A.Eniki drew attention to the timidity and hesitancy of the steps the Soviet leadership was taking

in ensuring ethnic equality in the country. Indeed, after 1922, a number of autonomous regions, including the Caucasian republics, acquired the status of the union republics. A.Eniki concluded from very vague and flowery discourse of B. Zheleznov that, in the opinion of the latter, Tatarstan had not fully used the capabilities of an autonomous status and was not entitled to the status of a union republic. The writer firmly and convincingly challenged that view, noting that the Constitution reserved the right of self-determination for the peoples themselves ['Vech. Kazan', 1989, Oct. 16.].

Public sentiment also had been reflected in the activities of the regional committee of the CPSU, which after the election of G.Usmanov as Secretary of the CC CPSU, was headed by M. Shaimiev. Under these conditions, the new Secretary of the Tatar Regional Committee of CPSU had a hard time: the idea of the transformation of Tatarstan into the union republic had already penetrated in the public, it was the most popular in the republican party organization, and was not alien to M. Shaimiev himself. However, he was fettered to the platform of the CC CPSU on the national question, which prevented him from openly campaigning for the transformation of Tatarstan into a union republic. M. Shaimiev was likewise between a rock and a hard place.

§ 3. The Ideology of the Communist Party of the Soviet Union Regional Committee in the Years of Perestroika

Oleg Morozov

At the time, an American expert on the Soviet Union had predicted that in Tatarstan, there would sooner or later inevitably be a major ethnic confessional clash. Russians and Tatars, Orthodox Christians and Muslims, the complications of history, differences in ste-

reotypes, old offenses, and divergent interests ... In short, he could not see any civilized ways of resolving these contradictions in such a divided society. In his experience, he had not met with such exceptions. But it had appeared, and the Americans at the early 21st century, called this phenomenon 'a Tatarstan model'.

Of course, this model could not be born overnight. Its first foundations had been laid back in the mid 1980s, the period in Russian history known as perestroika. Moreover, the

² Incidentally, at a meeting between B. Yeltsin and the scientific community at the University of Kazan in August 1990 B. Zheleznov handed him a note offering his help in solving the problems of the Russian autonomies.

leading and guiding force in the process, quite consistently, had been the CPSU represented by its Tatar Regional Committee.

But first of all, we should recall the situation during those crucial years for the country. Mikhail Gorbachev's reforms literally exploded in the society. And like any explosion, it generated a lot of debris. The pendulum had particularly sharply swung toward the awakening of national consciousness in all its manifestations, including extremist ones. The shadow of Karabakh hung over the entire country.

And at that time in the Tatar regional committee there came a new and, as it had turned out, last wave of party workers, among whom was the author of these lines. In fact we got to the regional committee, having no experience of party work, leaping over a dozen career steps, which was considered then a thing unheard of. For example, I, Associate Professor of the Kazan State University, had been at once entrusted with the leadership of the Propaganda Department (later transformed into the ideological department). My colleagues at the university, associate professors too – Vasily Likhachyov and Andrey Busygin – also came to fill primary roles. In the end, we had managed to assemble a solid team of like-minded people consisting of an entire constellation of figures now widely known in Russia and Tatarstan. It included Rafael Khakimov, Nail Khusnutdinov Alexander Yurtayev Georgy Isayev, Rimzil Valeev ...

Today, so to say, in retrospect, I realize that our team devoted its service not to the regime, but rather to the changes taking place at that time. Another thing is that all of us, especially at the beginning of perestroika, sincerely believed that these changes could have been made by the party itself. In short, we were in the system and tried the best of our ability and capacity to influence these processes from within.

It is clear that our opportunities were not limitless. Moscow cautiously watched what Kazan was going to do, and if anything was ready to 'tighten the screws'. Good thing we had a reliable protection in the first secretary of the regional committee Gumer Usmanov and the Secretary for Ideology Nail Kadyrmetov. Naturally, we had different views with regard

to many things (due to age, experience, mentality), but on the main thing, we largely concurred: it was necessary at all costs to maintain peace and tranquility in Tatarstan, and to reform society in a stable environment. That was, if I may say so, the ideology of the regional party committee, which we had been guided by in taking certain decisions.

Changes in the regional committee's style of work were in the first place felt by the scientists, cultural workers, and journalists, who had become our assets. On their advice, we began to conduct sociological research that ranked party officials. The secretaries of city and district committees, and these were people who had gone through the great school of life and party work, had been actually taken aback when shown what in fact people thought of them. We were the first to introduce monthly opinions of Party members and non-party people on those who held high posts.

Of course, the national question was the most acute one. The analysis showed that in the country where Tatar was the native language of a half the population, there were practically no schools, newspapers and magazines in the Tatar language. In short, this gateway had to be urgently opened. As a result, books and textbooks started to be published in the Tatar language, preparing personnel for Tatar schools. Based on our initiative, in Kazan, there began to appear a bilingual magazine 'Idel', the magazines 'Panorama' and 'Kazan', and the children's magazine in the Tatar language 'Salavat kupere', which is still published. All this was very, very difficult to achieve. Each edition had to literally be shoehorned through Moscow and the Central Committee of the CPSU. We were not always met with understanding.

Moreover, something had to be done with the national organizations. Thus, the most famous among them, the Tatar Community Centre (TCC) actually worked underground. Furthermore, none of the party workers actually knew what these organizations wanted. They examined them. Nothing in particular, as it had turned out: they demanded a union status for the country, opening up of national schools and institutions of social relations with

the Tatar diaspora, etc. After some deliberation, they decided to publish the TCC program in the 'Bloknot agitatora' ['Agitator's Notepad'] magazine.

The resonance had been overwhelming. Can you imagine an opposition organization's program appearing in the official organ of the party's regional committee? However, all the fuss surrounding the publication had not been quite of interest to our team members: none of us even thought about becoming widely known as innovators, let alone to promoting ourselves. The purpose of the publication was very different: we just wanted to make it clear to national organizations that they could deal with us, and this goal had been achieved. The leader of the Tatar emigration in Europe, Ali Akysh had publicly stated that the national organizations were not to quarrel with the authorities in the country and that 'reformer communists are better than chauvinist democrats'. And in February 1989, when I was already working at the Central Committee of the CPSU, in Kazan, there the first congress of the Tatar Public Center was held. Thus, as it is customary to say now, the TCC was able to enter the system, and the sparks of national consciousness in Tatarstan had not fallen on combustible material.

And, so, gradually, without abrupt movements, by small steps, there formed a 'Tatarstan model'. In fact, we largely intuitively followed the conservative principle 'preserve and multiply!', trying to create something new while trying to preserve the best. And later on, this rule had been strictly followed in the republic: never 'cut to the quick', not to carry out reforms just for its own sake.

In parallel, the regional committee was working on another important task – to prepare administrative staff for Tatarstan and Russia as a whole. It had been a fantastic experience. It concerned the culture of working with documents and texts in general, the performance discipline, and an understanding how decisions are made and how they are carried through. And as for working with people, the Party School taught it in such a way, as today, none other school teaches. I think that without his experience of party work, it is unlikely that the first President of Tatarstan Mintimer Shaimiev would have become a politician of the highest caliber. The author of these lines too would not have been able to make a single step in the political life of post-Soviet Russia with no experience in the party work.

Of course, all of the above does not change the main thing. Our attempts to reform the CPSU in a particular country were a priori doomed. The party was dying before our very eyes, and the cause was clear: its structure did not meet the severity of the existing political situation, through its own rigidity, its dogmatism, and from the inability to change ideologically. This, perhaps, has been the most important lesson to be learned from the experience of the CPSU, including by the 'United Russia'. A party, if it wants to maintain itself as a ruling one, should be in motion, in development, and not just occasionally, but constantly. Attempts to change anything in the already ossified body of a party would only accelerate its suffering. It is unfortunate that the CPSU had died, taking into oblivion with itself also a great country.

§ 4. The Rise of the Tatar Ethno-National Movement in the late 20th century

Rinat Zakirov

By the mid-1980s, the Soviet Union had entered a period of social and economic crisis. A lot of problems had been accumulated in the sphere of international relations. The new General Secretary of the CC of CPSU Mikhail Gorbachev, putting forward a program of

'perestroika and acceleration' for the socio-economic life of the country, initially did not attach much importance to ethnic issues facing the USSR. This is to some extent understandable if we bear in mind that by that time in the country there had been accumulated a

lot of problems associated with the bankruptcy of the old administrative system. In this situation the leaders of the CPSU never assumed that very soon it would be ethno-national issues that would come to the fore. Lack of a comprehensive national policy rather quickly led to the strengthening of centrifugal tendencies in a multinational state and the aggravation of interethnic relations. The unrest in the union republics had been seen by the authorities only as the cost of the price of democracy. Therefore, according to tradition in the official structures the focus had been made on searching out nationalists, extremists, and destructive elements. Instead of a serious and thoughtful analysis of these phenomena, priority was given to forceful methods to solve problems. It had been so at the time of the events in Kazakhstan, the Baltic republics, the Ferghana Valley of Uzbekistan, Nagorno-Karabakh and other regions.

As for Tatarstan, the first informal movements in the republic began to appear in 1987. They were mostly aimed at solving environmental problems. Undoubtedly, the Chernobyl accident of 1986 had played an important role in this. In addition, the USSR Government without adequate examination and consideration of the public opinion started the construction of a nuclear power plant in Tatarstan. Another important factor in the birth of informal associations that can be considered was popular discontent at the lack of clear prospects on the part of authorities as to the development of the country in those difficult circumstances, including in the sphere of ethnic relations.

In the summer of 1988, following the example of the Union republics, the national movement too was born in Kazan. A group of representatives of the national intelligentsia initiated the creation of the Tatar Community Centre (TCC), mainly for the purpose of raising the status of the republic to the union level. The TCC's ideas had found broad support among the people. Tatar community centers began to appear in the regions and cities of the country, and the regions of concentrated Tatars' settlement across the country. As early as in

the winter of 1988-1989, in the cities of the republic, particularly in Kazan, mass rallies were held, which, along with social problems raised also some ethnic issues. In particular, the idea of giving the republic union status had been supported not only by Tatars, but also by Russians, the Chuvashes, Mari, and representatives of other nations living in Tatarstan. To the rallies and meetings of the TCC, representatives of national movements came from many parts of the country.

Complex processes had also taken place in the party organization (CPSU) of Tatarstan. The Communists were about to split among themselves on the national question. Supporters of a 'muscular' policy insisted on the complete prohibition of national-ethnic organizations. However, their opponents who kept to a democratic platform, called for sticking with the people. There had appeared also a major turnaround in the republic's leadership. The ruling elite had evolved from complete rejection of existing national problems to the idea of revival of the sovereignty and statehood of Tatarstan.

Emerging national organizations held a wide variety of orientations. Problems related to the revival of a national culture and preservation of the native language had been actively raised by the Sh. Marjani society established in 1988. In the winter of 1990, the Vatan ('motherland') organization was founded dealing with the relations with compatriots living abroad. Prior to that, such organizations existed only in the union republics. The emergence of this organization was due to the fact that, since the beginning of perestroika, the Tatar diaspora abroad began to show great interest in the contacts with their historical homeland. At the same time, in Tatarstan too, there increased an interest in the compatriots abroad.

It is quite natural that the national movement from the very beginning was not uniform. A quite particular place within the Tatar national movement had been held by the Tatar National Independence Party 'Ittifak'. The surprising part was the fact that this party had been created under the CPSU's political monopoly and on the eve of the referendum on

preserving the USSR in the spring of 1990. The party was headed by writer and social activist Fauzia Bayramova. From the outset, the party had defined its goal of achieving full independence of Tatarstan. The founding congress had been held on the eve of the All-Union referendum. 'Ittifak' had made an appeal to the Tatars to vote against the preservation of the USSR, and then on the ruins of the empire to create an independent Tatar state. Of course, these slogans of 'Ittifak' were perceived as too radical. But after some time the idea of Tatarstan's independence, although in a more restrained form, became widespread among the Tatars. In the same spring of 1990, F. Bayramova was elected a people's deputy of the Supreme Council of the Tatar ASSR. The radicalism of the 'Ittifak' party certainly received a mixed response in the country, especially among the Russian-speaking population of Tatarstan and Russia.

In rather unusual social and political conditions during the winter of 1992, there had been established the Milli Majlis, which claimed the role of a national parliament of the Tatar people. Even in one of the first program documents of the TCC, the creation of Milli Majlis was provided by the legitimate election of its members. At regional and district organizations of the TCC, preparatory work was conducted for the registration in areas of large Tatar concentration, that is among the future voters of the Mejlis. But the most radical leaders of the national movement had considered these efforts superfluous and decided not to set the establishment of the Milli Mejlis on the back burner. This led to a split in the national movement. It is telling that a hastily created Majlis failed to achieve any of the goals, and infighting within the 'parliament' itself virtually blocked its work. Leaders of the Milli Majlis got mired in their ambitions and mutual strife, so that the idea put forward by the national parliament of the Tatars from the beginning had been discredited in the eyes of the general public. In 2004, some political forces have attempted to revive the Milli Majlis. But from the day of its establishment, it had practically been unable to function, and

therefore its re-establishment in its former form, in fact, did not have any significance. It should be also understood that the haste in creation of the Milli Majlis, had not least been due to the fact that a certain circle of radical leaders wanted to forestall the convening of the 1st World Congress of Tatars (WCT). This, as they had assumed, would have enabled them to have a certain advantage over the WCT. This assumption is likely to be correct, since it is true that the Milli Majlis made claims for the authority of the WCT. There had been voiced demands to make it the National Chamber of the Supreme Council of the Republic of Tatarstan. This was what the chairman of the Milli Majlis T. Abdullin had mentioned at the 1st Congress [World congress of the Tatars, 1992, p. 214].

This is an external outline of the plot and the partially key events associated with the Tatar national movement in the 20th and 21st centuries. It must be said that the Tatar question in Russia has a long and deep historical roots. This question, in fact, is a conglomerate of issues related to ensuring the rights and interests of the Tatar people.

It is no exaggeration to say that the twentieth century for the Tatars was marked by the struggle for national rights. The start of a real and powerful recovery of the Tatar national movement, as it is known, had been during the period of the First Russian Revolution of 1905 to 1907. The democratization of Russian society and the emergence of certain political freedoms allowed the Tatars to make significant advances in developing national education and culture in a short time. It was at this time, when an extensive network of Tatar periodicals, book publishers, and libraries emerged all over Russia, that a new Tatar literature was born, bringing together the traditions of Islamic and European cultures. Tatar professional theatre and musical art also appeared at this time. In the field of education, a huge step forward was made with the creation of a extensive network of Jadidi (new methodology) madrasahs.

The second wave of the Tatar national movement was catalyzed by the overthrow of

tsarism in Russia in February 1917. The Tatars welcomed the event with great zeal. This is how noted scholar and Tatar emigré activist Tamurbek Davletshin put it: 'The Tatars were well-prepared for the overthrow of tsarism in February 1917. By that time, they had already accumulated extensive experience of consolidating forces to fight for their national freedom.' [Davletshin, 1974, p. 55].

In our opinion, a notable feature of the events of 1917–1918 is that they were the Tatars' first attempts, after losing their state's independence in the 16th century, to restore their nationhood in the form of the 'Idel-Ural' State. Genuine nation state institutions were established in this period: democratic elections to the parliament, the Milli Majlis, were held; a government, the Milli Idare, was formed, as were military structures led by the Harbi Shuro (Military Council), a national monetary fund, and so on. It must be noted that these processes weren't finalised within the anticipated federal union of Russian peoples. However, after coming to power, the Bolsheviks were required to take into account the Tatars' powerful aspiration to restore nationhood. It was this very factor that in May 1920 facilitated the passage of a decree which founded the Tatar Autonomous Soviet Socialist Republic.

The restoration of Tatar nationhood, albeit in the form of an autonomous republic with very limited rights, was certainly a major event in modern Tatar history. However, it caused fresh problems for the Tatars, as the Bolsheviks, having initiated the formation of the TASSR, mainly pursued their own agenda, which at times was quite far removed from the interests of the Tatar people. True, the formation of the Tatar Autonomous Republic allowed institutions to be founded for the urgent tasks of retaining and developing the language, education, and culture of the Tatar people. However, the Bolsheviks' approach to these issues was limited to meeting the needs of Tatars who happened to reside within the borders of the TASSR. They accounted for only a quarter of the Tatar population. Thus, by the end of the 20th century, the Tatar question in Russia took on a new dimension.

The tiered system of national states within the USSR created severe tension between ethnicities in the country. The Tatars were particularly sensitive to these issues. This was because at the beginning of the 20th century, the Tatars were among the most advanced of the empire's peoples to have started the process of nation-building in line with progressive 19th century European ideas. They went into 1917 with significant achievements in education and culture, which gave impetus to the formation of the modern Tatar nation. What then happened was that the Bolsheviks' 'autonomization' policy forced a large nation (the fifth-largest by population) with explicable and reasonable claims to advanced positions in the multi-nation state into the Procrustean bed of an autonomous republic.

As we know, autonomous republics in the USSR were deprived of many aspects of modern culture granted to other union republics. Thus, autonomous republics weren't supposed to have national cinematography (the art form of the 20th century), academic science, encyclopaedic publications, essential periodicals (supplementary literary magazines, for example), 'superfluous' book publishers, and so on. Meanwhile, being the fifth largest nation and possessing a rich history and traditions, the Tatars clearly demonstrated 'cultural redundancy', going outside the strictures of Soviet autonomy. This 'redundancy' manifested itself through many talented representatives of the Tatars serving the cultures of other nations within the USSR (particularly in the Middle Asian republics). The accumulated intellectual potential of the people quickly became apparent at the onset of Gorbachev's perestroika. Back in the autonomy, they began to break down all the barriers. Work on a multi-volume 'Tatar Encyclopaedia' was started; permission granted to publish a new literary youth magazine entitled *Idel*; a new publishing house, *Magarif*, sprang up; a new Tatar theatre formed in Naberezhnye Chelny, and so on. These were indirect indicators of the Tatars' rich cultural potential that had been held back by the Soviet autonomy.

It is well known that the prevailing ideology in the USSR was that of the CPSU. This was a considerable impediment to the development of national cultures. The problem was particularly acute for the Tatar people because, by the Bolshevik Revolution of 1917, they had accumulated considerable spiritual and cultural capital. Today, the real cultural breakthrough of the beginning of the 20th century is rightly referred to as the 'Tatar renaissance'. However, in the USSR, all Tatar pre-revolutionary cultural achievements were declared 'bourgeois-nationalist trash', and access to them was practically prohibited.

As perestroika began, the Tatar intelligentsia raised questions about returning the cultural assets of the pre-Soviet era to the people. The most heated debates were over the work of a prominent Tatar writer and anticommunist emigré leader, Ayaz Iskhaki. Having thrown off the ideological shackles, Tatar society discovered pre-revolutionary authors had bequeathed it some outstanding examples of national literature. It should be noted that CPSU officials were especially sensitive to all these processes, seeing them as evidence of 'nationalist bias' and 'ideological subversion'.

It can therefore be concluded that the idea of enhancing the status of the TASSR to the level of a union republic did not come from nothing. To use a common expression, it fell on fertile ground. National movement activists organised a petition in support of union status for Tatarstan, collecting over 1,000,000 signatures over the course of 1989. TASSR deputies A. Konovalov and I. Kotov gave notice of this unique expression of the Tatar people's will in the USSR Congress of People's Deputies.

The Tatar national movement's active role had a notable impact within the TASSR. In Kazan, at the turn of the 1980s and 1990s, meetings and protests were held by numerous national organizations on an almost daily basis. In the state press, there were passionate debates about the future of Tataria's current statehood and the Tatar people, with possible options for its status being discussed. These processes didn't escape the attention of the central authorities and top officials of the Central Committee of

the CPSU. Dignitaries from Moscow became frequent visitors to Kazan.

With regard to the Tatar national movement at the turn of the millennium, the general public's involvement in addressing the questions of language, culture, religion, etc. should not be overlooked. Prominent members of the national intelligentsia set about developing concepts of national education and national culture in this way. They were announced in Parliament and discussed during parliamentary committee sessions. In its own way, the involvement of the Tatar intelligentsia put pressure on official institutions, aiming to coerce them to take measures to aid the development of the language, education, and culture of the nation.

There was also extensive discussion in the Tatar community about returning to the Latin alphabet, which proved its worth from 1920–1940. As we know, in 1997, the State Council of Tatarstan opted to return to the Latin alphabet. However, the Federal Government decided to undermine this decision, which was purely taken to address the linguistic problems of the Tatar language: the State Duma of RF passed a law obliging all peoples of the country to use the Cyrillic alphabet only.

The national movement also took an active part in the religious revival within the Tatar community. With the fall of communism, the Tatars' interest in their spiritual ancestry rose significantly. It is well known that the Tatar people have been rooted in Islamic civilization for over 1,000 years. Islam is de facto a fundamental element of Tatar ethno-cultural identity. A deep awareness of this is clearly apparent in all policy documents generated by the ATCC, the Milli Majlis, the Magarif Komitesi (Educational Committee), and other institutions. In the Soviet era, many ancient mosque buildings were misused. Activists from Tatar non-governmental organizations made a significant contribution to returning those buildings to believers. They also often initiated the building of new mosques and cultural centres.

To sum up, we can say that the Tatar national movement was a significant phenom-

enon in the lives of the people at the turn of the 20th and 21st centuries. When speaking of its prospects, it should be noted that the Tatars are particularly sensitive to the socio-political atmosphere in the country. A clear pattern can be discerned: during the periods of 'thaw', increasing liberalism, or revolutionary change, the Tatar nation became more dynamic; culture and

education were in the ascendancy. Conversely, when a 'firm hand' — any form of authoritarianism — was guiding the country, the Tatar nation stagnated. The people could only trust to the spiritual values they inherited from their ancestors. To avoid being crushed by the state machinery, the people had to hide away in the shell of their private lives.

§ 5. Going in Circles around the Idea of Sovereignty

Indus Tagirov

This might be an apt way to describe the initial establishment of Tatarstan's sovereignty. Non-governmental organizations in the republic and, above all, the TCC, compelled party and state authorities to fight actively for Tatarstan to gain union republic status. However, they did this without proposing a specific mechanism for implementing the idea. The republic's party and state leaders saw no way that it could happen other than by liaising with the top echelons of power. However, those at the top acted based on the provision of the Central Committee of the CPSU. This didn't provide for changes in the existing form of nationhood, but aimed at filling them with 'real content'. At the same time, no one was able to define what this meant. This climate of uncertainty spread to the local level.

Simultaneously, the old assumptions about the Party were overturned. Illusions about the 'honour and conscience' of the Soviet era were rapidly vanishing. A 'Democratic Platform' appeared within the CPSU, in effect becoming an alternative to the Party, although it only offered to modernise what had come before. A mass exodus from the CPSU indicated a crisis regarding its ideology and way of operating. It was also evidence of the impending fall of not only Soviet ideology but also the entire Soviet state.

Having set about reorganising public life, the party didn't abandon its underlying premise, however. It simply set itself the task of 'renewing socialism', while expressing a readiness to fight against 'vilification and crude, groundless attacks on the party'.

This was announced straightforwardly at the Plenary Session of the Tatarstan Regional Committee of the CPSU, held on 7 December 1989, to address the results of the September (1989) Plenary Session of the Central Committee of the CPSU and to prepare for the 28th Congress of the CPSU. The Communist Party had already begun to collapse when the session was held, and great concern was expressed about the possible results of the upcoming elections to the Supreme Soviet of the USSR. The First Secretary of the Regional Committee of the CPSU, M. Shaimiev, stated in his report that 'every communist must realise that this is ultimately about who will hold the levers of power'.

The report focused on the National Question. M. Shaimiev, referring to the September Plenary Session of the Central Committee of the CPSU, commented on the need for fundamental reforms in this field, 'The Party faced a task of utmost importance — to devise a modern strategy on the national question, a clear programme of action in this challenging area of public life.' As an example of such a programme, he mentioned the CPSU platform, which, in his opinion, was a good basis for renewing the national policy in accordance with the principles of Leninism, for harmonizing national relations, and resolving other national issues. For these reasons, the programme had received the broad support of the Party and people [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 5]. M. Shaimiev stressed that this was about developing the

federation and enhancing the rights and opportunities for all types of autonomy. Commending the previous national policy, he said that it had helped many nations to revive or instigate their nationhood and to develop different types of national and territorial autonomy, which in turn had created an opportunity to retain and develop national identity and to foster friendships between nations. 'However, since the 1920s, with the establishment of the command-administration system, distortions of Leninism have occurred, the consequences of which are still being felt,' stated M. Shaimiev.

After noting that Soviet Tataria's development had been long and complex, and that it owed its nationhood to the October Revolution, the speaker then elaborated on details regarding cultural ostracism, including the closing of many Tatar theatres, newspapers, and magazines, the replacement of the Tatar alphabet, etc. Taken together, these factors had resulted in many problems between different nations being formed, and 'hidden away'. Only perestroika and the processes of democratization and glasnost that it inspired revealed the true state of relations between different nations. M. Shaimiev identified the following questions as being the most critical: development of an international attitude, nation-state structure and development of native languages and culture, while highlighting the economic and legal relationship between the republic and the Centre [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 20].

The speaker didn't go beyond the national issues addressed at the September Plenary Session of the Central Committee of the CPSU, but talked about the need to strengthen and refine the socialist federation and expand the competence of autonomous administrative regions. Having mentioned the statements at the Congress of Peoples' Deputies of the USSR demanding to upgrade the status of autonomous republics and to transform them into union partners, M. Shaimiev noted that the idea, though very appealing, wasn't easy to implement. Besides, resolving the status issue wouldn't deal with many other problems.

This is how he described the republic's position, 'Today, given the specific historical context with regard to the USSR as a national-state construction, we must firmly adhere to the policy developed at the Plenary Session of the Central Committee. It appears to be the most appropriate and constructive.' At the same time he cited M. Gorbachev's opinion that far-reaching changes to the federation must not lead to a redrawing of borders or a change in the forms of national bodies, and that at this stage it was important to fill those forms with real content. The First Secretary of the Regional Committee of the CPSU cited examples of this content: state autonomy, autonomy to resolve problems at an administrative-territorial level, and policy regarding national culture, language, and environmental protection [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 34]. 'Along with this,' M. Shaimiev emphasized, 'we strongly reject national narrow-mindedness and arrogance, fully supporting that provision of the CPSU Platform which states that communists must consider it their duty not to allow any ethnic division in Party ranks, labour collectives or non-governmental organizations.'

Having paid special attention to religious matters, as well as interethnic and interconfessional relations, the Secretary of the Regional Committee of the CPSU said, 'In our ideological work, we should reconsider the role and place of religion in interethnic relations, its influence on national identity. In no way should we set people in opposition to one another, let alone fuel ethnic hatred on religious grounds. Despite the fact that communists and religious believers have different world views and that atheist education has been, and remains, one of our most important objectives, we must value the peace-building role of people of faith and their equal participation in the renewal of society alongside everyone else.' As a priority, M. Shaimiev identified the necessity of addressing issues related to the harmonization of interethnic relations and the restructuring of international upbringing, and the initiation of research in this field. He criticized social scientists for their inadequate

study of interethnic relations and the little practical relevance of many scientific papers on the issue. The speaker noted, 'Interethnic relations require integrated and systematic research. It requires the participation of not only social scientists and ethnographers but also philologists, historians, lawyers, economists, art historians, musicologists, and others. Articles and collections of research papers published today as well as defended theses are often extremely specialised and too theoretical; their authors often deal in abstract notions and, above all, they are distanced from the real objective of improving interethnic relations.' M. Shaimiev reproached the Institute of ILA of the Kazan Branch of the Academy of Sciences of USSR together with Kazan State University for their passivity. He emphasized that scientists should be involved in the resolution of current problems, and should be assigned long- and short-term tasks requiring academic research and the formulation of concrete recommendations [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 40].

The discussion at the Plenary Session of the Regional Committee centred on the issues raised in the report by the First Secretary of the Regional Committee of the CPSU. First Secretary of the Kazan City Committee of the CPSU, G. Zertsalov, opened the Plenary Session by immediately stating that without restructuring interethnic relations as part of an overall process of restructuring and democratizing society, no major issues would be resolved. The leader of the largest party in the republic was trying harder than ever to be careful and sensitive in his use of language. He emphasized that 'national relationships, as events in other regions of our country at test will not tolerate measures taken in a categorical, momentary fashion... whereas in our republic there is sometimes a desire to rush into things when the time seems right.' There followed a rhetorical question: 'Is this acceptable, when many people just don't realise how national issues are addressed, and some still have no idea of whether such questions are even appropriate? To unravel this tangle of interethnic problems without the informed

participation of absolutely all citizens of the republic is asking for new and perhaps even more acute difficulties.'

G. Zertsalov cited bilingualism as one of the most challenging issues, as everyone cared about the fate of their native language. After quoting the CPSU Platform on the national question of the right of indigenous communities in all republics to establish their native language as their official language and to accord Russian language official federal status, Zertsalov drew attention to the difficulties in addressing issues related to bilingualism. It would be impossible, unrealistic, to coerce everyone into learning a language in a short period of time. Introducing hasty measures without an appropriate budget would not help to solve the language problem. As the saying goes: more haste, less speed. Being hasty with regard to this issue would be dangerous and harmful. After indicating the need for developing a mechanism to deal with national and language questions in a consistent way, G. Zertsalov stated that the measures identified for developing Tatar culture under the republic programme 'Miras' were insufficient, and an integrated programme for the unobstructed development of the Tatar language on a reasoned scientific and material basis was required. He also identified the equally complex question of the capital of the republic's unique national vibrancy, referring to an article on the problem by M. Magdeev in the Socialist Tatarstan newspaper on 5 December. 'It would be good if, together with us, the Council of Ministers and the republic's State Committee for Construction, their architects, designers, and artists showed real concern about Kazan's national vibrancy,' concluded G. Zertsalov [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 41].

A. Yakupov, a member of the Party's Regional Committee, and maintenance technician at the Kamaz Press and Stamping Plant, joined the discussion to describe inter-ethnic relations at Kamaz. The giant plant employed 160,000 workers representing over 60 ethnic groups. As a collective, they valued their colleagues by their attitude to work, not eth-

nic identity. Even a good technical specialist would not be respected by his colleagues unless he respected the ethnicities of other workers. A. Yakupov spoke on the use of language in Naberezhnye Chelny, 'Today we are aware of certain mechanics restricting the use of the Tatar language. In production, let's say, in industry, Russian is the lingua franca. That is a historically objective fact. There is no point resisting it, as the industrial lexicon is full of foreign borrowings and technical terms, which are almost absent in the Tatar language. Yet, we must not put up with the limited cultural and everyday use of Tatar. Unfortunately, one cannot watch a feature film in Tatar at a cinema in our city, since we don't have any art cinematography of our own.' The speaker complained about the lack of opportunities to send a letter or telegram, or receive any document in Tatar within Tataria. The language was out of use in the city public transport and there were no street name plates in Tatar. A. Yakupov maintained that an equal Russian-Tatar bilingualism should be a law and a rule in the republic but, like G. Zertsalov, he recommended an unhurried approach to the problem with due regard to financial, human resources, and other issues [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 42].

Member of the CPSU Regional Committee, Director General of the Nizhnekamskshina Production Association N. Zelenov attributed the successful performance of his plant to the 'Leninist national policy implemented consistently by the Tatar Regional Party Organisation, its Regional Committee, and the Presidium of the TASSR Supreme Soviet.' As an example, he mentioned the fact that higher education establishments in Kazan and Nizhnekamsk had been offering training to national engineers and technicians and the fact that the plant entrusted to him employed representatives of ten ethnic groups, of which seven were represented in the management. 'We have experienced no inter-ethnic conflicts among our employees since the plant was established — we have had this staff composition for 19 years,' he mentioned emphatically,

We all have an equal right to work, use social benefits, and develop our traditions, language, and culture' [SA HPD TR, Inventory 15, List 15, File 1299, Sheet 61].

However, all the speeches were run-off-the-mill and could not impress participants in the Plenary Session. Neither Yakupov, nor Zelenov, nor other speakers representing plant personnels expressed their opinion on the republic's status, while demonstrating appreciation of the inter-ethnic work relations and suggesting a few further improvements.

Member of the CPSU Regional Committee, Secretary of the Party Committee of the Kazan Bridge Construction Association G. Ivanov also reported a good inter-ethnic atmosphere among his staff and suggested a number of improvements to it. Having expressed his rejection of the previous ethnic policy, which led to 'the scopes of the languages of many peoples in our country, including Tatar, being reduced to everyday communication', he supported the provision of the CPSU Platform, under which the republics were entitled to determine the official status of any language on their own without prejudice to any rights of other peoples. The speaker attributed the aggravated ethnic problem to poor economy, which, as he claimed, did not understand those who had been escalating the conflict by working up people from different ethnic groups against each other and tugging the national heartstrings of the people instead of focusing their efforts on improving the economic mechanism, ensuring the republic's transition to regional self-sufficiency, and saturating the market with fast moving consumer goods. So who benefited from 'splitting the country into ethnic communities?' The speaker's answer was predictable: 'I remember the confusion and even indignation when our staff received the application by the Tatar Public Centre on arranging a large-scale discussion of ethnic non-issues from the Presidium of the TASSR Supreme Soviet' [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 70]. In the meanwhile, G. Ivanov did not shed any light on the nature of the 'non-issues'. In fact, the TCC's application was aimed at ensuring an official

status for the Tatar language and turning Tataria into a union republic.

The necessity of transforming Tataria into a union republic was so obvious that many scientists and artists of other republics supported the idea. For instance, a statement was made at the aforementioned round-table conference in Riga, that it would be 'a step forward in terms of increasing the nation's sovereignty' [Communist, 1989, No. 6, p. 75].

The speech by Driller at the Elekon Association A. Borodin was far more to-the-point and detailed. Unlike a number of senior party officials, this worker was able to highlight a range of issues that had to be solved. He expressed his disapproval of the lack of ethnic theatres and clubs in the republic and the television, which seemed to be excessively enthusiastic about football and hockey matches and demonstrated the same plays without a Russian translation, mentioning the fact that Tatar was seldom used in the service sector [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 55].

The speech by Director General of the Radiopribor Production Association, Member of the Party Regional Committee Yu. Emaletdinov contained interesting references to his personal life. The introduction was as follows: 'I am Tatar. My father entered the Party in 1918. He established the regime in Meleuz district, Bashkiria. My step-father is Russian, a member of the Party since 1919. He participated in the establishment of the Komsomol in Udmurtia. I was a troublesome child, but I have never heard my Russian step-father mention my being Tatar in any negative way. So, why do we raise the question of inter-ethnic relations today? Why ruin traditions that were created under most challenging conditions?' The speaker criticised the TCC, accusing it of initiating a struggle against the CPSU for power, and maintained that they had to stand up for Article 6 of the USSR Constitution, which envisaged a leading social and governmental role for the Communist Party. Yu. Emaletdinov also criticised scientists who, to quote him, 'owing their degrees and status to Marxism-Leninism, they are beginning to blast the theory that they

themselves created,' and maintained that they should be corrected [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 89].

Party Committee Secretary of Yelabuga Pedagogical Institute A. Rybakov stirred the public by emphasising the necessity of making radical changes to the forms, methods, and nature of the inter-ethnic awareness work in higher education institutions. Proceeding from the position that an ethnic question always has a specific historical nature and that no one-size-fits-all solutions could apply to all situations, stages of socialist development, country regions, and even to various personnel, Rybakov brought up a concern that new approaches to arranging ethnic sociological studies on the development of nations and national relations should be worked out [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 45]. However, the speaker failed to come up with any new approaches, restricting himself to the statement that the Russian-Tatar Department of the Philology Faculty and the Tatar Department of the Pedagogical Faculty of Yelabuga Pedagogical Institute, had been training teachers for Tatar schools. The speech suggested that the possibility of training History teachers to give instructions in the Tatar language and the establishment of Tatar groups within departments for Science and Maths were at the stage of discussion.

Speaking about language classes in comprehensive and Sunday schools in the republic, the TASSR Minister of People's Education R. Nizamov mentioned that a bilingualism-oriented system was necessary, which would ensure equal possession of Russian and mother-tongues by schoolchildren. The minister emphasised the fact that the People's Education Authorities had been taking measures to restore the Tatar people's need for their mother-tongue and, consequently, ethnic schooling. Efforts had been taken to restore the status of the ethnic school and overcome the psychological barrier demonstrated by the majority of parents, mostly urban dwellers, who were reluctant to teach their children their mother-tongue. R. Nizamov reported that a new subject called Domestic Culture, Literature, and

History was introduced to Russian schools and vocational schools, while people's education departments had been instructed to ensure mother-tongue classes for all pupils of kindergartens, secondary and vocational schools. The Council for Mother-Tongues, the Department for Ethnic Schools had been established under the Ministry to coordinate the development of ethnic-Russian bilingualism, and the Tatar Language and Literature Department had been founded under the Tatar Institute of Teachers' Improvement. R. Nizamov laid an emphasis on such issues as the relations between family and school, intensification of pedagogical training. Realising that a 'great leap' was no solution to the problem, he suggested that dedicated Tatar groups should be initially established in child care centres.

It is clear that people's education was not free of trouble. Many speakers mentioned tardiness instead of quick measures, lack of determination for founding ethnic schools and classes in secondary schools, and delayed supply of school textbooks.

Having mentioned the drawbacks, Chairman of the Republic Writers' Union R. Muhamadiev stated that hardly any ethnic schools remained in towns and work settlements and that child care centres offering lessons in the mother-tongue of the indigenous ethnic group were extremely few even in the capital. He attributed the situation to the fact that the arrest of M. Sultan-Galiev in 1923 was the beginning of repressions against the national intelligentsia. Two compulsive revisions of the Tatar alphabet, as well as the notorious Resolution of the Central Committee of the CPSU(B) dated August 1944, also contributed to it. As a result, the Tatar people became a 'population without kith or kin, without even an original name'.

'It is probably writers who, more than others, have to deeply feel and comprehend the situation when a man's spiritual and moral needs are neglected, which is especially violent when it comes to language as the cornerstone of the national culture,' Muhamadiev said. The speaker expressed confidence that 'the Supreme Soviet of the USSR will adopt

a law on language to ensure constitutional equality, free development and unlimited use of all the country's ethnic languages within their ethnic areas one of these days.'

Emphasising the fact that the republic had to ensure linguistic and cultural development for all peoples forming dense communities within it, R. Muhamadiev stated that it was necessary to realise that Tatarstan was the world's only historical territory capable of providing unrestricted development for the Tatar nation, its culture and language, and that restoring the status of Tatar as the republic's official language was a burning issue on the agenda. Unlike the previous speakers, R. Muhamadiev finished his speech by expressing confidence that Tatarstan would soon become a union republic, and Tatar its official language [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheets 56–57, 59].

Director of G. Ibragimov Institute of Language, Literature, and History of the Kazan Branch of the USSR Academy of Sciences, Member of the Party Regional Committee M. Zakiev focused his speech on inter-ethnic relations and the research on them. Emphasising the fact that inter-ethnic relations had turned out to be very susceptible to various processes related to the progress of democratisation and Glasnost, the professor moved on to the republic's status, describing the CPSU Platform 'The Party's National Policy under the Current Conditions' as a big step forward as compared to other recent Soviet and party documents. M. Zakiev expressed his regret concerning the declarative approach to ensuring equality for the peoples of the republics. He presented the results of the Scientific and Practical Conference on the Issues of Controlling the Social and Economic Development of the Autonomous Republic through Self-Government and Self-Financing, which was held at the premises of Galimdzhan Ibragimov ILLA Scientists from eight autonomous republics had an unanimous opinion that the prerequisite for economic independence was a transformed political status of the autonomous republics. The scientists were very circumspect in criticising the following four national status cri-

teria specified in the CPSU Platform: social and economic development, population size, national consolidation level, and the previous experience of state-building.

M. Zakiev mentioned some curious facts, 'In terms of social and economic development, our republic is within the top 10, even among the union republics. In terms of population size, the Tatars are number six in the Union. However, only 26.5% of them live in Tataria (1.6 million); but the remaining 5 million inhabiting other territories across the Union, admit Tataria to be their spiritual homeland and, somewhat surprisingly, they are more concerned with the republic's status than anyone else. Having consolidated to form a nation back in the mid-19th century, which deals with the third criterion, and having a millennium-long history of statehood, if we refer to the fourth criterion, the Tatars have had all reasons to self-determine themselves as a sovereign republic within the USSR, thus raising their status by one step [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 65].

The discussion at the Plenary Session apparently shifted from the inter-ethnic relations to the issue of the republic's status. The demand that Tataria should be transformed into a union republic was becoming increasingly imperative.

President of the Tatar Public Centre M. Mulyukov was the first to criticise M. Shaimiev's report that suggested the negligence of the national question. He also disapproved of many speakers who had been downplaying the matter. M. Mulyukov maintained that the issue of the republic's status and that of inter-ethnic relations should be differentiated. He said that the Tatar social movement was a nation-wide movement for reconstruction. In response to the criticism by TCC, he said that over 40% of the delegates at the first TCC founding congress in February 1989 were communists and members of the Komsomol, 18 out of 21 members of the board being communists.

Speaking about granting Tataria the status of a union republic, M. Mulyukov criticised the senior officials of the CPSU Regional Committee for a lack of consistency: 'As

you know, the former First Secretary of the Tatar Party Regional Committee Comrade Usmanov raised the question of improving our republic's status at the September (1989) Plenary Session of the CPSU Central Committee. Before his departure to Moscow, at the meeting with the Tatar Public Centre management, he maintained that Tataria had to be rewarded the union status. Why does the new management deviate from the line, thus failing to show any succession?' M. Mulyukov reported that 70% of the respondents in Tataria supported the idea of ensuring a higher status for the republic, mentioning the fact that the TCC had collected over 200,000 signatures in support of the demand, and maintained that the issue of transforming the republic into a union one should be discussed effective immediately and put on the agenda of the Tatar ASSR Supreme Soviet Session (the Plenary Session took part the day before it. – I.T.). The speaker mentioned the fact that the TCC had presented to the TASSR Supreme Soviet an outline of the law on language and the draft mechanism for the implementation of the law.

As an example of an efficient struggle to transform an autonomous republic into a union one, he mentioned the Bashkir ASSR, where the Board for the Development of Suggestions to Ensure the Status of a Union Republic for Bashkiria was founded in 1989. M. Mulyukov stated that the TCC had developed certain suggestions concerning the issue.

The speaker also criticised those who maintained that economy, cost accounting, and self-financing could improve the republic's status as such: 'Firstly, cost accounting and self-financing will not ensure complete economic sovereignty for the republic. Secondly, who would guarantee that by obtaining the right to cost accounting... we will catch up with union republics and ensure 32 deputies representing the Tatar ASSR to the USSR Supreme Soviet? Economy does not exist without politics and vice versa... Many speakers, including the famous writer Kugultinov, academicians Sakharov, Sagdeev, Valeev, and Larionov from Yakutia have said many times that the status of Tataria has to be upgraded

to that of a union republic. On 15 November 1988, the Buryat republican newspaper *Buryaat Uten* wrote that it was of primary importance for the Tatar socialist nation to obtain the status of a union republic.' I shall not mention the fact that documents by the United Nations Organisation and other international documents entitle us to the union status... The anti-Perestroika forces have taken advantage of the people's unawareness,' Mulyukov went on, 'to deliberately mix the national question with inter-ethnic relations. By the way, one cannot distinguish one thing from another in the report of the Party Regional Committee. They want to present the solution to the innocuous distorted national question as an attempt of working up one nation against the other.' Like other speakers maintaining that the inter-ethnic controversy was not pronounced in the republic, unlike national questions, he focused the public attention on national training. 'In Kazan, there is not a single representative of the indigenous ethnic group among the management of city and district school boards. Out of 140 school principals in the city of Kazan, only 19 are Tatars. The new Trade Union Committee of the KamAZ Casting Plant does not contain a single Tatar, though Tatars account for 33.1% of the plant's personnel. At present, Tatars make the 40% of all KamAZ employees, but have no representation in the management. Speaking of the human resource policy, I would like to ask: how long is the position of the Party Regional Committee's Second Secretary going to be reserved (as termed by Belyaev)³ for representatives of a certain nation?'

M. Mulyukov suggested that some part of the income from oil production and sales should be used to create a high-frequency Tatar-speaking radio, mentioning the *Svoboda* Radio Station, which broadcast its *Azatyk*

programme globally for three hours each day, as an example.

M. Mulyukov also shed light on the issue of cooperation with party authorities. Party and Soviet authorities clearly tended to estrange themselves from the TCC. Instead of cooperating, 'they force out, punish, or reject some TCC representatives.' As an example, M. Mulyukov mentioned the reduction with severe reprimand of the TCC Member of Board F. Badretdinov, the host of the *Glasnost* TV show, on the pretext of biased commentary on the TASSR Supreme Soviet Session. Mulyukov might have given a somewhat inaccurate account of Badretdinov's case. Chairman of the TASSR State Committee for Television and Radio I. Khayrullin reported Badretdinov and several other TV workers to have been punished for having a subjective approach the programme preparation. (He meant the report from the TASSR Supreme Soviet session, which I. Khayrullin claimed to have not included the speeches of a vast majority of deputies of the TASSR Supreme Soviet, in particular those in the Tatar language. I. Khayrullin might have been right in this case.) The Badretdinov incident was surely more than just accidental — when there's a will, there's a way. I. Khayrullin could not tell the whole truth for obvious reasons.

The First Secretary of the Vakhitovsky district CPSU Committee B. Leushin was opposed to Mulyukov. 'Unlike some activists of public organisations,' said B. Leushin, 'I fully support the provision contained in the speech by the First Secretary of the Regional CPSU Committee M. Shaimiev that believing that a change to the republic's status will automatically solve all of our cultural, economic, and social problems would be a dangerous illusion' [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 78]. The phrase 'some activists' clearly referred to M. Mulyukov, who maintained that economic issues and political status were directly interdependent. B. Leushin believed that 'simply replacing the administrative government from Moscow with that from Kazan would not provide a quicker solution. Becoming a union republic without

³ M. Mulyukov was referring to the head of the Department of Scientific Communism at the V. Belyaev Aviation Institute in Kazan, who complained that the main leadership positions in the country were reserved for the representatives of one nation. However, he was referring to the Tatars.

having the economic basis relying on regional cost accounting is a meaningless, though seemingly attractive, form of democracy.' To prove that all the available opportunities had not been used yet, he referred to the draft land law, which he believed to stipulate equal rights for union and autonomous republics. B. Leushin also criticised R. Muhamadiev and M. Zakiev, who allegedly claimed that spreading the Russian language could cause a nuclear war [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 79].

People's Deputy of the USSR Supreme Soviet T. Minnullin also expressed his opinion on the republic's future: 'We will never be able to separate ourselves. We have intergrown. It is a history of millenniums. We cannot imagine a different life... Our republic is a multi-ethnic one, and it cannot be any other way. Speaking of a union republic, we speak of a republic for all peoples within it. It is rather an economic issue than a national one.' T. Minnullin clarified the situation with B. Leushin's speech: 'Comrade Leushin has said today that the draft land law includes autonomous republics. Do you know what it has cost us? You have only seen what has been broadcast on television. The committees did not discuss any autonomies within the framework of the draft laws initially suggested. The draft property law did not contain a single mention of autonomies. Neither did that on languages... Economic reforms alone are no solution to our problems. These all require a political solution.' The writer mildly criticised M. Shaimiev, 'This is why I cannot agree with Comrade Shaimiev in this respect, though I am positive that the report was well-presented. Comrade Shaimiev spoke about the economic issues, which were also related to the today's agenda of the Plenary Session. These items are inseparable from each other, as we cannot address our national and inter-national issues without addressing the economic ones.'

T. Minnullin also tackled the burning language issue: 'I would like to address our Russian comrades. When working with the population, we should interpret the matter in our favour. It is not about limiting a language

but about preserving Tatar. Not only Tatar, in fact — it is about preserving all national languages.' Having mentioned that the USSR Supreme Soviet was preparing a draft law on the languages of the USSR peoples, the speaker defined those to blame for the linguistic decay as officials and 'national bootlickers, national ladder climbers, and the cowardly intelligentsia' [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheets 97–98].

The writer criticised the Movement deputy group advocating for proclaiming Tataria an open republic. 'Many people and I,' he said, 'have developed a negative attitude towards this movement. Why? I am aware of the open hearts of the people who live in the republic. But, comrades, an open republic is not a revolving door. The Tatar Autonomous Soviet Socialist Republic is a national republic, where all peoples of the Soviet Union live perfectly well. This is what I want for the future.'

The head of the Department of Marxist-Leninist theory of the Kazan Conservatory B. Sultanbekov presented a well-grounded speech highlighting a number of controversial issues on the subject. He talked about two secretaries of the Central Committees of adjacent union republics, who were sitting next to each other at a meeting on national issues in Moscow and ignored each other completely. He also mentioned an episode in Georgia, where people dragged the monument to Kirov and Ordzhonikidze along the road by a rope around the neck, while the crowd was cheering them, and how in Kaunas, where the first T-34 tank to enter the city in 1944 was thrown off its pedestal, and the brutal murders and abuse of women in Sumgait and Ferghana. The speaker stated that the seemingly isolated cases revealed a struggle. A struggle not only for power. 'We should take a civilized approach to crisis management without blowing up the walls or, most importantly, the foundation of our common house, for the roof will not differentiate between the guilty and the innocent when it falls down.' Sultanbekov gave a warning to those 'rocking the national boat in the troubled waters of these days of tumult.'

B. Sultanbekov criticized petty interference with the republic's affairs by the central authorities and their usurpation of all rights to regulate local life. As an example, he referred to the Decree by the RSFSR Supreme Soviet on Approving the Decree by the Presidium of the Supreme Soviet of Tataria on Naming the New Naratlyk Village in the Territory of the Kazaklar Village Council, Vysokogorsk district. After naming the Chairman of the Presidium of the RSFSR Supreme Soviet who had signed the Decree, he asked the following rhetorical question: 'Does Comrade Vorotnikov, who signed the document of 'enormous national importance', have no other concerns?' Even the Governor of Kazan would address such issues on his own, without turning to St. Petersburg, by merely summoning a village gathering. B. Sultanbekov also criticized the Presidium of the republic's Supreme Soviet, which could also have addressed the issue on its own.

The speaker expressed approval of M. Shaimiev's speech on the need to add some real meaning to the republic's rights, supporting the suggestion that Stalin's first opponent on the national question, M. Sultan-Galiev, should be rehabilitated, thus expressing approval of the politician's idea to ensure the status of a union republic for Tataria [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 93].

First Secretary of the Regional Committee of the ALYCL M. Gadylshin supported B. Sultanbekov by claiming that the republic's youth were committed to ensuring sovereignty and an independent youth organization for Tatarstan, saying that 'all requirements concerning any changes to the republic's status should be reinforced by a clear idea of the legal and economic mechanism for overcoming the indefensible ranking of all nations within our country.'

First Secretary of the Oktyabrsky District CPSU Committee and candidate for member of the Party's Regional Committee Kh. Muradymov referred to many facts to prove that the region inhabited by 15 ethnic groups had an atmosphere of mutual trust. At the same

time, Kh. Muradymov noted that they had to take extensive measures to introduce bilingualism to social and cultural life and expressed his regret about the loss of many arts and crafts, national sport and entertainment traditions, etc.

A. Konovalov, a representative of the Movement for Radical Reconstruction of Tataria, President of Kazan State University, USSR People's Deputy, and member of the Party's Regional Committee, also supported the idea of granting the status of a union republic to Tataria: 'In terms of economic and intellectual potential, the republic is at the same level or even higher than some of our union republics.' However, the deputy maintained that a general political approach to the problem was necessary to ensure a solution applicable to all nations and peoples in the Soviet Union, so that all national state entities, as well as nations, could enjoy equal rights and opportunities.

Encouraging participants in the Plenary Session to take a balanced approach to addressing pressing issues, A. Konovalov summed up his speech: 'We should not forget the good Tatar saying: "Don't scratch a spot that's not itchy" [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 99]. At the same time, the speaker did not reply to T. Minnullin, who criticized his suggestion that Tatarstan should be transformed into an open republic.

Following a series of disputes, First Secretary of the CPSU Regional Committee M. Shaimiev answered a series of questions. They dealt with the issues on the Plenary Session's agenda. The most sensitive of them were as follows: 'When and how should rights and conditions at least equal to those of Russian be ensured to the Tatar language in the Tatar Republic? When and how should discrimination against Tatars in the republic during elections for deputies of the Supreme and city Councils, as well as trade union and other committees, be eliminated? Here are some examples of discrimination against Tatars. Only 8 out of 28 USSR people's deputies representing the Tatar Republic are Tatar; there is not a single representative of the Tatar nation

among the 34 members of the newly elected factory committee of the Trade Union of the KamAZ Casting Plant. The existing election system enables the majority to suppress the minority. As a minority in nearly all cities in Tataria, the Tatars are suppressed. We need constitutional guarantees of minority representation in elected authorities.' M. Shaimiev replied: 'I think that both the report and the discussion provided good coverage of the first question. Some clarification of the second issue is necessary, which Comrade Mulyukov has mentioned. The number of Tatars among the 28 people's deputies representing the USSR from the TASSR is not 8 but 13. There are also 11 Russians, 2 Ukrainians, 1 Mordva and 1 Chuvash.

We might think this is fine. Well, it's not about what we think — it's about people's elections. We can and should understand the concerns about certain regions, in particular, about the city of Kazan, but I think that the Tatar civic center must make an effort to rectify the situation.'

In his closing speech, M. Shaimiev said: 'Speaking of the republic's status, we should bear in mind that we support the current well-considered platform of the Party's Central Committee, which we mentioned in the report. The question is ultimately about a federation that ensures equal political and economic rights for everyone. This should be our aspiration. According to Gorbachev's report at the September (1989) Plenary Session of the CPSU Central Committee, a platform had been developed to specify the solutions to national questions for all Communists in our country...

...I exchanged opinions with Bureau members during the break. Everybody likes the course that the Plenary Session has taken. It really is an open dialog, and, more importantly, one that is focused on the issue under discus-

sion. This says that our regional party organization and all comrades participating in our Plenary Session today are mature. It should be emphasized that all fundamental provisions presented in every section of the report, as we can infer, are supported by the vast majority.

M. Shaimiev noted that national questions would have further coverage in the press, while the provisions of his report would be presented in greater detail. He reported that M. Sultan-Galiev had been legally rehabilitated and that preparation for his complete party rehabilitation had been initiated. As for meeting the requirements of Tatars living outside the republic, he expressed his hope that the transition to regional self-sufficiency, which was aimed at ensuring economic independence for the republic, would enable the government to allocate specific funds for these purposes [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheets 102–106].

As we can see, the Plenary Session could not restrict itself to discussing inter-ethnic relations. Any matter related to them seemed to depend on the republic's status. Without solving the latter problem, it would be impossible to make progress in implementing the Tatar language and the republic's equal development within the union state.

At the same time, it was becoming increasingly obvious that the problem could not be solved by decrees. An act of real self-determination by the republic's people had to take place. How could this be done? What was the realistic way to ensure full-fledged statehood for Tatarstan? Russia itself suggested the way by adopting the Declaration of State Sovereignty of the RSFSR at the 1st Congress of People's Deputies on 12 June 1990. The Tatar Republic could and had to go the same way. The Russian Declaration was the trigger of the so-called parade of sovereignties.

§ 6. The Development of the Idea of the Republic's Sovereignty

Indus Tagirov

The Plenary Session of the Tatar Regional CPSU Committee of 3 August 1990 took place against the backdrop of threatening events that had spread throughout the entire country. The local Soviets of Jelgava and three more Latvian towns had resolved that all monuments to Lenin and Soviet Army soldiers who had liberated the republic from the fascists should be torn down. Anti-army sentiment surged in the Baltic republics, Moldavia, Ukraine, Armenia, and Georgia. In many cases, military personnel and their families were helpless against abuse by the local authorities. The Supreme Soviets of Latvia and Estonia resolved to suspend the Decree of the USSR Council of Ministers dated 2 November 1989 'On Registering Military Personnel at the Deployment Site of Military Units'. The situation was similar in Ukraine, where employment was being refused to the wives of military personnel and those who did not speak Ukrainian were being dismissed. Cases of physical violence against military personnel were becoming increasingly frequent. In 1989–1990, 97 officers were murdered and 150 people suffered grievous bodily harm. The republics established national military units at the same time [News of Central Committee of Communist Party of the Soviet Union, 1990, No. 12, p. 20].

The Congress of the People's Movement of Ukraine, attracting 2,100 delegates representing 632,800 members of the organization to the Ukraine Palace on 25–28 October 1990, proclaimed a struggle for 'a sovereign, independent, democratic, parliamentary Ukrainian Republic'. The Movement's program stated that the process of historical development had been violently interrupted, causing Ukraine to become part of the USSR with a single ruling party, which had brought the people to an economic and environmental crisis. It emphasized that it was impossible to prevent a nationwide disaster without changing the political system, eliminating the Communist Party's monopoly, and establishing political and economic plu-

ralism. The Movement declared its mission to ensure independent statehood for Ukraine and establish a parliamentary republic through non-violent means [News of Central Committee of Communist Party of the Soviet Union, 1991, No. 2, p. 62].

Persecution of communists began at the same time. On 18 October, the newspaper *Za Vil'nu Ukrajinu* (For Free Ukraine) published a resolution by the Presidium of the Lviv Regional Council of the Movement, which read as follows: 'We encourage those communists who value the national interests and human honor and dignity to dissociate themselves from the corrupt and criminal leadership of the Communist Party of Ukraine, which has reduced our rich republic to poverty, decay, and spiritual devastation, and quit the CPSU in protest to contribute to the dissolution of any work-related party organizations.' A campaign was initiated to force party committees even out of rooms and buildings outside of industrial plants. Passes to the plants' premises were withdrawn from dismissed party officials. Communists were banned from management positions. All activities of Party and *Komsomol* organizations at schools were banned in Ivano-Frankivsk district. For instance, the Session of the City Council refused to confirm the appointment of S. Sichova as the head of the civil registry office, because she had previously worked as an instructor for the Party's City Committee. Russians in Ternopil region were advised to head for Russia, and Ukrainians were told: 'If you want to work as a doctor, teacher or journalist, you have to turn in your party membership card.'

The political situation in Georgia was reported to have become difficult when the Communists won only 64 parliamentary seats in the elections to the Supreme Soviet. Round Table Free Georgia headed by Z. Gamsakhurdia won 155 parliamentary seats. The remaining nine blocs and parties had a total of 27 seats. Round Table Free Georgia was clearly

determined to cancel the USSR Constitution, reject the new Union Agreement, and proclaim Georgia a subject of international law. As urged by the Ajdghilar people's forum, the Abkhazian population refrained from participating in elections. The majority in South Ossetia also ignored them, since they were preparing for the elections to the Supreme Soviet of the South Ossetian Soviet Democratic Republic.

After winning elections to the local Councils, the popular fronts of Latvia and Estonia, as well as the Lithuanian Sąjūdis, became more active. The republics' Communist parties split up into separate Communist parties. New laws aimed at banning Communist parties as criminal organizations were being prepared. Some even called for a 'second series of Nuremberg Trials'.

In 1990, food prices increased in Estonia without causing much popular discontent: 50% of Estonians and 16% of Russians took it calmly. A senior official of the Department of Socio-Economic Policy of the CPSU Central Committee, I. Belistov, was sent there to study the situation. He reported on his trip as follows: 'It is a common fact that decentralization, which has become widespread in a number of regions of the country, is most pronounced in Estonia. The rightful desire to obtain true sovereignty, primarily in the economic sphere, has developed into open separatism that threatens to destroy our common economic space' [News of Central Committee of Communist Party of the Soviet Union, 1990, No. 12, p. 94].

Complicated processes were also taking place in the Russian Federation, initially meant as the unifying link in democratizing the country. Parties and movements demanding true democratization through dissolution of the CPSU and elimination of its control over the country's life were springing up everywhere. The Democratic Russia movement was gaining momentum. It held a congress of 1,000,181 delegates representing 71 regions of the RSFSR in the Russia Cinema in Moscow on 20–21 October 1990. Presenting an alternative to the CPSU leadership was de-

clared the fundamental principle of the Organizing Committee for the Congress. Avoiding any violent means of solving national or social problems and other issues was established as the organizational principle. The speakers' demands included resignation of the union government, and de-partization of the army, the KGB and the Ministry of Internal Affairs. Although no general program document was adopted, addresses, declarations and resolutions specified the key political objective as destroying the USSR by withdrawing the RSFSR from it. The idea of Russia's sovereignty was the dominant concept of the Congress. More specifically, measures to destroy the USSR included preparation and holding of acts of civil disobedience to force the government of Gorbachev and Ryzhkov to resign, support of the Russian parliament and government's focus on radical economic reform, and participation in the development of a new Constitution of the RSFSR.

E. Tadevosyan, Head of the Department of Socialism of the Moscow State Institute of International Relations of the USSR Ministry of Foreign Affairs and Doctor of Philosophy, wrote in Communist magazine that the time had come to implement the expansion of the republics' rights declared at the beginning of Perestroika. He maintained that the republics should sign a new union agreement as soon as possible. Otherwise, he warned, the dissolution of the USSR could become a reality. The author referred to the resolutions to establish independent states beyond the USSR adopted by various forces in some republics. 'I am deeply convinced,' the scholar wrote, 'that an active discussion of the draft agreement, and particularly its adoption twelve to eighteen months ago, would have dramatically limited the opportunities for separatist forces. It is obviously much harder to reach to such an agreement today. Thus, it would be extremely unreasonable to delay its preparation and adoption.' The article appeared in April 1990. The scholar believed that a lot of time had been lost by then. The agreement should have been signed in 1988–1989 [Communist, 1990,

No. 6, p. 19]. It had not been prepared, never mind signed, by August 1991.

The events in the country also affected the Tatar Republic. The party ceased to accept new members, and the current ones were withdrawing at an increasing rate. Whereas in 1989, 1,200 people in the republic quit the CPSU, in 1990, the number increased to about 2,500. The party's budget was reduced by over 40%. The clashes between the Soviet and Party authorities escalated. The slogan 'All power to the Soviets!' was ubiquitous. One of the suggestions was that the CPSU should be completely deprived of exclusive control over the state, and a multi-party system should be introduced.

The population's living standards dropped, the food problem was becoming increasingly urgent. Over 34.4% of respondents in opinion polls among communists in the TASSR reported certain inter-ethnic tensions. Public sentiment was affected by radio, television, and newspaper reports on the growing inter-ethnic tension in the Baltic states, Ukraine, Middle Asia, and Transcaucasia.

Apart from discussing the findings of the 28th CPSU Congress and the problems described above, the August Plenary Session of the Tatar Regional CPSU Committee was focused on national sovereignty of the Tatar ASSR. One of the speakers, First Secretary of the Regional Party Committee M. Shaimiev, referred to Secretary General of the Party M. Gorbachev, claiming the country's progressive forces to be taking a sweep 'towards humanism, democracy, and social justice,... overcoming the totalitarian Stalinist system as a society of free citizens based on socialist values is being formed.' He was optimistic that the 'over-centralized state will be transformed into a true union state, ... profound revolutionary processes are taking place.' However, the reality that was reflected to a limited extent in the information presented by speakers at the Plenary Session was evidence of the decay within the CPSU and the country.

According to M. Shaimiev, the rapidly escalating inter-ethnic conflict in the country motivated the 28th CPSU Congress to em-

bark on a democratic national policy, voluntary alliance, and agreement among peoples, with regard to which he stressed the need to establish constitutional treaty relationships between the Center and the republic, based on the idea of a union of sovereign states under an agreement with a clear division of powers between the Union and the union republics. 'All national state entities, including autonomous ones, must be equal participants in the process,' the speaker noted.

The report later focused on justifying the need to address the republic's state sovereignty at the 2nd Session of the TASSR Supreme Soviet. Evidently, M. Shaimiev had given up on the idea of preserving Tatarstan only as an autonomous republic.

