the remnants of various 'volunteer units,' eastern workers, etc.). It is not hard to imagine what awaited the majority of these people in their home country.

fascist groups which arose among the eastern legionnaires, of course, had played their role in the failure of the aspirations of the Nazis. One of the best known of these groups was a group led by Guinan Kurmashev and Musa Dzhaliil²³. The group apparently began its activities in late 1942. It consisted primarily of Tatar officers who find themselves to be German prisoners of war. The conspirators concentrated their efforts on the expansion of the Legion 'Idel-Ural' inside and preparation for rebellion. They used the printing house of the newspaper 'Idel-Ural', released by the East Ministry of Germany specifically for legionnaires from the autumn of 1942, to achieve the goal.

Guinan Kurmashev created and coordinated the work of five groups of the underground organization. Musa Dzhaliil, who had the opportunity to move freely throughout the territory of Germany and Poland, organized a campaign amongst the legionnaires. Ahmet Simayev worked on the propaganda radio-station 'Vineta', where he could get information to the resistance group and produce leaflets. Abdulla Alish, Akhat Atnashev and Zinnat Khasanov also took active participation in the production and distribution of leaflets.

It is safe to assume that the battalions of the Legion 'Idel-Ural' did not meet the expectations that had been assigned to them by the German command, largely due to the activities of the underground group of Kurmashev and Dzhaliil. Unfortunately, this work

was interrupted by the German counterintelligence: the members of the underground were arrested in Berlin on the night of 11/12 August 1943. About 40 people from the propaganda departments of the Legion 'Idel-Ural' were captured in August 1943.

After a prolonged investigation, the members of the Resistance were brought to the Imperial court in Dresden. On 12 February 1944 11 people were sentenced to death by decision of the court. They were: Musa Dzhaliil, Guinan Kurmashev, Abdulla Alish, Akhmet Simayev, Akhat Atnashev, Abdulla Battalov, Fuat Bulatov, Salim Bukharov, Fuat Sayfulmulyukov, Zinnat Khasanov, Garif Shabayev. The text of the sentence referred to 'assistance to the enemy' and 'undermining the military power'. This formulation reasonably suggests that the Resistance group which existed in the 'Idel-Ural' Legion caused serious damage by their actions to 'The Third Reich'.

The Tatar patriots were executed by guillotine in Berlin in the Ploetzensee prison on 25 August 1944. The first who ascended the scaffold was Guinan Kurmashev — at 12 o'clock 06 minutes. The other members of the underground were executed at an interval of three minutes.

A memorial plaque containing the names of the band in Berlin, in the Museum of the Resistance to Fascism and exhibits of materials about the heroes in the Ploetzensee prison commemorate the Tatar underground members.

²³ More detailed information about the underground activities of the 'Idel-Ural' Legion [see: Zabi-rov, 1990; Mustafin, 1971]. These activities are described in summarised form in the work [Akhtamzyan, 2002]

CHAPTER 7
**The national problem and political situation
in Tatar Autonomous Soviet Socialist Republic in the middle
of the 1940s–the first half of the 1980s**

Alfiya Gallyamova

In the early post-war years, society lived in hopes of democratic changes. However, the response to them was the reinforcement of state party control over various sectors of socio-political and spiritual life and repressions. The ideological adjustments started in the country in 1943, when along with the decisions on reviving the national economy in the regions, freed from the German occupation, a number of Soviet magazines were developing measures for overcoming 'major political mistakes' [Novejshaya istoriya Rossii, 2007, p. 327]. In the summer of 1944, the state adopted a regulation on reinforcing the ideological programme in the Moldavian and Byelorussian Soviet Socialist Republics [Ibid., pp. 501, 506]. In August 1944, the Central Committee of the All-Union Communist Party (Bolsheviks) issued a resolution 'On the status and means of improving the massive political and ideological activities in the Tatar Party organization'. The decisions were aimed at the renunciation of the ideological 'concessions' made due to extreme circumstances of the war time. Under the new conditions after the routing of the enemy from the country, the official propaganda began to change its tone. It no longer needed to focus on the national heroic epic and historical images, living in minds of the USSR nations and raising people's patriotic spirit.

The key point in the resolution made by the Tatar Autonomous Soviet Socialist Republic (TASSR) was to erase the historical memory of the past powerful Tatar states from the conscious minds of the Tatar people. So the first ideological stroke was deliberately aimed at historical studies. The history of the Golden Horde was banned from educational programmes. It was consid-

ered to have a negative impact on sociogenesis not only in Tatarstan, but Russia as well.

In the post-war period, the use of the Tatar language was also restricted. This also reinforced the Russian language and the importance of all things Russian in the socio-political life of the country. I. Stalin set the tone: in May 1945, during the celebration of victory, he called Russians 'the most outstanding nation of all the nations in the Soviet Union' [Pokhlebkina, 1997, p. 349]. Soon afterwards, a thesis was released that proclaimed the Russian people the big brother of all the other nations of the country.

The foundation of developing language, working traditions, customs and other national features has always been manufacturing production. In the 1940s, the Tatar language was further losing its social function in the urban labour sector of the republic. For instance, 40% of workers in the Kazan Aviation Plant were Tatars, but there was not a single community club which functioned in the Tatar language [Tagirov, 1973, p. 23]. The oil industry which evolved in the republic during the post-war period, did not have professional terminology in Tatar, as it was fully adopted from the Russian language. Even though the oil-producing industry was evolving in a region where the majority of people were ethnic Tatar.

Russian vocabulary was introduced, with the disapproval of Arabisms in verbal speech and, especially, in writing. For instance, during one of the sessions of the Union of Writers of the Republic, the Secretary of the Tatar Regional Committee of the CPSU(B), Rakhmatullin, made a statement: 'We will fight grimly the Arabic words', and in confirmation of his words,

he criticized K. Nasyri for using a lot of 'Oriental' words in his works. In 1951, a session of the Union of Writers of the Republic session gave its approbation for the purification of the language from any inclusions of Arabism, Farsism and pan-Turkism, and showed their support for the introduction of Russian vocabulary. Many writers, for example, Sh. Mannur and N. Isanbet, expressed their fears that concentration on the Russian language might lead to people forgetting their native language. However, some of them supported the official approach of the language policy for pragmatic reasons. For instance, I. Gazi argued that fluency in Russian was necessary for higher education [Khaplekhmitov, 2008, p. 47].

Nevertheless, in the early post-war years the Tatar population ignored this reasoning. In the late 1940s, the vast majority of Tatars sought to study in Tatar. 95% of Tatar children studied in Tatar schools of which there was insufficient number in the republic. As proof of this, in the early 1950, there were numerous written requests from the Tatar citizens of Kazan addressed to the Tatar Regional Committee of the CPSU(B) to open new Tatar schools. In July, 1950, under pressure from persistent requests from Kazan citizens, the Head of the Kazan Urban department of public education, N. Truseynyov, appealed to the Tatar Regional Committee of the CPSU(B) to open a Tatar school near factory No. 237, where many of the workers were former Tatar peasants. The inquiry stated that 'the schools nearby, located in barrack-type buildings, operated in three shifts and were full to capacity' [SA HPD TR, Fund 15, Inventory 31, File 760, Sheets 398–399].

However, no new Tatar schools were opened. On the other hand the authorities were taking active measures to improve the Russian language classes in existing Tatar schools. In 1946, the Kazan and Elabuga teacher training institutes established departments to train training Russian language and literature teachers to work in Tatar schools [Demidova, 1977, p. 74]. In 1948, the main newspaper of the Republic 'Krasnaya Tataria' ('Red Tataria') published a series of articles about methods of improving the efficiency of Russian classes introduced by the Russian

language and literature teacher, Z. Maksudova. Later the newspaper published articles by academics, university teachers and some of the most distinguished middle school teachers. One of them was G. Kamay, a famous academic.

In 1949, the First Secretary of the Tatar Regional Committee of the CPSU(B), Muratov, appealed to the Central Committee of the CPSU(B) to mandate the Ministry of Education of the Russian Soviet Federated Socialistic Republic (RSFSR) to increase the number of teaching hours for Russian language and literature [SA HPD TR, Fund 15, Inventory 30, File 6, Sheet 406.]. In his request he was motivated by the concern for the cultural level of Tatars, and the fact that fluency in Russian offered an advantage in secondary vocational and higher education. In fact, in the 1947/1948 academic year, only 70% of 10th form Tatar students managed to pass their exams. The vast majority failed the Russian exam. The following years, the situation did not change. In the 1952/1953 academic year, 51,752 people, or 64%, out of 80,634 low-performing students failed the Russian class [SA RF, Fund A–2306, inv. 72, f. 2751, s. 18]. The situation in the republic remained the same and in summer, 1953, the matter of the low level of fluency in Russian amongst Tatar students was discussed by the Collegium of the Ministry of National Education of the Russian Soviet Federated Socialistic Republic (RSFSR). The main focus was drawn to that fact that the Tatar Autonomous Soviet Socialistic Republic (TASSR) was the only autonomous republic, where all the subjects in Tatar schools from the 1st form to 10th were taught in the native language. The Collegium of the Ministry of the Russian Soviet Federated Socialistic Republic (RSFSR) acknowledged the importance of enhancing the skills of the Russian language teachers in the republic. Only 132 out of 1827 Russian teachers had higher education, 459 were undergraduates and 1236 people had secondary education [SA RF, Fund A–2306, inv. 72, f. 2751, s.19]. The main reason why Tatar school students had poor knowledge of Russian was believed to lie in the fact that primary school teachers did not know Russian themselves [SA RF, Fund A–2306, inv. 72, f. 2751, p. 129].

In the early 1950s, the republic authorities did consider the possibility of developing higher and vocational education in the native language. While not denying the direct involvement of the republic leaders in the process of Russification, it must be acknowledged that it was impossible to oppose it. Significantly not only Tatarstan, but no single Soviet republic adopted resolutions to improve the teaching of native language. Meanwhile, every Soviet and autonomous republic without exception passed several resolutions on improving the quality of Russian classes.

However, it is important to mention the following nuance. The Tatar language was actively used in promoting the communistic ideology amongst the native population of the republic. In the beginning of 1946, the Bureau of the Regional Committee of the CPSU(B) organized a special committee under the Propaganda and Agitation Department to translate the works of the Marxism-Leninism classics into Tatar. In the latter half of the 1940s–the early 1950s, two volumes of works by K. Marx, F. Engels and V. Lenin in Tatar were published. In December 1953, the Bureau of the Tatar Regional Committee of the Communist Party of the Soviet Union (CPSU) considered publishing the collected works of V. Lenin in Tatar in an edition of 10 thousand copies. In other words, the exploitation of the Tatar language for promoting the communistic ideology not only was as common, but continued to expand even further.

In the latter half of the 1940s, the ideological pressure intensified in the Tatar Autonomous Soviet Socialist Republic (ASSR) and in the country in general. After the war, the authorities started actively using repressive methods, reviving the pre-war atmosphere of fear and suspicion. A slightest fault, even a careless statement could lead to accusations of anti-Soviet activities and counter-revolutionary acts. For instance, in 1947, the Party expelled U. Baychura from the Kazan branch of the USSR Academy of Sciences for saying the following words looking at the portrait of Stalin, while drinking tea with his colleagues: 'Now he does not worry about rations'. What made it worse was that they were having tea in a polling station which was sup-

posed to be an embodiment of political perfection. Clearly this innocent incident was to have unpleasant consequences not only for the man who made the otherwise harmless statement, but for the Secretary of the Party organization, Furasov, as well. He was removed from his post for 'sluggishness in taking the decision regarding the offence' of Baychura [SA HPD TR, File 26, Inventory 16, File 10, Sheets 10–12].

Prisoners of war were particularly distrusted. The reaction of the Tatar Regional Committee of the CPSU(B) to an anonymous letter (1949), containing the facts about 'improper attitude' of the First Secretary of the Kzyl-Yulduz District Committee of the CPSU(B), S. Vafin, towards the staff, is quite eloquent. It contained a list of people, who were, according to the author, unworthy of their positions. Yet they were all based on different reasons, often being careless discharge of their duties, mutual cover-up, immorality. However, regarding L. Novikova, an assistant of the Secretary, the reasoning behind the accusation was the fact that her brother, maths teacher in the Kutlu-Bukashsk middle school, G. Novikov, was once in German captivity. The Tatar Regional Committee of the CPSU(B) responded to only this argument, by recommending the dismissal of Novikova [SA HPD TR, Fund 15, Inventory 30, File 1, Sheets 123–124]. Notably, the archive funds of records of the post-war period, contain many similar anonymous incriminating documents [Ibid., Fund 15, Inventory 30, File 1, Sheet 115; File 4, Sheet 5; File 5, Sheets 104, 165, 174; Inventory 37, File 15, Sheet 215].

The cautious attitude of the authorities towards those who only yesterday reached Berlin and won the war had its reasons. They saw war veterans as a potential source of undermining the ideological principles of the USSR as the most progressive country in the world. In fact, many veterans changed their social and psychological attitude, after they had learned about life in the west. For instance, many people in Novy Nadyrov remembered the admiration expressed by Yusup Shafikovich Garayev, son of the kolkhoz chairman, first kolkhoz driver, for life in Germany, after fighting throughout the entirety of the war. Prisoner of war, Salikh Zaripov, who

also lived in Nadyrov, told his fellow villagers that even in captivity the living conditions were better than in the kolkhoz. As a result, the veteran was convicted for 'anti-Soviet agitation' and sentenced to 25 years in prison. The manhunt targeted even those veterans who were never caught making any anti-Soviet statements. Thus, within a few years the state imprisoned many now famous activists and figures, such as the writers Ayaz Gilyazov, Gury Tavlin, Subbukh Rafikov, defender of the Brest Fortress, P. Gavrillov, valiant pilot, M. Devyatayev, member of the French Resistance, A. Utyashev.

A common punishment for communists who had been held in captivity was expulsion from the Party. In 1947–1948, punishment was inflicted upon 26 people. Similar measures were taken with regard to the 'children of former exploiters', people who did not hide their religious views and openly observed the rituals. In 1947–1948, the Tatar Regional Committee of the CPSU(B) expelled 26 people from the Party for hiding their social origin, 23 people for observing religious rituals and 26 people for anti-Soviet comments. The majority of those expelled were young communists who had joined the Party in 1941–1947 [SA HPD TR, Fund 15, Inventory 30, File 6, Sheet 177]. Many of them were talented young people and prominent figures.

Between 28 June and 25 September 1949, a Party group of the Central Committee of the CPSU(B) conducted a complete review of the ideological activities in the Tatar Autonomous Soviet Socialist Republic (TASSR). They paid particular attention to the work of all the mass media including the local newspapers. It examined the branch of the Academy of Sciences, the Union of Writers and the Opera Theatre, the Lenin memorial houses in Kazan and in the Kokushkino village. Most of all their verdict criticized the national newspapers 'Krasnaya Tataria', 'Kzyl Tatarstan' and 'Kherle Yalav'. Afterwards, the Regional Committee of the CPSU(B) gathered the staff reporters of national newspapers to discuss the results of the latest plenary session regarding the harvest and preparations for it. The Committee examined the work of the Tatar publishing house and 'assisted it with publication planning' [RGASPI, Fund 17, Inventory

132, File 103, Sheet 102]. In other words, during the entire post-war period, ideological pressure in the republic became stronger and broader.

The process of de-Stalinization which began in the 1950's, led inevitably to revitalization in a wide range of spheres of social life in Tatarstan. Perhaps, the first substantial sign of political change was the rehabilitation of repressed persons which began in autumn 1953. It affected hundreds of people convicted in the show trials held in the republic between 1933–1937. Such trials were based on fabricated evidence of affiliation to such organisations as the 'Counter-revolutionary German Fascist Organization', 'Counter-revolutionary Insurrectionary Organization', 'Counter-revolutionary Trot Group', 'Counter-revolutionary Trot Terrorist Organization', 'Peasant Ittifak' ('Society') and 'Counter-revolutionary Trot Nationalist Terrorist Organization'. Among the most famous political officials and creative professionals of the republic, the rehabilitation involved the Chairman of the Council of People's Commissars of the Tatar Autonomous Soviet Socialist Republic, K. Abramov, Chairman of the Central Executive Committee of the Tatar Autonomous Soviet Socialist Republic, G. Baichurin, state official, the 'Kzyl Tatarstan' newspaper editor, A. Davletyarov, First Secretaries of the Tatar Regional Committee of the CPSU(B), A. Lepa, M. Razumov, M. Khataevich, People's Commissar of light, and later local industry of the Tatar Autonomous Soviet Socialist Republic, A. Ganeev, People's Commissar of Agriculture, A. Iskenderov, former chief assistant of the Republic Prosecutor, Kh. Alkin, First Secretaries of District Committees of the CPSU(B), Z. Gilmutdinov, Kh. Palyutin, G. Tikn, politician, Pro-rector of the Tatar Communist University, I. Rakhmatullin, Editor in Chief of the Tatar State Publishing House, V. Shafigullin, linguist, brother of Sadri Maksudi, Khadi Maksudi, former 'Muhammadiya' madrasah teacher, A. Mustafin, historian, Pro-rector of the Tatar Scientific Research Economical Institute, M. Korbut, economist-geographer, Rector of the Kazan State University, N. Vekslin, anatomical pathologist, Rector of Kazan State Institute of Advanced Training of Doctors (KSIATD), M. Aksyantsev, publicist and educator, S. Atnagulov,

First Prosecutor of the Tatar Autonomous Soviet Socialist Republic, Principal of the Kazan Institute of Chemical Engineering, G. Bogautdinov, writer and educator, F. Saifi-Kazanly, Principal of the Kazan Institute for Occupational Health and Safety, S. Schwartz, historian, Professor N. Elvov, and famous writers, Galimdzhan Ibragimov, Karim Tinchurin and Shamil Usmanov. The writers Ayaz Gilyazov, Gury Tavlin, Subbukh Rafikov, poet Khasan Tufan, generals Nigmat Enikeev and Yakub Chanyshv managed to survive the Stalinist camps and returned home.

However, the process of rehabilitation in the 1950's was not completed. Many prominent figures of Tatarstan of the 1920–1930s still bore the sinister stigma of nationalists and sultan-galieviers. The accompanying letters from the supreme judicial authorities specified: 'In the event of finding close relatives, they should be informed only the result of the trial, and details of the court decision shall be omitted'. The rehabilitation did not involve people, who were repressed during the forced collectivization, or who struggled against 'national deviation-ism' or who were persecuted for religious reasons. The local authorities often played it safe when re-examining appeal cases of victims and their families, by unreasonably withholding the decisions of acquittal. An illustrative example of this is the report note from the Prosecution Office of the Russian Soviet Federated Socialistic Republic (RSFSR) related to a review of the Prosecution Office in the Tatar Autonomous Soviet Socialist Republic (TASSR) in 1959. 22 cases, examined by the Russian authorities, either concluded with ungrounded rejection by the Prosecution Office of the Tatar Autonomous Soviet Socialist Republic (TASSR), or were sent for additional investigation, even though the sentence was clearly unfair. For instance, additional investigation was assigned to the case of A. Shakirov, who, as it is said in the document, was a 'senior member of the Party and leading academic'. In 1942, he was accused of organizing anti-Soviet nationalistic activity, but there was no evidence of Shakirov's guilt in the case. A similar situation arose with the cases of M. Byvaltsev, A. Prokhorov, S. Sharafiev, V. Khamzin and others.

In the mid-1950s, the state was diverging from open dictatorship and the unitarian model with a strong centre towards distributing certain authorities to different regions. There were attempts to enhance the status of Soviets in cultural development. Furthermore, in 1957, the Supreme Soviet of the Tatar Autonomous Soviet Socialist Republic, as well as the corresponding bodies in other autonomous republics, began to discuss annual national economic plans based on central directives. The authority of the autonomous executive structures were slightly expanded in industry management. On the other hand, the authority of municipal and district Soviets was increased in areas of cultural and social construction across the entire territory. The development of the socialistic democracy was supposed to be supported by various social organizations which were actively formed during this period in workplaces, communities and Soviet bodies. Numerous house committees, street committees, women's committees, vigilance groups, production site community bureaus and so on, were aimed at directing people's energy towards the establishment of communist relationships in society. Political documents declared that such relations were to become dominant in the USSR within 20 years. However, none of the social organizations could exist without the approval of the Party and State authority bodies, indicating the narrow limits of the policy of social democracy.

Meanwhile, the move towards liberalization provided the impetus for the process of spiritual emancipation and revived people's hopes for radical changes in the political environment. The Tatar Republic, as well as the country in general, witnessed attempts to form independent social organization outside the Party and Komsomol influence. However, they were immediately shut down, as the authorities saw them as a threat of revival of the oppositional political movements.

Students of the Kazan IHLs took significant actions towards bringing the true principles of democracy to social life. For example, in 1956, communist Saidgadzhiev and Komsomol members Gaynutdinov, Nurullin, Turyansky and

Katayev from the Kazan Financial Economic Institute tried to organize a discussion club. Their club enrolled 'only those, who had their own thoughts, who could think independently, regardless of our Party ideology' [SA HPD TR, Fund 15, Inventory 38, File 133, Sheet 18]. As announced by Katayev in the Komsomol student group meeting on 29 November 1956, 'the students gathered to discuss the issues of politics, economy and culture without being guided from above' [Ibid.]. They even took first steps towards putting it all into action. During one of the society meetings, they discussed the issue 'Is cult of personality the product of socialistic society?' Katayev made the following note-worthy statement: 'If we had two parties, there would be no cult of personality. For instance, the capitalist countries have several parties, so they do not have, and cannot have a cult of personality'. It is interesting to note that Katayev remarked that the personality cult in the country was transitioning from a Stalinist cult to a Leninist one [SA HPD TR, Fund 15, Inventory 38, File 133, Sheet 19].

Along with the Financial Economic Institute, the Kazan Institutes of Chemical Engineering and of Veterinary Research were also showing 'disloyalty'. For instance, students of the Kazan Institute of Chemical Technology, Sapozhnikov and Fridman, 'secretly, without informing the Party and Komsomol organizations', released a special issue of the wall newspaper 'Golos kursa' ('Voice of the course'), the headline of which contained a slogan: 'We have to berate all that seems to be wrong, dull, bureaucratic' [Ibid.]. In the Veterinary Research Institute, attention was drawn to 'disorganizing, demagogic and anti-social' public speeches of the fifth year students, Pavlov, Lipovtsev, Akhmetov, Yeltsov, Chegvintsev and Sirazeev, against the higher education reform project suggested by the USSR Ministry of Higher Education Institutions [SA HPD TR, Fund 15, Inventory 38, File 133, Sheet 21].

Although the majority of the students' specific proposals involved complaints about the school organization and their desire to bring about what they believed to be efficient changes, the republic authorities were quite worried about

the sentiment of student youth. All of the Kazan IHLs held meetings, where the above-mentioned students were subject to public censure. The fact that all of these meetings were attended by accredited leaders of the republic meant that the authorities took them quite seriously. For instance, the Secretary of the Regional Committee, Batyev, attended the meeting in the University and in the Institute of Chemical Engineering, Badygov visited the Institute of Veterinary Research, whereas the Institutes of Agriculture and Aviation were visited by the Deputy Manager of the Department of Science, School and Culture of the Regional Committee of the Communist Party of the Soviet Union, Mangutkin, and so on [SA HPD TR, Fund 15, Inventory 38, File 133, Sheet 22].

Furthermore, the aspirations towards 'democratic excesses' did not end with moral punishment for all students. The initiators of the discuss club in the Kazan Finance–Economic Institute, Katayev and Nurullin, were expelled from Komsomol, Saidgadzhiev from the Communist Party of the Soviet Union, and all three of them were expelled from the institute. The Principal of the Institute, Bunin, and the Dean of the Faculty, where the students were studying, Andreev, received Party penalties for 'losing political vigilance' [SA HPD TR, Fund 15, Inventory 38, File 133, Sheet 21].

Much more brutal measures were taken against people who expressed oppositional sentiments regarding the existing regime, not just by making public statements, but by taking real actions. For example, on 16 August 1957, 4 leaflets with 'anti-Soviet content' were found attached to the building of the City Soviet in Chistopol. After thorough investigation, the author was found. It was a native citizen of Chistopol, fourth year student in the Moscow Institute of International Studies, A. Vasilyev, who had come home for holidays. He was arrested by the Committee for State Security of the Tatar Autonomous Soviet Socialistic Republic, pursuant to the notorious Article 58–10 [SA HPD TR, Fund 15, Inventory 38, File 93, Sheet 155]. In the document of the State Archive of the Historical and Political Documentation of Republic of Tatarstan which we discovered, the author of

the leaflets repents his action and tries to explain the origin of his oppositional view with personal reasons: the fact that the authorities refused to allot better housing for his parents.

In this particular case, perhaps, it might have been one of the deciding aspects to express disloyalty to the authority. However, it would be definitely wrong to ascribe oppositional public sentiment only to such factors. Nor can such cases be considered accidental or isolated. In any case, there are certain documents proving that similar 'manifestations of hostile anti-Soviet elements' took place in the republic. As an example, there is an accompanying note from the Secretary of the Tatar Regional Committee of the Communist Party of the Soviet Union, S. Batyev, to the Department of Party Organizations in the Russian Soviet Federated Socialistic Republic (RSFSR), V. Churaev, dated 12 February 1956. It notably says: 'We attach the leaflet "Message to all citizens of Kazan" of anti-Soviet content' [SA HPD TR, Fund 15, Inventory 38, File 93, Sheet 71].

On 30 April 1956, 5 page letters containing a 'proclamation of anti-Soviet nature' were found in the mailboxes of 35 Kazan flats. It contained a message to various establishments and figures of the Tatar and Bashkir ASSRs, Arzamas, Chkalovsk and Kuybyshev oblasts, primarily to the Tatar pedagogical institutes, academies and schools. The text of the proclamation letter was written by hand in block letters and copied on carbon paper by one person, signed as I. Bikbulat, on behalf of the 'Committee for organization of opinions regarding issues of national freedom'.

The proclamation began with a statement about the harassment that 'the Tatar people have been subjected to for 400 years'. Then the author of the proclamation exposes the policy of Russification policy in the education sector. What makes this leaflet so curious is that its author, unlike those who directed their writings to official authorities, reached out to 'pure, fresh public forces', as he calls them. The originator or originators of the leaflet did not believe in the creative potential of the authority, at least, in the matter of finding a solution to the national

problem. The leaflet addresses this issue as follows: 'Waiting for something from the Central Committee or their hirelings in the regions is the same as lying to yourself... The current leaders are wrong to blame all the atrocities of the 1930–1940 on Stalin alone. Their hands are also covered in blood, shed throughout the years of Stalin's dictatorship. They contributed to the establishment of a bloody dictatorship. Stalin's supremacy, based on terror, survived with their help, and the Tatar people do not care whether there is one dictator leading the Russian government, or 10–15 party aristocrats or whether the national policy of the ruling communists is called Lenin's or Stalin's. Their policy is based on Russian chauvinism...'. Hence, the author of the leaflet makes a conclusion that there is no use in appealing to the Central Committee of Communist Party of the Soviet Union. However, he does not encourage the radical struggle either. Basically, the idea of the text is to enlighten Tatars, 'to explain to people the basics of the policy of Russian chauvinists' [RGASPI, Fund 556, Inventory 14, File 55, Sheets 15–17].

Inspired by the liberal endeavours of the 20th CPSU Congress, broad categories of the Tatar intelligentsia submitted requests to enhance the status of the republic with the Soviet state. They also made suggestions with regard to solving the problem of the national culture and language development.

The most radical requests, regarding the national status of the Tatar Autonomous Soviet Socialistic Republic, came from the Tatar intelligentsia. Even before the famous 20th CPSU Congress, a group of creative activists of the Republic had sent a letter to the Central Committee of the Communist Party of the Soviet Union, where along with the issues of cultural revival of Tatars, they addressed the problem of giving Tatarstan the status of a union republic [Iskhakov, 1997, p. 34]. After denouncing criticism of the Stalinist personality cult from the Congress tribune, the public speeches made by intelligentsia increased in quantity and intensity.

In 1956, during a meeting of the Kazan Bauman District Party Economy committee, the writer G. Kashshaf, while talking about how

harmful the personality cult had been for historical studies, literature and art, openly expressed his hopes that 'the Central Committee of the Party will work on the issue of possible reformation of Tataria into a union republic' [SA HPD TR, Fund 19, Inventory 45, File 72, Sheet 108]. In 1957, writer N. Fattakh sent letters, requesting the re-organization of the Tatar Autonomous Republic into a union republic, to the top officials of the state, including N. Khrushchev [Ibid., Fund 15, Inventory 38, File 196, Sheet 111]. Prior to that he had appealed to the supreme authorities of the republic, where his reasoning had been found to be erroneous. The unfairness of the autonomous status ascribed to the Tatar Republic was the theme of a letter also written in 1957 by G. Enverov and Sh. Fakhrulislamov to the 'Literary newspaper'. They wrote in their message 'On the future of Tatar Nation' to one of the most popular publications at the time: 'For this minor reason' such as the lack of borders with foreign states, the situation in our schools with entrance examinations to IHLs is also different from the situation in other republics [Ibid., File 191, Sheet 65].

The famous Tatar writer, Sh. Mannur, who was notable for his ability to tell the truth and live by it even during the post-war Stalin era, for which he was expelled from the CPSU(B), after the 20th Communist Party of the Soviet Union Congress did not shy away from directly addressing himself to the first official of the state, N. Khrushchev. He gave an honest expression of his concern for the socio-economic and socio-cultural situation in the Tatar Republic [RGASPI, Fund 556, Inventory 14, File 55, Sheets 108–116]. The author was particularly worried about the spiritual state of Tatars. Notably, Sh. Mannur pointed out: 'We have a lot of confusion and perversion in the sphere of enlightenment, language and literature, culture and art. The registry of records and even all records management in Kazan and many other districts are based upon the Russian language. Our leaders make all their public speeches in Russian. During the post-war decade, Tatar literature and art made very little progress. The Tatar drama theatre is in a particularly difficult situation. Every year it loses its best old actors, but does not train new ones. In

this decade the secretaries of the Regional Committee supervised literature and art only through clamour, elaborations, expulsions and stentorian resolutions. That is why the development of literature and art far from being encouraged, is actually being artificially restricted. The tragedy of the situation is that these tovarishches (comrades) do not read and do not understand their own literature. Hence, the lack of vivid party leadership in this area'.

The Tatar intelligentsia in Kazan made numerous attempts to develop a strategy to consolidate the Tatar nation in the changing world. During the Union of Writers meeting in 1956, Amirkhan Eniki, Akhmet Fayzi and Khatip Usmanov brought up the importance of creating a cultural coordination centre for all six millions of Tatars, scattered across the country. However, this proposal was flatly rejected by the leaders of the republic, S. Ignatyev and S. Batyev, as a course towards national isolation, a return to the 'theory of cultural national autonomy by a party which had long since been dissolved' [RGASPI, Fund 556, Inventory 14, File 55, Sheets 10–11].

A one of the most respected Tatar writers, Amirkhan Eniki, took a courageous social stance. Basing his views on many facts, A. Eniki publicly expressed concerns regarding the disparity of the development rates of the republic's economy and qualitative changes in Tatars' ethnic development. 'I am not saying that the Tatar nation will become extinct. It will exist and create, but what will happen to its culture? I feel like in the past 15–20 years there have been many flaws in the praxis of the national policy (theoretical guidelines were certainly valid)',—the writer concluded [RGASPI, Fund 556, Inventory 15, File 31, Sheet 8]. This statement by A. Eniki eloquently reflects the attitude of the Tatar intelligentsia towards the modernization processes in the republic. The writer's belief both in the correct theoretical principles of national policy and also that the Tatar nation would continue to live and create, while at the same time expressing his concerns about the fate of Tatar culture, show that the Tatar creative intelligentsia accepted the Soviet model of social transformation, but realized the dangerous decaying tendency of the ethnic factor in the modernizing republic.

This tendency made itself felt not only among the creative elite. The letter of a teacher from Almetyevsky district, Muzafarov, to the editorial office of the 'Pravda' ('Truth') newspaper was further proof of this. In his letter, he proposed the creation of the Tatar Teptyar Autonomous Republic in the oil regions of South-Eastern Tatarstan and Western Bashkortostan [SA HPD TR, Fund 15, Inventory 38, File 195, Sheet 58]. In my opinion, it was caused by the wish to halt the rapid process of transforming the oil region into a new Russian-speaking enclave, corroding the cultural community of Tatars.

This process even more so involved those Tatars, who, as a result of the Soviet policy of extending the economy and intensive reclamation of new lands, happened to be outside the territory of the Tatar Autonomous Soviet Socialistic Republic. Those who found themselves in a different ethnic environment as a result of the policy of planned migration naturally wanted to preserve the national spirit. Far from their homeland, they tried to organize Tatar ensembles, amateur theatres; in the evenings they gathered around to sing native songs. However, it was not easy to keep the native culture alive outside the Tatar Autonomous Soviet Socialistic Republic (TASSR). For instance, in the 1950s, in the mining town Prokopyevsk of the Kemerov oblast, Tatars managed to organize a Tatar dancing and singing ensemble and a Tatar-Bashkir ensemble called 'Agidel'. It developed an interesting repertoire and played no less than twenty concerts. However, their creative career was not destined to last. A local official of the cultural sector banned the work of the amateur artists and said: 'If you want to listen to and perform native songs, then go to Kazan' [Sovetskaya Tataria, 1990, 15 November].

In the 1950s, it provoked the Tatar's rebellious spirit, as they appealed to the supreme authorities with complaints about the local government. One of those letters was sent in 1958 to the governing authorities of the Communist Party of the Soviet Union in Moscow, Almaty and Kazan by Honoured Teacher of Kazakh Soviet Socialistic Republic, educator in the Semipalatinsk Pedagogical Institute, M. Yagudin. The author thoroughly analyzed the cultural and

political situation in Kazakhstan with all nuances, describing it unfavourable for the national self-definition of Tatars living there. Yagudin wrote about the closure of Tatar libraries, other cultural educational establishments and radio programmes.

Typically, in all these appeals, in all forums regarding the national problem, the people of the republic expressed their worries firstly about the fate of the Tatar language. In the 1950s, its use field was rapidly decreasing. The fast pace of industrial development in the republic led to the corresponding growth of the urban population. The urban production sites and establishments often used Russian as a means of communication. The older generation in the cities, many of whom had until recently been peasants, were now struggling because of their poor knowledge of Russian. They wanted to insure their children did not suffer from the problems that they did.

Seeing the lack of potential in being fluent in the Tatar language, many members of the Tatar creative intelligentsia actually sent their children to Russian schools. This matter was frankly addressed by the Secretary of the Tatar Regional Committee of the CPSU, K. Faseev, during the Plenum in 1958, dedicated to the language situation in the republic. 'Here is an interesting story, — he pointed out — teachers themselves work in Tatar schools, persuade others to send their children to Tatar schools, but send their own children to Russian schools'. He backed up his words with an example from one of the Agryz schools, where only two out of 39 Tatar teachers had their children studying in the Tatar school [SA HPD TR, Fund 15, Inventory 39, File 141, Sheet 33].

In the capital of the republic, Tatar schools began to lose their popularity in the early 1950s, so in 1958, there were only 3 Tatar and 17 mixed schools in Kazan, as 83% of Tatar children were studying in Russian schools [SA HPD TR, Fund 15, Inventory 39a, File 77, Sheet 44]. By the end of the 1950s, the relevance of national school was rapidly decreasing in other cities and district centres of the republic. There was a drastic fall in the number of children studying in Tatar schools in the republic.

The notable decrease in the relevance of the Tatar schools was shown in the numbers of applicants for IHLs. In the late 1950s, out of all students of the republic only 28% were Tatars, the majority of whom were graduates of Russian schools. For instance, in 1957, 620 people were accepted into the Kazan University, including 173 Tatars, but only 27 of them were Tatar middle school graduates, 24 of whom applied to the Department of the Tatar language. In 1957, the Kazan Aviation Institute accepted 750 students, including 113 Tatars and only 11 of them were from Tatar schools; Kazan Finance and Economics Institute accepted 200 people, including 39 Tatars, only 9 of which had graduated from Tatar schools. 405 students were accepted into the Kazan Medical Institute, 121 of which were Tatars, including 18 Tatar school graduates [SA HPD TR, Fund 15, Inventory 39 a, File 77, Sheet 20].

In order to save the Tatar language, many of its representatives suggested the creation of separate Tatar and Russian groups even in kindergartens. Another popular idea among the Tatar creative elite was to re-introduce the separate groups, which had existed in the 1920–1930, in IHLs, where students would study in Tatar. The most radical members of the Tatar intelligentsia, particularly the writer Nurikhan Fattakh, famous for his oppositional views, suggested that Tatars be banned from studying in Russian schools. In an atmosphere of increased liberalism and under the influence of increasingly persistent declarations from the intelligentsia, in the late 1950s, the republic government undertook a series of measures aimed at creating more favourable conditions for development of the Tatar language and national culture in general. Naturally, first and foremost, we have to mention the Plenum of the Regional Committee of the Communist Party of the Soviet Union in May (1958), which thoroughly analyzed the status of the development of the national schools. Prior to the Plenum, the preparatory commission, which included members of the Central Committee of the Communist Party of the Soviet Union, embarked on thorough preparatory work, acknowledging that the drastic fall in the number of national schools was abnormal.

The person who played the deciding role in organization of the May Plenum was S. Ignatyev, who in autumn, 1957 took on the leadership of the Tatar Regional Committee of the Communist Party of the Soviet Union. This can clearly be seen in his declaration during one of the preparatory sessions of the Bureau of the Tatar Regional Committee of the Communist Party of the Soviet Union. 'Last year, in the autumn, I had a chance to meet with writers, who told me about the status of the cultural development. At the time I had no idea what was the situation with language, education, and how important the language was for a Party worker to be able to communicate the words of the Party in his native language. However, when I looked closer and started examining this issue, I felt scared. It was the first time in my experience working in national republics that I saw such situation, where people do not respect their own language, do not support it, poorly work on its development and improvement, authority figures are ashamed to speak their native language, even if they have to. After that we discussed it and decided to raise this issue properly, start talking, writing slogans and banners in Tatar, and oblige Tatars to make reports in Tatar and so on. However, in order to avoid excesses since we do not regard ourselves as specialists, we reported to the Central Committee of the Party and asked for help...'. This was an introduction to the lengthy emotional speech made by S. Ignatyev [SA HPD TR, Fund 15, Inventory 39, File 70, Sheets 41–49], which quite accurately conveys the complicated situation surrounding the national problem, even for the period of liberal tendencies of the 20th Congress. His speech clearly expressed his willingness and at the same time fear to take actions aimed at saving national culture. It was a mixture of functionary communist world view and sincere astonishment, if not shock at the disloyal attitude of the republic's Tatar leaders towards their native culture.