Concerning the political, economic, and legal factors determining the Declaration of State Sovereignty, the speaker mentioned the rapid growth of ethnic self-awareness and the civil movement for raising the constitutional status of the republic. M. Shaimiev noted that economic reform and the transition to market mechanisms would allow the government to settle the key set of disputes between the union and autonomous republics by eliminating any existing inequality in their economic relations. He also referred to the Declaration of Rights of the Working and Exploited People adopted by the 3rd All-Russian Congress of Soviets in 1918, which did not provide for any ranking of the republics and advanced the idea of a free union of free nations as the fundamental principle of the federation. M. Shaimiev called the adoption of the USSR Law 'On the Delimitation of Powers Between the Union of Soviet Socialist Republics and Constituent Entities of the Federation,' which proclaimed the autonomous republics Soviet socialist states — constituent entities of the Federation — of the USSR, the beginning of the restoration of this principle. The report stated that the meaning of the phrase 'the right of nations to self-determination' was free establishment by the republics of constitutional treaty relationships with any national territorial entities concerned. As an example, M. Shaimiev mentioned the adoption of the

Declaration of Sovereignty of Russia at the 1st Congress of the People's Deputies of the RSFSR on 12 June 1990. He noted that the adoption of the Declaration of State Sovereignty by the TASSR Supreme Soviet would contribute to real political and socio-economic independence, as well as to expanding the republic's competence and powers. 'I think that the document will be representative of the interests of all peoples in the republic and become the basis for new laws of the TASSR, including its Constitution, the republic's participation in preparing and signing the Union and Federative (with the RSFSR) agreements, without any prejudice to the RSFSR's territorial integrity,' he said. Taking into account the special historical, economic, cultural and other connections of the peoples inhabiting the RSFSR, M. Shaimiev stressed the need to establish treaty relations between the RSFSR and the Tatar Republic [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheets 4–34].

First Secretary of the Naberezhnye Chelny City CPSU Committee A. Logutov approved submission of the issue of proclaiming the republic sovereign to the Regional Committee's Plenary Session as one of the most critical problems: he also believed that the issue of the USSR's national state structure should have been discussed back at the 1st Congress of People's Deputies of the USSR. If a clear concept had been adopted, it could have eliminated a number of local problems. A. Logutov gave a more direct and harsh estimate of the hurried adoption of the Declaration of State Sovereignty of Russia without due regard for the opinion of the autonomous republics. He considered it contrary to the USSR Law of 26 April 1990 'On the Delimitation of Powers between the Union of Soviet Socialist Republics and Constituent Entities of the Federation', under which Tataria was both a constituent entity of the USSR and of the Russian Federation. Participants in the Plenary Session could not help but agree with the speaker when he said: 'At present, the standard of living in Tataria is not commensurate with the contribution made by the republic's industry and agriculture to the country's economy. Our city is a vivid example. Enterprises

and organizations produce commodities with a total value of over 3 billion rubles. Over 700 million rubles go to the state budget. However, the city's current annual budget, for example, is 85 million rubles, although we need about 250 million to ensure normal development and reliable operation of municipal services.'

At the same time, A. Logutov complained about the lack of complete official information on the events in the country, which had provoked rumors and controversial opinions causing inter-ethnic tension. 'The outcome of meetings in party organizations after the Congress suggests,' he said, 'that people are mainly concerned about three issues. First. What will we have; how is it going to affect the republic's regions, its individual citizens? Second. What will the solution to the inter-ethnic problem be? Will it lead to refugees? Third. What will the solution to the language problem be? These three issues are critical today.' After noting that there was enough time before the Session of the Supreme Soviet of Tataria, he suggested that all mass media should be used to ensure that people could receive as much information as possible. In conclusion, the speaker said, 'When we proclaim sovereignty, it has to be absolutely clear based on a well-considered approach and strict economic calculations to prevent it from failing like regional self-sufficiency, which we have been discussing so much recently. As for my position, I advocate sovereignty based on a union agreement; I advocate sovereignty that would make the republic an equal among equals, ensure equal rights for all peoples, the unalienable right to a decent life, free development and use of one's native language, and satisfaction of national and cultural needs of every person. Sovereignty must foster common progress of the Union and the Russian Federation and strengthen them. In order to achieve these goals, we have to give up all superficial ideas, reach a civil agreement and join our efforts to work and create' [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheets 34–35].

M. Khasanov, First Vice Chairman of the TASSR Council of Ministers and member of

the Regional CPSU Committee, expressed his approval of the idea of sovereignty as well-justified and modern: 'Tataria has been living within the framework of autonomy for 70 years. Historically, this is a short period, but I think it is long enough to draw some conclusions, assess the events, and compare various forms of national and state structure in terms of how effective they are and how reasonable it is to preserve them any longer.' After mentioning that the republic's largest union- and federation-controlled machine building, petrochemical, power, light industry and processing plants were concentrated in Kazan, he complained that the republic controlled only 2% of them, which were of little importance. In 70 years of its existence, the republic had only had two of its own industrial ministries: for local industry, controlling the Arsk Ethnic Footwear Plant and a cardboard plant for the disabled; and for the fuel industry, which was responsible for distributing firewood to the population. They had recently ceased to exist. Thus, the Council of Ministers did not control any industrial ministries. 'How can the autonomous republic control its industry or enjoy any economic rights in such a situation?' the speaker demanded. 'The republic can only use 2–9% of the amount raised from union- and republic-controlled plants and organizations,' said M. Khasanov, 'to meet its socio-cultural and other needs. The republic does not have any real rights to carry out foreign economic activities, while the monetary fund of less than 1% of the republic's total exports amount is ridiculous.'

In conclusion, M. Khasanov said: 'Speaking of sovereignty, I should emphasize the fact that it deals not only with the Tatar nation but directly affects all peoples living in Tataria. We must avoid any nationalism and chauvinism, neglect of and prejudice to the interests of any nation when addressing it... It would be a mistake to say that there is general approval of the idea of state sovereignty. Some do not hesitate to advocate for it; others are on the fence; a third group views it as a scheme by the republic's leaders. People make wild, extremist statements, reporting an alleged

plot of separation, of withdrawal from Russia, even from the Soviet Union. We should state decisively that state sovereignty granted to the republic does not mean any political separation or economic and cultural isolation from other republics and central governmental agencies, any changes to its borders, not to mention its withdrawal from Russia and the Soviet Union... We should make a firm and clear statement that Tataria has been and will remain part of the Soviet multi-national state. It is the cornerstone of our future national state construction. I suggest that we should essentially accept the draft resolution on the issue submitted by the Bureau of the Regional Party Committee and use our right to legislative initiation to submit the issue of the republic's state sovereignty to the next session of the TASSR Supreme Soviet for consideration' [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheets 41–42].

First Secretary of the Vakhitov District CPSU Committee B. Leushin, like many other party officials, was concerned about the intra-party situation. He was apprehensive about the outflow of a large part of the academic, artistic, and technical intelligentsia from the party. The speaker also discussed the economic issue, making note of measures for a transition to a market economy before the Union or Russian governments made any decisions. Among such measures, he mentioned privatization of enterprises and other public property, tax benefits and most favored treatment for business, widespread use of business forms, restructuring of banking, increased deposit interest rates, etc.

B. Leushin remarked that the Socio-Economic Department of the Republican Party Committee and the Communists in the republic's government should focus their efforts on developing a concept for Tataria's transition to a market economy as soon as possible, which would require them to engage new, young thinkers outside the box from the Kazan Scientific Center of the USSR Academy of Sciences, higher education establishments and research institutes .

However, B. Leushin was more kindly disposed towards the Russian government, say-

ing that 'we have to take into account' its approaches to these issues: 'If we only use our prospective economic and political sovereignty to fight with our neighbors, with Russia and the Union and re-divide our small public pie, it will be a step towards further aggravation of the crisis. We would only amplify our problems and that of Russia and the Union.' He called for a cautious, step-by-step approach to solving the difficult problem of gaining sovereignty, for a general national referendum on the matter to be preceded by a discussion on the issue in workers' associations and the mass media [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheets 43–50].

I. Kabanov, Farm Boss at the OGME 'Leninogorskneft', Secretary of the Shop Party Organization and Delegate to the 28th CPSU Congress, expressed the opinion of ordinary communists on the changes happening within the party and in the country. He said that people found the issues of socio-economic status and those related to the transition to market relations disturbing. I. Kabanov's speech concerning the republic's sovereignty was brief: 'I agree that each national republic should be an equal among equals... it is the republic's people who should determine its status under the historical conditions' [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheet 52].

Speakers supporting the idea of sovereignty for the republic mentioned a number of other important issues. Kh. Khayrutdinov, First Secretary of the Zelenodolsk City CPSU Committee, member of the Regional Party Committee and delegate to the 28th CPSU Congress, expressed confidence about the Party's future, despite the fact that 284 people had quit the CPSU in the district alone [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheet 53].

N. Muzafarov, Secretary of the Aznakayevo City CPSU Committee and delegate to the 28th CPSU Congress, dedicated his speech to the republic's sovereignty. 'We understand sovereignty,' he stated, 'not as separation and complete self-isolation, but on the contrary, as enhancing the republic's diverse connections with other areas across

the country ... The republic's higher status will undoubtedly increase its influence on all Tatars as a united spiritual and cultural center.' N. Muzafarov reported that meetings with workers' associations had been largely focused on the sovereignty issue. As a positive example, he mentioned the position of the TCC, whose representatives had fostered mutual rapprochement and rapport of the parties. 'We have to conduct a dialog and joint search, so that everybody concerned with the people's interests can do something of practical value instead of going to the opposition,' the speaker said emphatically.

N. Muzafarov did not overlook supply difficulties: 'It's hard to explain to farmers, livestock breeders, oil and transport workers why they have to receive their tobacco allowance cigarette by cigarette and pay an arm and a leg for ordinary consumer goods while they fulfil their plans and duties to the people honestly.' 'We are tired of the Centre's references to the events in Armenia, Azerbaijan, and other extreme events,' he said, 'and only view them as an evidence that central agencies are incapable of controlling the economic situation. People are not sure that tomorrow their kolkhoz chairman or factory director won't have to allocate matches in boxes and salt in spoonfuls.' Without mincing his words, he said that control should be exercised over the republic's leaders, ministries, and departments: they should resign if 'they do what they were appointed for badly' [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheet 58].

V. Salamashkin, Secretary of the Party Committee of the Kazan Aviation Institute and delegate to the 28th CPSU Congress, called for developing 'a renewed Tatar Republic ... along with the Russian Federation and within the Russian Federation under the Federal Agreement, and with the Soviet Union under the Union Agreement' [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheet 64].

Secretary of the Party Organization of the Etilen Plant A. Samarenkin noted that party membership had decreased and applications to quit the party had been submitted on a large

scale, and in his speech he focused on the issues that would emerge when the republic became sovereign: 'Periodicals, radio, and television have been discussing the future of the Tatar ASSR. Unfortunately, I think this debate is dominated by political ambitions and emotions relating to the fact that the republic has been drained of oil, agricultural products have been exported from Tataria in spite of food shortages, concerning the environmental crisis, etc. It is hard not to agree with these arguments. However, most of the published works and speeches are excessively emotional, and lack analytical data and figures to enable us, common toilers, to develop an opinion or a position of our own on this matter ... Economic relations have become even more critical, because the republic is very close to entering the regional market, which is largely connected with the supply of raw and other materials, spare parts, and components for all industries in Tataria. It is still not clear how much access to food citizens of the republic will have with sovereignty and market relations ... We need a targeted, carefully considered program to stabilize agriculture by involving the republic's entire industrial and scientific potential' [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheets 68–69].

Head of the Kukmor district Party Organization R. Zaripov justified the need for the republic to gain sovereignty using the example of economic development of the rural areas. 'As you know, Tataria produced over 60 centners meat [per capita] in 1989,' he said. 'The figures are 37 centners for the Volga region and 46 for the RSFSR. However, the consumption statistics is 69 kg in Tataria, 78 kg in the Volga region, 75 kg in the Russian Federation, and so on. Our workers are rightfully dissatisfied with the fact that their living standard is inconsistent with the republic's industrial, scientific and technical potential. So we face a question difficult to answer: why do we, as one of the republic's most advanced areas in terms of producing and processing animal products, have to beg superior authorities to enable us to meet ... our population's minimum demand for meat

and dairy products? We cannot sell a single kilogram of meat to industrial plant workers. There is a constant shortage of dairy products. What is the use of the region's producing an average of over 4,000 kilograms of milk per cow? Our three factories — clothing, fur, and felt footwear, each employing over a thousand people — annually produce fast-moving consumer goods with a total value of over 0,9 million rubles, but the region is left with only 0.9% of the products. For instance, the felt footwear factory produces 1.5 million pairs of felt boots per year, while workers in our district only have access to 4,000–5,000.' The factories have hardly been involved at all in district budgeting. R. Zaripov rightfully complained about the Center's practice of taking valuable industrial and agricultural products from the republic, leaving an amount much smaller than the country's average per capita. The republic ranked 50th of 73 administrative units within the Russian Federation in meat consumption, 42nd in milk consumption, 62nd in vegetable consumption, etc. According to the speaker, in order to increase living standards the republic needed true independence, both political and economic: 'Tataria needs the status of a sovereign state to make the best use of its rich potential.' R. Zaripov expressed a clear opinion on the republic's relations with the USSR: 'I think that no communist would say that Tataria should withdraw from the USSR. The Tatars and all peoples in the republic need different relations with the Russian Federation within the USSR: justice, equal rights, and mutual benefits' [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheet 72]. B. Zheleznov, Doctor of Legal Sciences and Associate Professor of the Department of State and International Law of the Kazan State University, attended the Plenary Session as an expert in national state construction. Since he was actively involved in developing the fundamental principles of sovereignty, we will provide a more detailed summary of his speech, in which he shed light on the most pressing issues of the relations between the Center and the republic:

'As a lawyer, I've spotted some issues that in my opinion require legal clarification ... The first is the issue of the relations between Tataria on the one hand, and the Union and the Russian Federation on the other hand. The situation is more or less clear when it comes to the Union. Since the Law of 26 April of this year (1990 — I.T.) "On the Delimitation of Powers between the Union of Soviet Socialist Republics and Constituent Entities of the Federation" was passed, ... we have been a constituent entity of the Union of Soviet Socialist Republics, in which role we can and should sign the Union Agreement. But in order for Tataria to sign it not as a union republic, but as a full member of the Union federation, we must proclaim our state sovereignty. I should say that the draft Union Agreement, which is currently under development, includes a provision to this effect. Assume that the Azerbaijan SSR signs the agreement, and, say, the Nagorno-Karabakh autonomous district will sign it within the Azerbaijan SSR, and so on. I think we should move away from this rule. We should become a sovereign, equal party to the Union Agreement by signing it directly and not through and within a union republic. This does not mean that I advocate withdrawing from the Russian Federation. We can and should stay within the Russian Federation, and sign the Union Agreement directly as a sovereign state. This is essential.

Second, the tangle of problems concerning the relations between Tataria and Russia, which will emerge when we proclaim sovereignty, appears even more challenging. I have emphasized the fact that, according to Comrade Logutov, and to some other comrades who gave it a passing mention, we would be constituent entities within two federations, as they understand it — the Union and Russia. I think this point of view is ... acceptable. However, there has hardly been a case in the history of mankind where the same state was a constituent entity of two federations. Furthermore, assuming a confrontation between the federation, a state that is a constituent of both will clearly find itself in a very difficult situ-

ation. I think it would be reasonable, both legally and logically, to presume that by signing the agreement with the USSR as a constituent entity within the union federation, Tataria would cease to be a constituent entity of the Russian Federation and thus would not have to sign the Federal Agreement with Russia. What should the relations between Tataria and Russia be like? I think we should enter into a series of relevant specific agreements and treaties with the Russian Republic, delegating those functions that are more reasonable to delegate to Russia as a sovereign state. I think this is how we should interpret our legal status after the proclamation of sovereignty.

So we sign the Union Agreement. What we sign with Russia is not a Federal Agreement but a series of agreements and treaties, under which we delegate some of our functions to it. We can partly stipulate it in our Constitution. However, adopting the Declaration of Sovereignty of Tataria is just the first step, although a crucial one. The next essential step to take right after we proclaim sovereignty is to answer the question: what rights will we transfer to the Russian Federation under agreements? In order to transfer these rights, we have to have them. As an autonomous republic, we do not have many of them now under our Constitution. Thus, I believe that the first and most important thing to do, regardless of any current laws we develop on a number of issues — we have to pass at least 20–30 new laws during the first period following the proclamation of our sovereignty — is to analyze the Constitution of Tataria. This would enable us to establish our rights as a sovereign state and determine which ones to transfer to Russia. Otherwise we will be left hanging until our superiors sort things out for us under the superior Constitution, so there will be no difference between us and an autonomy.'

Unlike the previous speakers, B. Zheleznov did not call for autonomy. However, he seemed to negate whatever he had said before in his conclusion. He warned Tataria against any confrontation with the Russian Federation, claiming that there was no reason

to feel apprehensive about the Declaration of Sovereignty of Russia. Without mentioning that the Declaration had been developed without due regard for the opinions and rights of the autonomous republic and was in complete contravention to the international laws of nations, Zheleznov said that the document should not 'worry you in any specific way, as it is essentially a notebook standard, meaning it can be filled with any content,' stipulating that all peoples in Russia have a right to free self-determination [SA HPD TR, Fund 15, Inventory 15, File 1299, Sheet 75].

Chairman of the Board of the TASSR Writers' Union R. Muhamadiev presented convincing arguments for sovereignty: 'A true social revolution is taking place in the country. That is, the lower classes do not want to live the old way, and the upper classes are unable to control them in any new way. The country is in pieces; it is suffering abnormal processes. On the one hand, we want to live in a state governed by the rule of law. On the other hand, we don't want to recognize laws. While fighting for democracy, we are unable to give up our imperialist ambitions and dictatorship. By voting for the Soviets, we intend to keep referring any issues to party committees. We make enterprise economically independent, but create dozens of new obstacles in their way, and so on, and so forth. These perversions are especially blatant in our second-grade republic, because the legal status of autonomy has been reduced to an absurdity and the concept of a republic has become non-functional.

At first glance, we have a Supreme Soviet and even a Constitution of our own. Yet, we are legally the same as ordinary territorial entities. At the 1st Congress of People's Deputies of the RSFSR, I voted optimistically for Russia's sovereignty and supremacy of RSFSR law. But I was soon shocked to see that most of the deputies were unaware of a seemingly simple truth apparently implied by the adopted declarations: autonomous republics want to lift their heads, and constituent entities within the federation must have the same rights as Russia ... So I have little hope that the Supreme Soviet of Russia will be able to ad-

dress the critical issues of autonomous entities in the near future. Please don't interpret my words as an expression of mistrust to either the RSFSR Supreme Soviet, of which I am a member of the Presidium, or its head B. Yeltsin. On the contrary, I have developed a much better attitude to our political leader following a series of meetings and discussions with him. The Russian parliament just has more important things to do. It is facing pressing issues on a Russia-wide scale. In this situation, the people and the Supreme Soviet of the autonomous republic must take care of their future in order keep up to date and not miss a historical opportunity. This is why I find it timely and appropriate to put the key issue of Tatarstan's sovereignty on the agenda of the 2nd Session of the republic's Supreme Soviet.

This requires full rapport among the representatives of all peoples within the republic and a consolidation of all sound democratic forces. What should unite us is our aspiration for national concord and civil peace. Excessive emotional pressure either by the Democratic Party of Russia, which seems to express its opinions through the newspaper *Vechernyaya Kazan*, or by the national intelligentsia, which has no daily periodical of its own. The only way to solve the national problem in favor of the peoples is sustainable democratization, which, in the national sphere, includes the recognition of the right of nations to self-determination.

We must be deeply aware that the root cause of inter-ethnic conflicts often lies in neglect of the national issue, the habit of ignoring the pressing needs of the people, who already have a distorted, flawed self-consciousness.

Today, any person of sound judgment must understand that proclaiming Tatarstan sovereign and raising its status to a union republic is no prejudice to anyone's rights and interest. On the contrary, it would finally harmonize inter-ethnic relations within the republic, since if the republic is deprived of rights, it means political and economic deprivation for each of us, for representatives of the peoples. The promise to substantially expand the rights of autonomous republics within the federation

framework has been proven to be nothing but an empty phrase.

The new status of Tatarstan should be enshrined in the Constitution (I fully agree with Comrade Zheleznov⁴, who has presented a wonderful speech today suggesting that he understands the most cherished expectations of the republic's people), which we must develop right now, guided by the principles of profound political democratization and, most importantly, decentralization of power. A sound economic policy determined independently by the republic is of vital importance. Tatarstan cannot remain a mere supplier of cheap raw materials for all-Union ministries and departments any more. Is it right that Tatneft, which has produced as much as 2,5 billion tons of oil, is currently unprofitable to the best of my knowledge? In addition, the south-east of the republic has been reduced to an environmental disaster, while other countries producing as much oil have been wallowing in money and enjoying modern civilization. Their forex savings ensure the future of the generations to come. What can we hand down to our descendants? Devastated mineral resources, crippled fields, clogged-up springs, and hundreds of unsolved problems?'

As a representative of the Board of the republic's Writers' Union, R. Muhamadiev had to address the issue of culture and education in the republic: 'I have to make a few remarks concerning the problems of renounced ideology, neglected culture, and the progress in implementing programs for and solutions to the national problem. It is bitter to admit that a healthy Tatar language is still rarely heard on public transport and at railway stations. The number of copies of Tatar books, especially quality children's books, is dwindling quarter by quarter for a lack of paper. Idel has had nothing to print its issues on for many months. The city's Tatar newspaper

⁴ There could, of course, be no complete agreement since B. Zheleznov fully supported the Declaration of Sovereignty of the Russian Federation, while R. Muhamadiyev expressed the concern that it did not take the rights of the autonomous republics into account.

Shähri Kazan still does not have even temporary registration in the capital of Tatarstan ... It was recently announced that three Tatar grammar schools were to be opened. The republic's Ministry of Education (Comrade Nizamov) and the Urban Department of Public Education (Comrade Prokhorov) have demonstrated their reluctance and inability to solve pressing problems once again. It turns out that two grammar schools will be opened at Tatar schools already closed down; only the nameplates will change. As for the third one, it still has no place of its own. The teaching staff is complete. There are many potential students and then some in Kazan. But they have no place to accept parents' applications — they are still in the safes of the Writers' Union. Please note there is only a month, even less, left before the beginning of the new school year.' The speaker's main target was Yu. Prokhorov, Head of the Urban Department of Public Education, who, according to R. Muhamadiev, had been shifting the blame on others in his articles on the decay of national education in the newspaper *Vechernyaya Kazan*.

Chairwoman of the Republican Women's Committee D. Davletshina supported the idea of proclaiming Tataria a sovereign state and transforming it into the Tatar Socialist Soviet Republic within Russia [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheet 83]. Unfortunately, D. Davletshina did not justify her opinion either at the Plenary Session or during preparation and adoption of the Declaration of State Sovereignty of the Tatar Republic. The position of TASSR Minister of Internal Affairs S. Kirillov was very clear: 'The proclamation of state sovereignty of our republic will be an act of national importance. I support the idea of sovereignty, provided that we stay with the Soviet Union' [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheet 88].

In recognition of the prospective consideration of the issue of state sovereignty for the Tatar ASSR at the 2nd Session of the Supreme Soviet of the Tatar ASSR, the Plenary Session passed the Resolution on State Sovereignty of the Tatar ASSR.

The Plenary Session noted that the restructuring of the Soviet society had provided real opportunities to expand the rights of the autonomous republics and improve their constitutional status, while further development of autonomous entities was consistent with Leninist political principles — the right of nations to self-determination and equal rights, cooperation and mutual assistance — and in accordance with the policy for renewing the union of sovereign republics adopted by the 28th CPSU Congress.

The Plenary Session supported the idea of proclaiming state sovereignty for the republic to promote further development of its statehood, political and economic independence, and improvement of its legal status as a Soviet socialist state. Sovereignty was declared to be consistent with the inherent interests of the representatives of all peoples in Tatarstan, to promote equal conditions for the preservation and development of their culture, languages, national customs and traditions, the enhancement of friendship and inter-ethnic unity, and improvement of the living standards of working people, and to open the door for a new constitution of the Tatar Republic, its participation in the development and signing the Union Agreement on an equal basis, entering into the Federal Agreement (with the RSFSR), and establishing mutually beneficial relations with other republics.

The Plenary Session considered it reasonable for communist people's deputies to be actively involved in preparing the republic's Declaration of State Sovereignty and to focus on implementing its provisions [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheet 95].

In conclusion, M. Shaimiev answered questions. He began by stating that many periodicals had published articles suggesting that the republic's population was interested in the issue of Tataria's sovereignty. M. Shaimiev answered the deputies' question referring to the statement made by Chairman of the Political Council of the Democratic Party of Russia N. Travkin that the Union center had imposed the idea of sovereignty on the Tatar population as follows: 'I think this is nothing less

than a provocation. I talked about this on national television. Now I have to make this perfectly clear at the Plenary Session. A people's deputy of the RSFSR and the USSR should not toss around words lightly without exploring the life of the republic's population. When he, as Chairman of the Committee for the Soviets of the Supreme Soviet of the Russian Federation, was in Kazan, he did not deign to inquire about the procedure for forming new Soviets, even in the capital of the Tatar ASSR. If he came to establish another branch of his party, that's fine. But he should have stated his true intention. I'm inclined to attribute certain articles by people's deputies to this fact. Of course, this something to which each human being, each citizen is entitled, but I believe that articles signed by a people's deputy, even if rather frivolous, do deserve public assessment' [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheet 99].

A note by President of the Tatar Public Center M. Mulyukov also suggested that there was wide discussion among intelligentsia of issues related to the republic's sovereignty: 'We have prepared a draft constitution with respect to the sovereignty proclamation.' M. Shaimiev replied: 'We have many alternative versions of the Declaration itself now. I believe that the draft constitution will also be adopted by the Constitutional Commission to be established at the next session. It will definitely consider all versions of the constitution and suggestions' [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheet 99].

It is no wonder that the issues of sovereignty of republics, as well as the Constitution, were most widely discussed in the Tatar national community. Along with the TCC, the Ittifaq Tatar party for national independence, formed by R. Muxametdinov and F. Bajramova in April 1990, was extremely active. Ittifaq's provocative statements concerning sovereignty and international relations caused certain apprehension in the non-Tatar public. For instance, M. Shaimiev was asked the following question: 'Please tell us your opinion of the Tatar Party for National Independence, its program, in particular, its requirement that Tatar Communists

should quit the CPSU and join Ittifaq.' His answer was: 'We have party pluralism. It is a constitutional provision, a law. I'm unaware of the party's program. I think such a Muslim party existed back in 1906. It was a Muslim party then. I believe it spread beyond the TASSR throughout Russia. The name might be derived from it or be a mere coincidence. Parties are allowed. I just wouldn't like the national party to become a nationalist one.'

M. Shaimiev noted that many newspaper articles contained inaccurate information. For instance, a newspaper claimed that the republic exported 40 million kilograms of meat, that is, 40,000 tons. 'We have never exported this much meat, and we never will,' M. Shaimiev said. He emphasized the need for reasonable, well-founded, and accurate statements in times of trouble: 'We cannot just complain about our wasted oil and other losses every time we speak. That's the wrong approach. In the system we lived in and the conditions under which all peoples lived in the Soviet Union, we would still have approximately what we actually have even if we'd been sitting on a mountain of pure gold. It's like this everywhere. We have republics sitting on gold, oil, good coal or other resources. We're still sitting on oil — we have about 7 to 11 billion tons of it. We have all have been living under these conditions. Conditions for a new life are now being created. Perestroika allows us to take a different approach to the issue and provides other opportunities. So I totally agree with the speakers at today's Plenary Session who complained about low public awareness of sovereignty ... The media still present directly opposing opinions in the form of speeches or articles. There are also a lot of articles of the type I've just described. However, I think that after today's discussion, when the republic's Communists adopted a resolution to express their opinion on the issue at their expanded Plenary Session, and now that the dedicated commissions of the republic's Supreme Soviet have almost completed the version of the Declaration to be published for public discussion, we must start expressing our opinion' [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheet 100].

M. Shaimiev also stressed the need for public clarification of the republic's draft Declaration of State Sovereignty involving people's deputies of the TASSR, USSR and RSFSR and the local Soviets. M. Shaimiev said it was crucial for the deputies to present the Declaration to the public, consult them and bring the electorate's opinion when they come for the session.

In summing up the speeches on sovereignty at the Plenary Session, M. Shaimiev said: 'Comrade Zheleznov and other participants in the Plenary Session provided a very accurate legal description of sovereignty. The only thing I would like to say is that we are currently an autonomous republic within a socialist state under the Constitution. But what kind of state do we have if we build a law-based society without sovereignty? We cannot do this without sovereignty. What is important today is to proclaim the sovereignty of the republic. By proclaiming sovereignty, we will delegate the appropriate rights to ourselves. These are the rights that allow us to participate in developing and signing the federal union agreement. We delegate the rights to ourselves. We thus enable ourselves to determine which of our rights to give to Russia and which to the Union. If the party and Soviet authorities of the autonomous republic, which has changed greatly over the years, and which has developed enormous all-round potential, had not raised the question, had not declared sovereignty when the country returned to renewal, transformation, and perhaps even redevelopment of the Union Agreement for the first time since the revolution, neither you, nor the republic's population, nor the public would understand us.'

The speaker who said we should start to "give away" these rights after we declare sovereignty was absolutely right. But how should we do it? We need to develop mechanisms, pass a number of laws and regulations and amend our Constitution. This will take time. But we cannot start until we have declared sovereignty. This is my answer to the question. We will discuss all issues concerning our relations with Russia and the Union. We do not

need to ask the simplified question of whether or not we are with Russia today. We are sovereign. We are determining our relations, but we cannot live without Russia — this is absolutely clear. Even if we want to, we can't. Why do we want something disadvantageous to us? I think it's clear' [SA HPD TR, Fund 15, Inventory 15, File 1899, Sheets 100–101].

It should be noted that the Plenary Session failed to clarify the issue of sovereignty completely. Participants in it also lacked a clear opinion on their relations with Russia. The speech by B. Zheleznov did not make the situation any less vague. The speaker was obviously mired in controversy. On the one hand, he admitted that sovereignty was necessary for Tatarstan to ensure its right to sign the Unity Agreement independently. On the other hand,

he maintained that the republic should remain within Russia. However, he claimed it was impossible for Tatarstan to be a constituent entity of two federations at the same time.

M. Shaimiev's assessment of B. Zheleznov's speech as 'legally clear' indicated that the republic's government was still not ready to state the republic's status in the Declaration. It was no coincidence that the draft Declaration prepared by the working party of the Presidium of the Supreme Soviet defined Tatarstan as a constituent entity of the Russian Federation.

Thus, the republic was not prepared to declare itself sovereign without specifying its legal standing at that time. Although the opinion was expressed, it was very difficult for it to become dominant. However, it eventually prevailed.

CHAPTER 2

The Future of the USSR and Tatarstan's Status in the New Political Situation

§ 1. Democratic Platform

Vladimir Lysenko

When Perestroika began, the democratic forces in the USSR advocated social liberalization of the social system and federalism. The Democratic Platform of the CPSU, centered on the Moscow City Party Club, was one of the political leaders of this process. The ideologist of the democratic movement in the USSR was Alexander Yakovlev, the most prominent figure of that period.

The mission of the Party Club was to push for the convening of an extraordinary CPSU Congress. The agenda of the congress would be carry out reforms within the Communist Party, as well as advocate a multi-party political system and democracy.

In November 1989, the Moscow Party Club organized a working meeting with representatives of similar groups from 16 cities and regions, at which a number of appeals were developed and a decision was made to hold a founding conference in January 1990 to establish the Democratic Platform within the CPSU. The Platform's objectives soon became widely known throughout the country, attracting reformers not just from the CPSU, but society in general.

The Democratic Platform in the CPSU requested the writer of these words to speak at the next CPSU Congress, which also happened to be the last such congress. My speech was essentially a call on the party to switch to social democracy and liberalism, but orthodox Communists refused to compromise, and thus a real opportunity to establish a mass democratic party was missed.

A democratic revolution swept across the Soviet Union at the turn of the 1980s–1990s.

In the spring of 1990, the position of President of the USSR, as the head of the executive branch of power, was introduced. When M. Gorbachev was elected to this office in March 1990, the center of an alternative Political Bureau and Central Committee of the CPSU was created. Elections of people's deputies of Russia and those to local Soviets took place against the backdrop of a CPSU crisis. The opposition democratic forces of such cities as Moscow, Leningrad, Gorky, Sverdlovsk, and others were acting in concord during these elections. However, the USSR was soon dissolved. Thanks to the democratic leadership of Russia, the dissolution of the Soviet Union was relatively peaceful, without repeating the Yugoslavian tragedy. A federal union of Russian regions replaced the USSR.

The first revolutionary stage of the 1990s was marked by the rule of B. Yeltsin. Under his rule, the Russian Federation was a decentralized, asymmetrical, and constitutionally agreed state. The elections brought changes, with new national and regional leaders coming onto the political stage. The Republic of Tatarstan became extremely active and independent. The example of Tatarstan is very instructive. Realizing that following a republic-wide independence referendum, any further steps in this direction were sure to result in a military conflict, the government of Tatarstan was able to in time check its ambitions, and entered into an agreement on essentially confederate relations with the federal government of the Russian Federation. The experience of Tatarstan was subsequently used by Georgia, Azerbaijan, Moldavia, and other regions.

Among the powerful constituent entities of the Federation (besides Tatarstan) also included such wealthy regions as Bahkortostan, Khanty-Mansi and Yamalo-Nenets Autonomous Okrugs, Krasnodar district, Belgorod, Lipetsk, Kemerovo oblasts, Krasnoyarsk district, and others. The Kremlin would not go as far as granting complete independence to the powerful republics (Tatarstan, Bashkortostan, and Yakutia). They became republics within the Russian Federation. At the same time, within the post-Soviet space, regions with lower status were formed — the Chechen Republic, North Ossetia, Abkhazia, Adzharia, and a series of republics, krais, and oblasts.

V. Putin came to power during the second stage (beginning of the 21st century), which was marked by a transition to a centralized, symmetrical, constitutional federation, characterized by increasing elements of unitarism and authoritarianism.

Federalism in Russia is very young. Over the preceding centuries, Russia had always been a country with a totalitarian regime. The democratic revolution of the 1980s–1990s led to changes in the social order.

The Russian Constitution is that of a super-presidential republic, dominated by the

president. When V. Putin came to power, gubernatorial elections were abolished, and the governors of regions were appointed instead. Uniform rigid vertical of power was restored in the country, which is fundamentally contrary to the principle of subsidiarity. The political status of the leaders of constituent entities within the Federation was reduced to that of regional politicians:

- inter-regional associations were, in fact, frozen;
- the process of formation of the 'party of power', that is, United Russia, was completed;
- the political party system was now similar to that of the Liberal Democratic Party of Japan.

Twenty years have passed since the democratic movement emerged in our country. The Union of Right Forces, the Yabloko and Republican Parties, as well as other democratic parties, lost the elections to the parliament in the late 20th century, which was a reflection and the culmination of a deep crisis. A new democratic platform, taking into account the contemporary situation, would become necessary, which was to be developed by analyzing the defeats and mistakes that had brought the movement to a deep crisis, rather than to its victories.

§ 2. 'Parade of Sovereignties': Causes and Impact on the Formation of Federal Relations in the Country

Luybov Boltenkova

To speak about the Russian Empire, later the USSR, and then the Russian Federation since December 1991, the 'parades of sovereignties' which occurred in the country (regardless of their form) have certain things in common, in spite of epochs in which they occurred. This process had multiple reasons and diverse triggers. However, the historical pattern, as an objective cause, and administrative mistakes and flaws in national policy, as well as deliberate actions (mostly by the political elite) as subjective causes, all had a constant character. The historical pattern pertains to the process of emergence, development, and formation of the

state, which regardless of its form, is referred to as Russia. Let us analyze its origins and Russia's full historical path to the present day. To put it succinctly, within the context of our theme, this path had 'gathered nations' under a single political enclosure, imposing common civilizational values on these peoples and their territories. The nature of the process was determined by the rate, depth, methods, and means by which the carrier of such civilizational values intruded into the lives of 'strangers'. The Russian people were the carriers of these values, until a certain historical moment, when they began to share their civilizational and

state creative work with other nations. This is to say, having created a state of their own, the Russians once again 'mastered' the territories that other nations had already 'claimed' before them, thus forming the state of Russia. In a manner of speaking, there was no such thing as a 'no man's' territory. By the time the Russians came to any specific territory, other peoples, with a history of their own, had already been living there for some time. Sometimes these had no state structure, but they always had a history. They became subordinated to the Russians, either voluntarily or forcefully. Where the merging was voluntary, the idea of sovereignty became less thought about as time went on. Coercive subordination of peoples led to dreams of sovereignty, which certain parts of society believed to be their mission in life. This mission would be passed on from generation to generation, with occasional attempts of fulfilling it, when an opportunity presented itself. Thus this mission was hidden within the historical process, and the 'opportunities' would be the mistakes made by the ruling elites.

It is a well-known fact that Ivan the Terrible conquered Kazan, the capital of today's Tatarstan, through military action in 1552. The local population, which became united as the Tatars during the process of Eastern conquests and rule (which also prevailed in Rus' for a long time), had an earlier centuries-long history, which is described in the previous volumes. The occupation of Kazan by the Russian tsar meant two things. Firstly, the Rus' turned into Russia. Secondly, the defeated party did not cease to think or dream of its sovereignty. The history after 1552 proved that it was not the entire society that was committed to preserving sovereignty⁵; otherwise such a tight historical amalgamation of the Tatar and Russian elements into the Russian statehood would have been impossible. However, we should not underestimate the appeal of sovereignty on the part of the Tatar elites. The historical memory

⁵ On the subject of sovereignty in the early and middle ages of history, it should be borne in mind that the theory of sovereignty did not yet exist at the time. We use this term instead of 'self-government,' 'independence.'

had been preserved for centuries as a form of historical common patterns. This memory was dormant⁶ until a historical opportunity presented itself in 1917–1918, pre-determined by the events of 1905–1914. We will not be looking at the whole range of conflicts, we will just say that the ruling elites also did make some mistakes in terms of national policy. Scholars have long presented the position of the autocratic government concerning the involvement of non-Russians in the state government, in particular, in the State Duma. 'The State Duma must be Russian, not only in spirit, but also in terms of its composition. Non-Russians can participate in its work, as long as they do not interfere when it comes to addressing purely Russian issues,' read the Manifest on the Dissolution of the State Duma dated 3 June 1907 [The laws of the Russian Empire, 1910, Vol. 27, No. 29241–29242].

Such demonstration of disrespect for the peoples of Russia implanted the seeds of distrust of the government. This, combined with a number of socio-economic reasons, brought about a struggle against the regime, causing those who remembered their previous statehood to fight for independence. By the time the Bolsheviks came to power, the Russian Empire had practically fallen apart. To gather the pieces together on a new political basis, a new principle slogan was introduced: the right of nations to self-determination all the way up to secession [Dekrety' Sovetskoj vlasti, 1917, pp. 39–41]. Many made use of this right – though this took many forms. The RSFSR, Ukrainian SSR, BSSR, and TSFSR formed the USSR. The Tatars, the Bashkirs, the Yakuts, and others established ASSRs within the RSFSR. History thus provided an opportunity (occasion) to partly achieve the historical goals of achieving sovereignty of the Tatars and others. Even those who had not aspired for sovereignty and had no good reasons to do so, took advantage of this opportunity. However, the strategy of

⁶ The word 'dremala' ('dozed', 'slumbered') is given in quotation marks because in actual fact memory manifested itself in poems, songs, folk tales, and other forms of art and culture—about past glory, achievements, independence.

the Bolsheviks only brought the nations together for a certain period. The further political and legal practice, in terms of national and state construction, was generally controversial. On the one hand, the very first Soviet Constitution of 2002 emphasized the freedom of nations, free union of national republics, and the freedom of union republics to withdraw from the USSR [Kukushkin, Chistyakov, 1987, pp. 283–313, pp. 315–365], while autonomous republics were regarded as states [Kositsin, 1968 a; pp. 519–555; Kositsin, 1968 b; pp. 137–148; Enikeev, 2002, et al.]. On the other hand, centralization and unitarization were a clear trend. Be that as it may, the autonomous republics, including the TASSR, preserved their trappings of states for years. Slogans, speeches, theory, and school and university textbooks nurtured the feelings of statehood. Those in the know were aware that where there was statehood, there was sovereignty.

This sovereignization trend gained momentum during Perestroika. It primarily had economic manifestations (transition of the republics to independent-accounting). 'Economic sovereignization' inevitably led to the need for real, not only on paper, political sovereignization. At first, it led to the development of a new Union Agreement (Georgia, Armenia, Azerbaijan, Uzbekistan, Tajikistan, Kirghizia, Turkmenistan, Moldavia, Latvia, Lithuania, Estonia, and Kazakhstan did not sign the 1922 agreement. The republics entered the USSR either under their Constitutions or under laws). The autonomous republics were also involved in the development of the Union Agreement (this fact drove a wedge between the two levels of government — all-Union and republic-wide). A trend of equalizing the rights of union and autonomous republics developed in accordance with party and governmental decisions. Both were to adopt declarations on state sovereignty to become founders of the new Union (parties to the new Union Agreement) [Abdulatipov, 1993 a, pp. 70–80; Supreme Soviet of the USSR, 1990, pp. 72–77, 140–143].

Thus, it is not in the masses of the population or at the level of autonomous republics where the idea of sovereignization emerged. The RS-

FSR Declaration of State Sovereignty was adopted on 9 June 1990, in accordance with the Union's resolution [Vedomosti s'ezda, 1990, No. 2, Article 22], Paragraph 9, which confirmed 'the need for a significant expansion of the rights of autonomous republics, autonomous regions, and autonomous districts, as well as krais and regions within the RSFSR'. It should be emphasized that the Declaration confirmed the decisions made at the Union level. In fact, it was preternatural for the RSFSR to aggravate the sovereignization of its constituent entities. Realizing how complicated and ambiguous the situation was, the RSFSR government ordered that the draft Federal Agreement should be worked on intensely — the signing of which could save Russia from falling apart 'in favor of' the new Union, the constituent entities of which many union republics were reluctant to become in 1991 (constituent entities of the old Union not under the Agreement, but under laws). The intention was apparently to replace them with new members of the Union—former ASSRs, which followed the RSFSR to adopt Declarations on State Sovereignty [Abdulatipov, 1993 b, pp. 20–57].

The adoption of sovereignty declarations was a manifestation of the 'parade of legal sovereignization'. It took place in accordance with decisions made by the all-Union authorities.

Analyzing the process historically, the trend towards such a semi-final solution had originated long ago, which we have proven above. The events of the summer-winter (August, December) of 1991 prevented the semi-final from developing into the expected final solution. Three Founding Republics of the USSR — Russia, Ukraine, and Belarus — exercised their right to freely withdraw from the USSR and proclaimed the Commonwealth of Independent States, constituent entities of which republics within the Russian Federation could not become, on 8 December 1991.

Republics within Russia, having been already sovereignized, the further policy could not be developed without taking this fact into consideration. The sovereignization of former ASSRs within Russia (when still part of the USSR) captured the minds of politicians and

parts of society in a number of areas, which now viewed the Federal Agreement as a step backwards on their path to independence. Tatarstan, which adopted its Declaration of State Sovereignty on 30 August 1990, was one such area. The Declaration provided a political and legal possibility for the republic's government to enter into separate agreements with the RSFSR government, as an independent party. Continuing the policy introduced by the Declaration, Tatarstan would not make a single step backwards, and refused to sign the Federal Agreement (31 March 1992). Tatarstan viewed this as a correct political move, within the acceptable political and legal framework. The Federation viewed this as a dangerous precedent, posing a threat to the country's integrity. Participants in this political process found the only correct way out of this situation — the Federation said, 'take as much sovereignty as you can implement', and Tatarstan agreed to sign a bilateral Agreement, which was compatible with the RF Constitution of 1993. Thus, the federal relations with Tatarstan took a constitutional form, although they were never free of certain 'twists' towards sovereignization of the republic in the context of the Russian Federation (Russian federalism), which were not a classical model but a result of a hard-fought historical struggle. However, it was not the 'twists' that determined the essence of the process, though they were, to some extent, positive, in terms of preserving and developing federalism, which was characteristic of and necessary for the Russian statehood. Most importantly, federalism, just as non-violence, just as democracy, has proven to be a powerful conflict settlement tool. All participants in the process had to realize the truth, which motivated mutual concessions to the extent of ensuring a politically and legally stable integrity (unity). This was secured in the relations with Tatarstan. At the same time, it ensured federalism in general for Russia. The rest was mere polishing of what was created during the transition period of instability. This includes the new Agreement with Tatarstan of 2007, which had been subjected to the necessary legal procedure in full, and the harmonization of the RF Constitution,

the constitution and laws of RF constituent entities, and many other measures in the sphere of federal relations. However, it is pregnant with controversies, just like any process.

The issue of sovereignty within a federal state is one such controversial issue. The 'parade of sovereignties' has ended at this stage of Russia's life. The future depends on the actions of the people, primarily politicians, in various situations. History suggests that two opposite trends — sovereignization and de-sovereignization — will persist in the nearest future. It is also clear that studies on government, law, and sovereignty, foster the hope for sovereignization in nations who live in federated and even in unitary states. However, the 'activator' of this in the Russian Federation is the very RF Constitution (Article 5 and others). Thus, amendments have to be introduced to the ambiguous, controversial regulations to ensure a sustainable development for the country. This would require once again an active involvement of Tatarstan in this process. What form will this take? It is up to the people of Tatarstan. The people should have access to correct information concerning the key aspects of both history and the contemporary situation.

The rapid globalization, large-scale computerization, the development of nanotechnologies, and other innovations, previously nearly inconceivable, will motivate us to rethink our ideas about the future. In terms of our subject, this means certain adjustments to our concept of sovereignty, taking into account the fact that nations and states had lived for centuries and millenniums without even having such a word as sovereignty. It was coined for specific political purposes. An the ideal of the free humans has been cherished since the beginning of time. The term 'sovereignty' can also be applied to it — primarily the sovereignty of the personality. All the rest are just derivatives of it. According to the great philosopher I. Kant, every person is the monarch unto to himself. History will only justify those innovations, in particular in terms of sovereignty, which are aimed at forming a 'sovereign' personality, which will live in awareness and take responsibility for whatever happens in the world.

§ 3. The Status of Tatarstan under the New Political Conditions

Indus Tagirov

It is rare in human history, when the people and their government join efforts in a common aspiration. Yet, this is what happened in Tatarstan in the 1990s. At first, the population gathered at political meetings to demand that the republic should be raised to the status of a Union republic, while the party elites kept dragging their feet for a long time. The situation did not change until the RSFSR Supreme Soviet adopted the Declaration of State Sovereignty of Russia on 12 June 1990. Following the example, which was the beginning of the so called 'parade of sovereignties', the republic's government embarked on a tough course to adopt a similar document.

In the middle of August 1990, the Chairman of the TASSR Supreme Soviet M. Shaimiev, who was at the same time the First Secretary of the Tatar Regional CPSU Committee, gathered representatives of non-governmental organizations in the Kazan Kremlin. They discussed the issue of adopting a Declaration. All participants in the meeting acknowledged that it had to be adopted. The only controversial issues were the date of the Session of the Supreme Soviet and the republic's subject status, that is, the republic's legal relations with the USSR and the RSFSR. M. Shaimiev proposed that the Session should be summoned in late August. The deputy group of the Supreme Soviet of Equal Rights and Justice disagreed, claiming that it would be impossible to consult the people during the summer holidays: 'The people will be traveling and enjoying their vacations. We need them to be back at their places. We cannot adopt an important document like the Declaration, without consulting the people.'

The deputies failed to agree on how the Declaration should present the legal relations between Tatarstan and the USSR and the RSFSR. Equal Rights and Justice deputies I. Grachyov and A. Shtanin insisted on proclaiming sovereignty within the RSFSR. Professor I. Tagirov expressed a different opinion.

In perfect conformity with the Declaration of Rights of the Working and Exploited People, as the only document to proclaim Russia to be a federation in January 1918 — a text which he was actually holding in his hands — he claimed that the Declaration should proclaim Tatarstan as fully sovereign. Subsequently in the process of its implementation, with due regard to the historical, geographic, geopolitical, economic, and other conditions, the self-limitation was to begin. That is, a number of powers were to be delegated to the Russian Federation under a bilateral Agreement.

No voting on the issues was necessary. It was important to engage the public in discussing the issues contained in the Declaration, and to initiate its preparation. A number of non-governmental organizations developed variants of the document.

The Presidium of the Supreme Soviet adopted the Resolution in the Draft Declaration of State Sovereignty of the Tatar Soviet Socialist Republic and formed a working group for its preparation, which included TASSR people's deputies, Regional Committee officials, members of the republic's government, and scholars (including the writer of these lines).

As a result, several variants of the Declaration were submitted. They were essentially different in two aspects — the relations between Tatarstan and Russia and those between the Tatar and Russian languages within the republic. The draft Declaration by Associate Professor of the Kazan University, deputy of the republic's Supreme Soviet A. Shtanin specified that the republic was to be treated as part of the Russian Federation, while that by the republic-wide CPSU Committee contained no mention of the republic's legal standing, stipulating that sovereignty, according to the Declaration of Rights of the Peoples of Russia (the document under which the Russian Federation was established in January 1918), was to be proclaimed to the full extent,

after which the republic was to determine its relations with the federation. The drafts by the TCC and a group of writers and economic executives, headed by writer and people's deputy if the republic R. Valeev, were quite similar to it.

Thus, the gap between the public and the government had narrowed materially by the time of the Session of the Supreme Soviet was to take place, to which mass media contributed greatly. People shared an awareness of the need for qualitative changes to be made to the republic's status, which would transform it into a state guided by the principle of the people's freedom of self-determination.

On 27 August 1990, the Second Session of the 12th Convocation of the TASSR Supreme Soviet opened. Thousands of people had gathered on the streets around the Supreme Soviet building by that moment. Deputies had to work their way to the building, guarded by dozens of militia men, through a crowd that was demanding that they should adopt the Declaration of State Sovereignty immediately. 241 deputies out of 249 attended the Session. The Chairman of the republic's Supreme Soviet M. Shaimiev proposed an agenda of 12 issues, the third one of which called for a discussion on the state sovereignty of the republic. However, following a discussion, the sovereignty issue was moved to number 5 on the agenda, which provoked general displeasure.

Emotions ran high in the meeting room of the Supreme Soviet, consistent with the mood of people on the streets and squares of Kazan and across the republic. One of the deputies suggested to the chairman and the people's deputies that they should resolve to remove the police guard line from the entrance to the Supreme Soviet, stating that 'we should not ... be hiding from our people' [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheet 35]. M. Shaimiev replied that this did not require a resolution by the Supreme Soviet, and the police guard line remained where it was.

After a recess, deputy F. Bayramova spoke, 'Comrades! You have asked us to make the people on the street calm down. We satisfied your request, and during the recess, I think

you saw the people walking away from the building hosting the Session of the Supreme Soviet. This does not mean, however, that there is no more tension there. As you know, we collected half a million signatures, which we handed over to the Presidium of the Supreme Soviet of Tataria. Tatar hunger strikers in Naberezhnye Chelny, Nizhnekamsk, Ufa, and many other places are now demanding a decisive and urgent decision on the republic's state status ... My suggestion is that we should address the issue of the state status of the Tatar ASSR immediately. Should the discussion of our proposal be delayed or suspended for any reasons, we shall not be held responsible for any tension and ethnic conflicts that may arise' [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheet 183 a] (Translated from Tatar.-I.T.).

The public demanded that the agenda should be amended because of the complicated situation in the republic, and that the issue of the republic's Declaration should be addressed immediately [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheet 184]. Even though the discussion of the procedure went on, it was clear the discussion of the issue of the Declaration could not be endlessly delayed. It was impossible to ignore the public opinion, which was expressed in numerous telegrams and written addresses by the population.

In the afternoon of the second day of the Session, F. Mukhametshin, on behalf of the Secretariat, informed the deputies that certain documents addressed to the Session had been received. By 3:00 p.m., 685 documents, including 137 letters, 207 addresses and declarations, and 612 documents dealing directly with sovereignty had been registered. Geographically, the correspondence represented 50 republics, regions, towns, and other localities. The documents also triggered a struggle among groups of deputies. Deputy R. Siraziyev expressed his dissatisfaction with the fact that only part of the telegrams was read out, while 612 telegrams on sovereignty meant that 'it is not bread what the people are concerned about', but the form that the sover-

eignty was to take: 'We have been postponing this issue. This can have totally unpredictable effects. So I think we should dedicate the next day ... to this issue' [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheet 294]. The next speaker, R. Galeev, supported Siraziyev and said the following words, which stirred the public: 'Comrades, we began by putting the cart before the horse. Without having adopted the Declaration of Sovereignty, we adopted many documents, which we will have to amend for another two weeks if we adopt the Declaration. This is why I agree with Deputy Siraziyev that we have to address the key issue tomorrow...' [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheet 295]. Some deputies at the Session had a different opinion. For instance, Deputy V. Kurylyov said, 'Today... some deputies are not ready to discuss sovereignty. Some deputies make statements, which are excessively categorical. We should address this issue in a very peaceful atmosphere. We have to adopt a document of extreme importance, which should be sound. Therefore, I have submitted a note suggesting that we address the general public in periodicals on behalf of our Session, and urge them to stop any meetings and hunger strikes ... Each of us realizes how important the issue to be discussed is' [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheet 296]. The session voted for addressing the population to appease it. The address was adopted on the following day.

Several deputies, in their speeches, rejected the suggestion that they should adjourn and go home on the pretext of harvest time in the villages, which originated from a letter to the Session. In response to such demands Deputy R. Yusupov said that the meetings were indicative of solidarity, in terms of the most burning issue that has been bothering the entire population of the republic, and required that all telegrams should be studied and reported to the Session immediately. He criticized the approach when someone tried to use a telegram to sabotage the session, while ignoring the rest of the telegrams [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheet 299].

Deputy A. Vasilyev suggested that all the telegrams should be hung up in the lobby so that all the deputies could read them. M. Shaimiev agreed.

Some deputies tried to prevent the draft Declaration, submitted by the Presidium of the Supreme Soviet, from being discussed by referring to the opinion of the workers' associations. For instance, deputy of the Spartakovskaya Street Electoral district of Kazan, V. Ivanov mentioned the meeting in the Moskovsky and Leninsky districts, at which statements had been allegedly made that 'if it (the draft Declaration. – I.T.) is adopted, it will have unpredictable effects'.

Following a long discussion of the Law on the Status of a People's Deputy, the Session addressed the issue of the republic's state sovereignty. Live radio coverage was provided.

The discussion began with a speech by Chairman of the Supreme Soviet M. Shaimiev. He emphasized that the suggested promotion of the republic's status was well-grounded and stressed the need of adopting the Declaration of State Sovereignty of Tatarstan. M. Shaimiev suggested that a dedicated commission should be established to develop the document.

The next speaker was Chairman of the Permanent Commission for National Issues and Culture R. Yusupov. Justifying the adoption of the Declaration, he said, in particular, 'A sensible and honest person, whether Tatar or not, cannot but notice the fact that the still-existent unitary, totalitarian hierarchic governmental system cannot ensure truly equal rights for all nations and provide the necessary conditions for the development of their cultures and languages. Autonomous units are the most disadvantaged, as compared to Union republics.' Yusupov remarked that Tatarstan was nearly deprived of national Tatar schools, had no Academies of Science or Art Film Studios of its own, and had only one book publishing house. Possessing enormous natural wealth and a great industrial potential, Tatarstan was not entitled to control its own property. The scope of the Tatar language had been narrowed, which posed a serious threat to the na-

tional everyday customs and traditions. At the same time, R. Yusupov warned the deputies against adopting any document under which Tatarstan would be a constituent entity both within the USSR and within the Russian Federation. R. Yusupov summed up his speech thus: 'Being a people's deputy, whose primary responsibility is to ensure and enhance good-neighborliness among representatives of different ethnic groups in our republic, I consider it my duty to bring this to the notice to all of my colleagues in the parliament, ... to carefully consider each factor before voting for the Declaration, and take high responsibility for the future of 7.5 million Tatars. I encourage you to vote for true sovereignty for the people of Tatarstan' [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheets 412-416].

M. Shaimiev then read out the document, presented by a group of deputies, proposing that, taking into account how extremely difficult it would be to agree on the issue of sovereignty, they should begin by discussing the concept and key principles of the Declaration. Anyone willing to speak could do so. However, the deputies rejected the idea and decided on listening to the authors of alternative versions of the Declaration.

Deputy R. Siraziyev presented the draft Declaration prepared under the leadership of Deputy R. Valeev. It stipulated that the republic must not be a constituent entity of the two federations, which the speaker compared to sitting on two chairs at the same time. The document lay stress on the supremacy, independence, fullness, and indivisibility of the republic's power within its territory, its independence and equality in external relations, and the international legal standing of the republic [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheet 419].

Deputy of the RSFSR Supreme Soviet N. Makhiyanov spoke in support of the speeches of R. Yusupov and R. Siraziyev. He named the following three factors as being crucial to the sovereignty issue: the close connection between Tatarstan and the spiritual and physical life of Russia; the political situation in the Soviet Union; and the national factor. N. Makhi-

yanov attached the greatest importance to the national factor. He said that, by recognizing the right of nations to self-determination, the Bolsheviks once earned good political capital, so this was 'the right time that we generously collect on the political bills issued in the past'. The speaker maintained that the USSR had long ceased to exist, while the RSFSR was undergoing decay. However, a new structure to incorporate the emerging sovereign republics had not formed yet. Given the context, to withdraw from the RSFSR and enter the USSR, for Tatarstan would be no more than a transition 'from one prison cell to another'. Therefore, N. Makhiyanov suggested the following procedure: 'Recognize Tatarstan to be a sovereign republic. The Declaration of State Sovereignty of the Tatar Republic should not specify the Federation to which our republic belongs to. Stage Two: to determine the powers that Tatarstan is ready to delegate to the assumed Center, which will unite with the sovereign republic in the future. Stage Three: to specify our requirements to the new Union Agreement immediately.' The speaker mentioned emphatically that the acquisition of sovereignty by Tatarstan was not destructive but constructive, while the approach suggested would foster the creation of a conceptually new commonwealth of national state entities. Besides this, I. Makhiyanov suggested that they call the republic just a Soviet and remove the word Socialist as a step towards de-ideologization and democratization of society. He warned the deputies against any national, religious, and political discrimination against citizens and suggested that the international agreement on human rights be ratified and the republic's Constitution developed. [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheets 423-424]. It should be noted that a large part of the deputies and, accordingly, the population came to believe it would be unreasonable to define the republic as a socialist one. It took them long, however, to give up the reference to the Soviet regime. Yet, no special discussions on these issues took place at the Session.

The burning one was that of the relations between Russia and Tatarstan in those days.

The Deputies continued to refer to their electorate. For instance, Deputy Kosulin said that deputies of the Zelenodolsk City Council had instructed him to read their address, adopted at the session of the City Council before he went to the Session of the Supreme Soviet. The address mentioned that the adoption of sovereignty declarations by union republics undermined the very existence of the Union of Soviet Socialist Republics. The document focused on proving that the adoption of the republic's Declaration of State Sovereignty was unlawful: 'Proclaiming Tataria a sovereign state would render ineffective union-wide and republic-wide (RSFSR) laws. The Supreme Soviet of Tataria would have to urgently develop and adopt a legislative package, regulating the republic's political and economic system as well as civil, criminal, and labor regulations of its own. A sovereign state needs to have a legislative body that would function continuously, which we do not have at present ... We would like you to focus your efforts on issues of primary importance. Nothing prevents the republic from obtaining as much independence as we can manage. Nothing prevents us from taking measures to create favorable conditions for restoring the Tatar national culture, the distinctive identity of the Tatar nation. Since the issue of state structure is crucial to the people's life, the City Council of People's Deputies of Zelenodolsk believes that any issues concerning the determination of the republic's status, and the adoption of the Declaration on Sovereignty is too early to discuss, and should be addressed by the peoples through a referendum on the series of all the above bills. We encourage you to demonstrate governmental wisdom and civil responsibility.' However, the deputy himself appeared to have a somewhat different opinion, for his final words were as follows: 'Comrades people's deputies! I would like to ask you again to refrain from adopting a very strict attitude about what you have just heard. This might be an alternative, and I feel that the most important message of this address is how much it pains the people's deputies when it comes to the problems that affect us all. We

are not the only ones who care about the future of our republic and the citizens living in the territory of our Tataria.' [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheets 425-428]. The speech by M. Mulyukov was long awaited. On the one hand, it was representative of the sentiments of a large part of the Tatar population. On the other hand, it served as a reference point for many in the meeting chamber. Therefore, the audience listened attentively. 'It has been three years since the Tatar Public Center, taking into account the public sentiment in our republic, that of the Tatars and other ethnic groups in our republic, and that of the Tatar population residing outside of our republic, which we know to be over 5 million people, came to recognize that the status of our republic had to be changed,' the speaker began. An inference followed — the framework of autonomous status has become too rigid for the republic, so it has to be raised, which is impossible within the Russian Federation. He then presented the key provisions of the draft Declaration of 36 paragraphs submitted by the Tatar Public Center. The audience was satisfied to hear him say the words: '...I can confirm the fact that the rights of all citizens living in our republic are ensured. The reason I say this, is the false allegation that the Tatar Public Center has raised the question of sovereignty for the republic, in order to force the Russian population out of our republic. Comrades, let me say it again: This is not true! You cannot find this in any document by the Tatar Public Center or in the Declaration.' This seemed a good omen that the speaker was advocating for civil accord and suggested that 30 August should be established as the Day of the Sovereign Tatarstan. [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheets 428-431].

For his part, Deputy P. Ionov spoke in recognition of every nation's right to unimpeded implementation of its national, political, and social interests, eliminating the possibility that any one nation will dominate another. He was also opposed to the idea of transferring part of the republic's powers to the USSR or the RSFSR, since sovereignty

should mean complete independence of the republic. Thus, P. Ionov suggested that the mention of Tataria's legal standing should be excluded from the draft Declaration. The deputy summed up by suggesting that they adopt the Declaration as a political document, proclaiming sovereignty, and elaborate further legal details in the future. The deputy's speech, which in fact was a call for the deputies to compromise, elicited applause from the approving audience.

Deputy R. Khafizov, speaking on behalf of the Permanent Commission of the Supreme Soviet for Legislation, Lawfulness, Justice, and Privileges, largely summed up what the preceding deputies had said. He reported that the Commission had held five meetings on the issue of sovereignty and submitted a proposal to the Ministry of Justice that it should present a draft Declaration of State Sovereignty. The draft Declaration by the Ministry of Justice was approved at the Commission's meeting with nine affirmative and seven dissenting votes. Many issues turned out to be controversial, and so the Commission had been unable to agree on all of them. An important finding of the commission was that the provision stating 'the sovereign Tatar Republic is a constituent entity of two federations — the USSR and the RSFSR' was legally invalid. The audience applauded at hearing this.

R. Khafizov laid special emphasis on the provisions of the draft Declaration that ensured supremacy of the republic's law and established agreement-based relations with Russia and the Union of Soviet Socialist Republics. R. Khafizov then shed light on issues of property and suggested that the respective article of the Declaration should read as follows: 'The land, its minerals and other natural resources, within the territory of the Tatar ASSR, are property of the nation, which has the exclusive rights to own, use, and dispose of them. It is within the exclusive competence of the Tatar SSR to determine the legal status of all types of property. The Tatar SSR is entitled to a share of the all-Union property, depending on the contribution made by the people of the Tatar ASSR.'

R. Khafizov was unable to keep from announcing his electorate's opinion concerning the sovereignty of the republic, which indicated that the deputies were to take into account a number of diverse, sometimes controversial factors to solve the problem of the republic's independence. An address signed by 400 electors contained the following demand: 'We, the workers and officials, representatives of the artistic intelligentsia, Tatars and Russians, Chuvashes and Hebrews, the people of Tataria, elected you deputies as we believed your election platforms and promises. Nearly each deputy platform contained slogans about transforming Tataria into a union republic. We demand that you fulfil your election promises and announce the Declaration of State Sovereignty of the Tatar Soviet Socialist Republic at the Second Session of the TASSR Supreme Soviet. We demand that you vote on sovereignty by roll-call. The people have to know which of the deputies should be recalled for acting contrary to their election promises' [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheets 433-437]. Another document, signed by 1,500 people, reads as follows: 'The deputy group of Derbyshki Microdistrict hereby informs you of the following suggestions summarizing the opinion of the microdistrict community on Tataria's sovereignty before the opening TASS Supreme Soviet Session: The Sovereignty Declaration proposed by the Presidium of the TASSR Supreme Soviet should not be adopted. The Session should restrict itself to a short statement concerning the issue ... Voting ... should be by roll-call. Decisions to change the republic's status or those on the official language or any other issues should only be made by means of a referendum. Thus, a Referendum Law has to be developed first. Workers' associations of Derbyshki insist that Tataria should be only within the rejuvenated Russia. The republic's Supreme Soviet should implement the Resolution of the 1st Congress of RSFSR People's Deputies prohibiting council chairmen, at any level, to occupy another position at the same time.' In conclusion, the deputy suggested that two draft documents should be voted on when the Declaration had

been adopted — resolutions concerning the government's objectives resulting from the adoption of the Declaration of State Sovereignty and the Address by the Supreme Soviet of the Tatar Republic to the Supreme Soviets of the USSR and the RSFSR, suggesting immediate negotiations with the sovereign Tatar Republic on entering into mutually beneficial agreements. These words elicited applause from participants of the meeting.

Deputy B. Vorobyov maintained that the general public had to be engaged in the discussion of essential documents. He referred to Articles 1 and 2 of the republic's Constitution, according to which all power in the Tatar ASSR belonged to the people. B. Vorobyov informed the deputies that he had carried out a survey of, and held personal meetings with electors, and thus found out that 83.4% of the electors were demanding a referendum. Arguing against a statement that a referendum would destabilize the situation in the republic, the deputy noted: '...our people have enough awareness ... and are mature enough to decide on certain essential legal enactments on their own. And what question is more important than the issue of sovereignty and the republic's self-determination, for both the Tatar people and the Russian people, as well as for all citizens of the republic? Thus, supporting the idea of sovereignty for the republic, I find it reasonable to develop a package of laws, and first of all, one on the referendum, as soon as the republic is proclaimed sovereign. Any further issues concerning the republic's agreement relations with the Union or with Russia should be addressed by means of a referendum. The language issue and other key laws should also be dealt with via a referendum. Otherwise our election promises will remain unfulfilled' [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheets 439-440].

B. Vorobyov shed light on such issues as the country's management of economic crisis, the need for well thought-out agreement relations with the RSFSR and the USSR. The deputy inferred that the republic's Declaration of Sovereignty had to be adopted, while the issue of whether it should belong to one

or another federation should be addressed by means of a referendum.

Deputy M. Shaykhiev presented an impressive speech in Tatar. He said that proclaiming the republic as sovereign would meet the expectations of the Tatar people and the multi-ethnic people of Tatarstan. Rejecting the idea of belonging to two federations at the same time, he maintained that the republic should be included in the USSR directly.

Deputy V. Mikhaylov tried to describe the mood of the electorate in Sovetsky district, Kazan, referring to a number of letters and addresses. The sampling method that he used to analyze the documents relied on the data of the Kazan Planning and Design Office (KPDO), where he himself worked, and the opinions of the deputies of Sovetsky district. The masses largely demanded sovereignty through a referendum. According to V. Mikhaylov, any discussion on withdrawal from Russia would be premature for two reasons. Firstly, the RSFSR Supreme Soviet had a detailed crisis management program for Russia, while Tataria had not developed one for economic development and transition to a market economy. Secondly, the Declaration of Sovereignty suggested was inconsistent with the international Declaration of Human Rights and did not stipulate any further democratization of life. Therefore, V. Mikhaylov suggested that they should develop packages to secure the economic and national development of the TASSR and specify its agreement relations with Russia before they returned back to the sovereignty issue.

The deputy then read out an address from the session of the Sovetsky District Council of People's Deputies to the Session of the republic's Supreme Soviet, which rejected the idea of Tatarstan withdrawing from Russia and expressed apprehension that the Russian, Mari, Mordvin, and Ukrainian people of the republic could suffer oppression. V. Mikhaylov concluded his speech with the following words, which elicited applause from the audience: 'We have to live on this land, and none of us can go away. We have to ensure equal rights for everyone, so that we can move move for-

ward' [CA TR SC, Fund R–3610, Inventory 1, File 1915, Sheets 441–443].

Deputy F. Safiullin began his speech by stating that the country had not yet ensured equal rights for different nations, though he believed the economic crisis to be the root cause of all misfortunes. He said, clearly meaning V. Mikhaylov, but without naming names: 'Some people say we do not have a program of our own. Why make up a program, if we have the one by Yeltsin? We will adopt it in its entirety, 100%, or even 110%, if it is suitable for us. However, the reason we will adopt it is not because we have been ordered to, but because we, of our own accord, find it reasonable, which is what sovereignty is all about.' F. Safiullin claimed the idea of entering two federations at the same time would be pointless. Speaking about the referendum, he said that many people had the wrong idea of it as a form of legal appropriateness. However, some part of the population was sure to be dissatisfied with the outcome, and thus a referendum could not appease the entire society. Assuming that Tatars did not constitute an absolute majority of the republic's population, for which reason the referendum would possibly fail to achieve the desired results, the deputy said: 'This is about the people's national dignity, the revival of the national culture. We cannot proclaim sovereignty without the Tatar people willing to do so... However, this does not entitle the Tatar people from holding a Tatar-only referendum, excluding other ethnic groups. We have no right to do this either...'

F. Safiullin encouraged the deputies against naming the republic Soviet and Socialist, suggesting that it should be named simply as the Republic of Tatarstan. The audience was pleased to hear him say these words: 'We must have special relations with Russia, and we need a special way to formalise such special relations, after we adopt the Declaration. We are inside Russia. Even if we wanted to, we would be unable to separate ourselves from Russia. I think no one wants this, anyways.' F. Safiullin supported the idea of V. Mikhaylov that they should adopt a decree on

government, which was to become 'the first cry of the newborn sovereign Tatar Republic.' One party has to demonstrate common sense, while the other party should make concessions. In my opinion, the Tatar people cannot be sovereign without reasonable concessions from the Russian people. However, the Tatar people will never repay such concession with evil, but with double, triple friendship. I encourage all citizens of the republic—Tatars, Chuvashes, Russians—to demonstrate such common sense,' the deputy concluded to great applause [CA TR SC, Fund R–3610, Inventory 1, File 1915, Sheets 445–450].

Deputy T. Shigabiyev agreed with F. Safiullin that sovereignty was the primary responsibility to the people, which was necessary to ensure efficient control over the republic; to implement this, did not mean to break up with Russia: 'We are situated in the heart of Russia. Where can we go? Is there any way for us to become separate? We are not raising questions of establishing armed forces, customs borders, monetary circulation, or a Ministry of Foreign Affairs of our own.' In conclusion, he said: 'Nearly all of us have stated in our election programmes that we wanted sovereignty for our republic, and that we would struggle for independence. I know almost 90% of the people sitting here to have specified this in their programmes. Therefore, let us stay true to our word. I think we should vote by roll-call so that our electors can know which deputy has fulfilled his/her promise to the electorate.' He maintained that the deputies should support the draft Declaration submitted by R. Siraziyev and R. Khafizov [CA TR SC, Fund R–3610, Inventory 1, File 1915, Sheets 450–453].

RSFSR People's deputy M. Rokitsky happened to act as a mediator between the leaders of the Session and the deputy group 'Soglasiye.' His position consisted in refraining from such extreme measures as demanding that the republic should be renamed in to the Kazan oblast or voicing the slogan of 'Tataria for Tatars.' He expressed support of M. Shaimiev's centrist views: 'Therefore, I cannot—I think those who know me well

might say this is for the first time—I cannot but celebrate the carefully worded and circumspect speech made by Mintimer Shaimiev.' M. Rokitsky maintained that the session should adopt the Declaration without specifying the republic's legal standing: 'We should not close off our paths. We had better wait.' The speaker recommended that the deputies should explain to their electors that state sovereignty meant national sovereignty, which was not a form of oppression but a way towards a prosperous republic. [CA TR SC, Fund R-3610, Inventory 1, File 1915, Sheets 453-454]. M. Rokitsky's mediation was not limited to this.

On 30 August 1990 M. Shaimiev opened the Session's morning meeting by advocating for a carefully worded and constructive discussion to make sure that a vast majority agreed on a specific decision. [CA TR SC, Fund R-3610, Inventory 1, File 1916, Sheet 1].

Deputy R. Fayzullin was the first to have the floor, and emphasising the importance of the issue in question, he urged his colleagues to achieve a consensus. He classified those who felt apprehensive about sovereignty into three categories. In his opinion, the first group feared that this could lead Tatarstan to separate from Russia. However, the poet believed that complete separation of Tatarstan to be out of question: 'What we are talking about is sovereignty, equal rights. Can you think of any person who has no family or other connections to the other nationalities? We cannot live without each other—so let us be realistic. We cannot have a full life without Russia' [CA TR SC, Fund R-3610, Inventory 1, File 1916, Sheet 3]. The second group's apprehension was that sovereignty could cause prejudice to the interests of other ethnic groups. R. Fayzullin claimed this anxiety to be groundless. The third group included people who believed that it was party bosses 'preparing a new structure for themselves' who needed sovereignty. The speaker claimed the apprehension to be obviously unsound, because it was up to the people and deputies to decide who would govern the republic. R. Fayzullin categorically rejected the principle of belonging to two federations,

saying that 'you cannot wear two yokes on one and the same neck.'

To the contrary, A. Kolesnik, who spoke after R. Fayzullin, supported the idea of entering the two federations, claiming that 80% of his electorate were opposed to any withdrawal from Russia.

Deputy V. Fakhrutdinov said that it was the individual and not the state who should be the highest priority in a sovereign republic. He viewed the people as the legitimate source of power. 'I believe,' he said, 'that we must not strive for prosperity by oppressing others, ... it is sure to bring about interethnic conflicts.' Like many other deputies, V. Fakhrutdinov suggested adopting the Declaration without specifying the republic's legal standing, so that they could negotiate with Russia or the USSR after the people expressed their support.

R. Minnullin highlighted the necessity of promoting the republic to a normal civilised state, so that it could be an entity under international law, with representatives in other states and republics of the USSR. 'We will only accept complete independence, complete freedom. Pardon me, sovereignty is not like meat or sugar, which you can receive serving by serving,' he said. R. Minnullin encouraged the deputies to overcome their doubts and lack of self-confidence and concluded: 'This is the beginning of a new period in history. A new epoch, new challenges, and new problems, which we will have to solve on our own, lie ahead' [CA TR SC, Fund R-3610, Inventory 1, File 1916, Sheet 19].

The author of one of the versions of the Declaration, A. Shtanin, who spoke next, maintained that state sovereignty was necessary as was national-state self-determination for every nation. Just like V. Fakhrutdinov, he noted that the individual was the top priority.

General Director of Nizhnekamskneftekhim Production Association G. Sakhapov presented figures indicative of the republic's deprivation of economic rights. He reported that 80% of the industrial goods produced by the republic to be attributable to Soviet Union-controlled plants, those controlled by Russia were producing 18% of the total, and

only 1.5% were attributable to locally controlled plants. G. Sakhapov mentioned that Nizhnekamskneftekhim had been exporting its products under a license issued by superior authorities, claiming that Moscow received nearly all the profit. Emphasising the fact that the situation was even worse for other plants, such as Nizhnekamskshina, he said: 'What is clear is that we cannot put up with this anymore, and there is no going back for us. Which path can lead us to the wide expanses, to normal economic, and everyday human activities if not abundance? I mean independent plants, diverse forms of incorporation, a market economy, sovereignty, and territorial self-government. Our well-being is in our hands. It is not within another entity, not in subordination to someone that we can achieve this, but with someone, with sovereign republics, under agreements with equal, decent business partners.' G. Sakhapov laid special emphasis on international relations and citizenship, drawing the deputies' attention to the fact that people were concerned about compulsory learning of the Tatar language. The deputy said in conclusion: 'I will vote for a sovereignty that clearly specifies: 'The Tatar ASSR guarantees the right to comprehensive economic, social, and cultural development, freedom of conscience and worship, as well as other human rights and freedoms to all citizens within its territory, regardless of their ethnic status.' We, the people's deputies, must swear this like an oath. There's no other correct solution' [CA TR SC, Fund R-3610, Inventory 1, File 1916, Sheet 29].

Deputy of the Saby Electoral District F. Bayramova stressed the fact that she was representing the Tatar Public Centre and rejected the idea of holding a referendum, claiming that she had sworn to fight for Tatarstan's sovereignty: 'It has been many thousands of years since God has granted us this language, land, and faith. We have not conquered anyone here, and we have no such intention. What we are struggling for is our rights. We are struggling to preserve our nation. To put issues of statehood and language to a referendum, would be a gross violation of international law. We

will have to look to the international public for protection...' [CA TR SC, Fund R-3610, Inventory 1, File 1916, Sheet 28]. F. Bayramova attached special importance to the issues of rural communities and national culture. In conclusion, she touched upon the relations between the Tatars and the Russians, which, to quote the speaker, 'have grown to be so intimately related that certain generations of them began to develop as if they were Siamese twins, ... the Russians and we have grown into each other.' She estimated such a fusion of the two peoples as a preternatural notion, suggesting an imminent national tragedy, which would result in the loss of the 'two major cultures, the beautiful features of the two nations.' 'The people who have neither ethnic roots nor perceptions are neither Tatar nor Russian ... This is the result of our fusing of the two nations,' she said [CA TR SC, Fund R-3610, Inventory 1, File 1916, Sheet 31].

Deputy from Yelabuga A. Vladimirov handed into the Session's Presidium an address signed by 3185 citizens of the town and outlined its contents. Supporting the idea of sovereignty, the citizens demanded that the republic should not withdraw from Russia, which they expected to cause a decay in the country's and the republic's economy towards collapse, and probably have unpredictable effects on international relations. Deputy N. Valeev disagreed with him. He said that the public was inclined to establish the republic's relations with the USSR and the RSFSR, as well as with other republics, under agreements, including under a Union Agreement.

In the meanwhile, the square around the building that hosted the Session remained crowded. People shouted demands that the Declaration should be adopted immediately. However, such sentiment might obstruct the work of the Supreme Soviet, so chairman of the Session M. Shaimiev reminded the deputies of the recently adopted special address to electors and reported a demonstration that had taken place on Svobody Square, contrary to the agreement. 'I think the Session should be suspended unless deputies representing the

Tatar Public Centre go (to the square – *I. T.*) and agree (with the demonstrators. – *I. T.*) that it should stop. I suggest that they should make the agreement an hour before the next recess,' he said. The words elicited applause from the audience, and the Session returned to meaningful activities.

RSFSR People's deputy, chairman of the Writers' Union of the republic, R. Muhamadiev presented a speech that was both polemical and constructive. A small extract from it is presented below: 'A number of deputies, in particular Comrades Kosulin and Vorobyov, advocated vociferously for a referendum. No one has held an event like this in the country before. Russia, Turkmenia, Moldavia, and Lithuania—every republic that had proclaimed sovereignty—addressed this issue in the parliamentary way. What bothers many people about sovereignty is how our republic would survive. They warn us: What if Russia shuts off its oil pipelines, its canals, railroads and closes its airspace? Comrades democrats, I answer you this: the democratic law-governed Russia cannot undertake such steps. I think the time of force and dictatorial coercion is history. Chairman of the Supreme Soviet, Yeltsin, stated many times that RSFSR—and I am quoting here—'will give every encouragement to any form of Tataria's sovereignty and protect it against any encroachment.' By proclaiming itself sovereign, Tatarstan would not be triggering any confrontation with anyone, especially not with Russia. Suffice it to say, the number of Tatars living within the RSFSR, outside of Tatarstan, is over 3 million, while 1.5 million Russians live in Tatarstan. This apprehension is thus groundless. All people are sure to need amity and mutual understanding like all people need air. Independent republics with equal rights will enjoy previously unthought-of opportunities for economic, cultural, and political cooperation. To the contrary, agreements between sovereign republics will bring them closer together as a prerequisite for sound, truly democratic relations between nations ... As for the Declaration establishing Tatarstan as a constituent entity of the two federations, I agree with all the rest—that this

is absurd. As for band-aid solutions and suggestions that we should wait, I would like to remind the honourable people's deputies that, first of all, we have been waiting for 70 years, or even more. Second, sovereignty either exists or does not exist. There is no in-between. Anyway, it is high time we realised that we can only leap over an abyss once. We will not be making a second attempt. I truly believe in the good judgment and political expertise of those representing the people of Tatarstan.'

Impressed by these words, deputy P. Ionov called for all the deputies, including those representing the RSFSR, to refrain from one-sided comments on the position of each individual deputy. This also applied to R. Muhamadiev's speech because not only the Democratic Platform but also the Tatar Public Centre had been making one-sided, probably ill-considered, statements.

Emphasising his role as a lawyer and a scholar, and not a politician, B. Zheleznov tried to justify the relations between Tatarstan and Russia, as well as the USSR, thus supporting the idea of double membership. He maintained that within the RSFSR Tatarstan should be a constituent entity of the federation, while entering the USSR as a confederal member, following the USSR's gradual transformation into a confederation. 'We cannot think of ourselves but as an entity within Russia, not only for historical, economic reasons but because of our geopolitical situation in the heart of Russia,' he said [CA TR SC, Fund R-3610, Inventory 1, File 1916, Sheets 50–51].

Deputy from Aznakayevo R. Shakurov harshly criticised the draft Declaration by the working group of the Supreme Soviet and, essentially, the approach of B. Zheleznov: 'The two related principles underlying the Leninist national policy are self-determination and equality of nations. In terms of these principles the draft Declaration presented by the working party ... is amorphous and inconsistent. I would call it a Declaration of Pseudo-Sovereignty. As the saying goes, history repeats itself, first as tragedy, second as farce. Back in the 1920s the Tatar people fell victim to the first deception—that is, the autonomisation

process. 'Double subordination' and 'double status' followed in the 1990s. A new deception is being devised against all nations in our republic.' R. Shakurov also criticised A. Kolesnik's suggestion that they should not hurry to proclaim the republic as sovereign, claiming that with such an approach they would have to wait another 500 years. He finished his speech by saying: 'The sovereignty of Tatarstan is in no contradiction to that of Russia. In fact, it reinforces it.'

Writer R. Valeev expressed concern about a potential ethnic rift in the deputy corps and said that he was going to speak in Russian so that his 'Russian brothers and Russia-speaking Tatars' could understand him because 'if they do not understand me today, when I speak Russian, I am afraid we will never understand each other ... And if the Russian part of the Session blocks the acceptance of the Declaration of State Independence, I fear of becoming totally disappointed with them.' His speech was an attempt to persuade the deputies that the Declaration, as a document ensuring the republic's political economic sovereignty, and thus righting the wrongs done to the Tatar people, had to be adopted. R. Valeev rejected the idea of proclaiming Tatarstan a constituent entity of the two federations as well as that of putting the republic's status to a referendum vote. He stated that he would vote for complete sovereignty without any such terms as 'constituent entity' and 'as part of,' advocating for roll-call voting—the results of which should appear in print—and maintaining that a governmental programme should be developed urgently, in the context of sovereignty and market relations. The deputy set an ultimatum to the government. It was to resign if it proved unable to manage the crisis and form an independent economic policy of its own.

It should be noted that the government was actively involved in the discussion of issues related to political and economic sovereignty. First of all, the head of the government M. Sabirov delivered a number of speeches at the Session. Vice chairman of the Council of Ministers F. Khamidullin presented a report on the government's economic programme.

Here is an excerpt from his speech: 'Among 73 regions and autonomous republics within the Russian Federation, Tataria ranks 9th by population size, 9th by industrial output, 8th by agricultural output, 7th by the amount of investments absorbed annually ... The republic ranks 1st among Russia's autonomous republics by industrial output per capita, which is much higher than the Russian average. The republic's agricultural output is also above the Russian average.' Having mentioned Tataria's being one of the leading economic regions, he shed light on the weak spots of the national economy. He laid emphasis on the republic's social backwardness, as compared to other regions of Russia. For instance, it ranked 91st by hospital beds per capita and 37th by housing per capita. F. Khamidullin maintained that the governmental policy, in the context of sovereignty, would consist in the maximum use of the republic's economic potential in favour of its multi-ethnic people. [CA TR SC, Fund R-3610, Inventory 1, File 1916, Sheets 73-75].

Deputy of the USSR Supreme Soviet Yu. Krasilnikov was among advocates for sovereignty, especially in terms of the economy. The deputies were pleased to hear him say the words: 'What is the percentage of property owned by Tataria out of its total industrial capacity? One and a half percent! No colony has ever owned such a miserly amount of capital ... I advocate for complete sovereignty, meaning that Soviet Tatarstan should be recognised as an entity under international law.'

Secretary of the city of Kazan CPSU Committee G. Zertsalov and deputy M. Kazakov spoke on interethnic relations. While the former referred primarily to the opinion of the most active members of the party, the latter expressed the point of view of the average Communist. M. Kazakov's speech vividly represented the sentiment, deep emotional upheaval, and hesitation of the Russian deputies: 'The most important thing for the Russian-speaking part of the population is a guarantee of equal rights for all nations inhabiting our republic. However, I have been somehow hesitant about the decision taken since I ar-

rived in Kazan, since the very first days of our session ... because these meetings, manifestations, slogans, posters, emotions, undisguised nationalism, and chauvinism, and people demanding that deputies should listen to nobody but them—all caused a very negative response in me. I even told some of my colleagues that we would probably have to vote for some proposals but not for sovereignty. Having given it a second thought and having realised that the meetings had been arranged by a small group of people, whom I believe to be present among the people's deputies, however, I decided to rise above the emotions, above the opinions of those who arranged the meetings, and vote for our republic to become sovereign ... The only way to achieve success was to make sure that all social forces united for the sake of the people—that is, according to the 28th CPSU Congress, that the principles of partnership, tolerance, mutual respect, and civility are implemented [CA TR SC, Fund R-3610, Inventory 1, File 1916, Sheets 78-79].

Deputy A. Ziatdinov from Nizhnekamsk was able to dispel the doubts. His speech was representative of the sentiments of the Tatar part of the deputy corps. It was important for Russian-speaking deputies to hear a reputable person say that Tatarstan had no intention to break up with Russia but merely demanded equal rights. 'Russia needs Tatarstan,' the deputy said, 'as much as we need Russia. Ukraine, Moldavia, Estonia, Chuvashia, Uzbekistan, Yakutia ... Sakhalin, need Tatarstan as much as we need them ... We want to establish mutually beneficial economic relations in the world. Love cannot be forced ... They say we have scarce natural resources. Does Finland, Israel, not to speak of Japan, have more of them? We should rely predominantly on work, mental work, physical work, creative work ... The republic has an enormous intellectual, scientific, engineering, and technical potential, a wealth of human resources in industry and in agriculture. Our only task is to get them interested in working at full capacity.' A. Ziatdinov criticised the opinion that the republic had no economic concepts to justify state sovereignty and reminded the audience that back

in the middle of 1989 a group of economists from the republic cooperated with experts from six autonomous republics to work out the key principles of economic self-reliance, which Moscow rejected as being applicable to union republics only. The deputy concluded his speech with the following words: 'I think there will be new executors for new tasks when we have the new opportunities. We do have economists and lawyers. Some of our colleagues have been trumpeting the danger of self-sufficiency. Indeed, our situation was like renting a room in someone's apartment. When the time came to receive an apartment of our own, they began to voice doubts as to whether we can live on our own. However, it is hard to prove that we can live on our own, before we have received an apartment' [CA TR SC, Fund R-3610, Inventory 1, File 1916, Sheets 80-82].

The speech by chairman of the Council of People's Deputies of Naberezhnye Chelny Yu. Petrushin, who announced the following instructions made by the deputies of the City Council, showed that the deputies were not inclined to vote for full-fledged sovereignty: '1. Accept the Declaration of State Sovereignty of the Tatar Soviet Republic and transform it into the Soviet Republic of Tatarstan. 2. Exclude the provision that Tatarstan shall be a constituent entity of the rejuvenated Federation of Russia and the Union from the draft Declaration. 3. Proclaim Tatar and Russian as the official languages on the territory of Tatarstan. 4. Take into account remarks and suggestions presented at the session of the City Council when discussing the Declaration.' The deputy suggested adopting a brief declaration specifying two official languages and ensuring protection for all three nations in the republic and citizenship [CA TR SC, Fund R-3610, Inventory 1, File 1916, Sheets 84-87].

In spite of expressing complete support for Petrushin, deputy S. Titov proposed that the republic's name should contain the definition 'Soviet Socialist.'

Like many other deputies, deputy of the Kazan Council M. Shamsutdinov and deputy

of the Supreme Soviet A. Akhatov proposed renaming the TASSR as the Republic of Tatarstan. In contrast to a number of deputies, First Secretary of the Kirov District CPSU Committee R. Sabitov stated that the people were not prepared to fathom sovereignty in terms of its legal and economic content and referred to the decision by the Kirov District Council of People's Deputies dated 28 August to suggest putting the issue to a referendum.

Expressing the opinion against double membership and holding a referendum, Attorney of Kirov district, Kazan, R. Vagizov appealed to Sabitov: 'As long as we are now 'ceremonially' burying the Stalinist policy of ranking nations by grades, as long as all deputies agree that double membership in federations is absurd, politically and legally, we have to dot our i's concerning the referendum. My arguments against holding a referendum are as follows: when issues related to the natural right of nations to self-determination, to establishing a national centre are put to referendum, the referendum should not take place. The second argument is that by proclaiming sovereignty, we ratify international laws on the right of nations to self-determination ... A precedent was established in the USSR, when the Supreme Soviets of the USSR, Ukraine, etc., were proclaimed sovereign. Why should Tataria set up an obscure experiment and establish the precedent of putting the issue to referendum? This is all the more true because a referendum could aggravate the situation in the republic. It would be quite a challenge to force the Jeanie of interethnic tension back into the bottle' [CA TR SC, Fund R-3610, Inventory 1, File 1916, Sheet 107].

The discussion of this issue turned out to be so long that the last speakers, Yu. Reshetov, R. Galeev, T. Abdullin, and I. Mustafin, had to deliver their speeches, though constructive, to a very noisy audience.

Chairman M. Shaimiev proposed establishing a conciliatory commission to finalise the Declaration, with the following membership: S. Abuladze, M. Agliullin, Yu. Alaev, N. Bagramov, N. Vladimirov, I. Grachyov, B. Zheleznov, Ye. Kabysh, Kh. Kiyamov, Yu.

Krasilnikov, V. Lipuzhina, V. Likhachyov, A. Lozovoy, R. Minnullin, M. Mulyukov, G. Murtazin, R. Muhamadiev, V. Nefedov, A. Perov, Yu. Petrushin, M. Sirayev, R. Sirazyev, I. Tagirov, L. Terentyev, F. Khamidullin, R. Khafizov, A. Shtanin, R. Yusupov, and Sh. Yagudin. F. Safiullin was accepted as another member of the commission, as suggested by deputy A. Vasilyev. It thus consisted of 30 members.

Since M. Shaimiev participated in the commission's work as its chairman, R. Shamgunov presided at the evening meeting of the Session.

The commission was able to agree on the republic's name without any long discussion. The phrase 'Soviet Socialist' was removed, yielding simply the Republic of Tatarstan.

However, M. Shaimiev was absent at that time. When he entered the room, hosting the commission, to see the shortened name in the draft Declaration on the table, he insisted on a double name for the republic. 'We shall adopt the Declaration and go home. However, I will have to take the document to Moscow tomorrow,' he said, adding that the right time had not come to remove the two words.

Membership in federations and official languages turned out to be the most widely discussed issues for the commission. At last, its members struck a compromise. They resolved that the Declaration should not specify Tatarstan's belonging to any federation and should establish Tatar and Russian as official languages.

When the commission's mission was complete, M. Shaimiev proceeded to preside at the meeting and said: 'The deputies' general mood suggests that they should expect the document to embody the full range of opinions, aspirations, doubts, and hopes ... I think they have been able to create a document as the work of a collective mind. As instructed by the commission, deputy Safiullin will speak on the draft Declaration of Sovereignty of the Tatar ASSR.'

We should quote some lines from F. Safiullin's speech: '...Fruitful work and mutual understanding have resolved the increasing

controversy ... in our parliament. Now that the tension has subsided, I am happy to be approaching an agreement. Whatever ice of mutual suspicion of scheming that remained has melted. We have come to understand that we have no bone to pick with each other, that we share a common history and a common future ... Speaking on behalf of the conciliatory commission, I can report 30 people to have almost unanimously, without any dispute on the key issues, arrived at a reasonable and wholesome conclusion, by taking the best from every draft declaration, which I am happy to present to you on behalf of the commission. I acknowledge that it might be not free of minor hiccups, not completely flawless. Comrades, this is a compromise, this is a concord. This is what is appropriate among people, among nations, among age groups in a normal society. Before I read it out, I appeal to you to support the document, memorialising the key ideas it has to be consistent with' [CA TR SC, Fund R-3610, Inventory 1, File 1916, Sheets 134-135]. The audience proceeded to discuss the draft Declaration read out by F. Safiullin, largely focusing on the provisions that dealt with property and supremacy of the republic's laws. They agreed to accept the draft without any amendments. The proposal that the 'the Tatar nation' should be omitted from the phrase 'realisation of the inalienable right of the Tatar nation, the entire people of the republic to self-determination' was rejected by the chairman of the Commission for Lawfulness, Privileges, and Deputy Ethnic R. Khafizov, who claimed the Tatar nation, as a party to state legal relations, was entitled to self-determination [CA TR SC, Fund R-3610, Inventory 1, File 1916, Sheet 140]. On 30 August at 10:00 p.m. the final version of the document was adopted. Chairman of the Counting Commission R. Altynbaev reported that 241 out of 242 deputies had voted for approval, Yu. Bakhteev being the only abstaining deputy. The report elicited a storm of applause and hurrahs.

The adoption of the Declaration was a major shift in the history of Tatarstan as it paved the way to dull-fledged statehood, and at the

same time beginning Russia's transformation to a true federation. However, the entire revolutionary implementation still lay ahead.

The success of any revolution depends on the extent to which the society breaks with the old laws and adopts new legal rules. Tatarstan was also to adopt new legal rules regulating its relations with Russia and the rest of the world.

The republic was on its way to developing into a sovereign state. This made the Decree of 27 May 1920 on the establishment of the Tatar Republic no less important. In fact, it increased its significance because the people, who lost their statehood back in 1552, had finally acquired autonomy. Had the republic's territory not been outlined back then, the sovereignty of the 1990s would not have been possible. The Tatar ASSR became a stepping stone to true statehood.

Being an important document, the Declaration of State Sovereignty did not change the republic's status as such. Superior structures continued to determine the republic's rights. It could be dissolved or, at best, transformed into a regular administrative unit at any time. Nobody would be able to dispute the validity of such a decision. When adopted, the Declaration had to be formalised. That could be done in two ways. The first way was to put the issue to a republic-wide referendum as an indisputable expression of the will of the multi-ethnic nation of Tatarstan. The second way was to enter into a bilateral agreement, to the effect that the Russian Federation recognised the Declaration.

At first, such a bilateral agreement seemed a more beneficial solution. If the leadership of Tatarstan felt that they could convince the Russian government that they had been acting in accordance with the law, the republic would be able to establish agreement relations with the Russian Federation according to the formula of a 'revolution without quarreling with the public prosecutor.'

However, the Russian government appeared to be very hesitant about this question. Moscow seemed reluctant to recognise the Declaration of State Sovereignty of Tatarstan.

In those days the republic's Supreme Soviet received the draft Federal Agreement, which it considered and discussed at the session of 6–8 February 1991. The deputies rejected it as a document inconsistent with the republic's Declaration of State Sovereignty and issued a special resolution to order the delegation of Tatarstan to prepare a draft Agreement between the TSSR and the Russian Federation.

On 20 February 1991 M. Shaimiev sent a letter to this effect to chairman of the RSFSR Supreme Soviet B. Yeltsin. At the same time, the Presidium of the TASSR Supreme Soviet sent a telegram to the 3rd Extraordinary Congress of RSFSR People's Deputies. It informed the Congress that the 3rd Session of the Supreme Soviet of the Republic of Tatarstan had resolved to sign the Union Agreement independently and further enter into the Agreement with the RSFSR according to the Declaration of State Sovereignty of the TASSR and the USSR Law On Delimitation of Powers between the Union of Soviet Socialist Republics and Constituent Entities of the Federation dated 26 April 1990.

However, it turned out to be impossible to address the issue of the procedure for signing the Union Agreement at the Congress of People's Deputies of Russia. The republic faced obvious difficulties connected with the forthcoming presidential elections in Russia and Tatarstan. Should Tatarstan participate in the RSFSR presidential elections?

In May 1991 the republic's Supreme Soviet resolved to elect presidents of Tatarstan and Russia. A large part of the population was confused to learn about the decision, while some protested.

F. Bayramova stated on 14 May 1991: 'I am going on a hunger strike in protest against the blatant violation of the Declaration of State Sovereignty of the TSSR and the ill-considered resolution by the republic's Supreme Soviet to hold RSFSR presidential elections on the territory of Tatarstan dated 13 May 1991.' The deputy's hunger strike involved 16 more people and lasted until 27 May. A number of meetings against the Supreme Soviet's

resolution to hold elections of the Russian president took place.

On 27 May the protesting crowd carried F. Bayramova into the meeting room of the Supreme Soviet on a chair. On the same day the Supreme Soviet made a decision to the effect that the republic was not officially involved in the elections of the Russian president. At the same time, the document stipulated that an opportunity to vote must be ensured for anybody willing to participate in the elections of the president of the Russian Federation.

74% of the electors voted for M. Shaimiev during the elections for the president of Tatarstan. The elections for the president of Russia did not take place on the territory of Tatarstan because the requirement that over a half of all electors must come to polls was not met.

It was thus necessary to clarify the relations between Russia and Tatarstan as well as issues related to the Union Agreement. M. Shaimiev negotiated directly with B. Yeltsin.

On 12 August 1991 the two delegations sat down to talk in Moscow. The negotiations were very tough and ended on 14 August, when a joint protocol was adopted.

The talks began with welcoming speeches by heads of delegations. Then the floor was given to vice head of Tatarstan's delegation professor I. Tagirov. He started by reminding the audience that the Tatar people had cherished the historical memory of their statehood, without ever ceasing to struggle for its restoration. He noted that Tatarstan had never become part of Russia of its own accord. Special attention was paid to the proceedings of the 3rd All-Russia Congress of Soviets of January 1918, most importantly to the Declaration of Rights of the Working and Exploited People, which recognised the peoples of Russia to be sovereign and proclaimed Russia as a federation. The speaker attached special importance to the final provision of the document, which read, 'the 3rd All-Russia Congress of Soviets shall restrict itself to laying the foundation of the federation of Soviet Republics of Russia, delegating the power to decide at a plenipotentiary Soviet congress if and how they want

to be involved in the federal government and other federal Soviet authorities, to the workers and peasants of each nation' [Vasilyev, Gureev, 1972, pp. 9–11].

S. Shakhray expressed his appreciation of the long-awaited reference to the federation's founding documents. S. Stankevich made an attempt to reject the documents as 'Bolshevik tricks' but failed to provide any argument except for 'Russia's millennium-long history.' He found himself at a loss of words when he was reminded that the millennium-long history originated in Kievan Rus, after which the speaker suggested that they should continue their negotiations in Kiev. Vice minister of Foreign Affairs F. Shelov-Koverdyaev tried to support S. Stankevich.

On the second day of negotiations G. Burbulis admitted that Tatarstan's position was rightful. However, he was not prepared to enter his words into the minutes written following the negotiations. He also recalled that the elections of the president of Russia had been undermined in Tatarstan, which, he believed, aggravated the situation.

Quite naturally, the negotiations were centred, apart from the proceedings of the 3rd All-Russia Congress of Soviets, on the Declaration of State Sovereignty of Tatarstan. G. Burbulis noted that he would prefer the delegation of Tatarstan to have brought the results of a referendum on the republic's status. The Tatarstani party retorted that there was no need to hold a referendum since a voluntary merging with Russia had not taken place—not a single Tatar had signed a document on such a merging during the 438 years since Kazan was occupied, which was the exact reason why the Declaration did not specify Tatarstan to be a part of Russia. On hearing this, S. Shakhray left his table and began to talk as if

on behalf of the Tatar party, while walking to and fro along the table. 'So, we are not going to withdraw from Russia; yet we are not going to be a part of it either.' He received this reply: 'Sergey Mikhaylovich, you have demonstrated a very deep understanding of our position.' A long time had passed before the question of withdrawing from Russia was raised again.

The Russian delegation then proposed that they should start from understanding the positions of each party. It was crucial for the Russian government to make sure that the negotiations were confidential to prevent other union republics from finding out about them, since there existed the 'Nine Plus One' document, which was binding on the Russian party. They were also apprehensive lest other autonomous republics follow Tatarstan's example. The parties agreed to ensure confidentiality. There was no reason to fear lest Tatarstan would inspire other republics. First, the other republics had admitted that they had entered Russia on a voluntary basis. Second, their declarations of state sovereignty specified that they were parts of Russia.

A protocol was adopted following the negotiations.

On 16 August the delegation of Tatarstan returned to Kazan hoping that the path to signing the Union Agreement, as an independent party, was now open to Tatarstan. A few days were left before the potential start date of its signing.

The two delegations had agreed that B. Yeltsin would meet with M. Shaimiev in the Russian White House on 19 August 1991 at 4:00 p.m. to finalise this issue.

However, this meeting never took place. Events took a different turn. Three days in August 1991 had changed the situation in the country dramatically.

§ 4. Conspiracy Against the Country and the People

Indus Tagirov

A conspiracy against the country and the people is what one might call the events of 18–21 August 1991. It was a conspiracy of the state authorities. It was against the people, not against each other, that they schemed. The events were associated with the State Committee for the State of Emergency (commonly known as the GKChP). To this day, many myths and speculations surround these events. As a result, the real events were pushed into the background, and coming to the foreground were the secondary ones, having no fundamentally significant facts.

Indeed, what were these events like? Why did they coincide with the date when the new Union Agreement was to be signed? The only thing that is beyond any doubt is that they were connected to it, and were in fact a resumption of the struggle over the document. At the same time, they were marked by the confrontation between the USSR president, Secretary General of the CPSU Central Committee, M. Gorbachev and the RSFSR president B. Yeltsin. Gorbachev wanted as many rights as possible for the prospective Union and, accordingly, himself, while Yeltsin tried to arrange the Union as a confederation, the republics, primarily Russia and, accordingly, the Russian president, having the real power. Yeltsin maintained that the Union should have not more than two or three powers, while the rest should be delegated to the local authorities.

Who was right is a question of history. Today, beyond any reasonable doubt, it is clear that they both were largely to blame for the confrontation. The fact that Yeltsin's ideas prevailed does not mean he was right. Anyway, we should analyse the events chronologically.

Formally, the escalation of the conflict between Gorbachev and Yeltsin was triggered by the new draft Union Agreement, as it appeared in newspapers. Yeltsin's associates believed that it left many rights in the Union's

centre, while Gorbachev's supporters, in particular the chairman of the Supreme Soviet of the USSR A. Lukyanov, viewed it as a deviation from the results from the All-Russia Referendum, at which the people voted for preserving the USSR. Tatarstan's position was very definite. Most of the republic's electors said yes to the Union.

Articles appeared in the newspapers criticising a number of provisions of the draft agreement, expressing apprehension, lest the Commonwealth of Independent States, which was to replace the USSR, be the beginning of the end of the Union State. President of Tatarstan M. Shaimiev also expressed concern about the integrity of the state, in relation to the document [Sovetskaya Tataria, 1991, 21 August]. It should be noted that he did much work to make sure that a document acceptable for all the republics was developed. He insisted, in particular when negotiating with the leaders of republics, on creating such a document in Novo-Ogaryovo, that all the republics, including the autonomous ones, should be equal parties to the agreement. At the same time, most of the union republic leaders were opposed to the idea, which was reflected in the so called '9+1 Declaration' (developed by nine union republics plus Gorbachev himself). The leaders of the autonomous republics in general said nothing.

An episode connected with the former mayor of Moscow Gavriil Popov is quite remarkable. One day in June 1991, when president of Russia B. Yeltsin was in America, he suddenly came to the US Embassy to meet with the US Ambassador in the USSR Jack Matlock. After several minutes of a trivial talk, meant for eavesdropping equipment, Popov took a sheet of paper and wrote: 'I have to hand a message to Boris Yeltsin immediately. A coup is possible. He should return to Moscow immediately.' Continuing to talk nonchalantly, the ambassador took the pen to write just one word: 'Who?' In response, Popov wrote three names:

Prime minister Valentin Pavlov, KGB chairman Vladimir Kryuchkov, and minister of Defence Dmitry Yazov. 'I will report to Washington immediately,' Matlock wrote in response [GKCHP, 2007, p. 27]. When reporting the conspiracy against Gorbachev to Washington, he added Lukyanov to the three names, suggesting that the ambassador had other sources of information. Thus, the Russian government was already aware of the conspiracy in June. Gorbachev was aware of it, too. Kryuchkov had informed him of it in secret notes. US Ambassador Matlock warned him about the conspiracy on the instructions of Bush.

It seems like both Yeltsin with his team and Gorbachev with his soon-to-be GKChP members knew everything. When in Foros, Gorbachev—to quote A. Chernyayev, who was assisting him with an article he was working on—'was able to foresee the possible scenarios, including the 'emergency' one.'

On 4 August Gorbachev went for a Crimea vacation to his dacha in Foros. Was it right for him to leave his place in those days, important as they were for the country's future? Before flying off to the Crimea, M. Gorbachev said at a meeting of the USSR Council of Ministers on 3 August: 'Bear in your mind that we have to take tough measures. We will go to great lengths and even introduce a state of emergency if necessary.' When already on the airfield, shortly before he departed, he said to V. Kryuchkov, who had come to see him off: 'Keep your eyes open. Anything can happen. If there is a direct threat, we will have to intervene.' He also warned vice president G. Yanayev: 'Gennady, you are going to be in control here. Take firm measures, if necessary, but do not spill blood' [Questions of history, 2003, No. 7, p. 78] The transcript record of the meeting contains his words: 'I am taking a vacation tomorrow, with your consent, to avoid interfering with your work.' The then chairman of the Supreme Soviet of the USSR I. Laptev later wrote about the events of those days: 'I think the August vacation of the USSR president will always remain one of the greatest mysteries in the last days of Soviet history. It is no exaggeration to say that Gorbachev

had taken enormous effort to make sure that the Union Agreement would be signed. He had already been informed about some action being prepared. Why did Gorbachev not heed the warning? What made him ignore it? He is the only one who knows.' Editor of *Obshchaya Gazeta* Egor Yakovlev did ask him. The question was: 'What made you leave the place so hastily, without even saying goodbye to president Bush Senior, who was staying in Moscow?' Gorbachev answered: 'I have to admit self-critically that I demonstrated overconfidence in that situation' [GKCHP, 2007, pp. 31, 36].

He left in order not to interfere in the work of his associates. And they worked. On his instructions, on 6 August minister of Defence Marshall D. Yazov met with the KGB head V. Kryuchkov at a secret KGB facility on the outskirts of Moscow. O. Baklanov and V. Boldin attended the meeting.

D. Yazov entrusted Commander of the USSR ABT P. Grachyov to develop the technical details of the emergency measures. It took them 7 days, until August 14, to get ready to introduce a state of emergency in the country. V. Kryuchkov, D. Yazov, Baklanov, O. Shenin, G. Yanayev, V. Boldin, and V. Pavlov were calling Gorbachev every day to keep him informed about the situation in the country and in Moscow.

Newspapers reported that an agreement between Kazakhstan and Russia had been ratified in Almaty; B. Yeltsin and N. Nazarbayev adopted two joint declarations of guarantees for the Commonwealth of Independent States. Periodicals also reported on protocols on cooperation and coordination between the Ministries of Foreign Affairs of Russia and Kazakhstan to have been signed. The heads of both states evaluated the condition of their relations. In particular, N. Nazarbayev said: 'We appeared to be unanimous during the referendum on the Union Agreement, so we currently want it to be signed as soon as possible.' The leaders stated at a press conference that the meeting in Almaty had 'laid a reliable foundation of the new Union' [Izvestiya, 19 August 1991].

On 18 August a delegation consisting of Baklanov, Shenin, Boldin, and Commander-in-Chief of the Army V. Varennikov arrived in Foros on a personal plane to inform Gorbachev that a state of emergency could possibly be introduced. Baklanov said that 'the Union Agreement would not be signed' and that Yeltsin would 'be arrested on his way.' He suggested that Gorbachev should 'stay here while we do the dirty job for you.' In conclusion, Gorbachev said: 'Damn you. Do what you want. But report my opinion!' [GKCHP, 2007, p. 36].

Early in the morning of 19 August the radio and television reported that a state of emergency had been imposed on the country, the State Committee for the State of Emergency (SCSE) had been established, and the presidential powers had been transferred, 'due to certain health problems' of M. Gorbachev to vice president G. Yanayev. The newly established committee included O. Baklanov (first vice chairman of the USSR Council of Defence), V. Kryuchkov (head of the USSR Committee for State Security), V. Pavlov (USSR prime minister), B. Pugo (USSR minister of Internal Affairs), D. Yazov (USSR minister of Defence), G. Yanayev (vice president of the USSR), V. Starodubtsev, and A. Tizyakov. The SCSE adopted the Declaration by the Soviet Government, the Address to the Soviet People, and Resolution No. 1. The documents emphasised the government's adherence to the ideas of socialism and perestroika. The 'Address' claimed that perestroika was at a deadlock, the authorities had lost public trust at all levels, as well as control over the country. The following phrase in the 'Address' became the keynote of all the documents: 'A mortal danger has come to loom large over our great Motherland!' Though the documents presented an adequate account of the situation, they contained certain dubious provisions. For instance, the following speculation seems rather vague: 'Instead of ensuring the safety and well-being of each citizen and the whole society, people in power tend to use it for no benefit of the population, as a means of unscrupulous self-affirmation.' Were these se-

nior governmental officials not the ones who had the power? Whom did they mean? It is not clear.

The Russian government's response to the situation was decisive. It was manifested in the decrees by the RSFSR president and the joint address to the population by president B. Yeltsin, president of the Cabinet of Ministers I. Silayev, and vice chairman of the Supreme Soviet R. Khasbulatov, which appeared on the same day. The documents claimed the SCSE to be an unconstitutional organisation of criminals. According to the decrees, the all-Union authorities on the territory of the RSFSR, including the KGB, the Ministry of Internal Affairs, and the Public Prosecution Office, were subordinated to the government of the Russian Federation until the USSR Congress of Soviets. Local authorities were instructed to refrain from executing any orders and decrees by the SCSE. A demand was put forth that M. Gorbachev should be enabled to speak to the people. Chairman of the Supreme Soviet of the USSR A. Lukyanov was demanded to call an extraordinary Congress of People's Deputies of the Soviet Union. The documents encouraged citizens to go on an indefinite strike until the requirements had been met.

On 19 August RSFSR president B. Yeltsin called a press conference, at which he delivered a speech stating that the removal of USSR president M. Gorbachev was an anti-constitutional act [Труд, 20 August 1991]. A political meeting of many thousands of people was held near the Russian White House for over three hours on the same day. Speaking at this meeting, B. Yeltsin called for calm and warned the military against taking any provocative actions.

It was easy to foresee the further course of development of the events. The conspirators were totally confused. Clueless and scared, Gorbachev removed himself from the matter, having infected the conspirators with his doubts, hesitation, and lack of confidence. Vice president G. Yanayev's hands were shaking at a press conference with journalists. Indecision and fear spread in the military, in the agencies such as the MIA and the KGB,

among everyone involved in the conspiracy. The conspiracy was doomed. The former Advisor to the US president, well-known Sovietologist Z. Brzezinski commented on the poor organisation of the conspiracy: 'If the putschists had made careful preparations, they would have attached special importance to the sentiment in the army and would not have relied on the Moscow garrison but would have redeployed troops from the country's remote regions' [Komsomol'skaya pravda, 1991, 22 August]. Indeed, Yeltshin and his associates were able to turn P. Grachyov and some other generals, on whom the putschists had placed their hopes, to their side. It is no wonder that Oleg Shenin said at the trial of SCSE members that 'if they and Valentin Varennikov had been included in the SCSE in that cursed August, the outcome would have been very different' [quoted by: Garifullina, 1995, p. 253].

In turn, the interim USSR president G. Yanayev adopted a decree of 20 August as a response to the actions by the Russian Government, claiming Yeltsin's decrees to be inconsistent with the Constitution and not enforceable. The SCSE declaration claimed that most of the union and autonomous republics 'supported the measures, which were caused by the extreme situation' [Komsomol'skaya pravda, 1991, 22 August].

A war of decrees and orders thus began to confuse the people, especially the heads of local governmental authorities.

Decrees and orders by both the SCSE and the Russian government threatened those who refused to follow them with punitive measures. Even the USSR Constitutional Supervision Committee was unable to determine who was wrong and who was right, whose decrees were consistent with the Constitution and whose not. The local authorities found themselves in an even more awkward situation—their futures depended on who would eventually win. As the saying goes, success is never judged.

The Russian leaders also felt doubtful about their eventual victory. As R. Khasbulatov said on Radio Liberty on 19 August 2001, Yeltsin, feeling insecure, mentioned the US

Embassy as a potential shelter. This is why most of the country's regions kept a low profile. Kazan supported neither the SCSE nor the Russian government actively. The republic's government had to overcome the two incompatible trends.

The Presidential Administration, the Secretariat of the Cabinet of Ministers, the republic's Presidium of the Supreme Soviet, and the republic-wide CPSU Committee received encrypted telegrams from the SCSE. The content was the same. Some were secret and not to be disclosed, while the rest were published in the mass media.

On 36 August at 10:36 a.m. the Tatar Republic-Wide CPSU Central Committee received an encrypted telegram from the CPSU Central Committee, signed by Secretary of the CPSU Central Committee O. Shenin, which addressed the first secretaries of union republics' CP Central Committees, republic-wide, krai, and regional party committees. It read as follows: 'As a state of emergency has been imposed on certain areas of the USSR, please inform the CPSU Central Committee regularly about the regional situation, public sentiment, appeasement and disciplinary measures, and the public response to the measures taken by the USSR State Committee of Emergency.' Secretaries of the republic-wide committee R. Idiatullin, N. Baleshov, and V. Kandalintsev read it. After an hour, or to be more accurate at 11:37 a.m., an encrypted telegram from the Secretariat of the CPSU Central Committee was received, which read as follows: 'As a state of emergency has been introduced, please take measures to involve Communists in the assistance to the USSR State Committee of Emergency. Refer to the USSR Constitution for practical guidance. We will inform you additionally about the Central Committee Plenary Session and other events.' R. Idiatullin, N. Baleshov, V. Kandalintsev, R. Muslimov, R. Khakimov, S. Mukharlyamov, B. Shagiyeu, Zinovyev, M. Sabirov, and V. Vasilyev read the encrypted telegram.

At the same time, telegrams from the Russian government ordered the authorities not

to follow any instructions and decrees by the SCSE.

The republic's power structures found themselves between a rock and a hard place. On the one hand, encrypted telegrams from the USSR governmental bodies and the SCSE demanded that they should observe the latter's decisions and instructions. On the other hand, an increased inflow of those from the Russian government insisted that they should resist the SCSE. For instance, on 20 August the republic's Ministry of Internal Affairs received a telegram signed by KGB chairman V. Ivanenko and RSFSR minister of Internal Affairs V. Barannikov, which read as follows: 'All officials of Russia's state security apparatus and agencies of internal affairs should demonstrate firmness, reason, and a sober understanding of the situation in the country, providing every assistance to the legitimate government elected by the people to prevent military action and possible bloodshed at this moment, which is critical to our society. We feel positive that KGB officials and those of the RSFSR Ministry of Internal Affairs will refrain from any involvement in the anti-constitutional coup' [CA of the Procuracy of TR, File 109966, Vol. 5.] The telegram was presented to the republic's president and prime minister.

On the same day, they received the Address to the People of the Russian Federation from the RSFSR Government, the decrees by RSFSR president B. Yeltsin declaring the establishment of the SCSE as an anti-constitutional act qualifying as a coup d'etat. It declared any resolutions made by the SCSE as illegitimate and void on the territory of the RSFSR. Officials who executed them were to be legally persecuted under the RSFSR Criminal Code. One of the decrees stipulated that all USSR executive authorities on the territory of the RSFSR, including the KGB, the USSR Ministry of Internal Affairs, and the USSR Ministry of Defence, were directly subordinated to the RSFSR president, elected by the people, until the extraordinary USSR Congress of People's Deputies. KGB agencies and those of the Ministries of In-

ternal Affairs and Defence were instructed to execute any decrees and orders from the RSFSR president and Council of Ministers immediately and take urgent measures to prevent any orders and instructions from the anti-constitutional Committee of Emergency from being executed. The order warned that officials who executed any resolutions by the SCSE were to be removed and held criminally liable.

On the same day, the Presidium of the TASSR Supreme Soviet met to discuss the social and political situation in the country, in the context of the emergency. It was noted that no state of emergency had been imposed on the republic, and that the governmental and administrative agencies exercised their constitutional powers. In order to ensure political and economic stability in the republic, its president was advised to enhance control over the execution of the effective USSR and TASSR laws, in particular those concerning the mass media. The editors of republic-wide and local newspapers were advised against publishing any materials aimed at destabilising the situation [CA of the Procuracy of TR, File 109966, Vol. 5.].

The top priority for the republic's government in such a challenging situation was to keep the situation stable. The question was how to preserve civil peace and international concord in the republic, rather than whose instructions to follow. Therefore, any activities by the president, the Government, and the Supreme Soviet were subordinated to this goal.

President Shaimiev was staying in Moscow, where he had previously arranged to meet with Yeltsin to agree on the procedure for signing the Tatarstan draft Union Agreement. However, the meeting never took place because of the developed situation. Anyways, Shaimiev was not to blame for this, as he was in the White House at the agreed upon hour. Only Yeltsin was not there. The leaders of 15 autonomous republics met with Lukyanov and Yanayev, which led to no satisfactory results. The latter two politicians prevaricated. The meetings had no particular outcome. The situation resembled walking on thin ice. It

was important not to make a mistake. They needed to both avoid panic and not take sides.

Everyone was waiting for the president to arrive. Leaders of the government and a number of agencies met him at the airport. He said flatly that a state of emergency would not be imposed on the republic [CA of the Procuracy of TR, File 109966, Vol. 5., Sheet 89].

On 30 August at 10:30 a.m. M. Shaimiev held an extended meeting of the Presidential Council, which took about an hour and a half. It was also attended by members of the Presidium of the Supreme Soviet, the Cabinet of Minister, headed by the prime minister, senior officials of the Presidential Administration and the Supreme Soviet, chairmen of district and city Soviets, the head of the Kazan Garrison, and the heads of two military schools.

The president provided a detailed account of his stay in Moscow. He declared that their principal goal was to keep the republic stable and prevent certain political forces from drawing the population into the vortex of confrontation, instructing his audience to avoid causing a state of emergency and to stay cool-headed [CA of the Procuracy of TR, File 109966, Vol. 5., Sheet 37]. The president shared the same clear opinion with journalists right after the meeting.

The president's address to the citizens of the republic calling for peace and calm also contributed to stability. The republic acted in accordance with the Declaration of State Sovereignty of Tatarstan. The republic's government demonstrated in every speech and through every action that the interests of Tatarstan, and its multi-ethnic people, were its highest priority. It refrained from supporting either the SCSE or the Russian government openly.

Those who prompted the republic's government to take sides expected just one outcome. Those responsible for the future of the republic and its people were prepared to face any scenario. The 'Narodovlastiye' group encouraged the Presidium of the Supreme Soviet to take sides by calling an extraordinary session of the Supreme Soviet to criticise the SCSE. However, it could cause fierce confrontation

in the parliament between SCSE supporters and those siding with the Russian government. It would be sure to spread beyond the parliament and cover the entire republic and its capital.

The Volga Region Military District was preparing to support the conspiracy, which suggests that the republic's government had taken the right approach. On 19 August at 7:40 a.m. the Kazan Garrison was issued the command ROTOR—that is, to place its units in operational readiness and wait for further instructions. District Commander A. Makashev ordered that all army, detachment, unit, and institution commanders should be recalled from leave on 20 August. The head of the garrison Major General Timashev was ordered to supply a special operation team of 150 men and vehicles for them. The purpose was to occupy such important facilities as the TV centre, the Supreme Soviet Building, the Council of Ministers, airports, the city centre, the post office, electric power substations, three points in the water system, and the river port.

Teams of tank troop officers and local military units were to be joined by special operation detachments from Samara. Five platoons with a total of 150 men in 7 vehicles were to encamp along the line Kremlin – Lenina St. – Akcharlak Restaurant – Gvardeyskaya St. The troops were expected to cover the route four times. 150 soldiers with 7 vehicles, one ATC, and one tank were to take the line Vishnevskogo St. – Gvardeyskaya St. – polygon and encamp near the railway station, the Central Department Store, along Kirova Street, and near the Officers' Residence. The following advancement schedule was established: 7 officers + 8 vehicles: 8:00 a.m., ATC: 10:00 a.m. and 12:00 p.m., vehicles with soldiers: 7:00 a.m., 12:00, 1:00, and 1:30 p.m. Besides this, columns were expected to move along the roads from Naberezhnye Chelny and Zenodolsk 'as a display of power' [CA of the Procuracy of TR, File 109966, Vol. 6].

It was still possible that troops would appear on the streets of the city on 21 August. At 3:00 p.m. on that day, when the putsch had been suppressed, the garrison received a tele-

gram from the district ordering it to place the troops on alert. It meant that Makashev could risk it all even if the situation in Moscow was not favourable. When asked whether tanks could be possibly have been brought to the streets of the capital, the head of the garrison Major General G. Timashev answered that 'if I had been commanded to move tanks to any square of the city, I would render a salute and then resign.' If he had resigned and refused to follow Makashev's instructions, which is hardly possible, his successor would have executed the order.

It is thus remarkable that a series of orders received from the district, right after the SCSE conspiracy was suppressed, were destroyed.

The apparent reason is simple—they laid the city authorities under obligation to fully obey any orders by the fascist Makashev, including Order No. 337 dated 20 August 1991, published in *Komsomolskaya Pravda*, which stipulated that 'any commissars, citizens, betrayers of the Motherland, of the Union shall be called in question and transferred to law enforcement bodies.'

However, even the scarce information currently available suggests that the republic's government took a careful and circumspect approach to the situation in the days of the SCSE. These and other similar facts prove the charges brought against the leaders of the republic at that time were groundless.

CHAPTER 3

New Relations between the Republic of Tatarstan and the Russian Federation

§ 1. Preparation for a Referendum and the Decision Made by the Republic's People

Indus Tagirov

The events of August 1991 not only set diverse political forces in motion but started the decay of the USSR. M. Gorbachev returned from Foros in total frustration. His closest associates, who had plotted the revolt, were in prison. The minister of Internal Affairs B. Pugo had shot himself. A number of senior officials of the CPSU Central Committee also committed suicide. M. Gorbachev acted to meet every requirement by B. Yeltsin, who forced him to sign the order, to the effect that the Communist Party was dissolved, in front of the eyes of millions of TV viewers.

The USSR was living on borrowed time. In December 1991 the leaders of Russia, Ukraine, and Belarus signed a trilateral agreement on the dissolution of the USSR in Białowieża Forest. They not only acted contrary to the will of the country's people, who had voted for preserving the USSR at the All-Union Referendum, but violated the USSR Constitution by encroaching on the state's territorial integrity. M. Gorbachev, who remained the USSR president in control of all the country's law enforcement agencies and the guarantor of the USSR Constitution, was obliged to arrest the people and commit them to trial. He did not do this. That is, he is also to blame for the collapse of the USSR as a person who failed to fulfill his constitutional duty.

The only solution for Tatarstan was to reinforce its sovereignty and establish agreement relations with the Russian Federation.

The Tatar people were committed to obtaining full-fledged statehood and establishing relations

with Russia under a bilateral agreement based on the adopted resolution. The referendum was not aimed at leaving the Russian Federation, which made a positive answer a more likely outcome.

The document did not satisfy the Russian government, so it turned to the wholly politicised Constitutional Court headed by V. Zorkin. On 13 March the Constitutional Court delivered a judgment that it would be illegal to hold the referendum in Tatarstan, and that it must be cancelled. The judgment was confirmed by the RSFSR Supreme Soviet, which summoned chairman of the Supreme Soviet of Tatarstan F. Mukhametshin to its meeting. The meeting was broadcast on television and radio.

V. Zorkin tried to put a scare into the Russian public by saying: 'Shall a positive answer be given to the question on the referendum, it will legally justify a proclamation of independence. Any lawyer would rightfully think so.'

Though he failed to put a scare into the public, he was heard, which resulted in the public opinion being formed that the referendum was aimed at breaking up with Russia. Moscow radio and television stations, newspapers, and journals promoted this idea of the referendum. Even when the Presidium of the Supreme Soviet of Tatarstan adopted a clarification on the matter, the campaign did not end. The campaign of casting aspersion on the republic gained momentum, causing a negative response in a large part of Russia and CIS population, of which numerous letters and telegrams to the Supreme Soviet and president of Tatarstan were indicative.

In her letter to president of Tatarstan M. Shaimiev, chairman of the Supreme Soviet F. Mukhametshin, and prime minister M. Sabirov, T. Volodina supported the scheduled referendum. This woman maintained that those opposed to the idea of sovereignty wanted 'slaughter and blood, another Karabakh, Georgia, Serbia, Croatia, Moldavia ... The multi-ethnic nation of Tatarstan has chosen its path... Leave the leaders of sovereign Tatarstan in peace. Do not affront and threaten them ... Hands off Tatarstan.' This simple woman thus expressed the sentiment of many citizens of the republic.

The Russians were also largely opposed to such pressure on the republic. Letters and telegrams of support came from Ukraine, Tajikistan, Uzbekistan, and the Baltic States.

Yet, a different mood was also present in the country. In Samara deputy Yudin of the Russian Supreme Soviet representing Samara oblast held intense anti-Tatar propaganda in Samara. A telegram by activists of the Tatar Public Centre—Abdulov, Galimov, and Nadirov—addressing the president of Tatarstan M. Shaimiev reported that this man had threatened to send volunteer detachments of imperialist chauvinists against Kazan, demanding that the activists of the Tatar Public Centre should criticize on television the idea of holding a referendum in Tatarstan. Otherwise he would have Tatars exiled and executed.

Political forces of every stripe and colour became active in the republic, which often led to fierce confrontation. For example, members of 'Public Rule' resolved to gather the Consultative Council of the Congress of Democratic Forces of the Republics and National State Entities of the Russian Federation in Kazan in February 1992. Viewing it as an attempt at obstructing the republic's sovereignty, the TCC disrupted the event. In response, the leaders of 'Narodovlastiye' published a declaration entitled 'Public Resistance to Extremism' in the newspaper *Vechernyaya Kazan*.

The signers of the declaration accused the republic's government of overlooking the infringement of freedom of speech and assembly by radical members of nationalist organisations, demanding that the law enforcement au-

thorities should prosecute the 'organisers and executors of the sabbath' and the encouraging citizens of Tatarstan as well as the republic's non-governmental organisations and parties to make preparations to resist any attempts at violating the Constitution [*Vecernyaya Kazan*, 19 February 1992].

It was certainly unclear to the readers what kind of organised resistance was meant and what kind of defence of the constitution was meant. However, it fueled the confrontation and was aimed at creating interethnic tension in the republic.

Certain forces around the government of the Russian Federation were also not indifferent to the events in the republic. Young politicians surrounding the Russian president, lacking in political experience, spurred B. Yeltsin on to reckless actions, threatened him with impeachment forcing him to go back on his words 'Take as much sovereignty as you can manage!' Moreover, some of them suggested that he should send troops to Tatarstan. However, Yu. Skokov, Secretary of the Security Council of the Russian Federation, convinced B. Yeltsin not to take such ill-advised measure.

When preparing the referendum, the republic's government had to provide a very accessible clarification of the goals and objectives behind the matter to the general public. For this purpose, it resolved to call the 9th Extraordinary Session of the Supreme Soviet of the Republic of Tatarstan of the 12th Convocation on 16 March. The agenda was to contain the issue of 'On the Clarification of the Wording of the Issue Put to the Referendum of the Republic of Tatarstan Scheduled on 21 March 1992.' Moscow kept a watchful eye on the session. It was apprehensive about the potential decision, which could determine the future of not only of Tatarstan but of Russia. The famous Russian politician R. Abdulatipov attended the session. All the deputy groups gave him a warm welcome.