The May Plenum (1958) acknowledged that it was abnormal for the number of national schools to have fallen so drastically. The resolutions they adopted were designed to improve the quality of Tatar language and literature lessons, consolidate the material resources, techniques and teaching methods in Tatar schools and im-

prove the teaching staff. There were also plans to organise entrance examinations to universities and training colleges in Tatar for applicants as an option. The academic development of national school issues was strongly criticized: the insufficient number of postgraduate students in Tatar linguistics, the lack of academic manuscripts on methods of teaching the native and Russian languages in Tatar schools.

The Plenum stressed the poor use of national elements in the forming the socio-cultural infrastructure, in the image of cities and towns. This issue was mentioned in a declaration made by Ryabkov, the editor of the 'Sovet Tatarstana (nowadays known as 'Vatanym Tatarstan') newspaper. 'The city of Kazan is no different than other cities of the Volga River region, though it is the centre of a national republic. None of the shop window displays are in Tatar, nor any of the signs on administrative buildings. A passenger, going past the 'Kazan' station, through a large river harbour, cannot see any slogans, banners or displays in Tatar. This is not right. Visual propaganda in general is very poorly represented in the city, not to mention the propaganda in Tatar which is non-existent. A similar picture can be seen in other cities of the republic. Some Tatar people feel annoyed by this situation, it causes false rumours',—Ryabkov stated [SA HPD TR, Fund 15, Inventory 39, File 70, Sheet 5]. The Plenum acknowledged that it was not normal to have such a poor level of political and organisational activity among the population, as well as records management in ministries and offices in the Tatar language. They also referred to the absence of banners, announcements, slogans and posters in Tatar. Therefore, they initiated a set of measures aimed at organizing educational activities in Tatar in pioneer centres, community centres, libraries, theatres, parks, cinemas etc.

The May (1958) Plenum of the Central Committee of the Communist Party of the Soviet Union managed only to state the necessity of improving the situation with the development of the Tatar language, but failed to put anything into action. By the early 1960s, as the limitation of liberal reformations in the country was becoming more obvious, the creative workers of

the republic were rebuked 'for their ill judgments about derogation of the Tatar people's interests'. In the early 1960s, the terminological commission, which was actively working on upgrading the Tatar alphabet in the late 1950s to bring it in line with the norms of the Tatar language, was disbanded. During the same period, the authorities took other measures against the work of linguists and journalists who were fighting for the integrity of the Tatar language and confronting the process of its artificial degradation by which Tatar concepts were being replaced with Russian and foreign terms.

In 1960, Moscow declared that the decision of the Plenum of Regional Committee of the Communist Party of the Soviet Union 'On the status and means of improving the work of Tatar general education schools' (May, 1958) was incorrect.

Regarding the abolishment of the decision, F. Tabeev, who in 1960 replaced S. Ignatyev as the First Secretary of the Tatar Regional Committee of the Communist Party of the Soviet Union, commented: 'The implementation of this erroneous decision could have led to national narrow-mindedness, isolation, decreased demands of Tatar schools regarding advanced Russian classes' [SA HPD TR, Fund 15, Inventory 39, File 129, Sheet 7]. The official position of Tatarstan was defined with internationalist phraseology. The public speeches of the republic's top officials were full of praise for the ongoing national policy and its beneficial influence on the republic. While describing the process of 'progressive rapprochement of nations during the period of building communism' in one of the meetings of the Party core group, F. Tabeev stated: 'The Republic has a good basis for international education. Our every production collective is multicultural, there is no separation by nationality or domicile, children of different nationalities grow up in the same kindergartens, and look, how many intermarriages there are' [SA HPD TR, Fund 15, Inventory 7, File 4528, Sheets 23, 25].

One of the signs of the ordinary people being dissatisfied with the new turn in language policy was the collective letter to the Regional Committee of the Communist Party of the Soviet Union,

sent by the students of the Usadsky Agricultural School in 1961. 'Students who want to study in Tatar, — the letter said, — are getting enlisted in Russian groups, their comrades enlisted in Russian groups, sometimes have to leave school and go back home... It is not acceptable that a person cannot get education just because he does not speak Russian. This did not used to happen here before. Such practices have started here only since autumn, 1960' [Ibid., Inventory 42, File 20, Sheets 14, 14 reverse]. However, over the following 20 years the situation with language only became worse.

The change in the country's political leadership in 1964 revived the hope, especially amongst the Tatar intelligentsia, of enhancing the national status of the republic. Tatar writers once again began to address this issue to various authorities, also due to adoption of the Constitution of the USSR (1977), RSFSR (Russian Soviet Federated Socialistic Republic) and TASSR (Tatar Autonomous Soviet Socialistic Republic) (1978). The relationship between the republic's administration and intelligentsia regarding this issue is brilliantly captured in the work by A. Eniki 'Before the sunset', where he described his dialogue with the Chairman of the Presidium of the Supreme Soviet of the Tatar Autonomous Soviet Socialistic Republic, S. Batyev, about the advisability of sending his letter to L. Brezhnev regarding the status of Tatar Republic [Eniki, 1996, pp. 119–121]. The story of the aksakal of Tatar culture shows that the republic authorities were upholding the position of profanation and not reacting to the attempts of national intelligentsia to raise and resolve pressing ethnopolitical problems.

A detailed letter about the transformation of the Tatar Autonomous Soviet Socialistic Republic into a union republic was sent to L. Brezhnev by the veteran of the Great Patriotic War, communist Gainulla Yafayev. He supported his proposal with six paragraphs proving the inadequacy of the autonomous republic status: there are the differences between union and autonomous republics in legislation concerning representation in the Soviet of Nationalities of the USSR Supreme Soviet. The fact that the Tatar Republic does not have an Academy of Sciences or a film studio, insufficient popularization of works

of Tatar culture on Soviet radio and television, the absence of a Tatar ASSR pavilion in NEAE (National Economy Achievements Exhibition)²⁴. It is interesting that Tatars living in the Tatar Republic, also sent proposals on the re-establishment of the autonomy of the Crimean Tatars. [SARF, Fund A259, Inventory 46, File 7012, Sheet 108]. As far as the official position is concerned, it is important to note that the RSFSR administration approved the drafting of the Tatarstan Constitution project as a union republic. This was discussed during one of the sessions of the Academic Council for National Problems under the Section for Social Sciences of the Presidium of the USSR Academy of Sciences [Drobizheva, 1997, p. 69]. However, neither in the middle of the 1960, nor in the late 1970s, at the peak of Brezhnev–Suslov conservatism, was the issue of transforming the Tatar Autonomous Soviet Socialistic Republic into a union republic resolved.

While the tone of the official position with regard to the achievements of national policy was becoming more positive, the oppositional sentiment of the society was growing stronger. However, most of these sentiments were mainly 'underground' in nature. The intelligentsia distanced itself from the authorities. Its members formed social fringe groups with their own independent assessments of events, their own cultural interests and internal relations. National problems were discussed at literary evenings, creative professionals conventions, in the clubs and during informal meetings of like-minded people. In the 1960s, the creative intelligentsia undertook trips to Bolgar, where amongst the ancient ruins, the acute awareness of the burning issues was felt in a different way, and they were discussed with particular frankness. The members of Tatar intelligentsia discussed not only the about burning issues. In 1964–1965, a Tatar fringe group was active in the republic. It tried to encourage a sense of national identity amongst Tatars, living outside the Republic, by providing them with Tatar literature, newspapers and magazines from the republic [Gallyamova, 1997 a, p. 202].

²⁴ From the archive of R. Amirkhanov, made available to the author in 2000

The Tatar intelligentsia not only talked about the worrying state of national culture, but also tried to take actions, while further distancing itself from the authorities. Its members formed social fringe groups with their own independent assessments of events and their own cultural interests. In August, 1964, the KGB (Committee for State Security) under the Soviet of Ministers of the Tatar Autonomous Soviet Socialistic Republic received a report concerning a group of young engineers, who were expressing their dissatisfaction with the cultural and language situation in the republic. The group consisted of Taufik Aydi, an operator of the 'Orgsintez' factory, who later became a writer, and employees of the Central Design Bureau under the Kazan Optical Mechanics Factory (KOMF), E. Zaynullin, M. Mukhametzyanov and Khasibullin. One of the KGB (Committee for State Security) reports to the Tatar Regional Committee of the Communist Party of the Soviet Union mentioned that T. Aydeldinov was known among many young Tatars for his reputation as a 'theorist and advocate for interests of national culture'. According to this report, the main function of T. Aydi was to write both anonymously and on behalf of the group, letters to the Party and state authorities about the oppression of Tatar people. The author pointed out the small number of radio programmes in Tatar, the lack of Tatar films, Tatar philharmonic orchestra, All-Union Tatar newspaper, and insufficient publishing of books by Tatar writers.

The members of this fringe group were under real surveillance. According to the records of the state security apparatus, during his speech at the literary evening in the Community centre in Derbyshki on 29 October 1964, E. Zaynullin sharply criticised Professor M. Zakiev for writing that it was necessary to enrich the Tatar language with Russian vocabulary. On 27 January and 18 February 1965, at the literary evenings in the same Community centre Khasibullin and M. Mukhametzyanov spoke against the official position regarding the language issue. In March, 1965, during the readers' conference in the republic library, E. Zaynullin once again pointed out that the Tatar literary language was 'losing its face

and becoming Russified' [SA HPD TR, Fund 15, Inventory 7, File 85, Sheet 14]. At the crowded literary evening, dedicated to the memory of G. Tukay, in April, 1965 in the same Community centre, E. Zaynullin and M. Mukhametzyanov made speeches, which the KGB (Committee for State Security) referred to as the 'propagation of national narrow-mindedness'. None of the people at the evening, and there were many prominent members of creative society, for instance, Kh. Tufan, G. Latyp, G. Khalit, objected. This meant that the speakers were expressing the general sentiment of all [SA HPD TR, Fund 15, Inventory 7, File 85, Sheet 15].

In April 1965, T. Aydi was invited to the Leninsky District Committee of the All-Union Leninist Young Communist League, where he continued to stand his ground, while talking about the Tatar culture falling behind the Middle Asian cultures and importance of creating an environment for higher education in Tatar. Later, in June 1965, M. Mukhametzyanov and E. Zaynullin were invited to the notorious 'Chyornoye Ozero' ('Black Lake') for a precautionary conversation with the KGB (Committee for State Security). They continued to maintain their attitude, when talking about the decay of Tatar education and that there was no Tatar newspaper in the Kazan Optical Mechanics Factory (KOMF), where they worked. The conversation ended with a warning to M. Mukhametzyanov and E. Zaynullin that if they failed to realize their 'mistakes', then they would use other enforcement actions.

However, even after the precautionary conversation with the KGB (Committee for State Security), T. Aydeldinov, E. Zaynullin and M. Mukhametzyanov, despite giving up public speaking, continued 'secret nationalistic manipulation' of citizens who were in contact with them. For instance, in summer 1965, T. Aydeldinov and M. Mukhametzyanov had trips to other districts of the Tatar Republic as newspaper and magazine distributors. In November–December of the same year, M. Mukhametzyanov visited the Moscow mosque a few times, where he persisted in 'actively manipulating its clergy in a nationalistic way'. The report also included information about those who fell under their influ-

ence. For instance, there is information about an artist Yakupov, who had a diary, where he wrote about his views on the national issue. One of his notes was included in the report: 'While this state exist, Tatars can never be free' [SA HPD TR, Fund 15, Inventory 7, File 85, Sheet 15].

Judging by the report, the fringe group discontinued its activities only in late 1966–early 1967. In November 1966, after the KGB (Committee for State Security) received a report that T. Aydel'dinov 'had many documents of interest', and his flat was secretly inspected. As a result, they found and photographed many manuscripts and copies of petition letters to various authorities, in which he, using numerous statistics and reference data, gathered evidence of the humiliated condition of the Tatar nation. Afterwards, precautionary conversations were held not only with T. Aydel'dinov, M. Mukhametz'yanov and E. Zaynullin, but their wives as well.

This 'nationalistic group' was not alone in its intention to resist ethnic assimilation. There were other bold persons in the republic who openly expressed their disapproval of the national policy. In 1968, leaflets were scattered at the Republic Congress of Writers held at the premises of Tatar theatre. They contained demands for the organization of a Tatar youth magazine. The leaflets were written by young writers R. Valeev, Z. Malikov and M. Mansurov [Idel, 1994, No. 7–8, pp. 21–23]. While giving them credit for their personal courage and dedication, we cannot ignore the fact that their oppositional activities coincided with the time of modernization of the Soviet regime, rather than its consolidation and liberation from relics of the old order. The regime had won and it did not need to resort to such forms of crackdown on opponents as repression. However, of course, the authorities could not ignore the bold statements about the decay of Tatar culture being linked to the political environment in the country. Opposition activists were brought to the KGB (Committee for State Security) many times for so-called precautionary conversations. Nevertheless, this did not change the social behaviour of the 'delinquents', suggesting that officials were quite trusting of them. Perhaps, this was because the activities of 'nationalistic groups' had little social resonance.

The oppositional nature of the national intelligentsia was also more generalised. This manifested itself in the works of Tatar intelligentsia as a confrontation with conformism. For example, the editors of the 'Kazan utlary' ('Kazan lights') magazine often published articles on themes that were not exactly approved by the authorities. The magazine caused quite significant public resonance with its publication of the discussion about the origin of the Syuyumbike tower, which was a hot topic throughout the entire Soviet period. The discussion was started by well-known Tatar artist, G. Shamukov, who wrote an article where he convincingly proved the Tatar origin of the tower.

In July 1969, I. Sibgatullin, from Kazan, set himself the same aim in a letter to the Supreme Soviet of the USSR and also to editors-in-chief of the central newspapers. Referring to numerous sources, he supported the conclusion that the Syuyumbike tower was an original monument of 'Tatar domination' in Kazan, being a minaret of the 'Muraleev mosque'. I. Sibgatullin continually addressed a wide range of official authorities, referring to double standards of the internationalism policy, that allowed insults of Tatars' national feelings in Russian literature. He demanded measures be taken against Russian writers Boris Shergin (author of 'Ilya Muromets'), Anatoly Ananyev (author of the novel 'Tanks go rhombus'), who allowed themselves, according to him, 'to insult the national dignity of Tatars' [SA HPD TR, Fund 15, Inventory 7, File 644, Sheets 27–29].

In the post-war decades, the tendency to consider centuries-old Tatar culture irrelevant was rapidly gaining traction in the Tatar Republic. This was especially the case amongst the intelligentsia as the most educated social category. Their spiritual world was progressively becoming modeled on the basis of Russian and foreign cultures seen through a filter of official ideology. The Tatar nation which always suffered a 'presumption of guilt', was clearly undergoing a process of intensive cultural mutation. The underestimation and often disregard of national identity and interests, the unification and standardization of spiritual life, accompanied by the loss of ethnic forms of self-expression, were leading

towards the consolidation of nihilistic attitude towards Tatars' own nationality, native language, culture and traditions. The feelings of national pride, honour and dignity of Tatars in the educational process were gradually atrophying. For example, in 1975, 183 Tatarstan middle schools were named after Z. Kosmodemyanskaya, 67 after O. Koshevoy, whereas only one school was named after G. Gafiatullin who had repeated the exploits of A. Matrosov. Only 48 out of 993 pioneer brigades were named after distinguished compatriots [Andreeva, 1989, p. 101].

In terms of 'growing internationalization', the number of Tatars fluent in Russian was rapidly increasing, inevitably leading to the native language being superseded from the general education schools. In the mid-1960s, the majority of school students were children of working class Tatars, who were fluent in Tatar, but preferred to study in Russian schools. According to results of surveys carried out in Kazan factories, almost 88% of children from working class Tatar families were studying in Russian. Many Tatars tried to not demonstrate their nationality. Barely any Tatar could be heard on the city streets, the urban youth was changing their names to make them sound Russian.

Nevertheless, in the 1980s, the general public of the republic continued expressing their disapproval of the language situation. In particular, a letter was written by D. Kasimov, addressed in 1980 to the Regional Committee of the Communist Party of the Soviet Union, in which he noted: 'Tatar children, raised from the very early years in Russian nurseries, Russian kindergartens and Russian schools, lose their national feelings, native language, native culture, way of life etc. The Tatar nation of the republic, native people of our land, was and is now being intensively Russified' [SA HPD TR, Fund 15, Inventory 8, File 1573, Sheet 64]. Not only the Tatars referred to the importance of learning and speaking the Tatar language. For instance, judging by the letter of A. Katsyuba, it is becoming clear that people of non-Tatar nationality had almost no chance of learning Tatar even in Kazan. In her letter to the 'Vechernyaya Kazan' ('Evening Kazan') (1981) she wrote: 'I have been living in Kazan for the

most part of my life, but I cannot speak Tatar. It took me so much effort to find a self-teaching guide by R. Gazizov, published in 1960 in an edition of 6 thousand copies. ... with its help I learned the grammatical system of the Tatar language and gathered some vocabulary'. Further the reader asked that some sort of courses be arranged, because, as she wrote, 'I am not alone in my wish to learn Tatar' [Vecernyaya Kazan, 1981, 20 January].

The 'blurring' ethnic image of Tatarstan was pointed out by a Tatar man from Kazakhstan who wrote to the Tatar Regional Committee of the Communist Party of the Soviet Union: 'Two years ago (in 1978. — A.G.) I had a business trip and was lucky to go for the first time in my life to the homeland of my ancestors, Tataria, and, of course, to Kazan. What a glaring contrast with Almaty! Almost all the visual propaganda, advertisements, all the banners, titles of cultural and social facilities and others are only in Russian. If it was not for the greeting in the railway station 'Rakhim itegez Tatarstanga!' ('Welcome to Tatarstan!') and the sweet conversatoin of old ladies in the buses and trams, I might not have believed my luck. Why and for whom does tovarishch R. Sabirov suggest in the pages of 'Pravda' ('Truth') that the future city for the builders of the Tatar nuclear power station be named Kamskiye Polyany (Kama Meadows)? Maybe Nizhnekamsk, Naberezhny Chelny, Zelenodolsk, Chistopol, Spassk and so on and so forth are enough?' [SA HPD TR, Fund 15, Inventory 8, File 1573, Sheet 20].

In the 1960–1970, the generation born after the Revolution was entering the phase of active social and working life. There are young people who have no experience with war. Bearing this in mind, the authorities placed special emphasis on glorifying the role of the Bolsheviks in the Revolution, Civil War and the Soviet people in the Great Patriotic War. The propaganda was reaching its peak especially on the cusp of anniversary dates linked to the post-October history. At those times there were many public political readings, visual lectures, events linked to revolutionary, military and labour glory. An entire series of pompous events

was arranged for the anniversaries of the Great October Revolution and the Great Patriotic War.

The Tatar Republic had particularly loud and grandiose celebrations for festivals commemorating Lenin. Many historical places were named after him: the Lenin memorial house in Kazan and Lenino-Kokushkino, the Lenin memorial in the Kazan University. It became a tradition to use those venues for initiating children into the Pioneer movement, the Komsomol and for conferences on Lenin-related subjects. Lenin lesson, Lenin merit, Lenin readings — after the discrediting of the Stalinist personality cult, these were some of the most used terms in domestic policy sector.

On 16 December, the auditorium of Kazan State University hosted traditional meetings in memory of student declarations in 1887 in which Vladimir Ulyanov participated as a first year student in the law faculty of the KSU. The life and work of V. Lenin were set as an example for students in the city schools. The idolization of the leader of the World Proletariat had no limits. In the 1980s, there were about 20 monuments in Kazan, dedicated to him [Vecernyaya Kazan', 23 October 1987]. Only two of them, erected in 1954 in front of the main building of the Kazan State University and on the Ploshchad Svobody (Freedom Square) had any artistic value. The culmination point of perpetuating the memory of Lenin was the construction of a huge red building of Lenin memorial on the Kazanka riverbank among the slums of Kazan. The poet, Yevtushenko ominously referred to it as a crematorium. In fact, this massive red-stone building served as a 'temple' of communist ideology for only a short time. Soon after its construction, its monopoly along with the state system collapsed and the building was transformed into the National-Cultural Center.

Besides the events dedicated to Lenin, a major part of Kazan's political life was occupied by celebrations of the anniversaries of Tatar revolutionaries and those, who were considered their predecessors: Kh. Yamashev, G. Kulakhmetov, G. Ibragimov, M. Gafuri, K. Nasyri, M. Vakhitov.

An important step was the introduction of Soviet rituals. In the mid-1960s, there were

persistent attempts to arrange festive farewell events for those leaving to join the army, passports awards, honouring of working dynasties, farewell events for retirees, ceremonies of marriage registrations and registration of newly-borns. On 18 November 1965, the authorities established a 'Park of Newly-weds' by the River Harbour. Similar parks were founded in the Leninsky and Kirovsky districts of Kazan.

However, people were not in favour of ideologically-oriented events, even if they were free and sometimes on a very high professional level. For instance, the political clubs 'Rodina' ('Homeland'), 'Prometey' ('Prometheus') and 'Globus' ('Globe') were not popular, since the young people did not see them as their own, authentic. The futility of ideological events was proved by poor attendance at the stage plays on historical revolutionary themes. For example, the revolutionary patriotically-themed stage play, performed in the Kachalov theatre, 'Cities of the wind' by A. Kirshon, which was outright politically pretentious, failed to resonate with the audience: People began to walk out of the auditorium. The same happened to the stage play 'Take care of the white bird' about Komsomol N. Miroshnichenko [Khakimov, 1989, p. 75]. However, performing groups were obliged to have ideologically-themed works in their repertoire. In the latter half of the 1970s, the Kamal Theatre staged the plays 'Invasion' by L. Leonov and 'Bolsheviks' by M. Shatrov. In December 1964, the Tatar State Philharmonia arranged a concert lecture 'Musa Dzhaliil and Tatar music' as part of the activities of cultural universities. All of them were held in half-empty auditoriums with only about 20–30 people [SA HPD TR, Fund 15, Inventory 7, File 354 a, Sheet 6].

In 1965, the Tatar Regional Committee of the Communist Party of the Soviet Union criticized the philharmonic society for not popularising the best pieces of Soviet composers, writers and poets. In addition, popular performers of folk songs, A. Avzalova, D. Salyakhova, Z. Basyrova, G. Rakhimkulov and others did their part by performing 'mainly frivolous songs' [SA HPD TR, Fund 15, Inventory 7, File 354 a, Sheet 6]. The authorities censured the collective of the

philharmonic society for their unflattering attitude towards Soviet reality. In 1960–1970, the works of composers were often blamed from the official tribune for being predominantly sad and melancholic and having no social message. Besides, the philharmonic society was criticized in the middle of the 1960s for the small number of communists in its ranks: out of 200 people, there were only 14 communists and 2 candidates to the Communist Party of the Soviet Union [Ibid., Fund 15, Inventory 354 a, Sheet 9].

Generally speaking, social passivity, skepticism and political apathy were taking over the general public. An unwillingness to participate in socio-political activities was reflected in massive escapism. People began to 'withdraw' into themselves, their family, leaving their intellectual jobs to becoming loaders, yard keepers and so on.

The weak civic standpoint was directly caused by having no opportunities to express it. Clear proof of this was the closure of the school of communication in the Youth Centre in the 1970s, as a result of the immoral behaviour of the principal. In fact, according to the recollections of witnesses, the centre brought together ingenuous young people who raised thorny political questions and had interesting discussions about burning issues.

Even clearer proof of the dangerous consequences of expressing a fundamental civic stance can be seen in the fate of R. Ilyalov from Kazan, who then was a special correspondent of the 'Uchitelskaya gazeta' ('Teachers' newspaper'). R. Ilyalov dared to openly protest against the Soviet invasion of Czechoslovakia. Two weeks before the famous demonstration organised by dissidents in Moscow in August 1968, during the time of events in Prague, R. Ilyalov wrote a warning letter titled 'Everyone is a master in his own house' about the upcoming aggression, expecting, that would be published in the 'Rude pravo' newspaper. Having received no answer, Ilyalov wrote another letter 'Not help, but occupation' addressed to publications of several communist parties. Both letters ended up in a completely different institution and were estimated to be 'anti-

Party'. Ramzi Ilyalovich wrote a weighty letter to the Central Control Commission under the Central Committee of the Communist Party of the Soviet Union, where besides the Soviet aggression in Czechoslovakia, he pinpointed the flaws of the political order in the USSR [SA HPD TR, Fund 15, Inventory 7, File 645, Sheet 15]. For his freethinking he was subjected to 'social condemnation' and he paid for it with his party membership card. After his personal case was heard at the session of the Bauman District Committee of the Communist Party of the Soviet Union on 21 November 1968, R. Ilyalov was expelled from the Party. This decision was abolished only 21 years later.

Naturally, the fact that there were no similar incidents of a dissident nature in the republic does not mean that the citizens had no oppositional sentiment. The increase of negative processes in the society became the topic of hushed discussions and arguments in the university auditoriums, institute laboratories, construction bureaus, student dormitories and finally just at home in the kitchen. People were trying to peer behind the ideological curtain by listening to the jammed broadcasts of western radio stations: 'Voice of America', 'BBC', 'Deutsche Welle'. Sometimes this ended with precautionary conversations in the 'Chyornoye Ozero' ('Black Lake'). For instance, the report note written by the Chairman of KGB (Commission for State Security) under the Soviet of Ministries of the Tatar Autonomous Soviet Socialist Republic, A. Bichurin, in the 1970s, tells about the preventative measures taken against an assembly worker of the Chistopol factory, A. Ulitin, the Kazan Institution of Civil Engineering teacher, B. Kalygin, painters A. Prokopyev, N. Utkin, the Communal Accommodation Department electrician of the Gorky Plant, S. Potapov, Deputy Head of the 'Orgsintez' Plant, V. Yablokov, and a tram park worker, V. Smirnov. The main reason why these people were summoned to the 'Chyornoye ozero' ('Black Lake') was their interest in information disseminated by foreign media, recorded by special services and deemed anti-Soviet [SA HPD TR, Fund 15, Inventory 7, File 85, Sheets 52–60].

According to another official document, interest in western music was also considered a crime. This can be seen from an abstract from the KGB (Commission for State Security) report: 'It is easy to slip from idleness and parasitism to an apolitical state, and from that to committing a crime. Recently a parasitic group of 42 young people were caught in Kazan listening to the 'Voice of America' and 'BBC'. They were tape recording American and British heartbreaking jazz music and selling them off-the-books in the record stores' [Ibid., Fund 15, Inventory 41, File 140, Sheets 8–9].

'Radio hooliganism' was very common in Kazan. This involved 14–18-year-old teenagers making crude radio transmitters and, using common radio receivers. They went on air using names which confronted official ideology, for example, 'Dollar', 'Christ', 'Ragged boot', 'London', 'Various-storey America', 'BBC'. These 'Radio hooligans' set up two-way radio communication and played recordings of wild jazz music of 'Atomic bomb', 'Tubercule bacillus', 'Dixon rock'. Radio hooliganism was so popular among the youth that usual methods of propaganda to combat them through the mass media were futile. On the contrary, they made them even more appealing to the public. According to the KGB (Commission for State Security), 'after a series of lectures, both personal and through media, the number of radio hooligans have increased'. Furthermore, the public expressed solidarity with the radio hooligans: 'The majority of parents... encourage them to practice radio hooliganism... Some people's judges show too much leniency when determining punishment for radio hooliganism and do not order the confiscation of the radio equipment from hooligans, basing their decision on

the fact that it belongs to the hooligans and not their parents. There have been some cases when the court orders are not being implemented by officers for various, often non-objective reasons',—a KGB (Commission for State Security) worker reported [SA HPD TR, Fund 15, Inventory 45, File 25, Sheets 2–5].

An important aspect of the life of youth in the 1960–1970 was events involving original song (guitar poetry). They did not have ideological messages and often expressed a critical attitude. The All-Union Leninist Young Communist League committees tried to guide this movement into the right direction by arranging original song competitions. However, the youngsters were much more keen on unauthorised trips to the countryside, where a guitar became a symbol uniting like-minded people. This period was a starting point for the careers of famous Kazan bards, L. Sergeev, B. Lvovich and V. Muravyov.

Naturally, the syndrome of consistent ideological pressure did not always lead to noble and attractive forms of social opposition. At times, young people who were indifferent to ill-fated ideological unions, clubs and committees, united in aggressive cliques. Randomly self-organized bands of provocative young people driven by the sole cult of violence spread across the entire country. However, particularly intense anti-social activities resulted in series of crimes, sometimes with tragic endings, which entered the headlines. They were to become notoriously as a 'Kazan phenomenon'. One of the important factors here was the atrophy of national identity, which among other crucial functions had a function of self-education, teaching the notion of national conscience and giving moral and ethical guides.

CHAPTER 8

Socio-economic development of the Tatar Autonomous Soviet Socialistic Republic in 1945–the middle of the 1980s.

Alfiya Gallyamova

Industrial development. In the latter half of the 20th century, the Tatar Autonomous Soviet Socialistic Republic stood out among other regions of the Soviet Union with its rapid industrial development. It was attributed to the post-war state strategy according to which the republic was an important administrative base, as well as to the establishment oil-production in the south east and Kama River industrial area in the north part of the republic. Even during the first post-war decades, the growth rate of the large scale industry gross product in the Tatar Autonomous Soviet Socialistic Republic (Tatar ASSR) was much higher than the average for the USSR. So, while in the USSR it increased 45.3 times in 1959 compared to 1913, in the TASSR it increased 146 times [Zajcev, 1957, p. 43].

In the latter half of the 1940s, the construction of new industrial plants, targeted at all-Union needs, began to develop in Kazan which was to remain the centre for the republic's only industrial hub at Kazan-Zelenodolsk. The military industrial complex occupied a firm place in the economy of the republic. It was centre around the Gorbunov Aviation Plant, which in the 1940s had begun the production of strategic Tu-4 bombers capable of carrying nuclear weapons [SA HPD TR, Fund 26, Inventory 33, File 40, Sheet 23]. In 1953, the plant was the first in the country to develop the Tu-16 high-speed jet bombers. For many years they were at the core of Soviet military strategic aviation. Aircraft produced in the plant have won many aviation world records. In 1955, a specialist design department was set up in the aircraft industry system in Kazan specialising in designing specific radio measuring equipment for radar stations. The department developed projects codenamed

'Uran' ('Uranium'), 'Grunt' ('Soil'), 'Akatsiya' ('Acacia'), 'Floks' ('Phlox'), 'Volt'. Moreover, the factory made a great contribution to the development of civil aviation. Since 1956, the plant has manufactured the Tu-104, the world's first jet airliner. For the ten years which followed, the plane was one of the most long-distance airplanes of the Aeroflot. In 1957, the factory developed the Tu-110 and Tu-110A high-occupancy jet airliners and antenna systems for radar stations 'Tyulpan' and 'Dunai' [SA HPD TR, Fund 15, Inventory 42, File 11, Sheet 16].

The second most important part of the MIC was the Engine Plant. In 1945, its staff started working on designing the RD-20 axial flow compressor jet engine, the first in the country. Starting from 1946, the plant embarked on serial production of these engines, and, in 1950, took the first steps in developing modern jet engines with a VK-1 radial flow compressor. In 1953, the factory began production of AM-3 engines for high-speed long range bombers. In 1957, it designed a new modification — the RD-3M engine, which provided long range, high speed and flight altitude [SA HPD TR, Fund 15, Inventory 37, File 162, Sheets 1–3].

The Zelenodolsk Shipbuilding Plant manufactured anti-submarine ships. The shipyard designed a 'Sokol' high-speed hydrofoil, unparalleled in both national and foreign shipbuilding industry. The plant had a design department which developed strategically important pilot projects for the formation of the country's anti-submarine warfare. By the beginning of the 1960s, the Zelenodolsk plant was producing 'Loza', 'Onega', 'Dozor', 'Sura', 'Kuloj', 'Uviko', 'Biko', 'Trenazher', 'Tulpan' radars and test equipment for missile hydroscopes [SA HPD TR, Fund 15, Inventory 42, File 11, Sheet 20].

In the 1950s, the Helicopter Plant began to developing its production. In 1957–1958, it increased the lifespan of an attack helicopter and, in 1959, the plant began manufacturing passenger helicopters. The 'Radiopribor' Plant began the manufacturing of "Proton" guidance stations, 'Svod' short-range navigation radar, test equipment, video range finder unit TP-1, Chrome and Chrome-Nickel identification additional equipment. The Mathematical Machines Plant began serial production of devices of infra-low frequency, 'Granit-2' computing device and the M-20 electronic mathematical machine [Istoriya Kazani, 2004, pp. 214–215]. The production works, especially, the defense production, developed rapidly, especially the Plug Connector Factory, Pilot-Production Plant of Vacuum Engineering (from the latter half of the 1970s production associations 'Elekon' and 'Vacuummash') and others.

By the early 1990s, 40% of the republic's economic potential was made up by defense production enterprises [Sovetskaya Tataria, 1990, 15 December].

In the latter half of the 20th century, the south east of the republic found its oil 'vocation', and began actively to industrialize. The state placed strong emphasis on the reclamation of oil fields discovered in Tatarstan during the war years. This is clear from the amounts of money allocated to this sector. In 1951–1955, the state allocated 5 billion rubles to the oil-producing industry of the republic. This is more than it allocated to its entire industry from the beginning of industrialisation [Burnasheva, 1960, p. 258].

The volume of oil extracted in the Tatar Republic began to increase at much higher rates than in other regions of the country. While across the Soviet Union in the first half of the 1950s, oil production volume a little more than 2 times, in Tatarstan volume increased 21 times. By the mid-1950s, the Republic had become the undisputed leader in the country's oil-producing industry [Bajbakov, 1984, p. 199]. Tatarstan took leading positions not only in terms of the volume of pumped oil, but for its new technological solutions as well. In the 1960s the term 'Tatar school' was coined to denote the general recognition of the achievements of

the republic's oilfield workers in the production of 'black gold'. They were the first in the world to use circle water flood. In other words, they were pumping into the oil reservoirs water instead of mud allowing them to produce the cheapest oil in the country and save the state billions of rubles. Since 1952, the oilfield workers of Tatarstan have become the first in the country to fully switch from rotary to turbine drilling. As a result, the rates, achieved in the republic, exceeded comparable ratings of American drillers in similar geological conditions. It sparked the interest of Americans in the Soviet turbodrills, for which they later purchased a license. Thanks to the oil industry, by the mid-1960s, the republic was in first place in terms of gross product among other autonomous republics [SA HPD TR, Fund 15, Inventory 7, File 270, Sheet 16]. The great contribution to the establishment of oil industry in the south east Tatarstan was made by the first heads of 'Tatneft', A. Shmarev, V. Shashin and R. Mingareev.

By the late 1960s, the oil-producing industry reached its production peak and became a crucial part of the export resources of the country. In 1970, Tataria produced record amounts of oil at 100 million tons per year and maintained this high standard until the mid-1970s. In the beginning of the 1970s, only 5 countries in the world (USA, Saudi Arabia, Iran, Venezuela and Iraq) was producing more oil than Tatarstan [Zaripov, 1986, p. 121]. By 1971, the republic land interiors had produced 1 billion tons, in 25 years, while it took Russia 90 years to produce the first billion of 'black gold' [Zaripov, 1986, p. 121]. During the so-called Brezhnev period, the USSR economy was mainly supported by 'oil dollars'.

In the latter half of the 1970s, the development of oil industry in the republic began to slow down. The government focused on Tyumen oil in a commitment to extensive methods of modernization. The main flow of investments and equipment was directed to the development of oilfields in Western Siberia. Many skilled workers were sent there from the Tatar Republic. The oilfield workers of Western Siberia even had a saying: 'Samotlor-

skoye oil was developed with the help of three "T"s: Tractors, "Tatr" (Czechoslovakian dump trucks — author) and Tatars'.

From the very outset the industrial development of the oil region was clearly based on a model of Soviet modernization driven by directives and mobilisation. The continuously and rapidly developing exploitation of oilfields was not accompanied with major developments of the oil refinery industry in Tatarstan. Initially Tatar oil was sent to refineries in Bashkortostan, Kuybyshev (now Samara) and Saratov. However, when the oil output increased tenfold, these plants could no longer cope with the volume. In the late 1950s, the republic had constructed an extensive network of tank farms and oil pipelines. 1959 marked the beginning of construction of the famous 'Druzhba' oil pipeline. The first stage of the project was completed in five years. The oil pipeline consisted of three branches, exporting oil to Poland, GDR (German Democratic Republic) and Czechoslovakia.

The development of large-scale oil-producing industry in the republic was followed by the establishment of the gas industry. 1956 marked the beginning of the first stage of Minnibaevsky Gas Processing Plant, which processed associated petroleum gas. For many years, the Almetyevsk district had been the leading centre of the USSR gas industry. The development of the oil industry revived the industrial development of Bugulma, one of the oldest cities of the republic. In 1956, it resulted in opening of the Bugulma Mechanical Plant.

The chemical industry in the republic began to expand in the 1950s and 1960s. The construction of the Kazan plant 'Orgsintez' began in 1958. In 1965, it began production of its main product — polyethylene. The phenol and acetone production facilities began production even earlier, in 1963. This was to mark the development of the new petrochemical field. The chemical plants mastered the production of new types of synthetic rubber, high pressure hose, safety films, six-layer motion picture films for wide-screen picture and other products. The Kazan Industrial Rubber Products Plant, the Kazan Synthetic Rubber Plant, the Kazan Pho-

togelatin Plant and the Kazan Chemical Plant set the tone for the entire industry field.

The development of oil industry resulted in establishment of a new industrial region in north east of Tatarstan. It became known as the Kama Industrial Complex. It began with the Nizhnekamsk Petrochemical Plant, then the 'Nizhnekamskshina' Plant producing synthetic rubber and tires for heavy vehicles and 'LiAZ' buses. The transformation of fertile lands in the north east of the republic into a gigantic construction site in the 1960–1970 was dictated by not only the proximity of oil-producing regions. The area chosen for construction of KamAZ was a mono-national region, where the vast majority of population was Tatar. The construction of Kama River Automobile Plant which began in 1969, was meant to showcase the brotherly cooperation of the USSR nations in building the material-and-technical basis for communism, thus defining the economic strategy of the country. People were recruited to work here from the various regions and republics. It was to some extent caused by the fact that the central authority wanted to mobilize the working resources of the region and consolidate their commitment and identification with the Centre. However, the construction of this Auto Giant on the Kama River was not just a result of economic expansion of the Centre. It was also the result of the aspirations of the leaders of the republic who strongly encouraged it while maintaining their adherence to the policy of technocentrism. This policy was predominant both in economic policy as well as public sentiment.