The debate was lively and the opinions controversial. In his speech, deputy R. Vagizov noted that the resolution of the Constitutional Court of Russia was unjust and was in gross violation of both domestic and international law, thus stating: 'The convic-

tion relies on the argument that the Declaration, supplementing the Constitution, and the republic-wide law and regulation on the referendum are contrary to the provisions of the Constitution of the Russian Federation ... It is puzzling that Russian parliamentarians all across Russia are saying loudly that the Constitution is a vestige of the command-administrative system, yet at the same time they are prepared to fight to the death for each letter of it. Russia, by signing intergovernmental agreements with Tatarstan, recognises it as an equal partner and immediately called into question the constitutionality of mutual agreement relations ... It is common practice to be guided by the following fundamental principle. If the Constitution of Russia contains no relevant provisions, they should refer to a provision in international documents to ensure a legal solution to the conflict. However, the high court dismissed the idea.'

R. Vagizov then further remarked that the voters tended to misunderstand the question of the referendum. The population wanted higher economic and political status and were for fair agreements with all the republics. However, they interpreted the formula 'entity of international law' almost as the republic's secession from Russia and attaching it to some foreign government. 'Our centuries-long friendship will be secured under the new Constitution, guaranteeing human rights, bilingualism, and dual citizenship' ... noted Vagizov. 'When our aspiration for sovereignty is finally satisfied, it will be a major accomplishment in the history of the people, which will in turn foster the improvement of the economic and political status of the republic. In the event of a negative result, the situation will favour the growth of nationalist and chauvinist sentiment ... The process of sovereignisation is irreversible; a return to the past is impossible... We need to adopt a resolution on the attitude to the decision of the Constitutional Court of Russia and confirm our commitment to hold a referendum to raise the status of our republic.'

Deputy N. Mansurov stated that the forces trying to calumniate the referendum by inter-

preting the decision as secession from Russia were thus attempting to smother sovereignty.

The parliamentary group 'Soglasie' supported the resolution of the Constitutional Court of Russia completely and decided to boycott the discussion of this issue. 'I found myself in a difficult position ... because the 'Soglasie' group decided not to participate in the discussion of this issue... It was definitely, beyond any doubt, about seceding from the Russian Federation and establishing a separate independent state... which fact the Constitutional Court of the Russian Federation confirmed,' said the leader of the group 'Soglasie' I. Grachyov. Yet, the fact that the leader of the group had to participate in the discussion indicated that the boycott was inefficient, and only involvement in the discussion could yield certain results.

The speech by chairman of the Council of Nationalities of the Supreme Soviet of the Russian Soviet Federative Socialist Republic, R. Abdulatipov was able to change the sentiment of many deputies by saying that historically Russia is a federative state and suffers more from unitarism than from federalism. The speaker underscored that the process of sovereignisation is an objective process in the development of national self-awareness connected to the acquisition of national dignity and independence. The Russian republics had to undergo it so that the Russian Federation did not repeat the fate of the Soviet Union, whose dissolution was mainly due to the over-centralisation of power and government. R. Abdulatipov thanked the president of Tatarstan for demonstrating a circumspect approach to the matter and, admitting that any 'dictation by the Centre' was unacceptable, warned the audience against 'national dictation' at the local level. In conclusion, he encouraged the deputies to give each decision careful consideration so that extreme forces had no reason to doubt sovereignty and expressed the hope that the republic's parliament would pave the way for the rest to normalise their federal relations and national processes. The speech by the representative of the Russian parliament was interrupted several times by the deputies' applause.

Deputy F. Safiullin, speaking after R. Abdulatipov, found it easier to express his opinion, as the audience as a whole and not only individual deputies were prepared to criticise the actions of the Constitutional Court of Russia. Here is an excerpt from his speech: 'I would like to briefly analyse the decision by the Constitutional Court to prove that it is unsound. We are being tried not because we try to conquer, humiliate, or deprive somebody of their rights. The only reason why we are being tried is our insisting on and demanding equal rights, the right to enter into agreements as equal parties without prejudice to anyone's rights. They are trying us only because of that. For the right to be the masters of our mineral resources, our wealth. So we should not be ashamed of this 'criminal record.' I believe that soon others will be ashamed: the judges and their masters. The trial was held in gross violation of procedural norms. During the proceedings interested parties acted as experts. It turned out to be a trial where only witness for the prosecution were present.'

Deputy Yu. Alaev spoke in support of the key statements by R. Abdulatipov. He gave special attention to the issues of mutual respect of national dignity, maintaining that Tatarstan should establish independent contacts with foreign countries and enjoy economic sovereignty. Like many other deputies, Yu. Alaev was well aware that R. Abdulatipov was one of the authors and adherents of the Federation Treaty. Clearly intending to play up the fact, he said that the specified document provided for the independent implementation of international contacts, both at the interstate and intergovernmental level as well as at the level of entities under international law, for republics within the Russian Federation.' Yu. Alaev tried to convince the deputies that the most recent draft version of the Federation Treaty was materially different from the original versions and thus acceptable for Tatarstan. According to him, 'the change in the position of the Russian government results, in particular, from our consistent policy ... our intention to acquire sovereignty by using civilised methods.' The deputy admitted the possibility that in the future the republic would essentially be completely independent.

However, in his opinion, it should still remain within the Russian Federation.

Deputies from the 'Soglasie' group were not satisfied with the course of the session and during a break decided to invite representatives of television. The deputies decided to boycott voting.

Speaking on behalf of 'Soglasie,' I. Salakhov announced that the deputies of the group had just received the decision of the Constitutional Court and the draft of the Federation Treaty, and in connection with this they they would like to ask some questions to R. Abdulatipov and the Presidium of the Supreme Soviet. M. Mulyukov supported him by suggesting that they should submit the decision by the Constitutional Court to the Constitutional Review Board for consideration. The 'Soglasie' group unsuccessfully attempted to disrupt the meeting, but the audience resolved by a majority of votes to give the floor to president M. Shaimiev.

M. Shaimiev, in particular, noted: 'The referendum is a test for all of us, it should yield a good result, lay a reliable foundation for the friendship of nations in our republic to last for centuries. This should be the interpretation of the given issue... We have always valued the authority of the Supreme Soviet of our republic. And do not entertain any illusions. A unanimous 'for' in the referendum is the only way to concord. This imposes great responsibility on us and requires a common approach to interpreting the objectives of the referendum. There is no other solution...

I think that both the Supreme Soviet and the people of the republic are wise enough to make the right choice in the referendum to preserve the friendship of nations. It would enable us to make full use of the potential created by many generations to improve the well-being of our population, for which we have every opportunity. Thank you for your attention.'

The speech predetermined the outcome of the session. However, attempts to change the situation were made during the discussion of the resolution.

Following a long debate, the session passed the Resolution 'On Clarification of the Word-

ing of the Issue Put to the Referendum of the Republic of Tatarstan Scheduled for 21 March 1992' by a majority of votes.

The Kremlin in Moscow and the White House fueled negative sentiment in Tatarstan. Moscow ordered the Prosecutor of the Republic of Tatarstan to close all polling locations. Some district prosecutors in the republic were especially enthusiastic. For instance, the practice of intercepting letters to the president and the Supreme Soviet was established in Lenino-gorsk. Prosecutor Grin', head of the local RDP, summoned their authors on the pretext of an instruction by the Supreme Soviet of Tatarstan and made them write letters of explanation to the republic's prosecutor O. Antonov. However, not a single polling place was closed in the republic.

B. Yeltsin interfered in the situation by addressing the voters of Tatarstan on television, frightening them that if they said 'yes' to the referendum, it would turn Russian inhabitants of the republic into second-class citizens.

After B. Yeltsin, M. Shaimiev addressed the people on republic-wide television. It was a brave move on his part. The calm tone of the republic's leader and convincing arguments clarifying the position of Tatarstan and the purpose of the referendum instilled confidence in the citizens of the republic. CPSU member N. Stepanov from Kazan addressed a letter to F. Mukhametshin, M. Sabirov, and M. Shaimiev: 'How I worried about the voting day of 21 March, thinking only of victory. Your timely address to the people, the voters of the Republic Tatarstan, was a great contribution to the victory.'

The Tatar population of Russia and the CIS was also affected by the events. The Tatars of Uzbekistan, Moscow, Astrakhan, Yekaterinburg, Chelyabinsk, and Krasnoyarsk wanted to join those who voted for the republic's sovereignty. Construction engineer from Chelyabinsk V. Valiev wrote: 'I have always considered myself to be a citizen of my historical homeland, and I say 'yes' to the referendum.'

The movement against pressure on the republic's leaders was gaining momentum in

Tatarstan. Voters E. Gazizova and R. Zakirova wrote: 'Please convey to president M. Shaimiev our thanks for the firmness that he and the republic's entire government demonstrated by standing up for sovereignty. We were afraid that they would have to yield to the pressure and cancel the referendum.' Some letters demanded that the government should resolutely hold its own. K. Nuretdinov wrote to F. Mukhametshin that if he was frightened by the leaders in Moscow and signed the Federative Agreement, then he would become traitor number one, and not a single Tatar would forgive him. 'If you fear the Russian government, you are no chairman. If you are gutless or imperialist, resign and do not disgrace the Tatar nation!', he wrote in conclusion.¹ A letter from Agryz read: 'There is no way back now. Today the entire world knows us. The referendum must be successful... There is no way back, only forward, only forward.'

Those opposed to the referendum tried to hold back the tide at any cost. For instance, the Presidium of the Supreme Soviet of the Russian Soviet Federative Socialist Republic sent to the Republic of Tatarstan cars carrying leaflets addressing the population and various proclamations on the initiative of its chairman R. Khasbulatov. Such leaflets were put up in all house courtyards. However, in many cases it caused irritation rather than doubt and fear.

In one letter to first deputy chairman of the Supreme Soviet Z. Valeeva, it was written that: 'In our house (and in neighbouring houses), in all courtyards and floors a proclamation, which is attached to this letter, has been neatly and firmly hung up. Can't we take some sort of measures against this action? I do not know, maybe we could also paste an anti-proclamation over it?'

War and labour veterans from Kukmor sent a letter written on the reverse side of the address by the committee 'Friendship' to pen-

¹ On the subject of sovereignty in the early and middle ages of history, it should be borne in mind that the theory of sovereignty did not yet exist at the time. We use this term instead of 'self-government,' 'independence.'

sioners. It contained the following lines: 'Our country seems to be breathing its last, the Nationalists are tearing it into pieces...' It then states in red capital letters: 'The Motherland is in danger!' The letter also stated the following: 'Shame on those who distribute the leaflets. We, labour and war veterans, will vote unanimously 'for' the secession from Russia. The toilers of Kukmor will support the government of Tatarstan headed by Shaimiev.'

Of course, letters of a different nature existed, too. For instance, the voter Sidorova wrote to F. Mukhametshin: 'Is the example of... other sovereign states not enough? Consider the Baltic states. Have their living standards improved since they became sovereign? Or the Caucasus, Moldavia... We have been living well without making differentiating between Tatars, Russian, Chuvash, etc. Because we have all been living in Russia.'

The letter is not angry. It is rather a protest against the collapse of the Union and apprehension lest the same happen to Russia. The author was sure that everybody in the republic would regret seceding from Russia, except for 'senior politicians and officials,' who need power and 'a larger portfolio.' From the letter of the Gusev family: 'We believe Shaimiev, but the Nationalists will not let him work, and he will yield to them just to stay in office. Up to 90% would vote for the referendum if not for F. Bayramova, M. Mulyukov, F. Safiullin. They are clearly nationalists and will do their best to remove the president and the Supreme Soviet... Sovereignty will not cause the people of Tatarstan to live any better, as it has been in other former republics... We should live in Russia.' Like many others, the author of the letter was annoyed by the leaflets: 'They have no paper for newspapers but have enough for that.'

What is more, the letters suggested that the awareness-raising measures by the organisers of the referendum had been insufficient. It appears that the author of the following lines to the republic's Supreme Soviet was right: 'If factory directors held meetings at their premises so that their personnel could vote on the question on the referendum, the percentage of votes would be up to 99%.'

The letters also reflect information about the work of the leaders of a number of companies, the heads of departments, and some deputies of the Supreme Soviet of Tatarstan to discredit the referendum. For instance, the letter by Vafin and Sadriev reported a meeting arranged by deputy M. Khafizov, at which he encouraged the audience to vote against the republic's sovereignty in the referendum on the pretext that the 'Cabinet of Ministers, the Supreme Soviet, and president of the Republic will lead the population to starvation; Tatarstan's oil will only last for 3 to 4 years, the size of pensions and salaries will be lower than in Russia.' The letter from the Nizamovs from Kazan reported similar statements by the deputy of the Supreme Soviet Yu. Reshetov, who encouraged voters to say 'no' in the referendum when speaking on republic-wide radio on 9 March 1992. The authors of the letter believed that the deputy contradicted himself because he voted for the Declaration of State Sovereignty of the Republic of Tatarstan on 30 August 1990.

Many voters expressed dissatisfaction with the newspaper *Vechernyaya Kazan*. A letter by teacher and veteran G. Khamidi titled 'Kaynylyar' ('They Boil') describes a day in the office of the head of the newspaper's Department for Interethnic Relations Ye. Chernobrovkina. The author writes that after the statement that the newspaper would publish materials with diverse opinions, the editorial office was given 3–4 letters in defence of the referendum. However, they were not published even after three weeks. Although, according to the author, at the same time they published materials of an opposing viewpoint. A proclamation encouraging women to cross out the word 'yes' on the ballot hung on the wall in Ye. Chernobrovkina's office. One of the visitors to the office held in his hands an entire packet of such proclamations. He gave some copies to the author of the letter and said: 'Distribute them to acquaintances!' G. Khamidi spent several hours in the editorial office, and during that time work, related to the referendum, was in full swing. R. Khusnullin wrote in his letter to F. Mukhametshin: '*Vechernyaya Kazan* has been actively working to undermine the referendum. Each issue contains 2 to 5 arti-

cles, all titled 'Let's Leave Russia,' with a drawing of a frontier post with armed soldiers. It is a call to conflict, to a civil conflict.' The author was dissatisfied that no 'measures against this newspaper' had been taken.

All such letters expressed concern about the republic's future and the outcome of the referendum. At the same time, they are indicative of the fact that people are still unaccustomed to living in a democracy, they have not learnt to adequately appreciate different opinions and positions. The letters are also suggestive of a slow and troublesome development of democracy. They do not call for violence. To the contrary, the predominant aspiration is to maintain concord among the peoples of the republic, reinforce mutual trust among people, and improve their financial status. The letter by N. Sharifullin from Kukmor is curious in this respect. It contains six such suggestions: strengthening awareness among the population, especially in localities with a predominantly Russian population; presenting more speeches by common people in newspapers, radio, and TV programmes; impugning the decisions by the Constitutional Court and Supreme Soviet of the Russian Federation in well-argued measures to make sure it is possible to apply to the International Court, if necessary; ensuring the legal prosecution of both chauvinists and nationalists; adopting laws; and taking specific measures to improve workers' financial standing. The last paragraph is very important—the author believes that the president of the republic should speak to the people 1 or 2 days before the referendum.

All letters to the president, the Supreme Soviet, and the Cabinet of Ministers were studied closely. They were used as references for important decisions. The head of the Correspondence Department of the Supreme Soviet Kh. Ishtiryakov collected and preserved them in a special 'Referendum' folder².

² The materials of this folder were kindly provided to the author of this article by the head of the department of letters and reception of citizens of the Office of the President of the Republic of Tatarstan H. G. Ishtiryakov.

An analysis of letters and statements to the republic's Supreme Soviet and president shows that interethnic trust reigned in the republic. Even the most contradictory opinions and judgments on sovereignty were marked by a common understanding that Tatarstan is our common home, which should have very close relations with Russia. The majority of people in the republic and in Russia believed that the diverse economic, cultural, and familial connections should be preserved and enhanced. In fact, it was a mandate of the people.

22 March arrived referendum day. As chairman of the Supreme Soviet F. Mukhametshin recalled: 'It was a warm sunny morning. Everyone was on tenterhooks—both Moscow and the republic's government. I received an official call in the city apartment, where my wife and I stopped before going to the polling station at 9:30 a.m. They said that the head of the Presidential Apparatus of the Russian Federation S. Filatov wanted to talk to me. After a brief greeting he asked me to report on the situation in the republic. I answered that the situation was normal, that Russians and Tatars were going to the polling stations in a friendly fashion to vote in the referendum. Fortunately, no interethnic conflicts had happened in spite of all the threats. S. Filatov said, in what seemed to me an annoyed tone, that he was leaving for work and asked me to call him in an hour.

Moscow used every channel to monitor the events in the Republic of Tatarstan. I will always remember the day of waiting breathlessly for the outcome of the referendum, which fortunately turned out to be positive for our people. What could we say in case of a negative result? I think there would be mutual reproaches and mistrust. This is an altogether new path of development for the Republic of Tatarstan in the context of a new Russia!

Indeed, a new Tatarstan was born on 22 March, and the way was paved for a new democratic Russia. This is why the prediction of increased interethnic tension in the republic and the speculation that Russians would wake up as second-class citizens in Tatarstan the morn-

ing after the referendum could not come true. Letters, telegrams, surveys, and studies convinced the republic's government of the need to hold a referendum with full confidence in its positive outcome.

Nevertheless, certain circles continued to whip up fear and panic among the people. Arms were hastily withdrawn from garrisons in Tatarstan. Arms depots remained empty. Propaganda cars of the Supreme Soviet of the Russian Soviet Federative Socialist Republic were distributing provocative and menacing leaflets across the republic.

The voting was calm. Mutual trust reigned everywhere. Not a single interethnic confrontation occurred. To the contrary, the results of the referendum instilled confidence in the population that the right way had been chosen. This is how M. Shaimiev recalled those days: 'Several days before the referendum the Constitutional Court of Russia commenced a case claiming that the referendum was illegal and had to be cancelled. The Supreme Soviet of the Russian Federation arranged a tumultuous hearing of our parliamentary speaker. A group of Russian prosecutors was sent to the republic. We had 2,611 polling stations at that time. The chairmen of all the polling stations were instructed in writing that they would be put on trial if they opened the polling stations on the day of the referendum. On the eve of the referendum (the reason is still unclear to me) president of Russia Boris Yeltsin addressed the Tatar people on television, encouraging them to boycott the referendum: 'If the people of Tatarstan say yes in the referendum, he claimed, it could lead to bloodshed.'

On the same evening, after his speech, I also addressed my own people. I explained that such pressure was non-democratic. I said that it was up to the people to determine their future. I maintained that a positive answer to the question on the referendum was the only way to ensure peace for every family. On 7 a.m. the day after the referendum I received the first report. All the polling stations were open to the voters. And more than 60% of those taking part voted 'yes.' The reason I am telling this is because I want to show you how hard our path

to democracy was' [Mukhametshin, Izmaylov, 1997, p. 50].

A total of 61.4% of the republic's voters at polling places said yes to sovereignty for Tatarstan.

A description of the atmosphere in Leninskogorsk on the days of the referendum can be found in the letter by N. Egorov, who resided in the city: 'The house in Sadriyev Street where I live is a small one—there are only 14 apartments. But how many nations of our once glorious Fatherland it represents! Last March all of us—Tatars and Russians, Chuvash and Mordvin, Kazakhs and Ukrainians—voted for the preservation of the USSR. Unfortunately, our opinion was ignored. I think our task—to say 'yes' or 'no' to sovereignty for Tatarstan—was not too difficult this time. It looks like we all wanted peace and friendship, calm and happiness to reign both in the small house in Sadriyev Street and in the large house—Tatarstan—as it has been for many centuries.

Long before the referendum, they began to threaten us by saying that both 'yes' and 'no' in the referendum would cause the Russians and the Tatars to quarrel, maybe even to spill blood. That is, they encouraged us to boycott the vote. But last Saturday we went to Polling Station 15 in a friendly fashion to make our choice. We voted for a happy and peaceful life in a sovereign Tatarstan. May our ancient land enjoy it indeed! [Sovetskaya Tataria, 24 March 1992].

Loginov, a carpenter in the Helicopter Association, upon leaving the voting booth commented on the referendum as such: 'I think that Tatarstan's sovereignty is beneficial to everyone. We will have more opportunities to be prosperous. I am also convinced that our friendship will become stronger. Take my case. I am Russian. My best friend is Tatar. His name is Ildus Abrarov. We work and go out together. We often argue about politics and sometimes disagree with each other but, as the saying goes, we are as thick as thieves.'

These words of ordinary citizens of Tatarstan fully reflect the mood of the majority of the republic's inhabitants. By no means they prove the suggestion that it was unreasonable to hold the referendum, and that it would hardly

have any effect. One of the DPR activists said: '...We do not recognise the results of the referendum to be legally valid, rather we consider it as an opinion poll. However, the referendum revealed the clear parity of two communities—Tatar and Russian—since a half of all citizens on the voter list (50.2%) voted approval. Consequently, the politicians will have to bring together the interests of these two communities.'

Several months before the events in question, a special correspondent of *Rossiyskaya Gazeta* Skukin wrote that it was due to the efforts of deputies from the 'Narodovlastiye,' supported by economic men from among the deputies, who convinced the Supreme Soviet of Tatarstan to accept the resolution on holding a referendum about the republic's status [*Rossiyskaya gazeta*, 28 November 1991]. Thus, there was a time when activists of the RDP and the 'Narodovlastiye' deputy group insisted on holding a referendum, apparently expecting the voters to say 'no' to sovereignty. When it had taken place and voters said 'yes,' they began to say that it was pointless, and that it should be interpreted as a mere opinion poll. They referred to the decision by the Constitutional Court of Russia, deliberately omitting the fact that the chairman of the Court V. Zorkin had stated that if the voters said 'yes' in the referendum, it would legally justify a proclamation of independence. Of course, none of Tatarstan's leaders intended to proclaim independence. But what is important in this case is that V. Zorkin recognised the referendum as legally valid. Therefore, the results, in the opinion of the referendum's opponents as a rule are dominated by dissatisfaction. For instance, according to the vice chairman of the Supreme Soviet of the republic A. Lozovoy, 'the referendum was aimed at legalising the Declaration of Sovereignty of Tatarstan through public will. After all, when it was adopted, the Union Centre and Russia pretended that nothing had happened. It hurts ones self-esteem, and besides, it is always preferable to have clearly-defined relations. Unfortunately, the Russian government—then and now—never carried out an analysis of the situation in Tatarstan. It did not explore the mo-

tivation behind the Declaration of Sovereignty. The result of the referendum will force politicians to make some conclusions.'

The Address by president M. Shaimiev to the people of the republic, in which he presented the nature and outcome of the referendum, was fully representative of the public sentiment. In particular it stated that: 'It is a historical fact that complete freedom has been acquired to ensure the fully-fledged development of a multi-ethnic Tatarstan in the fraternal family of Russia, the CIS, and the world...

Despite mass pressure exerted by certain circles, we have demonstrated the wisdom and enormous patience of our people.

Dear compatriots, while expressing my sincere gratitude for your support, your clear minds, and your kind hearts, I encourage you today, at this very hour, to reinforce peace and concord in our common home—Tatarstan. Relying upon your trust, I would like to confirm again before the face of the international community that we will do whatever we can to ensure prosperity for our native republic and to further reinforce the traditional centuries-long friendship between our peoples...

I repeat what I said before the referendum—our future is in our hands! How deeply we realise our great responsibility to history, to the future is dependent upon the fate of the nation and the fate of each one of us. Our legacy for our descendants should include a history of wise solutions to the complex problems of our existence. This includes a wise approach to rejuvenating and reinforcing our alliance with Russia, staying loyal to it and preserving its integrity, not in words but in deeds, adherence to the democratic principle of a civil society and state construction, and recognition and respect of human rights regardless of one's ethnic and religious status. It is our today. It is also our tomorrow' [*Sovetskaya Tataria*, 24 March 1992].

The interview with M. Shaimiev by a correspondent of *Sovetskaya Tataria* is curious in this respect:

'On the eve of the referendum an exercise was held in our military district. Had you agreed to the exercise? Do you interpret this as

pressure? Is this a violation of legal and moral norms?'

'If I interpreted these activities as pressure, I would have expressed my attitude to them. There were a lot of rumours, including arms being withdrawn and supplied. It is merely a regular replacement of obsolete arms, nothing more.'

'Do you expect any formal recognition by other countries? Will there be any kind of official statement on your behalf?'

'Perhaps it was unnecessary to raise the question of legal standing in the international context to referendum. Having attained sovereignty, we will possess this right. The sovereign state should have every attribute of an independent state, except for those which we will transfer to the Russian Federation. We can only

be sovereign for a day. We'll have to check our ambitions in the future.'

'What political steps are you going to take next? Do you think extremist forces can come to power?'

'I am going to take into account the outcome of the referendum when taking a political step. It is necessary to draft an agreement with the Russian Federation before the Congress of People's Deputies of Russia and submit it to the Russian leadership. As for the seizure of power, I think we should not worry about it because the governmental authorities of Tatarstan enjoy high public trust' [Sovetskaya Tataria, 24 March 1992].

The path to an agreement turned out not to be so simple. The high public trust mentioned by Shaimiev was to be challenged many a time.

§ 2. The Referendum Results and their Formalization in Legislation

Indus Tagirov

The favourable outcome of the referendum on the political status of Tatarstan did not mean that the struggle for the sovereignty of the republic was over, quite on the contrary, it was entering the most important phase: first, the referendum results were to be summed up, second, they were to be enshrined in the Constitution, and third, a number of important laws intended to establish the sovereign state were to be adopted.

These tasks were addressed at sessions X, XI, XII, and XIII of the Supreme Soviet of Tatarstan. Representatives of different branches of the authorities of the Russian Federation and the Republic of Tatarstan participated in the debates. Central Television stations, radio broadcasts, and the press presented diverse information about the events in Tatarstan. The president and the Supreme Soviet of the republic received letters and telegrams that reflected the whole spectrum of the public opinion not only of Tatarstan but of Russia and even CIS countries. Because the processes taking place in Tatarstan reflected, just like a drop of water, the most important political events throughout

the entire territory of the former Soviet Union. Tatarstan, as one of the leaders of the Russian Federation expressed it, created a moral vector that was followed by others.

Session X of the Supreme Soviet, at the suggestion of the Presidium, apart from summing up the results of the referendum, was to discuss the draft constitution of the republic. The development of the agenda appeared to reflect the complex and challenging situation, which was created after the referendum. In essence, there was a struggle between two tendencies for the social development of the Republic: strengthening its sovereignty and its attack on the fundamental principles enshrined in the Declaration on the State Sovereignty and the results of the national referendum.

The parliamentary group 'Soglasie' proposed its own variant of the agenda, in which the question about the results of the referendum was absent. According to one of active members of this group, assistant professor of the law faculty of Kazan University Yu. Reshetov, the referendum did not require any confirmation. Meanwhile, the discussion was about summing

up the results and not about confirmation. The opinions of the parliamentary groups 'Tatarstan' and 'Suverenitet' were directly opposed to this position. They thought that it was not enough to just sum up the results, that it was more important to determine the prospects for further development of the republic based on those results. Without taking into account the results of the referendum, it was impossible to adopt the Constitution of the Republic. The Declaration, referendum, and Constitution could be only considered in close interrelation. Therefore, at the suggestion of the deputy N. Mansurov, the question was formulated as follows: 'On the measures for the implementation of state sovereignty of the Republic of Tatarstan stemming from the results of the referendum on the republic status of 21 March 1992.'

The deputies of the group 'Soglasie' tried to replace the speaker, citing as a reason the change to the wording of the question. They proposed N. Mansurov as the speaker. This was like proposing an alliance between the parliamentary groups 'Tatarstan' and 'Suverenitet' to fight together against the official authorities. But this proposal was ignored since the gap separating the groups was yet to be bridged, which—as the sessions showed—was not an easy task. Nevertheless, everybody understood that consensus needed to be sought.

In connection with a change in the wording of the referendum the speaker, chairman of the Supreme Soviet, F. Mukhametshin requested to move the discussion to the next day in order to properly prepare for it.

At 5:30 p.m. a meeting of the Presidium of the Supreme Soviet took place, where F. Mukhametshin brought up for discussion the following: how to deal with the additional issues. The discussion was particularly about the results of the referendum and the tasks arising from them. It was decided that the main speaker would be F. Mukhametshin, and one of the members of government would be a co-speaker. F. Mukhametshin stated that he had discussed this question with the first deputy prosecutor general of the Russian Federation, and they defined other questions of the prospective devel-

opment of Tatarstan. These questions were reflected in his report [CA TR SC, Fund R-3610, Inventory 1, File 2073, Sheet 5].

It appeared to be rather difficult to include the question about the project of a new constitution in the agenda. Apart from discussion of the official project developed by the constitutional committee of the Supreme Soviet headed by the president of the republic M. Shaimiev, there were attempts to include two more projects into the agenda. The latter, differing from one another only in terms of presentation, were distributed among the deputies literally two days before the opening of the session by the 'Democratic Reform Movement' and the parliamentary group 'Soglasie.' The parliamentary group 'Tatarstan' regarded them as auditable results of the referendum and suggested removing them from consideration. The proposal was not accepted.

From the very beginning, the authors of alternative projects tried to create a negative perception about the official project. The deputy I. Grachyov stated that the 'Soglasie' group regarded the official project of the Constitution extremely negatively in terms of both power structure and on key issues: mutual relations with the Russian Federation, citizenship, the borders of the Republic of Tatarstan, etc. [CA TR SC, X, vol. 1, Sheet 44].

It is noteworthy that whatever question was discussed at the session it contained a motive of fight—in favour or against the sovereignty. Such was the question on the transfer of the law enforcement bodies under the jurisdiction of Tatarstan: everybody was well aware of the fact that its solution could be a positive step aimed at the implementation of the republic sovereignty. Moreover, a special preliminary committee, considering the viewpoints of the law enforcement bodies and the minister of Finance, D. Nagumanov, came to the conclusion that the transfer of the law enforcement bodies under the jurisdiction of Tatarstan was possible. There were draft laws prepared 'On the Judicial System of the Republic of Tatarstan,' 'On the Status of Judges in the Republic of Tatarstan,' 'On Militia,' 'On

the Prosecutor's Office,' 'On the Arbitration Court.' Reporter on this issue, group leader, A. Lozovoy emphasised that the transfer of the law enforcement bodies under the republic jurisdiction would require a radical change in the law enforcement structure itself, the procurement procedure, and allocation of about six billion rubles from the republic budget. Besides, he highlighted the necessity to include this question into the list of questions of the negotiation process with the Russian Federation [CA TR SC, X, Vol. 1, Sheet 61]. It was decided to bring up this question for discussion during the session.

The presence of two approaches to the budget system of the republic was also clearly defined during the discussion. Many deputies spoke in favour of a budget based on a single channel tax, while the 'Soglasie' group deputies were against it in every way. D. Nagumanov's report about the approval of the 1991 budget implementation and about the law on budgetary system for 1992 as well as the co-report of the chairman of the Supreme Soviet Planning, Budget, and Finance Committee G. Kobelev appeared to cause the government's criticism for the uncontrolled use of funds and especially foreign exchange earnings. Further discussion turned into a debate about interest-free crediting of low-income citizens for the construction of private housing, while the correlation between the republic and local budgets did not ease the tension. The atmosphere became very tense. A temporary peace set in only after the interference of the president M. Shaimiyev and the chairman F. Mukhametshin, which lasted for a short while. Thus, the deputy group 'Soglasie,' even after a voting on the draft law 'On the Budget System of the Republic of Tatarstan for 1992' was announced, tried to disrupt it. I. Grachyov stated that this budget should not be adopted in the form of figures, explaining that the figures would not be accurate, and that the relations with the Russian Federation were built in it in the form of a financial war, while the budget itself preserved a levelling principle of distributing financial provisions among regions and economy branches regardless of their contribution into the devel-

opment of the republic [CA TR SC, X, Vol. 3, Sheet 335].

I. Grachyov's statement was rebuffed by the deputies. Thus, A. Kolesnik characterised I. Grachyov's definition of economic relations between Russia and Tatarstan as a financial war, which was beneath any criticism, reminding that during the preparation for the referendum I. Grachyov frightened the population by the beginning of the third world war in case it was conducted. Kolesnik grasped the subtle motive of Grachyov's antagonism to the republic sovereignty and said as if on his behalf: 'So it is bad, indeed, you see, the sovereignty is to blame' [CA TR SC, X, Vol. 1, Sheet 336]. Indeed, the disagreement with the republic sovereignty was concealed, maybe not completely perceivable out of all motives that members of the deputy group 'Soglasie' were guided by in their actions.

Overriding contradictions on the issues of the budgetary system, which resulted in the adoption of a single channel budget and the accompanying verbal squabbles, was just a prelude to hot discussions on the referendum questions and the Constitution of Tatarstan. Tempers ran high during the breaks, were transferred to the offices, slopped over into the lobby, and were reflected in interviews.

The report of the chairman of the Supreme Soviet F. Mukhametshin was realistic and carefully worded. The main result of the referendum, as an indicator of achievements of a whole new level in the development of the republic statehood, the speaker named the completion of the next step in reforming the national and state structure. The importance of the referendum for the republic was defined as the establishment of a sovereign state, an international legal entity, as a new page in the centuries-old history of Tatarstan.

F. Mukhametshin noted that the referendum, as it was confirmed by representatives of international organisations, complied with all the rules of the international law, despite the improper actions of the Russian prosecutor's office that intended to disrupt it. 'This all could be well forgotten today. But just as one cannot take out a line from a song, so these un-

pleasant moments will remain in the memory of our multinational people. Now it is already a history. It is the history of a long, treacherous path of the Republic of Tatarstan towards enhancing its status, achieving equal rights in the state relations with Russia, other republics, and neighbouring and far-abroad countries,' said the speaker.

Based on the voting results F. Mukhametshin concluded that more than half of Tatarstan citizens supported the main idea of the referendum—the necessity and political expediency of enhancing the state status of the republic—gave credence to their parliament, and confirmed their commitment to the policy, which the republic had been following during the recent years. F. Mukhametshin pointed out to the presence of different approaches to the referendum assessment: some try to discredit its results, explaining that the voting results were affected by the nationality of the voters, others insist on declaring independence of Tatarstan immediately, and still others talk about the need to sign the Federal Treaty in its present format as soon as possible. F. Mukhametshin provided specific figures refuting the views that allegedly it was the village mainly consisting of Tatars that voted positively for the referendum question, and cities where Russian population prevailed spoke against it. In Kazan 46.8% of the voters said 'Yes' to the referendum question, in Naberezhnye Chelny those made 60.8%; in Almetyevsk, 71.4%; in Nizhnekamsk, 54.3%. 'I consider such arguments unsubstantiated and politically irresponsible,' said the chairman of the Supreme Soviet. 'The reality is as follows: there were those who voted 'No' among Tatars, and there were those who said 'Yes' among Russians.'

One of the most important conclusions of F. Mukhametshin's report was as follows: we should not rush into declaring independence because consultations, negotiations of Tatarstan delegations with the leaders of the Russian Federation have been taking place lately. An agreement to seek establishment of special relations between the Republic of Tatarstan and the Russian Federation by signing a bilat-

eral contract based on mutual delegation of authorities has already been reached.

In F. Mukhametshin's report much attention was paid to economic problems of sovereignty. The main emphasis was placed on strengthening property rights of the republic, and especially on the use of oil produced in the republic. The reporter qualified the establishment of an independent budget of the republic and the creation of a national bank as an evidence of the economic sovereignty establishment.

The questions of the legislative recognition of the referendum results were treated ambiguously by the deputies. Mukhametshin emphasised that the contents of the draft Constitution introduced for consideration at the Supreme Soviet session would be supplemented during the discussion with a comprehensive, extended understanding of constitutional problems by the deputies and would absorb the current circumstances of the republic's legal development. As rights that should be secured to the republic, he listed eighteen most important authorities exercised by a sovereign state [CA TR SC, X, Vol. 3, Sheets 31–39].

Relations between Russia and Tatarstan were a subject of special disputes. The deputies held two positions: the first position was insisting on the establishment of an equitable relationship with the Russian Federation, and the second one was aimed at the sovereign development of the republic as part of the Russian Federation. Controversies arose from different interpretations of the Supreme Soviet resolution as of 16 March, which explained the referendum question by the preservation of the Russian Federation integrity.

The deputies of the 'Tatarstan' group blamed the president, the Supreme Soviet, and the government for delaying the resolution of questions related to the implementation of the referendum results. Deputies of the opposition groups, however, tried to ignore these results.

F. Bayramova hailed criticism on deputies of pro-Russian orientation, blaming them for attempting to revise the referendum results, turn the republic into a sovereign state valid only on paper, not in reality. She also re-

proached the republic leaders who, according to her, should have 'buckled down to the state affairs' as early as on the second day after the referendum and created a programme intended to implement the republic independence. She proposed the following measures: establishment of a reserve bank for the collection of taxes, an in-house monetary system, transfer of the law enforcement bodies under the republic jurisdiction, and adoption of several laws needed for the sovereign development of the republic. 'We need an army,' she said. F. Bayramova also demanded exit from the economic area of Russia, restriction on the import of goods therefrom, creation of an independent education system of the Tatar people, and entry of Tatarstan into the UNO.

The speeches of F. Safiullin, M. Milyukov, and R. Valeev were in accordance with many propositions of F. Bayramova. However, they lacked sharp words, which were typical of Bayramova's speeches. Thus, F. Safiullin described the referendum result as an expression of mutual trust between the peoples of the republic. 'We,' he said, 'do not set a goal to separate ourselves from anyone, we do not set a goal to impinge on anybody's borders' [CA TR SC, X, Vol. 3, Sheet 388]. F. Safiullin pointed out to the need for adoption of a law on securing the rights of a sovereign state to the authorities of the Republic of Tatarstan and encouraged towards making all the steps for the implementation of sovereignty thoughtfully and in compliance with the people's needs. R. Valeev spoke for the establishment of an in-house national bank and the right to print money. At the same time, the deputy clearly stated that he did not have any extremist tendencies, and that he was against confrontation with Russia but advocated for an equitable agreement therewith based on the separation of authorities.

While supporting the proposition to transfer the law enforcement bodies under the jurisdiction of Tatarstan and establish an in-house monetary system, deputy M. Mulyukov cited some facts characterising actions against the referendum by adherers of the groups 'Narodovlastiye,' 'Soglasiiye,' and 'Citizens of the Russian Federation.' According to him, the referendum oppo-

nents spent 60 million rubles to disrupt it, and three thousand agents were sent to the republic to perform the respective activities. They were paid 500 rubles a day to cover travel expenses. The deputy also named addresses and persons for the people sent on mission to the republic to contact. Among them there were the editorial offices of the *Vechernyaya Kazan*, *Kazanskiye Vedomosti* newspapers and the people's deputies of the republic I. Grachyov, I. Sultanov, Z. Latypov, and V. Mikhaylov. It is hard to say to which extent this information—not refuted by any of the deputies—was true.

The fundamental questions of sovereign development of Tatarstan remained in the deputies' focus during the discussion of other questions as well.

The question of submission of the draft Constitution of the Republic of Tatarstan to the committees of the Supreme Soviet for preliminary discussion was considered at the meeting of its Presidium on 13 May 1992. It also concerned alternative draft Constitutions: whether they should be brought up at the session. It was decided to submit three draft Constitutions to the committees and create a work group, which would sum up the propositions and notes received during the discussion [CA TR SC, Fund P-3610, Inventory 1, File 2072, Sheet 57].

At the evening meeting the report of the president of Tatarstan M. Shaimiev on the new draft Constitution of the republic was discussed. The substantive part of the report was aimed at ensuring the provisions of the Declaration on the State Sovereignty supported by the nationwide referendum. M. Shaimiev began his speech stating that since the Declaration was adopted, enough time had passed needed for the comprehension of the political situation, position, and actions of Tatarstan intended to enhance the state status of the republic. 'Some people criticised us, and they keep doing it, for procrastination, and others, for undue hurry. Some people reproached us that we allegedly descended from Russia and broke off historical and other connections therewith, others criticised us for negotiating with Russia,' said the president. Assessing the Declaration as

a cementing instrument of international agreement in the republic, he defined it as the source of legal regulation of the republic life, political and legal basis for adoption of the Constitution of the Republic of Tatarstan.

The head of the republic expressed his satisfaction with the high activity of the population during the referendum [CA TR SC, Fund P-3610, Inventory 1, File 2072, Sheets 397, 398]. 'Whatever our opponents called it (referendum. – I. T.) , whatever they predicted sometimes resorting to actions unacceptable in the civilised society, thus trying to exert pressure on the voters,' he said describing the situation in the republic in those days. As for the delay with the preparation of the draft Constitution, M. Shaimiev explained it this way: 'We have to admit that we lived hoping to preserve the USSR for which a majority of the population of the country voted at the referendum (in March 1991. – I. T.)' The president determined the future of the country, its political status within the framework of the former Soviet Union. This appeared to be the keynote of the whole report, and at the same time it defined the strategy of establishing the sovereign Tatarstan.

What was crucially important was that the draft Constitution of the republic reflected the quality change of Tatarstan status according to the referendum results. M. Shaimiev defined it as follows: 'Until now the rights of the republic, as it is well-known, were decreed by the Soviet Union and Russian authorities. Today we declare our commitment to democracy; therefore, the people itself, their will and interests become the source of the right.' At the same time, democracy and sovereignty were defined in the president's report as inseparable, interdependent concepts fully complying with the generally recognised human rights secured in the Charter of the UNO, covenants on human rights of 1966, and other rules of the international law. 'Compliance with these, said the president, 'is a criterion of civilisation of sovereign Tatarstan, a condition for its active participation in international relations, and certainly a prerequisite for its acknowledgment by other countries.'

M. Shaimiev's speech about the relationship between Russia and Tatarstan was listened to with great attention. Article 66 of the draft Constitution was defined as the key article in this aspect: 'The Republic of Tatarstan builds its relationship with the Russian Federation—Russia—based on the Agreement on Mutual Delegation of Authorities.' The president named special agreements as the mechanism of this fundamental document.

M. Shaimiev proposed to take the presented draft Constitution as a basis for discussion.

The deputies were mostly concerned with questions associated with the relations and agreement between Tatarstan and the Russian Federation as well as with the citizenship issues. While noting that the draft Constitution contained a provision on absolute equality of the rights of citizens regardless of any grounds, and, nevertheless, a limitation was allowed on the grounds of speaking two national languages in paragraph 6 of Article 14, I. Grachyov asked the president to share his views on this. M. Shaimiev's answer was brief: 'I think that this must be determined by the Law on Languages.' Then he added that there was a provision enshrined in the law that the president must speak two state languages.

The right to travel within the republic for citizens of Tatarstan was stipulated in Article 35 of the Constitution. I. Grachyov interpreted this provision as an implication of setting boundaries in future. It was obvious that this question was far-fetched because only the territory of the republic was meant in the Constitution of Tatarstan, as for the right to travel along the territory of Russia it was clearly enshrined in the Constitution of the Russian Federation. The president's answer was as follows: 'How can we restrict the right of a person to travel freely on the territory of our state?' However, Grachyov stuck to his opinion [CA TR SC, Fund P-3610, Inventory 1, File 2072, Sheet 413]. Such comprehension of Article 35 of the Constitution also implied incomprehension of provision 23 of the Article on dual citizenship, which actually meant the negation of the republic citizenship.

The citizenship issue was also addressed by the deputies of the 'Tatarstan' group in terms of a possibility to extend the scope of its action to Tatars, who wanted to have a Tatarstan citizenship. 'If anybody in Tatarstan is only a citizen of Russia, why not specify in the Russian Constitution that Tatars residing in the Russian Federation can also have Tatarstan citizenship?' F. Bayramova addressed this question to the president.

M. Shaimiev, citing the Universal Declaration of Human Rights, according to which every person has the right to citizenship and cannot be deprived thereof, answered that it should be reflected in the agreement with Russia.

The deputies of the 'Soglasie' group were mostly interested in the questions concerning the relations between different authority branches. I. Salakhov addressed the following question to the president: 'Which type of a state do you refer this draft Constitution submitted by the constitutional committee to: by regime, closer to an autocratic or democratic one, by the form of government, to presidential, super-presidential, or parliamentary?'

In reply to this question, the president said that the democratic regime penetrated into all the Articles of the Constitution, and the latter contained principles levelling all the three authority branches. However, he emphasised, 'it seems that the presidential form of government should prevail in the long perspective.'

Great importance was given to the question of the Deputy N. Mansurov regarding Article 66 of the draft Constitution on the mechanism of mutual delegation of authorities: 'Does this article imply the possibility of unilateral revocation of the delegated authorities?'

The answer was as follows: 'Yes, actually, in case of termination of fulfillment of obligations by one party the contractual relations automatically result in losing the agreement itself.'

In the alternative draft Constitutions of the deputies of 'Soglasie' and 'Narodovlastiye,' who called themselves democrats and talked a lot about human rights frequently opposing them with group rights, in particular with

people's rights, much attention was paid to the problems of democracy and human rights.

The first alternative draft Constitution was presented by 'The Movement of Democratic Reforms.' Z. Latypov delivered a report on it. He began his speech expressing satisfaction with the official draft Constitution and said that the draft Constitution submitted by him, which contained 59 articles and 7 chapters, represented the well-known principles of people power and forms of its expression, the system of elections, and law changes. As for the Constitution, it should be adopted by way of a national referendum.

In fact, no chapter or article of the draft Constitution presented by the speaker contained anything ultimately new, but they were only a random presentation of international pacts on human rights and the Universal Declaration of Human Rights. Some well-known statements were also defined in Latypov's report, for example, the permanency of the Constitution as assurance of its credibility both with the population and the authorities, with reference to the US Constitution, to which only 26 out of over three thousands proposed amendments were adopted during 218 years of its existence. However, this information, though important and interesting, was not directly related to the draft Constitution proposed. The presented draft Constitution, as Z. Latypov admitted, did not contain any specific rules: 'We do not introduce any specific rules here because we have no regulatory framework on many issues today. We only introduce principles, and all the rest is based on the living conditions, circumstances we will live in. Naturally, all this will be changing.' When referring to the US Constitution, the speaker should have reminded of the fact that there had been no regulatory framework either at the time when it had been adopted. It is not that the Constitution should adjust to any laws, which existed before, but the Constitution itself should become the basis for adoption of laws.

The only difference from the draft Constitution presented by Z. Latypov was in the definition of the republic status resulting from the unilateral interpretation of the Resolution of the Supreme Soviet of the republic of 16

March 1992: 'The Republic of Tatarstan is a sovereign democratic law-governed state within the Russian Federation.' It should be noted that when talking about Article 56 of his draft Constitution, without providing insight into the relations between Tatarstan and Russia, the speaker mentioned only in passing the principle of delegation of authorities between Russia and Tatarstan. It is anyone's guess whether the concept of mutual delegation of authorities dropped out of the report deliberately or undeliberately.

The speaker failed to give a satisfactory answer to any of the questions, including those about the republic citizenship, the attitude of the state towards religious festivals, and the relationship between two state languages. The speaker became deadlocked when M. Mulyukov, pointing out to the inconsistency between the draft Constitution presented and the Declaration on the State Sovereignty and the referendum results, asked: 'Why do you try again to include Tatarstan into the Russian Federation in your draft Constitution, despite the people's will and the referendum?' Latypov answered that certain legal documents adopted in the Supreme Soviet and the referendum were a basis for defining Tatarstan as a constituent entity of the Russian Federation. It remained unclear what documents he was talking about because until then Z. Latypov's colleagues only referred to the Resolution of the Supreme Soviet of Tatarstan of 16 March 1992. As regards the reference to the referendum made by those who were against the consideration of its results at the session, it was surprising. The following words of Z. Latypov sounded all the more strange: 'If you really want to make sure that I am wrong, you can apply to independent lawyers, so they can make a conclusion.' Obviously, the speaker 'forgot' that just before the referendum, while speaking at the session of the RSFSR Supreme Soviet, the chairman of the Constitutional Court of Russia V. Zorkin had already made a conclusion that the answer 'yes' at the referendum would be a legal basis for declaring the independence of Tatarstan. The mishap occurred when the speaker defined

the concept 'sovereignty.' The deputies noticed that it was present in the draft Constitution only formally. Thus, A. Akhatov asked the speaker the following question: 'Is there such kind of a sovereign state on our planet that preserves its sovereignty being a part of another sovereign state?' The reply: 'Bashkiria, Chuvashia—they all adopted sovereignty,' raised a burst of laughter in the conference room.

V. Mikhaylov recited the fundamental principles of another draft Constitution from the 'Narodovlastiye' group. Much attention in his report was paid to human rights and their relation to group rights. Emphasising that human rights are the core of the law in general, he said: 'Any group rights can result from the rights of a person, and it is never vice versa... we abandon the tradition when the Constitution speaks on behalf of the people.'

In many respects the draft Constitution presented by 'Narodovlastiye' was very much like the draft Constitution of 'The Movement of Democratic Reforms': it was implied that the Supreme Soviet must not have any Presidium, which, in their opinion, was impossible to find in any constitution of democratic countries [CA TR SC, Collection P-3610, list 1, File 2072, Sheet 449], the same approaches were observed as regards the organisation of local self-government, description of the problems of separation of powers, election of administration heads. This draft Constitution represented Tatarstan as a parliamentary republic, where the government was accountable to the parliament not to the president. According to the deputies of the 'Narodovlastiye' group, the Constitutional Court was the last instance in solving the questions of compliance of laws and resolutions of the Supreme Soviet with the Constitution of the republic. It goes without saying that this quite democratic statement did not and could not receive any objections from the deputies. There were objections on other issues, though. Thus, the Deputy A. Kolesnik asked about the consistency of the presented draft Constitution with traditions and specifics of the Republic of Tatarstan, and it was for a reason since this draft Constitution equally suited

to any region of Russia. His answer sounded vague. A. Kolesnik called V. Mikhailov's attention to the fact that the judicial system of Tatarstan, according to the draft Constitution proposed by 'Narodovlastiye,' was to be liquidated and become entirely Russian. There was an argument in reply that citizens of Tatarstan were citizens of the Russian Federation, and they would demand protection of their rights in the name of the Russian Federation.

F. Safiullin asked several questions regarding the non-compliance of the draft Constitution proposed by 'Narodovlastiye' with the referendum results and suggested excluding it from consideration. I. Salakhov objected to this, saying that since none of the three drafts complied with the referendum results, all of them should be excluded from consideration. M. Shaimiev interfered with the discussion: 'I cannot agree with the view of Deputy Salakhov because the content of the draft Constitution proposed by the constitutional committee of the Supreme Soviet is arranged accurately with the articles in strict compliance with the referendum results. This is described in my report' [CA TR SC, Fund P-3610, Inventory 1, File 2072, Sheet 463].

The chairman of the Supreme Soviet F. Mukhametshin noted: since the draft Constitutions have not been discussed in the committees yet, they should be submitted there, and this will be the most sensible and real approach. The deputies of the 'Soglasiiye' group expressed an opinion that three key statements needed to be included into the official draft Constitution: it should not allow any discrimination on the language grounds, including restrictions on professions, it should contain an article on the preservation of Russian citizenship in Tatarstan and a clause on the territorial integrity of the Russian Federation.

F. Mukhametshin found that the deputies were getting so far ahead because one of the drafts should be taken as a basis first, and only after that any proposals should be introduced. M. Shaimiev viewed the proposition of 'Soglasiiye' rather as a political speech intended to have a certain effect and reminded that the group leader I. Grachyov was in the

constitutional committee, where—after long discussions—the following wording of Article 23 was approved: 'Citizens of the Republic of Tatarstan are allowed to have dual citizenship, and the conditions for exercising this right shall be determined by a contract, agreement with the Russian Federation and other states. Citizens of the Republic of Tatarstan can preserve, at their option, the citizenship of the Russian Federation—Russia. Every person has the right to choose citizenship and the right to change it. It is prohibited to deprive anyone of citizenship or the right to change it' [CA TR SC, Fund P-3610, Inventory 1, File 2072, Sheet 465].

V. Vakhitov reminded the audience that the draft Constitution, which had been presented by the president, had had a nationwide discussion within two months, and only this draft received proposal for amendments. The two alternative draft Constitutions became only available two days before. For this reason he noted that the draft, which had a nationwide discussion, should be preferred.

The members of the 'Soglasiiye' deputy group I. Grachyov, B. Kozlov, M. Khafizov, I. Sultanov, and N. Gorshunov tried to prevent taking the official draft Constitution as a basis and submitting it to the committee, insisting on the discussion of all three drafts. In their turn, the deputies of the 'Tatarstan' group F. Safiullin and R. Yusupov, while standing their ground that the two alternative drafts contradicted with the referendum results and the Declaration on the State Sovereignty, insisted on taking the draft Constitution of the Supreme Soviet as a basis [CA TR SC, XI, Vol. 1, Sheet 28].

It was decided to submit all the three draft Constitutions to the committee. The session discontinued its work to resume it on 6 July.

It seemed that the work was coming to an end. The main approaches to the critical articles of the Constitution were determined, its main articles were defined, a great work was done towards making amendments to the draft, which was discussed. It only remained to come to an agreement on the following key issues: relations with Russia and determining the citizenship. Naturally, this did not mean that the remaining questions had been resolved, and

there were no disagreements regarding them. They still remained but closely related to these two problems.

The XI Session of the Supreme Soviet, which opened on 28 September 1992, was marked up by a new stage in the discussion of the Constitution.

The chairman of the Supreme Soviet F. Mukhametshin read out a draft agenda consisting of 12 items in the Tatar language. The question on the draft Constitution was listed as number one in it [CA TR SC, XI, Vol. 1, Sheets 6–7]. However, there were still proposals on the agenda coming in. Sometimes there were questions rushing in from outside. The deputies tried to bring up for consideration of their colleagues issues on the rise in crime, unemployment, increased poverty of people, the privatisation process, and many more. Much prominence was given to F. Bayramova's question on the evaluation of actions of law enforcement bodies of Menzelinsk and Naberezhnye Chelny: it concerned the use of firearms by officers of these bodies on 20 August 1992 against activists of a national movement. During this operation 26 people were wounded, and then 68 people were arrested.

F. Bayramova's information aroused a stormy reaction of the deputies. The chairman interrupted the debates and put F. Bayramova's proposal to a vote, but it did not pass. Other similar proposals did not pass either. Sometimes it came to appeals not to discuss the draft Constitution but pay attention to people's needs and only discuss everyday problems. No doubt that in such appeals, apart from well understandable concern with people's fates, there was an intention to postpone the consideration of the draft Constitution. Thus, the Deputy V. Mikhaylov suggested that the draft should be excluded from consideration allegedly due to its poor preparation, absence of independent examination, and amendments from the 'Soglasnye' group.

It did not seem possible to override the draft Constitution by other questions whatever important they were. The price of this question was too high.

The speaker on the new draft Constitution of the republic, minister of Justice A. Salabayev stated that all the committees of the Supreme Soviet and many people's deputies participated in the improvement of the draft. 'Though we did not agree always and in everything, the introduced proposals and remarks helped the constitutional committee a lot, we believe they let it work out a number of fundamental provisions of the draft Constitution more correctly,' said the minister. He said that the draft Constitution had undergone the expertise of the Juris Doctors Christian Diki from Switzerland and Christian Weber from the Department of Public, Civil, and European Law of the Munich University. Amendments were made to six sections of the draft out of seven, to 59 articles out of 175. Three articles were newly adopted, and six articles were excluded. After that the speaker covered a number of critically important issues of the draft Constitution. One of these issues was to decide who would adopt the Constitution: the Supreme Soviet or the nationwide referendum?

The changes proposed by the committee had to do with chapter two on the economic system of the republic. 'The committee,' said A. Salabayev, 'assumed that democracy and sovereignty only make sense when they are supported by a respective economic base and the right of the people to dispose of their own property... Article 8 notably appeared in this exact chapter. It reads that the Earth, its mineral resources, water, forest, and other natural resources, plant and animal life, state budget funds, state bank assets, and the cultural and educational values of the peoples of Tatarstan, and other property that ensures the economic independence of the republic and preserves material and spiritual culture are a national asset.'

The minister's report gave much prominence to the citizenship question recorded in the draft with the consideration of the deputies' comments. The speaker noted that the remarks contained different, sometimes opposite stances, and this required more weighted approaches that took into account the existing reality and international rules from the constitutional

committee. The most essential and therefore controversial was about the nature of relations between the Republic of Tatarstan and the Russian Federation. Nevertheless, as the speaker noted, the committee's stance in this question was unwavering, which is that the Republic of Tatarstan should build its relations with Russia on the basis of a contract with a capital C, and as a mechanism for its implementation special agreements should be prepared. The following words of the speaker were accepted ambiguously by the deputies: 'The policy adopted by the republic to only build relations with Russia horizontally, we believe, is the only way of all civilised states. The international expansion of the Republic of Tatarstan as a sovereign state will require its absolute compliance with international law in relations with other states.' The speaker stated that compliance with international legislation and the recognition of its priority over internal legislation are prerequisites for the recognition of Tatarstan by other states. A. Salabayev described in detail the provisions of the draft Constitution on relations between different branches of government, the role and place of judicial bodies, local authorities, and the electoral system [CA TR SC, XI, Vol. 1, Sheets 435–439].

The questions addressed to the speaker were concerned with the restriction of the rights and abilities of the Supreme Soviet and the strengthening of presidential power, which gave rise to the question of the impeachment process for the president of the Republic. The discussions were indicators of society's anxiety regarding the ambiguous prospect of the democratic development of the republic.

Just like at the previous session, the deputies focused squarely on questions of the relation between Tatarstan and Russia and citizenship in the republic. F. Bayramova repeated her question: 'Will Tatars living outside the republic get the opportunity to acquire citizenship in Tatarstan?' The speaker answered that he had exchanged opinions on this issue with Fauziakhanum just before the session, but they ultimately failed to reach common ground. They agreed that F. Bayramova would make the respective amendment to the draft.

M. Mulyukov brought his own vision to the issue of citizenship. In his view, the issue should be about Tatarstan citizenship alone. All inhabitants of the Republic should have this right, along with Tatars who want to gain this right and live outside the country. Questions of whether the inhabitants of Tatarstan can also be citizens of other countries should be decided by agreement between Tatarstan and other countries [CA TR SC, XI, Vol. 1, Sheet 535].

A group of deputies referred to as 'Soglasie' was concerned with the question of nationality, but from a different perspective: will a person lose Russian citizenship if it has not yet been legally formalised? Of course, such concerns were groundless because first in the draft and next in the Constitution it was made clear that no one shall be forcibly deprived of citizenship, and citizens of Tatarstan shall retain Russian nationality. But at the same time, there was a sense that the group did not actually share a consensus on the matter.

The deputies' questions and A. Salabayev's responses got the blood stirring in the hall and in discussions between the individual deputies. Sometimes it took the chairman a while to get some deputies under control who got carried away. Thus, N. Mansurov, who was outraged that his amendment on the protection of sovereignty and territorial integrity had failed, posed the question: 'Does a sovereign state have the right to that protection?' A. Salabayev was in a bind. He attempted to refute the comment and the amendment of the deputy on the basis that the deputy only tried to address this issue by building up the armed forces of the Republic, while the protection of sovereignty actually takes place through the adoption of laws and economic and financial policies. According to the minister, the decision to build up the armed forces was premature [CA TR SC, XI, Vol. 1, Sheet 434]. N. Mansurov picked up on some of the confusion of the speaker and insisted on the inclusion of such authority in the Constitution. This time, A. Salabayev put a quick end to the dispute: 'I think that after negotiations have been concluded these issues will be resolved somehow.'

Deputies were concerned about the treaty between Russia and Tatarstan. Would it not be practical to abstain from adopting the Constitution until the completion of the negotiation process and the signing of the treaty with Russia? Would that open the door to discrepancies as a consequence that will be harder to resolve afterwards? The same question in various forms was posed by deputies of the 'Soglasie' group. And it was not just the deputies who were interested in it. Numerous publications in newspapers as well as radio and television talks of representatives from different groups of the population and various nationalities indicated that it was necessary to avoid making a mistake in this matter.

The address by the president on the fate of the Treaty between Russia and Tatarstan was more than relevant. M. Shaimiev stated that the draft Constitution in accordance with the Declaration provided that relations between Tatarstan and Russia shall be based on a treaty, and the mechanism for its implementation will be based in separate agreements. The president added: 'If during the signing certain fundamental questions emerge, I do not think we should deprive ourselves the right to propose changes beforehand' [CA TR SC, XI, Vol. 1, Sheet 474]. This was relatively new to the approach to relations between Russia and Tatarstan because it made them more dynamic and was not a concrete result of the negotiation process.

Disputes on the rest of the agenda were triggered by an extreme emotional response: should they start an article-by-article discussion of the draft Constitution or conclude discussions on matters of principle before that. T. Abdullin proposed a consensus to hold an article-by-article discussion with emphasis on the issue of the republic's state structure. But the offer was not understood fully. Deputy Y. Reshetov was concerned that only 145 people voted for the draft Constitution at the May session of the Supreme Soviet, and that was not consistent with the Regulatory Norm of a two-thirds majority, so he proposed to conciliate the fundamental aspects of the draft. 'To reach an agreement and then move forward!

he said [CA TR SC, XI, Vol. 1, Sheet 485]. With the support of some other deputies, A. Efremov proposed to hear out the opinion of A. Salabayev on just three articles of the draft Constitution, about which the deputies had a principled disagreement, and hold a discussion only on these issues. The chairman agreed with this suggestion but with a compromise of his own: when focusing on the three articles, the speakers can also touch upon other articles of the draft.

Based on the voting results, the deputies began its article-by-article discussion.

Y. Reshetov calmed down and explained the stridency of his speech by saying it should be a question of the concerted will of the majority of deputies who are backed by voters. He offered to discuss policy questions regarding relations with the Russian Federation, the rule of law in Tatarstan, and the state languages. The preservation of the principle of the rule of law of Tatarstan in the Constitution, according to him, would mean its secession from Russia. This article, as the deputy pointed out, did not correspond to the international norm of the territorial integrity and political unity of the state, or to 60% of those interviewed who were in favour of sovereignty for the Republic within the Russian Federation. Y. Reshetov stated categorically that the article under discussion will never be approved by the Russian authorities. The question of languages, in the view of Y. Reshetov, also needed to be discussed. 'Despite the Declaration,' he said, 'here ... they only voted for one official language to remain in the Republic—Tatar.'

That final sentence from Y. Reshetov caused president M. Shaimiev to react immediately. He stated that the draft Constitution contains Article 4, which states that the official languages in the Tatarstan Republic are both Tatar and Russian. This was to the same extent obvious for the majority of deputies as the rejection of Y. Reshetov's assertion, which was false. The noise in the hall demonstrated exactly that [CA TR SC, XI, Vol. 1, Sheet 491]. Y. Reshetov also heard the criticism expressed by deputy M. Mulyukov.

Y. Reshetov's rendering of the superiority of the rule of law in Tatarstan was even criticised by his peers. One of them explained to Y. Reshetov that it was not a matter of secession from Russia: the laws of the Republic of Tatarstan on issues relating to its administration have supreme judicial authority, and regarding questions referred by the Republic of Tatarstan to the federal government the laws of the Russian Federation shall be in force in Tatarstan [CA TR SC, XI, Vol. 1, Sheet 504].

An artificial focus on the question of relations between Tatarstan and the Russian Federation outraged the women of the corps of deputies. 'Every meeting,' angrily stated deputy L. Zelenovskaya, 'we start with the question: Are we leaving Russia or not. But we have already had a referendum in that regard. That referendum decided that we are a sovereign state. And sovereign states are subject to international law, meaning our economic rights are sovereign, and our political rights are sovereign... No, we are not going anywhere. Are we claiming any part of Russia, or is Russia taking any part of our territory?' L. Zelenovskaya expressed herself on the issue of citizenship loud and clear: 'By accepting our Constitution, we are all—according to our own wishes, of course—citizens of Tatarstan. And anyone who wants dual citizenship in Russia or anywhere else, they should announce their desire' [CA TR SC, XI, Vol. 1, Sheet 555].

There was a sense that the positions of deputies from different political tendencies were gradually coming together. The proposal to put the three articles under discussion to a second referendum was not supported. Deputy A. Ziatdinova expressed the opinion of the majority: 'The people expressed their opinion on 21 March clearly enough, so I plead that we do not reopen that issue' [CA TR SC, XI, Vol. 1, Sheet 500]. And that is exactly what they did, never again returning to the topic.

After such boisterous debates, some deputies from 'Soglasiiye' focused on the issue of setting limits on the powers of the president. They insisted that the Constitution should contain a norm for the dismissal of the president from their office should they break the law and

establish the right of the impeachment of the president by the Supreme Council, bearing in mind that 'a collective body will always be more objective compared with any one person, no matter how many merit badges they have racked up, and so on' [CA TR SC, XI, Vol. 1, Sheet 502]. The proposal was rejected as the Argumentation was unsuccessful: throughout history there have been many cases where one person was right, and the majority was wrong.

The situation among the deputies gradually became less tense. What emerged next was an illusion of full reconciliation. Someone even made the proposal to raise a white flag of reconciliation on behalf of the Republic. But F. Mukhametshin's reaction to it was instantaneous: 'We do not intend to raise a white flag above the building of the Supreme Council, I most strenuously object!' [CA TR SC, XI, Vol. 1, Sheet 500].

A consensus agreement was still very far away. Before the Constitution could be adopted, it had to overcome a particular amount of resistance. Some deputies tried to completely downplay the results of the session. One of them stated boldly that there was no talk at the session about real sovereignty, it was simply the manipulation and deception of false sovereignty, and the level of understanding of human rights on behalf of the current members of the Supreme Council made it impossible to adopt a normal Constitution. He suggested that all voluntary organisations and parties should produce their drafts for the Constitution, so that it would not just be effective while M. Shaimiev was president of the Republic.

'So will parties have their own Constitutions?' This question from the president could not help but puzzle the immensely self-confident deputy. Everyone knew that except for the two already rejected there were no other projects.

That statement gave rise to displeasure in the hall. Even the deputies from 'Soglasiiye' stopped talking about how the president was backing a bad project. On the contrary, it was pointed out that the Constitution Commission did an excellent job, and normal discussion on the draft Constitution was convened just to cre-

ate a broad-based commission and correct any imperfections in the project [CA TR SC, XI, Vol. 1, Sheet 508].

The subsequent presentation provided an objective assessment of the draft Constitution, in which it was stated—more than in previous constitutions—that the rights of individuals and citizens were clearly separated. The idea of establishing a Conciliation Commission was supported, and it was ultimately decided to adopt a Constitution at the special session.

The president of the Republic M. Shaimiev offered to adopt a Constitution by referendum on the conciliation commission. But the representatives of the 'Soglasie' deputy group, especially I. Grachyov, were strongly opposed to that proposal. The experience of the referendum on the status of the Republic led them to believe that an official draft Constitution would be supported by the people. For that reason, said deputy group agreed to adopt the Constitution by the Supreme Council, although earlier it testified that the current Supreme Council was inadequate for such a task...

The XII session of the Supreme Council of the Republic of Tatarstan was opened on 28 October 1992 and lasted for three days. The proceedings were devoted to an article-by-article discussion of the draft Constitution. Doctors of Juridical Science V. Likhachyov, B. Zheleznov and Candidates of Legal Sciences R. Biktagirov, A. Karimov, R. Tarnapolsky, G. Khabibullina, and Sh. Yagudin were invited to contribute as legal counsels. In the Conference Room were also Y. Yarov, the vice chairman of the Supreme Soviet of the RSFSR, and O. Rumyantsev, the executive secretary of the Constitutional Commission of the Supreme Council of Russian Federation. They not only followed the progress of the session but also arranged press conferences and consulted deputies from 'Soglasie.'

The minister of Justice A. Salabayev spoke on the main issue of the draft Constitution.

Despite the agreements of the previous session, 'Soglasie' deputies attempted to include some additional issues on the agenda. I. Grachyov said this was because none of the

voters told him to adopt the Constitution on an urgent basis, but everyone was asking to sort out transport, prices, and pensions [CA TR SC, XII, Vol. 1, Sheet 6]. But deputies voted for the session to be completely focused on the discussion of a draft Constitution.

In his opening statement, the chairman of the Supreme Soviet F. Mukhametshin pointed out that since the adoption of the Declaration of State Sovereignty more than two years had passed. 'During this period,' he said, 'in this hall and in the media there have been various opinions. One blames us that the Supreme Soviet delays discussing the Constitution yet demands its immediate adoption, while another until now has taken the position that it is too early to adopt it. As chairman of the Supreme Soviet, I disagree with such judgments. The Constitution of a sovereign State is not the place for unnecessary haste or unwarranted slowness' [CA TR SC, XII, Vol. 1, Sheet 18]. By pointing out the historic scope of the document, F. Mukhametshin indicated that succeeding generations will have to live under the new Constitution too. He called on deputies who had different political views and beliefs to come together for the achievement of real statehood, unity, and the republic's prosperity [CA TR SC, XII, Vol. 1, Sheet 23].

But the deputies from 'Soglasie' were reluctant to be included in this unity. They were running to maintain their concept of the Constitution by amending its formal draft: they submitted ninety-eight articles from the projects rejected on 21 May as amendments. The plan was to have a long discussion with the aim that the adoption of the Constitution would fail.

B. Kozlov started an attack by expressing surprise that the chairman of the Supreme Soviet gave the introductory speech and not the president—that is, an executor and not a legislator. F. Mukhametshin answered straight away: 'First of all, I am not an executive entity, I am the chairman of the Supreme Soviet, and I made the introductory remarks before the start of the discussions on the Constitution. I never said anything about the Constitutional Commission.'

Almost all the deputies from 'Soglasiiye,' one by one, and sometimes even interrupting each other with references to regulations and procedural irregularities, began putting forth various claims to the Presidium of the Supreme Soviet in order to delay the adoption of the Constitution.

Finally, a member of the Constitution Commission and the minister of Justice A. Salabayev took the stand. He reported that since the previous session of the Supreme Council the People's Deputies wrote 140 amendments and comments on the preamble and 59 articles of the draft Constitution that related to citizenship, relations with the Russian Federation, and the activity of the Supreme Council, its Presidium, and their competence [CA TR SC, XII, Vol. 1, Sheets 39–40]. He reported that deputies from 'Soglasiiye' made amendments contrary to the formal draft and relevant only to the position of the group that was rejected on 21 May. The minister described a number of amendments that were made by the Tatarstan deputy group, which did not receive consent from the Constitutional Commission, including the amendment proposed by F. Bayramova that only the Tatar language should be official in the Republic (defending her position, F. Bayramova claimed that where two languages are declared as official, there is only one used in practice. She gave an example from 1921, when two languages were claimed as official in the Republic, but in fact only Russian became official).

Unlike F. Bayramova, the deputies from 'Soglasiiye' insisted on including two official languages in the constitution. The principle of equality for Tatar and Russian was stipulated in the draft Constitution.

The speaker A. Salabayev reported that the constitutional Commission, taking into account the relevant amendments, held the view that in the article on citizenship, which establishes citizenship in the Republic, the following provision should be set out: 'Citizens of the Republic of Tatarstan may hold citizenship in other countries, the conditions for the exercise of which are determined by treaties with the relevant states. Citizens of Tatarstan can maintain citizenship in the Russian Federation by

their choice.' The speaker stated that the Commission on Legislation, where deputies from 'Soglasiiye' prevailed, proposed that the last sentence should be formulated this way: 'All citizens of the Republic of Tatarstan are at the same time citizens of the Russian Federation.' They did not like the position where citizens of Tatarstan could retain Russian citizenship by their will, and the deputies from 'Soglasiiye' proposed removing the phrase 'by their will.' 'I insist on that formulation,' said one of them, 'so if it (the formulation. – I. T.) is not accepted, for me it will be conclusive proof of the deprivation of Russian citizenship,' and categorically threatened not to participate in the voting. The Commission on Industry and other individual deputies also suggested removing the words 'by their will' and replacing them with the following more flexible phrase: 'they retain citizenship in the Russian Federation' [CA TR SC, XII, Vol. 1, Sheet 144].

A verbal dispute between the deputies of 'Soglasiiye' and the reporter resulted in a showdown with the party 'Ittifak' and TCC. I. Grachyov said into the microphone: '...for the sake of meeting the requirement of 10 thousand people who want to renounce Russian citizenship you make two million or more write some statement to state their will in some way,' and threatened that the list of people requesting Russian citizenship must be given into 'Ittifak' and TCC [CA TR SC, XII, Vol. 1, Sheet 148]. It was hard to separate falsehoods from reality in those words; emotions were too closely linked with the substance of the matter. However, the question had begun to assume an ethnic overtone, there was no doubt in it. The further development of the situation spoke of the fact that the majority of deputies did not want that. The noise of disputes and discussions broke out in the hall. O. Ermakova was very active and adopted the position of 'Soglasiiye' deputies regarding the final step of discussions on Article 23 and its citizenship rules. Her vote sometimes overlapped with the votes of several other deputies, including the speaker and Chairperson.

After long and heated discussions the article was adopted in the version proposed by

the Constitutional Commission. A conciliation commission headed by the president of the Republic was established, which—in addition to representatives of deputy groups—included professors I. Tagirov and B. Zheleznov. It succeeded in getting everyone to agree on disputed questions.

On 6 November the XII session concluded its work on the adoption of the new Constitution of the republic. It embraced the will of the people reflected in the referendum about turning the Republic into a sovereign state. The first lines of the document state that '...this Constitution is adopted and proclaimed according to the results of the popular vote (referendum) on the question of the Republic of Tatarstan's Statehood. The first article brought to life the integrity of the Declaration and referendum: 'The Republic of Tatarstan is a sovereign, democratic state that expresses the will and interests of all the multinational people of the Republic. Sovereignty and the powers of the state emanate from the people. State sovereignty is the inherent status of the Republic of Tatarstan.' Article 59 of the Constitution stipulated that the laws of the Republic of Tatarstan have precedence throughout its territory if they do not contradict with the international commitments of the Republic of Tatarstan, and Article 60 settled the inviolability of its territory. Article 61 established relations between the Russian Federation and Tatarstan: 'The Republic of Tatarstan is a sovereign state and a subject of international law associated with the Russian Federation on the basis of a treaty on the mutual delegation of powers.' It is important to stress that this Article was documented before the signing of the bilateral treaty.

The Ordinance 'On the Procedure of the Introduction of the Constitution in the Republic of Tatarstan' was issued, and it was also decided to submit the relevant bill to be considered during the XIII session. In terms of composition, the proposed draft legislation 'On the Procedure of the Introduction of the Constitution of the Republic of Tatarstan' included 13 articles. The most important among them was Article 11, which was expressed in the following way:

'Taking into account the adoption of a new Constitution in the republic, Tatarstan will apply to the Supreme Council of the Russian Federation with a proposal for the inclusion of provisions on treaty/constitutional relations between the Republic of Tatarstan and the Russian Federation in the Basic Laws of the Russian Federation [CA TR SC, XII, Vol. 1, Sheet 95].

The struggle for the Constitution did not stop on there but also took on other forms.

The attack on the adopted Constitution was the continuation of the fight during its initial discussions. The 'Soglasie' deputies continued their consultations with well-known political circles in Moscow that were opposed to the Constitution of Tatarstan. On 12 November 1992 on the TV programme 'Utro' on Channel One, a presentation by the secretary responsible for the Constitutional Commission of the Supreme Council of the Russian Federation O. Rumyantsev was aired with a one-sided, tendentious interpretation of some of the articles of Tatarstan.

It gave birth to the development of the draft statement of the Presidium of the Supreme Council of the Republic of Tatarstan, which read: 'The Constitution of the Republic of Tatarstan legislatively strengthens the changes that occurred in its legal status, the commencement of which was enshrined in the Declaration of State Sovereignty of the Republic of Tatarstan on 30 August 1990 and following the outcome of the national referendum on 21 March 1992.' The course of action of certain groups was condemned in a statement aimed at discrediting the objective reformation and nation-building process of the Republic of Tatarstan in its bid for statehood. It stated that O. Rumyantsev's statements were contrary to the continued negotiating processes between the leaders of Tatarstan and Russia and questioned his sincerity in finally entering into the long-awaited agreement between the republics. The statement concluded with the following: 'We are convinced that the forthcoming signing of the treaty between the Republic of Tatarstan and the Russian Federation will satisfy the aspirations of our peoples. The adoption of the

Constitution of sovereign Tatarstan will contribute to this. It is founded on the principles of the self-determination of peoples and their equality, respect for human rights, territorial integrity, and the preservation of the historic patterns of a comprehensive linkage with the Russian Federation—Russia' [CA TR SC, XII, Vol. 1, Sheets 83–84].

F. Mukhametshin, at a meeting with R. Khasbulatov, the chairman of the Supreme Council of the RSFSR, before the Congress of the People's Deputies of the RSFSR, expressed his dissatisfaction with the statement of O. Rummyantsev and also some journalists, who tendentiously highlighted the developments in Tatarstan. F. Mukhametshin briefed R. Khasbulatov on the text of the Presidium of the Supreme Council statement and demanded that it should be featured in all media venues. R. Khasbulatov agreed to this only when they said that otherwise it will show up in the independent papers. Furthermore, F. Mukhametshin was featured on television. The chairman of the Supreme Soviet of the Republic of Tatarstan also spoke at the Congress of the People's Deputies of the RSFSR.

The truth about the Constitution of a sovereign Tatarstan blazed its own trail all the way up to the ears of the Russian public. The leadership of the Republic was flooded with telegrams of congratulations from everywhere. His words to the effect that Tatarstan set a moral standard and with its actions models the future of democratic Russia were confirmed. An important result of the meeting between R. Khasbulatov and F. Mukhametshin was a statement they made about the need to sign the treaty on the new strategic relationship between Russia and Tatarstan [CA TR SC, XII, Vol. 1, Sheet 90].

At the same time, the president of the Republic M. Shaimiev was in the midst of productive work on the Constitutional Commission of the Supreme Council of the RSFSR. The intensity of the political situation, compounded by known political forces, gradually lessened. The relationship between the leaders of Russia and Tatarstan fell into a normal pattern of business. All of this created conditions for the incremen-

tal establishment of the Republic Legislative Database.

In preparation for the regular session of the Supreme Council of the RT on its Presidium, issues on the relations between the Russian Federation and Tatarstan were only discussed a few times. The concepts of contractual/constitutional and constitutional/contractual relations were clarified, and the draft laws 'On the Prosecution Office of the Tatarstan Republic,' 'On the Election of Judges,' 'On the Election of the Supreme Arbitration Court' were discussed [CA TR SC, Fund R–3610, Inventory 1, File 2080, Sheets 63–66]. It was decided during the session to raise the question of the draft laws 'On the Constitutional Court of Tatarstan,' 'On the Supreme Arbitration Court of the Tatarstan Republic,' and 'On the Militia.' The draft laws 'On the Status of Judges in the Tatarstan Republic' and 'On the Judicial System in the Tatarstan Republic' were prepared by the vice chairman of the Supreme Court of the Republic M. Mavlyatshin, and the draft law 'On the Prosecution Office of the Tatarstan Republic' was developed by a legal team headed by the deputy prosecutor of the Republic K. Amirov. They were discussed and approved by the Procurator's Office collective of the Republic on 13 November 1992. In the explanatory memorandum of the Bill it is stated that its development 'is first of all aided by the establishment of a sovereign State, and the adoption of the new Constitution dictates the need for the legislative regulation of the activities of state authorities, including the Procurator's Office' [CA TR SC, Fund R–3610, Inventory 1, File 2080, Sheets 130–163].

All the bills described above were identified as part of the sixteen questions of the XIV session [CA TR SC, Fund R–3610, Inventory 1, d.File 2080, Sheets 81–82]. Their fate was anything but simple. Ultimately, these bills were not fated for success.

Following the adoption of the Constitution of the Tatarstan Republic, the situation was exacerbated. The opposition made sure that it would never come into effect or result in a struggle for sovereignty. Deputies of the Supreme Council of the RSFSR from Tatarstan

Morokin and Fakhrutdinov started to gather signatures to demand the devolution of the Constitution of Tatarstan for the consideration of the Constitutional Court of Russia. The members of 'Soglasiiye' began to develop what was called the 'Civil Forum,' where they tried to engage Russian political authority. For that hurriedly fixed, unlegislated, and in practice non-existent 'forum,' a document was prepared that condemned Tatarstan with accusations that it was attempting to dismember Russia.

From the Russian side, O. Rummyantsev, the secretary of the Constitutional Commission of the Russian Federation, was particularly active. Following his suggestion, on 16 September 1992 Moscow became the site of a meeting of the Supreme Council Commission of the Russian Federation headed by N. Medvedev on international relations and nation-state organisation. Issues regarding the Constitution of Tatarstan were discussed. O. Rummyantsev invited deputies and members of the 'Narodovlastiye' group of the Supreme Council of Tatarstan to attend. The State Secretary under the president of the Russian Federation G. Burbulis was invited to make the report, the same person who previously led the delegation of the Russian Federation during talks with the Delegation of Tatarstan regarding the preparation of a bilateral treaty. At the same time, V. Likhachyov, who headed the delegation of Tatarstan in these negotiations, was not invited to the meeting. Therefore, it was intentional that only one party was actually heard. The aim was to condemn the Russian delegation for being so conformable towards Tatarstan and to make them harden their position.

Before coming to the panel session, G. Burbulis asked in a telephone conversation with V. Likhachyov whether some order might be adopted clarifying the 60th article of the Constitution of Tatarstan with an approach consistent with Article 70 of the Constitution of the Russian Federation.

Following the presentation of G. Burbulis, O. Rummyantsev demanded that the Constitution of Tatarstan should be brought into line with the Constitution of the Russian Federation, and

that its implementation should be delayed. He also raised the issue of submitting the Constitution of Tatarstan to the Congress of the People's Deputies of the Russian Federation for their consideration. O. Rummyantsev's presentation also highlighted the requirement to refer the case of Tatarstan to the Constitutional Court of the Russian Federation. In order to bring the Constitution of Tatarstan into full compliance with the Constitution of the RSFSR, Rummyantsev set a date of two months. It was nothing other than an ultimatum. In case these requirements were not observed, strict precautions had to be made in relation to the Republic. In this case they meant an economic and financial blockade of Tatarstan, which would entail a total cessation of salaries, student grants, and pensions. But Tatarstan citizens, who participated in this meeting along with R. Muhamediev, N. Makhyanov, and the deputies of the Supreme Council of the Russian Federation resisted 'Rummyantsev's attempts.' On hearing this news, V. Likhachyov demanded that he should also be heard at the meeting.

During 23–24 September 1992 a cross meeting between two commissions was held, involving individual members of the Constitutional Commission of the Supreme Council of the RSFSR. It was attended by a group of lawyers, who were experts in political science, international and constitutional law, and also foreign and Russian journalists. Deputies of the Supreme Council of Tatarstan A. Kolesnik, F. Safullin, and vice president of the Republic V. Likhachyov were also present. Deputies from 'Narodovlastiye' distributed defamatory material to the meeting's attendees about the referendum, discussion, and adoption of the Constitution and the situation in Tatarstan.

The report of V. Likhachyov was heard first. He began his speech with proof that the Constitution is the logical end to the path endorsed by popular referendum that the Republic has travelled down since the adoption of the Declaration on State Sovereignty. V. Likhachyov stressed that Tatarstan changed its status in accordance with Article 70 of the Constitution of the RSFSR. The speaker reported that

in July the Russian Federation proposed drafting a series of bilateral treaties, but there was a breakdown after further negotiations. 'I have,' he said, 'the impression that the leadership of the Russian Federation does not want to be held accountable for determining the nature of the relationship with the Republic of Tatarstan, and of course, the initiative goes to the Supreme Council' [CA TR SC, XIII, Vol. 1, Sheet 54]. To the question of whether Tatarstan disrupts the territorial integrity of the Russian Federation and human rights, he answered 'no.' 'You have to be a pragmatist in politics and see the specific processes in social, legal, and other spheres,' claimed V. Likhachyov and made a detailed comment about his vision of the nature of bilateral treaty relations.

Afterwards, V. Likhachyov answered questions for an hour and a half. Most of them were asked by 'Soglasie' deputies from the Supreme Council of Tatarstan. 'As though they could not just ask them in Kazan, they had to come to Moscow for it,' joked V. Likhachyov. That joke was met warmly, and the discussion, contrary to the reckoning of certain participants of the meeting, carried forward as a bilateral equitable dialogue. At the end of the four-hour meeting G. Burbulis stated: 'From the political, legal, and economic perspectives, taking into account all the realities, Tatarstan is the only subject today that has the right to a special status and special rights' [CA TR SC, XIII, Vol. 1, Sheet 56]. After that the Commission adopted a regulation with a paragraph that included the meeting of the presidents of the Russian Federation and Tatarstan.

This meeting took place on 25 September 1992. At the meeting the presidents of the Russian Federation and Tatarstan discussed workable approaches to the definition of relations between Russia and Tatarstan. The essence of the Constitution of Tatarstan was also set out at the Council meeting of the heads of the republics of the Russian Federation. Thus, the taboo that distinct political forces wanted to include in the Constitution of Tatarstan was removed. Real opportunities made themselves apparent for the consideration of implementing a Constitution. This task was

fully completed by the XIII session of the Supreme Council of the RT.

The XIII session, by promulgating the Law on the enactment of the new Constitution of the Republic of Tatarstan, summarised the results of the path the Republic had travelled since the adoption of the Declaration on State Sovereignty on 30 August 1990. It was opened on 30 November 1992 at 10 o'clock. F. Mukhametshin, on behalf of the Presidium of the Supreme Council, made the proposal to consider a draft bill of 'On the Procedure of the Introduction of the Constitution of the Tatarstan Republic.' On the basis that the views of various deputy groups were known, R. Sirazeev recommended listening to those who attended the representative meetings of the Commission of the Supreme Council of the Russian Federation, and that a law on the introduction of the Constitution should be put to a recorded vote. Deputies from 'Soglasie' did not agree to this and tried to introduce an agenda with a number of other issues. They made every effort to defer the consideration of the draft law on the introduction of the Constitution by putting forth different arguments.

The agenda of the session was adopted with only one issue: 'On the Procedure of the Introduction of the Constitution of the Republic of Tatarstan.'

The first speaker was deputy A. Lozovoy. Although his report was short, the questions and answers following it were rather intense. For the most part, this encompassed relations between Tatarstan and Russia as well as citizenship. The speaker said that treaty provisions for the constitutional relationship must be negotiated with the leadership of the Russian Federation and established in the Constitution of the Russian Federation. The basis of the establishment was supposed to be a Treaty between the Republic of Tatarstan and the Russian Federation. Deputy F. Bayramova came out against it because, in her view, it would eliminate the principles of the rule of law in Tatarstan and, with that in mind, offered to remove Article 11 from consideration.

Although 11 people were registered for the debate, only those deputies were heard who

participated at the meeting of the Commission of the Supreme Council of the RSFSR. The story from F. Safiullin on the details of the proceedings was emotional and representative of an authorial vision of what happened at the meeting of the Commission. He precisely explicated the purpose of the meeting: prevent the introduction of the Constitution of Tatarstan until it is brought into conformity with Russian legislation. In case of the failure to meet this requirement, the Republic will face economic and financial sanctions.

I. Grachyov, a representative of 'Sogla-siye,' had a different view of the meeting. He, they say, was more Catholic than the Pope himself, and he defended Russia more zealously than its official representatives themselves. I. Grachyov attacked the Constitution and referendum in Tatarstan, probably more than anyone even in Moscow itself. Moreover, by reflecting the position of the leadership of the Supreme Council of the RSFSR, he denounced the delegation of the Russian Federation in negotiations with Tatarstan, saying they were too compliant and insufficiently strong in upholding the integrity of the Russian Federation, which the leaders of Tatarstan took quickly advantage of when they passed their Constitution. By his words it seemed that the negotiation process broke down because of Tatarstan and not because of a conflict on the subject between the executive and legislative branches of the Russian Federation itself, which soon turned into a great tragedy. The following words from Grachyov resounded as a fearsome accusation of the leadership of the Republic: 'These actions of the leadership of the Tatarstan Republic can be considered an attempt to wittingly deceive its people and the peoples of Russia. This is a path of pressure, ultimatums, and defiance that ignores the legitimate interests and rights of the Russian Federation' [CA TR SC, XIII, Vol. 1, Sheets 48–49]. It was strange and unclear which ultimatums and defiance ignored the legitimate interests and rights of Russia, and all the more what pressure could be put on Tatarstan.

The speech from V. Likhachyov in a way averted the impending disaster that I. Grachyov threatened. He explained the events in Moscow at the meeting of the Commission of the Supreme Council of the Russian Federation in detail and reported that after the completion of the Congress of the People's Deputies of the Russian Federation the negotiating process would be continued in order to bring about a bilateral treaty. The vice president expressed confidence that at the Congress the model of development of Tatarstan would be favourably received, despite possible attempts to put the issue on the Constitution of Tatarstan on the agenda.

Following the draft discussion, which was prepared by the drafting commission, the law was approved.

The XIV session of the Supreme Council of the RT, held 22–25 November 1992, was focused on bills aimed at putting the new Constitution of the Republic of Tatarstan into effect. This first discussion was on the report of the minister of Internal Affairs of the Republic S. Kirillov on the draft Law 'On the Militia.' The speaker emphasised the importance of this law in relation to the adoption of the new constitution, indicating that crime knew no boundaries, and that the Republic of Tatarstan occupies one criminal procedure space with the Russian Federation. The questions to the minister were mostly about the relations between the militia of Tatarstan and the Russian Federation. The general response to this was the words of the minister that the Militia of the Republic is guided by the law of the Russian Federation 'On the Militia,' which does not contravene the legislation and Constitution of Tatarstan [CA TR SC, Fund R–3610, Inventory 1, File 2142, Sheets 455–456].

Deputy M. Kurmanov compared the work of legislators with attempts to 'work on that crossword that exists in the law 'On the Militia of the Russian Federation.' The decoding was in order to make the bill compliant both with the Russian law 'On the Militia' and with the principles for a new Constitution of Tatarstan. V. Mikhaylov found the adoption of the law respecting the new Constitution inap-

appropriate because it was allegedly impossible to enforce in reality without laying down the boundaries of the Republic, and the law enforcement agencies of Tatarstan would not protect the rights of citizens of the Russian Federation, and so he proposed the resumption of all administrative links under the authority of the Russian Federation. This was consistent with the opinion of 'Soglasie,' whose members believed that the most positive features were taken from the Russian law 'On the Militia,' and the draft law broke the scope for the territorial operation of this law. Deputies of the 'Tatarstan' group in the debates on the report criticised the law because it stipulated that the Republic has a low level of authority, and it reminded regulators to implement Russian laws. At the end of the heated discussions the bill was adopted on its first reading [CA TR SC, Fund R-3610, Inventory 1, File 2142, Sheets 170-235].

Another crucial issue was with the discussion of the report by chairman of the Supreme Court of Tatarstan G. Baranov 'On the Status of Judges of the Tatarstan Republic.' In his address he stated: 'The adoption of the Republic's constitution now constitutionally enshrined the principle of the separation of powers into legislative, executive, and judicial branches. Thus, as an ordinary organ of the state, the court has been transformed into a separate branch of governmental authority.' G. Baranov indicated that many provisions of the Bill—not contrary to the sovereignty of the Republic—were drawn from the Tatarstan law in effect 'On the Status of the Russian Federation.' Then a discussion followed about relations with the Russian Federation and citizenship.

The bill continued to come under attack. I. Sultanov, who blamed the leadership of the Republic for hastily adopting laws regarding law enforcement authorities, warned: 'This haste, with which we have started to adopt laws on the judicial system, prosecutors, and law enforcement officials, ensures... that we all experience the difference between the Constitutions of the Republic of Tatarstan and the Russian Federation as well as between the laws of the Tatarstan Republic and the Russian Federation.'

The argument between F. Safiullin and M. Khafizov was interesting as it concerned a significant portion of their available time being dedicated to the issues of using the Tatar language in the judiciary. This time the deputies held similar positions. They both defended the norm requiring judges to have knowledge of two official languages. The only difference was that F. Safiullin wanted its immediate implementation, and M. Khafizov believed that it 'cannot be introduced at the current moment.' M. Khafizov did not appreciate the words of F. Safiullin on how there was no one to defend their mother tongue. He took it to be aimed at him and said that 'when you lived well and did not object to the current situation of the Tatar language,' he, Khafizov, and his comrades wrote letters to the regional party, the Presidium of the Supreme Soviet, and the Council of Ministers to express their abhorrence with the Tatar language's status in the Republic.

The developer of this concept did not pay attention to the issue of language in the draft law as vice president of the Supreme Court M. Mavlyatshin gave reasonable answers to the numerous questions and objections raised by deputies. At first, he swept aside the statements of certain speakers that this bill represents the copy of a Russian law and instead moved on to an explanation of the provisions of the draft law on bilingual judges. He stated that 70% of Tatarstan judges are already bilingual. The legality and necessity of the norm of bilingualism in the draft law, the judge reasoned, was intended to promote the objectivity of the proceedings and the professionalism of judges. He compared a judge who knows only one language to person who is colour blind.

Deputies were of the view that the pending bill will most likely be viable only under the condition of its consistency with the fundamental principles of the Constitution of the Republic and the principled positions of Russian law. The draft law concept was adopted on first reading.

Before moving discussions to the issue 'On the Draft Law "On the Organisation of Courts in the Tatarstan Republic,"' the president of

the Republic spoke on the language problem, explaining that the norm of bilingualism established in the draft law has to comply with the Law on Languages, which was allotted 10 years to be carried out, and does not apply to the current judges.

Deputies heard the chairman of the Supreme Court G. Baranov on the issue 'On the Draft Law "On the Organisation of Courts in the Tatarstan Republic."' The distinctive characteristic of the draft law in contrast to the current one was that it envisaged the introduction of the institution of justices of the peace, which brought judges closer to the people and contributed to the democratisation of society. According to the draft, the justice of the peace had to be appointed by the president of the Republic upon submission from the Supreme Court. Other judges had to be elected by the Supreme Court. The speaker made a detailed overview of the rights and obligations of judges, the structure of the court, and their relations with other branches of government.

Deputy V. Mikhaylov referred to all the legislative work done to that point as the moat separating them from the Russian Federation, and this bill was judged to be an expression of the policy aimed at making all judges be of indigenous nationality [CA TR SC, Fund R-3160, Inventory 1, File 2143, Sheet 3]. In his presentation he used the expression 'so-called indigenous nationality' but then understood that he offended the whole nation and stated that he made a mistake and was ready to apologise.

The vice chairman of the Supreme Court M. Mavlyatshin highlighted the features of the proposed bill. The introduction of the justice of the peace he assessed as a fundamental reform of the judicial system. Before, the speaker stated, courts were created for the protection of existing state structures, for protecting the party, and now they intend to directly serve the people. He also substantiated the economic feasibility of judicial reform [CA TR SC, Fund RP-3160, Inventory 1, File 2143, Sheet 15].

The vision proposed by the Supreme Court was endorsed and sent to the Commission on

Legislation in order to prepare a draft together with the Supreme Court to be considered in its first reading.

The next question was the draft legislation discussion of the RT 'On the Procurator's Office of the Tatarstan Republic.' The government prosecutor S. Nafiyev reported that the draft was written by a group of prosecution authorities in accordance with the wishes and statements of popular deputies of all levels, scientists, lawyers, and city and district procurator's officers. 'The project preserves all the valuable and currently enforceable laws in the Russian Federation, and during its development draft norms were used that are set forth in the Law on the Kazakhstan Procurator's Office Act of the former USSR,' he said [CA TR SC, Fund R-3160, Inventory 1, File 2143, Sheet 87]. The Prosecutor precisely described all the articles of the draft law and concluded that: 'The adoption of the Law 'On the Prosecutor's Office of The Republic of Tatarstan' will make it possible to create a system of public institutions with authority and complete the formation of the institutional and legal framework of its activities. Many practical questions were put to the speaker, and three popular deputies took the floor. The bill was adopted in its first reading.

The concluding address at the session was given to the chairman of the Supreme Soviet M. Mukhametshin. Observing that 1992 was not an easy one, he stressed that 'this year will go down in the historical chronicles of the multi-ethnic population of Tatarstan as a year of momentous achievements, deep societal transformation as well as the year when a sovereign State—the Republic of Tatarstan—was born [CA TR SC, Fund R-3160, inv.1, File 2143, Sheet 146].

As a whole, 1992 was a productive year, albeit not a simple one. Speaking generally, it was when the process of transforming Tatarstan from an autonomous national-state entity in the Russian Federation into a sovereign State with its own Constitution was finalised, which sets its relations with the Russian Federation on the foundation of a bilateral agreement.

But further developments showed that opponents to the formation of a sovereign Tatarstan would not give up.

The Constitution of Tatarstan brought about inaccurate reporting from certain quarters of Russia that did not want to enter into equitable relationships between Russia and Tatarstan. Since the opponents of Tatarstan sovereignty clustered around the chairman of the Supreme Soviet of the RSFSR R. Khasbulatov, a letter was sent to him signed by F. Mukhametshin reading: 'The democratic transformations that occurred in the Republic, responsive to the best interests of its multi-national people, did not satisfy certain political forces in the Russian Federation. The process of the establishment of sovereignty in many former autonomies continues to be largely perceived by them as a desire of the local ruling elites to maintain their power. A deliberate defamation of the objective process of reforming the national/state structure of the Republic of Tatarstan is in process, and it continues to give rise to a new statehood based on traditional friendship between its constituent peoples.'

The media played an unhelpful role in this. For instance, the presentation on 12 November of the TV programme 'Utro' on Channel One, with a popular deputy of Russia, the responsible secretary of the Constitutional Commission of the Supreme Soviet of the Russian Federation, O. Rumyantsev. In his interview he gave an unceremonious explanation of several provisions to articles of the new Constitution of the Republic of Tatarstan. 'We consider that some of his expressions are contrary to the continued negotiation process between the leaders of Tatarstan and Russia, calling into question their sincere wish to find a long-awaited consensus between the republics. Objectively, this contributes to an increase of the political turbulence in society and provokes interethnic discord between peoples.'

In these circumstances, the Presidium of the Supreme Soviet of the Republic of Tatarstan declared with full responsibility that no one will create conditions for political instability in the Republic or call into question traditional centuries-old bonds of friendship, fraternity,

and understanding between the people of different nationalities.

We are convinced that the forthcoming signing of the treaty between the Republic of Tatarstan and the Russian Federation achieves the aspirations of our peoples. The adoption of the Constitution of sovereign Tatarstan will contribute to this. It is founded on the principles of self-determination of peoples, their equality, respect for human rights, territorial integrity, and the preservation of historic patterns of a comprehensive linkage with the Russian Federation.

This letter somewhat subdued the opponents of Tatarstan's sovereignty. But intimidating the public with the breakup of Russia never stopped. The newspaper published materials each worse than the next. And an article in the *Argumenty i Fakty* newspaper entitled 'Is Russia falling apart?..' gave a clear sign of the breakup of Russia, even providing a map.

The central issues blamed Tatarstan and other former autonomies along with it for seeking secession from Russia, supposedly facilitated by a treaty-making practice distributing competences between each republic and the Federal Centre. Finally, the republics were blamed for seeking financial incentives for themselves.

We will highlight just a few substantive comments regarding these accusations here. First, no republic, all the more Tatarstan, was intending to leave the Russian Federation. Second, treaties between them and the Federal Centre, by delimiting administrative abilities and authority, would make it possible to ensure respect for the rule of law in the republics in the implementation of competences, which would be a recognition of them in full accordance with the document that established the Russian Federation and with the Declaration of Rights of the Working and Operating People, where it states very clearly that the republics determine the nature of relations with the Federal Centre themselves. Third, there was no question of any financial benefit for the republics. The republics negotiated with the authorities of the Russian Federation not about benefits but about equitable financial relationships.

On 1 April 1993 a meeting of the Presidium of the Supreme Soviet of Tatarstan was held, headed by the chairman of the Supreme Soviet of Republic Z. Valeeva. F. Mukhametshin and the president of the Republic M. Shaimiev were not in attendance, and Z. Valeeva only spoke with them by phone. They discussed the issue of the referendum of the Russian Federation on 25 April 1993 in Tatarstan, which was authorised to be held by decision of the IX Congress of People's Deputies of the Russian Federation. The issue at stake was whether or not to conduct it in Tatarstan itself. And if they were to conduct it, then what would it look like? All kinds of other smaller questions cropped up that flowed from this main one. On the basis of the laws of the Republic clearly defined in the Constitution of Tatarstan, the Russian Referendum should not be conducted on its territory because that would mean recognising Tatarstan as a subject of the Russian Federation. As a consequence, the sovereignty of the Republic would be violated. All the more, there was no treaty between the Russian Federation and Tatarstan for the establishment of relations between the republic and the federation. But on the basis of the rule of dual nationality stipulated by the Republic's Constitution, where residents of the Republic could also be citizens of the Russian Federation, the referendum had to be held on the territory of Tatarstan. Otherwise, the rights of people who also considered themselves citizens of the Russian Federation would be violated. The problem was to bridge these divides, to reconcile the contraries and the seemingly different conflicting principles.

Policies are a more subtle and flexible means than legal rules and concepts. They are intended to serve as the conciliating judge between contradictory legal norms. This meeting was an indication of how the reconciliation of particular issues regarding the suggestion to conduct a Russian referendum on the territory of Tatarstan was achieved.

Things got problematic straight away: How should they refer to the issue under discussion on the agenda? The vice chairman of the Supreme Soviet A. Lozovoy suggested naming

it: 'On the Regulation of the Congress of the People's Deputies of the Russian Federation on 25 April 1993.' This particular version was approved on the agenda. Z. Valeeva claimed that, except references to the documents of the Congress of the People's Deputies, we must proceed from the independent status of the Republic, and that Article 59 of the Constitution states that Tatarstan determines its status independently, the Republic did not sign the federal pact, and the Constitution of the Republic contains wording on dual citizenship.

The discussion began. Z. Valeeva pointed out the need to serve the rights of people who consider themselves citizens of the Russian Federation as a prevailing argument for the referendum. The members of the Presidium were not sure about the expediency and legitimacy of holding the referendum. They found themselves in a difficult situation because of the possibility of ambiguity in the Tatarstan Constitution on dual citizenship.

Two provisions contained in the Constitution clashed, namely: Tatarstan is a sovereign State where all inhabitants are only its citizens, and the rule on dual citizenship, where according to a certain interpretation people residing there can consider themselves citizens of only the Republic or only the Russian Federation. On the one hand, Tatarstan is a sovereign state and a subject of international law, and on the other, it is its citizens who are at once citizens of the Russian Federation. The sovereignty dictated to Tatarstan not to participate in the all-Russian referendum, along with dual nationality obligated them to adhere to the rights of the individual and citizen of the Russian Federation and thus to participate in Russian referendums. The members of the Presidium of the Supreme Council had to resolve these dilemmas.

A representative of the 'Tatarstan' group F. Safiullin placed emphasis on Tatarstan's sovereignty, which meant the Republic should not participate in the referendums of other states. I. Salakhov from 'Soglasie' on the contrary urged participation in the referendum on the grounds that citizens of Tatarstan are at once

also citizens of the Russian Federation. Then Z. Valeeva encouraged members of the Central Electoral Commission to consider the elections of deputies to the Supreme Council of the Republic. But its chairman I. Galliev stated that the Commission was unable to resolve these dilemmas. At the same time, he recalled that the Commission has experience taking part in Russian referendums gained during the presidential elections in the Russian Federation in June 1991, when conditions were created for anyone who wished to participate. Anyone who wanted to participate in the elections had the opportunity. In contrast to the situation at that time, in the current situation the Republic had its own Constitution, which incorporated dual citizenship. The Secretary of the Electoral Commission Zaripov drew the attention of attendants to the fact that Tatarstan has no law on citizenship, and that is why in accordance with the rule of dual citizenship stipulated in the Constitution a mechanism should be established to register those who would like to participate in the Russian referendum to vote. He offered to form the Electoral Commission as such a mechanism. The objections voiced about that approach were based on the absence of a treaty.

A consultation with qualified legal experts was required. The deputy minister of Justice R. Sayakhov stated that irrespective of the existence or absence of a treaty, 'we always have to ensure the right of citizens to express their choices on election day' [CA TR SC, Fund R-3160, Inventory 1, File 2143, Sheet 22]. The vice president of the RT V. Likhachyov concurred with the approach where human rights were put first and encouraged members of the Presidium to make the right decision, politically and legally.

In this difficult situation people were asking questions not just to each other but also to themselves. They were searching for an agreement both in society and in their own hearts. G. Kobelev suggested removing this issue from consideration as it supposedly should be considered with the participation of top officials. But the first officials of the Republic could not take sole responsibility for participation in the

Russian referendum. The question did not have a legal point but rather a political one. First, the referendum itself was the result of a conflict between the legislative and executive branches of the Russian Federation. And second, after getting involved in the referendum, it needed to be said which side Tatarstan is on. R. Valeev supported G. Kobelev and offered to address this issue with the participation of the president and chairman of the Supreme Soviet. The president said by phone: 'Do you want this decision to be made by one person?' Of course, there should have been a solution from more than just one person, and possibly not even only the Presidium should have taken part but the whole Supreme Soviet.

Some members of the Presidium considered that in this fluid environment it is best not to 'get involved in this scrimmage' [CA TR SC, Fund R-3160, Inventory 1, File 2143, Sheet 27].

Following its in-depth discussion, the Presidium adopted a Resolution 'On Ensuring Citizen Rights to Participate in the Russian Federation Referendum on 25 April 1993,' which stated: 'The Central Electoral Commission of the elections of People's Deputies of Tatarstan is to create conditions for the expression of the will of the citizens in the referendum on 25 April 1993' [CA TR SC, Fund R-3160, Inventory 1, File 2143, Sheet 53].

In the autumn of 1993 the events surrounding the opposition of the legislative and executive powers—that is, president Boris Yeltsin and the chairman of the Supreme Soviet of the Russian Federation Ruslan Khasbulatov—engulfed Russia. A vivid description of those events was relayed to the public in the article 'Democracy is only worth something if it is able to defend itself' by N. Dolgopolov in *Komsomolskaya Pravda*. The article featured such lines as 'October. A fateful month for Rus. The worst of all things that could possibly throw the country back into the past happened. But it only just looked that way. In 1993 we have found ourselves back in 1917, except now we have powerful tanks and murderous Kalashnikovs instead of broken down Mosin rifles. No matter how the events unfold, they

can only be called a tragedy or, without diplomacy, a civil war' [Komsomol'skaya pravda, 5 October 1993]. Indeed, it looked like the country was facing a full-fledged civil war. This was also reflected in the Address of president Boris Yeltsin to the people. '...In the Russian capital gunshots are being fired, and blood has been shed. Gunmen brought in from all over the country and incited by the White House sow death and destruction.'

The leaders of the Supreme Soviet called an extraordinary session, and B. Yeltsin divested Parliament and Congress of authority by his decree. Newspapers were filled with breaking news from the Presidential Administration and the Supreme Soviet. The issue of Komsomol'skaya Pravda from 23 September published a chronicle of the events under the title 'Who needs Great Russia, and who needs the White House.' It featured mini-interviews with vice president A. Rutskoy, who proclaimed himself acting president, and R. Khasbulatov. Both sides were consolidating forces, and eventually fighting erupted. Former president of the USSR Mikhail Gorbachev touched on the possibility of returning to big politics.

As we can see, the events unfolding in the country were provoked by government bodies. They started a fight among themselves in the capital. The newspapers featured lines like: 'One thousand armed Chechens leave Grozny to aid Khasbulatov; support battalions are forming in Moscow markets. Soldier salaries have been raised 10 times.' [Komsomol'skaya pravda, 23 September 1993].

The order to get the Dzerzhinsky Division into combat readiness was delivered. The Medical Department in Moscow announced the list of persons killed in the events of 3–5 October 1993: 90 identified and 49 unidentified bodies. The postscript stated that the exact number of dead was unknown [Komsomol'skaya pravda, 4 October 1993].

It was the wisdom of the Russian people that saved the country from dissolution and civil war. They passed the strength test by not following the footsteps of their maddened leaders. It could not have gone any other way. What

happened in those days awakened Russia as a whole. Russia did not fall to pieces.

The Constitutional Commission of the Supreme Soviet of the Russian Federation was dissolved. In December a new Constitution of the Russian Federation drafted in the interior of the Presidential Administration was adopted by referendum. Elections were simultaneously held in the State Duma, the lower house of the Federal Assembly established by the Constitution.

Tatar-Russian relations reached a qualitatively new level. But the republic did not manage to complete the transition of its law-enforcement authorities under its own jurisdiction and finalise the associated bills passed in the first reading at the XIV Congress of the Supreme Soviet of the Russian Federation. All the difficulties could be traced to a treaty that had not yet been signed.

On 30 November 1992 M. Shaimiev officially petitioned the Supreme Soviet of the Russian Federation to formalise the constitutional relations between the Republic of Tatarstan and the Russian Federation in the Russian Constitution. But the path to that treaty was slow and arduous.

In December 1993, concurrently with the referendum on the new Russian Constitution, elections were held in the State Duma. In Tatarstan these elections, as well as the referendum, never ended up taking place. Only 367,000 citizens out of 2,600,000 attended the polls—that is, less than 25%. And only 88,000 of them voted to adopt the Russian Constitution. This was a statement of the frustration and dissatisfaction with negotiations on the bilateral Treaty meant to govern relations between Russian and Tatarstan.

Indeed, the Russian party was drifting further away from the agreed positions and pressuring the republic, particularly in matters of fiscal relations. During the preparation of the treaty between the governments of Tatarstan and Russia, 12 agreements were signed on issues such as customs, budget, defence, higher education institutions, etc. An analysis of these documents reveals that Tatarstan made conces-

sions in all the points without exception. As a matter of fact, those concessions were included in the Treaty signed 15 February 1994 in a concentrated form.

The time and conditions under which the Treaty was entered into were unfavourable for Tatarstan. That winter was a cold one. Houses and institutions were not properly heated. Russian pipelines decreased the amount of accepted Tatarstan oil, and as a result many oil fields stopped operating, causing layoffs and an overall staff reduction. This was real pressure on the republic.

Under such circumstances the country was forced to make concessions to the Russian side and back away from a series of previously agreed positions. Only the preamble stating that the parties were founded on the principles of self-determination and free will of the people was the most consistent and acceptable part of the treaty of 15 February 1994. The fact that Tatarstan was not directly recognised as a sovereign state and a subject of international law indicated that the treaty was a compromise. Such recognition was indirect—that is, via the preamble to the Tatarstan Constitution, which stated that Tatarstan was united with the Russian Federation on the basis of the present Treaty and the constitutions of the two states.

The recognition of the land, its subsurface, and the entire property of Tatarstan as the property of all its multi-national population was a positive point of the Treaty. Of great importance was also the recognition of Tatarstan's right to engage in international economic activity. Under the Treaty, the republic also received the right to enter into international economic relations with foreign states and also enter into treaties and agreements with them.

Tatarstan won the right to have its own citizenship. But unlike the project previously agreed upon, the Treaty established many areas of joint authority with Russia, and the police, court, and public prosecution office remained in Russian jurisdiction. The Treaty established 17 areas over which Russia would have exclusive authority, 15 areas over which Tatarstan would have exclusive authority, and 23 areas of joint authority.

The Treaty was met with intense criticism both in Russia and Tatarstan. In Moscow people accused the Russian president of being soft and tanking the country, and they even threatened him with impeachment. In Tatarstan M. Shaimiev was also accused of excessive pliability in his stances. Russian leaders managed to provide a true estimate of the Treaty. B. Yeltsin described it in the following terms: '... In 1994 in order to resolve the highly complex and contradictory issues with Tatarstan, for the first time ever we used a new constitutional element. By this I mean a bilateral Treaty on the delineation of authority between federal and regional bodies. At the time this mechanism functioned as a sort of 'political ambulance' and prevented the disintegration of the federation [Rossijskaya gazeta, 1 November 1997]. The prime minister of the Russian Federation V. Chernomyrdin gave a similar assessment, saying that the signed document saved Russia from dissolution [Krasnaya zvezda, 3 October 1997]. V. Putin also positively assessed the Treaty during his stay in Kazan on the eve of the election of the president of the Russian Federation. He named Mintimer Shaimiev one of the founders of the modern Russian Federation, which was essentially an assessment of the pioneering role Tatarstan played in the process of the democratisation of Russia.

The Treaty is undoubtedly ambiguous. Except for its significant violations of the original agreements, much of the Treaty actually contributes to strengthening the sovereignty of the republic. The economic independence of Tatarstan and securing the right to its property and ability to conduct international activity were the greatest achievements. And Tatarstan embraced these opportunities by starting to independently conduct foreign trade and opening representation offices in a number of countries. Particularly friendly relations formed between Tatarstan and Turkey. Foreign visits of official delegations of the republic and the reception provided them proved that the western world perceived Tatarstan as a state that had special relations with the Russian Federation.

But the beginning of the 21st century was marked by fundamental changes in the rela-

tions between the governmental bodies of Tatarstan and Russia. Certain circles of the Russian political elite were not at all pleased about the special status of Tatarstan. A clear trend towards establishing vertical authority and granting equal rights to all the subjects of the Russian Federation began to emerge. The State Duma, which works upon command of the Presidential Administration, was formed. Judicial instances, and the Constitutional Court above all else, also became an instrument in the hands of the Presidential Administration of the Russian Federation. It was the Constitutional Court that in 2002 passed a decree abolishing the sovereignty of the republic. N. Firsov, famous historian, was indeed right when in 1869 he wrote that 'the central authority in Russia did not like ... subjects who did not live by its laws and directives' and noted that in Russia 'there have always been two parties, one of which advocates drastic measures towards merging' the national outskirts with 'the regions of Great Russia by establishing the same laws, administration, and courts in them, while others hope to arouse in those who have joined the Russian state ... a feeling of affection to the Russian authorities and the Russian government through the preservation of their special rights and privileges' [Firsov, 1869, p. 215]. To all appearances, nothing really changed in the 21st century. But adherents of the first party are gaining the upper hand, while representatives of the second party defend themselves. So it is no coincidence that prohibitive proposals requiring the curtailing of the sovereignty of republics and a reduction in the free self-determination of nations to empty national cultural autonomy without a solid financial basis start showing up. In one episode of *Odnako*, journalist M. Leontyev put things like this: the Russian people do not need republics if they have sovereign rights. National cultural autonomy should be enough for them. In what way were they better than the population of the Tambov oblast or some other area, he wondered. The governor of the Novgorod oblast M. Prusak spoke out with much the same opinion. The governor of the Penza oblast V. Bochkaryov

did not agree that the National Question should be addressed according to Article 5 of the Constitution of the Russian Federation (relying on the well-established principles of the equality of rights and self-determination of nations) and offered to address it by the creation of national autonomies [Rossijskaya gazeta, 12 January 2000]. The reply of A. Zagorodnikov, professor, Doctor of Political Sciences, to the article of the chairman of the State Council of the Republic of Tatarstan F. Mukhametshin titled 'The treaty that strengthens Russia' published in the *Russian Federation Today* magazine meant that not only politicians but also honorary scientists were joining the struggle against the sovereignty of Tatarstan. The author demanded to harmonise the articles of the constitutions of the republics with the Constitution of the Russian Federation without excluding the possibility of using force to resolve the issue.

A. Zagorodnikov believed that the principle of unifying subjects as equals was a cornerstone of the federation itself [Rossijskaya Federacziya segodnya, 2000, p. 25]. But this contradicts well-established notions about the federation as the majority of scientists agree that the federation emerges where there is, on the one hand, a cultural, linguistic, and ethnic diversity, and on the other, a need to achieve state unity. A living classicist of American federalism Vincent Ostrom once wrote that the key elements of U.S. federalism were a contractual approach, a pluralism of government institutions, a constitutional system of government, competition as a means of conflict management, active involvement of citizens in public life, the establishment of relationship models intrinsic to open societies, and the ability to reform even in a complex society [Ostrom, 1993, p. 283]. However, these clearly established principles of federalism were not of much interest to Russian advocates for the revival of unitary practices. Their task was to prepare the Russian public to campaign on the abolition of the sovereignty of Russian republics. All these speeches resembled artillery preparations before an attack on the Constitution and the laws of the republic, and the attack

itself transformed into a volley of prosecutor protests and lawsuits.

Since 2000, when Vladimir Putin came to power, there has been an active war against the laws of Tatarstan. On 7 July the prosecutor protested against the Constitution of the republic. On 24 May 2002 the deputy of the general prosecutor for the Privolzhsky federal district A. Zvyagintsev filed a suit demanding amendments to the Constitution of the republic. In Nizhny Novgorod the newly established commissions started their long and tiresome negotiations on amendments to the Constitution. The representative of the president of the Russian Federation in the Volga federal district S. Kirienko headed the Russian side, and the chairman of the State Council of the republic F. Mukhametshin headed the Tatarstan side. As a result, on 19 April 2002 the State Council adopted the Law 'On Amendments and Additions to the Constitution of the Republic of Tatarstan.' Essentially, this was a new version of the Constitution different from the original in its significant disempowering of the republic. However, even after that, the lawsuits and prosecutor protests never ceased. Article 21 stating that the Republic of Tatarstan has its

own citizenship was challenged; instead, the phrase 'citizens of the Russian Federation in the Republic of Tatarstan' was used in its place. As of 3 February 2005, 99 laws of the republic were brought into accordance with Russian law. They involved all the key sectors of the economic, cultural, and political life of the republic. Even the Law 'On the Languages of the Peoples of the Republic of Tatarstan' was challenged, and the use of Latin script was banned entirely.

One of the last protests was a protest against national symbols. It stated that the flying of the Russian flag was compulsory. The Russian flag above the Parliament had to be of the same size and at the same height as the Tatarstan flag. In the discussion of that protest at the session of the State Council on 25 May 2005 everyone defended the sovereign status of the republic and its national symbols, and only one deputy demanded the strict implementation of the prosecutor's protest.

Negotiations on the amendments to the Treaty of 15 February 1994 signed between Moscow and Kazan were brought to an end. New times requiring new relations between Tatarstan and the Russian Federation had come.

§ 3. The Historical Significance of the 1994 Treaty

Indus Tagirov

A document of historical significance—that is how I would describe the document signed in Moscow on 15 February 1994. First, this is the first treaty between Russia and Tatarstan after the troops of Ivan the Terrible took Kazan. Second, it establishes contractual relationships between the two states. And third, it is aimed at transforming Russia into a treaty-based constitutional federation. This was all because, following Tatarstan, the republics that signed the Federation Treaty indicated their desire to also sign a treaty with Russia.

Sometimes people stated that perhaps it would have been better for Tatarstan to have just signed the Federation Treaty rather than undergo such a difficult journey. We should

immediately object to this notion as the Federation Treaty is the document that formally allocates the rights of federal authorities among subjects—that is, from top to bottom. Moreover, everyone sees that due to the lack of a mechanism to execute this document, the rights have remained unallocated and lay only with the Moscow authorities.

But our treaty is of another kind. From the very beginning it relies on the recognition of the sovereign rights of each party. There is no top-down distribution of power, only a horizontal one, even though the body of the document never mentions the sovereignty of Tatarstan. But this point only indicates a de facto recognition of Tatar sovereignty.

It is quite clear that the Treaty is yet to be understood as a historical document. This process takes place on two levels. To interpret the Treaty on the level of mass consciousness, no professional skills are required. It can be seen with the naked eye that this is not a treaty that fully recognises the principle of equality emphasised in the preamble. One does not need to carry on about this fact all over the world and demonstrate such an understanding as a sort of revelation. Nobody makes any secret of the fact that, judging by some of its points, the treaty resembles an agreement between a mother country and a break-away colony—that is, it relates to a certain stage of this dynamic process.

It could not have been otherwise, for Russia is a recognised subject of international law, whereas Tatarstan is only trying to achieve this status. Thus, the cause of weakly-worded points in the treaty cannot be drawn back to someone's mistake or omission but the initial inequality of rights. This is why the Treaty is what it is. It might have been better or worse in certain sections. An unwillingness to understand is the same as an unwillingness to see the forest for the trees.

It is therefore necessary to admit that certain power structures started to interpret the treaty as the fact of the complete recognition of the Constitution of the Russian Federation by Tatarstan. Such an interpretation in no way corresponds to the truth and contradicts the entire spirit of the Treaty. Reckless actions only bring grist to the mill of people who proclaim that the leaders of Tatarstan have sold the freedom and independence of the republic. Those people are convinced that Tatarstan is already an independent state and a subject of international law. However, it seems that this is not the case. From an impartial perspective, the treaty is indeed a significant step in this direction.

What gives us reason to assume that? We should start with the undeniable fact that someone in the State Duma is working to rescind the treaty in their belief that it will destroy Russia. In this article there is no need to prove to these 'democrats' that Russia requires democra-

tisation and is still yet to become a democratic state. The treaty concluded between Russia and Tatarstan marks the beginning of such democratisation. Because democracy is not only the recognition of the rights of any person but first and foremost the implementation of regional rights and the refusal to submit to what the Centre dictates. President of Russia Boris Yeltsin, while fighting against the dictate of the Soviet Union's centre, said that it should be left with two-thirds of its important functions. He was right, of course. M. Gorbachev's mistake was not understanding it. And now we are where we are. Today, by signing the treaty, Yeltsin proves that he sticks to his previous position. He has probably learnt the notorious axiom that to save big things, you should concede the little things.

So what is the treaty about and what is its significance? I do not pretend to be the bearer of all truth, I merely want the reader to make their judgments on the issue knowing that this is just my own perception of it. The first thing I see in this document is the recognition of the initial sovereignty of Tatarstan. This is evidenced by the preamble to the Treaty, which highlights the unity of Tatarstan and the Russian Federation in a separate point. In order to unify two things, they must initially be separate. Therefore, the use of the notion of unity is in fact a recognition of Tatarstan's Declaration of State Independence. Simultaneously, the concept of both a singular and undivided Russia is being affected.

At the same time, the use of this vast notion takes Tatarstan beyond the status of a republic incorporated in the Russian Federation, for when the subjects of unification are clearly identified—that is, Tatarstan and the Russian Federation—it means that all other republics are part of it as well. And this is really so since they all signed the Federation Treaty. The relations between Russia and Tatarstan are beyond this document.

The agreement secured the referendum's results on Tatarstan status dated 21 March 1992. This can be proved by the following. First, the existence of agreements between Tatarstan and

Russia is a real fact. Second, via the recognition of Tatarstan's Constitution, sovereignty can be recognised in the form stated in Articles No. 1 and No. 61. Similarly, the legal standing of Tatarstan has been indirectly recognised in international law. In addition, it is reinforced by a number of articles of the agreement itself where the participation of Tatarstan in international organisations and relationships has been mentioned. And third, the recognition of the Constitution of Tatarstan will put an end to the requirements that it should be aligned with the Constitution of the Russian Federation on behalf of both authoritarians and those who refer to themselves as democrats. After all, this much is written in our Constitution in black and white about the rule of law of the Republic in Tatarstan. This is the main indicator and the main point of sovereignty.

It will not come as a surprise if anyone immediately objects to this, but let me ask you this: Is the unity of the Republic of Tatarstan with the Russian Federation only recognised in the Constitution of Tatarstan? Is this fact not also stated in the Constitution of the Russian Federation? And there is no doubt that these people will be right. The logic of their further thoughts on the matter may develop in the following way. Look at Article 65 of the Russian Constitution and you can see that Tatarstan is listed among other Federal subjects.

This is the very basis of how the unity of Tatarstan and Russia is expounded upon, and it is based on contradictory positions. The Constitutions of all states were considered as the legal framework of integration because a compromise needed to be found. This quite inevitable and rational compromise is an indicator of the reconciliation of contradictory documents. There is no doubt that the reference to both constitutions and the present Agreement is a mutual victory. Down the road, a lot of things will depend on the wisdom and competence of the people who implement it. From this point of view it is possible to consider that this is not just a weak point in the document but rather a weak point that can be turned into an advantage. And here are the reasons. If it is first and foremost a strengthening of a certain step for-

ward towards interdependency, then secondly, the signing of the agreement makes Russia not a unitary but a federal state. This is even more the case with its elements of a confederation.

At the same time, the Agreement has a significant meaning for Russia itself as it was written to become an instrument for its democratisation via economic decentralisation, which president of Tatarstan M. Shaimiev has mentioned.

Will Russia develop as a single whole and an indivisible state with a highly centralised administration based on military force? Such a tendency is quite clear in the new military doctrine of Russia, according to which troops can be used to eliminate inner hotbeds of tension. Such a tendency can also be seen in the results of State Duma elections in the Russian Federation, primarily in the fact of the victory of the Party of V. Zhirinovsky. And not only in this. There are many people calling themselves democrats who uphold the slogan of a united and indivisible Russia. I would like to remind these people that the ideologist of this conception and the founder of the Cadet Party, professor of history P. Milyukov, eventually admitted that this very slogan killed them.

Meanwhile, the power and meaning of our Agreement is that it offers another chance for Russian development. To be exact, this means the chance to democratise using the principles of the asymmetry of the federation and economic decentralisation. However, this requires a certain amount of time as the matter in question is about overcoming known moods in the public consciousness. It is also about the necessity of certain changes in the Russian mentality.

The duty of the progressive public (primarily the humanitarian intelligentsia) is not to indulge backwards moods for the purpose of raising political capital but in the ability to distinguish and promote the aspects that correspond to the aims of stabilising society, getting the economy out of its slump, and ensuring social peace and international harmony.

The agreement between Tatarstan and Russia is exactly the document that may eventually become an instrument of social reorganisation based on democratic principles. No, of course

the Agreement does not suit everyone. But there is at least a difference between dreams and real possibilities.

The agreement has already been signed. Now it just needs to be protected and transformed into the mechanism of the establishment of Tatarstan as a real sovereign democratic state and a subject of international law.

Our Agreement must also become a developing factor for stability in the republic and its economy. Political events develop so rapidly that sometimes the public has no time to realise they are really happening. The signing of this agreement between Russia and Tatarstan is one such event. And its final evaluation can only come from life itself.

§ 4. The Meaning of the Legislation of the Supreme Council of the Republic of Tatarstan to Strengthen the Status of the Republic of Tatarstan

Farid Mukhametshin

At the turn of the 1980–1990s the Republic of Tatarstan was one of the first republics in the Russian Federation to really start to develop and implement in practice the concrete social process mechanisms to form a new model of the federal state system. The experience of Tatarstan in its enhancement of independence and in the legislative aspects of this process as well as in the creation of forms of interaction with the Federal Centre that are adequate to the features of a new epoch has been closely studied and adopted by many Russian regions since that time. The republic has acquired the status of a real contributor to the All-Russian political process, especially in regard to the generation of principles and mechanisms for the functioning of a democratic federative statehood.

There have also been symbolic changes in the Republic itself occurring simultaneously. Its own conception of social, political, and economic development, the emergence of a new statehood in the Republic, and the formation of an integrated legal and political system has been actively elaborated. This is why if one tries to group the events that make up the background of the developing political process in Tatarstan during the 1990s, a significant dynamic series of events emerges: the beginning of reforms in the economic and sociopolitical spheres; the process of increasing the state legal status of Tatarstan; the elections of the first president of the Republic; the development

and legal accompaniment of the negotiation process with the Federal Centre. In addition, exactly during this period the declarations on the sovereignty of Tatarstan and the new Constitution were adopted, the Republic Referendum on increasing the status of Tatarstan was held, the Federal treaty was developed, and the delegation from Tatarstan participated in the Constitutional meeting.

At this time the developed legislative principles of interaction between the representative and executing branches of the state authorities of the republic passed the test on their strength and historical perspective with flying colours [News of the Supreme Soviet of the Republic of Tatarstan, 1992, No. 1; No. 3]. Much experience was gained with the timely removal of contradictions and the exigent attitudes higher state authority institutions had towards one another.

From today's position compared to the ten-year period of the 1990s, three relatively independent stages can be distinguished in the contemporary history of the republic and subsequently in the development of the political and legal process. The first stage covers the period from April 1990 until November 1992, from the beginning of the 1st session of the XII Supreme Council of the Republic (1990–1995), until the adoption of the new Constitution of Tatarstan. Conventionally, this can be defined as the stage of the political self-determination of the republic.

The second stage is the period of active work on the political and legal recognition of changes that took place in the republic. This stage is limited by the time frame from November 1992 through February 1994. Its final end point became the signing of the Agreement 'On the Delimitation of Jurisdictional Subjects and the Mutual Delegation of Authority between the State Bodies of the Russian Federation and the State Bodies of the Republic of Tatarstan.'

The third stage started in February 1994 and was connected with the legitimisation of the principles of reforming the political structure of the republic and the beginning of the full-fledged socio-economic reform policy (recognised in accordance with federal, constitutional, and international law after signing the agreement 'On the Delimitation of Jurisdictional Subjects and the Mutual Delegation of Authority between the State Bodies of the Russian Federation and the State Bodies of the Republic of Tatarstan').

At the basis of this periodisation are both purely exterior political and social factors. Within each stage the content of the activity of the Republican Parliament was much more connected with solving problems of a quite certain kind. In this respect the priority object of the stage has been the political self-determination of the republic and the republic's formation as a subject within the all-Russian political process. Accordingly, this is why the work of the higher bodies of state authorities was connected with the legislative and political guarantee of changes that took place in the republic.