In the same way that all the headlines in the 1950s were taken up by the oil-producing south eastern part of the republic, in the 1970s, the media regularly covered the process of industrial reclamation of its north eastern part. The mass media stressed the unprecedented scales of the Kama Automobile Plant, exceptionally high rates of construction and installation works supported by colossal state investments. The workers in thousands of enterprises throughout the country worked under the slogan 'Orders of KamAZ to be ready in advance!' The establishment of KamAZ, as well as of the

entire Kama River Industrial Complex, was in many ways experimental. Essentially, the construction sites were a testing area for radically new solutions in construction, an all-Union laboratory for technological and organizational innovations. The designing and construction of the Auto Giant involved about 25 ministries and institutions, more than 100 research and development institutes and about 150 building and construction departments. The construction was carried out by 5 thousand enterprises of the USSR, the equipment was supplied by 867 plants from 307 cities of the country. The construction involved workers from 96 cities and regions [Gallyamova, 2007 a, p. 50]. In the 1960s and 1970s, Naberezhny Chelny often held All-Union Schools for advanced labour management practice. The concentration of huge numbers of people and material resources made it possible for the Kama Auto Giant to achieve its first products in 1976, even though construction had started only in 1969. The commencement of the KAMAZ works was specifically timed to coincide with the 25th Congress of the Communist Party of the Soviet Union. In Soviet times, the Communist Party of the Soviet Union Congresses, held once in 5 years, celebrated outstanding labour achievements. Party congresses were regularly marked by a convoy of new 'KamAZ' automobiles, displayed in Moscow on the Red Square by the Spassky tower of the Kremlin, to show the highest achievements of the country. In a short period of time, the workers built six factory plants which were unparalleled throughout the world. By April 1980, the plant had manufactured 'KAMAZ' number 150,000; 500,000 by 1984, 1,000,000 by 1988 [Gallyamova, 2010, p. 87].

With the development of motor vehicle industry in the Kama River region the share of mechanical engineering industry in the industrial potential of the republic considerably increased. By the mid-1980s, it amounted to 40% of the industrial output in Tatarstan. However, the establishment of KamAZ was also an important event in the economic history of the late Soviet period, from a national point of view as well. Until the mid-1970s, the country's fleet

of trucks consisted mainly of low-capacity vehicles. KamAZ manufactured heavy vehicles and tractor units, as well as high-volume and large capacity road trains. The massive production of diesel engine vehicles contributed to the economy of the country's fuel and energy resources. By the mid-1980s, 'KAMAZ' vehicles carried out the main stream of haulage in the USSR. The country overcame the acute deficiencies in cargo transport.

Against the background of the epic transformations in heavy industry which significantly expanded geographically within the republic, the changes in manufacturing aimed at satisfying the needs of the population, were not as impressive. The external appearance of many old factory buildings was a sight for sore eyes. Many of them had been constructed before the Revolution and continued working with even older equipment. Light industrial and food manufacturing enterprises used outdated technologies and old machinery, low-quality feedstock and archaic materials.

These fields involved the highest percentage of human labour. In general, the proportion of human labour in the republic's industry remained quite high. Every year thousands of measures aimed at the technical improvement of production processes were introduced. However, any increase in manufacturing volume was achieved by increasing manpower. In the early 1980s, human labour amounted to 63% in the meat industry association and 62% in the baking industry. By the end of the Soviet period, the number of unqualified workers in the republic's industry amount to 50,000 persons. 1 in 2 people or 1,685,000 were involved in manual work, and 614,000 or every second person worked in construction [Programma stabilizacii, 1991].

By the early 1980s, only a tenth of all plants and factories were automated or mechanised. Even in the leading enterprises of the republic, only a 40–50% increase in output was achieved through scientific technical developments, although, according to the target plans, this number was planned at 75–80%. In the 1970s and 1980s, in many energy industry, transport and construction facilities, the percentage of ma-

chinery which had been in use for more than 20 years old, not only failed to decrease, but even increased. By 1985, the ratio of replacement of morally and physically outdated equipment in the republic amounted to 1.8% per year. This was approximately three times less than needed [Usmanov, 1987].

The lack of incentives for sustainable management resulted in huge economic losses. By the mid-1980s, annual wastage amounted to 290 thousand tons of ferrous metals, more than 0.5 million cubic metres of wood, and huge amounts of deficient plastic materials, as well as tens of thousand tons of textile and many others [Sovetskaya Tataria, 1989, 26 September]. The amount of industrial waste in the end of the 1980s reached 8 million tons or 2.2 tons per person. Almost none of it was recycled [Programma stabilizacii, 1991]. Losses from faulty goods were reaching threatening levels. Notably, the highest level losses due to faulty goods—77% from the total industry volume—was in the progressive mechanical engineering industry [SA HPD TR, Fund 15, Inventory 45, File 41, Sheets 37–40]. Electronic computers and watches, manufactured in the republic, were non-competitive in the international market. Low-quality products were produced in the Compressor Plant, the Production Enterprise 'Tasma', 'Organic synthesis', Vakhitov Chemical Plant, 'Nizhnekamskshina'. The light industrial goods were not in demand not only internationally, but in domestic market as well. For instance, while the Spartak shoes were collecting dust on the shelves during the times of acute deficiencies in shoes, people were spending hours in queues for imported shoes.

The smooth work of fast developing production enterprises was notably hindered by the excessive centralisation of the administration, parallelism, regional contradictions and confusion in economic relations. The new government which came to power in October 1964, tried to create a mechanism of internal industrial self-regulation by introducing principles of material incentives in the end product and economic accounting. The expansion of industrial independence and real levers for motivating the personnel had a positive impact

industrial production output of the republic in the latter half of the 1960s. The total volume of output in the latter half of the 1960s increased by 66%, workforce productivity 1.5 times and the over-plan output came to 220 million roubles. In 1970, more than 80% of manufacturing increase was achieved by increasing the performance of each worker [SA HPD TR, Fund 26, Inventory 43, File 39, Sheet 71].

However, these numbers did not mean that industry sectors managed to overcome their old problems. The aggregate indicators for the republic's industrial development reflected its high rates, but at the same time its costliness. Between 1960 and 1989, industrial output in the republic increased 6.8 times, whereas workforce productivity increased only 3.8 times [estimated acc.: 70 let TASSR, 1990, p. 20].

During this period almost the entire territory of Tatarstan was involved in intensive processes of industrialisation. Prior to World War II, the republic had only one industrialized centre in the form of Kazan–Zelenodolsk Industrial Hub. In the 1950s, it was joined by the oil region. This led to a substantial change in the economic situation in the south east of Tatarstan. The 1970s brought the third industrial centre — the Kama River Industrial Complex. This led to the involvement of entire groups of the socially and ethnically homogenous Tatar rural population in industrial and construction sectors. By the mid-1980s, Tatarstan became one of the largest regions in terms of scientific, technological and economic potential. From being a supplier of grain, animal produce and hand-made goods, it became transformed into a region exporting various machines, dental appliances, watches, medications, typewrites, furs, chemicals, films. By the mid-1980s, more than 130 types of product were exported from Tatarstan to 82 countries throughout the world. By the end of the Soviet period, the Tatar Autonomous Soviet Socialistic Republic among 71 regions of the Russian Soviet Federated Socialistic Republic (RSFSR) occupied 11th place in terms of industrial development, 7th place in construction and 8th in terms of profit. The main economic indicators showing the per capita contribution of the republic to the eco-

conomic development of the country exceeded the average Union level. This included gross product by 14% and industrial production by 27% [Vecernyaya Kazan', 1989, 26 June]. However, specific trends in the industrial development of the republic, and the country in general showed that the problem of radical technical modernization had not been resolved.

Agricultural development. By the end of the war, the agriculture in the republic, as well as in Russia in general, was in a state of decline and in need of support from the state. There had been a sharp deterioration in the material and technical resources of the agricultural industry. However, during the post-war period the kolkhoz farming villages have once again become the main source for the creation of resources and workforce for industry as it continued to recover.

The severe drought in 1946 caused terrible suffering a large part of the country's territory including the Tatar Republic. There had been almost no rain in the spring and summer and as a result the grain crop in the republic amounted to 3.5 quintals per 1 ha. The potato crop amounted to 43 quintals and vegetables to 73 quintals per 1 ha. Consequently, the grain harvest crop was insufficient even for the seed crops provided to the kolkhoz collective farms, meeting only 43% of the required amount [National Archive of the Republic of Tatarstan, Fund 5894, Inventory 1, File 3431, Sheet 1]. Smaller scale droughts took place again in 1948 and 1949.

By the end of the 1940's, agricultural technology was still at a low level. In the early 1950s, spring crops were often sowed at spring ploughing time. Less than 50% of spring cultures were sowed at autumn ploughing time. There were years, for instance, in 1950, when large areas of grain and other crops were left unharvested, while huge amounts of milled grain on the threshing floors were ruined due to the lack of driers [Krasnaya Tataria, 1950, 15 September].

During the post-war period, there was a low level of electrification in the agricultural sector, even though the fourth five-year plan (1946–1950) included the massive construction of

small-scale rural power plants, wind power plants and heating stations. The plan was not technically viable and most work was carried out by horse and human labour.

Many farms were systematically unable to provide themselves with seed. In the early 1950s, using their own resources, the kolkhoz collective farms sowed 36–38% of the cultivable area [SA HPD TR, Fund 15, Inventory 30, File 6, Sheet 139]. In order to comply with and exceed grain supply targets, they had to give the seed grain to the state which in turn promised to allot seed loan later. However, the price for allotted seed grain much higher than the price, at which the kolkhoz collective farmers sold their grain in the autumn. The way it was delivered to the kolkhozs, as kolkhozniks recollected, was one of the worst memories of those years. Usually, the seed was allotted in spring, when the roads were impassable and the fields were flooded with spring waters. Hungry women and teenagers would drag the seed grain by hand sleighs from the state storage houses for 20–50 km. All of this had negative impact on the crop sector production indicators. As a result, the sizes of croplands decreased: in 1950, compared to 1940, they decreased by 12,000 ha [SA HPD TR, Fund 15, Inventory 30, File 6, Sheet 139]. During the fourth five year plan, the average grain yield in the republic did not exceed 5.3 quintals per 1 ha. In some years the result was very modest: in the drought year (1948), the yield amounted to 4.1 quintals, and in 1949 this number came to 4.6 quintals per 1 ha. It was lower than in the country in general, where the yield amounted to more than 6 quintals in average for 1946–1950 [Zelenin, 2001, p. 47]. The gross yield of grain in 1950 was estimated at 65 million poods, that is 2.5 times less than the target plans and amounted to only 83% of the gross grain yield in 1940 [SA HPD TR, Fund 15, Inventory 31, File 789, Sheet 79; estimated by: Narxoz TASSR, 1970, p. 71].

Animal husbandry was also in an advanced state of decay. None of the sectors in the republic was economically viable. Some of the kolkhoz farms did not even have buildings to house community herds. Thus the kolkhoznik farmers each kept a few heads of livestock in their

farmsteads. By early 1946, out of 4,255 kolkhozs of the republic, 4,210 had cattle farms, 3,878 pig, 4,194 sheep and 3,429 had poultry farms. The buildings mainly consisted of small houses, with cracked walls and leaking ceilings. They were typically no feeders and the animals were fed right off the floor with dirty raw potatoes or unmilled grain.

In 1950, the First Secretary of the Tatar Regional Committee of the CPSU(B), Z. Muratov, sent Stalin a letter about the terrifying situation in the countryside, showing with specific examples that the lack of economic interest of the rural population in social labour had led to the critical condition of agriculture. On 1 January 1950, deficiencies in grain supply in the republic amounted to 1,449.8 thousand tons, 3.9 thousand tons in meat supply and 242.6 thousand hectolitres in milk supply. In total, by the early 1950s, 2,000 kolkhoz farms in Tatarstan were lagging behind in production terms leading to huge deficiencies [Ibid., Fund 15, Inventory 31, File 15, Sheet 148].

The low levels of agricultural production showed that military-style mobilization of agricultural policy was falling short of expectations. The agricultural sector in the Tatar Republic, and the country as a whole, was characterised by negative development dynamics, in all performance rates such as: gross product, yield, animal farming productivity. Despite an improvement in the social production resource base, shown by an increase in almost all types of community livestock and agricultural machinery, the agricultural sector was deteriorating.

After Stalin's death, the new government of the country took serious measures to alleviate agricultural policy. According to the resolutions of the September (1953) Plenum of the Central Committee of the Communist Party of the Soviet Union, the tax system was changed, procurement prices for agricultural products were increased, regulations of obligatory supplies were decreased and the debts of the kolkhozs were written off. Resources for the development of the material and technical facilities in the sector were significantly increased as well. According to the latest studies by Rus-

sian agrarian specialists, whose opinion is hard to refute, the first five year plan after the September Plenum 1953 was the most successful and productive period of agricultural reform throughout the nation. It was aimed at resolving the burning economic and social problems of the countryside [Zelenin, 2000, p. 397].

However, the government was still committed to extensive development and the expansion of cultivated areas by reclaiming virgin and fallow lands of Kazakhstan, the Orenburg region and Bashkortostan. Hence, the main stream of investments, allotted for the development of agricultural sector, went to newly reclaimed areas. The Tatar Republic, being one of the old-arable regions, still lacked sufficient funds for modernization of the sector.

The establishment of oil-producing industry led to the redesignation vast expanses of the most fertile black soils in the south east of the republic. The most acute problem for the kolkhoz farms in the oil regions was the violation of their land use rights. The extent of the use of kolkhoz lands by the oil companies was often unreasonable, amounting to unauthorized land seizure, accompanied with outrageous mismanagement. The result was irreversible damage to farmlands and the environment. In the initial stages of oil field development, oil-recovery management was in an advanced state of decay and the issues of industrial drainage and waste treatment facilities had not been resolved.

The first resolution land legislation compliance in the region was passed by the USSR Soviet of Ministers in 1947. However, it is unlikely that it was efficient, since similar decisions were made in 1950, 1954 and by the same intervals in the following years up until the end of the Soviet era. Based economic modernization priorities in the country, the local party government, as well as the oil industry administration, were initially concerned with implementing plans to establish oil production, realizing that they would be held responsible for implementation the plans. On the other hand they realised that they would only be slightly admonished for land destruction. Vast areas of kolkhoz lands, fields, rivers and waters in the

oil regions were systematically polluted with oil and production waste. The lands were ruined and crops were damaged when the equipment and construction materials were transported to the sites. Eventually, the agricultural executives began to realise that 'oil fees' were beneficial for the farms: they could be used to resolve many of the internal problems of the kolkhoz farms.

Besides property losses, the oil industry damaged local kolkhoz farms by diverting a considerable part of the agricultural labour potential. By 1957, more than 400 thousand people of the rural able-bodied population left the countryside to work in the oil industry. As a result, due to acute shortage of manpower, many of the kolkhozs were unable to keep up with the demands of agricultural deadlines and incurred heavy losses of cultivated crops.

The situation in the agricultural sector of the republic in the mid-1950's was exacerbated by the imposition of economic cooperation conditions with the state which were less favourable than the neighbouring regions. This was particularly acute in terms of access to the MTS's. In the areas of the Tatar ASSR, located on the north side of the Kama River, the fixed rates of payment for tractor hire were twice that of the bordering regions of Udmurt, Mari, Chuvash Autonomous Soviet Socialistic Republics (ASSR) and Kirov oblast, which had the same climatic and natural conditions. For instance, in TASSR the fixed rate was 65 kg grain per 1 ha for ploughing, while in the neighbouring regions it was 35 kg. There was a similar situation was in the regions of TASSR to the south of the Kama River. Here, the soil and climate conditions were similar to the areas of the Chkalov, Kuybyshev and Ulyanovsk oblast regions. Nevertheless, the fixed rate of in-kind payment for grain cultures operation in the Tatarstan kolkhozs amounted to 65 kg per 1 ha at ploughing, against 50 kg for the kolkhozs in the neighbouring regions [SA HPD TR, Fund 15, Inventory 35, File 138, Sheet 149].

In 1954, the Tatar Regional Committee of the Communist Party of the Soviet Union made a request that the situation be reconsidered. Thus the rates of in-kind payment were

reduced for 27 northern districts of Tatarstan. However, even after that, they still were higher than in the kolkhoz farms of the Udmurt, Mari ASSR and the Kirov oblast. In the black soil areas the situation did not change at all. In 1956, the Secretary of the Tatar Regional Committee of the Communist Party of the Soviet Union, P. Urayev, submitted another request to N. Khrushchev to reconsider the issue in the southern districts of the republic. Moscow did not respond. The general public clearly sensed the humiliation of the republic in the agricultural sector. In 1957, Tatar writer, Sh. Mannur, in his letter to N. Khrushchev pinpointed the main issues in the agricultural development of Tatarstan. Amongst these he emphasized the excessive plans of state supplies for TASSR agricultural produce and their negative on the condition of the republic's agricultural sector and peasants.

In the mid-1950s, the agriculture sector in the republic was still lagging behind. Due to the lack of machinery, the sowing schedule of various crops extended up to 35 days, and the harvesting up to 60–70 days. The majority of kolkhozs sowed low-quality seed. For example, in 1957, 920 kolkhozs of the republic, or 50% of the total, lacked sufficient seed. Agricultural technology was at a low level: more than half of winter crops were not harrowed, and there was almost no mineral and only a small amount of organic fertilization. Inter-furrow land treatment and thinning of arable crops were performed in gross violation of agricultural schedules, with little frequency and not over the entire area. As a result, the republic did not meet the target of state supplies for grain, vegetables, sunflower, hemp and sugar beet. By the end of the fifth five year plan (1951–1955), the agricultural production not only failed to exceed even the 1940 target, falling short of it. For example, the average annual gross grain yield in the Tatarstan kolkhozs in 9 pre-war years (1932–1940) amounted to 19.2 million quintals per year, whereas in 10 post-war years (1946–1955) it amounted only to 14.4 million quintals [RGASPI, Fund 556, Inventory 14, File 83, Sheet 79]. By the mid-1950s, the grain yield in the republic was lower than the all-

Union level. Kolkhoz animal farming was in an advanced state of decay. In the mid-1950s, the republic failed to reach livestock targets on any animal species [RGASPI, Fund 556, Inventory 14, File 83, Sheet 81].

The decline in agricultural production led to the problem of intensification by reinforcing the material and technical resources. However, the Tatar Republic, among other regions of traditional agriculture, as it was mentioned before, did not have enough funds to overcome the backward state of agricultural sector. The industrial and agricultural strategies of the government preferred extensive methods. The government wanted to achieved a breakthrough in agriculture by expanding cultivable areas into reclaiming virgin and fallow lands.

In 1957, the backward state of the agricultural sector in the republic could no longer be ignored. In order to analyze the agricultural situation, a brigade of the Central Committee of the Communist Party of the Soviet Union was sent to Tatarstan. The examiners saw hopeless poverty, the despair of the kolkhoz farmers which was pointed out in their analytical report. The report of the Moscow delegation documented the peasants' complaints about the abuse of power by the local authorities, complete lawlessness of most of the kolkhozniks and made a firm conclusion that the agriculture in the republic was in backward state.

Nevertheless, the blame for all of this was laid upon the republic government. Their work, especially of those responsible for the development of agricultural sector, was strongly criticized by local executives at the Plenum of the Regional Committee of the Communist Party of the Soviet Union in March 1957. The review raised the issue of replacing the First Secretary of the Tatar Regional Committee of the Communist Party of the Soviet Union, Z. Muratov, with S. Ignatyev [RGASPI, Fund 556, Inventory 14, File 55, Sheet 90].

In July 1957, the Soviet of Ministers of the Russian Soviet Federative Socialist Republic (RSFSR) adopted a resolution 'On rendering assistance to the agriculture of the Tatar ASSR'. Beginning in 1957, the plan for mandatory grain supply for the kolkhoz farms in

the Tatar ASSR was reduced. Their debt of in-kind payment payable to the MTS, as well as arrears, was written off. The republic was provided with tractors, harvesters and pedigree cattle. Despite certain in the agricultural sector, it was far from modernized. Nevertheless, in the early 1960s, investments into regarding the agricultural sector of the republic once again began to decline. For instance, if in 1953–1956 agricultural investment in TASSR amounted to 62.1 million rubles and to 90.1 million rubles in 1956–1959, that is, an increase of 45%, in 1959–1961, it was again decreased to 70.7 million rubles, otherwise by 22%. In addition, the procurement prices for agricultural products which were increased after the September (1953) Plenum of the Central Committee of the Communist Party of the Soviet Union, were reduced across the whole country. At the same time, the prices for agricultural machinery, spare parts, fodder and mineral fertilizers went up. Moreover, in 1958 the state introduced a law on the reorganization of the MTS, according to which the kolkhoz farms were obliged to purchase most of the machinery from the machine and tractor stations.

In order to achieve a breakthrough in animal farming, in the late 1950s, agricultural policy embarked upon a venturesome course 'To overhaul and surpass America in meat and milk production'. Noisy campaigns began all over the country aimed at implementing increased requirements for the early implementation of the seven-year plan. During his speech at the Plenum of the Tatar Regional Committee of the Communist Party of the Soviet Union in May 1959, the Chairman of the Council of Ministers, A. Abdrazyakov, declared: 'The workers of Tataria have pledged to meet the target of meat production in 3 years and the target plan of milk production in 2 years' [SA HPD TR, Fund 15, Inventory 40, File 135, p. 89]. However, the price they had to pay for these achievements is captured in the complaint letters of peasants addressed to various high authority bodies. Since public farming was unable to manage increased plans for animal products supply, pressure was increased on private subsidiary farming. In order to reach the target, the kolk-

hoz farms started collecting young stock from kolkhozniks.

The local executives' hands were untied when the Plenum of the Central Committee of the Communist Party of the Soviet Union in December 1959 came to the conclusion that private subsidiary farming gradually had to fade in importance. They started an irreversible campaign of forced purchase cattle from kolkhozniks. Cases of violation of the voluntary principle during the purchase of the animal farming products were reported in the Almet'yevsk, Arsk, Vysokogorsky, Drozhzhanovsky, Elabuga, Kamsko-Ustye, Kukmora and Zainsk districts.

Due to an increase in the taxation of private subsidiary farming, private animal husbandry became impractical: the kolkhoz farms seized calves in order to implement the plan and kolkhoz farmers were imposed a tax for each cow in butter, milk and meat. The situation bordered on the absurd: peasants had to buy butter in the market and hand it in as a tax. Moreover, the haylands, allotted by the kolkhoz, were clearly insufficient for maintaining livestock in personal possession. Peasants had no choice but to cut hay illegally, haul it at night, and pay for transport with vodka — an 'unconvertible Soviet currency'. In the early 1960s, the archive records and pages of newspapers had many articles about the abuse of power by the local executives against personal household plot. On 1 August 1962, the actions of some rural executives of the republic were made public by virtue of an article 'Burenka under arrest' in the 'Komsomolskaya pravda' ('Komsomol truth') newspaper. Afterwards, some of them were discharged, others received administrative penalties by the decision of the Regional Committee of the Communist Party of the Soviet Union [SA HPD TR, Fund 15, Inventory 43, File 29, Sheet 40].

However, the criticism of excessive actions towards private subsidiary farming did not stop the mega-programme from reaching its targets in animal farming. In the 1960s, the Party, Soviet and agricultural authorities were focused on increasing the livestock in the communal flock. In 1960, the Tatar Regional Com-

mittee of the Party passed a resolution to annually increase the population of cows in the kolkhozs and sovkhozs (state farms) by 25%. However, this objective was not supported by any serious economic calculations and was not accomplished. In terms of labour mechanization in the farms, the republic was far behind the average level of the RSFSR. In 1962, the kolkhoz (collective farms) and sovkhozs (state farms) failed to meet the sales plan [SA HPD TR, Fund 15, Inventory 44, File 37, Sheets 6, 10]. In 1963, the situation in animal farming was worsened even more by severe drought. In terms of acute deficiencies in fodder, the kolkhozs were forced to remove pigs and sheep away from weaning and fattening stock, in order to save the breeding stock. As a result, the herds of pigs in the kolkhozs reduced by 50%, sheep by 18.5%, and in sovkhozs (state farms) by 61.4 and 14.5%, respectively.

As part of the plan of the late 1950s to construct powerful farms supported with robust material and equipment resources, the authorities began another campaign to expand the kolkhozs as further advancement of forms of ownership. In practice this meant taking actions towards dealing with the backward state of production in economically unviable farms. State patronage usually meant uniting a number of weak kolkhozs unless there was an opportunity to merge them into the neighbouring powerful kolkhoz. When weak kolkhoz farms were integrated into a neighbouring strong one, the form of ownership remained the same. The process of transforming kolkhozs into sovkhozs (state farms) often led to formation of unwieldy, barely manageable, unprofitable farms whose efficiency rarely justified their reorganization. The total number of sovkhozs (state farms) in 1955–1965 was increased from 35 to 94. By the mid-1960s, they accounted for 20% of all agricultural areas, whereas they produced only 14% of agricultural products out of the total in the republic [Matveeva, 1980, p. 28].

This contradictory course of agricultural development had an impact on the general ratings of the development of agricultural sector in the following way. The gross product of the republic's agriculture increased by 40%, and of

the social production by 67.2%. This number was higher than in the USSR in general, where agricultural production increased by 10% [SA HPD TR, Fund 15, Inventory 41, File 132, Sheet 25]. This ratio was caused by the fact that the agricultural 'breakthrough' in the Tatar Republic came only in the late 1950s and the first half of the 1960s, rather than after the September (1953) Plenum of the Central Committee of the Communist Party of the Soviet Union, as it happened in the country in general. In the middle of the 1950s, the agricultural sector of the republic still remained poorly mechanized. However, the Tatar republic failed to reach the targets of the seven-year plan of agricultural development as well. In the first half of the 1960s, there was a fall in the indicators for yield and gross grain harvest in the republic. Some of the districts harvested only 5–8 quintals per 1 ha. The average grain yield in the republic did not exceed 9.5 quintals per 1 ha, yet in the best farms it reached 20–23 quintals [Karimov, 1992, p. 123]. In the late 1950s and the first half of the 1960s, meat production in the republic fell, while milk production slightly increased. However, this was significantly far from the target numbers [SA HPD TR, Fund 15, Inventory 43, File 30, Sheet 67]. Meanwhile, the production of sugar beet and eggs was showing high rates of growth.

Thus, the agricultural sector in Tatarstan was developing rather inconsistently. The agriculture was thrown into confusion with endless reorganizations, occasional expansions of kolkhozs and their reformations into sovkhozs (state farms). Generally, agricultural production was subject to micromanagement. The farms were dictated by technological processes, sowing and harvesting schedules and crop growing areas. With complete ignorance of the local conditions, the authorities praised and universally introduced one culture or technology after another. All of this began to throw the agriculture into confusion.

In 1965, the new government of the country, headed by L. Brezhnev, passed the Complex Programme of Agricultural Development, which covered an extensive list of financial, economic and technological measures for the

reformation of the sector. Having fully supported the agricultural policy of the Communist Party of the Soviet Union, the authorities of Tatarstan were focusing on extensive changes in many areas of agricultural production at once: mechanization, electrification, the use of chemicals and land improvement.

The economic reforms and improvements in the material and equipment resources implemented during the first five years after the adoption of the Complex Program of Agricultural Development, had a significant impact on the republic. Grain production — the key issue in the agricultural sector of the republic — was successfully improved by using intensive factors.

The most substantial positive movements happened in the agricultural sector of Tatarstan, as well as of the USSR in general, in the latter half of the 1960s. This was when the state adopted a series of measures aimed at reinforcing the material interest of agricultural enterprises in the results of their work. The annual average of the gross agricultural product in the republic increased during the eighth five year plan (1966–1970) by 28% while the plan required 25%. The work force productivity in the kolkhozs and sovkhozs (state farms) of Tatarstan increased by 44%, while the USSR in general achieved an increase of 37% [Fayzrahmanov, 1981, p. 15].

However, in the 1970s, the agricultural situation in the republic was become complicated, although the emphasis in the agricultural policy remained the same. Between 1971–1981, the agricultural–industrial complex of Tatarstan received 1.8 times more capital investments than in the preceding decade—4.7 billion roubles [Narxoz TASSR, 1987, p. 124], but the main bulk went to the industrial construction.

In the latter half of the 1970s, the renewal rate of the material and technical resources for agricultural production in the republic was falling behind the rate of the USSR in general. This was mainly due to the fact that in 1974 the Central Committee of the Communist Party of the Soviet Union passed a special resolution 'On further development of the Non-black Soil Belt of Russia', according to

which huge capital investments were allotted for the development of Central Russia oblasts and republics. The Tatar Republic, regardless of almost half of its lands being non-black soil, was not included in the generously subsidized Non-black Soil Belt.

The situation in the agricultural sector was complicated by the continuing fall in the cultivated areas in the republic: in the 1970s, vast expanses of the most fertile lands were transformed into gigantic construction sites for the Kama River industrial zone, the Nizhnekamsk Reservoir and laying of the biggest oil and gas pipelines across its territory. Agricultural lands continued to decline through the entire period in question. Between the 1950s and the 1990s, agriculture in the republic lost 140 thousand ha; 2 million ha was ruined by erosion, and 1.7 million ha was acidified [Programma stabilizatsii, 1991].

This had a negative impact on the level of agricultural development in the republic. Annual average agricultural output increased in the republic by 9%, whereas in the country in general it increased by 13%. Nevertheless, generally, the agricultural ratings of the Tatarstan economy were higher than a total in the Union. Calculated on the basis of 100 ha of farmland basis, the communal sector output of the agricultural production in the republic was 1.5 times more than in the Russian Federation in general [Gallyamova, 1997 a, p. 73]. However, agricultural intensification level in the republic did not correspond to the amount investments in material and technical resources spent on achieving this. The growth rate of the capital/labour ratio was a lot higher than the per capita gross product growth rate. While the capital/labour ratio in 1980 had increased by 222% compared to 1970, the gross product output per capita increased by 42% [SA HPD TR, Fund 15, Inventory 8, File 116, Shet 10]. The fall in production investments had a direct impact on the rate of return of agricultural enterprises. The annual average gross income of the TASSR kolkhoz farms began progressively to diminish: from 505,000 roubles in 1966–1970 to 497,000 in 1971–1975 and 401,000 in 1976–1980.

The active protectionist policy proscribed in the 'Complex Programme of Agricultural Development', ended with the adoption of yet another programme for improving the agriculture: — the USSR Food Programme. However, this also fell short of expectations and proved that strong state paternalism was not enough for agricultural development. It needed the self-regulatory mechanisms of socio-economic relations which functioned in the conditions of a civilized market.

Urban and rural social infrastructure. During the years of war, the territory of the Tatar Autonomous Soviet Socialistic Republic was not involved in military action. However, the war had its serious consequences here as well. The lives of most people were challenged by everyday difficulties. Kazan, as well as the entire country, suffered from deficiencies in bread and other produce. People suffered from a lack of housing. The municipal economy was in an advanced state of decline. Colossal investments were needed to restore the non-industrial infrastructure. However, Tatarstan was outside the war zone and could not rely on sufficient subsidies to overcome the challenges of war time.

Moreover, during the war years the republic, along with many other regions of the USSR in the rear of the front line, was involved in helping territories liberated from German occupation. It led the restoration of one of the districts of Stalingrad and two rural districts of the Stalingrad oblast, Orel and 23 districts of the Orel oblast. Tatarstan sent equipment, construction materials, seed, pedigree cattle, clothes, shoes and household items. Qualified workers, engineers, medical workers and teachers were deployed to Stalingrad [Abdrakhmanov, 1960, p. 15].

The rapid growth of the urban population due to high rates of industrial development in the republic and the number of rural peasants 'fleeing' from the countryside led to an escalation of the housing problem in Kazan. Only certain leading administrators and the most prominent representatives of the artistic and academic intelligentsia were provided with accommodation in comfortable houses, known as

'stalinkas', in the central streets of the city. During the fourth five year plan, 80 million roubles was invested into new housing construction and 85 thousand square metres of living space was put into service in the capital of the republic. It was a fraction of the amount spent in Samara (then Kuybyshev), Nizhny Novgorod (then Gorky) and Yekaterinburg (then Sverdlovsk). In 1947–1948, the city council did not build a single house, due to the lack of construction materials [SA HPD TR, Fund 26, Inventory 20, File 4, Sheet 48]. Moreover, the Municipal Executive Committee had no tools, other than axes and saws for preparing the timber, needed for house repair works. The committee had only horses to haul the timber. The critical repairs to buildings, many of which were wooden, required 50 thousand cubic metres of construction materials [Ibid., Fund 26, Inventory 29, File 299a, Sheets 2–5; 34–36]. Most ordinary citizens had no other choice but to embark on individual construction at their own cost or using state credit. However, due to the lack of resources and acute deficiencies in construction materials, many people could not afford it. The majority of ordinary Kazan people citizens lived in houses with no amenities. Often these were no more than confined cold baraks. Houses were heated with wood or coal.

One of the most significant social achievements of the 1950s was introduction of so-called 'khrushchevka'. This was the name given to flats widely constructed across the entire country. In 1959–1965, the Tatar Republic built 4 million square metres, which was 2.2 times more than in 1951–1955. During this period, Kazan acquired new residential areas in Karavayevo, Derbyshky and along the Siberian highway and blocks of flats along the Kuybysheva, Lenina (now Kremlevskaya), Pushkina, Mayakovskogo and Levobulachnaya streets. In the late 1950s, the average rating of housing provision in cities and workers towns in the republic amounted to 4.7 square metres per person or 50% of the norm, whereas in Kazan it came to 4.4 square metres [SA HPD TR, Fund 15, Inventory 31, File 15, Sheets 221–222]. In 1961, about 10% of the population lived in hostels, and 19.5% in single-family houses which

were often in a critical condition [Istoriya Kazani, 1991, p. 310]. The first large prefabricated panel block of flats in Kazan was built in the Leninsky (now Aviaostroitelny) district in 1960. Since then, the preference in housing construction in the republic was given to large panel buildings. By the mid-1970s, prefabricated panel blocks amounted for 80% of total housing constructed in the republic [Tabeev, 1976, p. 115]. 75% of the housing stock of Kazan consisted of houses with nine or more storeys [Ibid., Fund 26, Inventory 43, File 525, Sheet 5]. In the 1970s and the first half of the 1980s, almost every other Kazan people managed to improve their housing conditions. More than 90% of the population were now living in houses built during the Soviet era [SA HPD TR, Fund 15, Inventory 45, File 27, Sheet 13].

The house building industry in Naberezhny Chelny showed a high level of development, as the buildings were constructed upon original projects with the use of progressive technological and organizational solutions. 1972 marked the establishment of one of the most modern house building factories in the country with capacity of 120 thousand square metres housing per year [Sovetskaya Tataria, 1972, 16 August], where all the main processes were mechanized and some of them automatized. Naberezhny Chelny piloted the most progressive ideas in construction and manufacturing technologies for assembly details and exterior cladding.

However, the housing problem in Kazan remained acute throughout the entire Soviet period. Nevertheless, districts, occupied by native Kazan people, were neglected. The slums, where native Kazan people lived, were quickly become an eyesore in the centre of the capital city. Entire generations of native Kazan people sheltered in ill-equipped houses without hot water, gas, central heating, with leaking ceilings and frost-bound walls. They were unfamiliar with the simple conditions of normal human dwelling. The Novotatarskaya sloboda (district), traditionally occupied by Tatars, was a 'forgotten area' of the city. In the Soviet era, it was a big working district, mainly populated by the light and food industry workers. It has almost no social infrastructure, as there were

no cultural-educational or social institutions: hairdressing salons, laundries, banyas (bath houses), health clinics etc. [SA HPD TR, Fund 15, Inventory 41, File 126, Sheet 148].

The editorial offices of the central and republic newspapers were literally engulfed by letters from Kazan people. The Central Archive of Historical and Political Documents of the republic has a voluminous collection of letters received by the 'Pravda' ('Truth') newspaper in 1964, 330 letters in total. The majority of complaints were from common workers of enterprises and construction sites. They had living with their families for many years in inhuman conditions. Letters about difficult living conditions were sent by disabled veterans of the World War II, families of deceased servicemen and tuberculosis sufferers. The authors of many letters described serious violations of the rules allotting living accommodation, especially in official institutions. Workers from certain enterprises complained that sometimes flats were allotted out of turn, while workers who had been working in the enterprise for 20–25 years, did not have proper housing. Many of them resided in rented private flats [SA HPD TR, Fund 15, Inventory 45, File 24, Sheets 7–15].

Starting from the middle of the 1950s, even the cultural and intellectual elite of the republic were feeling the intensity of the housing problem. During the first post-war decade, the lucky owners of 'stalinkas', which had been built in quite small amounts, were the most prominent members of artistic and scientific intelligentsia, along with high-ranking officials and economic executives.

Extensive housing construction was provided by industrial enterprises. The largest builders were manufacturing such as 'Organic synthesis', engine-building, the 'Gorbunov' aircraft production factories, the Kuybyshev, accounting and computing machinery factory and the Kazan Division of the Gorky Railway [Istoriya Kazani, 1991, p. 236]. Thus, the aviation industry alone was responsible for the construction of about 50% of the residential construction in Kazan in the mid-1950s [SA HPD TR, Fund 15, Inventory 37, File 20, Sheets 58–59].

The institutional approach to the development of the housing issue led to a marked improvement in residential buildings near industrial enterprises. This also contributed to changing the spatial organization activities in the capital of the Republic. There was active construction the periphery of the city and on free land beyond the city boundaries. These housing projects occupied from 15 to 40 hectares with a population from 6 to 12 thousand inhabitants. Kazan significantly expanded its boundaries through the new development. In the early 1960s, the length of streets and passages in town was 712 km, and in the late 1970s, this number had increased to 933 km. The length of the city from north to south became 27 km, and from east to west — 29 km [Istoriya Kazani, 1991, p. 331–332].

The negative ramifications of the expansion in the development of Kazan were pointed out yet in 1956 by famous in Tatarstan poet Sh. Mannur. In the letter to N. Khrushchev he wrote: 'The issue of housing is extremely inadequate in Kazan. There are many emergency houses, in very poor condition, buildings, requiring a capital master plan, where large families of workers and employers live in precarious conditions. The City Executive Committee workers don't care much about it, residential construction in the city is miniscule. The only construction is taking place on the outskirts of the city with the support of the numbered factories' [RGASPI, Fund 556, Inventory 14, File 55, Sheet 111].