The historical benchmark in the beginning of active politics on the reformation of the traditional foundations of the state system came on 30 August 1990, when the Supreme Council of Tatarstan proclaimed the Declaration on Sovereignty [News of the Supreme Soviet of the Republic of Tatarstan, 1992, No. 1]. Special emphasis should be placed on the fact that the adoption of the Declaration was not just a contribution to the political fashion of the early 1990s for Tatarstan but rather a demonstration of its deep democratic processes. The trends in the renovation of the state and society at the end of the 1980s have been a powerful

stimulus for the revival of national self-consciousness in the state's regions. Society in the republic persistently put forward demands to change the status of the republic, which for a long while no longer had any correspondence with the interests of its further sociopolitical and economic development.

The idea of sovereignty became a real organising factor. Most citizens of the republic supported the idea of changing the status of Tatarstan, which is rather clearly demonstrated by the voting results of the parliament of Tatarstan: 241 (1 deputy abstained from voting) out of 242 people's deputies, who were present at the Supreme Council of Tatarstan's meeting dated 30 August 1990, voted 'for' the adoption of the Declaration on Sovereignty of the republic.

The Declaration consolidated the rights of the Tatar nation and all the multinational people of the republic to self-determination, property, land, minerals, and natural resources. The Tatar and Russian languages were proclaimed as dual state languages, and all citizens were guaranteed equal liability before the law irrespective of their 'nationality, social status, or religious and political views.' Sovereignty was proclaimed with no reference to the initial legal standing that was in complete accordance with international legal norms.

It is quite telling that the Declaration on the sovereignty of Tatarstan was adopted soon after the Declaration on the sovereignty of the Russian Federation. This event served as a starting point for the national self-determination of nations in Russia and for the intensification of democratic reforms. The following sovereinisation process in the republics created the foundation for the formation of a democratic federation. In relation to this position, Tatarstan and its political and legal matters from that period should be considered in the context of Russian events, both past and future.

The course of the sociopolitical development taken in 1990 has passed the test of time. In contrast with many regions where sovereinisation led to international conflicts, the Declaration cemented the start of democratic reforms and preserved international agree-

ments with Tatarstan. It consolidated an observance of the interests of all citizens in the republic and the protection of their rights and freedoms as a main principle of development. After the end of the authoritarian epoch the image of the republic is more determined by the dynamism of innovative processes in the creation of a democratic and socially oriented state and by the real impact of the formation of a newly democratic Russian Federation. According to these two criteria, Tatarstan became an example of the consecutive politics of improving the independence of a republic.

Speaking about the meaning of the Declaration, one should note that its proclamation has been a timely answer to the historical challenge of the upcoming epoch. It has become an essential condition for Tatarstan to acquire self-independence and a guarantor of its advancing development; it has created powerful momentum for the formation of a new value system and guidelines for a world outlook across large swaths of the population. It accelerated the change of the forms of statehood and the stages of the national history of the republic.

Together with its adoption, the principles of a new democratic state formation—the Republic of Tatarstan—have been created. The establishment of the necessary political, legal, and social institutions and the formation of new kinds of international relationships have begun. The real breakthrough was the refusal of the republic from the federal policy of 'shock therapy' in the beginning of the 1990s and the development of its own strategy of a 'soft market entry.'

The declaration became the predominant factor for strengthening political stability and international unity. The republic managed to avoid social confrontation among the peoples of different nationalities. In accordance with the Constitution of Tatarstan, a multi-ethnic and multicultural society formed in the republic with the predominant aim of creating social conditions for the benefit of all multinational people. In addition, Tatarstan gained wide abilities for establishing direct partnership relations with Federal subjects and foreign countries, first of all in the field of economics, edu-

cation, science, and culture. The republic fully integrated itself in the system of international relations.

This was precisely when the Supreme Council started working on legislation to provide a balance of national languages, cultures, and confessions in social life and state programmes for the development of national education, cultures, and the arts [News of the state council of the Republic of Tatarstan, 1996. No. 4, 8–10; 1998, No. 11; 1999, No. 8, 10]. The major role while making those decisions was granted to the strengthening of the role of the ethnic and sociocultural constituents of Tatar society in its way of life.

Said problems were considered priorities in the legislative sense as in the beginning of the 1990s on the eve of the Referendum (March 1992) the political situation in the Republic was rather strained. The condition of interethnic relations and the perception of related problems in that sphere in many respects were determined by the actions of a number of background factors that started becoming relevant as far back as Soviet times. Among them we can list: losses suffered by national cultures; extended negligence of authorities in the revival of the historical traditions of the Tatar people and of the entire country; the defect that took place in the personnel policy; the non-perception of the Russian-speaking population about the importance of national customs; the difficulties caused by the limited use of national languages. However, social consolidation processes can already be observed in the republic and have a tremendously positive influence on the sociopolitical climate in Tatar society.

This is why it is quite logical that on the day the Republic Referendum took place 1,309,000 people, or 61.3% of all people participated in the voting (that is 50.3% of the total number of all voters in the republic), answered 'yes' to the question 'Do you agree that the Republic of Tatarstan is a sovereign state and the subject of international law, and that its relations with the Russian Federation and other republics and states are built on equitable agreements?' Thus, more than half of the citizens of Tatarstan sup-

ported the key idea of the referendum, which is a necessity and encompasses the political expediency to increase the legal state status of the republic. The political strategy of the republic's authorities in the person of the president of Tatarstan, the Parliament, and the government for the achievement of equality with the Federal Centre found a lot of support.

The results of the Referendum let the republic make the next important step in the promotion of democracy and in the reinforcement of the economic independence of Tatarstan. It is also noteworthy that the Referendum contributed to the stabilisation of the political situation and the consolidation of international relations.

The most important step in the state sovereignty of the republic became the adoption of the Tatarstan Constitution dated 6 November 1992, where the basic human rights and freedoms that conformed to the Universal Declaration of Human rights were legitimised. The mutual responsibility of the citizen and the state with the priority of human rights as the highest social value was strengthened by Constitutional law. With the adoption of the Constitution in Tatarstan, a serious political step was made in developing an approach to the issue on the interaction of the Centre and its Subject in a democratic political structure, new approaches to the issues of nation-state building, civil society and constitutional state formation, and to the achievement and strengthening of interethnic agreements.

At the same time, the absence of a stable legal framework in developing relationships between the Centre and the regions could not but influence the intensification of contradictions between them when considering how Russian federalism was developing. Numerous attempts to get the negotiation process moving were made by both the Federal Centre and by the republics (which were much more active). Central authorities made a Federal agreement with the subordinate entities of the federation in April 1992. Only Tatarstan refused to sign it, and Bashkortostan signed it with the condition that the Federal agreement would be supplemented by bilateral agreement.

The main reasons for Tatarstan to refuse to sign this document were that less rights were

provided in this document than the republic already had by that time. In fact, the Federal agreement was just an agreement for the delineation of authority between the federal government and its constituent members, so it did not determine federal nature of Russia and consequently did not warrant the preservation of independence of the republic in the implementation of the functions it stipulated. Further development of the federal political and legal process showed that during the preparation of the new Constitution of Russia the clause about the Federal agreement was in fact excluded from the constitutional process.

Contradictions that emerged between the Federal Centre and the Republic of Tatarstan during the Constitutional conference and that were not solved in negotiations resulted in the Tatarstan delegation announcing its incapability of further participating in it. The main controversial point was that the Federal Centre ignored the legislative initiative of the Republic of Tatarstan about the new perspective of federalism in Russia and the constitutionalisation in its main law charter of the constitutional and contractual relations between the Russian Federation and the Republic of Tatarstan.

The second most important step in the contemporary history of the republic was logically related to the self-affirmation of Tatarstan as a subject of international relations. At this particular time the negotiation process between the Republic of Tatarstan with the Federal Centre began. The management of the republic always argued consistently for the signing of a bilateral treaty that acknowledges the rights of the republic and the results of the referendum, guarantees its brand new political and legal status, and asserts the idea of the formation of a new type of federal and international relations [see *Sovetskaya Tataria*, 18 December 1990; 16 February 1991, 11 July 1991; *News of the Supreme Soviet of the Republic of Tatarstan*, 1992, Nos. 4, 5; 1993, Nos. 5–7, 11–12].

Its own system of law forming processes received an impetus during this period based on Tatarstan's Constitution, which became the initial legal base for the further development and enhancement of all branches of legislation of

Tatarstan. Supreme Commercial Court law, constitutional court law, civil service law, budget system and budget process law, and many other laws were adopted in regard to state construction. They were all intended to develop the statehood of the republic and reinforce its independence in the exercise of state authority functions.

Parliament adopted a number of laws that provided for economical transformations, land reform, and the privatisation and denationalisation of property in the republic. Creative approaches were used to come up with comprehensive solutions for social problems. First of all, this concerns laws and government programmes adopted by the Supreme Soviet and the republic government in its first years carrying out the reforms: National Economic Stabilisation and Transition into a Market Economy Programme; Targeted Social Protection of the Population Programme; Dismantling of Dilapidated Housing in Tatarstan in 1993–1995 and through 2002 Programme; State and Community Property Privatisation Programme; the Republican Integrated Care Programme; Economic and Social Progress of Tatarstan Programme; Economic Demonopolisation and Product Market Development in the Republic Programme; and the Crime Prevention Programme³.

³ See: Resolution 1790-XII of the Supreme Soviet of the Republic of Tatarstan of 23 March 1993 (as amended on 8 June 1994) 'On the Programme of the Targeted Social Protection of the Population of the Republic of Tatarstan' [Vedomosti VS RT, 1993, No. 3]; Resolution 290 of the Cabinet of Ministers of the Republic of Tatarstan of 19 May 1993 'On the Programme of the Demolition of Dilapidated Housing in the Republic of Tatarstan for 1993–1995 and Projected up to 2002' [Vedomosti VS RT, 1993, No. 5]; Resolution 353 of the Cabinet of Ministers of the Republic of Tatarstan of 25 July 1994 'On Anti-Monopoly Policy and the State Programme of Demonopolisation of the Economy and the Development of Competition in the Commodity Markets of the Republic of Tatarstan'; Resolution 1553-XII of the Supreme Soviet of the Republic of Tatarstan of 10 July 1992 'On the State Programme of the Privatisation of State and Municipal Property in the Republic of Tatarstan for 1992 and up to 1995' [Vedomosti VS RT, 1992, No. 6]; Resolution 1077 of the State Soviet of the Republic of Tatarstan of 27 February 1997 'On the State Complex Programme of Combating Crime in the Republic of Tatarstan for 1997–1999.'

Held on 12 December 1993, the All-Russian referendum on the new Russian Constitution project revealed that not only Tatarstan but many other member states of Russia were not at all satisfied with this project. After the Constitution of the Russian Federation was adopted, a controversial situation emerged. On the one hand, the basic laws of the federal state existed, but on the other hand, more than one-third of the regions did not accept them. The contractual process became a real way to settle this argument. The Treaty 'On the Delimitation of Jurisdictional Subjects and the Mutual Delegation of Authority between the State Bodies of the Russian Federation and the State Bodies of the Republic of Tatarstan' revealed a new level of relations between Tatarstan and the Federal Centre—the level of the collaborative construction of a democratic federation where cooperation between the Centre and constituent entities is developed under due consideration for the interests of both parties⁴.

Such a political and legal agreement had no precedent in the history of the Russian Federation. The further development of this political process both in the Russian Federation and the Republic showed that the position of Tatarstan to enter into a reciprocal agreement with the Federal Centre was correct, and the Republic itself was a leader in the development of integration processes in modern Russia. Later a number of agreements were signed with the other member states of the federation.

Considering the meaning of this document from the perspective of the second decade of the 21st century, it is important to note that this agreement was a triumph of political realism, when conflict and tension from the first years of Russian statehood between the Federal Centre and the federation's subjects were solved by political means and compromises.

⁴ See: the treaty between the Russian Federation and the Republic of Tatarstan 'On the Division of Issues of Jurisdiction and the Mutual Delegation of Authorities between the Bodies of State Power of the Russian Federation and the Bodies of State Power of the Republic of Tatarstan' [Mukhametshin, Izmaylov, 1997, pp. 33–39].

This agreement meant the end of statehood and legal uncertainty between Moscow and Kazan and served as an important step in the reinforcement of the sociopolitical stability of society. Its signing appeased people of all nationalities in Tatarstan and knocked the feet out from under the political speculators of chauvinistic groups and extremist nationalists, not taking into account the possibility of tension in interethnic relationships. Conditions were created for the revival and all-encompassing development of the native language and culture of the Tatars and the other nations in the republic. Moreover, the fact of its appearance lent a powerful impulse to the evolutionary development of the Russian state on democratic principles. The government of Russia could then demonstrate to the world community its commitment to the legal methods of constructing a new Federation.

The Agreement reinforced the right of Tatarstan to deal independently with matters concerning the formation of a system of government authorities, the structure of its organisation, and its activity. But the main thing was to preserve mutual trust in society and to secure an environment that was free of antagonism from the various bodies of government. The Agreement intensified the process of creating the republic's legal base, taking into account the complexity of its specific character. In many spheres of law-making Tatarstan became an example of the active conquest of new political and legal grounds.

In the end, the Agreement was a major factor in the growth of the republic's economical independence. The State's social protection programme made it relatively easy for the population of the republic to endure the first blows of market disaster. A process of 'eased entry into the market,' the use of the government's regulatory role in the management of the economy and the social sphere, the evolutionary reformation of society with a particular focus on maintaining the population's standard of living, and many other measures made it possible to secure relative wealth for the republic's population, avoid disturbances and, ultimately, heated social conflicts. It is significant that many of

Tatarstan's innovations were subsequently considered by the Federal Centre and spread as best practice among the republics and regions of the federation.

Moreover, the Agreement made it possible to influence the process of preparation and decision-making at the level of the Federal Centre with regard to issues that affected the interests of the republic. In this context very complex work on refining the model for mutually beneficial relations was started in 1994, which took into account the interests of the multinational population of Tatarstan and of the Russian Federation as a whole.

By the end of the second stage (November 1992–February 1994) of top-priority in the activities of the government and administrative bodies were issues concerning the comprehensive legal framework covering life in the Republic of Tatarstan as a competent political and state entity.

In evaluating the development of the political process in the post-agreement period as a whole, it should be emphasised that this development is associated with the appearance of an essentially new social situation, the removal of a lot of contradictions between Tatarstan and the federation, and the strengthening of social stability in republic. This in turn affected the attitude of the voters towards the policy pursued by the authorities. It is no coincidence that the main task to which the representative and executive authorities applied themselves as part of the third stage was the maximum possible reduction of the crisis period that started in the 1990s.

Thanks to the agreements reached with the Federal Centre, the republic was one of the first in the Russian Federation to embark upon the path of innovative transformations, having chosen a quite unique way of entering the market economy. What this refers to is a special approach to the development and adopting of a strategy for managing social processes. As a result of the social protection measures in Tatarstan during the first stage of the reforms, the negative consequences of the 'shock therapy,' caused by a breach of economic ties and a high level of inflation, were significantly mitigated.

The 'eased entry into the market,' provided for in law, allowed for stability to be maintained in society and social disturbances to be avoided. This all contributed to the formation of brand new approaches to the evaluation of the state of and perspectives for the development of the social and economic sectors and the content of the socio-economic strategies.

As a logical consequence of reforms started in 1996, the State Programme of Economical and Social Progress of Tatarstan was adopted, which defined a conceptual model for the development of the republic, specifying the aims of the next stage of reforms and the methods and mechanisms for their achievement. Enhancing the quality of life of the people and building a socially oriented market economy were declared the primary aims of this programme. As part of the federal economic area, Tatarstan had a duty to become a stable and dynamically developing part of it. Hence, the model for Tatarstan was an economy with a stable growth, integrated into the world economy of the future and brought into action by means of foreign investments at the expense of a high added value of goods and services under the active regulation of the government.

The most important result of the republic's ten-year development at the end of the 20th century was the preservation of social and political stability in the Tatarstan community and the successive adopting of policies of a rational combination of personal and public interests. In other words, throughout the 1990s the form and content of the law-making process, within the framework of the institution of state structure of the Republic of Tatarstan, underwent qualitative changes that were determined not so much by administrative and territorial structure as by the form of the national statehood of the republic and the peculiarities of the development of federal relations within the country. The work on law-making carried out by the Tatarstan parliament at this time made it possible to create, practically from scratch, a legal basis for the republic and lay the foundations for democracy, rights, and justice in society. The legal constitutional status of the republic and the nature of the interrelations between the Russian Federation and Tatarstan were and still are determinative factors in the establishment and further enhancement of the state structure of the Republic of Tatarstan.

§ 5. Tatarstan: the Strategy of 'Eased Entry into the Market'

Filza Khamidullin, Vadim Khomenko

Throughout the 1990s the Republic of Tatarstan followed a policy of 'eased entry into the market.' A special legal basis was formed for this purpose. The 'Programme for Stabilisation of the National Economy of the TSSR and Transition to Market Conditions,' the 'Land Code,' the laws on land reform, peasant (farm) holdings, property in the TSSR, and on the budget structure and budget process in the republic were adopted as early as 1991.

But the Tatarstan model of entry into the market was quite specific. It was focused on the gradual adaptation of the socio-economic sphere to the new conditions of economic management for the purpose of preventing

the destabilisation of the relevant vital processes within the republic. To a large extent, the opportunity for implementing this model arose during the process of concluding the treaty 'On the Delimitation of Jurisdictional Subjects and the Mutual Delegation of Authority between the State Bodies of the Russian Federation and the State Bodies of the Republic of Tatarstan' dated 14 February 1994. There is still no unambiguous interpretation of the results of the 'eased entry into the market' by specialists, although it cannot be denied that the development of the republic during this period was free of essential cataclysms, and the republic differed posi-

tively from other regions of Russia on many key estimated figures.

In this regard it is important to establish what the positive potential of the Tatarstan model entailed as well as the parameters of socio-economic development that were not attained owing to certain drawbacks with the model. This is important not only from a historical perspective but also in terms of predicting the development of the Tatarstan and Russian society. It is difficult, however, to separate economical, social, and often political aspects, which in this case are interrelated and interdependent. In this connection, a full consideration of the results of the relevant stage of development in Tatarstan is required for a determination of the different positions that will objectively be essential as part of a prospective model for the development of the republic.

The period of 'eased entry into the market' should be regarded as including the crisis year of 1998 and the following 4–5 years, when a correction of the relevant management model was implemented based on an evaluation of its resistance to cyclical market fluctuations.

The Economy. Throughout the first half of the 1990s all the main branches of industry were characterised by a decline in output, which was only stopped in 1995—that is, earlier than in the Russian Federation as a whole, thanks to the measures taken in the Tatarstan Republic with the aim of supporting the manufacturers of goods. Industrial production started to grow in 1999. This was quite a dynamic process for Tatarstan, compared not only with its neighbouring leading regions but also with purely oil-extraction and production regions, such as the Khanty-Mansi autonomous district. Thus, by 2004 industrial production in the republic reached the level of 1990, while in a comparable autonomous region it was only 90% in the same year. This figure was lower in other relatively 'strong' neighbouring regions (Samara oblast, Perm krai, Bashkortostan Republic, Nizhny Novgorod oblast, Sverdlovsk oblast).

The dynamics of the development of industrial production in Tatarstan was determined by:

- Preserving the ability to manage the investment process constructively in the period of the privatisation of property, when there was no clearly expressed private interest for major development projects and qualified corporate management. This was achieved by keeping the necessary volume of shares in privatised major revenue-generating enterprises with the republic's government authorities and placing them in specialised state holding companies for the purpose of administration

- Keeping the necessary and sufficient sources of investments in a treaty-making process between the Republic of Tatarstan and the Federal Centre, in which the tax-sharing rate corresponded to the reality of the federal state of that time

- A definite positive growth in oil prices

In spite of the depletion of its oilfields, Tatarstan set itself the task of stabilising its oil extraction and even a certain growth, for which a proportion of the tax revenues were used, and tax concessions were created, as provided for by the the Federal Agreement.

Such an understanding of the 'eased entry into the market' differs from its more widespread interpretation, which is ostensibly based on the existence of considerable economic resources and special fiscal relations with the Federal Centre. The government factor in the management of the investment process is lacking in such a definition (Table 3.1).

As can be seen in Table 3.1, between 1995 and 2003 the Republic of Tatarstan managed to increase its proportion of mechanical engineering considerably: from 20% to 24%, making it greater than in Russia as a whole. Nevertheless, it is important to note that, upon completion of the 'eased entry into the market,' Tatarstan failed to restore the high-technology cost structure of industrial production that existed in 1991, a time of exponential advances in mechanical engineering, chemistry, and petrochemistry.

Tatarstan, besides retaining its industrial positions, became one of the top five major agricultural producers and an important grain producer as well. In 1996 the republic occupied the leading position in the Russian Fed-

eration for the gross output of grain, outstripping such strong grain regions as the Stavropol district and the Rostov oblast. Special support programmes were targeted at both small newly-emerging and large-scale agricultural undertakings. Undoubtedly, it is important to realise that, in addition to subsidies, the survival of agriculture depended on the work ethics of the rural, predominantly Tatar, population. Villages in Tatarstan are better developed than those in neighbouring regions. The traditions of large-scale subsidiary farming have been preserved here. This contrasts with the deteriorating villages outside the republic, primarily in the Non-Black Earth Zone.

However, Tatarstan was not able to develop its services market adequately during the period of 'eased entry into the market.' The development of cellular communications and the Internet, which lagged behind the leading regions, was restrained. This situation started to change soon after the period of 'eased entry into the market,' when large-scale trading and hotel networks (including international) started to appear, the market for paid services improved, and consumer standards changed for residents of the larger cities of Tatarstan.

Employment of the Population. By preserving its industrial and agricultural potential, Tatarstan has managed to secure maximum employment and minimum unemployment rates. However, the nature of the unemployment trend reflected tendencies in the rest of Russia—an increase of its 1999 level to more than 11% with a subsequent gradual decrease by 2002 to a level of less than 6%, which represented the lowest value of this index among the

neighbouring Russian regions, except for the Samara oblast.

The general tendency of changes in the structure of the working population bears witness to the fact that the number of people employed in trade and the services sector in Tatarstan is predictably increasing, which corresponds to the situation in countries with a market economy. At the same time, however, the proportion of administrative bodies has dynamically increased, approaching the general Russian level (Table 3.2), although the realities of the market economy assumed there would be an opposite trend.

A specific peculiarity in the formation of the Tatarstan labour market in the period concerned was the accumulation of hidden unemployment in rural areas at its officially low level. No more than 12% of all registered unemployed persons lived in rural areas. However, if on average there were two people to one vacancy in the republic, then in many remote rural areas there were more than 50. The population of the Tatar villages were less favourably inclined towards the practice of carrying out seasonal work in other branches of industry, which was developed in many Russian regions, and this was also a factor of the dynamics of this process. The situation was made worse by the fact that the proportion of unemployed persons was higher among rural women in Tatarstan than in Russia as a whole.

As a result of the changes in the structure of the industrial production in Tatarstan, as in other regions of Russia, there arose the problem of 'single-industry towns,' where production was represented by 1–2 main fac-

Table 3.1

The Branch Structure of Industrial Production in Tatarstan in 1991–2003, %

	Year	Power sector	Fuel	Chemistry and petrochemistry	Machinery construction	Foodstuff
Russian Federation	2003	12	19	6	20	14
Tatarstan	1991	4	8	21	34	13
	1995	12	21	25	20	9
	2003	7	38	18	24	9

tories, but the opportunities for diversification and obtaining another specialty were limited. Chistopol (the OJC Chistopol Vostok watch factory), Leninogorsk (the Tatneftebitum oil and gas production enterprise), Yelabuga ('EIAZ' PO), and Kamskiye Polyany were examples of such towns. For example, the level of unemployment in the Yelabuga district approached 3.5% in 1997, and 4%, in the Chistopol District. Increased unemployment levels were also apparent in the city of Naberezhnye Chelny and in the Mendeleyev and Zelenodolsk districts.

The lowest levels of unemployment were registered in the centres of the oil refining, petrochemistry, and power engineering industries, such as the Nizhnekamsk district (where unemployment was around 1% in 1997), the Almetyevsk and Zainsk districts (around 1.5%).

By 2003 the difference in unemployment levels was evened out to a certain degree. Nevertheless, the main urban and regional differences persisted. Thus, whereas in the Nizhnekamsk district this figure remained at a level of 1%, it exceeded 2.5% in the Chistopol district.

These problems of an inadequate diversification of production and the absence of a strategic consideration of alternative options for the development of the economy, where Tatarstan has natural advantages (for instance, in the field of transportation, tourism, etc., determined by the republic's location at the crossroads of international transport corridors, its recreational potential, and so on), were subsequently exacerbated all the more

acutely during the period of global depression of 2008–2009.

The population's income and social development. Throughout the period of 'eased entry into the market,' Tatarstan secured the necessary level of subsistence for its population, measured by the ratio of monetary income to the minimum subsistence level, which in 2003 had reached a level of 280%. According to this index, the republic was ahead of the majority of its strong neighbouring regions, such as the Nizhny Novgorod oblast (221%), the Perm krai (232%), the Republic of Bashkortostan (278%), yielding only to the Samara oblast, where this index was around 300% by 2003.

However, the mechanism for the maintenance of this level had essential differences. In this mechanism emphasis was placed on securing low tariffs on housing maintenance and utilities board (HMB), public transport, and subsidies on main foodstuffs. In this respect, in terms of salary and average income per capita, Tatarstan was not the leader. Such an approach was compulsory and had a clearly non-market character. But the method of such a 'manual regulation' was necessary because time was needed for the formation of the necessary ratios between wages and prices for services and goods. Under conditions of monopoly, the free movement of prices could lead to a general disproportionality and possible social tension. But here it was important to abandon such managerial impact in time and to secure the necessary market principle of interaction between business partners, ensuring normal market compe-

Table 3.2

The Sectoral Structure of Employment in 1990–2003, %

	Year	Industry	Agriculture	Construction	Transportation and communication	Commerce, catering	Housing maintenance and utilities board	Social sphere	Management
Tatarstan	1990	31.9	13.6	13.4	7.2	7.0	4.7	17.6	1.9
	1995	28.8	14.5	12.1	7.0	8.1	3.5	19.6	2.8
	2002	25.3	13.0	8.2	6.4	14.0	4.9	20.6	3.6
	2003	23.2	12.7	8.2	6.3	15.9	4.8	19.4	4.1
Russian Federation	2003	21.9	11.0	7.7	7.8	16.8	4.9	18.1	4.7

tition and a reduced dependency on the welfare state. This was subsequently accomplished. But the question of whether this point in time was the right choice remains unanswered because until recently Tatarstan lagged behind both the Samara oblast and Perm krai in terms of earnings. It is also apparent that an increase in salary at the initiative of employers is a longer and more complicated process than the regulation of prices and the introduction of subsidies.

The 'eased entry into the market' was accompanied by an attempt to restrict the excessive stratification of the population according to income level. However, it was extremely difficult to achieve this, and Tatarstan swiftly 'caught up with' Russia. Thus, in 2003 alone the ratio of the income of 10% of the wealthiest persons in the republic to 10% of the poorest increased from 11.8 to 13.1 times, while on average in Russia it increased from 14.0 to 14.3 times. The levels of income in the economic and social sectors were largely equal in Tatarstan. Thus, if in 2002 the ratio of the average pay in the agricultural sector to the average pay in the republic as a whole was greater than 40%, then in the Samara oblast it was less than 40%. In industry in the former region this index was a little over 120%, whereas in the latter one it exceeded 130%. Appropriate efforts were made to disallow the stratification of the population's income and earnings in terms of regions and centres of population (territories). But restraining such a process of differentiation in incomes was objectively impossible, considering the difference in the sectoral structure of the republic's regions and the gradual concentration of private capital in the profitable sectors of the individual territories. Thus, the oil-producing city of Almetyevsk, becoming increasingly separated from the other municipalities, assumed a leading position, whereas the situation in respect of earnings clearly worsened in the machine-building cities of Yelabuga, and in particular Zelenodolsk, during the 'eased entry into the market.' Thus, whereas the ratio of the average pay in Almetyevsk to the average pay within the republic in 1998 was around 150%, in 2003 it already approached 180%. By con-

trast, in Zelenodolsk, for example, this figure, which was around 90% in 1998, had decreased to 80% by 2003.

The sharp decrease in the influx of students into the sphere of professional education appeared paradoxical against a background of relatively well-preserved industrial production and agriculture, ensuring the population's income in the main sectors of the economy. At the beginning of the present century the number of students in professional educational institutions per 10 thousand people was the lowest in the Volga federal district. At the same time, more intensively than on average within the country, the number of students at universities increased 2.8 times between 1995 and 2004 (in the Russian Federation, 2.3 times). It was here where market relations in the field of higher education, having no special restrictions, were swiftly developed. The proportion of students at non-state institutions of higher education in Tatarstan in the 2003/2004 academic year was approximately 22%, compared with 13% in the Russian Federation. This led, on the one hand, to a certain devaluation of the level of education and, on the other hand, to a staffing imbalance, the consequences of which were felt much later.

The special approach to the regulation of the incomes and standard of living of the Tatarstan population was underpinned by the implementation of wide-ranging programmes of housing development and gas supply. Thus, gas supply became practically universal in the cities and rural areas (over 96%), central heating was provided in 97% of the housing stock in the cities and 80% in the rural areas. The introduction of mechanisms for the financial support of housing has allowed Tatarstan to become one of the leaders in housing construction per capita, where at the beginning of this century it remained behind only the Moscow, Astrakhan, and Belgorod oblasts, the Khanty-Mansi Autonomous district, and Moscow. Simultaneously, a programme of clearing derelict and dangerous dwellings was also implemented.

Final demographic and integral indices of the 'eased entry into the market'. The re-

sults of the socio-economic reforms are most accurately and comprehensively demonstrated by the demographic processes. From this perspective of evaluation, Tatarstan's position during the period in question differed positively against the background of 'demographic crisis' that had spread throughout the majority of the Russian regions, the consequences of which are still being felt.

By the beginning of 1990s the republic had maintained a higher level of natural growth than that of the central and north-west regions of Russia. But in 1993 the natural increase had already turned into decrease, which was defined by the global consequences of the 'shock therapy,' applied throughout the Russian Federation. However, in comparison with the other regions of Russia, the decrease in the population was moderate. Thus, the overall birth rate in 2003 did not differ from the national average (10.2 per mille), and the death rate was lower than that of Central Russia (13.8 and 16.4 per mille, respectively).

To a certain degree, the decrease in the population of Tatarstan was triggered by an increase in the child death rate in comparison with other strong Russian regions, despite its general decrease during the period of time concerned. Thus, whereas in 2002 this index in Tatarstan was 12 per mille, compared with over 13 per mille in the Russian Federation as a whole, in the Samara oblast it was just over 8 per mille, and in Saint Petersburg, less than 7 per mille. The reasons for this were the low level of urbanisation and the availability of transport in the rural areas of the republic.

Having the status of a socially attractive region, Tatarstan made up for the natural decrease of its population with a migratory influx of the population, which was greater than that experienced in the Trans-Volga federal district and in Russia as a whole. At the beginning of the 2000s the burdensome migrations from the CIS came to an end, and the volume of migrations to Tatarstan decreased noticeably. From this point it started to compensate for a little more than half of its natural decrease. However, in the neighbouring Samara and Nizhny Novgorod oblasts the volume of migration

made up for only 5%–15% of the decrease in the population during this period.

At the same time, it should be noted that the degree of Tatarstan's attractiveness for the Russian and Tatar population migrating from nearby areas varied in favour of the latter. An active migration of the Tatar population within Russia to Tatarstan was also observed, which as a result was instrumental in changing the overall balance of the population in favour of the titular ethnic group. There does not appear to be any significant 'infusion' of the Russian population during this period, unlike previous periods, which saw the development of oil fields and the construction of great industrial complexes. In summary, whereas the Tatars accounted for 44.3% of the population by the time the Tatar ASSR was formed in 1920, in 2002 this figure had risen to 52.9%. The long-term forecast of this trend requires political and sociological, rather than economic, analysis.

It was very important that a viable network of rural settlements was maintained in the republic. Their average population size exceeds 300 inhabitants. Against the background of the 'extinction' of villages in the Russian Federation in general, such a situation was quite a unique event and had become the subject of the close attention of both native and foreign specialists.

There was an overall increase in the population of the cities, except for Chistopol (Table 3.3).

At the end of the day, it should be emphasised that Tatarstan was one of the very few regions of Russia in which the size of the population in 2004 exceeded that of 1989.

In the index for the development of human potential the republic was in the top three leading positions. This was mainly achieved through the index of the level of income and the somewhat higher index of longevity. Moreover, Tatarstan scored more highly in the 'critical' index of quality of life thanks to its social policies.

However, on the factorial indices ensuring the dynamics of high-tech development the republic's positions were rather mediocre. In

the standard of education it lagged behind the most developed regions. And on the innovation index the republic only occupied the 11th position by the end of the period of transition to a market economy, lagging behind the leaders in almost all aspects, except for the private indices of the number of university students and the spread of cellular communication.

Thus, the strongest package of measures of government social support for the economy and the population during the period of 'eased entry into the market' was obvious. It weakened the inevitable negative consequences of the fast-track 'shock transition' to a market economy, where the absence of structured mature market mechanisms for supporting the necessary socio-economic aspects of development and a general social business responsibility could lead to a general economic recession and social cataclysms. The issues of the tim-

ing, depth of content, and mechanisms of such governmental regulation will be an object of study for years to come and undoubtedly will be subject to a certain level of criticism because not everything is arranged according to the standard classical schemes, and the process frequently encounters legal discordance with the Russian legislation. It is probable that certain sectors of the market and market institutions were formed in Tatarstan at a later stage than in the other progressive regions of Russia. Just as the development of forms of democracy in the political sphere was delayed, which was reflected in the ratings and evaluations of specialists. But the necessity of an 'eased entry into the market' in general clearly finds more supporters than opponents in view of the high degree of pragmatism and orientation towards the social parameters of economic development.

§ 6. Federative Relations in 1990s and their Role in the Consolidation of Russian Integrity

Emil Pain

In the first years of the new Russia existence the forces interested in the preservation of its unity were extremely weak. The leaders of the national movements of the non-Russian nations attempted to achieve sovereignty for 'their' republics. However, Russian nationalists did little to support the consolidation of All-Russian unity since they dreamed of re-establishment of the USSR.

After the Russian republics demonstrated 'a parade of sovereignties,' the Russian districts and regions were overcome by an overwhelming desire to achieve a higher status. Even the administrative districts of some cities issued declarations of sovereignty. The momentum of the disintegration of the USSR began to gather strength. No one at that time knew when it would end and what level of territorial integrity would be finally realised.

To a significant degree the political situation required president B. Yeltsin to adopt a political strategy aimed at the regional elites, which at that time were the most active segments of society. It was a policy based on negotiation, compromises, and give-and-take on the part of the Federal Government and the leaders of republics. I believe this policy went a long way to overcoming the negativity federative relations. The agreements between the Federal Centre and governmental bodies of the regional Federation subjects as well as the social contract signed by all the federation subjects, except for the Chechen Republic, significantly restricted the republican, district, and regional leaders from declaring the independence from the federation. They all recognised that the '...achievement of rights of the federation subjects is possible only through the governmental unity of Russia, its political, economic, and legal unity' [Dogovor, 1994].

The new political order established in Russia from the end of 1993 assumed not only the formal but also verbal agreements between Yeltsin and the leaders of the republics. Since

that time no demonstration of ethnic separatism has been observed, with the exception of the conflict with the Chechen Republic, which did not participate in the negotiations with the Russian leaders at that time.

These changes were noticed by Russian public opinion. In the collective Russian mind the confidence in Russian began to strengthen. Most importantly, the threat of armed conflicts, which is an inevitable companion of the disintegration of the country, also began to decrease. Sociological studies were indisputable evidence in support of this (Table 3.4).

The table shows that in 1993 there was a important change in the collective consciousness of the Russians. If in the first two years of the post-Soviet Russia more than a half of those interviewed lived in fear of armed conflicts, then by the end of 1993 the majority of Russian citizens demonstrated a certain optimism. The politics of negotiations and compromises produced a result. However, as time passed this policy began to be perceived in the consciousness of the majority of Russians as a strategy of one-sided compromise towards the republicans and the beginning of the disintegration of Russia. Some even saw malicious intent. 'Those people who undermined the USSR are now undermining Russia.'

For the most part such ideas did not coincide with reality. For instance, Yeltsin's celebrated phrase: 'Take as much sovereignty as you can swallow.' The phrase uttered by him in Tatarstan in 1992 was seen almost as the beginning of disintegration of Russia. However, it was said not before but after 'the parade of sovereignties,' thus far from encouraging the republic to take more sovereignty, it heralded the process of stabilisation of the regions and the Federal Centre.

From the year 2000 onwards the agreement between the Federal government and Tatarstan became a matter of growing criticism. However, in actual fact it was as beneficial to the

Republic as for the federation as a whole. It led to the significant weakening of the nationalistic tendencies in the republic, whose influence was almost totally founded on inciting fear amongst the population of the image of the 'Imperialist enemy.' The agreement between Moscow and Kazan strongly 'lessened' that image in the mind of the citizens of the republic. The agreement did not cancel any legislative acts that had previously been passed in the republic but in practice rendered them harmless in terms of the integrity of the country. The borders of admissible compromises to the republics on the part of the federal power were determined by its ability to control the main levers of influence on the regions: financial system, transport, main pipelines, and, of course, armed forces. Predictably, the radical Tatar nationalists took an extremely negatively view of the Agreement between the Federal Centre and Tatarstan. At the second All-Tatar congress, on February 1994, 655 delegates judged the agreement as the capitulation in the face of 'an imperial centre.' As Fauziya Bayramova declared, 'we were defeated, and by signing the Agreement on 15 February in Moscow the republic was thrown back in 1989' [Politicheskii partii Tatarstana].

The widespread views of the injustice and the unfairness of tax remissions to a number of the republics are also a matter of dispute. For example, today not only public opinion but also the majority of professional economists take a negative view of the idea to set up an off-shore zone in Ingushetia. However, in my opinion, it is impossible not to agree with former secretary of the Security Council of Russia I. Rybkin, who emphasised that without such a

zone it would have been impossible to prevent the involvement of Ingushetia in the Chechen conflict [Rybkin, Dubnov, 2003, p. 15]. Tax losses from the off-shore zone are insignificant when compared with the possible losses to the budget from a war with Ingushetia, not to mention the inevitable human losses.

When assessing the influence of social perceptions on politics, the extent to which they are realistic is not so important. If perceptions occur and enter the mass consciousness, then they can influence the political process no less than reality. The famous sociological Thomas theorem says: 'If people determine situations as real, they are real according to their consequences' [Thomas, 1918, p. 79]. I consider that such a reality, formed on mass and mainly mythological ideas, gave rise to the modern strategy whose key ideas were based upon the formation of 'a single executive vertical line' and restriction of the political role of the regional elites, primarily the republic leaders. Voters want things to be ordered, so there is nothing easier than to imitate this by creating federal districts led by generals. The voters were dissatisfied with the 'regional barons' assuming too much power for themselves, so an effective approach was used to remove leaders of a given region from the Council of the Federation.

Chechen politics in many respects determined the approach and methods of resolving a series of regional and national (ethnic) problems. The method consists of pressure (not necessarily military), but harsh pressure, which guarantees absolute obedience on the part of the regional leaders to the Kremlin. If in 1990s the Federal Centre divided the regional

Table 3.4

**Breakdown of Answers to the Question:
'In your Opinion, what is the Likelihood of Armed Conflicts in the Coming Months in Russia?'***

Answer options	1991 December	1992 December	1993 December
Probable (to this or that extent)	55	51	27
Improbable	25	30	50

* According to materials from studies by the Russian Public Opinion Research Centre.

leaders into 'friends—democrats' and 'foes—communists,' then in 2000s a new strategy was adopted—that of the total subordination of the regional elites. These changes, in my opinion, were characterised by the former governor of the Novgorod oblast Mikhail Prusak, who said that earlier governors were white and red for Kremlin, but now they are the same—'everyone is bad' [Quotation according to Tsukanova, 2000].

The question which needs to be asked now is: Whether there was a real danger of the disintegration of the state?

As already mentioned, from the mid-1990s in the Russian regions there was no serious demonstration of separatism, except for the Chechen separatism, which still exists today. This is a period when according to V. Putin the 'scattering of the state organisation is in the past.'

The sustainability of the Russian federative system underwent a test of strength during the period of an economic crises in 1998, despite initial fears that it would push the federation towards inevitable disintegration.

After the declaration of default by the federal government, practically all the regions began taking economic self-defence measures that seemed to be a real threat to the preservation of the economic unity of the country. Thus, according to the materials of the Russian Federal State Statistics Service, by September 1998, 79 regions introduced administrative price regulation on foodstuff and prohibition (or limitation) of its removal from a corresponding region. The press started saying that 'food separatism is stronger than a political one' [Konovalov, 1998, p. 1]. The actions of a number of regions to isolate a regional finance system and refuse to pay taxes into the federal budget looked even more terrible (Table 3.5).

Such actions gave cause for Russian politicians to speak about the disintegration of Russia, as though it was a fait accompli. CIS Executive secretary Boris Berezovsky spoke of the real danger 'of losing' Russia on 2 September 1998 [E' xo Moskvyy', 1998]. Following him, on 3 September the Krasnoyarsk governor Alexandr Lebed admitted the same danger

[NNTV, 1998]. One week later the leader of pro-government дума fraction of NDR Alexandr Shokhin directly accused the president of Russia (at that time it was possible) of his incapacity to preserve a financial economic and, as a result, the political unity of Russia. As for publicists and scientists, they literally competed with each other for the most gloomy forecasts of disintegration of Russia. If the journalist A. Venediktov based his assumption that disintegration was a momentary act and called 17 August as the day 'when the Russian territories and regions will start living a separate life from Moscow and the Federal Government' [E' xo Moskvyy', 1998], then the historian V. Loginov accepted the disintegration of Russia as the inevitable process and gave it an entire epoch [REN-TV, 1998].

At the same time, the ideas of introduction of the extreme administrative measures to standardise the situation became popular. The Sakhalin governor Igor Farkhutdinov offered the abolition of republics and the introduction of a province form of government. The governor of the Yaroslavl oblast Anatoly Lisitsyn offered to fill a vacuum of power by the formation of 'federal districts' within eight regional associations of economic cooperation. It was, according to the governor's idea, 'to help the Russian State, Government, and Administration of the President to form a vertical line of power which would be working and mutual-obliged. That idea much resembles the form that was realised by Putin in 2000. The same words about 'a vertical line of power' and the same level of communication of the federal power not with 89 leaders of the federation subjects but with the leaders of just a few regional districts. It is true that Putin formed just seven districts instead of the suggested eight ones, and not within economic associations but within military districts. Lisitsyn's idea of mutual obligations between the centre and regions also was not realised, instead of that the system of direct submission of subordination was created. However, this is not the most important element. Neither then nor later has there been any need for extreme administrative measures since Russia already possessed ordinary, I

Interrupting tax payments to the federal budget	Bashkiria, Kalmykia, Tataria, Tomsk oblast, Khabarovsk krai
Tax revenues to the federal budget are independently deducted to the republican budget.	Kalmykia

* According to materials from the Russian mass media in August—September 1998.

would even say, classical mechanisms which surely ensured unity of the federation.

Even three weeks after the default and shock, which paralysed the entire executive system, the federal government implemented the ordinary legal mechanisms to overcome the economic autonomy. The usage of them led to an unexpectedly rapid breakthrough. So on 23 September 1998 the Procurator General Yury Skuratov ordered the public prosecutor of the regions of the federation to review the legality of the actions of the local authorities [TASS, 1998]. On the very next day there were appeals against them. Many officials, albeit not the leading ones, but just executive officials, were charged with criminal offences. Even earlier (on 10 September) the Central Russian bank revoked the license of the Kalmykiya Bank, in

fact liquidated it. The republic paid an expensive price for attempting to take funds which were aimed for paying the federal taxes.

The market quite quickly and inflexibly dealt with 'agricultural separatism.' Those districts and regions that had restricted the removal of provisions in response no longer received fuel and lubricants (this was in September during the harvest campaign), so they had to cancel their decisions on their own. The experiment of administrative price freezing did not turn out well in any region. Two months after the August crisis, by October 1998, there was no trace of demonstration of an economic separatism in Russia, and today only analysts remember about that episode. Even during that period one may confidently speak about the end of 'disintegration of the state system.'

§ 7. The Establishment of the Worldwide Tatar Congress

Rinat Zakirov

By 1992 the Tatar national movement had a mass character. Of course, national organisations had different political orientation, offered different ways to solve accumulated problems, but all of them served the mutual great purpose—the revival of the state system and

the preservation of the national Tatar originality. It should be admitted that a major change occurred at that time within the views of the Tatarstan authorities. Obviously, the republic leaders realised that delay of solving national problems was fraught with loss of control over

the situation. Under the conditions of a radical turn-about the decision was made to hold the First Worldwide Tatar Congress in 1992.

The First Worldwide Tatar Congress was opened on 19 June 1992 in Kazan. More than 1,000 delegates arrived from different regions of Russia and other countries. Among them there were the representatives of the Tatar nation from the U.S.A., Canada, Australia, China, Japan, Turkey, Finland, Poland, Romania, etc. The Worldwide Tatar Congress caused an extraordinary rise of the national spirit, it was perceived as a holiday of unity of compatriots. All the participants admitted with one mind that Kazan was the centre of national culture and Tatar civilisation.

For the first time, on such a high forum vitally important problems of the Tatar nation, scattered along the whole world, were called into question. The basis of a principally new approach to the national problems was laid, which some time later formed a new revision of the Constitution of the Republic of Tatarstan.

At the Congress the question of the status of the official languages in Tatarstan and Russia was raised. The main topic was the status of the Tatar language. As the president of the Tatarstan Academy of Sciences M. Khasanov noted 'in front of the whole cultural public opinion the question complexly appeared about the elaboration of a scientific basis and methods to make the Tatar language a real component of official language [World congress of the Tatars, 1992, p. 214].

There is no doubt that the first Congress took place in an atmosphere of an emotional elation. It was difficult to combine such sentiments with the necessary efficiency and precise working agenda. Nevertheless, the resolution of the first Worldwide Tatar Congress has a great historic interest. Both the evaluation of the situation in the country and the idea of revival of the state system, national originality of the Tatar nation, preservation and development of the native language were reflected within that. The complete support of the government sovereignty of Tatarstan and observance of the human and nation rights were expressed in the resolution. It was a call to unite the Tatars all

over the world under the banner of national revival.

At the plenary session of the Congress the Executive Committee was formed. I. Tagirov was elected as its chairman, while under the Executive Committee the Foundation was established. Without exaggeration, one may argue that the Congress opened a new era in the long history of the Tatar people. The organisational structures of the Worldwide Tatar Congress have been successful for two decades.

The superior Congress body is a conference convened not less than one time during 5 years. During the period between conferences the Executive Committee, elected by the Congress with a term of office in 5 years, manages the Congress activity. The Executive Committee is a constantly active governing body of the Congress. The chairman of the Executive Committee of WCT, who at the same time is a member of Bureau, is elected during the session of the Executive Committee by the majority of its members with a term of 5 years. The chairman organises the sessions of the Executive Committee, of its Bureau, coordinates the work of his deputies and expert groups, commissions, and councils, and represents the WCT and its Executive Committee in state bodies, public associations, and international organisations.

The Congress includes public associations—legal persons who act according to their own statutes and also to the Congress statute. The Congress may form sections and open representative offices both in the Russian Federation and abroad; they realise their activity on behalf of the Congress.

The main Congress goals are:

- Consolidation of the Tatar nation and its social associations
- Assistance to the social, economic, national, cultural, political, and spiritual development of Tatarstan, consolidation of its state system
- Participation in the development of programmes and mechanisms of realisation of the cultural national autonomy of the Tatar nation in regions where they live
- Participation in research and peacemaking activity

The Congress must perform the following tasks:

- Comprehensively assist the social, economic, national, and cultural development of Tatarstan

- Participate in the activity of solving the ethnic-regional problems of the Tatars on the basis of observance of general democratic principles, rules of international law, and statutes of the countries in which the Tatars live

- Develop and support the implementation of special programmes in the field of national cultural development—language, science, education, culture, historic heritage, national pedagogics, demography, and so on

- Participate in the preparation and realisation of analytical, research, and expert works, elaborate practical recommendations for the governmental and public organisations as well as law projects and international agreements

- Regularly interact with the Tatar diaspora, non-governmental international organisations

The fundamental principles of the Congress activity:

- Recognition of the rights of the Tatar nation and other nations on self-determination, preservation of the national language, education, culture, customs

- Recognition of the priority of national unity over ideological and class beliefs and prejudices

- Recognition and an absolute observance of the laws of the Republic of Tatarstan, the Russian Federation, and other Tatar lands of living as well as the norms of the international right and requirements of international agreements

- Solution of the national and political problems on a rightful basis through civilised democratic means

The objectives of the Congress activities are:

- Collection and analysis of information on social, cultural, and legal status of the Tatar population in the regions of the Tatar living regions and, if necessary, providing them with legal assistance

- Participation in practical work to resolve ethnic-regional problems of the Tatars, coop-

eration with state and municipal structures, public, cultural, educational, and research organisations, media, international humanitarian organisations working on the national and cultural development

- Participation in the development and assistance in realisation of target programmes in the field of cultural development

- Participation in the development of practical recommendations for the public and other organisations as well as making the laws and international agreements

- Collection and spreading of information on the Republic of Tatarstan and Tatar nation, the publication of newspapers and magazines, audio and video products, interaction with media in the Tatar living regions

- Summarisation of the experience of the local Congress organisations, their propaganda and dissemination

The Executive Committee of the WCT as a non-governmental organisation, while not replacing the functions of public administration, realises communication with national associations of the Tatars over the world. Within the framework of the relationship between Tatarstan and other regions of Russia and countries, this organ of WCT makes efforts to develop and unite the Tatar nation and to manage the national cultural movement of the Tatars.

While implementing the main goals and tasks, WCT collaborates with state organs, cultural educational institutions, national cultural associations, political parties and movements, religious organisations of Tatarstan, Russian regions, and CIS countries, and also with individual citizens.

Within the structure of the apparatus of the Executive Committee of WCT, sections were formed to work with Tatar public organisations of foreign countries, with the Tatar communities in the Russian regions, with the Tatar republic sections of WCT, and also the analytical section was formed. The sections form a database about the Tatars in regions, keep them in constant contact, monitor the processes taking place in the field, coordinate

the activity of the local Tatar communities with the authorities involved in solving specific problems.

The link with the general public and its support are very important for the Executive Committee of the Worldwide Tatar Congress. In this regard it is necessary to emphasise the role of the Executive Committee of the WCT committees that develop ways of implementing the tasks set by the Congress. The committees are formed of the Executive Committee members and progressive specialists in various fields of the WCT activity.

At the present time 8 Committees are active in the structure of the Executive Committee of the Worldwide Tatar Congress: the Committee for the Strategy of Development of the Tatar Nation, which forms the conceptual directions for development; the Committee of International Relations and Protection of Human Rights; the Committee of the Development of Business Undertakings among the Tatar Population, as the economic basis of the work of the national organisations on the ground; the Cultural Committee; the Educational Committee; the National Media Committee; the Committee of the Tatar Youth; the Committee of Religious Affairs. The Committee of Religious Affairs was formed to regulate the complicated situation in the Tatar religious organisations. By the beginning of the 21st century disunity pre-

vailed in that field, religious figures were quite often in conflict with each other. Frequently in the regions of the Russian Federation artificial obstacles were put in the way of mosque-building. Many applications were submitted to the Executive Committee of the Worldwide Tatar Congress with the request to help in resolving of difficult emergent situations. Currently, thanks to the Worldwide Tatar Congress, most of the problems and conflict situations in the Russian Tatar religious organisations have been resolved.

At the present time in the Russian regions, CIS, and other foreign countries there are more than 450 active local organisations adopted in the WCT. As a rule the Congress admits only officially registered Tatar organisations, for which the Executive Committee of WTC widely use all the mechanisms that regulate relations with both national communities and with official structures representing the interests of Tatarstan.

In practice the official Tatarstan representatives quite often successfully resolve problems of the Tatar communes. On the one hand, those questions were not within the mandate of republic representatives. However, going beyond the formal approach, it was necessary to organise their activity based on a knowledge of the history, culture, customs, nation, and processes of modern national revival.

§ 8. 'Model of Tatarstan'

Rafael Khakimov

Regions populated by the peoples very different in culture and religion as a rule become conflict areas. Bosnia is a typical example. The conflict took place between Orthodox Serbs, Catholic Croats, and Muslims, although all of them speak the dialects of the same language, have been living together for many centuries, and there are a lot of mixed families among them. M. Shaimiev made a comment on that: 'The very serious Bosnian crisis on the territory of the former Yugoslavia, which we witnessed, is a lesson and a warning that there are

no winners in a fratricidal war. To conduct the negotiations can be extremely difficult, but it is easier and more ethical than to kill each other' [Khakimov, *Belaya kniga*, 1996, p. 5].

The post-Soviet territories after the collapse of the USSR became an area of military conflicts and remain a territory of a potential conflict. Georgia with Abkhazia and South Ossetia, Moldavia with Transnistria, Tajikistan, Nagorno-Karabakh, the Crimea, and then Kyrgyzstan with Uzbekistan were involved in lingering confrontations. Tatarstan in this aspect

was an exception. There are few such exceptions in the world, which is why there is no coincidence that the term 'Model of Tatarstan' was born. This model was formed during a visit by M. Shaimiev to a political forum at Harvard University in 1994, where the presidents and political leaders of different countries were presented.

The speech of M. Shaimiev lasted 3 hours. It made a deep impression and was broadcast on one of the National USA channel. After the forum American newspapers started talking about Tatarstan as 'An Island of Stability,' although it had been called 'An Island of Communism' before.

A number of international experts were convinced that Tatarstan would face a conflict, similar to the one in Chechnya, as Russians and Tatars in the republic are representatives of quite different cultural traditions, related not only to religion but also to language, behaviour, history that left a profound trace in the psychology of the two peoples. There were reasons for the concerns of the experts since Tatarstan was a typical 'divided' society with a potential for conflict. However, the authorities of the republic managed to avoid confrontation owing to a lot of factors, including the development of satisfactory situation in terms of policy and specific of socio-economic development.

In the 21st century it is difficult to imagine that at the beginning of 1920. Tatarstan was overcoming an extremely complicated period in its history. The economic mess, non-stop demonstrations with demands to expand the rights of the Tatar population, the confrontation of democrats and communists, the absence of clear strategy in the Federal Centre led to the creation of an extremely tense situation. The policy of 'Glasnost' led to a situation in which the mass media were criticised everything and almost without any constructive proposals. People could be easily understood as they had been waiting for the possibilities to speak out for years. However, the complaints from Tatars created tension among the Russians who looked hopefully towards Moscow.

By the end of the 20th century the political atmosphere stabilised, although the socio-economic field was in crisis that had isolated the region and impoverished the population, but it was overcome. Nowadays, people in Tatarstan see no reason for conflict between Russians and Tatars, why the Muslim leaders during festivities stand next to the Orthodoxies, Jews, Catholics, Protestants. The guests of the republic are often surprised that the Kazan Kremlin places the Mosque 'Kul Sharif' and the Annunciation Cathedral next to each other, symbolising the ethno-confessional mutual understanding between the peoples of the republic. This is a result of thorough work.

The 'Model of Tatarstan' is being built on several principles that determine its efficiency. The first and the main one is an interethnic consensus that is a basis of stability in the republic. No one nation should feel that their rights are being infringed. The Russian mass media and researches often pointed out to the percentage of the peoples. That is methodologically incorrect. No matter how numerous any nation may be, they deserve respect. The UNO Statute states in the 'Declaration on the Principles of International Law Concerning Amicable Relations between the States in Accordance with the United Nations Organisation Statute,' which contains a separate chapter called 'Principles of Equality and Self-Determination of Peoples.' In this important document the right for self-determination is interpreted widely, not simply as an intention to acquire independence but as a possibility to set up confederate, federate, associate relations or even dissolution in another state: 'Creating a sovereign and independent state, free joining to an independent state or a union with it or setting up any other political status, freely determined by the nation, are the ways to make use of the right for self-determination by this nation' [Rezolyucii OON, 1971].

The 'International Pact on Economic, Social, and Cultural Rights' and the 'International Pact on Civil and Political Rights' are such 'firm' international documents binding on the states that sign them. Article 1 of these pacts

states: 'All peoples have the right for self-determination. By this right, they freely set up their political status and conduct their economic, social, and cultural development' [Adamishin, 1989, pp. 292–293].

Among the European documents the Framework Convention for the Protection of National Minorities is especially notable, and it includes 4 norms:

1. The parties are obliged to guarantee any person, belonging to a national minority, the right of equality and equal protection by law. Thus, any discrimination based on any national minority relation is prohibited.

2. The parties are obliged to take relevant measures in cases of necessity in order to encourage in all the fields of economic, social, political, and cultural life the complete and actual equality between people belonging to the national minority and people belonging to the majority of the population. Thus, the parties must comply with the position of people belonging to national minorities' [Shaykhutdinova, 2000, p. 107].

Until now the international documents do not contain an exact definition of the concepts 'people' and 'national minority,' but the trend in developing legislation is moving towards the expansion of the rights for ethnic groups regardless of their calling themselves as a 'people' or a 'national minority.'

Following legal norms *per se* does not lead to interethnic consensus, which is not restricted only to tolerance. A general policy to satisfy ethno-national needs is also important. In the Republic of Tatarstan this is formulated as keeping the balance of interests of confessional and ethnic groups and political powers. The sense of this principle was expressed in the centric approach of the authorities and in the condemnation of extremes political relations on the part of the leaders of the republic, politicians, and intellectuals. Years later this approach became a part of the culture in Tatarstan.

Balance in these complicated issues is especially important as the role of the Islamic factor is constantly growing all around the country. The adoption of Islam as a state religion by the Bulgar state in 922 is nowadays celebrated

quite solemnly by an enormous number of pilgrims. On the other hand, after the conquest of Kazan by Ivan the Terrible, the missionary activities of the Orthodox priests became an important part of the Russian policy. Kazan became a centre of studying for the peoples of the Orient, a base of Christianisation of the region and promoting Orthodoxy in Siberia and Asia. With such traditions, it is extremely important to conduct internal politics very carefully since the issues of Islam and Orthodoxy are embraced by the interests of all the Russian Federation, while Tatarstan is located on the very cusp of the two leading religions. With the exception of the extremes, it is always possible to find a compromise; something which was successfully achieved in the republic.

Another basis of the 'Model of Tatarstan' is the Treaty between the republic and the Federal Centre on mutual authority delegation from 15 February 1994. It led to stability in the relations between Kazan and Moscow. The significance of the signed Treaty is especially clear against the background of the events in North Caucasus. In Tatarstan, despite a complicated situation in the early 1990s, there was no open conflict owing to the work of numerous experts and officials in the republic. Besides a political constituent, there was also an important socio-economic part in the Treaty. Due to the Treaty and stability, Tatarstan managed to develop its own economic policy, develop from a medium region into one of the leading areas in socio-economic development. The complete gasification and telephonisation, road and house construction, Internet networking development, etc., built up a relatively good infrastructure and prepared the republic for the market economy, investment attraction, a transition from resource dependence to high technology production. A new Treaty in 2007 was more an expression of a good will from both parties in the political field. It did not give any tax or other benefits, but it confirmed an importance of the treaty relations themselves.

The treaties and agreements signed between the state bodies of the Russian Federation and the Republic of Tatarstan supported the development of federative relations. M. Shaimiev

spoke out about it quite clearly: 'The Treaty is of huge importance not only for Tatarstan but also for the Russian Federation, and it is proved every day. If there had not been a treaty between Tatarstan and Russia, it would be difficult to define what path the state policy of Russia would have taken today. After signing the Treaty with Tatarstan, Russia set up a robust defensive mechanism to prevent the return to the unitary state and set out on the path of developing as a Federation.' [Khakimov, *Belaya kniga*, 1996, p. 11].

Federalism is the destiny of Russia which historically developed as a union of peoples, and as such it will remain. The role of Tatarstan in decentralisation and federalisation of Russia was and still is very significant. Many people would still like to see Russia as a unitary state, and in recent years opinions have been voiced that federalism is ruining the country. The 'Model of Tatarstan' is an example of federative relations beneficial both to the centre and to the republic that do not interfere with the interests of other regions. Of course, nothing is as simple as it seems in such a complex process. If during the political office of Yeltsin many issues had not been resolved, and not everywhere was a state of order, then when V. Putin came into power, a process began of overly detailed regulation of relations between the centre and the regions. It sometimes happened that the federative centre interfered in some issues exclusively within the competence of the authorities of Tatarstan (for example, the issues of the Tatar language and the national component in the system of education), thus breaching the Russian Federation Constitution. In reply to the complaints of the Republic of Tatarstan, the Constitutional Court passed a verdict based on political and legal grounds rather than upon the Russian Federation Constitution. Despite all the difficulties of a changeable political situation, Tatarstan remains an initiator of the federalisation of Russia.

The third principle of the 'Model of Tatarstan' is based on the international activities of the republic. Traditionally in Russian, the USSR, and the Russian Federation, it was pro-

hibited for the provinces, the regions of the federation to conduct their own foreign external policy. After World War II Ukraine and Belarus became UNO members but were under the strict control of the USSR Ministry of Foreign Affairs. The Union republics nominally had ministries of foreign affairs but actually carried out the functions of protocol.

The situation changed when perestroika began. Not only the Union republics, primarily the Baltic Republics, but also certain autonomous republics sensed a certain freedom. In the Russian Federation Tatarstan was the first to set up contacts with other republics, countries, and international organisations. By the time the Treaty was signed in 1994, there had been sufficient experience to formulate it and to confirm by law. Tatarstan made a real breakthrough in external relations. The approaches developed by Tatarstan in international activities were later included into the federal legislation and became a norm for all the regions of the Russian Federation.

These are the main principles of the 'Model of Tatarstan.' It should be added that the 'Model of Tatarstan' was noted not only by journalists but also by specialists of different research centres in the Russian Federation and in the west as well as by conflicting countries of the post-Soviet territory. There have been many conferences and seminars with this theme, but the most significant were the 'round-tables' called 'The Hague Initiative.' They were held in the late 1990s in The Hague Peace Palace supported by the Carnegie Endowment for International Peace. The organisers were the Republic of Tatarstan and Harvard University. In The Hague there were representatives of official agencies of the Russian Federation, Chechnya, Moldavia with Gagauzia and Transdnistria, Ukraine with the Crimea, Georgia with Abkhazia, and a set of international organisations [see Khakimov, *Belaya kniga*, 1996, p. 112]. The 'Model of Tatarstan' was not useful to all the participants due to the individual features of the countries, but Transdnistria and the Crimea attentively studied our experience. A particular variant

was offered to Chechnya to reconcile a dispute, formulated in the 'Memorandum about Chechnya,' containing the following conclusions and recommendations:

1. There is no military solution of the crisis in Chechnya, and ceasing military actions is urgent.

5. Creating optimal conditions for carrying out free and fair elections in Chechnya with announcing a general amnesty.

7. To solve the issue of the political status of Chechnya on the basis of a deferred decision and by taking into account the world experience' [Khakimov, *Belaya kniga*, 1996, p. 111].

The principle of deferred decision required negotiations to be conducted about exact, vitally important questions without determining the status of the republic since the discussion about the independence of Chechnya forced the Federal Centre into a dead-end. Some years later, in the opinion of the participants of the forum, after the stabilisation of the situation, it was possible to come back to this question and to document the relations between Chechnya and the Russian Federation.

The materials of the 'round-tables' were used by a number of countries. At the same time, certain weaknesses were revealed in the procedure of negotiations between conflicting countries. While preparing the Treaty, Tatarstan was cooperating with a very wide circle of the specialists in the fields of political, social, and economic sciences; not only with the Presidential Administration of the Russian Federa-

tion but also with the Government of Russia and numerous ministries. Meanwhile, the authorities of the Republic of Tatarstan regularly informed the population about the negotiating process by mass media. In Georgia and Moldavia the meetings were of behind-the-scenes character, and it led to the suspicion of surrendering positions and the state interests.' For this reason opposition appeared even in the closest entourage of the governors of the countries. At the time of E. Shevardnadze, Georgia could have become a federative state, and he spoke about this idea in the mass media. However, the unprepared population and political circles rejected this state system. As a result Georgia simply split.