The new building development projects with its uniformity of tall nine-story buildings substantially differed from the old part. The people nicknamed them 'Chinese walls', and they could hardly be called a comfortable environment for sustainable human activity. Building infrastructure was not sufficiently developed. Thus, in 1970s the new area in Kazan was so-called 'Tankodrom'. Its inhabitants systematically complained to various institutions to show that not a single element of cultural or domestic life was fulfilled in the area. The 'bus stops and sidewalks were not maintained, roads to schools and shops were not made, lighting was bad. There were major disruptions in wa-

ter supply and bus transportation' [SA HPD TR, Fund 15, Inventory 7, File 1184, Sheet 22]. All the new residential areas in Kazan faced such challenges. In the early 1980s, Kazan remained one of the few cities of the Volga region, where no decision had been taken on integrated development [Sovetskaya Tataria, 1983, 26 June].

The failure to address the social-domestic and social-cultural problems led to serious collisions. Significantly the dull mass residential complexes frequently referred to as 'dormitories', with their boring social interior were plagued with the problem of socially dangerous groups of marginalized youth.

Another serious problem throughout the Soviet period was the provision of hostels for students from other cities. There were cases in which students lived at the train station. Thus, in 1960 the Dean of the Faculty of Geology of Kazan State University at a city-wide meeting of higher education workers stated that he received calls from the militia of the river port requesting that students from his faculty sleeping rough at the station be gathered up. Only 25% of the students of this faculty were supplied with dormitories. In general, only 45% of Kazan students, who needed a dormitory, were provided with accommodation. [Russian State Archive of Contemporary History, Fund 5, Inventory 37, File 90, Sheet 80]. The Aviation College, Communications College, Law and Paramedical-obstetric schools in the 1940s and the beginning of 1950s did not have their own dormitories at all [SA HPD TR, Fund 26, Inventory 30, File 15, Sheet 82 reverse]. Another problem with dormitories was the intolerable living conditions. In 1955 during a meeting of the regional committee of CPSU, there was criticism of the hostel at the asphalt and cement plant: 'The kitchen is not heated at the moment, there are no washstands, water in the tanks freezes with the first frosts, there is no buffet in the workshops or premises for eating. ... We're facing many housing difficulties. So what is there to stop a construction organization or company from fixing the roof in the dormitory, changing bed linen frequently, cleaning up the mess, providing them with drinking water, or organising their cultural activities' [SA HPD

TR, Fund 26, Inventory 88/16, File 39, Sheet 13 reverse].

It was extremely challenging for temporary visitors too to stay in Kazan, in the mid-1950s there were only 4 hotels in the capital, while before the Revolution were 34 [Ibid., Fund 19, Inventory 45, File 72, Sheets 19–21]. Nevertheless, there were many visitors to Kazan. In 1956, 1800 foreigners visited Kazan. They were mainly visitors from the socialist countries, although there were also representatives from England, Canada, France and Finland too [SA HPD TR, Fund 15, Inventory 39a, File 77, Sheet 201].

Along with the housing issues there were also problems with utilities infrastructure in the cities. In the first place, there was the matter of providing urban citizens with drinking water and sewage systems. Owing to a lack of funds for repair, half of the communal facilities and cultural institutions in Kazan were unable to function for 5–10 years after the war, sometimes even longer. Thus, the city's inhabitants had serious concerns about the functioning of bathhouses. They were desperately short of them in Kazan, and many that should have been available were under renovation for years. Kazan people, most of whom had no bathroom or shower at home, had to sit for hours in the bathhouse queues.

The problem of inter-city roads also remained acute in Tatarstan throughout the Soviet period. By the end of 1950s, only a fifth of the Kazan streets had road surfaces, while 27% of the streets had no lighting [SA HPD TR, Fund 15, Inventory 39a, File 77, Sheet 202]. In the mid-1970s fewer than half of 900 km Kazan roads were paved. At the beginning of the 1950s, with a total length of streets at 360 km, municipal services did not possess snowblowers or graders [Ibid., Fund 15, Inventory 31, File 15, Sheet 227]. Owing to the unsatisfactory snow clearance, in late February and March city roads became almost impassable for buses and trolley buses, and as a result they were frequently damaged. Public transport experienced major problems. Until the mid-1950s it mainly consisted of salvaged defense department vehicles.

As a result of rapid industrial development in the late 1950's, the metropolitan areas of the Republic faced serious ecological problems. In Kazan, environmental damage was caused by the Vakhitov Chemical Plant, 'Teplocontrol', the asphalt and cement plant and many others. At a meeting of senior executives dedicated to the ecological situation, a student of KAI Kabanov very precisely described the increasing damage of republic's capital: 'The chimneys billow out smoke all over the town. Look at the snow, it's black because of soot. There are filters for chimney stacks, and they should be introduced. Furthermore, there is Kaban Lake in the city centre. And what does it look like? In mid-August this lake turns into a swamp, slime forms on it, and children swim there. All the waste materials from industry, located around the lake, are discharged into it. Even the Kaban fish smells like that waste' [SA HPD TR, Fund 19, Inventory 45, File 72, Sheets 51–52]. The waters of the oil-drill areas were in very poor condition, especially the Steppe Zay river in the Almetyevsk area. The content of oil found in the Kama river exceeded the maximum permissible norms by 20 times.

In the 1950–1960, Kazan had a reputation for being the dirtiest city of the Volga region. In a letter to N. Khrushchev Sh. Mannur indicated: 'The city is extremely antiquated, streets are in an outrageous condition' [RGASPI, Fund 556, Inventory 14, File 55, Sheets 108–116]. The famous historian M. Usmanov in his initial impressions of Kazan from the 1950s, says: 'Kazan was very threadbare then and somewhat exhausted' [Usmanov, 1999, p. 26]. The city authorities were also very aware of the precarious state of the Tatar Republic capital's economy. In 1954 at their initiative a meeting was held with an invitation to the Moscow leadership to reach out to them and show the extent of the accumulated problems the housing and communal services of Kazan which had been ignored for so many years. For 7 years following the war, the city authorities of Kazan annually raised the issue of the need for the immediate repair of the storm drain. However, they consistently received refusal from Moscow. For a period of three years a request by the Kazan

City Executive Committee for funding for the disinfection of public sanitary facilities had 'languished' somewhere in between the central ministries. There were catastrophically few of them in a city with a rapidly developing industry. For the majority of Kazan people their 'facilities were in the backyard'.

The Minister of Public Service of the RSFSR Surov, who attended the meeting, admitted that his first impression of Kazan was that it was messy and dirty: 'There is no yard, which you would call clean, there is no street that is tidy. Even the main streets, where people walk, where shops are located, cultural institutions are poorly maintained too. ... Go to the Kremlin, and there you will find a junkyard'. However, the minister tried to identify gaps in the work of the civic services. However, the speech of indictment against them was unsuccessful. Surov blamed them for the early failure of public transport buses, but he had to admit there were no spare parts for their repair, and that their frequent breakdowns were caused by terrible roads, for the proper maintenance of which the city did not have enough machinery.

Surov agreed that the municipal engineering in Kazan needed serious re-equipping, but advised to reveal the internal reserves required to remedy the situation, because the Ministry of Housing and Communal Services, he admitted, was unable to provide a single high-sided truck, snow loader, nor any dump truck. After the meeting, three vehicles for cleaning the town were allocated to Kazan, thus raising the capacity of city cleansing services by only 5%. Furthermore, 8 toilet bowls and 80 waste containers were allocated to public services, which met the needs of only one house.

There was no major breakthrough in the development of the Communal Services in 1950s. In the late 1950s, in Kazan there were only 26 vehicles for waste collection, which provided only 30% of the city needs. Owing to catastrophic lack of waste collection equipment, the city had 40 landfills sites which were in a terrible condition. During a meeting of the regional committee of CPSU in 1958, S. Ignatyev observed with undisguised disappointment, even some desperation: 'I think we actu-

ally don't have a city'. Kazan cannot be called a city just because people live here and there are many houses, yet at the same time there is a lack of factors required for workers safety. Our city is a colony for those suffering from infectious diseases, with the highest concentration of contagious diseases, tuberculosis, all types of skin conditions.... Yesterday I was in the Kirov district, there is terrible dust and nothing is being done to take away the heaps of dirt. The same thing is in the city centre [SA HPD TR, Fund 15, Inventory 39, File 68, Sheets 76–77].

During the post-war decades, the schools remained in a grave situation. Due to a lack of funding in the cities, almost no schools were built or repaired. However, those buildings which during the war had been allocated to evacuated institutions and organizations, were returned to their pre-war purpose. Often they were in such a condition that it was impossible to use them without at least minimal repairs. The lack of facilities led to the necessity of establishing triple shifts at schools, the number of which increased regularly. Thus, in the 1956/1957 academic year 25 schools operated in the capital of Republic with a total of 3,200 pupils on a three shift basis. While in the 1957/1958 academic year there were already 39 such schools with an enrollment of 5,800 students [SA HPD TR, Fund 15, Inventory 39a, File 77, Sheet 204]. In the capital of Tatarstan only one Tatar school (No. 113) had normal educational conditions. The majority of Tatar schools were housed in badly organized premises.

Some cultural and educational institutions were unable to get their buildings back in full. In the post-war years Kazan remained the only city in the Volga region where there was no School Children's Palace [Ibid., File 15, Inventory 30, File 6, Sheet 425]. The Pioneer Palace was opened in Kazan only in 1951. During the first post-war decade in Kazan, not a single working club was built [RGASPI, Fund 556, Inventory 15, File 8, Sheet 104].

The system of higher and specialized education of the Republic experienced enormous difficulties with material and technical re-

source provision in the first post-war decades. All the IHLs and technical colleges in Kazan had problems with their premises. In the 1940s, veterinary and financial colleges did not possess their own buildings and classes were held in the evenings in rented premises. [Ibid., Fund 26, Inventory 88/16, File 39, Sheet 13]. IHLs and colleges did not possess furniture and students sometimes needed to listen to lectures standing [RGASPI, Fund 26, Inventory 88/16, File 39, Sheet 13]. The leading IHLs (KAI, KICT) had 2–3 square metres industrial-practical space per student with an average rate at 10 square metres. A number of IHLs worked in three shifts with shortened breaks.

From the latter half of 1960s to the beginning of 1980s, the situation regarding material resources for science and education began to change markedly. (The unfolding scientific-technical revolution encouraged the authorities to pay close attention to science and improving the material and technical resources). Two modern high-rise buildings were constructed for the Kazan University. New buildings appeared also near the Kazan Branch of the Academy of Sciences, Aviation, Scientific-Technical, Agricultural, Veterinary, Financial-Economic, Building-Engineering institutions, and the majority of technical colleges.

There were also certain advances in the development of the social and cultural infrastructure of Kazan. A number of buildings appeared which were to become landmarks and the city's most recognizable features. The center of the capital is inconceivable without the building of the Theater of Opera and Ballet named after M. Dzhailil, opened in 1956, and the Privolzhsky district would be unthinkable without the Kirov Palace of Culture (from 2000 the Concert hall of Tatar State Philharmonic). The Moscow district (previously Lenin) would be unrecognisable without the Uritsky Palace of Culture, or the Soviet district without the Palace of Culture named after Said-Galiev. During this period in Kazan wide-screen cinemas were built: 'Druzhba', 'Pobeda', 'Zvezda', 'Mir', 'Ogonyok', named after Tukay, similar cinemas opened in Zelenodolsk, Leninogorsk, Nurlatkh, Urussu.

In Almetyevsk, in the central part of all Kazan districts, parks were built. In the capital of the Republic the Actor's House, The House of Public Amenities and Services, the covered market, swimming pool, integrated health centre 'Zdorovye', Palaces of Chemists' and Builders' Culture, the Central Stadium, the Sports Ground, Exhibition Hall of Union of artists of the Republic were constructed. The most notable reconstruction activities in Kazan were conducted on the main streets named after Yershov, Butlerov and on Tatarstan, Komsomolskaya, Profsoyuznaya, Pravobulachnaya streets.

The architectural appearance of Kazan in the 1970s acquired the appearance of the present day capital thanks to the construction of high-rise buildings. The city was decorated with high-rise buildings of Youth Centre, Publishing house, 'Tatarstan' hotel, and the House of Public Amenities and Service.

The history of architecture of Kazan was marked in 1967 by the construction of Kazan circus. Its unique architecture in the shape of a flying saucer already at that time marked it out as a 21st century building. At first the project created by A. Khayrullin was met with great apprehension, since there had never been anything like it in before in world construction practice. Construction commenced after long periods of approvals in number of institutions, thorough calculations and the persistent work of the team of specialists including the head of 'Tatgrazhdanproekt' creative workshop, V. Panov, U. Alparov, the Director of the Institute, and engineers E. Brudny, O. Berim, and the architect G. Pichuyev. Kazan people fell in love with it immediately and it was given the highest accolades circus workers, including the celebrated Yu. Nikulin. The Circus became one of the most significant phenomena in 20th century Kazan, providing the city with an inimitable appearance and recognition.

In general, the city architecture was increasingly characterised by the excessive infatuation with glass and concrete. The construction of Conservatory Auditorium at the central Freedom Square, House of Tatar Cuisine at the central Bauman street, suburban train station

in this regard was characteristic. These buildings substantially differed from the Theatre of Opera and Ballet building by the absence of expensive decor. Distinctive national cultural features were almost never used in architecture. The appearance of buildings was depressing, owing to the poor quality of the construction material used. The facades of brick buildings were made mainly from silicate bricks since the available red brick was of a lower quality. Local industry had not developed veneered or coloured brick. The pigments used in construction had little variety in terms of coloration and quality.

The new cities in the republic which were built during the era of gigantomania and pomposity, also bore the seal of the time expressed in the construction of large monolithic buildings. Thus, in 1973 city plan for Naberezhnye Chelny town, the main nucleus of the city—the administrative square—was more than double the size of Red Square in Moscow [Republic of Tatarstan, 1995, 26 January]. This made the centre of Naberezhnye Chelny uncomfortable in the perception of the citizens.

The local government administrative buildings actively constructed in the 1960s and 1970s were an embodiment of the philosophy of standardisation and unification in opposition to distinct identity. They were designed to a single unified plan without their own face, rendering them completely forgettable. The building of the Tatar Committee of CPSU was extended with a new annex. The House of political education (current building of the Academy of Sciences of the TR) was constructed on the main street of Republic's capital, named after Bauman. Template buildings of committees of the Communist Party were constructed in each district. They differed from the surrounding buildings with their contemporary but at the same time non-descript forms and the blue spruces planted around them. At the same time throughout almost the entire Soviet period such essential centers of Tatar culture as Tatar Philharmonic [SA HPD TR, Fund 15, Inventory 7, File 354a, Sheet. 6] and Tatar Academic Theater named after G. Kamal, did not have decent buildings.

During the Soviet period, Tatar television which had begun to broadcast in the 1950s was low-powered. In the early 1960s, in the Republic there were 25 thousand televisions. [NART, Fund 4493, Inventory 1, File 486, Sheet 1]. Kazan station television programmes were watched only in 27 Republic districts.

An important area of the urban social infrastructure is the health-care system. During period under review, the hospital network grew steadily. The number of accessible doctors per 1,000 people increased sixfold. The construction of the Republican Clinic complex was a major event. At this time the hospitals in Zelenodolsk, Elabug, Bugulma, Chistopol, Almet'yevsk were awarded Republican health facility status. However, prior to 1989 the accessibility of outpatient and polyclinic health care Kazan represented only 70% of the required. In several suburbs the situation was simply disastrous. For example, in the village of Boriskovo a branch of the Medical Clinic No. 9 was stationed in an unsafe one-story wooden building with furnace heating and without sanitary facilities. There was one doctor here for more than 6 thousand people. The same situation was in the Mirny village [Problemy' perestrojki, 1990, p. 104]. By the end of the 1980s in TASSR there were 10% fewer doctors than the national average across the USSR, and 20% fewer than in the RSFSR. The republic only had 9 beds for every 10 that it should have been allotted [Mustafin, 1989]. Frequent medical equipment failures, lack of the most elementary equipment, and a shortage of vehicles – all of this together resulted in queues, which became a defining trait of Soviet health-care. Queues in general were inescapable features of Soviet social reality. They could be seen everywhere: in hair salons, bathhouses, cinemas, and theatres. The only way one could avoid queues was to personally know a doctor, hairdresser, bath attendant, or tailor.

The most distressing queues and shortages were in the commercial sector. Relative affluence allowed people to dress and eat better. In an effort to attain a better lifestyle in all aspects, people started to invest more money and time on home improvements. This proved difficult,

because obviously not enough furniture, electronics, refrigerators or washing machines were manufactured to keep up with increasing demand.

Republic authorities regularly informed Moscow about empty shelves and disruptions in grain, food, and manufactured goods distribution [SA HPD TR, Fund 15, Inventory 7, File 28, Sheet 17; Inventory 37, File 190, Sheet 35]. In 1950, Z. Muratov, First Secretary of the Tatar regional committee of the CPSU(B), requested that the USSR Council of Ministers base the product norms for Kazan on the norms of centrally-administered cities, giving the city a separate line in the budget. In so doing, he emphasized that in all other areas of planning, especially industrial, Kazan had attained this status as early as 1944 [SA HPD TR, Fund 15, Inventory 7, File 15, Sheets 224–225]. In 1962 the leadership of the Republic sent the RSFSR Council of Ministers a letter in which they reported an 'abnormal planning of the market reserve for dairy and meat production in Tataria' that had rapidly decreased meat and milk consumption per person [Ibid., Fund 15, Inventory 43, File 29, Sheet 52]. During this period, more and more complaints began to come in from every corner of the Republic regarding the lack of basic necessities. In an analytical paper based on letters that were sent to editors of 'Sovetskaya Tataria' in 1971, the following examples are representative: 'We workers haven't seen meat for two years, the percent of plan fulfillment is believable when it sits on the shelves'. A group of workers from workshop No. 14 at Lenin Kazan Chemical Factory (Dmitriev, Ibragimov) wrote: 'We studied Tabeev's report at the plenary session of RC CPSU. And were very surprised and disturbed when we read that there will be a bias towards pork again. [...] Why don't they push for lamb? In the newspapers everything is pretty good, but we are getting meat at the market for 4–4.50. Of course, we all make mistakes. Even Stalin did. But then city dwellers waited for food prices to drop every spring. And now they temporarily raised the prices for meat, sausage, and butter, but the prices aren't going down. The price of vodka has even gone up.

What do you think, is it necessary to explain the reason for the price increase to the people, or is it enough to issue an edict? Because issuing an edict without consulting the people is aggravating; it causes uncertainty in some, and panic in others'. The other letter says: 'In 1971 I would like for meat to be on the shelves, and not in newspapers. The same people in Yoshkar-Ola get ration coupons for meat... It would be nice if we could get at least the same' [Istoriya Kazani, 2004, pp. 226–227].

The same signals were coming from the newer cities. A. Generalov, a worker, writes: 'I came to Nizhnekamsk in 1967. Till the latter half of 1969, meat, veal, pork, canned meat, smoked and marinated herring, all sorts of sausages — everything was in the shops. Now we don't have the minimum... There are very few grocery stores. There is a terrible crush of people everywhere. The cost of lunch in the work canteens is growing very fast' [SA HPD TR, Fund 15, Inventory 35, File 305, Sheets 214–215]. In 1977 residents of Nizhnekamsk wrote a collective letter to 'Pravda' newspaper in which they complained about about the rate the social infrastructure was growing in the city, and also the dysfunctional state of social order [Ibid., Fund 15, Inventory 8, File 349, Sheet 18].

By the end of the 1970s, food shortages had gotten so bad in the cities of the republic that rationing was introduced for meat products and butter that continued until the end of the Soviet period. What's more, the allotted quantities of foods remained unchanged over this whole time.

Many problems regarding urban development, which were always overtaken by industrial construction in the Republic, were related to the rapidly expanding urban population. Most locals were more than willing to work in industrial manufacturing. This was evidenced by the rapid increase in oil workers, chemists, and machine-builders, among others.

The exponential growth in workers in the industrial spheres of manufacturing was not always directly reflected in an increase in city population. Thus, due to the fact that the oil industry in the south-east is widely dispersed,

when local peasants become oil workers they usually didn't move away from homes. Unlike the workers who built the factories in Kazan in the 1930s and also those who later, in the 1960–1970s, created the Kama industrial zone, when oil workers transitioned to industry they generally didn't relocate to the city. Due to the housing shortage in the city, many of them continued to live in their original homes without changing their village lifestyle. Caring for parents, raising children, tending to their own gardens, their social surrounding familiar from birth — all of it remained unchanged for many of them. Besides, the working conditions for oil workers didn't change significantly. Because, unlike factory and foundry workers who worked indoors, the oil workers laboured outside just like peasants, in the fresh air and sunshine. In the infancy of the oil industry, locals were used mainly for unskilled labour that required greater physical effort. This was also compounded by the need to make the long trip from home to work every day. Unlike the oil workers who lived compactly in the city and were brought by buses, the locals had to get to work on foot.

The urban population began to grow dramatically in the 1960–1970s mainly due to the Kama Industrial Zone. The construction of KamAZ in Naberezhnye Chelny and petrochemical plants in Nizhnekamsk urbanized a vast amount of former countryside.

Thus, in 1970–1989 the population of Kazan increased by 10%, Altemyevsk by 18%, Naberezhnye Chelny by 66%, and Nizhnekamsk by 42% [Mustafin, Khuzeev, 1992, p. 16]. The percentage of the total Republic population that lived in the capital dropped from 47% to 42%. On 16 November 1979, the millionth inhabitant of Kazan was born, Irek Shamilyevich Mustafin [Istoriya Kazani, 2004, p. 237]. But in comparison to other multi-million cities, the population of Kazan grew much more slowly, as its growth rate in the 1980s was 10%, compared to the country average of 29%. Kazan's rate of population growth was, on average, less than half that of all city dwellers across the republic. The population of Nizhnekamsk grew four times faster than in Kazan, and that of

Naberezhnye Chelny grew six times faster. In general, the growth rate of the urban population of the republic was more than 1.5 times higher than the average rate across the USSR [Vecernyaya Kazan', 1990, 30 May]. These figures show the economy of the Republic was highly specialised, which gave rise to a corresponding pace of urbanization.

As a result, the percentages of people living in cities and villages in the Republic changed significantly. In the 1950–1960s, the most significant changes took place in southeast Tatarstan. This region, along with the traditional Kazan–Zelenodolsk industrial hub, gradually became the second industrial center of the Republic with a multi-ethnic urban population. It was there that the towns of Almetyevsk and Leninogorsk and industrial communities of Aznakayevo, Aktyubinsky, Bavly, Dzhalil, Zainsk, Zelenaya Roshcha, Karabash, Russky Aktash, Shugurovo, and Urussu all appeared. From 1939 to 1959, the urban population in the Republic increased from 614,300 (21.1% of the total population) to 1,190,300 (41.8%). At that time the rural population decreased from 2,299,900 (78.9 percent) to 1,660,100 (58.2 percent) [70 let TASSR, 1990, p.5]. At the beginning of the 1970s, almost 50% of the people in the republic lived in cities; the 1989 census showed that by that time, 73% of the population lived in cities. The three industrial zones were home to 80% of the population [Nurgaliev et al., 1989, p. 69].

However, the high modernization rates in the republic's economy and urbanization of its territory didn't mean the peoples' living standards would improve. The latter urbanized regions were industrial provinces whose sky lines were known for being sparse and oversimplified. A vivid example of this is the information sheet based on a comprehensive survey of the economy in Nizhnekamsk in 1966. At that time, 27,000 people lived in the city. The document noted: '... A sewing workshop is located in an inadequate, cramped and cold building. The only photographer's studio in the district had one employee and in December 1965 was located in the basement of a building. There was only one hair

salon with women's and men's rooms for the whole area [SA HPD TR, Fund 15, Inventory 7, File 98, Sheets 1–4]. The same information sheet pointed out the unsatisfactory performance of companies that repaired appliances and radio equipment, and offered dry cleaning and other services. It was stated that only one phone booth was operational in the city, and there were only two booths for making long-distance telephone calls. Nizhnekamsk businesses could supply only 50% of the need: there were two bakeries, one furniture shop and no specialized shops for selling manufactured goods, vegetables, milk and meat products. They had only 59% of the necessary school buildings, 33% of the children's preschools, and 32% of the hospitals and clinics needed. There was not enough heating in the city; in the winter of 1966 the temperature in buildings was 10–12 degrees Celsius. There was only one bathhouse in the city that could serve 26 people at a time, and there was no laundromat nor hotel. Owing to the lack of buses, there was no bus transportation available from the city to construction sites at the chemical factory, thermal power plant, reinforced concrete factory, and other settlements in the area. In spring and autumn it was difficult to walk through the city even for people wearing rubber boots. As mentioned in the information sheet, on the day the men's dormitory was inspected, the hot water heater and showers didn't work and there was no hot water or boiling water for tea. Bedbugs were found in bed linens [SA HPD TR, Fund 15, Inventory 7, File 98, Sheet 2]. However, in the early 1960s, the design for Nizhnekamsk had been awarded a gold medal and a first-degree diploma for its simplicity, maximum convenience for residents and economic efficiency of construction at the all-USSR competition for designing new cities.

Thus, the republic's industrial development during this period featured major accomplishments in implementing advanced technologies, adding extensive new territories, and generating a number of new branches and dozens of new enterprises. Unprecedented achievements were made in the aircraft and instrument-

making industries in the post-war years. The republic was involved in the development of aerospace equipment and space exploration. Certain types of industrial products manufactured in the republic were unique, but mostly they were in the branches of heavy industry. The mining industries that generated products for export carried a lot of weight in the industrial output of the republic. Insufficient technological progress was made in fields that supplied the needs of the people.

Industrial production was modernized by increasing the complexity of production processes, but this didn't mean it was improved. It was also oriented toward extensive implementation methods that led to unjustifiably expensive changes and a progressive decline in product quality. However, it is true that the republic's economic indicators were higher across all areas than throughout Russia in general. For example, from 1940 to 1985 overall industrial output in the Republic rose by a factor of 72, and in the Russian Federation it rose by only 22 times. Meanwhile, the growth rate of pro-

ductivity in Tatarstan increased by a factor of 19, and in Russia by 10.

However, the superior modernization rates in the Republic's economy and the urbanization of its territory didn't lead to the same changes in living standards for its people. On the contrary, the extensive rates of change often turned into rush work and extremism, which meant disorganization and everyday hardships. Technocratic approaches inevitably hindered the development of the social sector and the integrity of the socio-economic progress in the region.

The policy of the centre dictating where to deploy productive resources exacerbated the contradictions between institutional and local interests, wasted environmental resources, and damaged the ecological balance on a significant part of Tatarstan. This narrow-minded expansion resulted in one-sided and non-integrated social development. To mitigate these effects, the economy had to be fundamentally restructured, which brought about the revolutionary processes that led to the collapse of the Soviet model of economic modernization.

CHAPTER 9

Spiritual and Cultural Processes in the Tatar Autonomous Soviet Socialist Republic from the 1940s to the middle of the 1980s

§ 1. Ideology and Culture of the Tatars from the latter half of the 1940s to the middle of the 1980s

Alfiya Gallyamova

The ideological orthodoxy of the post-war years was most intensely reflected in the humanities, literature and art. The authorities tried to impose a strict framework of official dogmas on, primarily, the scientific and artistic intelligentsia, who constantly felt as if they were being presumed guilty.

Among historians, the Bulgarian theory of the origin of the Tatars prevailed. All progressive aspects of the Tatars' history had to be related exclusively to the role of the Russian people and the Russian state. All issues related to the period of the strong Tatar state and connected with the Islamic East had to be suppressed or interpreted negatively. For example, instead of the Kazan Khanate being "conquered" by Russia, it was "incorporated" into it, which certainly had "progressive" significance for the Tatars.

The first major public event in light of the August resolution was held in September 1944, when there was a meeting of the most active party members of the Republic. The Tatar Scientific and Research Institute of Language, Literature and History, a center of Tatar humanities, immediately was subjected to a powerful ideological attack. In October 1944, the Bureau of the Tatar Regional Committee of the Communist Party of the Soviet Union adopted a resolution 'on errors and shortcomings in the work of the Tatar Scientific and Research Institute of Language, Literature and History' that quoted the main provisions of the August resolution of the Central Committee of the CPSU(B). The institute was accused of mak-

ing serious ethnic-related mistakes in elucidating the history, literature and art of the Tatars [SA HPD TR, Fund 15, Inventory 5, File 1143, Sheets 51–55]. The works in which serious mistakes were made in explaining the history of the Golden Horde included the 'Prospect of Periodization of History' and the 'History of Literature' by B. Yafarov and the 'Prospect of Periodization of the History of Literature' by Kh. Khismatullin and Ya. Agishev [Ibid.].

The authorities criticized the article by Naka Isanbet called '500 Years of the Tatar Folk Epic—Dastan "Edigü,"' published in 1940 in 'Soviet Edebiyaty' (No. 11–12) [SA HPD TR, Fund 15, Inventory 5, File 1154, Sheets 30–31] in a resolution of the Regional Committee of the CPSU(B) dated 28 November 1944 titled 'On the Erroneous Article by N. Isanbet'.

At a plenary session of the Regional Committee of the CPSU(B) in February 1945, First Secretary Z. Muratov and Secretary of Ideology Malov once again confirmed the official guidelines that were compulsory for all people studying or writing about Tatar history. They essentially consisted of emphasizing the positive aspects of the joint struggle of the Russian, Tatar and other peoples of the country against foreign invaders, tsarism, and the oppression of landowners and capitalists; the socialist transformation of Tataria and the popularization of Tatar revolutionaries [Tagirov, 1999, pp. 335–336]. Although two years earlier in June 1944, shortly before the August resolution, it had been considered one of the achievements of Tatar culture [Kul'turnoe stroitel'stvo v Ta-

tarii, 1976, p. 68]. These decisions show that an objective examination of Tatar history had been rejected. They didn't limit themselves to just 'eliminating the mistakes' of historians and philologists. Staff changes were made as well. M. Gaynullin was appointed as the new director, replacing Kh. Yarmukhametov, and some heads of departments were dismissed. In 1946, a scientific session dedicated to the ethnogenesis of the Tatars was held in Moscow. Despite the fact that many frank, well-grounded statements were made in the course of the discussion that seriously questioned the Bulgarian hypothesis, it was established in historical science [Galiullina, 2004, p. 26]. In 1949, a collection of articles called 'Origin of the Kazan Tatars' of the history department of the Institute of Language, Literature and History, was subjected to ideological criticism. Its authors, well-known historians B. Grekov, A. Smirnov, N. Kalinin, and E. Chernyshev, were accused 'of insufficient commitment to Marxist-Leninist ideology, of the objectivist approach to studying history, of overestimating the impact of the Muslim East and underestimating the influence of Rus' on the Tatar ethnogenesis' [SA HPD TR, Fund 15, Inventory 30, File 6, Sheet 229].

However, Tatar humanists resisted the attempt to build Tatar history in accordance with the 'pattern' proposed by officialdom. This is evidenced by a debate between Khayri Gimadi and Magamet Safargaliev that unfolded in 1951 on the pages of 'Voprosy Istorii' ('Historical Issues') regarding the origin and ethnogenesis of the Tatar people. First M. Safargaliev published an article in which he expressed his disagreement with the Bulgarian theory of the Tatar origin, believing that the ethnogenesis of the Kazan Tatars was affected by many Turkic tribes, not just Bulgars. In this regard, he criticized volume I of the first collective summarizing work, 'The History of the Tatar Autonomous Soviet Socialist Republic from Ancient Times to the Great October Socialist Revolution', which was being prepared for publication [Safargaliev, 1951, pp. 74–80].

Literary scholars were also undergoing intense criticism at that time. An outline of the

history of Tatar literature compiled at the end of the 1940s was criticized for insufficiently discussing the impact of Russian revolutionary-democratic literature, failing to show the struggle between the two directions of literature in a class society, and overestimating Sufi literature. Research done by G. Kashshaf, in which he studied Derdmend's works, was called a blatant error only because Derdmend was a gold industry entrepreneur [SA HPD TR, Fund 15, Inventory 30, File 6, Sheet 287].

Scientists working in the Institute of Language, Literature and History were accused of being 'isolated, detached from real life and the urgent tasks of the Soviet study of literature' [SA HPD TR, Fund 15, Inventory 30, File 6, Sheet 284]. This accusation was based on the fact that no literary expert wanted to participate in the incrimination campaigns inspired from above or to publish articles criticizing cosmopolitanism. The Institute was also seriously reproached for the fact that none of the philologists chose a topic for his/her dissertation related to the Soviet period. Indeed, researchers did not want to take on the politics-ridden themes of Soviet literature, because the slightest failure to observe the Communist 'recipe' would be strictly criticized. F. Khusni, L. Zalyay, and F. Musagit, who were trying to critically interpret the works of contemporary Tatar writers, were rebuked for denigrating the value of their works.

The general course towards tightening party control over the spiritual life of the country also directly influenced literature itself. In July 1945, K. Nadzhmi, secretary of the Writers Union of the Tatar ASSR, established a rigid ideological framework in a report in which he repeated the party's guidelines on how the history of the Golden Horde was to be interpreted and how to approach the Edigü epic. Nadzhmi urged writers to focus their efforts on creating 'highly artistic literary works revealing the high moral character of the heroes of our time, displaying the great victory of the Soviet people, depicting the life of the Tatar people during the period of socialist transformation of Tatarstan under Soviet power' [Istoriya Kazani, 2004, pp. 440–441].

On 1947 August 1947, an article was published by S. Bakhtiyarov, a staff correspondent for Pravda who covered the Tatar ASSR, entitled 'Serious Shortcomings in the Work with Writers of Tatarstan' that reported on the dismissal of the editorial staff of 'Sovet Edebiyaty' for publishing a collection of poems by Sh. Mannur called 'Telega Dergachey' ('A Wagon of Landrails'). It was labeled as libel against the Soviet reality, as were all of Mannur's works in the article. Bakhtiyarov summed up his speech by criticizing the 'permissive' attitude of the leadership of the Republic's Writers Union.

After such an article was published in a major newspaper there was a series of meetings of the Tatar regional committee, Kazan city committee, and Bauman district committee of the CPSU(B) at which decisions were made with the idea that no work should escape the attention of 'sound criticism' [Nikiforov, 1984, p. 153]. They demanded cultural leaders glorify the pathos of recovery, portray the best features and qualities of the Soviet man and the positive aspects of the socialist system, and at the same time deprived them of the right to expose the real vices of the society. For example, a fable by A. Iskhak called 'Dyra' ("Hole") was criticized for very correctly noting the criteria for social success: be quiet, don't hurt anybody, and nobody will hurt you' [RGASPI, Fund 17, Inventory 8, File 778, Sheet 43]. At the end of the 1940s, ideological critics attacked a libretto of the opera 'Altynchech' by N. Zhiganov, the comedy 'Khodja Nasretdin', the drama 'Raykhan' by N. Isanbet, the poem 'Eaglet' by A. Erikeevev, as well as many stories by A. Enikeev, S. Battal ('Along Stolbovaya Road'), F. Khusni ('A Pedestrian's Path'), M. Amir, and Sh. Mannur [RGASPI, Fund 17, Inventory 8, File 778, Sheet 43]. Rigid guidelines were imposed on the repertoire of theatres, which were forced to stage modern plays that 'faithfully reflected the life and struggle of the Soviet people'. About two dozen plays of theatres in the capital were prohibited for violating the party's guide-

lines [SA HPD TR, Fund 15, Inventory 30, File 6, Sheet 287]²⁵.

Textbooks were also reviewed in terms of ideology. A Tatar literature anthology for the eighth form of secondary school was sharply criticized twice (in September 1948 and in January 1952). The authors were accused of being 'enthralled by bourgeois objectivism', of including 'harmful works' in the anthology, of insufficient emphasis on the impact of Russian literature on Tatar literature, of incorrectly assessing Jadidism and the role of Islam, and of idealizing the 'religious and mystical legacy' of M. Koly and G. Utyz Imyani. The harmful works included some by G. Kandaly and F. Khalidi. In the resolution of the regional committee of the Communist Party of the Soviet Union 'on errors in the textbook on literature for the eighth form of Tatar secondary schools', Jadidism was presented as a bourgeois-nationalist movement trying to separate the Tatar people from Russia. The final result of this campaign was that the names and works of people who are the pride of Tatar literature were disgraced.

Unable to stand up to the ideological pressure, cultural leaders ceased to write and create, for which they also got a 'scolding' from the party authorities. In 1948, A. Iskhak, M. Maksudov, and A. Shamov, who were well-known for their satirical works, were subjected to so-called 'party criticism' for a lack of 'new things'.

Party assessments, which determined the fate of the textbook and those who had written and published it, became more and more severe from one office to another, just like the organizational efforts. On 11 July 1948 'Kultura I Zhizn' ('Culture and Life') newspaper published an article by P. Klimov entitled 'Good Textbooks for Schools!' that contained critical comments regarding a number of textbooks of central and local publishing houses. The most serious claims were directed against a Tatar lit-

²⁵ Lists of titles of prohibited performances in 1946–1949 [for details see: The History of Kazan, 2004, pp. 638–642].

erature anthology that allegedly included 'deliberately erroneous and harmful works'. Its main points were included in a resolution adopted on 2 September 1948. After the January resolution, B. Yafarov, one of the authors, was expelled from the CPSU(B), and M. Gaynullin, the director of the institute, was reprimanded. L. Zalyay, G. Kashshaf, and G. Khalit were reproached for incorrectly interpreting issues in Tatar literature, particularly for their positive assessment of Jadidism.

Ideologically verified guidelines for assessing Tatar social ideas were identified in a collection of articles about Qayum Nasyri published by the staff of the Institute of Language, Literature, and History in 1948. In it, Q. Nasyri was characterized as a major Tatar educator, and G. Tukay presented as a folk democratic poet. Thus, the positive interpretation of enlightenment and the democratic nature of cultural leaders from poor classes of the pre-revolutionary society were officially approved, as opposed to Jadidism and outstanding personalities from the upper classes. In other words, the main criterion used to assess the pre-revolutionary culture was to be the class approach.