The 'Model of Tatarstan' leans upon the historical traditions and modern policy of the republic. It would not be possible without democracy and federalism. The Tatar renaissance always coincided with the periods when the elements of democracy were born. 1905, 1917, the 'defrosting' of Khrushchev's times. *Pere-stoika* for the republic was a new stage. At the same time, it should be noted that the Tatars were always supporters of a firm state. They had been reformers in Ancient and Medieval Ages, had participated in the establishment of the Russian state, and remain the same until now. Together with Russians, who are also supporters of a strong state, they created a solid base for social, economic, cultural, and political development of the republic on the principles of the 'Model of Tatarstan.'

CHAPTER 4

Priorities of External Relations of the Republic of Tatarstan

§ 1. Practice of External Relations of the Republic of Tatarstan

Ildar Nasyrov

The Republic of Tatarstan, being one of the most economically developed regions in the Russian Federation, actively takes part in international cooperation in order to encourage economic development, to attract investments and technologies, to strengthen scientific, educational and cultural contacts, and to support compatriots.

Tatarstan combines the majority of factors (excluding a border zone) to encourage international integration. This is an economically developed region with energy resources, petroleum production, petrochemistry, and machinery production based on international cooperation and oriented towards external markets. There is practically no sector of the economy in the republic that, directly or indirectly, would not have with the external world. About 60% of the production from Tatarstan are exported [Semerkin, 2010].

Tatarstan develops relations not only with the economically developed countries of Europe and America but traditionally gravitates towards strengthening trading and cultural relations with the countries of the Middle East and Asia. The reason for this is its location in the centre of Eurasia, at the crossroads of trade routes between the Orient and the West, the north and the south, in combination with the historically formed multi-ethnic and multi-confessional population.

When considering the range of external relations of Tatarstan, the ethnocultural factor should be taken into account. Together with economic interests, it is an important moving force in the international cooperation of the republic, it supports cultural and humanitarian contacts as well as compatriots as one of

the priorities in this field. Spiritual closeness and common cultural interests form the basis for centuries-long relations between Tatarstan and the Muslim countries of Asia and the Middle East. Nowadays, when Russia is playing a more noticeable role in the regions of the Middle East and Asia, they have obtained a new content and gained an additional impulse [Nasyrov, 2008].

The modern practice of external relations of Tatarstan started in the early 1990s. The adoption of the Declaration of State Sovereignty (1990) and the Constitution of the Republic of Tatarstan (1992) encouraged international activities to develop. In the latter half of the 1990s, after adopting the federal legislation regulating international and external economic relations of the Russian regions, the formation of legal and organisational fundamentals for their implementation was completed. The international relations of the Republic of Tatarstan are conducted in accordance with the principles of the external policy of the Russian Federation, on the basis of the Russian and international legal norms, in tight interaction with the Ministry of Foreign Affairs of Russia [Akulov, 2006, pp. 272–286].

The main feature of the legislative base for external relations of Tatarstan is the Treaty issued on 26 June 2007 'On the Delimitation of Jurisdictional Subjects and the Mutual Delegation of Authority between the State Bodies of the Russian Federation and the State Bodies of the Republic of Tatarstan,' containing a separate article about international and external economic cooperation of the Republic of Tatarstan. This Treaty is a successor in a bilateral agreement about a division of jurisdiction and

mutual delegating of authorities from 15 February 1994, which in its own way became a form of the legitimisation of the Russian Federation Constitution in Tatarstan.

In Tatarstan, in accordance with the republican Constitution, the head of the Republic defines the directions of external activities, presents Tatarstan while implementing international and external economic relations [Konstituciya RT, 2005]. An important role in acquiring international recognition of Tatarstan as a worldwide known factor of international relations was played by the first president M. Shaimiev.

The State Council of the Republic of Tatarstan as a supreme body of the legislative branch forms a regional level of statutory base of international cooperation and also defines amounts of the budget financing of international and external economic activities. Within its competence, the Republic of Tatarstan forms a statutory legal base of external relations that can be divided into two groups:

- The first group: the Constitution of the Republic of Tatarstan, the laws of the Republic of Tatarstan and other legal acts

- The second group: international treaties of the Republic of Tatarstan

The first international treaties in commercial, economic, scientific, technological, and cultural cooperation (Ukraine, Kyrgyzstan, Azerbaijan, Hungary, Lithuania, Belarus, Bulgaria) were signed in 1991–1992. In total, over 50 documents were signed; some of them are terminated at the moment.

External activities is a responsibility of the Government of the Republic of Tatarstan carried out by the Ministry for Industry and Commerce. The republican ministries, supervising agriculture, culture, education, science, tourism, sport, other fields, also develop international cooperation.

The authorities of the Republic of Tatarstan support not only the large enterprises in developing long-term international projects and expanding outlets but also small and middle businesses by carrying out consultations and trainings, presentations and business-missions, implementing the measures of financial stimu-

lations for export-oriented productions, introducing innovative projects, and setting up competitive production.

In the second half of the 1990s the representative office system of the republic was formed abroad and in the Russian regions. The trend of the next stage was emphasis on strengthening the foreign trade cooperation, which defined the organisational form of foreign missions as a trade and economic representative office or a trading house. At the present time (considering Russian regions) the Republic of Tatarstan has 20 functioning missions and about 30 trading houses.

Representative offices and in part trading houses provide the implementation of top-priority tasks in the foreign relations sphere, including the promotion of the Tatarstan enterprises production, attraction of investments for projects within the Republic, initiation for the Tatarstan enterprises of direct ties with economic entities of a host country/region, coordination with the authorities in implementation of joint projects, organisation of visits, and the compatriots' support.

Significant assistance for the development of the whole complex of bilateral relations with Turkey and Iran is rendered by the Consulate General of the Republic of Turkey (established in 1996 in Kazan) and the Consulate General of the Islamic Republic of Iran (established in 2007).

Foreign trade cooperation of the republic is flourishing. With trade ties with over 100 countries around the world, Tatarstan looks forward to striking a balance between cooperation with the Western and Eastern countries. The development of foreign economic ties with France, Germany, Italy, the Netherlands, the United States, and other Western partners is coupled with strengthening relations with Turkey, the Republic of Korea, China, India, United Arab Emirates, and other Eastern countries.

The foreign trade turnover, having increased twentyfold since 1992, reached its maximum volume in 2008 and totalled 21.3 billion US dollars, including export amounting to 18.4 billion US dollars. The share of engineering products in the republican export

was amounted to 6.6%; 5.4%, synthetic rubber; 1.7%, plastic products; 0.9%, tyres. In a similar vein, the high proportion of crude oil (66.0%) and petroleum products (14.8%) continued to form a considerable part of the Republican export. The ensuing global crisis has led to the significant reduction of foreign trade turnover volumes primarily due to a decline of crude oil and refined products prices.

However, the volume of foreign investments, on the contrary, reflected an upward trend even during the crisis in 2009 (for 9 months Tatarstan received more than 1.5 billion US dollars, or 119% compared with the same period of the last year). The structure of the cumulative foreign investments included (according to the type of foreign trade activities), first, real estate operations amounting to 66.8%; second, the manufacturing sector has accumulated 23.9% of the investment; mining operations ranked the third place (4.1%). [Activity of enterprises and organizations of the Republic of Tatarstan, 2009].

One of the economic growth and joint ventures development area has become Russia's largest Special Economic Zone (SEZ) of industrial type 'Alabuga' located within the territory of Yelabuga district, Tatarstan. Investors are allocated pre-prepared facilities with all the necessary infrastructure within the territory of the SEZ. The residents of the SEZ are represented by three key groups: production of cars and car components, processing of polymers into end products, manufacturing of construction materials. As of the end of 2009, 9 residents were registered in the SEZ 'Alabuga.'

Visits by foreign political leaders to Tatarstan proved the acknowledgment of its high international authority. As early as in 1993 the Hungarian president Árpád Gents visited the city of Kazan. In terms of the largest international events held in Tatarstan in recent years, they are a CIS summit (August 2005), the annual meeting of the EBRD Board of Governors (May 2007); heads of states visits from the following countries: China (Hu Jintao, March 2007), the Czech Republic (Václav Klaus, April 2007), Turkmenistan (Gurban-

guly Berdymukhamedov, June 2008), Turkey (Abdullah Gyl, February 2009), as well as the Secretary of State (Hillary Clinton, October 2009) and the head of the Palestinian National Authority (Mahmoud Abbas, January 2010). In 2009, 18 foreign ambassadors to the Russian Federation visited Tatarstan. Foreign visits of the Republic of Tatarstan official representatives are also held at a high level.

According to the Constitution of the Republic of Tatarstan (Article 14), strengthening relations with the Tatar diaspora in the Russian regions and abroad is among the international cooperation top-priority of the republic. Currently around 1 million Tatars live outside Russia, and the most numerous Tatar diasporas have historically formed in the Middle Asian countries of the CIS. The support of compatriots, in close cooperation with federal authorities and Russian foreign institutions, reflects in all forms of international cooperation, from cultural to economic, making them specific.

One of the most significant projects in this area is the World Congress of Tatars (WCT) that has been regularly held in Kazan from 1992 in order to address persistent ethnocultural issues in Russia and among compatriots living abroad. The initiatives implemented by Congress include: the adoption of the State Programme for the Preservation, Study, and Development of the State Languages of the Republic of Tatarstan, the establishment of trading houses on the territory of Tatars dense residence, the development of satellite television and radio aiming at forming a Tatar-speaking common information space.

The Executive Committee of the WCT works with around hundred and fifty Tatar organisations in 35 countries, and this interaction helps to determine the most urgent issues that concern compatriots [Nasyrov, 2007, pp. 179–185].

Tatarstan has been at the centre of international attention at various stages of the contemporary history, in the focus of key socio-economic events. In recent years Tatarstan has been actively involved in international processes focused on the development of inter-

civilisation dialogue, the empowerment of the tolerance principles in public life.

Islamic countries have expressed positive interest in strengthening contacts with Tatarstan. This can be explained not only by the fact that significant number of Muslims reside here but also the successful implementation of the balanced domestic policy in the multi-ethnic republic, with approximately equal Muslim and Orthodox population.

In general one can say that Tatarstan has created the basic principles and approaches to the development of its international activities as well as the necessary legal and human resources and the infrastructure of foreign contacts. It has also improved its collaborative mechanism with the federal authorities.

Tatarstan has accumulated a wealth of experience in international and foreign economic relations, known as 'Tatarstan diplomacy,' or the effective use of international cooperation for socio-economic development of the republic, the spread of the tolerance principles, and coherent consideration of various social interests as well as the preservation

of regional identity in a multicultural modern society.

International cooperation of Tatarstan is multidimensional and multidirectional. The geographical coverage, forms, and participants of this cooperation are constantly expanding. These developing international contacts along with extensive foreign economic relations closely integrate Tatarstan into the world.

Having aimed at strengthening international cooperation for the development of a diversified economy based on advanced technologies, including enhancing the level of raw materials processing and the increase of the region's competitiveness, the Republic of Tatarstan is contributing to the solution of national socio-economic development problems in the age of globalisation. The need for a consolidated response to new external challenges and the increasing interdependence of domestic and global processes require more precise coordination of regional authorities in the sphere of international cooperation with the national government and other key players in international relations.

§ 2. Cooperation of the Republic of Tatarstan with International Organisations

Ildar Nasyrov

Tatarstan's cooperation with international organisations has become an important form of maintaining foreign contacts in all its main directions, embracing the implementation of both economic and humanitarian projects. In addition, the Republic of Tatarstan is engaged in working with not only international organisations consisting of regional representatives from different countries but interstate associations as well.

In the first half of the 1990s Tatarstan took part in selected events of the Unrepresented Nations and Peoples Organisation and later became a member of the Assembly of European Regions. The Executive Committee of the Worldwide Tatar Congress gained an observer status with the Interparliamentary Assembly

of the CIS. The republic established contacts with such major international organisations as the UNO, UNESCO, UNIDO, ILO, EBRD, the Council of Europe, the Congress of Local and Regional Authorities, the International Union of Local Authorities, the Council of European Municipalities and Regions, and a number of other international and regional organisations. The republican actions are reconciled with the Ministry of Foreign Affairs of the Russian Federation [Akulov, 2000, pp. 61–66].

In this regard it is interesting to note the assessment the significance of Tatarstan's international contacts for the Russian Federation given by the U.S. Advisory Commission on Intergovernmental Relations: As K. Graney

notes, the activity of Tatarstan in the European regional institutions, UNO's Development Programme, and UNESCO contributed to the deeper integration of Russia into the European and global community in the post-Soviet period. Supported by international organisations, Tatarstan has taken important steps to preserve the ethnic, linguistic, and cultural uniqueness of the Tatar people in the Republic of Tatarstan and in Russia as a whole [Graney, 2001, p. 39].

In January 1994 UNO Under-Secretary-General Joseph Reed visited Tatarstan. At the same time, the president of the Republic of Tatarstan M. Shaimiev delivered the speech at Harvard University (USA), which has become a landmark for understanding the processes taking place in our republic by Western politicians. From then the term 'the Model of Tatarstan' has been coined.

At the turn of the century cooperation between the republic and UNESCO has intensified. However, it should be noted that even as early as 1983, after a resolution made by UNESCO, celebrations were held to mark the 800th anniversary of the most significant representative of the 13th century Eastern poetry Kul Ghali. In 2001 the Kazan Kremlin was included in the UNESCO World Heritage List. A significant result of cooperation with UNESCO was the holding of 'Tatarstan Days' at UNESCO headquarters in Paris in June 2001 dedicated to the 1,000th anniversary of Kazan. The Bulgarian Historical and Archaeological Complex and Sviyazhsk Historical-Architectural and Natural-Landscape Complex are also included in the Tentative List of the UNESCO World Cultural Heritage. Work on including the traditional Tatar holiday Sabantuy in the UNESCO Intangible Cultural Heritage List is underway. In 2003 UNESCO Director General Koïchiro Matsuura visited Kazan. The anniversary of Kazan (2005) and the 200th anniversary of Kazan State University (2004) were included in the calendar of memorable dates of UNESCO. Under the auspices of UNESCO and the Council of Europe the international project 'The Volga Trade Route' (2001–2005) was started in Ka-

zan [Akulov, Nasyrov, Savelyev, 2006, pp. 196–210]. Since 1998 an international UNESCO faculty, coordinating scientific and socio-educational projects, has been functioning in one of the leading private universities in Kazan. Since 2007 the Federation Commission for UNESCO in the Republic of Tatarstan has been coordinating the cooperation with this international organisation. In October 2010 M. Shaimiev took part in the 185th session of the Executive Board of UNESCO as the State Counselor of the Republic of Tatarstan, where he presented a project designed to restore the ancient city of Bolgar and the island-town Sviyazhsk.

In recent years the Republic of Tatarstan has strengthened its cooperation with the UNO's Industrial Development Organisation (UNIDO) and the UNO's Economic Commission for Europe. Having started in the mid-1990s with an intensive exchange of information with UNIDO regarding the access to the world market of investments, Tatarstan signed the Memorandum of Cooperation between the Government of the Republic of Tatarstan and UNIDO in 2009. The memorandum is aimed at developing cooperation in the sphere of energy efficiency and energy saving, environmental protection and rational use of water resources, industrial development, application of modern technologies for processing and recovering of waste with the aid of recycled materials to the Republic of Tatarstan. In May 2010, during a working visit to the Republic of Tatarstan by UNIDO Director General Kandeh Yumkella, the parties agreed to establish a UNIDO Project Office in the Republic of Tatarstan designed for implementing the prospective avenues for cooperation and providing training concerning document preparation in compliance with the requirements and standards of international financial institutions.

Within the framework of Tatarstan cooperation with the UNO European Economic Commission, the possibility has been considered to use alternative energy sources, including the feasibility of using biomass and the implementation of this project in the republic. The

efforts to develop innovative technologies and bioenergy in the Republic of Tatarstan are being made within the framework of the inter-departmental working group on coordination of Tatarstan cooperation with the UNO ECE [Deyatel'nost' Pravitel'stva Respubliki Tatarstan, 2010].

By 2010, 20 representative offices of international organisations and public associations, aimed at promotion of bilateral humanitarian relations with foreign states, were opened in Kazan.

Cooperation with international organisations plays an important role in improving state management, the promotion of democracy, the formation of civil society, the preservation of cultural diversity, and the protection of human rights.

Among international organisations promoting such a multi-directional cooperation, we should note the Council of Europe, which supported a series of international conferences and scientific seminars regarding the issues of local government, federalism, intrastate relations, human rights, cultural heritage, intercultural and inter-religious dialogue held in Tatarstan.

Human rights defenders of Tatarstan actively interact with foreign colleagues. The Council of Europe Commissioner for Human Rights Alvaro Gil-Robles turned attention in his report to the initiatives of the Republic of Tatarstan aimed at promoting harmony among ethnic groups as well as open cooperation and dialogue supported by political and community leaders of the republic [Robles, 2004].

Strengthening the international position of Russia in conjunction with the need to develop a dialogue with Islamic countries led to the expansion of the activities in this direction [Nasyrov, 2008, pp. 2687–2692]. The Republic of Tatarstan, which historically strives for diverse contacts with the Middle East countries, is actively involved in the development of the Eastern trajectory of Russian foreign policy. Here we can also note the visits of the republican officials to the Middle East countries, which were held at the highest level, and the contribution of Tatarstan to building relationships with the leading organisation unit-

ing Islamic countries—the Organisation of the Islamic Conference (OIC), the Secretary General of which Ekmeleddin İhsanoğlu has repeatedly visited Tatarstan. While in Kazan in August 2005, the OIC Secretary General Ekmeleddin İhsanoğlu said that Tatarstan constantly cooperated with the organisation, and many joint activities had been held. This cooperation acquired a systematic nature after the Russian Federation was granted observer status in the OIC.

Kazan hosts major international events organised with the direct support of the OIC affiliated institutions. Among them there are the International Investment Conference, organised in 2008 in Russia for the first time jointly with the Islamic Development Bank under the auspices of the Ministry of Foreign Affairs of the Russian Federation. In 2009 and 2010 this event was held in the format of the International Summit of Islamic Business and Finance. In the field of scientific cooperation we can highlight the holding of the 16th International Conference of the Islamic World Academy of Sciences in Kazan. The representative forum, which was attended in 2008 by more than 100 leading scientists of the Islamic world, was the first event of its kind that took place in Russian. The acquired experience of cooperation with the Islamic Academy of Sciences showed that its activity has evident practical character. The primary focus was on the development of new technologies, environmental protection and health, social affairs [Nasyrov, 2009, pp. 6–10].

On 25 September 2009 the Organization of the Islamic Conference celebrated its 40th anniversary. The two major events were held in anticipation of this occasion in the Republic of Tatarstan: the 27th meeting of the Administrative Council of the Organisation of Islamic Capitals and Cities and the International scientific-practical conference 'Islamic Education in Russia and Abroad,' organised together with the Islamic Educational, Scientific, and Cultural Organisation (ISESCO) and the Federation of the Universities of the Islamic World, whose members include the Russian Islamic University in Kazan.

Considering the problem of cooperation with Islamic financial institutions, it must be taken into account that the current status of Russia in the Organization of the Islamic Conference does not allow the Islamic Development Bank to carry out its activities in full within its territory. This problem cannot be solved without the support of the Federal Centre. In this situation the Islamic financial community and the Central Bank of Russia need to find common ground and make the appropriate changes to the current legislation and regulations. In this regard, it can be noted that at an investment conference in Kazan Ahmad Muhammed Ali, president of the Islamic Development Bank, highly appreciated the contribution of the Russian Islamic Institute in promoting the study and implementation of the Islamic financial system in Tatarstan and Russia, noting in particular the seminar 'Islamic Finance – Banking and Insurance.'

In March 2010, together with the Islamic Development Bank and partners from Islamic countries, the Tatarstan International Investment Company was established, the shareholders of which have determined the priority areas for investment: infrastructure development, telecommunications, agriculture, finance, small-scale power generation, and halal industry.

Cooperation between Tatarstan and the World Bank was also efficient. The first negotiations for the provision of the loan, which began in 2002, ended in February 2005 with the resolution of the World Bank to grant Russia a loan of \$125 million for the needs of municipal development of Kazan (that means that at this stage the project was carried out through the Federal Centre). In the future the cooperation continued on the basis of the Memorandum of Understanding between the government of the Republic of Tatarstan and the International Bank for Reconstruction and Development (which is part of the World Bank) signed in June 2006. Among the promising directions of the cooperation are asset management, technical assistance and loans provision, assistance in the development of the Alabuga Special Economic Zone,

and reformation of HMB sphere. The work on improving the investment attractiveness of companies of Tatarstan is also conducted with the assistance of the World Bank experts. The Memorandum of Strategic Partnership between the government of the Republic of Tatarstan and the IBRD, which lasted until 2015, was signed in June 2009.

Since 1992 the Republic of Tatarstan has been an observer of the International Organisation for Joint Development of Turkic Culture and Art (TÜRKSÖY), and since then artistic groups, pop and opera singers, and artists of Tatarstan participate in international cultural programmes carried out under the auspices of TÜRKSÖY. Since 1993 Tatarstan theatre groups have been participating in Nowruz, the International theatre festival of Turkic peoples. In 2009 Kazan hosted the festival for the fourth time. TÜRKSÖY takes part in the International festival Golden Minbar in Kazan with a special prize For Contribution to the Development of Turkic World Cinematography. In 2009 the Ministry of Culture of the Republic of Tatarstan jointly with TÜRKSÖY held the Turkish Film Festival. 2011 was proclaimed the Year of Gabdulla Tukai since it was the 125th anniversary of the poet's birth.

European organisations, among all international organisations of the regional level, most actively cooperate with Tatarstan. Since 2001 the chairman of the State Council of the Republic of Tatarstan F. Mukhametshin has been the member of the delegation of the Russian Federation in the Congress of Local and Regional Authorities of the Council of Europe (CLRAE), thus participating in the work of the governing bodies of this representative organisation. Among the most significant projects initiated with the participation of Tatarstan are the development of intercultural dialogue and the preservation of the languages of national minorities in the modern world, facilitating the integration of the young people from problem areas into society, as well as the introduction of e-democracy in the ongoing work of local government bodies.

In November 2010 F. Mukhametshin was also elected to one of the oldest European

interregional associations—the Assembly of European Regions (AER) (founded in 1985, brings together 270 regional members from 33 European countries and 13 interregional member organisations). Support for cultural diversity, sharing of experience, and the training of public officials are among the priority directions of the work of the AER, in addition to the formation of the regional course in European politics. Tatarstan has been a member of the AER for quite a long time, but the election of F. Mukhametshin to the AER took the cooperation with the organisation to a new level.

The capital of Tatarstan is involved into the activities of international organisations. I. Metshin, mayor of Kazan, is vice president of the Organisation of World Heritage Cities (OWHC Eurasian regional office is located in Kazan), International Assembly of Capitals and Big Cities; Russian Union of Historic Towns and Regions (he is also the chairman of the Chamber of historical cities). Kazan is an observer of the Organisation of Islamic Capitals and Cities as well as of the Community of European cities blessed by the appearance of the Mother of God. Events organised within the framework of the UNO's Human Settlements Programme (UN-Habitat) are held in Kazan. Kazan was awarded honorary diplomas of UNO-Habitat for the implementation of the Programme for the Demolition of Dilapidated Housing in 2005, and Bugulma, for the Clear Water project in 2008.

Cooperation with the international organisations is also carried out by ministries. In addition to the joint projects with TÜRKSOY, the Ministry of Culture of the Republic of Tatarstan cooperates with the World Congress of Writers, in whose activities the Association of Writers of the Republic of Tatarstan, the Tatar Pen Centre, regularly takes part. The Ministry of Culture of the Republic of Tatarstan has established contacts with the International Federation of Library Associations and the Library Assembly of Eurasia. The Ministry of Internal Affairs of the Republic of Tatarstan collaborates with the International Police Association.

Kazan has become a recognised venue for holding events at the level of major international organisations. Kazan hosted a meeting of the Council of Heads of States of the CIS in 2005, the 16 Annual Meeting of the EBRD Board of Governors in 2007, the 6 Meeting of ministers of Culture of SCO member states, the 50th Meeting of the Council of Heads of Customs Services of CIS Member-States, the International Conference on Competition under the Auspices of BRIC in 2009, the Meeting of Heads of the Ministry of Internal Affairs (Police) of the CIS countries, the 12 Meeting of the EU-Russia Permanent Partnership Council on Freedom, Security, and Justice, and the 5th Meeting of the Council of Justice ministers of the CIS member States in 2010.

Undoubtedly, the development of the modern tourism and transport infrastructure of the capital of Tatarstan contributes to such dynamics of the expansion of international contacts, which is significantly related to the preparation of the city to a number of major events: in 2005 Kazan celebrated its 1,000th anniversary, and in 2013 the city is preparing to hold Summer Universiade and matches of the World Cup in 2018. These two events would be impossible without the fruitful work of Tatarstan with FISU and FIFA, the leading sports organisations, which was carried out within the framework of the requests of Russian Federation to hold these sports world class events.

When summing up the participation of the Republic of Tatarstan in international organisations, it can be concluded that the organisational form of cooperation allows the expression of regional interests in the international arena in a more precise way. It promotes the development of institutional mechanisms and the legal base for the participation of the regions in international cooperation. The increasing dependence of the socio-economic development of the country and its regions on global processes shows the need for further strengthening of international cooperation, including at the level of international organisations.

§ 3. The Authorised Representative Office of the Republic Tatarstan in the Russian Federation as Part of the System of International Relations of Tatarstan

Nazif Mirikhanov

After the formation of the Tatar Autonomous Soviet Socialist Republic (TASSR) in 1920, the Tatar People's Commissariat of Nationalities (Narkomnats) was renamed the representative office of the Republic of Tatarstan in the capital. Mirsait Sultan-Galiev became its first head. In 1938 the representative office of the Republic of Tatarstan was closed, and Mirsait Sultan-Galiev was subject to repression. The representative office of the Republic of Tatarstan in Russian Federation was reopened only in 1991.

The authorised representative office of the Republic of Tatarstan in the Russian Federation is a public body, a legal entity carrying out activities in accordance with the Regulations approved by the president of the Republic of Tatarstan.

The authority of the representative office of the Republic of Tatarstan in the Russian Federation comes from the federal structure of the Russian state—every federal state has representative entities in the capital.

The plenipotentiary representative office of the Republic of Tatarstan in the Russian Federation works in a number of areas: assistance and overall control of the implementation of political and economic issues raised by the leaders of the Republic of Tatarstan to federal agencies; support for international relations, above all working with the embassies of foreign countries; public relations and media, protocol services.

Tatarstan is gradually acquiring experience of cooperation with foreign countries: France, Germany, Italy, Austria, Turkey, Switzerland, Poland, Hungary, Bulgaria, Iran, regions and administrative units of the United States, Canada, and others. The cooperation with China is increasing.

The Republic of Tatarstan, while putting into practice its constitutional provisions for legal identity, is also making significant ef-

forts to implement a number of international programmes and expand its capabilities to act independently in the system of bilateral and multilateral (together with Russian federal structures) international relations.

The successful visits of the president, prime minister and chairman of the State Council of the Republic of Tatarstan to foreign countries and the signature of a significant number of bilateral agreements make it possible to expand the international recognition of the republic, raise the authority of Tatarstan, and intensify all forms and levels of the international cooperation.

The authorised representative office in the Russian Federation is one of the links that connects the structure of the bodies of state power of Tatarstan with the federal authorities of Russia and foreign diplomatic representative offices in Moscow in the sphere of international relations. It carries out international work in the following areas:

– Establishment and development of business contacts and relations with diplomatic, sales, and culture representatives and missions of foreign states, international organisations, foreign firms, and companies.

– Participation in the preparation of foreign visits of heads of state and government delegations of the Republic of Tatarstan, decision taking with regard to consular, passport and visa issues; coordination of visits by delegations and signature of documentation with the relevant federal authorities and foreign representative offices, providing the delegation with the necessary information and reference materials.

The authorised representative office of the Republic of Tatarstan in the Russian Federation ensures the participation of the representatives of ministries and departments of the republic in cooperation with foreign partners representing major intergovernmental and non-governmental international organisations,

such as the UNO, UNESCO, UNIDO, ILO, Council of Europe, the CLRAE (Congress of Local and Regional Authorities of Europe), IULA (International Union of local authorities), CECR (Council of European Communities and Regions), AER (Assembly of European regions).

It is involved in the development of contacts with the largest banks, including the World Bank, and foundations (Adenauer, Ebert, Seidel, Soros, Ford), international entrepreneurs' organisations and travel agencies (World Union of Wholesale Markets, the annual Leipzig Trade Fair, etc.).

Co-operation with the majority of countries is clearly not limited to foreign trade activities and expands in the direction of cultural and educational programmes.

More active participation of the Republic of Tatarstan in the technical assistance programme of the Council of Europe and the European Community is also a priority programme element. Participation of the chairman of the State Council of the Republic of Tatarstan as a member of the official delegation of the Russian Federation in the Congress of Local and Regional Authorities of Europe (CLRAE) and his work in the Chamber of Regions of CLRAE allow Tatarstan to expand its influence in the European representative body as regional issues are regularly discussed at sessions of this Chamber.

Participation of Tatarstan representatives in programmes and activities of the Council of Europe, the Assembly of European Regions, negotiations and contacts with the leadership of the Council of Europe and the leaders of the Assembly of European regions confirm the recognition of Tatarstan in regional European circles.

The external relations of local authorities, business leaders, and entrepreneurs representing all types of property are extremely important in the international system of contacts of the Republic of Tatarstan. Provision of assistance to this category of participants of international relations has a very positive influence on the economic health of the republic. Within the framework of the development of internation-

al relations of cities and regions of Tatarstan, there are significant opportunities for the implementation of the main provisions of the European Charter of Local Self-Government and the European Charter of Regional Languages and Cultures and the Languages and Cultures of Minorities in the republic.

Major economic projects were carried out under the auspices of the Council of Europe under the programme of technical assistance to the CIS (TACIS) on the basis of international agreements. Restructuring state-owned enterprises, private sector development, agriculture, infrastructure (energy, telecommunications, transport), the reform of management systems, services, and education are the priority sectors of this programme.

Employees of the authorised representative office in the Russian Federation have special relations with the structural units of the Russian MFA. This allows for the efficient resolution of current issues of the international activities of the Republic of Tatarstan. The International department of the plenipotentiary representative office of the Republic of Tatarstan in Russia is increasingly becoming a 'working body' in Moscow, helping the Presidential Administration, the Government, the State Council of the Republic of Tatarstan, certain ministries with the preparation and holding international events.

The authorised representative office of the Republic of Tatarstan in the Russian Federation, along with the implementation of the important functions of an internal nature, acts as the main liaison between Moscow and Kazan in international activities of the Republic of Tatarstan and is becoming an important element in the implementation of the programmes of External Relations of the Republic.

It has become customary to hold meetings with ambassadors and trade representatives of foreign states in the plenipotentiary representative office of the Republic of Tatarstan in Moscow within the framework of preparation for overseas visits of the heads of Tatarstan as well as the reception of foreign delegations in Kazan. The authorised representative office of the Republic of Tatarstan in the Russian Federa-

tion works on the coordination of bilateral draft treaties and agreements, which are planned to be signed during forthcoming visits by leaders of the Republic of Tatarstan with the MFA of Russia.

Thanks to the active international activity of the leaders of Tatarstan, the personal authority of the president of the Republic M. Shaimiev in the Russian Federation and on the international arena, and his regular statements on complex regional and federal problems in the mass media, the authorised representative office of the Republic of Tatarstan in the Russian Federation in Moscow is becoming increasingly recognisable amongst the federal authorities, the diplomatic corps, and foreign partners. The leaders of the authorised representative office of the Republic of Tatarstan in the Russian

Federation receive invitations and participate in official protocol events organised by foreign embassies, trade representatives, and federal agencies included in the international activity. The authorised representative office of the Republic of Tatarstan in the Russian Federation participates in almost all international forums and seminars organised by the MFA in Moscow, and sometimes abroad.

Important work on the implementation of the programme of External Relations of the Republic of Tatarstan, both independently and in collaboration with federal entities of the Russian Federation, continues. The authorised representative office of the Republic of Tatarstan in the Russian Federation contributes significantly to this process, which is a worthy factor in the international authority of Tatarstan.

CHAPTER 5

The Tatar World at the end of the 20th century

§ 1. The Tatars in Neighbouring Countries and Beyond: the History of Settlement and the Current Condition

Rustem Gaynetdinov

The Tatars are among the world diaspora nations and are represented in the leading countries of five continents of the planet.

According to quite approximate data, the total number of the Tatars living outside the Russian Federation is just over 707 thousand people, including 634.9 thousand in the neighbouring countries and 72.5 thousand, beyond. There are ethnic communities and groups of Tatars in more than 50 countries.

According to most modern scholars, the Tatars people formed in the depths of the Golden Horde in the latter half of the 14th–early 15th centuries. Geographically, these were the regions of the Volga-Urals, which are traditionally considered to be the historical area of the formation of the ethnic Tatars. At the same time, linguistic and cultural integration of regional ethnic communities, components and sub-ethnic groups of the Tatars took place within a single state. By the time of the breakup of the Golden Horde State into independent Tatar khanates, the Tatars had a clear ethnic identity, a common literary language, based on the Turkic-Kipchak dialects, a common religion—Islam, common national-psychological characteristics, and even similar anthropological signs. The Slavic, Finno-Ugrian, and other ethnic infusions, which followed over the next centuries and influenced the ethnogenesis of the Tatars, were not so significant as to change the inherent identification characteristics developed in the late Middle Ages.

As an active mobile people, the Tatars have been engaged in trade and business from time immemorial. Even in the pre-Mongol period

of Volga Bulgaria, Bilyar, the capital of the state, was a world centre of trade, and Bulgarian merchants and their products were known in many countries of the Orient and the West. During the time of the Golden Horde the Volga and the city, situated on it, including Bolghar, were famous for its bazaars, which attracted merchants from many countries. During the period of the Khanate of Kazan, Kazan was a major trade centre linking Europe with Asia. In the 16th century the loss of statehood in the the majority of the Tatar Khanates, the displacement of historically inhabited lands as a result of steadily increasing policy of forced Christianisation forced part of the people to leave their traditional habitats and move to new territories.

Active interethnic contacts of the Tatars in the following centuries led to the strengthening of integration processes within the nation. The local names of ethnic groups, inherited from medieval Tatar states (Kazan (Volga), Siberian, Astrakhan, Kasimov Tatars), were replaced with national ethnonym 'Tatars.' Their linguistic and cultural differences disappeared in the 20th century once and for all. Now these ethnonyms are preserved only as a secondary local names.

The diaspora parts of the Tatar nation developed in a different way. After 1552, when the Kazan Khanate joined the Russian state, a process of the forced resettlement of the Volga Tatars began. They were mainly resettled to the Orient and South, Bashkir, and then in the Kazakh steppes.

The territorial movements of the Tatars, who made up the population of Astrakhan

and Siberian Khanates, which fell after Kazan and the Nogai Horde, which was peacefully adjoined, were insignificant. They mainly remained in places of their historical habitat. Only at the end of the 19th century there was a relatively large migration of the Tatar rural population from Siberia to Turkey.

In the 18th–19th centuries the Tatars were used actively by Tsarist Russian administration in the process of setting the recently annexed territories of Kazakhstan and Semirechye (Turkestan). They mainly performed mediating functions due to their linguistic and religious affinity with the indigenous peoples of these lands. Intensive trade with the new territories at the same time led to the creation of considerable trading capital amongst the Tatar settlers. This later enabled the Tatars to fulfil a broad educational and cultural function for the Turkic-Muslim population of Central Asia, with their traditional patriarchal way of life.

Having settled the neighbouring parts of the Turkestan, Tatar pioneer traders went further to Xinjiang, and at the end of the 19th century they went into Afghanistan and even in India (Kashmir). As a rule their families and compatriots also moved after them, actively occupying a market niche or acting as landowners in the new settlement areas.

South-East Asia (Manchuria, Japan, Korea) became one of the quickly settled territories in the 20th century, where a powerful urban culture of the Tatars was forming and consolidating due to the wide participation of the Tatars in construction and settling of the Chinese Eastern Railway (CER).

Communities of Polish, Lithuanian, Belarusian, and Dobruja (Romanian) Tatars were formed in their own way. Their withdrawal from the Golden Horde state began in the 15th and 16th centuries. In the following centuries they evolved quite apart from the main part of the Tatar ethnic group (Polish-Lithuanian Tatars even lost their own language during their emigration—'osadnichestvo'). Until the end of the 20th century the connection of these peripheral (diaspora) parts with the ethnic core of the nation, concentrated in the Ural-Volga

Region, was maintained at the level of irregular cultural and information contacts.

The Tatars of the Crimea, who retained their statehood until the middle of the 18th century, decided to integrate with ethnic Turks, and for this reason their national and psychological distinctions from Kazan and Siberian Tatars are currently the most significant. During the All-Union census in 1989 Crimean Tatars identified themselves as a separate ethnic group, and their consolidation with the Volga Tatars and other ethnic groups into a worldwide Tatar nation might only be a long-term historical prospect.

At the end of 19th–early 20th centuries the Tatars created modern institutions for cultural and educational development, becoming one of the most advanced and educated peoples of the Russian Empire. In particular, before the October Revolution the Tatars were second after the Russians in the number of books published in native language in Russia. They have made a significant contribution to the culture of the peoples of the Ural-Volga, Central Asia, the Caucasus. As a result of the intellectual capacity of the Kazan Tatars, they developed modern education, book printing, newspapers, and magazines.

Tatar bourgeoisie in the new territories owned gold mines, tanneries and woolen mills, soap factories, wool and fur processing enterprises, hotels, shops, public catering facilities. Everywhere they sought to increase their prosperity.

According I. Tagirov, in 1914 Tatars owned 141 more or less large enterprises, including 90 enterprises in the Volga and Cis-Ural regions; 19, in Central Asia; 18, in Kazakhstan; 8, in Central Russia; 6, in the Caucasus. The industrial enterprises belonging to Tatar capitalists annually produced goods to the value of 10 million roubles [Tagirov, 1999 b, p. 23].

According to many academics researching the sociopolitical history of the peoples of the Volga and the Urals, in the early 20th century the Tatars were 'a completely formed and defined Russian nation of bourgeois type' [Khasanov 1977].

According to D. Iskhakov, the Tatars 'from the 18th until the beginning of the 20th centuries had a nationwide (so-called 'high') culture with a developed literary language' [Iskhakov, 2002, p. 2]. This layer of culture had very segmented institutional mechanisms (national press, the educational system, theatres, publishing houses, etc.), and they served the entire nation.

The Bolshevik Revolution of 1917 interrupted the evolutionary development of the nation. In Soviet Russia and then in the USSR a command-administrative system began to develop. In many cases this system applied a truncated, fictitious form of federalism, which ignored contradictions in the national-state structure of the country and the real needs of its people. It rejected forms of national-state building that did not fit in with the views of the Soviets. It physically destroyed adherents of these views or forced them to emigrate. These people included well-known social and historical figures, who did not accept the communist ideology of the Bolsheviks. Many peoples of the USSR, including the largest Russian people, were divided by Soviet ideologues into the 'right' (Soviet) and 'harmful' (emigrant) part.

In addition, the literary traditions and continuity of Tatar culture were greatly damaged by the third forced change of the Tatar alphabet in the 20th century: from the 15th century until 1929 the written language was based on the Arabic script, in 1929–1939 Latin alphabet was used, and since 1939 Cyrillic letters have been used for this purpose.

In foreign countries the diaspora of the nation developed autonomously formed a 'maternal' ethnos in this period. Interaction between the two ethnic groups was allowed by the Soviet political superstructure only in its immediate interests. According to L. Usmanova, 'the relations between the homeland and the diaspora were cast into oblivion due to the impossibility of emigrants returning as a result of ideological differences' [Usmanova, 2004].

It is important to note that the Tatar diaspora is heterogeneous in its social origin. In

the regions of Russia and CIS countries the diaspora was formed as a result of labour migration in pre-revolutionary and Soviet periods, and its representatives are inseparably linked with the historical homeland.

A vivid example of labour migration is the massive migration of the Tatars of the Ural-Volga region, where in the 1920–1930s they provided additional manpower. They also migrated to the south-eastern Ukraine to work in mines and to work on the construction of the Dnieper Hydroelectric Station and iron and steel works. To a large extent it was caused by the famine of the 1920s in the Volga region, the beginning of repression against the peasantry and the active Communist propaganda, which called upon the population for industrial and socialist construction projects.

In the 1930s and during the war and post-war years the Tatar diaspora in Uzbekistan was significantly replenished by immigrants from starving regions of Russia, who always considered Tashkent an 'abundant south.'

In the 1950–1970s rapid industrial development in all Central Asian republics was an attractive motive for the resettlement of the Tatars. In Kazakhstan the Tatars headed to the mines of Karaganda and Ust-Kamenogorsk, mining plants in Temirtau, Jezkazgan, Shymkent, Dzhambul (modern Taraz). The peak time for mass migration of the Tatars from the central part of the country became the years of development of the Kazakh virgin soil. The Tatars continued to arrive to Uzbekistan to restore Tashkent affected by the earthquake of 1966 and the 'Hungry Steppe' land improvement schemes. Together with the Russians and the Ukrainians, they were the backbone of the labour collectives of the advanced Uzbek industry: mining and metallurgical complex in Navoi, polymetallic plant in Almalyk and Angren, aircraft building and tractor plants in Tashkent. In Tajikistan the Tatars came to work in the mines and processing plants, light industry, construction of meliorative facilities and hydroelectric power plants, including the largest Nurek HES as well as the Tajik Aluminium Plant (TadAZ), the most advanced industry of the republic.

Tatar experts arrived in the 1960–1970s to Krasnovodsk in Turkmenistan (modern Turkmenbashi) to develop the deposits of salt and minerals of Kara-Bogaz-Gol. In Chardzhou (Turkmenabat) they worked at the chemical plant, in Nebitdag they extracted oil and gas and worked at the refinery. In Kizil-Arvat they worked at the largest car-repair plant named after 26 Baku Commissars. Karakum canal from the Amu-Darya River to the Caspian Sea was built with the mass participation of the Tatars.

As a result of these migrations the Tatar population of the Central Asian republics increased severalfold (the maximum 'peaks' were fixed by All-Union census of 1979: 531.2 thousand people in the Uzbek SSR, 312.6 thousand in the Kazakh SSR, 78.2 thousand in the Tajik SSR, 71.7 thousand in the Kirghiz SSR, and 40.3 thousand people in the Turkmen SSR). These diasporas are still the largest in the post-Soviet territories.

The formation of the communities of the Volga (Kazan) Tatars in Belarus and the Baltic States (Lithuania, Latvia, Estonia) is also associated with the post-war participation of the Tatars in large industrial construction projects in the region. Later they became the intellectual sector of the executive and engineering personnel there.

As a result of the collapse of the USSR, the groups of Tatars in the former Soviet republics instantly became diasporas (except in Russia).

In the new post-Soviet countries they faced an acute problem of integration into the civil society of their countries in conditions of dominant role of the titular nations in all spheres of economic and social life. Unfavourable socio-economic and political situation in the early 1990s caused massive migration and declining fertility of non-titular nations, as a result of which the Tatar population in the neighbouring countries everywhere began to decrease. It is especially noticeable in the countries of the Central Asian region, where the destruction of the existing cultural and economic ties, ethnic tension, deteriorating economy and social vulnerability of the majority of the population at the end

of the first millennium had the greatest consequences.

The migrant population reacted to changes in the living conditions in the Russian Federation and former Soviet republics.

For a period of 10 years, from 1989 to 1999, the number of the Tatars decreased by 32% in Uzbekistan, by 18% in Kazakhstan, by 35% in Kyrgyzstan, by 80% in Tajikistan, by 54% in Turkmenistan, and by 46% in Azerbaijan. Ukraine and Belarus lost 16% of the Tatars between censuses, the Baltic States lost about 30% or 35% of the Tatars.

Most of the Tatars went to Russia, especially to the Ural-Volga region. Tatarstan, along with Bashkortostan, became places of distinctive migration inflow for the Tatars. From 1992 to 1997 the Tatars made up 73% of 100 thousand people who came to the Republic of Tatarstan. At the same time, the outflow of the Tatars went not only to Russia but also to the neighbouring countries (for example, in Kazakhstan from Turkmenistan and Uzbekistan) and to far-abroad countries. In the following years the flow of migration from the CIS and Baltic countries greatly decreased: if in 1994 12.5 thousand settlers came to the Republic of Tatarstan, in 2001 this number was only about 800 people.

Those Tatars who remained found themselves in complex historical conditions. Nevertheless, they demonstrated their inherent restraint and a sense of reality, finding a civilised way of national revival, preservation and development of their culture, language, traditions, as well as of painless integration into the new civil society of the states, which became independent as a result of the collapse of the USSR.

The Tatar diaspora in far-abroad countries has more than six hundred years of history. The Polish-Lithuanian Tatars were a part of the Grand Duchy of Lithuania and began to settle in modern eastern Polish lands in the 14th century. The Dobruja Tatars, another fragment of the Golden Horde, settled in the Danubian provinces in the 15th century, and in the 19th century Tatars went to China, Turkey, and Finland.

In some countries the diaspora was formed in the 20th century as a consequence of social disruptions: revolutions and wars, which forced people to leave their traditional place of residence in search of a safer place to live.

Part of the diaspora is made up of Muslims (not only Tatars) who left Russia for religious reasons as a result of a number of sporadic waves of forced conversion to Christianity in the Ural-Volga Region and Siberia (the largest wave of 'religious' emigration of the Tatars to the Middle East was registered in the late 19th and early 20th centuries).

In Soviet times the diaspora in the far-abroad countries was represented by two strata: labour emigration (which explored new commercial markets and the sphere of labour application) and political emigration from pre-revolutionary Russia and the USSR (Turkey, Germany, USA). Political emigrants were represented by Tatar-emigrants of the Civil War period in Russia, who did not accept the socialist choice of their country (representatives of trade and industrial capital, public leaders, clergy, and Tatar warriors who fought against the Red Army on the side of the White Guard), as well as defectors of the period of Great Patriotic War. A relatively large group of Tatars, who studied in religious and secular educational institutions in Europe, Asia, and America, by virtue of their ideological and civil position joined different political groups or remained indifferent. A small amount of dissidents of the 1970–1990s, who went abroad for ideological beliefs, could also be conditionally considered as the representatives of political emigrants.

These waves of Tatar emigration provided the world with much ready-made talents. Many of them would acquire international acclaim (for example, Rudolf Nuriev).

The process of the formation of the diaspora in Australia in the late 1940s is very interesting. These were Russian emigrates from South East Asia (mainly Manchuria), who had fled from the persecution of the Soviet government and then Communist China. Thus, the Commonwealth of Australia became the second resettlement area for these migrants.

At the end of the 20th century, in the era of globalisation, mass communications, and the emergence of the conditions for free movement in the world, there began to form new diasporas in the countries of Europe, Asia, and America, where the Turko-Tatar population never lived before.

Currently the largest diasporas in foreign countries are in Romania (over 23 thousand), Turkey (20 thousand), China (5.6 thousand), and Poland (5.5 thousand). Diasporas in the United States, Canada, Germany, a number of European countries are rapidly growing because of the immigrants from the former Soviet republics.

Representatives of the diaspora who went abroad in the post-Soviet period to study or work and started a family with citizens of foreign states are as a rule politically neutral.

Today the boundaries between the categories of diaspora are actually blurred. The descendants of the labour and political migrants are now natives of the countries of residence and as a rule pay little attention to how and why their ancestors arrived in their new homeland.

It should be noted that the migration of people to other states should not be thought of as the search of a lucky land for themselves and future generations. 'In any case this is a tragedy not only of one person but also of all the people,' said the academician I. Tagirov [Tagirov, 1997, p. 9].

The Tatar diaspora is one of the most structured Russian diaspora. There are registered communities, national-cultural associations, sustainable ethnic groups in 44 countries around the world. The tendency to create their micro-environment and familiar traditional socio-psychological climate, designed to compensate for the spiritual distance from the historical homeland, is the strongest in the Tatar community.

For the Tatars living in foreign countries as a minority, the traditions and customs of previous generations serve as a means of self-preservation as an ethnic group. Therefore, elderly people try to convey to their children and grandchildren the national customs and

traditions, cultivating them as not only the national values but also as a means of protection from assimilation.

The compatriots abroad maintain close contacts with each other, gradually strengthening the cultural community and the unity of the community. Living in a society where their mother tongue and Tatar songs can be heard, and where there are elements of the traditional way of life and thought allows the compatriots to preserve their identity with the rest of the Tatars. This eases the psychological adaptation to a foreign language environment.

The national and cultural communities of compatriots preserve the Tatar national self-consciousness, the most important aesthetic values, ideals and objectives, cultural, moral, and historical experience of the nation, the norms of behaviour.

The Tatars are one of a few Russian peoples, who have centuries-old experience of peaceful coexistence with other peoples in a foreign language and cultural environment. Once in different countries abroad because of the historical events, the Tatars have a high international sense of justice, respect for social and political system of the countries of resettlement and decently fulfill their civic duty. The Tatars in foreign countries traditionally honestly execute the laws of their countries of residence, with respect for their traditions and cultures. Wherever they live, they are not a source of conflict and misunderstanding. As citizens of their countries, who make a significant contribution to their economic and cultural development, our compatriots are worthy representatives of the ancient Tatar people. They are interested in peace, stability, and prosperity of their countries and in extending of their full cooperation with the historical homeland of the Tatar people. Regardless of where they live and their religion, belonging to different ethnocultural and religious groups, the Tatars of countries outside the former Soviet Union consider themselves as a part of a single and indivisible Tatar people, the integrity of which is based on common history, culture, language, and national awareness.

According to the modern researcher L. Usmanova, 'not only the intellectual level of these people but also their ethnic identity in a totally alien, non-Tatar environment, is overwhelming. This is an example of the survival of a nation in the context of globalisation' [Usmanova, 2004].

Thus, during several centuries the Tatar diaspora in neighbouring countries played a historically important role in the pioneer settlement of newly discovered territories. At the same time, due to their developed ethnocultural abilities, they always exercised peacekeeping and peace-building functions, providing broad mediation in the search and establishment of interethnic compromise and transferring the practice of civil contract to their new territories. Modern Tatar diasporas in all the post-Soviet territories have such potential. The task of politicians and social scientists is to use it correctly for the progressive development of the nation.

The homecoming of this part of a diaspora is still the most complex problem. In our opinion, policy of this area needs to be based on a distinctive ethnic community since the artificial and hasty connection of the parts of the ethnic group, united mainly by historical memory in many ways, seems very doubtful. If unregulated, this may lead to social tensions between the 'parent' and the returned part of the nation. At the moment there is no clear or pressing need to undo the mosaic of the Tatar world.

Most of the Tatar cultural and national societies in foreign countries actively cooperate with the Republic of Tatarstan and its state and public institutions. Many are collective members of the International Union of Public Associations Worldwide Tatar Congress. The strengthening of the role of the diasporas of CIS countries and Baltic States in the establishment and expansion of mutually beneficial cooperation of Russia and Tatarstan with foreign countries is still an urgent problem since there is still little participation of the diaspora in large-scale economic operations.

Thus, the the main task for the historical homeland in this context is the systematic and methodical creation of regulatory and

bureaucratic procedures. This will ensure the self-sufficiency of the diaspora, the maximum satisfaction of its national and cultural needs, the development of effective mechanisms of interaction between the Russian state with the foreign diaspora in order to protect the rights and freedoms of compatriots and preserve ethnic and cultural identity.

Major historical events, which took place at the turn of the millennium, have dramatically changed the situation of the Tatar people. As a result of the fall of the 'Iron Curtain,'

the diverse world of compatriots abroad has opened up to the Russians. Foreign diasporas have become an object of the wide public and academic interest. Their history has become a part of the historical past of the people, and there is a real chance to bring together the scattered pieces of the ethnic group. Therefore, today the creation of an objective and truthful history of the Tatar people (taking into account the history of the diasporas) is one of the most urgent tasks of social scientists in our country.

§ 2. The Position of the Tatars in the Russian Federation and Abroad. The role of All-Tatar Events in Consolidation of Nation

Rinat Zakirov

There is almost no place in Russian Federation that does not have a Tatar population. The only question is how many of them live there. However, there are some regions with a significant number of Tatars. These are The Republic of Bashkortostan (over 1 million people), the Republic of Udmurtia (110 thousand), the Tyumen oblast (over 230 thousand), the Perm krai (over 150 thousand), the Sverdlovsk oblast (100 thousand), the Chelyabinsk oblast (around 250 thousand), the Orenburg oblast (over 160 thousand), the Ulyanovsk oblast (160 thousand), the Samara oblast (over 120 thousand), the Penza oblast (130 thousand), Moscow and the Moscow oblast (over 200 thousand).

Obviously, the position of the Tatars in each region has its unique features related to historical, social, economical, political, cultural, interethnic, and other factors. However, generally speaking, one must recognise that everywhere there are serious problems in preserving the mother tongue, national education system, fulfilling spiritual and cultural requirements, and the provision of information in the mother tongue. In the places with active national communities truly exercising their citizenship, the position of Tatars is markedly better than generally across the country. These include Ulyanovsk, Samara, Saratov Regions and the Republic of Udmurtia.

The position of the Tatars in the Republic of Bashkortostan deserves special consideration. It is commonly known that three-quarters of the Tatars in the Russian Federation live outside the Republic of Tatarstan. To a large extent this situation has arisen as a result of administrative split of pretty compact areas with Tatar population settled mainly between Volga and Urals. It is no secret that current administrative divisions and their borders Russian Federation were inherited from the Soviet Union, when the Bolsheviks quite randomly defined and created administrative units, including subnational entities.

The largest number of Tatars from the Ural-Volga region (about 1.5 million people) was included in the Republic of Bashkortostan by Bolsheviks in 1919. In 1920 the Tatar Autonomous Soviet Socialist Republic was established by decree on the territory of Kazan, partially Ufa, Vyatka, Samara guberniyas. In particular, it included the Menzelinsk uyezd of Ufa guberniya. Other parts of this guberniya inhabited by Tatars were due to hold a referendum for territorial self-determination. However, the referendum did not take place, and the fate of the majority of the Tatar ethnos was actually determined by a 'poll' of communists from the party cells of the CPSU(B). Thus, already at the beginning of the period of the for-

mation of the USSR grounds were being laid for the serious interethnic problems, which are significant in the present day.

It should be also noted that ever since the times of the development of the Volga region and Cisurals the tsarist government was skilled at creating interethnic conflicts and playing them off against each other. As the American researcher Dmitry Gorenburg states, according to an edict issued by the tsar in the 16th century, the Bashkirs were granted special privileges in land ownership and payment of various tributes [Gorenburg, 2004, p. 109]. These privileges encouraged the conversion of representatives of other nations into the Bashkir strata, especially many Tatars from Cisurals were converted. 'As indicated by sources of various ages, such sub-ethnic groups of Tatars as the Mishar Tatars and Teptyars quite often registered themselves as Bashkirs to get land and tax exemption' [Gorenburg, 2004, p. 109].

The American researcher considerably broadens the framework of concepts applied to the study of ethnicity and interethnic relation problems specific to Russia. In addition, he draws attention to the fact that 'censuses and formation of administrative borders as well as provision of privileges to separate ethnic groups often lead to occurrence of new ethnic groups and ethnic-cultural changes in existing ones. This theory, often called constructivism, was developed by Lorey Vial (Vial, 1989) and his colleagues who considered European colonialism as the main reason behind tribalism in South Africa: Europeans erected ethnic barriers between cultures for ease of ruling their colonies. ... the same situation was observed between Tatars and Bashkirs, two Turkic-Islamic ethnoses of Volga-Ural region' [Gorenburg, 2004, p. 107].

It should also be mentioned that there are two worldwide recognised scientific approaches to the ethnicity phenomenon. The first approach is called as primordialism, its followers consider the nationality as an invariant (constant) and important component of ethnic identity. The second approach is called as situativity. Followers of this concept consider ethnicity as a variable phenomenon depend-

ing on one or another political and economical benefits that bearers of 'mobile ethnicity' hope to acquire. Considering the metamorphoses of national identity of Tatars and Bashkirs in the Republic of Bashkortostan, we think it logical to introduce the term 'changing ethnicity' in order to adequately explain the situation.

From the early 1970s the Soviet authorities in Bashkortostan began persistently and consistently to amend the situation which was, as they saw it, 'unfavourable.' A major concern for the leaders of the Bashkir Regional Committee of the CPSU was the dominance of Russians (32% of the total population) and Tatars (24%), which would lead to the impossibility of any sharp increase in the Bashkir population (21%) without applying any statistical and demographic manipulation. Basing their views on ethnicity related motives of self-interest, these functionaries endorsed an administrative campaign to convert Tatars into Bashkirs by rewriting the nationality column in their passports. At the same time, this questionable practice was supported by some scientific explanation. Some scientists of the republic were empowered to find evidence backing idea that results of a 'scientific' inspection reveal 'Bashkir roots' in a part of localities inhabited by Tatars. Furthermore, the cases of conversion of Tatars into Bashkir strata were used as a questionable historical proof of modern 'ethnic metamorphosis' in favour of titular nation.

Later statistical-demographical manipulations of the population of ethnic groups of Tatars and Bashkirs are well tracked through the results of censuses. For instance, according to the results of the 1989 census, conducted amid emerging democracy and freedom of expression, Tatars in the Republic of Bashkortostan constituted 1.3 million people (28.4% of total population), while the number of Bashkirs was around 1 million people (21.9%). However, the 2002 census 'changed' the situation to the opposite. It turned out that in 13 years between censuses Tatar population fell by 300 thousand and constituted 1 million (their share to total population reduced to 21%). On the contrary, the number of Bashkirs increased by 300 thousand constituting 1.3 million. Howev-

er, there is much to be taken into consideration. If such a large part of population—300 thousand people—changes its national identity without much difficulty between two fraternal nations, then this obviously is a case of 'changing ethnicity' phenomenon.

However, from the scientific point of view, it would had been incorrect to close one's eyes to political, social, and economical circumstances associated with this phenomenon. For instance, a number of those identifying themselves as Tatars increases amidst democracy, freedom of will, and no administrative pressure. However, the number of Bashkirs increases amid administrative pressure. Regretfully we have to admit that in the last 10–15 years the position of the Tatar population in Bashkortostan has become more difficult in terms of the preservation of native language, national education, and culture. We have to admit that it is a fault not only of the leadership of Bashkortostan but also a part of Tatar community who adopted a radical position and refused the possibility of dialogue with the authorities of the republic. As a result, the situation of confrontation has gone so far that contacts between writers, scientists, men of art, representatives of communities of the two very close fraternal brother nations have ceased.

This situation has clearly encouraged the sensibly-minded forces in the Tatar and Bashkir community to focus on searching a way out of the dead-end, based on the principles of consent and mutual understanding. The 4 World Congress of Tatar held in December 2007 took a decision about the necessity of taking actions to overcome the crisis in relationships between Bashkirs and Tatars. The Congress was also marked by adoption of a Message to Bashkirs calling for cooperation and good-neighbourly relations based on mutual respect. Broad circles of Tatar and Bashkir community regarded these developments as quite positive.

Contacts between the Worldwide Tatar Congress and the World Kurultai of Bashkirs were resumed in 2008. The same year in summer a meeting was held in Kazan for leaders of social movements of people living in the Volga region and Urals. The meeting resulted

in the adoption of the Joint Claim in support of national education of people living in Russian Federation, which had been invalidated by infamous Law No.3 09 adopted by the State Duma of the Russian Federation.

The constructive cooperation of representatives of Tatar and Bashkir communities resulted in a gradual reduction of tensions in relationships between the two nations and the resumption of contacts between creative community, writers, musicians, and artists. Theatre groups of Bashkortostan resumed their tours to Tatarstan, and Tatar theatre groups to Bashkortostan. The population of both republics regarded these changes as very positive. For instance, tours of G. Kamal Tatar State Academic Theatre, 'Kazan' dance group in Ufa and other cities of Bashkortostan were always sold out. Tours of Bashkir Kajit Gafuri Academic Theatre and Mirage folk music group were also very successful.

The Republic of Bashkortostan underwent leadership changes in 2010. The first steps of new leadership taken in the sphere of Tatar-Bashkir relationship can be regarded as positive. For instance, TV channel 'Tatarstan-New Age' resumed broadcasting to the entire territory of Bashkortostan, while TV viewers of Tatarstan for many years already had had an opportunity to watch programmes of 'Bashkir Satellite Television' (BST) channel. At the present moment the two republics resumed their parliamentary contacts. They hold parliamentary programmes for the sharing of experience in the area of legislation.

This is a brief description of the situation regarding the biggest ethnic group of Tatars outside Tatarstan. The position of the Tatars in Bashkortostan is constantly within the sight of The Executive Committee of the World Tatar Congress and wide Tatar community. The experience of the last two decades has shown that in fact any confrontation, fueling tensions, exaggerated ambitions lead nowhere and do not promote national development of people.

When analysing the position of Tatars in the Russian Federation, it will be appropriate to remember the meeting of the president V. Putin with delegates of the 3rd Worldwide

Tatar Congress in summer 2002. At the meeting with the head of Russian state, representatives of Tatar community raised urgent issues of national life that needed to be resolved at the federal level. First of all, they drew Russian president's attention to the lack of an adequate concept of national policy that would meet the needs of the age. The delegates of the World Tatar Congress also persuaded the head of state to consider the interests of national schools in the process of developing federal education standards. Of course, they also raised the question of the need to federal radio and television in the Tatar language for the second largest nation in the country. V. Putin was receptive to expressed calls and publicly charged the Government of the Russian Federation to find ways to solve these issues in the shortest possible time. However, even after 8 years these issues are still unresolved. That, generally speaking, eloquently describes the position of Tatars in the modern Russian Federation.

As for the position of Tatars abroad, there are a range of totally different situations depending on the general political, social, and economical climate in the country of residence. Following the collapse of the USSR, 1 million Tatars found themselves in foreign diaspora. People in the CIS countries and Baltic states experienced the post-Soviet transition period differently. For instance, Tatar communities in Baltic states (Estonia, Latvia, Lithuania) quite successfully adapted to market economy and transparent civil society. They actively interact with each other and productively cooperate with their historical homeland in the Republic of Tatarstan.

In general, the following conclusions can be drawn. There has been increasing interest in the lives of Tatar communities and Tatars in general in recent years in European countries. For instance, in Finland it has become a tradition for heads of states (especially from Islamic countries) to come to the country to visit the Tatar Cultural and Religious Centre of Finnish Tatars 'Islamia' in Helsinki. The leaders of Finland many times declared that they are proud of their Tatars-Muslims making decent

contribution to national prosperity. The head of the Finnish state meets with representatives of Tatar community on an annual basis.

Indeed, the Tatar community in Finland already has a two-century history, Tatars put down their roots here long ago. The Finnish Islamic Association was established in 1925 and still successfully functions bringing organisational principles to lives of Tatars in the country. The 'Islamiya' Tatar Cultural and Religious Centre, located in the centre of Helsinki, incorporates a mosque with a prayer hall, Association of the Finnish Turks, youth centre, 'Yoldyz' sports society, library and reading hall. Not only Tatars but also other Muslims living in Finland (mainly diplomats from Islamic countries) come here for Friday Prayers. Religious and national holidays, musical evenings, and joint tea parties are conducted throughout a year. The full and organised life of the Tatar community in Finland can provide an example for all Tatars, living beyond the borders of historical homeland.

Tatars of Poland, Lithuania, and Belarus with common historical roots represent quite an interesting and unique sub-ethnic group of Tatars. The total number of Tatars in the three countries constitutes 16 thousand people. The Tatar population of these three countries represents ancient relic of the Golden Horde Tatars, who moved here over 600 years ago (in the 14th century) to the lands of the Grand Duchy of Lithuania to serve in the military. Later, following the establishment of Polish-Lithuanian Commonwealth (Rzeczpospolita), they were included into Polish nobility, and Polish kings offered them title of nobleman. Unlike the Russian state, the Tatars did not have to reject Islam in order to become Polish nobility. Thus, Polish Muslims in the Middle Ages had already formed authentic religious group representing Islam civilisation in Europe.