Under these circumstances, the Tatar intelligentsia, who did not want 'to dance to the ideological tune', often resorted to so-called 'internal emigration'. For example, this is evidenced by a letter from S. Mokshin, a correspondent from 'Sovetskaya Rossia' ('Soviet Russia') newspaper for the Tatar ASSR, to P. Erofeev, the editor in chief of this newspaper. He writes: 'After the well-known resolution of the Central Committee regarding the Tatar party organization, the newspapers of the republic swung to the other extreme and stopped talking about the Edigu epic and Jadidism at all, and stopped waging the ideological struggle against bourgeois ethnic prejudices. This led to a situation where these issues were discussed behind the scenes in narrow circles but nothing was published about these issues at all. Newspapers have not recently been publishing any articles devoted to promoting the success of the Leninist national policy or the friendship of the Soviet peoples. And if such articles appear from time to time, they are mostly declarative, they

lack the proper political insight, and are usually far removed from local life. The ideological work in newspapers is defensive rather than offensive in nature; articles rarely rebuff wrong views or backward attitudes' [RGASPI, Fund 556, Inventory 15, File 31, Sheet 14]. This letter clearly demonstrates that the national literary intelligentsia were opposed to the official interpretation of the history and culture of the Tatar people and sabotaged propaganda duties imposed on them by party authorities.

All branches of knowledge were undergoing intense ideological review in the post-war period. There were discussions about starting a 'pogrom' in philosophy, biology, linguistics and political economy in the republic, as well as throughout the country. In 1947, all scientific and educational institutions held meetings denouncing Klyuyeva and Roskin, two Moscow professors, for an attempt to publish their articles in an American scientific journal. Despite the fact that the Soviet doctors had acted officially, having asked permission to introduce their research to a foreign audience, the Ministry of Health accused them of being unpatriotic. The accusatory campaign unfolding in the country affected Kazan scientists as well. Velikhov and Porfiryev, teachers at the Pedagogical Institute, who, like their Moscow colleagues, wanted to publish their work abroad in response to an offer from the University of California, were accused of servility to the West. Nikanorov, a scientific secretary of the Chemistry Institute, was reproached for publishing a note about a medicine he prepared in the foreign press. It should be noted that there were scientists in Kazan who risked their careers by not participating in the public 'thrashing' of their colleagues. Thus, Arbuzov and Miropolsky openly declared that they did not consider it a mistake and even welcomed the desire of the scientists to maintain scientific contacts with foreign colleagues [RGASPI, Fund 17, Inventory 122, File 277, Sheets 3–10].

In 1948–1950, the Tatar Regional Committee of the CPSU(B) made a number of decisions against scientists whose work did not fit in the ideological template. During this

period they denounced the activities of scientists and lawyers from Kazan State University and the animal breeding station of the Tatar Scientific and Research Institute of Agriculture, as well as teachers at the Financial and Economic Institute. The experimental animal breeding station was accused of a low level of research in an article written by Lebedev, a station employee, entitled 'Study of the State of Cherkassy Sheep in the Conditions of the Tatar ASSR'. The article compared two groups of sheep — those raised collectively and privately — and all the indicators studied were worse for the collective herd, so the study was declared anti-scientific. Elia, a staff scientist and associate professor of the Institute of Language, Literature, and History, was criticized for discrediting the collective farm system, as he was a leader of a folklore expedition that collected 'anti-Soviet, anti-collective farm chastushki', as was noted in the party document [RGASPI, Fund 17, Inventory 122, File 277, Sheet 10]. From the authorities' point of view, the scientist should have filtered the oral folk arts, not recording the peasants' negative attitude towards Soviet reality.

In 1949, the 'Proceedings of the Law Institute' were taken off the market for a number of 'blatant theoretical errors and political distortions'. Specific claims were made against Levshin and Malenkov because in their joint article, they provided data on the marked decrease in 'speculators among private farmers' and the insignificant decrease in speculators among collective farmers and civil servants. An article by Akhmedov, a senior teacher, entitled 'Essays on Constitutional Turkish History' from the same collection of articles was called vicious and harmful, because the author characterized the Turkish state system as democratic, emphasizing the great role of Kemal Pasha and Yalcin the journalist in its establishment. The Regional Committee of the CPSU(B) negatively assessed a collection of works of the Kazan Financial and Economic Institute (Ed. 8, 1948) for its 'non-political nature and low ideological level'. This time, Saks, an institute employee, was accused for failing to criticize

bourgeois economists for the tax policies of capitalist states. As noted in party documents, Saks 'actually promotes the tax theory of bourgeois economists under the guise of polemics with them' [SA HPD TR, Fund 15, Inventory 30, File 6, Sheet 122].

During the Khrushchev Thaw, the creative intelligentsia tried to take full advantage of the opportunities brought about by the 20th Congress of the Communist Party of the Soviet Union to revive and further develop Tatar culture. In May 1956, a meeting of the Board of the Writers' Union discussed the most acute problems in Tatar literature. Having expressed concern that the Tatar Book House had lost its reputation as a national publishing house in recent years, writers substantially revised the publication plan to increase the number of Tatar literary works published [Ibid., Inventory 38, File 473, Sheet 38]. During the discussion, A. Shamov, the secretary of the Writers Union, noted that 60,000 copies of 'Neotoslanniye Pisma' (Unsent Letters) by Adel Kutuy had been published in the Uzbek Republic. Shamov noted, 'We have never had an opportunity to publish such a large number of a work of any of our Tatar writers' [SA HPD TR, Fund 15, Inventory 41, File 120, Sheet 85].

Writers made persistent attempts to start publishing a literary illustrated magazine for young people in Kazan at this time [Ibid., s. 94]. The reason it had not been published was directly related to the status of the Tatar Republic (which was an autonomous republic, but not a union republic). The national intelligentsia believed this was also the reason that the republic's writers received lower salaries than those in the union republics, and raised the issue of changing this situation. Thus, Sibgat Khakim, the deputy chairman of the Writers Union of the Tatar ASSR, requested the Tatar Regional Committee of the CPSU eliminate the unjustified infringement of local writers' rights. 'The fee paid for literary works published in autonomous republics,' he wrote, 'is 25% lower than that in union republics, and 50% lower for dramatic works' [SA HPD TR, Fund 15, Inventory 37, File 378, Sheet 53].

The Tatar intelligentsia began to more actively push for improvements in the conditions for developing the national culture after a ten-day Tatar literature and art festival was held successfully in Moscow in 1957. It was a real triumph of Tatar art that demonstrated not only the great skill of the republic's creative minds, but also its popularity among broad layers of the population. During this festival, the M. Dzhaliil Tatar State Opera and Ballet Theatre, Kazan Russian Bolshoi Drama Theatre and the G. Kamal Tatar Academic Theatre staged their best performances. More than 700 works of Tatar visual arts were exhibited in the halls of the Academy of Arts of the USSR.

Inspired by the positive feedback from the festival, G. Bashirov, the chairman of the board of the Writers Union, raised a number of issues for the Tatar Regional Committee of the CPSU to consider: restarting publication of Tatar periodicals that had been issued before the war — the monthly literary and art magazine for young people and the pioneer newspaper, transforming 'Literaturny Tatarstan' ('Literary Tatarstan') almanac published in Russian into a magazine, and increasing staff and salaries for 'Sovet Edebiyaty' magazine [SA HPD TR, Fund 15, Inventory 38, File 473, Sheets 94–95]. In the same period, an article by G. Bashirov was published on the pages of a republic newspaper in which he spoke out against the law forbidding Tatars to give their children Russian names, apparently seeing it as an expression of the Tatar people's inferiority complex [RGASPI, Fund 556, Inventory 15, File 31, Sheet 11].

Protesting against art being used as a political instrument, he spoke out publicly against the party control over the artists, and was harshly criticized by the authorities: 'Art dies when it is forced' [Ibid., s. 162].

The attempt to disavow some assessments of the history and cultural heritage of the Tatar people that began with the August Resolution (1944) of the Central Committee of the CPSU(B) was continued in January 1958 at a meeting of workers of the Tatar Regional Committee of the CPSU with representatives of the creative intelligentsia. S. Battal spoke out against looking at the epic 'Edigü' as feu-

dalistic, considering it national. Sh. Mannur supported him on this issue. A. Fayzi called for taking a new look at Jadidism: 'They created a bete noire from the word "Jadidism", suppress it in every way possible, and want to associate it with Pan-Turkism. But this is a scientific and educational people's movement! Half of those sitting here came from a madrasah. However, it's true that some counterrevolutionaries joined this movement, and because of that the whole movement became counterrevolutionary' [RGASPI, Fund 556, Inventory 15, File 31, Sheets 10–11].

It is worth noting that the cultural leaders that were present didn't object to all the issues raised. In fact, only government authorities such as S. Ignatyev, S. Batyev, and K. Faseev debated with the speakers. Thus, society in the republic was influenced by the increased liberalization course and persistently raised issues of democratic reforms in the socio-political and socio-cultural life of the republic.

A new twist in the development of national culture was in 1960 when a short 'thaw' was again followed by a 'political frost'. In October 1960, the Plenum of the Tatar Regional Committee found that 'Spring Awakening' by G. Minsky, 'Torments of Love' by Sh. Khusainov, 'Burning' by Kh. Kamalov, and 'Native Land and Soldiers' by R. Latypov were ideologically and artistically depraved. To inspire writers to create works with 'socialist content' on contemporary topics, the writers were bound to industrial enterprises.

Tatar theatre and drama, which had been called the most backward genre of Tatar literature, underwent a new ideological review in 1960 [SA HPD TR, Fund 19, Inventory 45, File 120, Sheets 84–85]. In the specially adopted resolution of the Bureau 'On the Regional Committee of the CPSU on the Performance of the Kamal Tatar State Theatre', it was criticized for 'failing to stage even a single play over the last few years which would raise the fundamental issues of the present times, for including ideologically and artistically weak performances in its repertoire, for its desire to please the outdated tastes of some spectators, for tending towards melodrama

and routine' [SA HPD TR, Fund 15, Inventory 41, File 69, Sheet 110].

The effectiveness of the authorities' control over the intelligentsia can be evaluated on the basis of information provided by the chairman of the Committee for State Security (KGB) in 1960. He reported: 'Of those assigned to production enterprises, R. Ishmuratov (the compressor plant), S. Battal (plant No. 16) and G. Khuzi (the chemical plant), and others have not written a single line so far' [SA HPD TR, Fund 15, Inventory 41, File 21, Sheet 5]. The artist I. Zaripov remembered the unique way he had handled his assigned business trip to the oil region. 'I'm working on an order, but my soul wants something different', he said. To satisfy his own longings, he first painted a picture of a 'handsome guy in a cozy house' and then decided to call the painting 'Oil Industry Worker, Akhat Aby'. 'Sure it's about oil,' the artist thought, 'It's not like he needs to be covered with oil' [Zvezda Povolzhya, 2009, No. 47].

Humanities scholars who studied the pre-revolutionary era found themselves under strict ideological supervision. One of the documents from the Committee for State Security (KGB) (1960) specifies the exact number and gives a list of works studied by students of the faculty of history and philology (KSU) while preparing their theses. 'Reading such literature negatively affects the scientific and political views the students will form since they are insufficiently politically prepared', the certificate stated [SA HPD TR, Fund 15, Inventory 41, File 21, Sheets 100–102]. The list of students included the names of currently well-known scientists of the republic such as R. Nafigov, A. Karimullin, and Kh. Kurbatov [Istoriya Kazani, 2004, pp. 660–662].

In 1963, an article by R. Mustafin entitled 'Thoughts on Literary Criticism' was withdrawn from publication in 'Sovet Edebiyaty' for positively describing Jadidism, which was still officially a pre-revolutionary movement of the Tatar bourgeois intelligentsia at that time [SA RF, Fund P–9425, inv. 1, f. 1131, s. 211].

Official guidelines to depreciate the national in favour of the international could not

suppress the Tatars' interest in their culture and history. This was evidenced by numerous letters and appeals to the governing bodies and mass media.

S. Rakhimov, a resident of the village of Bavly, sent a letter full of resentment against Kazan TV to the Tatar Regional Committee of the CPSU. 'We TV viewers,' he writes, 'cannot say for sure if there is a Tatar television studio, because we do not see its work...' [SA RF, Fund P–9425, inv. 7, f. 644, s. 22]. G. Shirgazin from Kazan wrote to 'Sovetskaya Tataria': 'I'm 22 years old. I love the culture of my people. Why aren't there any films made in the Tatar language?'. A. Sabirov from Naberezhnyet Chelny indicated with reproach that ethnic music was doomed to oblivion. 'Other ethnic groups teach their children to love their music beginning in early childhood', he noted [SA RF, Fund P–9425, inv. 7, f. 1184, s. 14, 16]. G. Khusniev, a chemical plant employee, requested that the authorities establish a newspaper called 'Literature and Art' and a Tatar film studio [SA RF, Fund P–9425, inv. 41, f. 221, s. 12–12 reverse]. In the 1980s, the Regional Committee of the CPSU received a letter from Tagir Idrisov, a student at Kazan Pedagogical Institute (an investigation showed the name had been made up). The letter also mentioned the Tatar TV broadcasts for the Tatar-speaking audience were insufficient [Ibid., Inventory 8, File 1573, Sheet 34].

The failure to appreciate the treasures of the nation's culture was obvious in the work of institutions created to enrich the spiritual life of the people, which was becoming more and more one-sided. Fewer and fewer works written by local composers were staged at the opera theatre from year to year. While 13 national performances were staged in the period from 1939 to 1950, only 8 were staged from 1951 to 1960, and just 5 from 1961 to 1970. [Komunist Tatarii, 1970, No. 8, p. 10]. In 1968, the repertoire of the State Philharmonic Orchestra included 33 Russian and foreign classics, 21 works by composers of union and autonomous republics of the USSR and only 13 works by Tatar composers. By 1969, only 8 works by Ta-

tar composers were left in the repertoire [Ibid.]. The republic radio and television clearly didn't have enough programmes in the Tatar language as well. In the 1960s, Kazan TV studio broadcast for 1.5 hours per day, which consisted of 43 minutes in Tatar, and 47 minutes in Russian. Tatar radio broadcast daily for 4 hours on average; of which from 2 hours 40 minutes to 2 hours 50 minutes was in Tatar, and from 1 hour 10 minutes to 1 hour 20 minutes was in Russian [SA HPD TR, Fund 15, Inventory 7, File 640, Sheets 2–3]. Given that Kazan was the sole centre of Tatar radio and television, it is evident that the spiritual needs of the Tatar population were neglected.

The post-war decades were not only a time of spiritual deprivations. Science, education and culture also suffered. The intelligentsia defended by opposing authorities, staying firm in the face of conformism, and resisting ideological imperatives. However, the level of a civilization and progress in a society are mainly defined by those who do not fight, but build, and who 'sow what is reasonable, right and everlasting' both during tumultuous times of social transformation and in periods of stability. True intellectuals continued to faithfully teach, heal, write, and study despite the political situation, without changing their beliefs for the sake of their careers, making full use of their professional skills.

Education. At the end of the 1940s, compulsory seven-year education was introduced in the republic, as well as throughout the country. The transition to compulsory eight-year education was begun in 1958. The Tatar Republic reported this transition was complete in 1963. In the mid-1970s, the transition to universal secondary education was completed there, as well as across the whole country. However, according to a document issued by the Department of Statistics of the USSR for 1962, 59,000 children from 7 to 15 years old did not attend schools in the Russian Soviet Federative Socialist Republic. The Tatar Autonomous Soviet Socialist Republic was first in the list of regions on the document. There were 2606 children in the Tatar ASSR who did not attend schools; the region was followed by Bashkiria

(2,127 people), Saratov oblast (1,749 people) and Dagestan (1,728 people). Moreover, Tatarstan was one of the nine regions in the RSFSR where the number of children who did not attend schools had increased compared to 1961 [Russian State Archive of Contemporary History, Fund 5, Inventory 37, File 104, Sheet 126]. This document shows that the progress of introducing general education in the USSR did not go as smoothly as it was presented in political statements, although its level was significantly increasing.

At the end of the 1950s, the republic, like the country as a whole, started restructuring the education system by combining studying with work for manufacturing companies. From 1959 to 1962, all seven-year schools were transformed into eight-year polytechnic ones. Ten-year schools, which were considered to be cut off from real life, were intensively transformed into polytechnic secondary schools with training in production. In 1960–1961, there were 114 of these schools, and in 1964–1965, there were 279 secondary schools with training in production for 202,600 children [Safronov, 1965, p. 185].

In 1964, it was acknowledged that the concept of polytechnic schools was a mistake, because they had not produced the expected results, and process included much formalism. However, during this period, the school specialisation process led to the establishment of the famous schools No. 18 and No. 39 in Kazan, where classes were taught in English, and school No. 36, where classes were taught in German. Kazan school No. 131 began to prepare mathematicians, programmers, radio physicists and chemical laboratory technicians. Thus, it became possible to use a differentiated approach in teaching school-age children depending on their abilities, at least for some of Kazan's children. In 1960, a secondary music school opened in the Conservatory with a small boarding school for those who came from the regions.

As for preparing the regular labour force, the biggest bet was placed on vocational schools, the network of which expanded exponentially during this period. While there were 15 such

institutions with 4,800 students in 1941, there were 69 of them with 6,900 students in 1951, and there were 123 technical training colleges in the republic with 58,800 students studying in them in 1986 [70 let TASSR, 1990, p. 163]. At the beginning of the 1980s, 71 colleges all provided secondary education [Shakirov, 1983, p. 83].

The system of tertiary education in the republic was multifaceted and diverse. Rapid industrial development had caused a steep increase in the demand for labour, which was quite easily satisfied by peasants willing to leave villages in search of a better life in the cities. But as production was becoming more complicated, it required not just manual labourers but highly-qualified experts. The rapidly industrialized Tatar Republic experienced an acute shortage of highly-qualified personnel. Thus, in 1960, the Tatar Council of National Economy applied for 1,779 specialists with a higher education, but received only 610 people. In 1961 the situation deteriorated even further. Instead of the requested 1,780 specialists, just 482 people with a higher education came to work for the enterprises in the Tatar Council of National Economy [Russian State Archive of Contemporary History, Fund 5, Inventory 37, File 90, Sheet 79].

Under these conditions, the system of tertiary education became vital in the modernization of the republic. It was established in Tatarstan in the 1930s. In 1935, there were 13 institutes of higher learning (IHL) [Kazan` na poroge ty'syacheletiy, 2004 p. 24]. All of them were located in Kazan. The first IHL outside the capital of the republic appeared in 1939. It was the Elabuga Pedagogical Institute. Immediately after the war in 1945, a European-style conservatory was opened in Kazan, which was the first in all the autonomous republics, and remained the only one for a long time. In 1946, the Kazan Institute for Engineering and Construction, which had been created in the republic before the war, was reopened. Due to the development of energy-intensive production in Tatarstan, a branch of the Moscow Energy Institute was opened there in 1968. At this time,

branches of the N. Krupskaya Leningrad Institute of Culture and the Volgograd Institute of Physical Culture were also established in the capital of the republic. By the beginning of the 1980s, there were 13 institutions of higher education in the Tatar ASSR [70 let TASSR, 1990, p. 225]. Since some IHLs merged, the new institutions did not increase the total number. The majority of institutions were still located in the capital of the republic.

Although the number of IHLs did not rise, this doesn't mean their quality stagnated. The existing IHLs underwent considerable changes and opened new faculties, expanding their educational opportunities. The creation of an architecture department at Kazan Institute for Engineering and Construction in 1969 was one of the major events of this kind. It is associated with the establishment of the Kazan school of architecture, which was important not only for the republic, but for the whole Volga region. The authorities of the republic persistently sought opportunities to prepare architects at Kazan Institution of Civil Engineering, as Tatarstan had the fewest number of architects in the mid-1960s as compared with the rest of the country: only four specialists per 1 million people. Architect teams at design institutes had only 1–10% of the staff they needed, and among 35 regional and 8 city architects, not a single one was a qualified specialist [SA HPD TR, Fund 15, Inventory 7, File 76, Sheet 142].

After large oil fields were discovered and the oil industry was developed in the republic, there was a steep rise in demand for specialists in oil geology and geodesic methods of mineral exploration, as well as in development and operation of oil fields. They began to prepare such experts at Kazan State University and Kazan Institute of Chemical Technology. In 1956, teaching and consultation centers of I. Gubkin Moscow Petroleum Institute were established in Almetyevsk and Leninogorsk, and evening departments of Oktyabrsky Oil College of Bashkir ASSR were created there [Shamseev, 1972, p. 154]. Due to the growing needs of the aviation, instrument-making and machine-building industries, the number of fields of

study was increased at the physics, chemistry, mechanics and mathematics departments of Kazan State University. The Aviation Institute began to prepare specialists in jet engines, radar, and other fields. In 1980, Kama Polytechnic Institute was opened in Naberezhnye Chelny, which prepared specialists for KamAZ. IHLs preparing specialists in modernized agriculture also expanded their capabilities. Kazan started preparing land reclamation experts, animal technicians, and other specialists.

Some growth was observed in the humanities as well. At Kazan State University, departments of Tatar language and literature and logic and psychology were added to the departments of history and Russian philology; the faculty of law was restored, etc. Elabuga Pedagogical Institute started to prepare teachers of foreign languages.

In accordance with the expansion of education opportunities, the number of students in the republic increased as well. From 1952 to 1962, the student population increased from 17,000 to 40,000, that is, by 2.5 times [Russian State Archive of Contemporary History, Fund 5, Inventory 37, File 102, Sheet 29]. The highest growth was observed in technical IHLs: Kazan Aviation Institute grew 8-fold (from 1,200 to 9,600 students), Kazan Chemical Engineering Institute grew 5-fold, and other IHLs grew 2- to 3-fold [Ibid., Fund 5, Inventory 37, File 102, Sheet 29].

As E. Bogachyov wrote in his book, 'Kazan Aircraft Institute was in good favour at that time. Young people were trying to get into aviation, closer to the cosmos. Cybernetics was rehabilitated' [Bogachyov, 2001, p. 43]. The number of students in Kazan was greater than in all of Turkey. The Tatar Republic also exceeded the most developed countries of Europe. In 1958, the following number of students studied per 10,000 residents: Federal Republic of Germany — 24, France — 34, Tatar ASSR — 113. Almost one-third of all students in the republic were Tatars. Many Tatar students studied at IHLs in Moscow and Leningrad [Abramov, 1960, p. 84].

The network of specialized secondary schools didn't grow at a uniform rate. It shrunk

considerably during the war: from 53 in 1940–1941 to 43 in 1945–1946. By 1960, the number of technical secondary schools had dropped to 35, but it grew steadily since 1960 and reached 62 in 1985–1986 [50 years of the Tatar ASSR, 1970, p. 159; 70 let TASSR, 1990, p. 225].

There is an opinion that young people had a 'thirst for knowledge' in the 1940–1960s. Of course, this cannot be denied, but it should also not be exaggerated, characterising it as a mass craving for knowledge, which is not quite correct. Of course, higher education helped set the parameters for status in the Soviet Union. A graduate was guaranteed a place in the social hierarchy and a certain amount of public recognition [Nugayev and Nugayev, 1997, p. 67]. However, not everyone was tempted by a career, many people in the 1960s wanted to receive good training and achieve financial well-being. For example, as was shown in a review of the Central Committee of the CPSU in 1961, some enterprises sent their employees to institutes against their will, and these employees asked the examiners to give them low marks. In 1960, 50 employees did not pass entrance examinations for the Aviation Institute due to such tricks [Russian State Archive of Contemporary History, Fund 5, Inventory 37, File 102, Sheet 79]. However, the outright pragmatism that characterised some Soviet students did not mean that the image of Soviet students as advanced, courageous and romantic youth that was created in the public consciousness was not true. The students were diverse and did not fit into ideologically defined parameters.

By the end of the 1980s, around 11,000 students graduated from TASSR institutions of higher education annually, and more than 17,000 students from specialised secondary schools. By that time, there were 30 graduates from IHLs and 48 graduates from specialized secondary schools per each 10,000 living in the republic [70 let TASSR, 1990, p. 229].

As to the ethnic dimension, it should be noted that the Tatars excelled the Russians in terms of growth in the number of young people studying in IHLs and technical schools. While in the 1960–1961 academic year, 57.8% of the students at IHLs were Russian and 31.2% were

Tatar, in 25 years the figures were 44.5% and 44.7%, respectively. The same situation was observed in technical schools [70 let TASSR, 1990, p. 226]. The growth in the number of students led to a general increase in the education level of the population. By 1979, it had grown by 8 times. While in 1939, there were 100 people with higher or specialized secondary education per 1,000 workers, in 1979 there were 815 of them. This figure increased by 6.5 times throughout the whole Russian Federation: from 124 up to 803 people [Narxoz RSFSR, 1986, 14; 70 let TASSR, 1990, p. 10]

Science. In the middle of the 20th century, the level of science development in Tatarstan was high. The rapid development of industry in the republic contributed to the increase in the number of scientific institutions with missions to ensure scientific and technical progress was made in high-priority branches of the national economy. In 1945, the Kazan branch of the USSR Academy of Sciences was opened. In 1950–1960, the Kazan branch of the S. Vavilov Leningrad Optical Institute; the Kazan branch of the Moscow Scientific and Research Institute of Technology and Production Organization; the Scientific, Research and Design Institute for the Introduction of Computing Technologies in the National Economy; the All-Union Research Institute of Raw Hydrocarbons; a branch of the All-Union Research Institute of Synthetic Rubber; and the Research and Design Institute of Vacuum Engineering were all established. The Kazan Veterinary Institute was reorganized into a research IHL.

Over the 1940–1980s, there was colossal growth in the number of scientific and scientific-pedagogical staff. In 1965, about 3,700 academic researchers worked in 51 scientific and research institutions of the republic [Resheniya partii, 1968, p. 293]. The percentage of Tatars working in intellectual fields of industry grew steadily. In 1951–1965, the number of scientific intelligentsia in the Soviet Union rose by 38%, and by 65% among the Tatars [Izmaylova, 1980, p. 188]. By the early 1980s, there were over 9,600 Tatar scientific intelligentsia in the republic. Each fourth doctor of philosophy,

each third candidate of sciences (equivalent to Ph.D.), as well as each third post-graduate student in the republic was Tatar.

Kazan schools were known worldwide in many fields of natural sciences. E. Zavoysky made his discovery of global importance in Kazan. He discovered electronic paramagnetic resonance. B. Kozyrev and S. Altshuler made considerable contributions to this research. One of the largest centers for studying higher algebra was formed under the leadership of N. Chebotaryov, and a center for studying electrochemical processes was formed under S. Kochergin. N. Chebotaryov's research was awarded a state prize. V. Morozov and I. Ado studied in his school. The discovery of a large oil field in the republic served as an impetus for developing geology in the capital. L. Miropolsky, E. Tikhvinskaya, V. Polyandin, M. Kaveev, B. Yusupov and other scientists conducted research of subsoil, the geological history and oil-bearing capacity of the Volga-Kama region. B. Laptev, N. Chetayev, Yu. Odinokov, M. Nuzhin, Kh. Mushtari and A. Petrov worked fruitfully in geometry and mechanics; B. Gagaev and G. Salekhov studied mathematics; A. Dubyago, D. Martynov, and I. Dukov were astronomers; G. Kamay was a chemist; and I. Validov and N. Livanov were biologists. Fundamental scientific problems were studied by professors V. Alemasov, K. Valiev, M. Zari-pov, P. Kirpichnikov, A. Konovalov, A. Norden, K. Salikhov, I. Tarchevsky, I. Teregulov, G. Tumashev, I. Khaybullin, etc. The work of Kazan scientists in the field of chemistry enjoyed universal recognition. In 1978, the academic B. Arbuzov and the corresponding member of the USSR Academy of Sciences A. Pudovik were awarded the Lenin Prize in the field of science and technology.

Although the authorities had a cautious attitude to their work, Tatar humanities scholars did not stop studying the ethnogenesis and ethnic development of the Tatars, accumulating valuable materials to reconstruct an authentic picture of the Tatars' past. Kazan Institute of Language, Literature and History, which was a branch of the USSR Academy of Sciences,

played the main role in studying Tatar history and culture. Of course, its resources were much more limited in comparison with those of the Academy of Sciences of the Union republics. In this regard, the resources of Kazan State University were also limited. They did not even have a department of Tatar history, but a branch of Tatar language and literature was opened in the faculty of history and philology in 1944.

In this period, Tatar folklorists' efforts resulted in the creation of 12 volumes of 'Tatar Folk Art', which is a treasury of the oral legends of the people. Tatar linguists published a Glossary of the Tatar Language in 3 volumes. In 1969, F. Valeev, who was the only Doctor of Philosophy in art history in Tatarstan and the whole Volga region, published a book called the 'Ornamentation of the Kazan Tatars', which became a significant event in Tatar art history. A number of historical works were published by M. Abdrakhmanov, Z. Gilmanov, I. Ermolaev, A. Litvin, N. Mukharyamov, Yu. Smykov, I. Tagirov, M. Usmanov, A. Shofman, and others. The history of Tatar social thought was developed by Ya. Abdullin, F. Gazizullin, and R. Nafigov. Archaeologists such as P. Starostin, E. Kazakov, R. Fakhrutdinov, and A. Khalikov conducted archaeological research; N. Zorin and E. Busygin researched ethnography.

Kazan was the center of Tatar linguistics. Recognized scientists in the field of Tatar linguistics such as Kh. Usmanov, D. Tumasheva, M. Zakiev, G. Sattarov, L. Zalyay, and F. Safiullina worked there. The Department of Tatar language was a major scientific center for Turkic-speaking republics. Experts from Turkmenistan, Yakutia, Chuvashia, Bashkortostan, Tuva, Karachay-Cherkessia, and Dagestan did additional training there. In 1961, the Tatar branch of the Research Institute of national schools of the Academy of Pedagogical Sciences of the RSFSR was created there.

Literature and Art. The content of the works of art and literature created during the post-war period were greatly influenced by the conditions under which the activities of the creative intelligentsia were strictly regulated. The main themes of this period were the diffi-

cult pre-revolutionary past of the people, wartime heroics and the construction of socialism. But, as the 'children' of their time, the best works also embodied universal values. The books of K. Nadzhmi, G. Bashirov, A. Absalyamov, A. Eniki, the music of N. Zhiganov, S. Saydashev, M. Muzafarov, D. Fayzi, A. Klyucharev, and the paintings of Kh. Yakupov, L. Fattakhov and K. Maksimov all currently occupy a rightful place in the nation's cultural treasury. In 1951 the highest prize — the State (Stalin) Prize of the USSR — was awarded to G. Bashirov for his novel 'Honour' and K. Nadzhmi for his novel 'Spring Winds'. The opening of the museum apartment of Sh. Kamal, the classic of Tatar literature, in January 1950 was a notable event in the cultural life of the post-war period.

Creative activity received a new impetus after the 20th Congress of the CPSU of the Soviet Union, which served as a forum for the disclosure of Stalin's crimes. This was evidenced by the works of S. Khakim, S. Battal, Sh. Mudarris, and a number of other poets. Tatar prose writers addressed the problems of a person's moral and spiritual identity, and the struggle between the new and the old. For example, this eternal theme was reflected in novel about student life 'So what do you think?' by N. Fattakh, novel about oil workers 'Treasure' by G. Akhunov, and the collection of short stories by Sh. Mannur 'A New Song is Sung'. The preparation by G. Bashirov of the collection of Tatar folklore tales 'A Thousand and One Mezecks' was a clear sign that the ideological climate was warming up. In a tribute to the time, A. Rasikh, A. Eriki, Z. Nuri, M. Amir, N. Isanbet and R. Ishmurat attempted to recreate an authentic image of their contemporaries.

New generations of Tatar composers embarked on their creative activities during the period of the 'thaw'. Wonderful songs and romances were created by R. Yakhin. E. Bakirov wrote the ballet 'The Golden Comb' and the musical comedy 'Melody of the Button Accordion' were written by E. Bakirov; the opera 'Samat' was written by Kh. Valiullin, and a symphony and a symphonic poem were created by A. Valiullin. Music written by N.

Zhiganov, A. Leman, and M. Muzaffarov was hugely popular.

The Theatre School, opened at the beginning of the 1960s, occupied a prominent place in the cultural life of the republic. Performances staged by the G. Kamal Tatar State Academic Theatre were invariably played to a full house. The theatre owed its popularity to the performance of actors such as Kh. Abzhalilov, G. Bulatova, F. Kulbarisov, A. Khayrullina, G. Shamukov, F. Khalitov and others. In 1957 the Tatar Theatre was awarded the Order of Lenin. In the same year the title of the People's Artist of the USSR was awarded to the composer N. Zhiganov, and the actors Kh. Abzhalilov and E. Zhilina, who worked at the Kachalov Kazan Drama Theatre, which enjoyed immense popularity among the Russian-speaking audience. Hundreds of people became acquainted with the finest samples of classical music, attending performances staged by the M. Dzhilil Opera and Ballet Theatre. The works of Tatar composers occupied a prominent place in the Theatre's repertoire: the opera 'Dzhilil' by N. Zhiganov, the ballets 'Raushan' by Z. Khabibullin and 'Kisekbash' by R. Gubaydullin. The orchestra of Oleg Lundstrem, a variety conductor and composer of symphonies and jazz compositions, has been performing in Kazan since 1956.

In the 1950–1960 large monumental sculptures appeared in Kazan. During this period a monument to G. Tukay was erected by S. Akhun, L. Kerbel and L. Pisarevsky. A great contribution to Kazan architecture was made by I. Gaynutdinov. The most famous of his projects include the M. Dzhilil Opera and Ballet Theatre and the building of the river boat station. The first project successfully combines the principles of the classics and Tatar ornamental decor. The second one embodies the search for new architectural solutions reflecting the current level of construction technologies. A. Bikchentayev was another outstanding architect, who made a significant contribution to the Kazan architecture of the 1940–1980. He was the creator of many major projects of public and residential buildings located mainly in the

central part of the capital of Tatarstan. They include the chemistry building of the Kazan State University, residential houses on Liberty Square and on Teatralnaya and S. Khalturin Streets.

Industry was a central theme in the work of artists. Oil motifs were embodied in the paintings 'Oil Explorers' and 'We've Struck Oil' by A. Burlay. The modern city was depicted in the paintings of N. Kuznetsov. The opening of the State Museum of Visual Arts in the style of an art gallery in 1959 was an important milestone in the cultural life. As was noted above, in 1958 the Tukay Prize was established, which was awarded for outstanding achievements in the field of artistic culture. F. Yarullin (for the ballet 'Shurale'), A. Fayzi (for the novel 'Tukay'), director Sh. Sarymsakov, artist A. Tumashev, actors Kh. Abzhalilov, A. Khayrullina and F. Kulbarisov, (for the play 'Without Sails'), artists Kh. Yakupov and L. Fattakhov (for illustrations to the Tatar fairy tales), and director N. Dautov (for the staging of the operas 'Altynchech' and 'Eugene Onegin') were the first to receive the Prize.

Despite the absence of spiritual freedom, the range of topics used in the creative work was extended in the 1960–1980s. In his autobiographical novel 'Native region, green cradle' and the novel 'Seven springs', G. Bashirov expressed his concerns regarding the erosion of the people's memory and the deterioration of the human treatment of nature. Historical topics were touched upon in novels 'The Itil River flows', 'Whistling arrows', the tragedy 'Kul Ghali' by N. Fattakh, the story 'Arduan Batyr' by G. Akhunov, and the novel 'Chulman, a river of grandchildren' by E. Kasimov. The theme of the village was depicted in a new light in the stories 'What do the raindrops sing', 'Berry meadows' by R. Tukhvatullin, 'Where the two mountains cannot meet' by M. Khabibullin, and in his novel 'Whirlpools'. Topical moral and ethical issues of the time were raised in works 'In the middle', 'Friday night', 'Cock on the fence', 'Green meadows beyond the fence' by A. Gilyazov; 'An undeclared will', 'Pacification', 'Conscience' by

A. Eniki; and 'Two bachelors' by A. Rasikh. In the 1960–1980s, Tatar poetry was represented by works written by Sh. Galiev, R. Fayzullin, R. Kharis, G. Rakhim, R. Gataullin, R. Mingalim, Zulfat, and others.

Works staged at the G. Kamal Tatar Academic Theatre and the K. Tinchurin Tatar Theatre of Drama and Comedy were significant events in the theatrical life: 'The blue shawl', 'faded stars', 'Mirkey and Ayslu' by N. Isanbet, 'Mother has come' by Sh. Khusainov, 'Almandar from Aldermysh' by T. Minnullin. The M. Jalil Tatar Opera and Ballet Theatre had many regular viewers. The premiere of the ballet 'Su anasy' ('Aquatic') by E. Bakirov was staged here in 1971. The V. Kachalov Kazan Bolshoy Drama Theatre also refreshed its repertoire. It staged such plays as 'The Zykovs' by Gorky, 'Ocean' by Stein, 'The Flight' by Bulgakov, and 'To be or not to be' by Gibson. The number of national theatres was growing. The G. Kamal Tatar Academic Theatre was awarded the Order of Lenin, and the V. Kachalov Kazan Bolshoy Drama Theatre was awarded the Order of the Red Banner of Labour. The State Folk Song and Dance Company headed by L. Kustobaeva and the K. Tinchurin Tatar Theatre of Drama and Comedy lent a vibrant national character to the cultural life of the republic.

The State Symphony Orchestra was formed in 1966. For 12 years, it was headed by Natan Rakhlin, an outstanding conductor and people's artist of the USSR. In 1979, Renat Salavatov was made the art director of the orchestra. The orchestra was the winner of all-Russian and all-Union competitions on three occasions. Its ensemble was the first to perform symphonic works by Tatar composers. The following graduates of the Kazan Conservatory actively worked in the sphere of symphonic music: F. Akhmetov, R. Enikeev, I. Yakubov, R. Abdullin, L. Batyr-Bulgari, L. Khayrutdinova, Sh. Timerbulatov, and others. The best achievements of Tatar symphonic music are associated with symphonies by N. Zhiganov, A. Monasypov, and F. Akhmetov. In the 1970s, the symphony 'Sabantuy' by Nazib Zhiganov was awarded the State Prize of the USSR, and

a symphonic poem by F. Akhmetov, devoted to the memory of F. Yarullin, was awarded the M. Glinka State Prize of the RSFSR.

In the 1960–1980s, the traditional values of the national musical heritage were becoming increasingly apparent. Previously unknown archaic folklore stratifications of various dialectal and regional Tatar groups (the Mishar Tatars, Kazan Tatars, Kryashens, Siberian, Astrakhan, and other groups) were revived. The lines of development of the traditional musical culture interrupted at the beginning of the 20th century were restored; the stratifications associated with Islamic culture and oriental musical and poetic traditions (Quranic recitation, the tradition of book singing, *munajats*) were revived. These new trends were characteristic of works by A. Monasypov, Sh. Sharifullin, R. Kalimullin, and M. Shamsutdinova.

Begun in 1982, the Chaliapin festivals became an important event in Kazan cultural life, and their popularity rapidly increased throughout the 1980s. Participation in the festival was considered an honour not only by Russian opera stars but also by those with worldwide renown.

The songs and romances by Tatar composers were made popular by acclaimed performers such as A. Avzalova, Sh. Akhmetzyanov, E. Zalyaltdinov, R. Ibragimov, and I. Shakirov. And perhaps it was the apolitical nature of works by S. Sadykova, R. Yakhin, F. Akhmetov, and R. Enikeev, disliked by the authorities, that was the reason for their great popularity.

B. Urmanche's works stood out in the field of visual arts. During this period, he created the triptych 'Tatarstan' and the sculptures 'Sagysh', 'Spring melodies', and 'Tulpar'. New picturesque canvases were painted by L. Fatkhov, A. Prokopyev, K. Maksimov, and N. Adylov. The monumental paintings and the easel painting works 'In a native mountain village', 'Zulfiya, a Kazan beauty' were created by I. Zaripov. The latter picture, together with works by Deyneka, Plastov, and Korin, represented Soviet visual art at international exhibitions in Paris and West Baden. History and contemporary life were vividly reflected in works by such artists as V. Kudelkin, A. Ro-

dionov and M. Usmanov. Unusual pictures by the distinctive Kazan artist G. Arkhiereev, as well as sculptures and metal compositions by I. Bashmakov, never failed to arouse interest. The zonal exhibition 'The Great Volga' occupied an important place in the life of the artists from the 1970s.

In 1959, a fundamentally new type of art emerged in Kazan with the opening of a television studio: the production of TV programmes. In the 1940–1950s, there had only been a correspondent office of the Kuybyshev newsreel studio in Kazan. The first live programmes of the Kazan studio were mainly devoted to the party's activities and sports competitions. From 1961, there was a newsreel studio here, which yearly translated 15 feature films into the Tatar language, produced 6 documentaries and issued, on average, 36 magazines 'Na Volge shirokoy' (On the wide Volga). The editor of the film group was S. Govorukhin, who later became a well-known film director. At the beginning of the 1960s, the following films were made: 'I want to believe' (Director: I. Proshkuratov, Cameraman: I. Shamsutdinov), the short film 'Bird Cherry Blossom' in the Tatar language (Director: R. Sakaev, Cameraman: I. Shamsutdinov), and the full-length film 'Berenche Theatre' (Director: R. Sakaev, Cameraman: A. Privin). These were feature films, in which artists of the Kazan theatres participated. The five-series documentary 'Soviet Tatarstan' was created in 1970.

In the mid-1960s, Kazan became hugely popular thanks to the Special Design Bureau 'Prometheus', headed by B. Galeev, and its successful experiments in the field of light shows. They were the first in the USSR to stage a sound-and-light play without actors in the open air and to make the sound-and-light film 'Little triptych' to the music by G. Sviridov.

The work of many creative workers was highly appreciated. Thus, the G. Tukay State Prize of the Republic was awarded to Kh. Tufan, I. Gazi, G. Akhunov, A. Eniki and A. Gilyazov; the M. Gorky State Prize of the RSFSR was awarded to Sibgat Khakim. The I. Repin State Prize of the RSFSR in the field of visual

arts was awarded to the artist Kh. Yakupov; the Tukay State Prize was presented to the sculptor V. Malikov and the painter N. Kuznetsov. B. Urmanche received the Tukay Award.

As is common knowledge, the awards only reflected the more elegant side of the life of creative workers. Their attempts to recreate the true picture of Soviet reality met with disapproval of the authorities and accusations of being preoccupied with the more shadowy aspects of life. In addressing the issues of personal life, everyday life and family conflicts, they were criticized for their triviality, narrowness of interests, and lack of ideology and civic consciousness. In spite of this, the intelligentsia, who not only possessed a superior intellect but also a true but undeclared love of the native people and homeland, served to ensure by their labour and social position that the cultural component of the Tatar people would occupy a worthy position in the process of modernization. It was, in fact, the independently-thinking intelligentsia that was the dominant factor in the constructive transformation of society, calling for the maximum consideration of its specific fundamental positions, which would ensure a natural evolutionary path of development without any shocks to society.

Thus, in spite of the official statement that the national issue was fully resolved in the country and that there was all-encompassing development of the Soviet peoples, the community of the Tatar Republic continued to be concerned about the negative processes in the cultural development of the Tatar ethnos. The most vivid examples of the resistance to the artificially supported process of de-ethnization were displayed by the Tatar intelligentsia. Both within and beyond the confines of the possible, its representatives continued to defend their own position, which undoubtedly reflected the sense of civic responsibility, characteristic of a true intelligentsia, for the moral and ethical status of their people, and the ability to speak the truth and to follow it in any, even the most unfavourable, circumstances. Finding themselves in the minority and sometimes even alone, the most resistant and principled representatives

of the Tatar intelligentsia opposed the ‘deculturation’ of society, the process of forced destruction of everything healthy in the culture of the Tatar people. Despite all the seemingly unshakable dominance of the official ideology,

civil activity, albeit in a limited and embryonic state, was preserved and maturing in society. In the context of the national region, by virtue of ignoring the ethnic factor in state policy, it obtained an appropriate colouring.

§ 2. Islam among the Tatars in the 1940–1980s

Ruslan Ibragimov

By the beginning of the Great Patriotic War, the policies of the Soviet State concerning religion, including Islam, had almost reached their goal. According to the sociological research of those years, the number of believers was decreasing day by day and, conversely, the number of villages, settlements, cities, and regions where there was officially no functioning place of worship or religious association was constantly increasing [Barmenkov, 1979, p. 162]. By the middle of 1941, as a result of mass atheistic propaganda, repressions against believers and the clergy, and three all-union anti-religious campaigns, the religious associations of the republic were on the verge of complete destruction.

The position of the believers and the clergy changed considerably with the beginning of the Great Patriotic War. Representatives of all confessions functioning within the territory of the USSR made patriotic appeals to their followers. Among them, there were representatives of Islam, the second largest confession in the USSR. In the appeal of the Central Muslim Spiritual Board, particular attention was given to the necessity to resist the external threat. In particular, it stated: ‘The Central Muslim Spiritual Board of the USSR urges all true believers to rise in defence of their native land, to pray in mosques for the victory of the Red Army, and to bless their sons, fighting for a just cause’ [Kuroyedov, 1982, pp. 92–93].

The rigid control established by Stalin over all spheres of public life, including spiritual, the suppression of all manifestations of divergence from the Soviet way of life and thinking were impossible in conditions of war. In periods of social cataclysms, the stabilizing and integrat-

ing functions of religion become manifest and are in particular demand. Hence, during these years, many believers began to express openly their adherence to one confession or the other, to attend places of worship and perform rituals — in doing so, ignoring numerous bans and restrictions.

The international situation was one of the reasons for the policy adjustment with regard to religion. The Soviet Union, single-handedly fighting a war with Nazi Germany, faced an important task: the opening up of a second front. In these conditions, the democratization of some aspects of Soviet life was able to have a positive impact on the course of negotiations with the allies.

In September 1943, J. Stalin held a meeting with the heads of the Russian Orthodox Church, which led to the decisions that marked a new stage in the relations between the state and the confessions. In practice, this manifested itself in the liberalization of the tax law in respect of religious workers, their exemption from call-up for mobilization, the granting of limited rights of legal entities to religious organizations, etc. The permission for a group of 17 believers to do the Hajj became a milestone event for the Muslims of the country.

In 1943, in addition to the functioning Central Muslim Spiritual Board (with its centre in the city of Ufa), three more Muslim Spiritual Boards – of the North Caucasus (in Buynaksk), Transcaucasia (Baku), Middle Asia and Kazakhstan (Tashkent) – were formed. This event, according to Ya. Roy, ‘... should be considered a part of the ideological campaign carried out by the Soviet leaders to influence the civil, patriotic feelings of

the population and to mobilize them in conditions of war' [Roy, 1998, p. 129]. Among the above-mentioned Muslim Spiritual Boards, the status of informal leader was given to the Middle Asian Spiritual Board, under whose jurisdiction was the only Islamic higher educational institution in the USSR, the madrasah of Mir-Arab (city of Bukhara).

A short-term normalization of the relations between the state and the confessions in 1943–1948 necessitated creation of a new authority capable of connecting, in these new conditions, the government and the religious associations, taking into account the changes in the USSR policy on religion. In this context, in May 1944, the Council for the Affairs of Religious Cults (hereafter CARC) was founded under the Council of People's Commissars of the USSR. This body was called upon to facilitate communication between the government and all religious associations (except for the religious associations of the Russian Orthodox Church, for communication with which the Council for Affairs of the Russian Orthodox Church was founded); in 1965, both councils were united into one single body: the Council on Religious Affairs (hereafter CRA) under the Council of Ministers of the USSR, functioning on the territory of the Soviet state. Representatives acting in the regions, provinces (krais), federal and autonomous republics came under the jurisdiction of the Council. Religious followers addressed the representative in a particular region on all issues concerning relations between the state and the confessions, such as registration of religious communities and places of worship or the holding of religious holidays. Nominally, they carried out a wider range of duties, including the total control of the religious organizations.

Between May 1945 and December 1947, there were registrations and re-registrations of 16 Muslim religious associations in the Tatar Autonomous Soviet Socialist Republic [National Archive of the Republic of Tatarstan, File R-873, List 1, Act 4, Sheet 33], which was a reflection of the liberalization of the state policy on religion.

This period also saw the peak of the population's religious activity. In 1945, celebration of Kurban Bayram was held in the republic on an uncommonly solemn and grand scale. According to a report by the Representative for Religious Affairs within the TASSR, approximately 24,000–25,000 people took part in the Namaz festivity in Kazan on 15 November (held in 6 places, although only one mosque and Muslim community were registered by the authorities), and half of these were young and middle-aged people [SA HPD TR, Fund 15, Inventory 5, File 1844b, Sheet 1]. The procession towards the places where the Namaz was being held was accompanied by the singing of 'Takbir'. In the Marjani Mosque, the only officially functioning mosque in Kazan, the Namaz festival was attended by around 12,000–13,000 people [SA HPD TR, Fund 15, Inventory 5, File 1844b, Sheet 1] As the mosque was unable to accommodate such a large number of believers, the majority of them remained in nearby streets. Among the visitors there were people in military uniform, who not only participated in the religious service but also performed a sacrificial rite themselves. A further peculiarity of the Kurban Bayram celebration in 1945 was the fact that a significant number of children of school age and women participated in it. These were given an opportunity to hold a service in the Marjani Mosque on the 17 November, where there were as many as 1,500–1,800 participants [SA HPD TR, Fund 15, Inventory 5, File 1844b, Sheet 1].

On that day, almost all of the villages of the republic held services in private houses and in cemeteries under the guidance of the former mullahs and elderly men who were well acquainted with the rites of Islam. A characteristic feature was participation of a considerable number of young persons (born 1928–1930) and middle-aged people. For example, in the village of Klyashevo in the Tetyushi district of the TASSR, they made up respectively 30% and 40% of the number of participants [SA HPD TR, Fund 15, Inventory 5, File 1844b, Sheet 1]. It is interesting to note that one of the sacrificial rites was performed by the chairman

of the kolkhoz [SA HPD TR, Fund 15, Inventory 5, File 1844b, Sheet 1].

The reason for such an active religious expression by the Muslims of the republic was, evidently, the elation that reigned in Soviet society during the post-war period. The long-awaited victory in the Great Patriotic War, the joy of the victors returning home, whose families had prayed for their lives, the re-evaluation of the spiritual values during the years of war by some servicemen, the loyalty of the authorities with regard to religion – all of this, in total, provided for an extraordinary high level of religious activity among the population in the first post-war festivity of Kurban Bayram. In the years that followed, such large-scale participation by religious followers was no longer observed.

The strengthening of religiosity among the Tatars during the war and post-war years was also expressed in increase of clerical activity. In his report, the representative of the CARC within TASSR wrote: ‘Certain religious workers who had left their former activity and worked for a number of years in Soviet institutions now (1944 – I.R.) leave their work and return to their former occupation’ [National Archive of the Republic of Tatarstan, Fund P–873, List 1, File 2, Sheet 18]. But before this or that religious community nominated their candidate as a religious worker to the religious regulatory body, it had to coordinate its choice with the representative who, in his turn, had to communicate the decision to the authorized Council of the republic, krai or region, where the centre of spiritual administration was. Speaking about the mullahs’ activity, it should be noted that they, as well as the religious workers of the other confessions, were exposed to strong tax pressure. This created a situation in which it was more beneficial for clergy to hold the ceremonies being unregistered, since, according to the regulation of the Ministry of Finance of 13 December 1946, the income of former clergy who did not have their own parish and a constant income was not taxed. At the same time, the local fiscal bodies, contrary to the law, quite often also taxed the mullahs who were acting illegally beyond the mosques.

Certainly, legally functioning mosques alone could not satisfy the religious needs of Muslims. Therefore, they had to gather for collective performance of the religious rites in unregistered but actually functioning communities and groups. In this context, the practice of using empty mosques by the unregistered Muslim communities became widespread. From the point of view of the authorities, these mosques were not only the place where the believers could satisfy their religious needs but also a gathering place for people with an ideology and a world view that differed considerably from the official ones. As a result, at the end of 1940s, it was decided to resume the practice of transferring the places of worship to the cultural, educational and economic institutions.

Because of the lack of places of worship for performing Namaz on Fridays and festive days, the Muslims often had to gather in the territories of Tatar cemeteries [National Archive of the Republic of Tatarstan, Fund R–873, List 2, File 2, Sheet 76]. But in this case, the believers were persecuted, as according to the Soviet legislation, all cemeteries were ‘national’ and were under the jurisdiction of the village and city Councils.

Thus, the majority of the country’s Muslim associations were put under the conditions where they had to act illegally, giving the authorities a legislative basis for application of administrative measures against them.

To the unregistered communities, any kind of activity, including a collection plate for their needs, was forbidden. The Muslim Spiritual Board existed also thanks to money deducted by the Muslim communities. However, as the number of legally functioning communities was insignificant, the mufti often initiated (contrary to the Soviet legislation on cults) attribution of a certain legitimate status on the unregistered mullahs by giving them certificates providing for the right to hold ceremonies. Such a flat violation of the law about cults demanded immediate interference of the authorities. Therefore, the Council for the Affairs of Religious Cults in the person of its chairman I. Polyansky ‘offered’ the representative of the

Council of the Bashkir Autonomous Soviet Socialist Republic, Karimov, 'to recommend in a categorical form to the mufti Khiyaletdinov and the workers of his administration to desist from communication with unregistered groups and clergy and henceforth not to give them certificates, and at the same time, to take measures to withdraw those certificates already given' [National Archive of the Republic of Tatarstan, Fund R-873, List 2, Act 5, Sheet 34].

In 1948, for the first time in 22 years, the Majlis of the Central Muslim Spiritual Board (renamed the Muslim Spiritual Board of European Part of Russia and Siberia (MSBPS) at the congress) was called, which in itself was an exceptional event in the history of relations between the state and religious confessions within the Soviet state. However, the decisions made at the congress only confirmed the limited rights which the believers and the clergy had possessed between the 1920s and 1940s. Only the functions of a purely theological character remained under its jurisdiction. In addition, its duty became to keep accounts of the mosques and buildings of worship [Yunusova, 1999, p. 218]. The political environment of that era, even in the context of liberalization of the relations between the state and the religion, did not permit raising the question of restoring the rights of believers and clergy.

The end of the Soviet state's short-term policy of permissiveness with respect to religion coincided with the end of the post-war period. This demonstrates that for the Soviet regime, a tolerant policy with regard to religion was forced and temporary. The problems caused by wartime conditions, such as consolidation of the Soviet society before the threat of the external enemy, creation of an attractive image before the allied powers, the difficulties of the post-war period, ceased being a priority.

In 1948, the CARC sent its representatives a circular, ordering to stop making favourable decisions on petitions concerning registration of religious communities. The variants of the reasons which served as the basis for the refusal were laid down on the legislative level in the resolution of the Council of People's Com-

missars of the USSR of 28 November 1943. 'On the order of opening the churches'. The reasons for the refusal could be: the technical unworthiness of the building of worship, the small number of the community's members, the presence of a registered religious community of the same confession near the place of worship (in this case, it was offered to the pleaders to unite with this community), the use of the building for other purposes.

Along with the implementation of the above-mentioned circular, the local authorities intensified their work in the battle against illegally functioning Islamic communities and increased criticism of the officially functioning religious associations.

At the turn of the 1950s, there emerged the tendency of intensive liquidation of empty buildings of mosques as centers of 'illegal' Tatar religious life. The authorities initiated this process as necessary dismantling of the mosques in view of their allegedly critical condition. The doubts concerning the truthfulness of such conclusions of the authorities are raised by the fact that, as a rule, the remaining material was used for realizing cultural, educational, and economic projects. Such actions of the authorities, concerning the believers in general and Muslims in particular, were typical of the post-liberal period of the relations between the state and the confessions. The position of the authorities on this issue was defined by their desire to return the religious associations to their pre-war state.

In the mid-fifties, in the context of the general political thaw in the country, the believers had a right to count on a more tolerant policy concerning religion. However, in reality, not only did the authorities not reduce their pressure on religion, but they even increased efforts to restrict the influence it had had on society during the war and post-war years. In this context, on 7 June 1954, there appeared the resolution of the Central Committee of the CPSU 'On the major drawbacks of the scientific and atheistic propaganda and on the measures of its improvement', where a considerable attention was paid to the measures of fight against the

influence of Islam. In particular, it contained paragraphs on prevention of new mosques' opening, all possible counteraction to the preaching activity of mullahs and increase of the sum of their income tax [Malashenko, 1998, p. 60]. Soon, excessive ardour and inevitable excesses of local authorities, who fulfilled these decisions, led to a new resolution of the Central Committee of the CPSU 'On the mistakes in carrying out scientific and atheistic propaganda among the population', which was issued on 10 November 1954 and was meant to correct and prevent the most odious forms of infringement of the rights of believers. The reaction of the latter was not long in coming; it was expressed in another wave of petitions concerning registration of religious communities and groups. According to the authorized Council for the Affairs of Religious Cults within TASSR, in 1957, twenty eight such applications were submitted, and 28 people visited it personally with petitions [National Archive of the Republic of Tatarstan, File R-873, List 1, Act 4, Sheets 100-101] The most persistent representatives of believers filed petitions to central regulatory bodies, the Councils of Ministers of the RSFSR and of the USSR. However, the functioning of the command-and-control system was built in such a way that a plea or a complaint of the believers 'returned' for examination to the initial, local regulatory bodies, whose actions actually were the origin of the applicants' complaints. The practice shows that, even with formal consent of the central regulatory bodies to register this or that community, the last word in this issue belonged to the local Executive Committees and the District and City Soviets, which reacted very negatively to the idea of a religious association functioning in their territory. According to the ideology of that period, existence of a functioning, registered religious association in the territory of this or that district or city was an indicator of high religious activity and testified to considerable inadequacy of local authorities' ideological work. Therefore, the latter not only tried to interfere in every possible way with the registration of religious associations but also consciously underreported the number of il-

legally functioning religious communities and groups in the statistical reports.

The resolution of the Council of Ministers of the USSR of 17 February 1955 did not have any significant effect on the status of the believers. According to it, all the actually functioning religious associations had to be registered, provided that they had a religious worker and a room suitable for the ceremonies. While it was not a problem to choose a candidate for the clergy, it was much more difficult for the believers to find space.

From 1958, a new massive attack on religion began. Having proclaimed the full-scale construction of communism, N. Khrushchev set the task of 'overcoming religion as a remnant of capitalism in the minds of people'. 'The crisis of religion' was proclaimed as the dominant phenomenon in the religious sphere by the ideologists. The religious life was represented as the inevitable process of 'degeneration' and 'decline' by means of propaganda. Fundamentally, this postulate was based on a quantitative index of registered religious societies, which, according to the authorities, adequately reflected the religious activity of the population.

In the early sixties, even in the conditions of the hegemony of the command-and-control system relations and the formalism in solving various problems, it became obvious that the real situation in the sphere of religious activity of the population had nothing in common with the official one.

In the report on the course of implementation of the resolution of the Council of Ministers of the USSR of 16 March 1961 'On the strengthening of control over implementation of the laws on cults', the representative of the Council for Religious Cults within the Tatar ASSR called the unregistered communities and groups of believers and the clergy the main problem in fight against the influence of Islam. According to him, '... it is difficult and impossible to define what percentage of the population is under the influence of religion ... no noticeable withdrawal of believers from the mosque and no recession of the clergy activity has yet been observed' [National Archive of the Republic of Tatarstan, Fund R-873, List 1,

Act 11, Sheet 6]. Actually, many Islamic rites remained quite a widespread phenomenon among the Tatar population, especially in the village.

To rectify the situation, in 1961 in the country, under Executive Committees, District and City Councils of the deputies of workers, groups assisting in the observance of law on religious cults were formed; in 1966, they were transformed into commissions for assistance to the legislation control on religious cults. Their duty consisted in exercising a daily, ongoing monitoring of religious communities and groups. A great importance was given to examining the forms and methods of the religious organizations' activity, the extent of their influence on the population, up to studying the preaching of the clergy, to collecting data and compiling information reports on religious holidays (the Uraza Bayram, Kurban Bayram). The commissions functioned on a voluntary basis and were formed out of the deputies of the local Council, the workers of the administrative and financial bodies, departments for national education, and other entities. As the members of the commission had to attend services in person (and they took place in the working hours as well), it was recommended to engage for these purposes retired people from among local public activists who knew the issues of the Soviet cult legislation. The vice chairman or the secretary of the Executive Committee of the local Council was, as a rule, appointed chairman of the commission. The quantitative structure of the commission was defined according to the number of the functioning religious associations in this area and the degree of the population's piety. The indicator of the latter was the number of unregistered but actually functioning religious communities and groups.

The failure and the self-deception of adequate correlation between the number of registered religious associations and the level of religiosity was demonstrated by a one-time census of religious associations and clergy carried out in 1961. It is necessary to note that, in the Soviet Union, such event was held for the first time. In its framework, it was supposed to register

all the actually functioning religious communities and groups. The results of this campaign in the Tatar Autonomous Soviet Socialist Republic revealed that there were 646 informally functioning Islamic associations, and also 366 illegally working mullahs [National Archive of the Republic of Tatarstan, Fund R-873, List 1, Act 11, Sheet 107]. The materials of the census showed that, among Muslims, only old men were engaged in cult activity, but among them, there were people who had held leading positions in education, kolkhozes, sovkhozes, on the factories and served in ranks of the Soviet army. These data did not correspond to a stereotype of that time that only backward and uneducated layers of the society were subject to the influence of religion.

The results of the one-time census vividly revealed the sustainability and the capacity for survival of the Muslim way of life among the Tatars. Thanks to the generation which had received a full-fledged religious education before 1917, the unregistered Muslim communities were provided with so-called mullahs 'without a mosque', who were experts in the doctrines of Islam and its rites. It is possible to say that, in the 1960s, there was a person or a group of people in almost every Tatar village who was able not only to hold a festal service or to perform rites according to all the canons of Islam but also to properly explain the allegoric sense of separate Suras and Ayah of the Quran to the believers. However, in these years, natural attrition saw the number of such mullahs considerably decrease. This inevitable process, together with the destruction of the centuries-old system of Muslim education, accounted for the fact that the management of Tatar religious life passed, in most cases, to mullahs who had the minimum knowledge of dogmatic issues. In this regard, from 1960s, performance of the Islamic ceremonies became the main criterion by which the Tatars determined themselves as believers. At the same time, the world-view aspect of Islam became less important. In such conditions, according to R. Mukhametshin, when '... Islam "was archaized", it lost many positions developed over centuries'

[Mukhametshin, 1998, p. 38]. This absence of the system of Islamic education caused '... the general "deintellectualization" of Islam' [Ibid.].

The common Islamic practice of 'taqiyya', that allowed Muslims to hide their true belief for the benefit of their confession, became of particular importance during the years of Soviet power. They could avoid the inevitable problems with the state authorities and public organizations and remain beyond the influence of communist ideology. Also, the rules of Islamic rites played a great role, because unlike the Orthodox rites, it was possible to perform them in houses and flats for Muslims to stay out of sight of the controlling authorities.

According to the CARC, the high level of Islamic ritualism among the population was due to not only the activity of the clergy and the faithful but also the insufficient use of the atheistic propaganda of civic rituals.

The state policy began to use less drastic methods towards religion after N. Khrushchev's removal from power. During this period, the authorities actively encouraged the clergy to participate in public life of the country by organizing numerous meetings of the clergy with the lecturers of the 'Knowledge' society, at which they discussed the domestic and foreign policy of the Soviet Union. The Islamic clergy as well as the clergy of other faiths were actively engaged in collecting monetary funds for the World Foundation, the Society for the Protection of Monuments and the Department for External Islamic Relations. These activities of the religious organizations were encouraged by the authorities.

It becomes obvious that there was a tacit agreement between the authorities and religious organizations, as a result of which '... the religious figures were quite satisfied with the existing "freedom" and the authorities tolerated the existing level of religiosity of the population, which was preserved by that time' [Yunusova, 1999, p. 270].

Despite the fact that the media constantly declared one of the dogmas of the Communist ideology concerning the 'extinction of religion', according to opinion polls conducted in the Tatar Autonomous Soviet Socialist Re-

public at the end of the 1960s, 25.7% of the Kazan Tatars called themselves believers, and in rural areas this figure was 17.9% [Musina, 1992, p. 54].

During this period, the contingent of mosque-goers was homogeneous on weekdays. As a rule, these were elderly people. But the situation essentially changed during the days of Islamic festivals. As mentioned above, during the holidays, there were a significant number of middle-aged and young people going to mosque. In the Marjani Mosque in Kazan, the number of worshipers on weekdays reached 120 people at morning Namaz, and there were not less than 500 at noon; at Friday Namaz (at noon), there were more than 1000 people; on holidays, the number of worshipers was approximately 4,500–5,500 [National Archive of the Republic of Tatarstan, Fund R–873, List 2, Act 40, Sheets 17–38; Ibid., Act 44, Sheet 37]. For the mosque in the city of Chistopol, these figures were respectively 30–40, 70–80, approximately 250, and approximately 250 people [National Archive of the Republic of Tatarstan, Fund R–873, List 2, Act 40, Sheets 17–38; Ibid., Act 44, Sheet 37]. The number of religious Muslim communities (among the registered communities) in rural areas ranged, on average, from 15 to 45 at Friday Namaz and from 45 to 150 during the holidays [National Archive of the Republic of Tatarstan, Fund R–873, List 2, Act 44, Sheet 37; Ibid., Act 45, Sheet 6].

Along with the empty mosques, believers' houses and Tatar cemeteries that formed illegal meeting places, there were also sacred spaces, that were, as a rule, 'springs' and 'holy graves'. Pilgrimages to these places were undertaken only in warm summer months, usually on Fridays. Along with the typical unsanctioned meeting places mentioned above, local authorities also tried to prevent in every possible way gatherings at these places.

The mid-1970s were marked by a lessening of international tension, as a result of which on the 23th of March 1976, the International Covenant on Civil and Political Rights came into force in the territory of the USSR. The articles of the Covenant related to religion declared the

freedom to adopt a religion of one's choice and to practice it either alone or in community with others. In fact, however, it came down to the same sham religious freedom that it was before.

The practice that had been in use since the early 1960s, when some mosques of the Soviet Union were chosen to demonstrate authorities' loyal attitude towards Islam, became common in the 1970s. The Marjani Mosque in Kazan was among them. Every time when foreign delegations from Islamic countries came to the Tatar Autonomous Soviet Socialist Republic, its members always visited the mosque, met its imam and then wrote in the guest book that 'the Soviet government does not interfere with the activity of religious organizations'. However, some facts unpleasant for the authorities were so obvious that they were impossible to hide. For example, in October 1979, during a visit of Muslim delegation from Turkey to Kazan, its members expressed their surprise that there were 16 mosques in Tashkent and only one in Kazan [National Archive of the Republic of Tatarstan, Fund R-873, List 1, Act 93, Sheet 58].

The tax law was one of the most powerful levers of influence on the clergy. The law even took into account the fact that the priests were men of retirement age. Therefore, in accordance with paragraph 172 of 'Regulation on state pensions', the pensions of the pensioners who were employed at religious organizations, in the cases when their income did not exceed 100 roubles, were reduced to 15 roubles. And if it exceeded the above-mentioned amount, then no pension was paid.

One of the ways to eliminate unregistered clergy was taxing them as uncooperative handicraftsmen. In February 1969, by the directive letter No.03/160, the Ministry of Finance of the Russian Soviet Federative Socialist Republic required the local financial authorities to bring to taxation unregistered mullahs and abystays.

The level of the tax pressure can be illustrated by a letter of the clergy and the executive body of the Marjani Mosque, dated 13 April 1976, that was addressed to A. Kosygin, the Chairman of the Council of Ministers of the USSR, and N. Podgorny, the Chairman of the

Supreme Soviet of the USSR. In that letter, the applicants point out that '... the taxation (of clergy) ... in no way corresponds to the statements of comrade Z. Kuroyedov (at that time, the Chairman of the Council for Religious Affairs of the USSR Council of Ministers) that the believers of all religions as well as the clergy are fully rightful citizens of the Soviet Union ... ' [National Archive of the Republic of Tatarstan, Fund R-873, List 1, Act 76, Sheet 43]. To coordinate the real position of the clergy with the above-mentioned thesis, the applicants proposed: 1) to impose the income taxes on the clergy that will be equal to the income taxes of all citizens of the USSR; 2) to allow the formation of the union of workers of religious institutions and mosques that will be responsible for temporary disability, regular holidays and retirement pension payments. Membership fees of the union and contributions to the social security fund shall be accumulated at the Spiritual Board.

The implementation of these requirements, particularly of paragraph 2, posed a threat to the government, as it would significantly increase influence of the Spiritual Board and give them some autonomy in its own personnel policy. That is why the statement caused a strong negative reaction of the authorities. Representatives of local authorities held a conversation with the people who signed the letter '... on the inadmissibility of such extremist manifestations' [National Archive of the Republic of Tatarstan, Fund R-873, Inventory 1, File 76, Sheet 48]. The clergy were warned about their possible deregistration if this incident happened again.

In the 1970s, some citizens of the Soviet Union became aware of the patently declarative nature of the values proclaimed by the CPSU, and that its goals and objectives were utopian. For many people, religion became an alternative ideology, a system of moral and ethical values that could fill the spiritual vacuum that many people possessed after suffering disappointment in communist ideology. In this context, the society's interest in religion, including Islam, increased significantly.

Late 1970s and the first half of the 1980s were marked by a strengthening of the role of Islam in international relations. The invasion of Soviet troops in Afghanistan and the fight against its Islamic opposition could not have contributed to the improvement of relations between the authorities and Muslims. During this period, the state clearly divided Islam into two categories. The first category included 'peace-loving Muslims of the Soviet Union', and the second one included 'Islamic fundamentalists' from abroad. The latter allowed the government to maintain a certain fear of Islam as a whole among soviet people and to create an obviously preconceived attitude towards it as one of the causes of the destabilization of the foreign relations and a potential hazard in the country.

However, in real life, more and more Tatars converted to Islam. So, the enhancement of the role of women in Islamic societies could serve as a factor characterizing the position of Islam in the first half of the 1980s. In particular, there were up to 200 women at Friday Namaz in the Marjani Mosque. Given the fact that in Tatar society they played the major role in children's upbringing, the importance of this fact in securing the continuity of Islamic spiritual values between Tatar generations is obvious. According to sociological studies conducted in the Tatar Autonomous Soviet Socialist Republic in the mid-1980s, 80% of Muslim got religious education in the family [SA HPD TR, Fund 15, Inventory 14, File 401, Sheet 13]. In this context, the words of the employee of the Department for Agit-Propaganda of the Tatarstan regional branch of the Communist Party of the Soviet Union sound demonstrative: 'Despite the efforts being made by the Party in the struggle against religious view of the world, we do not see any tangible results...' [SA HPD TR, Fund 15, Inventory 14, File 401, Sheet 13].

A significant factor contributing to the formation of a new generation of Muslims was the Clergy's ability to adapt and to exercise their functions under adverse external influences on the Islamic ummah by the state. In particular, there was a clear civil and moral orientation in the sermons of the imams of the Marjani

Mosque, and it bore its fruits: the social basis of Islam had significantly expanded in the Tatar Autonomous Soviet Socialist Republic, and its society of the believers 'rejuvenated'. That workers and the intelligentsia from the ages of 30 to 40 would go to mosque ceased to be a rare phenomenon. Often, even Communists and members of the Komsomol were among them. For example, there were 8 Communists and 2 members of the Komsomol among the intercessors of registration of the Islamic association in Moskovsky City District of Kazan [SA HPD TR, Fund 15, Inventory 14, File 401, Sheet 5].

Some of the last anti-religious regulations of the Communist Party of the Soviet Union concerned Islam. On 21 October 1985, the Central Committee of the Communist Party of the Soviet Union issued the Resolution 'On additional measures in connection with the intensification of the so-called "militant Islam" in Asian and African countries', and on 18 August 1986, there appeared another Resolution 'On strengthening the fight against the influence of Islam'. Despite the fact that these resolutions concerned mainly the republics of Middle Asia, the Caucasus and Transcaucasia, the governing bodies of other regions also directed government institutions towards the enhancement of the fight against Islam.

It is noteworthy that in these years the state policy on religion was inconsistent. So, along with the official documents of the Party, the purpose of which was to limit the influence of Islam, in 1986, the authorities sanctioned the International Muslim Conference 'Muslims for Peace' in Baku, which was attended by delegates from eight Islamic associations of the Tatar Autonomous Soviet Socialist Republic.

Despite the tendency of the authorities to carry out graduated democratization of the Soviet society, soon the process was out of control and penetrated into all spheres of life, including in the sphere of relations between state and religion. As in 1943, the foreign factor largely contributed to it. In the second half of the 1980s, the Soviet diplomacy intensified as it was seeking to overcome the confrontation with the major capitalist powers, in the first

place with the United States, and to establish friendly relations with them. Taking into consideration the great importance of democratic freedoms in these countries, including the freedom of religion, the leaders of the USSR not only eased pressure on religious organizations but also involved them in the realization of its foreign policy agenda. In this regard, during the visit of M. Gorbachev to the USA, in the official delegation, along with public figures and scientists, representatives of the main religions of the USSR were included, and that can be considered a major breakthrough in the state-confessional relations.

Against the backdrop of the democratization of all aspects of life of Soviet society, religions became more and more involved in public life of the Republic. The preparation and celebration of the 1000th anniversary of the Christianization of Rus' in 1988, the 1200th anniversary of the conversion to Islam of the peoples of the Volga and Cis-Ural regions, and the 200th anniversary of founding the Muslim Spiritual Board of European Part of Russia and Siberia in 1989 in many ways contributed to this process. These celebrations received a wide response in the society and were held in good form. These events significantly contributed to the fact that there started a reevaluation of the role of religion in history and culture in the society. The stereotype of believers and the clergy that many people, especially the young ones, had in their minds was shaken. Approaches to media coverage of the issues related to religion and activity of religious associations radically changed. At the end of the 1980s, clergy of different confessions often appeared in the press, on radio and television.

In the latter half of the 1980s, one could observe the growing interest in Islamic educational organizations among Tatar youth. From 1980, five inhabitants of the Tatar Autonomous Soviet Socialist Republic had graduated from the Mir-i-Arab Madrasah in Bukhara (Gosman Iskhakov, who later became the mufti of the Spiritual Board of Tatarstan, was among them), and by 1987, there were five more students from the Tatar Autonomous

Soviet Socialist Republic. A characteristic feature of the time was young people's liking for Islamic attributes, for example, they wore pendants with the image of a crescent, wrote religious texts, and even certain ayahs from the Quran on cars. Survey data also showed the strengthening of religiosity among young people. Thus, if in 1983 only 0.9% of students said that they were believers, in 1990 this figure stood at 20% [SA HPD TR, Fund 15, Inventory 15, File 266, Sheet 21; Musina, 1997, p. 212]. Overall, during 1989–1990, 34.1% said they were believers, 30.4% of Tatars living in cities vacillated between faith and unbelief; in rural areas, the figures were respectively 43.4% and 19.1% [SA HPD TR, Fund 15, Inventory 15, File 266, Sheet 21; Musina, 1997, p. 212].

It is noteworthy that at the end of the 1980s, during the destruction of the established dogmas and ideals, the regulatory function of Islam became the most needed one. The surveys conducted in cities and regions of the country showed that 30% of respondents noted that the main positive influence of Islam was its ability to establish social justice; 20% of respondents marked out its integrative function, because in their opinion, Islam was one of the guarantors of the maintenance of national culture and traditions; 10% singled out its compensatory function as faith in Allah helps in difficult periods of life [SA HPD TR, Fund 15, Inventory 15, File 1626, Sheet 18].

During democratization of the Soviet society, Muslims became significantly more active in exercising their right to fulfil their religious needs. This, first of all, resulted in applications for registration of religious associations and transfer of mosques in their possession. In the political environment of that time, they received the support of the authorities.

A characteristic feature of the time was the pursuit of religious communities and clergy to raise their status in society and realize their potential in activities unrelated to religion. First of all, this pursuit was realized in setting up charities and organizing courses in the fundamentals of religion for all ages.

The sociopolitical processes taking place in the country made it necessary to change the existing legislation on cults, which no longer corresponded to the realities of that time. In this context, in October 1990, the new laws of the USSR 'On freedom of conscience and religious organizations' and laws of the RSFSR 'On

freedom of religion' were adopted. These new laws provided for the actual implementation of the principle of freedom of conscience by the citizens. Thus, despite all the oppression and humiliation suffered by believers, Islam managed to retain some of its positions and had a significant effect on a certain part of the Tatars.

§ 3. Festive Culture of Tatars in Soviet Times

Raufa Urazmanova

During the Soviet period (20th century) with its new, legally mandated ideology of atheistic society, the social life of Tatars, like that of other peoples of the country, witnessed a complete change of not only the festive calendar but also the forms of celebration.

First of all, there were introduced new sociopolitical and public holidays, devoted to significant dates in the life of the Soviet State and the Red Army. Great attention was given to their preparation. In particular, already in the 1920s, the anniversary of the formation of the Tatar Autonomous Soviet Socialist Republic was celebrated with great enthusiasm. Special commissions on organizing these celebrations were created under the Central Executive Committee of the Tatar Autonomous Soviet Socialist Republic. 25 June, the day of proclamation of the autonomous republic, became a national holiday. The proclamation of 25 June as a non-working day, along with organizers' striving to put a national colour into the holiday, greatly contributed to it.

Along with a parade of Red Army units, demonstrations of workers, solemn meetings and gala concerts in Kazan, a people's holiday Sabantuy was also timed to the day of celebration of the first anniversary of formation of the Tatar Autonomous Soviet Socialist Republic. In 1925, the republican commission recommended to time celebrations of Sabantuy and Djien to the fifth anniversary of the republic everywhere possible. Gradually, it became a common practice.

In the 1920s and 30s, as well as in other parts of the country, there was extensive work

on propaganda and widespread implementation of other Soviet holidays, such as the anniversary of the October Revolution, May Day, International Women's Day, and others. In newspapers, magazines and specialized publications, there were articles in the native language that plainly explained the essence of holidays and collections of poems and songs that were recommended for use during the festivities. At the same time, these years were characterized by the intensification of atheistic education and the struggle against the religious rites and holidays [Urazmanova, 1984, pp. 8–9]. All this contributed to the fact that, in the pre-war years, Soviet holidays were widely included in people's everyday life and religious ones gradually lost their positions.

However, due to the generation that had received full religious education in the pre-October period, unregistered Islamic communities had the so-called 'mullahs without the mosque', who knew well the tenets of Islam and its rites. In almost every Tatar village, there was a man or a group of people who was able to hold religious services according to all Islamic canons, including festive ones. These continued to be held in someone's home, or in the territory near cemeteries if weather conditions permitted it. Although it had lost its mass character, during all Soviet years, families continued to observe the special fasting Uraza, during which it was forbidden to eat and drink, etc. in the daytime. Although a very small part of Tatars observed the fast, it became quite common to hold a special dinner, Avız Açu. On a day of fasting, people invited guests for dinner, that

started after the sunset, at which they read the Quran, prayed and talked on religious subjects. Among those who were invited, as a rule, there were those who did not observe the fast, mostly they were young families.

People rarely made a rite of immolation on celebration of Korban Gaete. However, in this month, part of those who had not spent Avız Açu, sought to invite the elderly (men or women) on the so-called 'Kartlar Aşı', rituals of which resembled Avız Açu and which could be held at any time of the day. Holding such dinners was typical for both villagers and townsmen. [Urazmanova, 2000, p. 132].

Due to the impossibility of public celebration, the religious holidays became private and 'chamber'. Families with the elderly tried to prepare a festive meal and use halal products, permitted by Sharia. And even those who did not put deep religious meaning in these events had these meals with pleasure and on such occasions often tried to give Sadaqah, that is, money, food or things to elderly, orphans or deprived ones: everyone who 'knows how to pray'.

In the 1950–1960s, the Tatar people still kept the tradition of naming religious festivals and elements related to them by means of the Arabic word 'gaet': gaet namazı, gaet koymağı. By the early 1990s, this tradition was almost completely lost.

Among all significant (blessed) dates of the Islamic calendar, Mawlid, the holiday of the 'Birth of the Prophet' Muhammad [Islam, p. 78], widely celebrated since the 1960s, still was the most important one. On the one hand, these were the years of a relatively calm atheistic propaganda. On the other hand, families were accumulating their own incomes. Mawlid was celebrated in the form of a home dinner with traditional ritual reading of verses of the Quran and activities related to it. Thus, the Islamic holidays, which were the elements of the lifestyle of the past with a strong emotional component, turned into symbols that marked out elements of ethnic (national) culture, designed to emphasize its uniqueness and originality, for the majority of the Tatars in Soviet times.

Out of all traditional people's holiday, only Sabantuy remained in Tatars' everyday culture. This holiday not only preserved its own specific features but also expanded its functions. It was during this period when Sabantuy became an ethnic, Tatar people's festival in contrast to the actively implemented Soviet holidays of 'the red calendar', inculcated by the state. At this stage, there appeared a distinctive ethnic-integrating function of the holiday. The Tatars who had not celebrated it in the past, including the Siberian Tatars, began to [Sibirskie tatarı', 2002, pp. 134, 135].

The industrialisation of the country caused a significant outflow of country people to the cities and industrial centers. In places where a great amount of Tatars came to as a result of the migration process, for example, in Moscow, Tashkent, St. Petersburg, Samara, the industrial cities of the Urals, Siberia, etc., Sabantuy became an all-Tatar people's holiday. Researchers into the everyday lives of Nizhny Tagil workers in the 1960s wrote about it. They rightly pointed out that celebration of Sabantuy, which had been celebrated there for many years, was a good example of the fact that folk tradition was alive in those days, and it could be successfully used for creating an interesting public holiday; and finally, it was very important that the festive customs of one people could be used for bringing together those of different nationalities, for developing sense of patriotism and internationalism [Krupyan-skaya, Budina, Polishchuk, Yukhneva, 1974, p. 142]. Moreover, T. Zolotova, a researcher in the festive culture of the Russians of Western Siberia, notes that in the 1970s and 1980s in the northern part of region, people started calling the holiday celebrated in early June 'Sabantuy'. This holiday combined the cultural traditions of the Russians and the Tatars, the two most numerous ethnic groups of the northern areas [Zolotova, 2002, p. 167].

The command-administrative methods typical for those years, by means of which the leaders of the country held public holidays, the prevailing dictates of the Party and Soviet government bodies seeking to turn them into

instructive, propagandistic events could hardly fail to affect the form and content of Sabantuy. It gradually became institutionalized and unified. First, everywhere, even in rural areas, especially after collectivization, people started to celebrate it not before but after the completion of spring field work. Secondly, it was celebrated on Sunday, the day off generally accepted in the country. The main thing was that it was celebrated on the same day in auls and regional centres and then in selected cities. The final was Sabantuy in Kazan, which was timed to the date of the formation (proclamation) of the republic. The setting of the particular date became a prerogative of the leadership of the republic. The specially appointed commission on this issue organized and held the celebration at the local level: it drew up a holiday program and appointed people responsible for this or that event. The form, justified under the new conditions, prompted by the festival's geographical expansion, became mandatory even for villages, having replaced the century-old principle of organization on the basis of voluntary participation in this work, which was an honorable duty of the aqsaqals, figures of respect in the auls, and their assistants.

Thirdly, the change of the dates of the celebration led to gradual disappearance of ritual actions of the 'preparatory part' of the holiday, in which children took an active role. They would go to every house in the village to collect food for the preparation of a special porridge — Zärä botqası, Qarğa botqası — and dyed eggs. [Urazmanova, 2001, pp. 24–37]. These rites were often declared to be begging insulting dignity and were banned as a result.

In this period, an adaptive and adapting feature of Sabantuy became apparent, and its secular character greatly contributed to it. On the one hand, the holiday adapted to the radically changed political and socio-economic conditions with minimal losses. On the other hand, it adopted many innovations, including global urban cultural elements, the details of which had become available due to the Tatars mobility, wide media network, and television from the latter half of the 20th century. In this

period, some of them became traditional 'Sabantuy competitions'.

These were numerous competitions in agility, courage, skill, that were rather more entertainment than sport, thus creating a relaxed atmosphere of the festival's fun.

In Soviet times, a single (unified) holiday structure came about due to various 'recommendations' and 'guides' for the Sabantuy celebration developed by the Propaganda Department of the Party's Tatar Regional Committee, the Republican scientific methodical center of folk art and the cultural and educational work of the Ministry of culture of the TASSR.

During the ritual festivities, there appeared an official part, typical for the majority of celebrations of that time, with the compulsory greeting speech of one of the representatives of the 'governing bodies', flag raising and celebration in honour of the leaders of industry. On the initiative of the developers of the methodological materials, there were proposed and introduced common rules for judging wrestling with towels (kōrāş), which is one of the main events of Sabantuy [Sharafutdinov, 2004, pp. 373–377]. The diversity in the list of the events in each case varied by the inclusion of new events, that did not always maintain the spirit of the holiday and usually depended on the initiative and imagination of those responsible for holding Sabantuy.

In the cities, it was a one-day holiday, which was usually held in the market square. In the auls, it took several days of action, including a prior house-to-house collection of the gifts for contestants, the competition itself in the market place, and finally, the merrymaking for the youth in the evening. In addition, in rural areas, it was the time of inviting guests, meeting with relatives and close friends. So, this holiday incorporated the function of Djien, the summer guest holiday of the Kazan Tatars. [Urazmanova, 2001, pp. 70–84]. And if in the cities, especially the large ones, the funds for holiday expenditures, including the purchase of prizes, came from the city budget and various factories, in rural areas, the collection of gifts was usually done in the traditional way.

The revolutionary reorganization of life touched the sphere of family relations. Significant changes occurred in the structure and essence of family and household rituals. Years of prohibition of the religion and its rites led to phenomenon interesting in its nature. As the official marriage, birth and death registrations were given to the state bodies, there appeared a more deliberate attitude towards these rites as religious and ethnic ones, and for a certain category of people, in particular non-believers, as just ethnic rites, which emerged from deep in the past. This led to the emergence of two types of meals in the everyday life of the Tatars: traditional dinners held according to the rituals, and dinners held in a new way. The first type, which is called *kartlar aşı*, *olılar aşı*, is a special dinner for the elderly. Reading of the Quran, various prayers, giving handout (*sadaqah*), as well as the order of serving traditional dishes and absence of alcoholic beverages were kept at this type of dinner. Often men and women were treated separately (or either men or women were invited), which was considered an observance of Islamic tradition.

The special dinner of the second type greatly contrasted with the first one. Guests were invited in couples, men and women, new dishes were served, including a variety of snacks and alcoholic drinks. These feasts were accompanied by the performance of various songs (solo and in chorus) and dancing. They appeared in the late 1920s–early 1930s, when an active propaganda of new non-religious ceremonies, for example, marriage registration of young couples, the so-called 'Red Wedding' (*qızıl tuy*), held in public at the club [Urazmanova, 1984, pp. 84–86].

From the 1930s to 1960s, one could observe a sharp reduction in the number of traditional wedding ceremonies. *Yabışıp çıgu*, 'elopement', that was previously condemned, became common. At night, the young man, with the consent of his chosen one, took the girl to his place, often he took her from gatherings at the club, and invited his friend and the close friend of the bride as witnesses.

On the following day, the girl's parents were informed of her whereabouts. Then, the couple invited them, along with elderly relatives and neighbours, to a feast, at which *nikah* was performed. People began to call this wedding feast '*nikah tue*, *olılar tue*', a wedding for the seniors. The presence of the young at this feast was purely voluntary. This wedding feast was (became) a demonstrative act of the formation of the beginning of married life. In those years, the registration of the marriage in the marriage RO, introduced by one of the first decrees of the Soviet power was not considered to be enough to legitimate the marriage in the public's eyes, especially in rural areas. The wedding feast, timed to to any public holiday or day off, was held in the house of the groom. It was held according to the new ritual.

This feast was called '*qızıl tuy*', '*yaşlar tuy*'. Thus, having emerged as a club event, the 'red wedding' became a component of Tatar wedding ceremonies. Gradually, it becomes the main wedding feast, mainly in cases when the marriage was contracted by means of match-making, and a traditional wedding ritual was maintained, albeit it was shorter.

Since the 1960s, there began a new stage in the development of the wedding ceremony.

The functions of this ceremony changed, and it acquired other highlights. Now, its main function was to create an unusual, festive atmosphere, which emphasized the importance of this moment in lives of the young couple and their relatives. This was achieved by means of 'the official marriage registration', conducted by public authorities, and wedding feasts. The rest of the elements of the marriage ritual did not have a great deal of significance, and although they granted the weddings their own originality, the length and order of events were not so crucial.

In rural areas, there was a relatively large variety of options, especially in the peripheral regions, where one could previously observe a complex ritual with lots of guests' visits [The Tatars, 2001, pp. 340–347]. In cities with multistorey buildings, the weddings were held in a more simplified and typical fashion. However,

there were a number of features typical for all wedding ceremonies.

The unified pre-wedding cycle is very interesting. Notification and the agreement of the girl's parents for the upcoming marriage, after the young people decided to get married, became obligatory.

This act often was the moment when families of the couple got to know each other better. This change of the matchmaking functions was typical not only for the Tatars but also for other peoples [Lobacheva, 1975, p. 17; Zhirmova, 1980, p. 99; Zorin, 2001, p. 78].

The ritual of solemn marriage registration, its active promotion and legislative consolidation contributed to the awareness of the importance and necessity of the act of state marriage registration not only from a legal point of view. Solemn marriage registration became an important, the most vivid and emotionally intense part of the wedding ceremony. There appeared the conventional wedding clothes: the long white dress and white shoes for the bride, which as a rule, she wore just once, and a dark suit with a white shirt for the groom. Now the couple also bought the wedding rings. This was a new phenomenon for Tatars. In cities, there appeared special services of the RO, which organized wedding celebrations and offered services of a toastmaster, the master of ceremonies of the wedding celebrations who wrote the scenario of the celebration, and manufactures of wedding attributes: special ribbons for witnesses, bridal bouquets, photo albums, etc.

The popularity of this ritual could be demonstrated by the fact that in rural areas, where there were no wedding palaces as in the cities, the newly-weds themselves, their relatives and friends were not only active participants but also the creators of the festive, solemn atmosphere at the marriage registration.

In each region, first, in the cities, and then, in the rural areas, there gradually appeared special places, certain routes that were visited by the wedding procession after the registration of the marriage.

At wedding feasts and banquets, the guests were divided according to their age, and this tradition was firmly kept.

The wedding feast for the elderly, *kartlar tue* or *olılar tue*, was traditionally held at the bride's home. Sometimes, it was held at groom's house, but this was rare. Its typical feature was not only the age of the majority of the guests but also the ritual itself: no alcoholic beverages, traditional dishes, etc.

The key point of this feast at bride's house was the performing of *nikah*, a religious ceremony of marriage. However, in those years, it completely lost its legal value, and its ritual was simplified as much as possible. Thus, by the 1980s, there even were no mentions of one of the most important requirements of *nikah*, the *mähär*, the marriage gift that the groom gave to the bride. Moreover, people started to call this wedding feast *olılar tue*, or *kartlar tue*, thus emphasizing the age of the guests and not the essence of the celebration. Mainly, it was due to the open prohibition, which sometimes was tacit, of the performance of religious rites in the Soviet state with its atheism. The rite was maintained by the tradition as an element of the Tatar wedding ceremony and as an act of public recognition of the appearance of a new family. On the part of the newly-weds, it was an act of respect for the elders, who, by virtue of age and beliefs, could not be active participants of the main wedding: *tuy*, *sıy*, *qızıl tuy*.

In the countryside, wedding ceremonies were still held at the club sometimes. In the cities, the wedding ceremonies were held at dining rooms, cafes, restaurants or ceremonial halls.

The style of the wedding feast itself changed due to the inclusion of game elements. Some of them were taken from the wedding customs of the peoples of our country; others, from the practices of the amusement's organizers. The spreading of these elements was fast because of the people's mobility, rural and urban residents' participation in weddings and interethnic marriages alike.

The wedding night and its preparation ceased to be the important elements of the wedding ceremony.

In general, the process of the unification and contraction of the wedding rituals was going on everywhere. The ceremony embraced

many common, not only pan-Russian but also international elements.

One of the clearest indicators of changes in the life of the Tatars can be a sharp rejection of Islamic names and an intensive search for new ones, a process typical from the middle of the 1920s and 1930s. Moreover, the new names were given not only to newborns, but adults also changed their names if they wished.

The new names were completely opposite to the old ones in their lexical and semantic properties: there were the names of outstanding figures (Engel', Telman, Frunze), geographical names (Kazbek, Ural, El'brus, Marsel', Rome), the names based on the names of the planets (Venera, Mars), minerals (Brilliant, E'nzhe, Rubin), flowers (Rezeda, Rosa, Siren', Landy'sh). Abbreviated 'revolutionary' names as Vil' (Vladimir Ilyich Lenin), Leniza (Lenin's precepts) Lenar (Lenin's Army), Runar (revolution destroys the ethnic strife), Damir and Damira (Long live peace!), Izil' (Lenin's covenants performer), etc. became very widespread in those years [Sattarov, 1981, pp. 17–18]. Gradually, these names were perceived as Tatar names, and they became widespread in the villages.

Already in the 1930s, there were attempts to carry out a new rite of naming. So, on 22 June 1924, the newspaper 'Red Tataria' published the following message in this regard: 'The octobering of a Tatar worker's newborn was held at the tram park club in Kazan. The girl was named Trotskino after the leader of the Red Army. A greeting telegram was sent to comrade Trotsky. There was a performance at the evening'.

At the same time, these celebrations played certain role in the struggle against religious ceremonies in general, and in particular against the Islamic rite of naming 'isem kuşu', as well as against other various magic rites. Only a few or even a couple of old men, who knew the religious rite, were invited to isem kuşu. The official registration of the newborn, which was a simple issue of the document, was conducted at the rural council or RO.

In the Soviet years, the ceremonies associated with childbirth, on the one hand, main-

tained the traditional customs, rituals and celebrations, that emphasized the joy of the family and relatives on this occasion. On the other hand, they transformed this important family event into celebration with the participation of a wider segment of people, co-workers, public organizations.

Traditionally, a new mother was visited by relatives and friends, who presented her with food and a gift for the child.

If a woman worked at a factory, her colleagues would certainly visit her and give her a present. In addition, it became a custom to visit new mother together. Friends and acquaintances agreed in advance on the day of the visit and informed the new mother. They brought food and organized a feast. Women were accompanied by their husbands. They bought the present together: it could be a bassinet, baby carriage, etc.

There appeared a celebration in baby's honour — *bäbi tue* — to which numerous guests were invited: relatives, acquaintances, work colleagues. Most often *bäbi tue* was celebrated in the firstborn or long-awaited child's honour (whether boy or girl) and was set to any holiday of the 'red calendar' (a non-working day).

The struggle against religion led to the fact that by the 1960s and 70s, the religious ceremony of name-giving, *isem kuşu*, became uncommon even in rural areas, where traditional forms of life were more stable. Informants noted with regret that there remained no men who knew how to perform it. The number of those performing circumcision reduced as well. Thus, based on a questionnaire conducted in Almetyevsk, it reduced more than three times just from 1950 to 1965 [Urazmanova, 2000, p. 103].

In urban areas, there were fewer special rituals associated with a newborn. Young parents living far from their relatives often performed neither *isem kuşu* nor *bäbi tue*. They thought that *isem kuşu* was unnecessary because the child was already registered at the register office, and the name was found. And leading the celebration of *bäbi tue*, as any other holiday feast, demanded a certain amount of work,

that a young mother was not always able to do. However, in these years, there appeared new celebrations, held with participation of public organizations. They widened the circle of persons involved in this important moment of the life of a family.

Parents with a newborn were invited to the club, specially decorated with posters, pictures of a happy childhood, and sayings of famous people about the mother and motherhood. The public representatives of the factory where the parents (mother) worked were also invited. The deputy of the (rural) city Council, one of the mothers of many children, and the colleagues that came to the celebration addressed the parents of the newborn with the words of greeting. A worker of the register office or the deputy, an honoured, respected figure, congratulated the parents and handed them a birth certificate. Congratulations alternated with performances of amateur actors, 'October Children' and Young Pioneers of the local school or kindergarten. The presentation of a small gift was an obligatory point of the celebration. It was quite common to present an envelope, or sack, inside which there would be a letter, an October pin, a Pioneer tie as well as greetings from the Executive Committee printed on a special form or a postcard. The parents of all newborns for a certain period of time were also invited to these evenings. Most often, they were held every three months, six months, or once a year.

Organizers noted that parents willingly participated in these holidays and remembered them with pleasure for a long time [Urazmanova, 1984, pp. 114–116]. Nevertheless, these celebrations did not become a widespread tradition.

During the Soviet era, all funeral and memorial rites continued to maintain the traditional ritual. The burial portion itself, the washing and dressing of the deceased, digging the grave, and specific requirements for the behaviour of living ones in this situation, was specified in Sharia and corresponded to these rules. Funeral rites are associated with the ethnic, Turkic history of the people. It was perceived as Tatar, Islamic in this set of identities. Its changes consisted in reducing the strictness of observ-

ing these rituals and the disappearance of some of them. People started to rethink them, and this was, obviously, the most important matter. Funeral and memorial ceremonies ceased to be connected to the afterlife and were performed as a folk ritual full of human sorrow. They were perceived as last honours to the person whose life had ended. At the same time, they were aimed at giving attention and support to people who had suffered great sorrow. These functions of funeral and memorial rites were further developed.

The canonized part of the rites was performed under the guidance of knowledgeable, trained people, who voluntarily or owing to their beliefs had acquired knowledge and, what was more important, skills from those of an earlier generation. Even when there were no official mullahs nor any operating mosques, there were always people unselfishly willing to help in organizing and holding funerals. In the literature of the 1930s, they were called 'sanitary mullahs'. [Kasymov, 1932, p. 48].

Participation in the funeral of not only relatives, neighbours but also of colleagues became typical. Trade unions often took care of all the organizational aspects of the funeral, including the majority of its costs. Hence, burial in a coffin, arrangement of the civil funeral service, women's participation in the funeral procession. Under the influence of urban culture, people came with flowers to bid farewell to the deceased.

In the villages, the coffin was used for burying representatives of intelligentsia or young people, especially those who died tragically and whose funeral was organized by public organizations and co-workers [Urazmanova, 1984, pp. 123–130].

Nevertheless, even in urban areas, the traditional funeral rite was held fully or partially by 67–73% of the Tatars. They were invariants relative to the size of a city and its ethnic composition. The percentage kept stable for different population groups (except the intelligentsia) [Starovoytova, 1976, p. 53].

Fundamentally new celebrations appeared among the family and household rites of the Tatars. First of all, the birthday celebration is a

suitable example. There is no analogy for it in Tatar traditional everyday life.

The emergence of the birthday celebration and its wide spread occurrence were a Soviet phenomenon because of its active atheist propaganda. This stood in contrast to the religious doctrine of the impermanence of mortal life ('a servant of God') and was directed at the confirmation of the self-value of life and gave a person an opportunity to become aware of himself as an individual.

It appeared in the post-war years and became a widespread custom from the 1970s. Townsmen, especially intelligentsia, were the first who began to celebrate birthdays. Fairly quickly, this phenomenon spread among all social groups of the population, including the rural areas.

Home celebration included birthday greetings, gift giving, a dinner party, to which one often invited relatives and friends. Under the influence of fiction, films and television, the Tatars began to place candles on the cake according to the number of years of the person's age, especially at children's birthday parties.

It is interesting to note that this absolutely family celebration also attained a collective form celebration.

People began to celebrate their birthdays with their fellow workers. In the course of research, we became acquainted with the lives of work teams and socialist labour brigades. It was typical that they almost always remembered the dates of companions' birthdays. The person whose birthday was celebrated was congratulated with special bulletins that were posted and colleagues set flowers at his or her workplace. At companies, it became customary to celebrate the employees jubilee birthdays (50, 55, and 60 years). On this occasion, the order with the announcement of gratitude was issued, and the person got a gift or a money reward. The ones who particularly excelled were presented with an honorary diploma in the name of the enterprise or the superior organization. Foremost workers and holders of an order were honoured at the special place of honour that was called 'the Red Corner'. The

participants of the amateur talent groups devoted their performances to the person whose jubilee was being celebrated. On the occasion of the anniversaries of especially famous workers, Heroes of Socialist Labor, for example, in the worker township Aznakayevo, they began to issue special brochures describing their life and labour achievements. In particular, such a brochure published in 1978 was dedicated to the Hero of Socialist Labor Garay Bagmanov, a native of Aznakayevo, who was a renowned builder of steel scaffolding.

Following the example of the working groups, such celebrations began to be organized in the countryside as well. In the summer of 1963 in the village of Uzbyak in Leninogorsk region, we were participants of the evening dedicated to the 70th anniversary of the kolkhoz member Shaykhraz Galiev. At the club in the villagers' presence, the heads of the kolkhoz and representatives from the district center warmly congratulated him and presented gifts. The celebration continued with relatives and close friends. The collective farmers greeted the honouring of an ordinary worker with great interest. In the following years, such celebrations were not uncommon.

In many villages, all workers and pensioners of the village received greeting cards on behalf of the government, the party and local kolkhoz committees on their birthday. Sometimes such congratulations were placed on special stands in the building of the kolkhoz board. Undoubtedly, such celebrations generally had a positive effect on camaraderie, were an indicator of a good microclimate in the workplace.

Celebrations of the so-called 'silver and golden wedding anniversaries' were new, all-Soviet events in family ceremonies of the Tatars. *Kömäş tuy* and *altın tuy* were the 25th anniversary and the 50th anniversary of family life, celebrations of which appeared in the latter half of the 20th century. As a rule, the couple themselves organized their 'silver wedding anniversary', but their 'golden wedding anniversary' was usually organized by their children. These celebrations were held in the

form of family feasts, at which guests congratulated the heroes of the day and presented them with expensive gifts.

Typically, in the countryside, these family feasts were usually preceded by a collective celebration in the couples' honour at the club. Sometimes these celebrations were held for several couples at the same time. Such celebrations attracted the general attention of the fellow villagers and usually turned into real holidays, granting wonderful memories not only to the heroes of the day and their families but also to all the villagers who took part in the celebration.

In cities, such celebrations were held at register offices and wedding palaces. The initiators of them were representatives of public organizations, groups in which people celebrating their jubilee worked. The couple, accompanied by children, grandchildren, relatives and friends, came to the place of celebration at the set time. Specific facts of the couple's life were mentioned at the ceremony, having a deep emotional effect on all the participants. The names of the husband and wife were reg-

istered in special books of 'silver and golden wedding anniversaries', in which they put their signatures; there was music in their honour and the couple was presented with gifts. Such celebrations were held everywhere in our country [Rogozina, 1973, p. 38].

In many Tatar families both in cities and rural areas, it has become customary to congratulate and give presents to women on International Women's Day and to congratulate men, even if they did not serve in the military, on 23 February, Defender of the Fatherland Day. People also celebrate numerous professional holidays, which appeared in Soviet times, in particular Teachers' Day, the Medical Workers' Day, and the like.

All these events are still celebrated in the post-Soviet era. Personal congratulations on jubilees by means of print and electronic media in the Tatar language became very popular. In the cities, the sphere of services that offered their assistance in the organization of celebrations, including the children birthdays and various anniversaries not only in secular form but also 'according to Sharia', was expanding.

Section III

**The Republic of Tatarstan and the Tatar World
at the Turn of the Millennia**

A NEW PAGE IN THE HISTORY OF TATARSTAN

Mintimer Shaimiev

The Soviet period in the history of Tatarstan, even though being criticized, granted a whole range of possibilities for developing the republic. The economy was enriched with the oil industry, which is now a leading field. It was the basis for the growth of petrochemical and chemical enterprises. The aviation industry and numerous machine enterprises were set up. The KamAZ became a leading enterprise in the country, and it remains so in the 21st century. Owing to the new fields, higher educational establishments and research institutes strengthened their positions. Being a semi-agrarian republic, Tatarstan became an industrial region. During the Soviet period, a slant in the profession and qualification structure of the population was overcome. Highly-qualified specialists were fostered in the Tatar environment practically in all aspects of life. This was to lead to positive consequences later in the years of perestroika when international relations were quite tense. Climbing up the career ladder did not have a political character and the main factor for recruitment was one's professionalism.

Despite the fact that Tatar intellectuals suffered during the years of repressions (1937), and then lost a lot of talented people during World War II, they succeeded in bringing up a new generation of intellectuals. There were outstanding scientists, writers, composers, actors, artists. The elder generation that managed to live in the conditions of the doomed democracy of the 1920s, handed the spirit of freedom on to the youth, and in many aspects this became the spiritual sustenance that appeared in the years of perestroika.

Meanwhile, the Soviet regime found ways to restrain the republic's potential. The autonomous status of Tatarstan was considered by the population as an obvious injustice. Infrastructure was not developed. There were no roads, gasification embraced only the cities, housing construction was kept to the minimum. Residential properties were getting shabby. Shops were half empty to the extent that people went to Moscow to buy food that they produced themselves. This shocking contrast between the quality of life in the Soviet 'hinterlands' and Moscow, Kiev, Minsk, Almaty, Tashkent, Bishkek, not to mention the Baltic and Transcaucasian republics, had an influence on the public mood.

The technology of peaceful production in the USSR was clearly behind that of the West. All efforts were hurled into the arms race. The militarization and the monopolization of economy took on threatening proportions, and Tatarstan was included into this process, which led to the consequences during the transition into the market system in the 1990s.

There was a severe censorship in the cultural sphere. In the directive plan, Tatar schools were closing down and the Tatar language was mostly used only at the level of daily life. Newspapers and magazines were brought under regulation, radio- and TV-programmes in Tatar were severely limited. All this together created a negative way of thinking.

'Glasnost' caused a stir in the entire Soviet society. Moscow and the Baltic Countries set the pace. Being spread around the entire USSR, the motto 'There is no other way' seized the public mind. In Tatarstan, the main core since 1918 was the idea of sovereign rebirth. From the late 1980s to the early 1990s, it was expressed in the demand to provide Tatarstan with union status. It seemed to everyone that the problem was in the inferiority of autonomy. In many aspects this was true.

However, a rapid development of events demonstrated that the Union republics were not satisfied with their status either. Then the idea of the sovereignty of the republics became dominant.

Sovereignty in international law is considered in a very wide sense, although it is traditionally related to independence. In Tatarstan after long-lasting discussions, where the dispersed opinions supported either gaining independence or keeping the current autonomous status, they found a compromising formula that was later included into the Constitution of the Republic of Tatarstan. The fundamental law of the Republic of Tatarstan states:

'The sovereignty of the Republic of Tatarstan is expressed in possessing the entire state power (legislative, executive and judicial) out of the jurisdiction of the Russian Federation and out of the authorities of the Russian Federation in the fields of the joint jurisdiction of the Russian Federation and the Republic of Tatarstan and is an inexorable quality of the Republic of Tatarstan'.

This formula corresponds to the the Constitution of the Russian Federation¹, which is why the order of the Constitutional Court (27 June 2000, no.92-0), by which the conception of sovereignty can be related exclusively to the Constitution of the Russian Federation and cannot refer to the republics, was obviously a politically charged decision. In the federative state, the authority was divided, which means that there is a 'divided sovereignty'.

In the beginning, the sovereignty of Tatarstan also meant that the republic was subject to international law. However, later, after tough discussions, it was eliminated from the official documents, although the Republic of Tatarstan continued its international activities on a quite high level.

On 30 August 1990, the 'Declaration of state sovereignty of the Republic of Tatarstan' was adopted. The declaration was announced after the admission of the 'Declaration of state sovereignty' by the Russian Federation, which presupposed the rights of the peoples for 'the self-determination within the national-state and national-cultural forms elected by them' (p.4). It became the basis for Tatarstan admitting a set of constructive steps and opened the possibility for developing its own politics.

In the political plan, the republic came across some complicated questions that required its solution. Firstly, the status of the Tatar language, secondly, the participation in the 'Union treaty' as an independent subject together with the Russian Federation, thirdly, developing relations with the Russian Federation on the basis of an agreement. The declaration of the state sovereignty of the republic of Tatarstan adopted Tatar and Russian as the state languages. This decision was principally important for the Tatar population, although it caused the objection from the side of the opposition. The compromise meant that on the political level there was an agreement to provide Tatar with a state language status and to initiate the negotiations with the Union centre.

By the proposal of the delegation of Tatarstan at the congress of the people's deputies of the USSR, there were changes in Article 71 of the USSR Constitution, which admitted autonomous republics as the members of the Federation Council, together with the Union republics.

The issue of the form of the participation of Tatarstan in developing and concluding the Union treaty became the most principal. The Russian Federation insisted on the participation of the republics in the Russian Federation delegation. The Republic of Tatarstan supported another position, which was expressed in the order of the Supreme Council of the Tatarskaya SSR 'On the plan of the Union agreement'. Point 2 contained a principal position that the republican parliament: 'In accordance with the Declaration of the sovereignty of the Republic of the Tatarskaya SSR, 30 August 1990, and the Act of the USSR, 26 April 1990, "On the division of powers between the USSR and the subjects of the federation" announced about its readiness to be a co-founder of the USSR, to sign independently the Union treaty and to accept all the obligations coming out of it' [Khakimov, Belaya kniga, 1996, p.7].

¹ Article 73 of the Russian Constitution states: 'Outside the limits of the authority of the Russian Federation and the powers of the Russian Federation on issues under joint jurisdiction of the Russian Federation, the subjects of the Russian Federation shall possess full state authority' [see: The Constitution of the Russian Federation, 1993].

This position required the regulation of the relations with the Russian Federation. The political situation in Kazan, Naberezhnye Chelny, Nizhnekamsk and other cities at the early 1990s was quite tense. There were regular meetings of many thousands, where the independence of Tatarstan was demanded. A lot of deputies supported this position. This is demonstrated by the fact that adopting the Order of the Supreme Council of the Tatarskaya SSR 'On the Act of the state independence of the Republic of Tatarstan', in accordance with which it was assigned to the Cabinet of Ministers within a month to present the Supreme Council of the Tatarskaya SSR an assessment and projection concerning the changes in the political, legal, social and economic position of the Republic of Tatarstan after adopting the Act of state sovereignty [Khakimov, Belaya kniga, 1996, p.11]. Meanwhile, the declaration of independence was related to the national referendum of 'the citizens of the Republic of Tatarstan about the state status of the Republic of Tatarstan' [Khakimov, Belaya kniga, 1996, p.12].

The political situation was quite serious, proved by the fact of the adoption of the 'Declaration of the entrance of the Republic of Tatarstan into the Commonwealth of Independent States', where it is noted that the republic announces its entry into the CIS 'as a co-founder' [Khakimov, Belaya kniga, 1996, p.12].

The political situation became smoother owing to the negotiations between the delegations of the Republic of Tatarstan and the Russian Federation, where some success was gained. With great difficulty, 15 August 1991, the Protocols after consultations was signed. It contained intentions about the necessity 'to start from the use of the agreed forms regulating relations between the Russian Federative Socialist Republic and the Republic of Tatarstan, taking into account their primary interests without damaging the interests of other republics and the Union in general' [Khakimov, Belaya kniga, 1996, p.32]. It was the first document in contemporary history signed between Moscow and Kazan, and it initiated the negotiations of concluding the Treaty about dividing powers between both sides. On 22 January 1992, an important stage was reached with the signing of an Agreement between the Russian Federation Government and the Government of the Republic of Tatarstan regarding economic cooperation.

To strengthen the status of the republic, it is difficult to overestimate the significance of the referendum of 21 March 1992. From the very beginning of the negotiating process between the Centre and the Republic of Tatarstan, 12 August 1991, the delegation of the Russian Federation posed a question about the legitimacy of the powers of the delegation of the Republic of Tatarstan. In Moscow, there was an active fight between the democratic powers and the communists. Tatarstan seemed unmanageable for many politicians as if it were a non-democratic subject, following Soviet traditions. There was an obvious misunderstanding in the centre about the processes taking place on the spot. Work was actually being carried out in the interests of the population, and it could be confirmed by a referendum. The source of rights is the people. We appealed to our population in order for them to speak out their attitude on the basis of free expression towards the declaration of state sovereignty adopted by the parliament of the republic.

The relations between Moscow and Kazan on the eve of the referendum reached rock bottom. The republic was bombarded with posters and leaflets with the call for voting against the question of the referendum. 'Do you agree that the Republic of Tatarstan is a sovereign state, a subject of international law, building up its relations with the Russian Federation and other republic on the basis of equal treaties?'

All the powerful bodies in Russia were absolutely against the referendum. It was totally unclear to us why and for what reason they are trying to deprive us of consulting the people in a very democratic way.

Precisely before the referendum, B.Yeltsin made a speech addressing the population of Tatarstan and called for boycotting the referendum. I had to speak out with the call for actively supporting the referendum question. Tension was rising. It came up to the moment that all the polling stations in the Republic of Tatarstan were sent an order by the Russian Federation Prosecutor,

warning about criminal responsibility in case of their opening for voting. However, by the morning of the referendum day, all 2611 polling stations were opened.

The results of the referendum demonstrated that both the Tatars and the Russians voted for the status of the republic. The received results (62%) proved that the people trusted the elected president and the deputies. After the referendum results, there were no objections from any political powers or the population. The results of the voting were accepted by everyone, and the republic reached the inter-ethnic and political stability, in general. The well-organized referendum with the participation of the observers from the Russian Federation and international organizations became an important argument in the following negotiations.

Confirming the status of the republic by the general voting became a basis for developing a new constitution of Tatarstan, which was adopted by the Parliament in 1992. The fundamental act became one of the basic documents for preparing the project of a bilateral treaty.

The negotiations were carried out with a huge difficulty and breaks as each party was looking for additional arguments in its favour. In 1993, the authority of the centre proposed the project of a new constitution of the Russian Federation, which was discussed at the Constitutional meeting. The President of the Republic of Tatarstan and the Chairperson of the Supreme Soviet of the Republic of Tatarstan appealed to the President of the Russian Federation with a proposal 'on the institutionalization in the Fundamental Act of the Russian Federation the provision about the contractual constitutional relations between the Republic of Tatarstan and the Russian Federation – Russia'. However, an official reply was not received. The republican delegation left the Constitutional meeting. Later there were bilateral consultations about introducing the amendments into the project of the Russian Federation Constitution in order to take it account the Tatarstan's position. As a result, the fundamental act of the Russian Federation was added with a quite important point (Art.11 p.3) which states: 'The division of jurisdiction and the authorities between the Russian Federation state power bodies and the bodies of the state power of the subjects of the Russian Federation is carried out by the current Constitution, the federative or other documents about the division of jurisdiction and authorities' [Constitution of the Russian Federation, 1993].

Article 11 contained a principally important phrase for Tatarstan about 'other documents' as it introduced the means of concluding bilateral treaties. Obviously, there were a lot of discussions about Point 3 Article 11 later, but at that moment it was a brilliant victory of the republic in protecting its rights for independence in forming federative relations. It should be noted that the Constitution of the Russian Federation was fixed as an international legal norm about 'legal equality and self-awareness of peoples', which strengthened the positions of the delegation of the Republic of Tatarstan.

The negotiations about concluding a bilateral treaty came up to their final stage. An important argument in concluding the treaty was the fact that in 1992 the republic did not sign the federative treaty for a series of reasons. In particular, by that time the republic had actually had more rights than was provided by the federative treaty, which in fact was a typical agreement between the centre and the subjects about dividing the authorities. The following events proved the rightness of the position of the Republic of Tatarstan. The federal treaty failed to be implemented and it was soon forgotten.

At the same time, Tatarstan needed to enter the general legal area of Russia. On 15 February 1994, the Treaty between the Russian Federation and the Republic of Tatarstan 'On the division of the implementation issues and the mutual delegation of the authorities between the bodies of the state power of the Russian Federation and the bodies of the state power of the Republic of Tatarstan' was signed. The situation was the following: the Federal centre was also interested, against its will, in signing the Treaty as before concluding it Tatarstan did not carry out the election to the State Duma of the Russian Federation, and the republic was not presented in the Federation Council of Russia. The treaty was a historic document and determined a change in the relations with the federal centre. Bilateral relations stabilized and became a base for successful socio-economic and cultural development in the republic.

Together with a political constituent, in the republic, a conception of social-economic development was being projected. The structural reorganization of the economy, necessary for transit into the market economy, faced difficulties because of a huge military industrial complex. Besides, the economy of the Republic of Tatarstan depended enormously on oil prices, which were subject to fluctuation, and, thus, it was complicated to develop long-term economic policy. The infrastructure of the Republic of Tatarstan was underdeveloped. There were other reasons that made obstacles for a fast transition into the market relations.

The 'shock therapy', declared by the Government of the Russian Federation, exposed the republican population to a risk and threatened people with impoverishment. The transition to the market was not supposed to bring up a negative attitude towards the market economy and to cause a distrust towards the republic authorities. That is why the Government of Tatarstan chose the path of the 'mild introduction into the market'. This meant a regulated, guided social protection of the population, gradual privatization under control of state authorities, the state's preservation of controlling stakes in budgeted enterprises. Tatarstan's independent policy during the voucher period allowed to avoid selling the republic's property at knockdown prices.

The most important tasks of economic policy were to make infrastructure close to market terms. This explains why road construction, gasification, telephone lines, liquidation of old housing, and Internet fibre optic connection projects were initiated.

An important factor of stability in production supplies during these complicated years was the policy of preserving agricultural production, gradual privatization of agricultural lands by large Tatarstan firms.

At the same time, there was a course for changing economy from selling raw oil to refining it and to developing higher technologies in general. There was a gradual expansion in processing oil, in developing the oil and chemistry industries. The percentage of higher technology production in the republic's industry was rising year by year. The policy of the 'mild introduction into the market' demonstrated its value.

An important component of the post-perestroika period was the development of Tatarstan's culture. The authorities of the Republic of Tatarstan declared that financing the development of Tatar culture would be top-priority as it had suffered during the Soviet period more than the Russian culture. The Russian population of the Republic of Tatarstan supported this opinion, which was important in order to conserve inter-ethnic concord. There were new Tatar schools, newspapers and magazines in the Tatar language, satellite TV. It was important for all the Tatars, living in the Russian Federation and the CIS. The Tatar language turned from a conversational into an official one that expanded its area of usage, including the Internet. Tatarstan initiated close contacts with the Tatars within the Russian Federation and the CIS. Together with churches, mosques were being restored around all the republic. The own Academy of Sciences was set up. An important moment in the development of culture was a change in the psychology of people: they not only felt they were the owners of the republic but also got proud of Tatarstan's success.

Owing to the 1994 Treaty, the republic could develop its external relations, coordinating its activities with the Ministry of Foreign Affairs of the Russian Federation. It attracted investment into the economy and raised up the status of Tatarstan among foreign countries. Kazan turned into a place of serious international forums and sport events.

As a result of steps taken in politics, economy, the social field and culture, the republic by the end of the 20th century had become one of the most dynamically developing regions of the Russian Federation. It is no coincidence that in the early 21st century Kazan is called the third capital of Russia. It was a turning point in the historical development of the republic, and that's why the period between the early 1990s and the early 21st century, to a full extent, can be called a new page in the history of the Tatar people and Tatarstan.

CHAPTER 1

Perestroika and Socio-Political Changes in the Country and in the Republic

§ 1. The reasons for the Social and Political Changes in the USSR and the Course for Perestroika

Mikhail Gorbachev

By the mid-1980s, the Soviet society had come to the state of deep crisis. It was drifting into a recession. The economy had stalled. The pace of economic growth had slowed down, it was practically zero. As the world's oil prices fell down, the financial situation deteriorated. Society was agitated with breaks in supplies and a lack of consumption goods (food as a commodity) leading to endless queues. The country, richest in resources, could not resolve the simple daily needs of its residents.

The moral and psychological atmosphere was on a downward slope. The disconnect between the growing educational level of the people, their spiritual demands and the ideological dogmas implanted by official propaganda, was drawing more and more attention to itself. The limitation of civil and political rights, the dominance of censorship and ideological pressure from propaganda resulted in hard discontent, especially among intellectuals. The social situation was becoming aggravated. The authorities represented by the party nomenclature were becoming more distant from the people. There were calls for stopping the Party bureaucracy's impunity and abolishing privileges for the nomenclature.

At the same time, there was a scientific and technical revolution in the capitalist world on the basis of globalisation. There were the calls that could be satisfied only by changing the society, liberating it from the strangle of bureaucratic overcentralisation. The Soviet system that had carried out a rapid development of the county at a certain period practically exhausted its capacities for mobilisation. We

were late with a response to the challenges of a new scientific and technical revolution. The country was losing its position. Beginning with the early 1970s, the gap with the West, which had entered a new technological epoch, was growing more and more.

In order to come out of this situation, it was necessary to get rid of the totalitarian Stalinist legacy, to overcome the alienation of people from property and power, to open up the space for realizing the nation's creative, intellectual potential, to urge people to get interested in the results of their activities. That was the task of perestroika, with its objectives to involve working people in taking economic and political decisions. It was necessary to help people in becoming citizens with all rights and in accepting themselves as the owners of their destiny. Only by switching on 'the human factor' to full force and effect, was it possible to gradually catch up with developed countries. At first, this aim was expressed in the intention 'to speed up scientific and technical progress'. A general concept called 'perestroika' was formed later.

The other important reason for 'perestroika' was the international situation in the mid-1980s. The situation of the Cold War, lasting almost four decades, was getting more dangerous and intolerable. The arms race was rolling ahead and the threat of nuclear war was growing. Certainly, no one wanted nuclear war, but no one could guarantee that it would not happen even by some ridiculous accident.

The USSR and the USA were constantly 'targeting' each other. The arms race became

a habitual aspect of world affairs. Europe turned into a real nuclear testing ground, annually getting more saturated with rockets of different power and range. Success in miniaturizing nuclear explosives led to the 'battle-ground' nuclear weapon. The seas and oceans were full of surface and subsurface launch platforms. Not only air but also space became a field of confrontation. Both superpower countries, to a certain extent, were involved on opposite sides in regional conflicts in Asia, Africa, and the Middle East.

Striving for military parity with the USA and their allies led to the fact that 40% of the USSR budget was directed at defense expenditures, and the production of military industry came up to 20% of the GNP (in some years, from 25 to 30%), that is five-six times more than the indices of the NATO countries. A general sum of science expenditures contained up to 80% spent on military research. Military expenditures depleted the national economy, restrained the growth of quality of life. Only 8 to 10% of the main funds were spent on satisfying the people's material needs.

However, state security was not becoming more reliable as nuclear weapons are weapons of collective suicide. At the same time, exactly the accumulation of nuclear weapon and the means of its delivery became a priority goal. The scenarios that presupposed the usage of weapons of mass destruction or the threat of applying them were the basis of military doctrines adopted by both parties.

It was urgent to look for a way to resolve the deadlock. The moment required radical changes and fundamental state positions, and their practical approaches in international politics, which were dictated mostly by dogmas of world-view and not by the real life interests of the people. The aim task for us was to re-determine the country's national interests, the real parameters and imperatives of its security, to thoroughly access the main tendencies of global social development and to carry out a programme of precise actions in the main external political directions.

Here was a crossing point of internal and external motives of the course for perestroika.

Fundamental reforms were impossible without creating a favourable international environment, without being liberated from the pressing burden of enormous military expenditures. It was possible to move forward only simultaneously, both in internal and external politics. The philosophy and methodology of the course for perestroika in the union of its internal and external aspects received its ground in the conception of a new way of thinking. The starting key position of new thinking was admitting the more and more consolidating integrity of the world, the interconnection and interdependence of the states, in all their disparateness and difference. From here, there is another key position, about the priority of general human interests and values. These ideas, as known, were spoken out earlier by such outstanding scientists and philosophers as Albert Einstein, Bertrand Russell, Niels Bohr, Vladimir Vernadsky and others.

In a new situation, it was already impossible to regard the world development from the point of the fight between the two opposite social systems. ---The phenomenon that the official Soviet ideology presented as a form of class struggle on the world arena actually turned into a military and political conflict of two blocs, headed by the superpower states. The policy of an ideologically motivated confrontation was outdated. The roots of new thinking were in understanding that there could not be winners in a nuclear war, that the confrontation was supposed to be replaced with policy based on the balance of interests and equal levels of security. The theory and methodology of this new thinking was based on striving for combining politics and morality, that is moral principles in the approach to solving both internal and external problems.

Initiating perestroika as a process of democratic reforms, it was necessary to have a democratic means for implementing them. The main way to involve people in politics, to make them used to the reforms was the intention of glasnost from the very beginning. For the governors of the state, it meant to tell the truth about the state of the country and the world. For the people, it meant saying

what you think, including, more often than not, saying what might be unpleasant for the leadership. Thus, a feedback from the people cropped up. The denial of the ideological repressions and censorship led to the fact that glasnost grew in real freedom of speech and of press, and became an important weapon for democratizing different aspects of life.

Perestroika spread across the economy. It started from a gradual transition of a part of enterprises into self-supporting relations, from a collective contract, renting, especially in agriculture, from the expansion of corporations as forms of entrepreneurship. From the beginning of 1988, the act about enterprises came into power. As a result of it, all the enterprises were to turn into self-supporting relations, to become independent economic subjects and to act on the basis of self-repaying and self-financing. Respectively, the management system was being reformed: the functions of ministries were limited and changed; planning shifted from being directive to becoming advisory and prognostic. There was a transition to new principles of price formation, combining market mechanisms with state regulation.

The reforms were confronted by a significant part of the managerial staff and the party nomenclature, the interests of which were greatly influenced. Economic reform was stuck. The measures to update the staff did not give significant results. The order of the day was a task of political reforms and a change in the power system. The logics of the social development dictated the necessity to hand power from the party monopoly to the Soviet, to which it was supposed to belong by the Constitution. The state was to get reformed from being 'communistic ideocratic' to 'soviet'. The crucial events in this direction were the elections of the People's Deputies of the USSR, held for the first time in the Soviet history on the alternative basis, and the first Congress of People's Deputies of the USSR (May-June, 1989).

The construction of the Congress as a new supreme power body and its activities depicted urgent problems and contradictions of the

Union state transformation. Being formally a federation, the USSR actually had turned into a unitary state. All the main decisions were taken by central authorities in Moscow. The republics could deal with only around 10-15% of the economy on their territories. Overcentralization was ruining local initiative. The Congress of People's Deputies was called for not only starting the institutional fundamentals of the society and state democratization but also for becoming a huge step in changing a unitary state into a real democratic federation. Such a form of the supreme power as the Congress of People's Deputies, elected directly in the republics, was supposed to raise up the status of the latter, their voice in the Union.

The power flow from the party to the Soviets that had had from the start a national-ethnic 'context' in a sense 'legalized' the requirements for more independence from the side of the Union and autonomous republics. Glasnost and democratization of social life put the 'Stalinist cap' off the problems of multi-ethnic relations. However, the inner dangers for perestroika did not receive an appropriate assessment. In general, the national problems in the Union seemed to have been solved. This mistaken opinion turned into a serious delay in taking the required steps for neutralizing the threat of nationalism and separatism. The signs of trouble were getting more frequent. The movement of the Crimean Tatars for coming back to their homeland became organized. Condemning a violent re-settlement of the Crimean Tatars in 1944, we could not but take into account that for the last 40 years the ethno-demographic situation in the Crimea had radically changed. The problems of other illegally repressed peoples – Volga Germans, Balkars, Chechens, Ingushes, Karachays, Kalmyks – were also very urgent.

At the beginning of 1988, the conflict between Armenia and Azerbaijan for Nagorno-Karabakh began. In February, there were bloody pogroms against Armenians in Sumgait (not far from Baku). Events were threatening to escalate into a religious conflict which could spread outside the Transcaucasia. There were other growing processes, quieter

by form but no less important, in the Baltic republics, in Moldavia, Georgia, similar events were taking place in Middle Asia and Ukraine. In different regions, there were more frequent questions about the language of the indigenous peoples, economic sovereignty, the expansion of rights.

The main basis of these processes was the growth of the national self-awareness of the Union's peoples, a kind of national renaissance, for which the policy of glasnost and democratization opened a huge space. The problem of national relations acquired an independent significance. It was necessary to re-access the legislation regulating the interaction of the Union and the republics, to clarify or to re-define the status, rights and obligations of the Union and autonomous republics, other national formations. In particular, at the 19th party conference, it was declared that within the formed structure of the Union state it was necessary to provide a maximum account of the interests of each nation and ethnic group, the entire community of the USSR peoples in such a sensitive field as multiculturalism.

A multi-ethnic structure of the Soviet state added specific features to a political reform. The problems of the relations between the Centre (Federation) and the republics became top-priority. It was decided, within the following stage of the political reform, to develop on the basis of the constitutional norms a system of state legal mechanisms, regulating these relations inside the Union State. The necessity to develop the agreement principle of building the Union became obvious. This brought about the issue of a new Union treaty.

A new Union treaty was demanded, first of all, to support political, social, economic interests of the Union republics and the protection of their sovereign rights in the Union SSR. At the same time, the project of reforming the Soviet federation also presupposed the adoption of the status of the Soviet autonomies: expanding the rights of the autonomous republics in all the fields of state, economy and cultural construction, strengthening their economic independence as well as expanding the autonomous regions and districts.

At the discussions about the national issue, there were complicated questions about the concept of sovereignty and the interpretation of its content, the division of the authorities of the USSR and the republican federation subjects, self-supporting relations at different levels down to the local one, the guarantees of the usage of the USSR national languages, the right of the republics to leave the Union. The conception of new agreement relations that would respond the formed realities and demands of the federation development, was coming into the world on the gridiron. It was necessary to predict a differentiation and a bigger flexibility of federative relation taking into account specific conditions and possibilities of each republic. While these problems were being discussed, in the republics there was more and more passion for 'sovereignty', an intention to 'stake' out its claim without the registration required for its legal validity before the conclusion of a new treaty. The destructive powers that were speculating on the the demands of independence got activated and played with separatist sentiments.

The situation was extremely deteriorated by the decisions of the first Congress of People's Deputies of the RSFSR. At the Congress, Yeltsin offered a provocative conception of sovereignty, by which 'the first sovereignty belongs to a person, then to an enterprise, a kolkhoz, a sovkhov, any other organization...'. The Congress appointed Yeltsin as the Chairperson of the Supreme Soviet, accepted the Declaration concerning the state sovereignty of the RSFSR, and, as the curtain fell, adopted the Yeltsin's provision, releasing the RSFSR ministers and a range of important ministries and bodies from subordination to the Union government. These actions, explicitly aimed at destroying the Union, urged the other republics to take the same steps and provoked the so-called 'parade of sovereignties'.

Yeltsin promised the autonomous republics 'absolutely all the rights', they would be willing to acquire. He asserted this in a speech at Kazan University. At the meeting with the society in Ufa, he proposed to Bashkiria: 'take all the power you can swallow'. Continuing

to pledge his allegiance to the Union, Yeltsin was actually leading to its collapse. However, he was forced to remanoeuvre, especially after the referendum of March 1991 (which Yeltsin bitterly opposed), where most of the citizens who took part in voting spoke out for the Union. In Tatarstan, 87.5% of the voters said 'yes' to the Union.

Owing to the success of the referendum, there was a meeting of the governors of 9 Union republics (by formula '9+1', that is the governors of 9 republics and the USSR President) and agreed on accelerating the work over the project of a new Union treaty. It led to the beginning of the Novo-Ogaryovo process. Some hope for moving forward cropped up. The governors of the autonomous republics remained dissatisfied: they spoke out the statement and expressed their anxiety about the decision in Novo-Ogaryovo that had been adopted without their participation and they demanded an equal participation in discussing the project and signing the Union Treaty. Their anxiety was well grounded. In the approach of the Russian authorities, there was a double standard: full sovereignty was granted to the Union republics, and nothing to the autonomous ones. In particular, Tatarstan, where 80% of businesses were subject to the Union, found itself in a straited situation when Russia ceased payments to the Union budget.

In the summer of 1991, the Novo-Ogaryovo process, after difficult negotiations and inevitable compromises, arrived at the agreed plan of the Treaty on the Commonwealth of Independent States. A constructive contribution was made by the former autonomous republics which were recognized the equal participants of the process as Federation subjects, together with the Union republics. The Treaty plan was published for general information on 15 August, and signing it was appointed to 20 August.

The August coup broke up signing of the Treaty, which was the aim of the coup organizers. There was a new situation when everything was supposed to be started from the very beginning, and in more complex conditions. The disorganization of the country's

economic life, caused by the position of the Russian authorities, was growing and turning the discontent of the population against perestroika. For some time, Yeltsin could put off a pro-Union impression, but all his actions demonstrated the opposite. The Novo-Ogaryovo process succeeded in being reanimated but all the activities of the Russian authorities were aimed at disrupting it. The discussions about a new conception of the Union Treaty were stuck in endless debates. The acquired agreements were rolled over by recommending new terms. Signing the successive plan that had been agreed to by seven republics on 14 November, was scuttled. Later, 1 December 1991, there was a referendum about the independence of Ukraine and ... a deal between three governors of Russia, Ukraine and Belarus in the Białowieża Forest, where they committed a coup d'etat by declaring the 'dissolution' of the USSR. The country's disintegration happened after an adventure led by the State Committee on the State of Emergency and the policy of the Russian authorities by taking a course toward destroying the Union.

Perestroika was scuttled but it left a profound trace in the history of the country and the entire world. The historic achievement of the reformers during the perestroika years was the fact that they started radical urgent reforms and tried to carry them out in a democratic way, expanding the borders of freedom step by step. We moved on with the reforms so far that the trend was already irrevocable. At the same time, we avoided civil war. Perestroika stirred up society, brought it to a new state, introduced the democratic start into its development. Asserting the mistakes of perestroika (and there were mistakes) cannot cross out its main long-term achievements. A new political system came up. It was amenable to parliamentarism. The dismantlement of the command economic system opened up the way to setting up the market system. The positive results of reorganization in external affairs were indisputable. The main one was overcoming the Cold War. The threat of a nuclear Armageddon was staved. The relations with the states of the Orient and West came

into a normal, non-confrontational channel. It disproved a widespread opinion about the failure of the reorganization. A many of its goals were achieved. Unfortunately, the collapse of the Soviet Union led to the destruc-

tion of a powerful mechanism of the perspective development of the great country, and the world's arena lost a most important factor for bringing order and peace to international processes.

§ 2. Perestroika in Tatarstan

Indus Tagirov

'Perestroika (reorganization) is a long-felt need that came out of deep processes of development in our socialist society. It had grown into a state of being ready for change. It can be said to have achieved change through suffering. A delay of perestroika for another moment could have led to the aggravation of the internal situation, which sincerely contained the threat of a serious social, economic and political crisis', – wrote M.S.Gorbachev [Gorbachev, 1987, p.11]. However, in his book 'Perestroika and a new way of thinking for our country and the entire world', there is no word about reorganizing the country's national state system. Meanwhile, precisely this issue was one of the most urgent issues in the life of the country.

A certain afterglow came to the party authorities a bit later. The theses of the CPSU Central Committee for the 19th All-Union Party Conference contained the necessity to take steps 'for the further development of the Soviet Federation' in the conditions of growing national self-awareness. De-centralizing and giving a lot of governing functions to the local authorities were admitted as the exigencies of the times. However, the following thesis that 'a key to further national development... in a harmonic union of the independent Union and autonomous republics... with their responsibility for the all-Union state interests' [Pravda, 1988, 27 May] actually denied the need of any significant changes in the state system. The democratization of international relations was dictated by the time.

There was a need for decisively breaking the stale unitarian relations of the Union Centre and the republics. Meanwhile, the current

forms of the national sovereignty, the division into the Union republics and the autonomous republics did not amount to equality. The country faced a growing dissatisfaction with the existing governing form. This was demonstrated by the riots in Kazakhstan, cruel events in Nagorno-Karabakh and Ferghana, protests in Tbilisi.

In the USSR, the Union republics did not have real rights either. 'If the republican legislative bodies had the same power as the legislative state bodies, our federative relations would be significantly better', – said the Estonian professor J. Boyare. 'Authentic federalism means that all the subjects of the Federation in the Council of Nationalities are presented equally by a number of votes. The objection that there are more Tatars in the Union than Estonians but they will not be presented is not reasoned: Isn't it possible to convert an autonomous republic into a union one?', – asked the scientist 'Communist, 1989, no.6, p.74-75].

The scientist from Latvia A. Plotnieks stated that 'if there are no strong republics with the real attributes of the sovereign states, the Centre will continue substituting the governing mechanism of the republics by trying to solve everything but will not be able to do anything in the end'. Appealing to Lenin's political will, he offered to let the Union deal only with the questions of defense and international relations.

It was the Baltic republics who were to become the detonators of ideas of perestroika as they were included the USSR only in 1940. The peoples of the Baltic republics still remembered the times of independence very well. They felt the injustice of the totalitarian regime more painfully than others. That is why, mak-

ing use of the re-organization in the country, they were the first to fight for real sovereignty.

It is no coincidence that, 8-9 February 1989, the journal 'Communist' with the journals 'Communist of Soviet Latvia', 'Communist of Estonia' and 'Communist' (Lithuania) in Riga held a 'roundtable' conference under the motto 'Hearing each other'. The 'round-table' materials made an impression about how an authentic federation had started timidly knocking at the windows and doors and its knocking was getting louder and louder. V. Kremnev, V. Nekhotin and A. Ulyukayev, who had prepared the 'roundtable' materials for publishing at the 'Communist', wrote: 'The circle of the problems being discussed in Riga is extremely wide. Besides, most of them are very urgent. There is no wonder that the statements spoken out were diverse and often controversial. A part of them was challenged during the discussions, the rest is given by the editorial to the readers for their own judgments. Although we are far from totally sharing the given points of view, we find a certain set of statements persuasive. At the same time, we try to provide a maximum complete impression about a collection of opinions that characterize the discussion that had taken place' [Communist, 1989, No. 6, p. 62].

With what were the Baltic Republics dissatisfied? With the fact that the owners of the lands and resources were not the peoples of the republics but the entire Soviet people. With the fact that the majority of the enterprises, banks, communication networks and means, transportation and energy systems of these republics was under the Union command and subordinated to Union ministries. With the fact, there was a growing migration from the Russian Federation and a decrease of the local population. With the fact that the sphere of usage of the native languages was shrinking, by the principle, noted by one of the participants in the discussion and the corresponding member of the Estonian Academy of Science, I. Apine: 'The faster is the switch to the Russian language, the better it is'.

What did the Baltic republics achieve? The acceptance of the lands and its resources as the property of the people, the refusal of the mo-

nopoly from the Union ministries, the change to complete economic independence, the cease of the migration of the Russian speaking population from the central regions of the country, the acceptance of the indigenous languages of the republics as state languages, the re-organization of the party by the federative principle and, at last, a significant expansion of the rights of the republics up to the level of true sovereign states.

Implementing these demands could turn the country into a real federation with the elements of confederation. Did the party take into account what was discussed at the 'roundtable'? Was there at this gathering, or were there frequent requests to withdraw from the USSR in letters and reports from numerous places where the current situation in the republics was being severely criticized?

Having declared ready to take decisive steps, the CPSU was not prepared to get rid of its monopoly on power and to re-organize the USSR. The so-called conception of 'perestroika', which was intensively talked about, did not have any clear goal, and no one knew about its policies. 'We, admitted even M. Gorbachev, have no ready recipes' [Gorbachev, 1987, p. 62]. The belated and evasive 'reforms' in governing the national economy did not solve even a single task from the agenda. They only introduced the disorganization in the relatively functioning command and administration system of governing the national economy.

In September, 1989, there was a plenary session of the CPSU Central Committee, which approved the platform 'National policy in modern conditions'. Its project was published in newspapers. In the Republic of Tatarstan, as everywhere in the country, there was lively discussion. The society was mostly interested in the issue of the status of the republics. The current situation was neither satisfying to the Union republics nor to the autonomous republics. However, society did not find the ways to solve the accumulated problems either at the platform of the plenary session of the CPSU Central Committee.

There was an impression that the platform was in no way aimed towards re-building the

national policy. It reminded one of the attempt to patch a worn-out caftan. Here, there was not a word about the principles of the equality of the republics. The autonomous republics, especially the autonomous regions, and the national districts remained in the same state. Approving their sovereignty was out of question. In September 1989, the plenary session of the CPSU Central Committee, discussed fulfilling the current forms of the state system with 'real content'. However, the so-called 'real content' was revealed in no single document.

The platform did not take into account the materials of the 'roundtable', nor the results of tough discussions about the issues of the federative organization of the country. The requirements, aimed at the republics' gaining their real, not 'paper', sovereignty, (as the representative of Latvia A. Plotnieks figuratively said) was that the Constitutions of the republics not be carbon copies of the Union Constitution; so that the answer to the question 'How does the Latvian SSR Constitution differ from the USSR Constitution?' not be answered 'In its cover!' [Communist, 1989, No. 6, p. 75].

In the Union republics, not only in the Baltic ones, it was said that it was high time to revise the division of powers between the Union and the republics in order to turn the Constitutions of the Republics into the Constitutions of sovereign states within the USSR, which would confirm the fundamentals of political, economic and social systems, citizenship and constitutional status of all those citizens of the other republics located on its territory, the organizations and the forms of realizing state power [Communist, 1989, No. 6, p. 75].

At the platform, there was not a single word about the party refusal of monopoly and the changes of the relationships with the republics' party organizations. Meanwhile, at the mentioned 'roundtable' in Riga, they talked about the necessity to reorganize the CPSU along federative principles. Thus, the representative of Estonia K.Khallik explained it by the necessity to remove the party from the administrative system. Appealing to the decision of the 10th congress of the RCP (B) 'On Party Unity', he said that the presupposed division of the

party and state functions did not occur, and the party started carrying out the administrative and governing functions [Communist, 1989, No. 6, p. 78].

The platform did not deal with the problems of national cultures and languages being in a disastrous state, although there were a lot of speeches about their 'harmonic development'. Within the current conditions, national culture was blurring into the dominant one and national languages were growing out of official and scientific usage. The researcher of the Institute of Oriental Studies of the Academy of Sciences of the Tajik SSR, S.Abdullo shared his observations on the pages of the Journal 'Communist' about the case that had happened in the Tajik State Philharmonic Hall. One of the actors had to write an application request addressed to the chief. 'Those present, noted Abdullo, who turned out to be casual witnesses to this case, were helping him but, being really not good at writing in Russian, they were coming across obvious difficulties. He asked them: 'And your chief doesn't know Tajik?'. 'He knows. He is Tajik', was the answer. 'Then, why don't you write in Tajik?'. The reply: 'Speaking is prohibited' [Communist, 1989, No. 8, p. 68].

'What would occur to Ukraine in case 'the inviolable Union' remained inviolable 50 years more?.. asked post factum the former President of Ukraine L. Kuchma. ... Russia did not try to make "Malaya Rus" a colony, it tried to make turn it into a part of its own' [Kuchma, 2003, pp. 147, 270]. The same fate could happen to Belarus.

The concern of the destiny of its culture and language was also noted in other republics. At the congress of the Lithuanian communists, this issue was set on a larger canvas.. The General Secretary of the CPSU Central Committee M.Gorbachev, who was taking part in the congress, was requested: 'Mikhail Sergeyevich, decrypt, please, each word of the USSR anthem "the inviolable Union of free republics forever united in Great Rus"'. The delegates told the General Secretary who was lost for words: 'Do not let yourself get overworked with it, Mikhail Sergeyevich. It can be your homework'.

At the same time, society was providing the material required for doing this 'homework'. Thus, at the 'roundtable conference 'Russia and the West', V.Khoros, Doctor of History, a leading researcher of the World Economy Institute of USSR Academy of Science, said: 'We should decisively reject the eternal Russian "Messianism", beginning with the statement "Moscow is the third Rome" and ending with the the provision about the international revolutionary hegemony of the USSR' [Communist, 1990, No. 11, p. 20].

The two alternative ways of the development of the Union (federative and confederative) were spoken and written about by the writer B. Oleynik. Giving the preference to the federation, B. Oleynik spoke out for a new union treaty, 'signed by not separate republic isolating themselves but by all the peoples living there'. In the given case, he meant the interests of the autonomous areas, 'which are willing to break loose from the custody of the union republics' [Communist, 1990, No.11, p. 30].

The union authorities required a certain political foresight in determining political relations between the union republics. However, they were at the tail-end of the events that were happening, often not even being able to understand what was going on. Here are some facts in demonstration of that.

On 11 March 1990, The Supreme Soviet of the Lithuanian SSR accepted the Act 'On restoring the independence of the Lithuanian State' and 'the Temporary fundamental law of the Lithuanian Republic' by abolishing the validity of the USSR Constitution in Lithuania. The same events happened to Latvia and Estonia. On 30 March 1990, the Supreme Soviet of Estonia accepted the Resolution 'On the state status of Estonia', declaring the current Soviet state power illegitimate on its territory. Latvia prepared a draft bill concerning citizenship, by which the citizens of the republic were considered the ones living in the republic since 17 June 1940.

On 30 January 1991, giving a speech at the meeting of the CPSU Central Committee, the first secretary of the Communist Party Central

Committee of Lithuania M. Burokevičius said that the present republic governors 'were and are convincing people that Lithuania has already separated from the Soviet Union and that the Communist Party of Lithuania is a party of a foreign state' [News of Central Committee of Communist Party of the Soviet Union, 1991, No. 4, p. 43]. The first secretary of the Latvian Communist Party Central Committee A. Rubiks, having mentioned the same situation in the republic, said that 'because of the moral terror, which is being carried out in the republic, not only are ranks of common communists falling away, but also prominent figures of our party' [News of Central Committee of Communist Party of the Soviet Union, 1991, No. 4, p. 43].

Complicated processes were going on in the Russian Federation itself, where there was a war between Russian laws and those of the USSR. The RSFSR President B.Yeltsin opposed the Union authorities. By the first secretary of the CPSU Volgograd regional committee A.Anipkin, the governors of Russia 'are waiting for the moment when the centre itself will take some unpopular measures, and after that they will lead us to the bayonet assault' [News of Central Committee of Communist Party of the Soviet Union, 1991, No. 4, p. 45]. And the first secretary of the Uzbekistan Communist Party Central Committee I.A.Karimov at the meeting of the CPSU Central Committee, 30 January 1991, characterized the policy of the Russian authorities as a means of the chauvinism of great-powers and called for taking decisive steps [News of Central Committee of Communist Party of the Soviet Union, 1991, No. 4, p. 47].

In the Russian Federation, there was a growing protest also against the actions of the Russian authorities. After the Declaration of the sovereignty of the Russian Federation, 12 June 1990, the declarations of the republics within it were adopted. There were movements in the districts and regions, which expressed the discontent about their powerlessness and aimed at the equal rights with the republics. It is not by chance that at the beginning of the republic sovereignty process, the regional Ural

and Vologda republics were declared. Preparations for similar actions started in other Russian regions.

In order to stop this process, the state secretary under the Russian President, G.Burbulis, tried to urge the Sverdlovsk oblast governor E.Rossel to speak out against the special rights of the republics (this referred to converting the republics into common administrative-territorial units). However, E.Rossel managed to wriggle out diplomatically. He strove for not converting the republics into regions but, on the contrary, for providing the republic rights for the most developed regions. It was no coincidence that E.Rossel declared the Ural Republic, after which he was ousted from power by B.Yeltsin. However, the idea of the republic turned out to be so appealing that during the Sverdlovsk oblast alternative gubernatorial elections, priority was given to the same E.Rossel. This fact and others prove that the most economically developed regions were straining after republics, and not after the poor, subsidized Russian regions.

The Tatar ASSR too had been one of the powerless regions by 1989. From its heart natural resources were being pumped out mercilessly, its environment was in a catastrophic state. The Tatar language was dying out, the national culture was pitiful to behold. The question of granting Tatarstan the status of a union republic had become an urgent need.

The leaders of the republic of Tatarstan had been able to include the republic in the number of the six regions of the country involved in the development and implementation of a regional system of self-financing. To implement this in the country, the CPSU Regional Committee Office had set up a commission headed by the Chairman of the Council of Ministers M. Shaimiev. This also included scientists, economists, representatives of labour collectives and the public. In the Kazan branch of the Academy of Sciences of the USSR, the economic department had been established and entrusted with the development of the concept of republic self-financing. Several sociological studies of international relations had been conducted by studying the opinions and sentiments

of various sections of the population. First Secretary of the CPSU Regional Committee G.Usmanov at every meeting or session of the leaders demanded that careful attention be paid to the needs of the people, meeting regularly with representatives of the public and studying the views of experts. On his initiative, a Republic 'home bank' of ideas was established for the entire structural rebuilding of the society. As a result, by the opening of the September (1989) Plenum of the Central Committee of the CPSU, a considerable bank of ideas and projects had been accumulated aimed at ensuring the transition of the republic to the principle of regional economic self-financing.

To the party forum in Moscow, G.Usmanov came with a deep awareness of public attitude and needs of the country, with specific proposals on the subjects under discussion. His report published under the title 'Our Future is in Unity' in the newspaper 'Sovetskaya Tataria' of 22 September 1989 reflected a condensation of public opinion on all issues of socio-political and economic development.

G.Usmanov on the CPSU Central Committee's Plenum had voiced the most urgent problems of economic development and inter-ethnic life. Among them, special attention was merited by the proposals for improving the status of autonomous republics. G.Usmanov referred to the data of the sociological studies showing that 67 per cent of respondents had offered to give up the ranking of the republics as not meeting modern reality. In the context of the development of the foundations of USSR legislation, G.Usmanov had proposed to determine the legal status of the RSFSR as a sovereign federal state with the creation of the Communist Party of the Russian Federation. The speaker highlighted the question regarding the status of the Tatar Republic, which, as he had said, 'is able to ensure its development on its own account settling all the while payments to the state budgets both of the USSR, and the RSFSR', stressing that its revenue was two and a half times greater than its costs.

However, although a number of G.Usmanov's suggestions had been considered within the CPSU Central Committee's plat-

form on the national question, the most important one, namely the rejection of the republics' ranking, had not been included.

Meanwhile, the possibility of giving autonomous republics, Tatarstan in particular, the status of the Union republics had been discussed at the said 'roundtable' in Riga [*Communist*, 1989, No. 6, p. 75]. CPSU Central Committee's General Secretary Mikhail Gorbachev expressed indecision in addressing the necessary reforms in this area.

Assessing the expectations placed by the public on the platform of 'National policy in modern conditions', the Secretary of the CPSU Tatar Regional Committee R. Idiatullin in an interview with the newspaper 'Soviet Tatarstan', said, 'The people were waiting for this document, acutely aware of its need and vital importance' [*Sovetskaya Tataria*, 1989, Sept. 14]. However, although the adopted platform contained a lot of good words, it was intended to leave everything as it had been.

The idea of raising the status of Tatarstan expressed in the oral and written statements of many well-known figures sounded after the Plenum just as it had before it. Thus, writer T. Minnullin from the podium of the I Congress of People's Deputies of the USSR stated the need to level 'the status of all national republics, without division into the union and autonomous ones'. And a classic Tatar literary figure G. Bashirov wrote in the newspaper 'Sotsialistik Tatarstan' that attribution of the status of a union republic to Tatarstan, 'would give new powers to the people allowing them, together with other peoples, to rise to a higher level of world civilization' [Isayev, Minnibaev, Tukhfatullin, 1990, p. 35]. The fullest reflection of the public attitude had been provided in the article 'What We Expected' by A. Eniki in the newspaper 'Vechernyaya Kazan' [*Vecernyaya Kazan*, 1989, Oct. 16.]. As this elder wordsmith noted, the platform project did not meet with the aspirations of the peoples deprived of a union statehood regarding the attainment of the national state equality within the Union. A. N. Eniki had convincingly proved the legitimacy of the question of granting the status of a union republic to the Tatar ASSR and shown

the advantages of doing this for all the peoples living in the republic.

However, A. Eniki had not intended just to condemn the approved document. No, not pessimism, but faith and hope in the future he wanted to inspire to his readers: 'And yet, in my opinion, one cannot completely lose hope. The draft platform on the national question reflects a new view on the national question, and contains a lot of practical proposals.' With this, the writer did not forget about the fate of more than 6 million Tatars living in different regions of the country. Having noted with regret that 'over the last 60 years, the autonomous Tatarstan practically could not give them any cultural, moral or material assistance', he pointed out that this had led to the gradual destruction of the people's integrity, to the closure in many areas of the Tatars' contiguous residences of national schools and other centers of national culture, and to the discontinued distribution of newspapers, and magazines in their native language.

Nevertheless, the writer believed that the tragedy of the people could still be forestalled. However, he placed his hopes on the incipient perestroika in the country and the platform of the national question: 'Our hopes are, of course, connected with the party's platform on the national question. It clearly states that representatives of any nationality, regardless of the place of residence, are entitled to cultivate their mother tongue, to teach it to his children, to satisfy their national, spiritual needs, to perform religious rites, to comply with national customs and traditions, and to preserve and further the native culture. Perhaps, in places of compact and prevalent residence of the Tatars, it is advisable to establish an administrative autonomy. In any case, such regions need to get assistance in the purchase of textbooks, as well as other manuals and literature in the native language, and in the provision of teaching staff and other professionals. In this regard, help can only come from Tatarstan, from Kazan, the common capital of all Tatars.'

The writer started a discussion with an associate professor of Kazan University B. Zheleznov, who had published in 'Pravda' on 24

August an article entitled 'What can the autonomous [republics] do?', which, essentially, approved and justified all the provisions of the party document.

B.Zheleznov, who by that time had just defended his doctoral thesis on the issues of autonomy, decided, apparently, that he was already mature enough to give 'valuable advice' both to state and party leaders, and the public². He began an article in 'Pravda' by expressing doubts about the feasibility and advisability of giving Tatarstan the status of a union republic. The author believed that the autonomies' capabilities were quite sufficient to address the issues of national development and there was no need for the transformation of their status. Apparently, he did not wish to take note that not only autonomies but even Soviet republics were stifled by lack of authority, and that only decisive action on their empowerment could save the country from collapse.

The one closer to the truth was E. Tadevosyan, who was of the opinion that the new Treaty of the Union of Soviet Socialist Republics could and should be based on Leninist principles of a free and sovereign self-determination of nations, their voluntary association and their full national equality [Communist, 1990, No. 6, p. 19].