As a result of partition of Poland at the end of the 18th century, Polish-Lithuanian Tatars became subjects of the Russian Empire. This continued up to the 1918 until Poland recovered independence. The first president of independent Poland, prominent figure of the Polish national liberation movement, Jozef Pilsudsky

was very happy for Tatar political emigration at the beginning of the 1920. It is commonly known that Tatar opponents of Bolshevik regime were headed by a social leader Gayaz Iskhaki, who was exiled together with Yu. Pilsudsky to Arkhangelsk in 1907–1908 for anti-state activities. At the beginning of the World War II G. Iskhaki was in Poland. At the beginning of September 1939 he had to flee from the flames under the bombing of Warsaw.

Following the fall of Communist regime in the 1990s, Gdansk became a centre of national revival of Polish Tatars, where following the World War II a significant Tatar community was formed. There was a concentration point of intellectual forces of Tatar nobility of Poland, leading to the progressive revival of Tatar (Islamic) part of Polish society. The Association of Polish Tatars, which existed before the World War II, was restored in 1990. It was headed by a famous scientist-Turkologist and poet, professor Salim Khazbievich. In 1991 the People's Centre of Culture of Tatars of the Republic of Poland was opened in Gdansk with the active support of the Pomorskoye Voivodeship. It was located in an old mansion in park areas in the central part of the city. Nowadays the entire cultural life of Polish Tatars revolves around this centre.

A great event in the lives of Polish Tatars and entire Tatar nation was the opening of a monument to the Tatar soldier, defender of Polish homeland in Gdansk in 2010. The president of the Republic of Poland Bronislaw Komorovsky gave a speech at the celebrations on this occasion. His impressive and powerful speech was full of respect and gratitude to Polish Tatars and in their person to entire Tatar nation.

A considerable number of Tatars (official figures, 23 thousand people) live in Romania, one more country of the European Union. Tatar life here is centred around Constanta, a city on the Black Sea coast with headquarters of the Democratic Union of Muslim Turko-Tatars of Romania. The Union publishes a monthly magazine *Karadeniz* (The Black Sea). There are many prominent academic, educational, cultural figures, members of diplomatic

corps of the country among Romanian Tatars. Tatars have fixed representation in the Parliament of Romania.

According to different estimates, 10 to 25 thousand Tatars live in Turkey. Due to linguistic and cultural affinity, common religion, local Tatars to a greater extent have assimilated than Tatars in other countries. Many representatives of Tatar emigration managed to distinguish themselves in the social, political, and scientific areas of the Republic of Turkey. They are Yufus Akchura, Sadri Maksudi, Akhmat-Zaki Validi-Togan, Abdulbari Battal, Gayaz Iskhaki, Sagadat Chagatai, Khamit Kushay, Rashit Rakhmati Arat, Akhmet Temir, Akdas Kurat, etc. Even now many people of Tatar origin play a prominent role in the social and political life of Turkey. For instance, a famous social figure and journalist Ali Akysh, an author of books about the Soviet regime and position of Muslims in Volga-Ural region. Also professor Nadir Davlet, a prominent specialist on the history of Turkic nations of Russia, professor Gyunyul Pultar (granddaughter of Sadri Maksudi), a specialist on international law. Turkey has functioning centres of Tatar culture in Ankara, Istanbul, and Eskişehir.

Among more distant countries with an active Tatar communities one needs to mention Germany and the Czech Republic in Europe as well as Australia, USA, and Canada. Certainly some CIS countries have quite a big number of Tatar population. According to the censuses, there are 70.3 thousand Tatars in Ukraine, 203.3 thousand Tatars in Kazakhstan, 219.1 thousand Tatars in Uzbekistan. A total of 60 thousand Tatars live in three other states of Middle Asia—Kyrgyzstan, Tajikistan, and Turkmenistan. China occupies special position with large Tatar community living in Uyghur autonomous region of Xinjiang (over 5 thousand people).

All in all, to complete the topic of Tatar diaspora, it should be stated that the experience of Tatarstan in cooperating with compatriots abroad was a requirement at the federal level. In recent years the Russian Federation began to pay much attention to relations with compatriots abroad. The International Council of

Russian Compatriots was formed, one of its founders is the Worldwide Tatar Congress. In this field the Congress cooperates beneficially with the Ministry of Foreign Affairs of the Russian Federation and its establishments abroad.

The organisation of the First Worldwide Tatar Congress in Kazan in 1992 by decree of the president of Tatarstan was a historical event. Meetings of the Worldwide Tatar Congress (there were four meetings) are always held in the atmosphere of spiritual and emotional elation. They contribute to consolidation of nation spread around the world among other nations. The role of all-Tatar activities is growing immensely under these conditions. It has to be said that the number and scale of such activities increase year by year.

Clearly, first of all, one needs to recognise the significant consolidating role of national holidays, such as Sabantuy, and Islamic holidays. This is no coincidence since holidays are always held in a sublime atmosphere, and they contribute to emotional contacts drawing people together. At all times sabantuys, dzhiens (meetings of people on the eve of harvesting) served the purpose of acquaintance, interaction, and betrothal of young boys and girls. Thus, national holidays perform specific institutional functions related to socialisation of Tatar youth and consolidation of nation.

As for the Islamic holidays, they also contribute to interaction, drawing people together based on common religion and common moral values. Up to 70 thousand Muslims, who come to the Moscow Cathedral Mosque in Uraza (fasting) Bayram and Kurban Bayram, are proof of the scale of such holidays. Obviously, the mosque cannot accommodate so many people, and they fill adjacent streets and parks.

Nowadays Sabantuy is held not only in regions of the Russian Federation but also in many countries near and far abroad that have Tatar communities. Contacts between the cities and regions of Tatarstan with the regions of the Russian Federation, where this festival is held, have become traditional. Tatarstan's patronage over designated Russian regions has led to quite positive results. The organisation

and content of the Sabantuy festivals have significantly improved. Up to 100 thousand people visit Sabantuys in such regions as Moscow, Samara, Chelyabinsk, etc. The Federal Sabantuy has been held since 2002, and every year the baton is passed to new region. The Federal Sabantuy has already been held in the Mari El Republic, the Republic of Udmurtia, the Republic of Mordovia, the Ulyanovsk oblast, the Nizhny Novgorod oblast, the Astrakhan region, the Chelyabinsk oblast. It was very popular among representatives of all nations living in one or another region. Sabantuys are also held abroad in more than 30 countries. Thus, one can say that in the last two decades the Sabantuy festival has become a mass ethnic-cultural movement of Tatar nation, not only domestically but internationally as well. It is no coincidence that UNESCO proposed that this festival should be included in the List of the Intangible Cultural Heritage of Humanity.

Since 2004 the Executive Committee of the Worldwide Tatar Congress has held the World Tatar Youth Forum (WTYF). In summer 2010 the 4th forum was held. Even during the Soviet period there was a spontaneous Tatar youth movement. Young people from the villages would meet in the evenings in parks and open areas of such cities as Kazan, Naberezhnye Chelny, Ufa, Izhevsk, Moscow, etc. They would meet and interact with new people, and in this way the ethnic and cultural identity of Tatar youth was expressed. Certainly, this can also be considered as one of important elements of socialisation of national youth.

Today the spontaneous youth movement has acquired certain structural forms. The Tatar Youth Forums elect its executive body—Coordinating Council (until the 4th Forum in 2010, Bureau) of WTYF. It organises various national activities for youth: theatre and music festivals, KVN (Comedy Club) tournaments, sports competitions, youth trips to memorial sites related to the history of Tatar nation, etc. Tatar youth was very enthusiastic about the decision of the International University Sports Federation to hold the World Summer Universiade 2013 in Kazan. All in all, it must be said that especially university students are

very active. University student clubs of Tatars successfully function in Kazan, Ufa, Moscow, Saint Petersburg, and other big cities. Today club-type work is the most popular form of work among Tatar youth. In 2010 there were more than 100 organisations of Tatar youth in regions of the Russian Federation and abroad.

The Tatar women's movement also has long and glorious history. Since the very establishment of the Worldwide Tatar Congress various women organisations such as White Kalfak (type of women headdress, 'Ak kalfak'), 'Tatar family' ('Tatarskaya semya'), etc., were formed within the Congress. They greatly contribute to education of youth, preservation of reliable family foundations. Today the teaching staff in country mainly consists of women. Five meetings of Tatar language teachers and heads of regional Tatar schools in the Russian Federation have already been held within the framework of the Worldwide Tatar Congress. Tatar women's organisations took an active part in them.

Life has shown that the Worldwide Tatar Congress can remain indifferent to questions of religion. Islam is one of the most important basic elements of ethnic-cultural identity of Tatars. When this area of modern life became affected by complex conflicts, Islamic clergy itself began to ask the Executive Committee of the Worldwide Tatar Congress for help in organising a neutral platform for negotiations. Such trust of Islamic religious leaders led the Executive Committee of the World Congress of Tatars to create a special commission on spiritual renewal. In 2005 and 2010 the meetings of religious leaders of Tatar communities in the Russian Federation were held in Kazan. They were a great success. Religious figures were able to share views and come to an agreement on many burning questions. It must be said that there are regions where national organisations are headed by influential religious figures. For instance, the National-Cultural Autonomy of Tatars in the Ivanovo region is led by Farit hazrat Lyapin, a religious leader of Islamic community. Thanks to the authority and organisational skills of F. Lyapin, life of Tatar community in the region may serve as

an example for many regions in the Russian Federation.

Due to their cultural identity over more than 1,000 years, the Tatars have been an integral part of Islamic civilisation. The Tatar nation always had a deep understanding of importance of the historical event when the predecessors of the modern Tatars officially adopted Islam as a state religion of Volga Bulgaria. This took place in May 922 on the banks of the Volga River, with participation of an embassy from Baghdad Caliphate headed by Ibn Fadlan. Every year at the beginning of summer Muslims of the Volga region come together in ancient city of Bolgar to commemorate those events. At first, these activities took place under the aegis of the Muslim Spiritual Board of European Part of Russia and Siberia (MSBPS) led by mufti Talgat Tadzhutdin. However, when other muftiyats also joined these activities, religious figures considered it necessary to engage into them the Worldwide Tatar Congress as well. The Executive Committee of the Worldwide Tatar Congress had actively engaged with this work, and in recent years up to 20 thousand people come to meetings of the Volga region Muslims in ancient Bolgar. This meeting is called as Izge Bolgar zhyeny ('The meeting in sacred Bolgar'), it is very popular among people and serves to underpin Tatar spiritual unity.

In recent years the Worldwide Tatar Congress is committed to undertaking concentrated efforts to develop a national business community. The results of this work are already evident. Successful and self-sustainable business structures run by Tatar businessmen have emerged in regions of the RF and CIS countries. It allows them to independently finance many local projects related to national life. Today the needs of business require serious consolidation, which is why the Association of Tatar businesspeople was created under the Tatar Congress. There is no doubt that the establishment of such a structure will contribute to the successful implementation of many national projects.

Many projects of the Worldwide Tatar Congress are connected with supporting the nation-

al culture. For instance, All-Russia festivals of Tatar folk music groups Tugerek uen ('A round game') are held since 2008. Moreover, on an annual basis more than 20 festivals of Tatar song are held by Tatar communities in regions of Russia and CIS countries. On the one hand, these festivals serve to preserve deep layers of music culture of nation, while on the other, they help to resolve the practical issues of providing the music for national holidays.

National sports are also very popular among Tatars. For this reason, in 2005 the

Executive Committee of the Worldwide Tatar Congress established Russian National Koresh Wrestling Federation 'Tatarça köräş.' On an annual basis this federation organises Russian championships, various tournaments, it opens children sections of national wrestling. Teams from 32 regions of Russia participated in 2010 Russian championship.

In summary, we can say that today all-Tatar events have gained wide scope and great power. Certainly, they play an important role in consolidation of modern Tatar nation.

CHAPTER 6

Ethnocultural Processes in Tatarstan and Tatar World at the end of the 20th–beginning of the 21st century

§ 1. Dynamics of Ethnocultural Policies of the Federal Centre and the Republic of Tatarstan in the 1990–2000s

Guzel Makarova

Before addressing the issue of ethnocultural and national civil identities of Tatarstan's population, one needs to explain the content, examine the process of establishment and development of the ethnocultural policies of the Russian Federation and the Republic of Tatarstan, in the context of which these identities were formed and evolved.

In the 1990–2000s Russia was studying new models of building ethnocultural policies. These studies were connected to the tremendous social, economical, political, and cultural processes happening in the society. These strategies were reflected and took into account the ethnic and civil identities already formed and implemented by that time in society. In return, federal and regional strategies were aimed at sustaining and developing or constructing new sociocultural communities.

We will interpret the term 'cultural policy' using treatment already established in sociocultural practice in Russia and majority of Western countries. Thus, this policy means a form of influence of state and related social institutions upon the process of cultural production and formation of sociocultural norms, views, values of people, and this form is declared, officially stated in laws, conceptions and programmes of cultural development. Ethnocultural policy in particular is a part of both cultural policy and ethnic policy at the same time. It is formed at their intersection point and associated with preservation, reproduction, and development of ethnic languages and cultures, ethnocultural groups interaction process management. Together with national

policy, it aims to guarantee the consolidation of population based on general civil values [see Makarova, 2009, pp. 35–49].

In order to determine the historical and political conditions, under which the Federal Centre and regions of Russia formed their attitudes towards ethnocultural development during the post-Soviet period, we will briefly describe the state national-cultural policy in the USSR. It had a dualistic nature. On the one hand, the official version of Marxism, on which the country's ideology was based, contained a thesis about the gradual 'levelling' of differences, including ethno-national differences. On the other hand, and in reality, the policy was adjusted to actual practice. When the Bolsheviks came to power, they were already using ethnic component to win positions in national regions.

Later ethnocultural variety was not suppressed but rigidly directed and managed. The slogan of the equal development of cultures of country nations was declared, and their function as 'national (ethnic) by form and international by content' was cultivated. Moreover, a policy was introduced to ascribe each individual to a given ethnic group, wherein ethnic affiliation was determined by official documents as well as by the help of census policy. Finally, another characteristic feature of the Soviet period was the extreme centralisation along with concentration of all main functions of control over cultural life in hands of central authority that implemented this contradictory.

The late 1980s and early 1990s were marked not only by dissolution of the Soviet

Union but also rise of ethno-national movements in regions of Russia. They were critical of the strategy of the centre and putting forward new slogans for ethnocultural development. This was also the period of the 'parade of sovereignties' staged by republics that had previously been autonomous within the Russian Soviet Federative Socialist Republic (RSFSR). Under these conditions significant changes were made in the ethnocultural sphere by the national republics in cooperation with the leadership of Russia. Russia was obliged to implement a policy of 'concessions and consensus measures' [Drobizheva, 2003, p. 34] 'and consideration of an increase in the activity of the national and regional elites' [Zorin, 2003, p. 126],

For instance, aspiration of regions for independence in resolving culture related issues was reflected in Fundamental Principles of Legislation of the Russian Federation for Culture (9 October 1992, No. 3612-1). The distribution of competences between federal and regional bodies of state power and regional governing bodies acquired legislative recognition. According to article No. 39 of the Fundamental Principles, the determination of cultural policy and adoption of republican legislation on culture related issues became a competence of state power and governance in republics of Russia. That was a principal step towards regional autonomy in this sphere. Under conditions of the extreme escalation of ethnicity related issues, this document could not avoid special articles devoted to rights of ethnic communities in culture related issues—that is, group (collective) rights (part III of Fundamental Principles).

The Constitution of the Russian Federation of 12 December 1993 and the Federal law 'On National-Cultural Autonomy' (No. 74-FL, 17 June 1996) formed the basis of actually 'multi-ethnic model of our society' [Zorin, 2003, p. 129; Drobizheva, 2003, p. 29] realised in two forms: ethno-territorial autonomies and national-cultural autonomy (NCA). According to the constitutional charter of Russia, a multinational population was recognised as the only

sovereignty holder in the Russian Federation (article No. 3)—that is, all ethnic communities of country were declared as state-forming. The Constitution also provides the right for preservation and use of native language, 'for free choice of language of communication, upbringing, education, and creative work' (article No. 26), and bans propaganda of racial, national, and religious supremacy, hatred, and strife (article No. 29).

In the 1990s the nature of development of national-territorial form of multi-ethnic model of our society was set out in such documents as the Agreement 'On the Delimitation of Jurisdictional Subjects and the Mutual Delegation of Authority between the State Bodies of the Russian Federation and the State Bodies of the Republic of Tatarstan' dated 15 February 1994 and the Law of the Russian Federation 'On the Principles and Order of Delegation of Authority between the State Bodies of the Russian Federation and the State Bodies of the Federal Subjects' (No 119-FL, 24 June 1999). By securing rights and relative autonomy of the Russian regions, they indirectly contributed to preservation of their ethnocultural identities as well as establishing regional identities. At the same time, the aforementioned documents set the framework for the level of independence of federal subjects, limiting the 'syndrome of 'regional self-will,' which was so typical for the beginning of the 1990s' [Abdulatipov, 2008], including in the ethnocultural sphere.

In turn, the Russian law 'On National-Cultural Autonomy' legitimised the formation of extraterritorial ethnocultural associations of citizens. Thus, it included all ethnic groups into the scope of national policy 'irrespective of availability or lack of own administrative formations' [Zorin, 2003, p. 133]. This document contained certain contradictions and drawbacks, which were to hinder its subsequent implementation. For instance, according to the comment by A. Osipov, national-cultural autonomy is limited to the preservation and development of language, education, and national culture, while excluding human rights, research, and other activities [see Osipov,

2004; Kuzeev, 1999; pp. 123–126]. Articles relating to provision of financial support from the state and local authorities to national cultural communities do not clearly define which authority shall provide this, what are the enforcement mechanisms for its implementation and the volume of designated resources [Osipov, 2004, p. 130]. V. Gushcha also mentions that the law does not clearly define specific forms of association of national groups and the order of their registration [Gushcha, 1997, p. 5]. Thus, according to the comments of aforementioned authors, ethnic minorities did not acquire 'adequate scope' for the realisation of their needs in the linguistic and cultural sphere.

Nevertheless, the adoption of the law 'On Ethnic-Cultural Autonomy' has ultimately contributed and contributes to a certain extent to the preservation of original languages and cultures, and thus to the reproduction of ethnocultural communities in Russia. However, this last circumstance in particular as well as the 'imposition' of collective affiliation instead of implementing 'the liberal principle of cultural freedom of individual' [Filippova, Filippov, 2006] and the further institutionalisation of ethnicity resulting from provisions of the law have become the target for criticism and fundamental rejection by some other researchers.

One more basic document of this period intended to set out the target and tasks, principles, and content of the country strategy towards ethnic communities and their cultures is the Conception of State National Policy of the Russian Federation approved by the Decree of president of the Russian Federation (15 June 1996, No. 909). It verifies the multi-ethnic and multicultural model of Russian policy of the 1990s, although this does not mean 'multiculturalism' per se. Here, the Russian Federation is recognised as one of 'the biggest multinational states in the world, where over 100 nations live' (part I). Providing 'conditions for equal social, national, and cultural development of all nations of Russia,' along with consolidation of all-Russian community, was declared as the main aim of state national policy (part III).

At the same time, the Conception almost makes the state responsible for the 'survival,' preservation of ethnoses, ethnic minorities, and their cultures. It states that besides expanding ideas of moral integrity and friendship of people it has to contribute to the preservation of their historical heritage, development of traditions and originality, languages of all nations of Russia, improvement of 'national comprehensive school as a tool for preservation of culture and language of every nation...' (part III). In fact, this option of building country policy should have contributed to the reproduction of multiplicity of all linguistic-cultural identities of Russia. Although in reality this document has not led to wide public resonance and was not consistently implemented [Drobizheva, 2003, p. 33; Makarova, 2009, pp. 94–95], the very direction in support diversity would have an affect on the further development of ethno-identificational processes in Russian society, in the so-called national regions of the Russian Federation.

Some points of the Conception already begin to articulate the importance of consolidation of a single Russian community (part III), and certain statutes refer to 'the unifying role of the Russian people' (part I) and importance of its national feeling as a state-forming (part IV). However, these elements, which are aimed at the formation of unity, are still poorly represented.

Besides conceptual basics, some specific aspects of Russian ethnocultural policy were formed at that period. Let us briefly describe laws and programmes of the Russian Federation associated with the preservation and development of one or another elements of culture or with activities of institutions, whose functions include the formation of sociocultural values important for society.

The frameworks of the Russian ethno-linguistic policy were set out in the Law 'On the Languages of the Peoples of the Russian Federation' (25 October 1991, No. 1807-I). It states that 'languages of the Peoples of the Russian Federation are national treasures of the Russian State' and 'are protected by the state' (introduction). It states the right of Russian

citizens to receive basic general education in native language (Article 9, item 2), which is secured by 'establishment of required number of relevant educational institutions, classes, groups' (item 2, edition 24 June 1998).

The law also affirms the right of republics of Russia to publish their own adopted laws in republic's official language together with official language of Russia, use them together with Russian during preparation and conducting elections and referendums (Article 13, item 1; Article 14, item 1), in legal procedures, and records management (Article 18, item 2). The law provides the ability to use official languages of republics and other languages of peoples of Russia when applying to state bodies, organisations, companies, and institutions of Russia (Article 15, item 4) as well as to mass media in subjects of the Russian Federation (Article 20, item 2), etc.

This all means recognition and support for ethnolinguistic diversity of Russia as well as the relative autonomy of the regions in resolving language and culture related issues.

Traditional folk culture is an important element of culture that often acts as a marker of ethnic identities. Another form to support this was the Federal Law 'On Crafts' (6 January 1999, No. 7-FL), declaring their preservation, renewal, and development as an important state task.

In turn, education acts as an important social institute that helps to implement the national-cultural and ethnocultural policy of state. On 10 July 10 1992 Russia adopted the Federal Law 'On Education' (No. 3266-1), which among the main principles of associated state policy secured the following twin principle: 'unity of federal cultural and educational space. Protection and development of national cultures, regional cultural traditions, and features by the education system under the conditions of multinational state' (Article 2). It also enshrines the main points of the Russian Law 'On Languages...' related to languages of study and education (Article 6).

The law also enshrines the nascent delineation of powers between the Russian Federation and subjects of Russia in the field of edu-

cational policy (articles 28, 29). For instance, recognition of the right of federation subjects (later annulled) to 'determine national-regional components of state education standards' demonstrated the tendency in the 1990s to embrace regional and ethnic linguistic-cultural diversity in the field of education policy of Russia (Article 29, item 8).

State policy in the field of religion to a certain extent also impacts these ethno- and national-cultural processes, including identification processes. The Federal Law 'On Freedom of Conscience and Religious Associations' (26 September 1997, No.125-FL) guaranteed the rights of citizens to 'profess... any religion or not to profess at all' (Article 3, item 1), equality before the law regardless of religious affiliation (Article 3, item 4) and also declared that in Russia 'no religion can be established as a state one...' (Article 4, item 1). Obviously, all of these elements influenced the confessional self-determination of citizens and were essential for social well-being of representatives of ethnic communities considered as historically associated with Islam and other non-Orthodox confessions. Thus, they demonstrated recognition not only of diversity of religious but also, though indirectly, freedom of choice and equality of ethnocultural identities.

In turn, ethnocultural strategies of Russia in the 1990s to a certain extent were reflected also in laws involving the sociocultural aspects of life of separate ethnic communities of Russia or groups of people suffering discrimination, violence and racial, ethnic, linguistic, or religious harassment as well as compatriots abroad. These are the laws such as: The RSFSR Law 'On Rehabilitation of Repressed Peoples' (26 April 1991, No. 1107-I) and the next Russian Law 'On Making Amendments and Additions to the RSFSR Law "On Rehabilitation of Repressed Peoples"' (1 July 1993 No. 5303), 'On Guarantees of the Rights of Numerically Small Indigenous Peoples in the Russian Federation' (30 April 1999, No. 82-FL); 'On the State Policy of the Russian Federation Concerning Compatriots Abroad' (24 May 1999, No. 99-FL), etc.

For instance, the RSFSR Law 'On Rehabilitation of Repressed Peoples' recognised actions of the Soviet Union against them as policy of 'tyranny and anarchy' (introduction), 'despotism and genocide' (Article 2). Thus, the law declares a set of measures related to territorial, political, economical, sociocultural rehabilitation of these peoples. Article 11 notably provides 'an action plan for restoration of their spiritual heritage and satisfaction of cultural needs.' Adoption of such law was aimed at showing in practice a declaration of equality of all peoples in the country, without which continuation of ethnocultural pluralism policy in Russia would seem fiction.

In the meantime the Federal Law 'On Guaranteeing the Rights of Numerically Small Indigenous Peoples in the Russian Federation' set out additional preferences for numerically small peoples to preserve 'traditional way of life, economic management, and crafts' (Article 1). Such 'special legal rules' (Article 5) were directed against forcible assimilation of these peoples and levelling their sociocultural identity and, as V. Tishkov reasonably comments, should had 'given additional protection to the communities most vulnerable from the sociocultural point of view' [Tishkov, 2007].

The Law 'On the State Policy of the Russian Federation Concerning Compatriots Abroad,' adopted already at the end of the 1990s, declared helping them to fulfill 'their civil, political, social, economical, and cultural rights preservation of identity' as an 'important direction of external and internal policy of the Russian Federation' (introduction to the law). Moreover, its adoption was aimed not only at encouraging the preservation of ethnocultural identities of our country peoples abroad. Demonstrating care on the part of the state for its citizens and compatriots, living beyond Russia, with regard to their rights, ethnicity, culture, and education, was also an important step for their consolidation and the establishment of single all-Russian identity within country.

Let us examine how the Republic of Tatarstan was building its ethnocultural policy during that period.

The turn of the 1980–1990s was marked by the rise of the Tatar movement stimulated by national elites. The Leaders of titular ethnic group associations were aiming for the renewal of 'the cultural-civilisational identity of Tatars through their national-state self-determination, ethnic consolidation, and sociocultural rehabilitation' [Gabidullin, 1997]. Under these conditions, the republican leadership began to support slogans for the national-cultural revival of Tatars. When they had achieved recognition from the ethnically section of the Tatars, they 'seized the initiative' from the activists of Tatar non-governmental organisations. Using the weakness of the federal authorities [Farukshin, 1994, pp. 67–79] and basing their strategies upon the aforementioned ethno-national slogans, their aim was to achieve a relative level of autonomy for the region from the centre, including with regard to ethnocultural development.

With the support of the ethno-national elites standing up for idea that the 'sovereignty of Tatarstan comes from sovereignty of Tatar people' [Gabidullin, 1997, p. 3], the 'Declaration on the State Sovereignty of the Tatar Soviet Socialist Republic,' adopted on 30 August 1990, contained a controversial item about the 'realisation of inalienable right of Tatar nation, entire population of republic for self-determination' [Khakimov, Belaya kniga, 1996, p. 4]. However, the Constitution of the Republic of Tatarstan, adopted on 6 November 1992 (No. 1665-XII), records already that Tatarstan 'expresses the will and interests of multinational population of the republic' (Article 1).

Thus, the territorial authorities gradually began to emphasise their centrist positions, declaring the equality of the entire population of the republic in programme related documents and newly-created laws. However, the marked duality persisted during the 1990s, including in the ethnocultural policy of the republic. For instance, polyethnicity and polyculturality of the region were emphasised in language and culture-related laws and programmes adopted in that period. Certain of these emphasised the support for the language and culture of the titular ethnic group of the republic (explaining

that especially they for a long period of time have not have an opportunity for full development). For instance, the Law of the Republic Tatarstan 'On Culture' (3 July 1998, No. 1705) declares that one of the main tasks of cultural policy is 'to encourage the development of Tatar national culture, culture of multinational nation of the Republic of Tatarstan' (chapter 1, Article 2).

A series of official documents set out the aims, tasks, and tools for the implementation of linguistic policy of Tatarstan, whose essence was in making the Tatar language, as an important component of ethnic identity of Tatars, an official language along with Russian, in creation of real conditions for expanding its social functions.

Thus, the Law of the Republic of Tatarstan 'On the Languages of the Peoples of the Republic of Tatarstan' (8 July 1992, No. 1560) declared social, economical, and legal protection for both official languages of the republic. It also outlined the possibilities for their equal usage in different spheres of life, enshrining a statement about the equal teaching of Tatar and Russian languages at preschool institutions, comprehensive school, and secondary specialised colleges (Article 10, item 2). However, the Law also contained some special items related to promotion of the Tatar language as a language of Tatar diaspora (Article 7, item 3), ensuring translation of different kinds of literature and films into the Tatar language as well as translation of 'famous Tatar books into the Russian language' (Article 23, items 1, 2), etc. The 'State Programme on the Preservation, Study, and Development of the Languages of the People of the Republic of Tatarstan' for 1994–2003 was adopted to ensure consistent implementation of items of the Law (20 July 1994).

The Law of the Republic of Tatarstan 'On Education' was also an important document explaining republican strategy related to formation of identities in the 1990s (19 October 1993, No. 1982). Freedom 'to choose the language of study' (Article 4, item 8) was declared as one of the main principles of Tatarstan pol-

icy in the respective field. It outlined that activity of the national-educational institutions is 'aimed at the renewal of the national identity of an individual based on the priority of universal human values,' and that education and upbringing in such institutions are provided 'on the basis of Conception of Tatar National Education' (Article 5). According to the latter, the Tatar national school should be built upon national-moral traditions of Tatars with native language teaching.

In turn, Article 7 of the Law 'On Education' states that: 'The Republic of Tatarstan sets state education standards determining, inter alia, requirements to every step of education and upbringing in comprehensive schools...' Accordingly and based on the Federal Law of RF 'On Education,' the republic also developed a regional component in the school system. For instance, in 1993 the subject 'The History of Tatars and Tatarstan' was introduced into all schools of the Republic of Tatarstan. Again, Article 6 (item 2) of the Law once again enshrined the equal teaching of the Tatar and Russian languages in general education institutions and specialised secondary institutions in Tatarstan.

One more document aimed at influencing the further development of the Tatar language and the Tatar national school was the Law of the Republic of Tatarstan 'On the Construction of the Tatar Alphabet with a Basis in Latin Graphics' (15 September 1999, No. 2352). It was adopted as a result of discussions of Tatar humanitarian intellectuals about the issue of substitution of the Cyrillic alphabet for the Latin or Arabic alphabet. A primary reason for the substitution was the phonetics of the Tatar language. However, another not insignificant factor in the ambitions of the national elites was, according to L. Sagitova's reasonable commentary, the 'new identity formation factor, including an attempt to assert its difference from the Russian culture' [Sagitova, 1998, p. 114].

At that time the efforts of local national elites were also aimed at making Tatarstan the centre of cultural attraction of Tatars all

around the world. From this perspective, one should note the work of the Worldwide Tatar Congress established in 1992 (with support of the establishment of the Republic of Tatarstan), including activities related to consolidation of Tatar youth living all around the world (organisation of the World Forum of Tatar Youth, summer camps for Tatar children from different regions of the world), creation of web-sites in Tatar language [see Tatarskij internet, 2010], organisation and holding in Kazan the Nuriyev International Festival of Classical Ballet (since 1987), etc. The aim of these measure was not only to create local processes of ethnocultural renewal of Tatars but also global processes, which in turn would positively influence the identity of Tatars from Tatarstan.

A series of culture related laws, adopted in the region in this period, did not specifically set out the republican strategy in the ethnocultural sphere. For instance, the Law of the Republic of Tatarstan 'On Protection and Use of Cultural and Historical Values' (1996), 'On Archive Fund of the Republic of Tatarstan and Archives' (13 June 1996, No. 644), etc. The characteristics of ethnocultural policy of Tatarstan of that period are reflected in the analysis of 'The Republican Programme for the Development of Culture in the Republic of Tatarstan between 1998–2000.' One of the aims of the programme was to 'encourage the development of the culture of the peoples of Tatarstan.' However, one of the specific objectives was described as the 'preservation and development of Tatar traditional culture and culture of people of Tatarstan...' In other words, the priority of the culture of the titular ethnic group is still not excluded. This fact has been confirmed by a system of specific planned activities arising from the Programme.

For instance, the sub-programme entitled Support and Development of Professional Art contains measures related to development of literature of Tatarstan in general. At the same time, a series of special events are aimed at improvement of Tatar art, beginning with 'Organising Tatar opera and ballet performances through social commissioning' (item 1.2, sub-

programme No. 1) and ending with 'Tatar cırı' competition ('Tatar song') and 'Tatar p'esasy' ('Tatar play') (items 3.2, 3.3, subprogramme No. 1). The subprogramme entitled the 'Preservation and use of historical-cultural heritage' highlights 7 archaeological and architectural monument complexes related to the history of Tatars and two, to the history of Russian, etc. The third part of the programme 'Support and development of international and interregional cultural cooperation...' was aimed at, first of all, support of culture of Tatar diaspora.

In the 1990s Tatarstan pursued a policy of 'levelling' the development of Tatar and Russian cultures, a programme which is confirmation of this. That was explained by the necessity to level out the trends of the Soviet period, during which the Russian language and culture were predominant and official. They were accorded priority throughout the entire territory of the country, while the language and cultures of other ethnic groups were ascribed a secondary role. In the conditions of extremely limited resources allocated to education and culture during the first decade following the declaration of sovereignty, this objective in republican policy resulted in temporary inequality to the detriment of the Russian language and Russian culture.

The Law of the Republic of Tatarstan 'On Freedom of Conscience and Religious Associations' to a certain extent also characterises the ethnocultural policy of Tatarstan, region where religion traditionally acts as one of the main markers of ethnic boundaries (14 July 1999, No. 2279). It highlights the importance of two religions, Islam and Orthodoxy, for the cultures of Tatars and Russians (as the main ethnic groups by number in the republic). At the same time, specific forms of centralised administration of Islamic religious organisations and Orthodox church acquired legislative consolidation in Article 10 (item 5). Moreover, the Law reserved for the republican authorities the right to manage certain issues in the management of religious organisations. In particular, a separate article in the law (Article 7) approved the functioning of a special state religious affairs body in the Re-

public of Tatarstan. The aim of this body in a multi-confessional region was to analyse and forecast the development of the religious situation, encourage the strengthening of mutual understanding between religions, and develop contacts between the state authorities and religious associations. The policy of the Republic of Tatarstan of that period begins to emphasise the multi-confessional nature of the republic, and it actually declares official recognition of two main religions—Islam and Orthodoxy. Furthermore, the discourse between the authorities to a certain extent helps to strengthen the ties between religious and ethnic identities in the minds of people.

In turn, a series of special measures were aimed at formation and strengthening of regional identity of population of the Republic of Tatarstan, for instance, the declaration of 30 August (the date the Declaration on State Sovereignty of the Republic of Tatarstan was adopted) as a holiday—the Day of the Republic of Tatarstan. On the main holiday of the Republic of Tatarstan the president traditionally congratulates population of the region on holiday, nationwide celebrations ending with evening fireworks are held.

The implementation of these policies in the ethnocultural strategy of Tatarstan are reflected in statistical data on the development of languages and cultures in the republic. For instance, in the 1990s in order to 'put into practice' the linguistic policy of the Republic of Tatarstan, 170 schools and gymnasiums were opened or restructured with study programmes being taught in the Tatar language. Prior to the end of the 1980s the Tatar language was not taught at Russian schools. Following the adoption of the Law 'On Languages,' compulsory learning of the Tatar language and literature was introduced in all schools of the republic.

These years are marked by development of the regional component in the system of general secondary education of the Republic of Tatarstan. Since 1993 a new subject entitled 'The History of the Tatar people and Tatarstan' was introduced in schools of the region (8–11 forms). At the same time, the 'History and Cul-

ture of the Tatar people' was studied in educational institutions (and classes), where teaching was conducted in the Tatar language (5–7 forms). In turn, art universities and colleges opened departments of Tatar art.

The revival of the rituals, customs, and traditions of Tatarstan ethnic groups played an important role in the republic's cultural policy. In 1991 the State Centre of Tatar Folklore separated from the republic's scientific and methodological centre and formed an independent organisation. In 1995 the Centre of Russian Folklore was established at the Kazan Department of Culture.

Finally, the ethnic aspects of the cultural policy implemented in the Republic of Tatarstan in the 1990s were also reflected in the following statistics. Out of 43 museums in the republic, which were operating in the early 2000s, an equal numbers of exhibitions were devoted to the life and work of Russian and Tatar workers of culture and art—A. Gorky, Ye. Boratynsky, I. Shishkin, B. Pasternak, G. Tuqay, B. Urmanche, K. Nasyri, G. Iskhaki, et. al. These parity indicators were also due to the opening of a number of institutions associated with the work of representatives of the Tatar art school. In the aims of reviving the identity of the Tatars, the first institution to be established was the Kazan National Cultural Centre (NCC), in the facilities of the Kazan branch of the Lenin Central Museum.

Thus, a number of external indicators of the cultural development of Tatarstan in the 1990s demonstrate that Tatar culture gradually began to catch up with Russian culture. According to certain quantitative data, Tatar culture even began to outstrip Russian culture. At the same time, there remained spheres in Tatarstan where the Russian and Russian-speaking culture continued to occupy a firm and even a dominant position. For example, as of 1 January 2001, 547 mass media were registered in the country. More than a half (55.8%) of the press mass media more conducted their activities in Russian, one quarter of them (25.1%) worked in both official languages of the Republic, and only one-eighth in Tatar (12.2%).

There were also editions issued in other national languages (Chuvash, Udmurt, etc.). In this situation of linguistic asymmetry the media policy of the authorities was primarily aimed at supporting the Tatar-speaking media.

The status of the Russian-speaking school remained high. The Russian language continued to occupy a leading position as the main language of communication at work and at home. In turn, the works of Russians composers, playwrights, and artists still played an important role in the programmes of theatres and concert halls, in exhibitions in museums and exhibition halls of Tatarstan. Although the share of works of Tatar playwrights, musicians, and artists in them increased over the years of the post-perestroika development.

As to the development of cultures of so-called 'ethnic minorities' of Tatarstan, it should be noted that at the initiative of the republic authorities and with the support of leaders of national-cultural societies, the first Congress of Peoples of Tatarstan was held in Kazan in 1992. The Congress created the Association of National Cultural Societies of the Republic of Tatarstan (ANCS RT). On 26 May 1999 to provide state support to public national-cultural organisations within above ANCS RT, a House of People's Friendship was opened in Kazan. From the moment the Law on Languages in the republic was adopted, a network not only of Tatar national schools but also schools of other peoples of Tatarstan began to expand.

The turn of the the millennium was marked in Russia by new alignment of the legal vertical structure. This also affected the ethnocultural sphere. The centre's steps to strengthen its own positions in the human resources and financial spheres were designed to promote further unification of the political and legal as well as the socio-economic relations in Russia. Such transformations became possible after a decline in the activities of ethno-political movements in the 1990s, the relative stability achieved in the centre's relationships with the so-called 'national regions of Russia' and the gradual improvement in the economy after the deep economic depression of the 1990s.

In this context, there was an evident strengthening of the desire of the Russian political leaders to mobilise ideological efforts to integrate ethnically and culturally diverse population of the country. The task of forming a single Russian identity became part of the context of federal political discourse. Thus, in his speeches, the Russian president Vladimir Putin began actively to use such terms as a 'Russian nation,' 'united people of Russia,' 'united nation' [Putin, 2007]. Dmitry Medvedev (the president of Russia in 2008–2012) emphasised that the nation's unity is one of the most valuable spiritual treasures of the country [Medvedev, 2008].

In this regard, particular attention should be paid to the legislative recognition of Russian state symbols. It was symptomatic that at the beginning of the 2000s, when Russian statehood and the national unity were being strengthened, the following laws were adopted in the country: 'On the State Flag of the Russian Federation' (25 December 2000, No. 1-FCL), 'On the State Coat of Arms of the Russian Federation' (25 December 2000, No. 2-FCL), and 'On the Anthem of the Russian Federation' (25 December 2000, No. 3-FCL). The newly approved flag and coat of arms demonstrated a rejection of revolutionary symbols (the red flag and the coat of arms with a hammer and sickle). They revived (with some changes) the symbols of the period of Russia's development, when it was a strong and firm state, and were aimed at embodying continuity of Russian history, recognition, and pride for the old country's victories. The same spirit runs through the new text of the anthem. Although written by S. Mikhalkov for V. Alexandrov's music of the Soviet anthem written, it incorporates expressions typical of Russian pre-revolutionary high style, such as 'our sacred state,' 'native land secured by God.' At the same time, there are 'traces' of the Soviet era in the following lines: 'coming years open a wide space for dreams and for life,' 'a centuries-long union of fraternal peoples,' etc.

Thus, the emergence of the new Russian statehood in the 1990s began with a search for symbols and images capable of uniting

Russian citizens. The stage of its strengthening was marked by legislative recognition of such symbols. At the same time, the adoption of the above laws was intended to balance the strengthening regional identities typical of the previous period. In turn, the laws were facilitated by the policies implemented by the governments of the national Russian republics.

The Russian intellectual elite actively discussed the issue of forming a Russian civil nation. The country began to implement certain 'ideological integration projects' based on one or another idea: 'the victory in the Great Patriotic War,' 'Orthodoxy,' 'Russian achievements in sports,' 'victories in international pop competitions,' etc. They were actively popularised and promoted by the Russian media in the aims of uniting, combining, and forming a single Russian identity.

Let us consider how these trends were reflected in documents adopted by the Federal Centre in the field of culture and ethnic and cultural development. First of all, the adoption of the new Federal Law 'On the State Language of the Russian Federation' (1 June 2005, No. 53-FL) was very indicative since it finally recognised the Russian language as the state language of Russia. The law guarantees its use throughout the territory of the entire country (introduction) and defines the spheres of its mandatory use (Article 3), it provides for the right of Russian citizens to use the state language (introduction) and stipulates measures to be taken by federal public authorities for its security and support (Article 4). It also provides for liability for the adoption in the Russian Federation and its constituent territories of any laws or regulations 'aiming at limiting use of the Russian language as the state language in the Russian Federation' (Article 6).

Other steps in this direction included adoption of federal target programmes 'Russian Language' for 1996–2000, 2002–2005, and 2006–2010. They emphasised the integration function of the Russian language as a means of 'strengthening the statehood' as an element that unites 'political, economic, and cultural spheres of life on the territory of the Russian

Federation,' 'as one of the most important sociocultural components of consolidation of the Russian civil society' [Federal'naya tselevaya programma, 2007].

The desire to preserve and strengthen the united cultural and symbolic relations of the country was a basis for approving the Federal Law 'On Amendments to the Law on the Languages of the Peoples of the Russian Federation' (11 December 2002, No. 165-FL). According to it, the alphabets of the state languages of the Russian Federation and its republics shall be based on the Cyrillic graphic system. In fact, it was a reply to the Law 'On Restoration of the Tatar Alphabet Based on the Latin Graphics' adopted by the State Council of the Republic of Tatarstan in 1999, which was regarded by the federal authorities as separatist and not contributing to integration of Russian peoples.

The shift of the emphasis in the ethnonational strategy of central authorities from diversity to integration influenced the sphere of education. Thus, the law of the Russian Federation 'On Amendments to Some Legislative Acts of the Russian Federation in Terms of Changing the Concept and Structure of the State Educational Standard' (No. 309-FL), adopted on 1 December 2007, set out its new meaning: the state educational standard is not now divided into federal or regional components, but is a single federal state standard. Accordingly, a paragraph concerning the establishment by the constituent parts of the Russian Federation of 'regional (national and regional) components of the state educational standards' (Article 29, p. 8 of the Federal Law 'On Education') was removed from the Law 'On Education.' A guarantee of 'unified educational policy in the Russian Federation' (Article 3, p. 7 of the new edition of the Law 'On Education') was set out as one of the major functions of these standards.

The new strategies of forming identities in Russia that emerged at the beginning of the 2000s became evident in the course of preparing censuses of the population in 2002 and 2010. In the Soviet period there was a policy

to attribute a person to a certain ethnic group in accordance with the official 'list' based on primordial ideas about ethnicity. In the 2000s this policy was replaced by a strategy of emphasising the freedom of choosing ethnic identity, making it more subjective. Thus, the 'list of nationalities' was expanded in the process of preparing for all-Russian censuses, and the issue of the native language was excluded from the census form in 2002. All this was done simultaneously with the authorities' efforts to strengthen the all-Russian identity in respect of the ethnic one. The categories thus incorporated civic categories instead of ethnic ones ('Russian citizen,' etc.).

In turn, in the 2000s there were federal efforts to overcome the trend of politicising ethnicity. This has been characteristic of the 1990s, when the regulatory bodies of the Russian regions connected the issues of ethnic and cultural development with solution of political problems as well as the establishment and maintenance of the relative independence of territories. First, the centre began to emphasise the importance of replacing the term 'national policy' with 'ethnic and cultural policy,' when concerned with policies 'related to Russian nationalities' [Tishkov, 2003a]. Accordingly, the term 'national policy' became free to be used to mean the 'policy of ensuring national interests of the country...' [Tishkov, 2009]. Second, the federal authorities wished to distinguish between the issues of state and territorial division of Russia, independence of Russian constituent territories, and ethnic and cultural development. This was aimed at viewing ethnic and national problems in the light of ethnicity and culture and expressing ethnic and cultural interests of the population not at the institutional level (that of constituent territories of the Russian Federation) but at the individual, personal, and group level [see Musina, ed. 2009, pp. 371–372]. This also discloses the federal strategy of making ethnicity gradually more subjective. It also attempts to remove sources of ethnic renewal. At the same time, it was an attempt to reduce the importance of regional identities, which were mainly based on the idea of maintaining and developing ethnic

languages and ethnic cultures and a strengthening of the all-Russian identity.

In connection with the above objectives, the task of maintaining multi-ethnic diversity was also gradually modified. At the federal level it began to be formulated not as an independent value but as a way of 'integrating citizens of any ethnicity into an all-Russian socio-economic and cultural space...' [Tishkov, 2003a].

Thus, in the late 1990s and early 2000s a number of federal programmes in the field of culture were adopted in Russia: 'Development and Conservation of Culture and Art of the Russian Federation' (1997–1999); 'Culture of Russia (2001–2005)'; 'Culture of Russia (2006–2010).' An increasingly prominent place in the system of principles and objectives of the state's cultural policy and of specific activities was given to those policies that were aimed at the consolidation and integration of the Russian society. The wordings of principles that encouraged diversity were gradually refined. Focus moved away from the state-funded development of languages and cultures of various ethnicities and the national education system and towards support for ethnic and cultural initiatives of the citizens themselves, promoting their mutual contacts, dialogue, and exchange.

This trend was partially evident in the analysis of a new draft Concept of the State national policy of the Russian Federation [see Nacziional'naya politika Rossijskoj Federacii, 2007], which, on the one hand, contained certain features of continuity in relation to the Concept of 1996, while on the other hand, embodied the strategy of ethnic and cultural development characteristic of the 2000s. In particular, the wordings of state policy objectives in the cultural and educational spheres included such paragraphs as 'cultivating patriotism and forming the all-Russian civil identity,' 'respect for the history of Russia and the state symbols,' and strengthening a positive international image of Russia' in the international sphere, which was also important for the development of a national identity of the Russians. At the same time, the objective of

'strengthening and improving national general education as a tool of preserving and developing culture and language of every nation...' (see Concept of 1996) was omitted from the above version of the Concept. The conceptually significant principle of Russian ethnic and cultural policy of the 1990s—'promoting the development of national cultures and languages of Russian peoples'—was also absent. In fact, it provided for the state's function of promoting ethnic and cultural diversity of the country, making it responsible for the survival of ethnic groups and their cultures. At the same time, the draft Concept under review included a principle connected with Russia's international obligations, namely 'protection of rights of national minorities.' However, this addition would have made sense only if politicians and academics had come to an agreement on the question of what nations in our country should be considered national minorities.

In other words, in the 2000s the federal authorities did not reject the policy of recognising ethnic and cultural differences. Nor did they reject certain forms of creating conditions for the citizens to achieve their requirements in this area (see section 'Major Directions of Implementing the State National Policy') of the draft Concept. However, a gradual deviation from the strategy of promoting diversity was seen at the federal level. At that time paternalism was characteristic of the state policy with respect to such groups of the population that were the most vulnerable in the sociocultural terms. Such groups primarily included small indigenous peoples of the country. In the period under review a number of federal laws and programmes were devoted to them (Law of the Russian Federation 'On General Principles of Organising Communities of Indigenous Peoples of the North, Siberia, and Far East of the Russian Federation (20 July 2000, No. 104-FL), 'On the Territories of Traditional Nature Management of Small Indigenous Peoples of the North, Siberia, and Far East of the Russian Federation' (7 May 2001, No. 49-FL), etc.), they were emphasised in the documents newly developed in the Russian Federation, in

particular in the above-mentioned new draft Concept. In addition, the Russian Germans repressed during the Great Patriotic War became a special object of the state ethnic and national policy of the Russian Federation. In particular, two federal target programmes were directed at supporting their socio-economic and cultural development for 1997–2006 and 2008–2012 [Razvitie soczial'no-e'konomicheskoi i kul'turnoj bazy', 1997; Razvitie soczial'no-e'konomicheskogo i e'tnokul'turnogo potentsiala rossijskix nemecev, 2007].

Finally, faced with ethnic conflicts, manifestations of fundamentalism and terrorism in the North Caucasus, an increase in the number of migrants and individual outbreaks of xenophobia and migrantophobia on the part of the host population, in the early 2000s Russia began to articulate objectives that ineluctably accompany the policy of ethnic and cultural pluralism: the creation of tolerance amongst the population by means of intercultural and inter-religious dialogue, finding a balance between differences and unifying features; managing interethnic relations and preventing interethnic conflicts; opposing extreme manifestations of nationalism and extremism. The following instruments were directed at solving these tasks during period under review: the Federal Law 'On Countering Extremist Activities (25 July 2002, No. 114-FL), the Federal Target Programme 'Formation of Tolerance and Prevention of Extremism in the Russian Society (2001–2005) (adopted by a decree of the Government of the Russian Federation on 25 August 2001). The draft Federal Law 'On the Principles of State Policy in the Sphere of Interethnic Relations in the Russian Federation' should be also be noted. All of these documents demonstrated a strengthening the centre's position in regulating the relevant issues.

In the republics of the Russian Federation some of the above-mentioned changes in the centre's ethnic and national strategy initially caused hidden or explicit dissatisfaction amongst the elite and certain intellectuals. In particular, they were concerned with the issue of recognising or not recognising the ethnic

factor as a basis for the federal division of the country. In the early 2000s the nationality-based territorial structure of the federation was supported not only by national and political leaders of Tatarstan but also by a number of academics. They warned that the 'destruction of national statehood of peoples' [see Farukshin, 2009, p. 107; Khakimov, 2009, p. 94] can lead to 'political destabilisation with unpredictable consequences for the country and its multinational population' [Farukshin, 2009, p. 107]—that is, the problem of ethnicity is inextricably connected with the issue of regionalism. To prove the efficiency of the model of ethnic federalism, they provided examples of a number of Western countries (Canada, Switzerland).

The regional elite expressed its objections to the subjectivisation of ethnicity as implemented in the Russian Federation and hence the weakening of the ethnic identity in the process of preparing and conducting census campaigns of the 2000s. In particular, the problems of the 'peoples list' and 'fragmentation of the Tatar ethnic group' became acute in the Republic of Tatarstan in the early 2000s [see Sokolovsky, 2002, pp. 207–237; Iskhakov, 2002, pp. 235–249]. They were associated with determining in the 'list' such ethnic groups as the Kryashens, Siberian Tatars, and others, which had been earlier classified—in censuses of the Soviet period—as the Tatars. The political and national leaders considered this innovation as a means to decrease the number of the Tatars in order to 'abolish' national republics and make them Russian governorates. The policy of carrying out the census in connection with the problem of 'Bashkirisation' of the Tatars in the Republic of Bashkortostan was also criticised [see Iskhakov, 2005] as well as the complicated methods of defining the issue of the native language (the same questions were raised during the census of 2010 [see Iskhakov, 2010; Galeev, 2010, etc.], but their discussion was not so heated).

While the federal authorities were implementing projects aimed at the formation of the all-Russian national identity, the leaders of the regions continued (although to a lesser degree

and in part on a different basis) to make efforts aimed at strengthening regional identities. Thus, the Law 'On the State Symbols of the Republic of Tatarstan (14 July 1999, No. 2284) was adopted in Tatarstan even before the adoption of federal laws on the language, anthem, and flag. These symbols refer us primarily to the history and culture of the titular ethnic group of the republic. Although the regional community itself was considered as a unifying factor for the entire population of the Republic of Tatarstan, by the middle of the first decade of the 2000s it was part of the all-Russian community.

It is important to note that in the first decade of the 2000s the regional authorities tried to preserve the achievements of the 1990s in respect of development of national languages and cultures. In particular, Tatarstan tried to adhere to the main directions of the ethnic and cultural policy related to the strengthening of the status of the Tatar language (along with Russian) as a state language of the republic, developing the Tatar national schools, supporting Tatar culture, and thereby developing the ethnic and cultural identity of the Tatars. Thus, on 28 July 2004 the republic adopted the Law 'On Amendments and Supplements to the Law of the Republic of Tatarstan "On the Languages of the Peoples of the Republic of Tatarstan"' (No. 44-LRT). It provided a new edition of the Law and prescribed new measures aimed at increasing the spheres of functioning of the Tatar language in the society. It also preserved a provision that is fundamental to the language policy of the republic, stipulating that the Tatar and Russian languages shall be taught in schools in the Republic of Tatarstan in equal amounts (Article 9, Article 10 of the Law). Also, in 2004 the republic approved the State Programme of the Republic of Tatarstan on Preservation, Study, and Development of State Languages of the Republic of Tatarstan and Other Languages in the Republic of Tatarstan for 2004–2013 (11 October 2004, No. 52-LRT) aimed at implementing new tasks in the language strategy.

The Tatar culture remained one of the priorities in the ethnic and cultural policy of the re-

public. This is reflected in certain programmes of cultural development (for example, in the Target Complex Programme on Preservation of Cultural Heritage 'Miras – Heritage' for 2007–2009), in particular activities, including those related to jubilees, etc.

At the beginning of the 2000s the development of the Tatar national school was also supported by the regional authorities. Thus, by the end of 2004 pupils were taught in 1,210 schools of the republic in accordance with the curriculum of Tatar schools. Of these 94 were granted the status of 'educational institutions of a new type' since they were schools with in-depth studying of the Tatar language. In addition, by this period 403 schools in Tatarstan had classes teaching in either Tatar or Russian.

However, upon the adoption of the Federal Law 'On Amendments to Certain Legislative Acts of the Russian Federation in Terms of Changing the Concept and Structure of the State Educational Standard (1 December 2007, No. 309), which repealed the possibility of constituent territories of Russia independently establishing regional components, the situation became more complicated. The republic's elite expressed its concern that this innovation would lead to a 'restriction of the rights of the peoples of the Russian Federation for their national and cultural development' [Prava narodov Rossii, 2008], to the gradual closure of schools with an ethnic and cultural component, and to the reduction of the volume of the Tatar language and literature, the history of the Tatar and other peoples studied in schools. Respectively, this caused a negative reaction. In particular, R. Khakimov noted as follows: As a politician with a solid experience, I do not understand why the regional component should be abolished. Does Russia lack problems?' 'They create a problem for no reason at all, noted the chairman of the Committee on Culture, Science, Education, and National Issues of the State Council of the Republic of Tatarstan R. Valeev. 'Who is bothered that the Tatars study the Tatar language, Chuvashes, Chuvash, etc...' The adoption of the above law was treated as preparation 'for abolition of multinational-

ity in the Russian Federation' by F. Safullin [Safullin, 2010]. D. Iskhakov also urged that they should not desist in pursuing their own ethnic and cultural rights, and that they should go even further up to the International Court [Zvezda Povolzhya, 14–20 May 2009].

Thus, the decisions of the Russian Federation regarding the ethnic and regional component were viewed rather negatively by the national elites. Moreover, it should be noted that this issue is still subject to dispute and mutual adjustments of positions by the the Federal Centre and Russian regions.

In this period there were also discussions regarding the possibility of introducing the subject of Orthodox Christianity into the Russian secondary education system. They began on 25 December 2007 with the announcement by Alexy II, the head of Russian Orthodox Church, that the 'fundamentals of the Orthodox culture' would be studied everywhere in the country from 1 September 2009. The national and political elite of Tatarstan as well as the clergy proposed that it should be a replacement for the optional course 'The History of Religion.' Summarising all the discussions on this issue that had taken place in the country over the recent years, the president of the Russian Federation Dmitry Medvedev said at a special meeting with the leaders of religious communities held on 21 July 2009 that the 'Fundamentals of the Religious Culture and Secular Ethics' would be introduced in certain regions as an experiment after 2010.

Another controversial situation emerged in this area connected with the approval of the Federal Law 'On the Days of Military Glory and the Victory Days of Russia dated 26 May 2010, which included the Day of the Conversion to Christianity of Ancient Rus (28 July) in the list of important country days [see Otzy'vy' tatarskoj obshhestvennosti, 2010]. In response to this, the regional authorities proposed that another date should be nationally recognised—that of the adoption of Islam in Russia. In accordance with the Law of the Republic of Tatarstan 'On Amendments to the Law of the Republic of Tatarstan "On Public Holidays

and Victory Days of the Republic of Tatarstan" (14 October 2010, No. 74-LRT), the day of official adoption of Islam in Volga Bulgaria (21 May) was established as a celebration date in the region.

With regard to the religious policy implemented by the republican authorities, it should be noted that the equal status of Islam and Orthodoxy in Tatarstan was in every way emphasised at the official level in the 2000s, with recognition of other religions professed by the population of the region. Moreover, the regional political elites emphasised the specifics of the 'local' Islam, which was referred to as the 'Euro-Islam,' 'peaceful Islam.' Such actions were evidently aimed at pacifying the attitude of the federal politicians towards Russian Muslims, to whom most of the titular ethnic group of the Republic of Tatarstan attribute themselves in one way or another. Russian Islam was articulated as 'own,' different from the traditional Islam of Arab countries [see Sagitova, 2009, pp. 125–162].

It should be stressed that while trying to preserve the main principles and priorities of the cultural policies of the 1990s after the early 2000s and given the balance of forces, which was not favourable for them, the authorities of constituent territories of the Russian Federation were forced to adjust their positions. In particular, after the harmonisation of the constitution, statutes, and laws of republics with federal legislation, the gradual alignment of the legal hierarchy also affected the legislation concerning issues of the ethnic and cultural life. Thus, during the period under review Tatarstan introduced amendments and supplements to a number of respective laws, adopted new laws and editions, which contained obligatory references to the relevant federal laws. The relationship between the Russian and Tatarstan legislation in the sphere of language and culture was described more clearly than in the 1990s. A number of issues relating to the interaction between the central and regional authorities and regulatory bodies in the indicated sphere were clarified, while a number of provisions contradicting to the federal legislation were excluded. For ex-

ample, the new edition of Law 'On the State Languages of the Republic of Tatarstan and Other Languages in the Republic of Tatarstan' No. 44-ZRT as of 28 July 2004 now prescribed that the republic law on languages should be 'based on the relevant provisions of the Constitution of the Russian Federation, the Constitution of the Republic of Tatarstan, and the Law of the Russian Federation 'On Languages of the Peoples of the Russian Federation' (Article 1). The wording of the third article on language, which stated that the Republic of Tatarstan was a state, was withdrawn. Finally, a clarification was introduced concerning the language of official correspondence with addressees of the Russian Federation and its constituent territories, namely the Russian language (Chapter III, Article 15).

The adjustment of the ethnic and cultural strategy of the Republic of Tatarstan with relation to the Russian language and Russian culture was its characteristic feature of the first decade of the 2000s. Thus, in November 2002 there was a meeting between M. Shaimiev, the president of the Republic of Tatarstan, and the leaders of Russian national and cultural societies and centres, which was widely covered by Tatar mass media. During the meetings they discussed issues of developing the Russian language and culture in the region. On 20 May 2003 the Cabinet of Ministers of the Republic of Tatarstan adopted a Decree on Holding a Republican Holiday of Russian Folklore 'Karavon' (No. 274). Shrove Day was celebrated more actively than in the previous years.

In 2001 the republican target programme Russian Language in Tatarstan for 2001–2005 was developed (dated 22 February 2001). The republican target programme Development of Culture in the Republic of Tatarstan for 2004–2007' (subprogramme Preservation and Use of Immovable Historical and Cultural Heritage) included certain churches in the cities and certain districts of the Republic of Tatarstan along with such large Orthodox architectural monuments as the Cathedral of the Annunciation the Kazan Kremlin and the architectural complex of the Sviyazhsk Island.

Certain specific measures in the cultural policy of the republic in the period under review were obviously designed to demonstrate the parity of developing Russian and Tatar cultures in Tatarstan, as declared by the regional authorities. These are the two cultures of the two largest populations in the country; Islam being associated with Tatarstan, and Orthodoxy, with Russia. In particular, such activities included the almost simultaneous opening of the renovated Cathedral of the Annunciation and the newly constructed Kul Sharif Mosque in the Kazan Kremlin (2005) [Mechet' Kul Sharif i Blagoveshhenskij sobor, 2010]; successive decisions on supporting the development of historical and architectural complexes in Sviyazhsk (the historical stronghold of Orthodoxy in Tatarstan) and Bolgar (a city historically founded by Tatar ancestors) [see Bulgarian state, 2007; Renewal of Sviyazhsk, 2007], which were united in 2010 in the project Cultural Heritage of the Republic of Tatarstan: Ancient City of the Bolgar and the Island and Town of Sviyazhsk, etc.

The proclamation of the principles of multiculturalism in a number of official documents had been a characteristic feature of the ethnic and cultural policy of the republic in the last years. In particular, the aims and objectives of the programme Development of Culture in the Republic of Tatarstan for 2004–2007 prescribes the principles of 'supporting diversity of the cultural life' and 'creating conditions for a dialogue between cultures in the multinational country' (programme passport). Moreover, these objectives, declared at the very beginning of the programme, were further consolidated in subsequent sections. The Law of the Republic of Tatarstan 'On National and Cultural Autonomies in the Republic of Tatarstan' No. 15-LRT as of 12 May 2003 was aimed specially at protecting the rights 'of citizens of the Russian Federation Living in the Republic of Tatarstan and Attributing Themselves to a Certain Ethnic Community Being in the Position of a National Minority' (Article 1). It specified measures taken by the public authorities of the region to support the initiatives of the national cultural autonomy.

In 2007 the 3rd Congress of the Peoples of Tatarstan adopted a Concept of the State National Policy of the Republic of Tatarstan (approved by Decree of the president of the Republic of Tatarstan No. DP-312 as of 3 July 2008). It specifically provided not only for the principles of observing individual rights 'for free ethnic self-determination,' 'for satisfying ethnic, social, cultural, living, religious, spiritual, and moral needs' [see Naczional'naya politika Respubliki Tatarstan, 2010], which were characteristic of the strategy of recognising ethnic and cultural diversity, but also for the principles of 'promoting the development of national cultures and languages, preserving the traditional lifestyle, people's crafts and trades, customs and rites,' 'cautiously treating the historical heritage and national heritage of the peoples,' which were typical of the policy of 'ensuring identity' [see Naczional'naya politika Respubliki Tatarstan, 2010], etc. Furthermore, based on the establishment of the rights of all peoples of Tatarstan for free ethnic and cultural self-determination, the republic's authorities have attempted to construct a regional Tatar identity.

Thus, the trend that emerged in the region at the end of the first decade of the 2000s can be described as a strategy of ethnic and cultural pluralism, or identity policy, as it is called in the West. As already noted above, the cultivation of tolerance for 'other' languages, cultures, and their bearers was a very important factor and ideological component.

However, it should be noted that the Republic of Tatarstan has always articulated the absence of any problems in the sphere of interethnic and inter-cultural relations, when the policy of multiculturalism was already interpreted as an essential condition for mutual recognition, mutual understanding, as well as social and political unity of the ethnically and culturally diverse population. Nevertheless, Tatarstan's authorities gradually began to understand the importance and necessity of making special efforts in this direction at the regional level. Thus in 2008 a special Republican target programme on the prevention of

terrorism and extremism in the Republic of Tatarstan was adopted for 2009–2011 (Decree of the Cabinet of Ministers of the Republic of Tatarstan No. 956 as of 31 December 2008). It provided not only for actions to prevent terrorism and extremism but also a number of preventive measures aimed at cultivating tolerance and mutual understanding between representatives of different ethnic and religious communities.

Thus, the policy implemented in the 1990s was characterised by the following aspects.

1. Given the extremely weak centre in the early 1990s, there could have been no discussion of a strategy of purposeful and consistent formation of particular identities at the federal level. Nevertheless, in the course of negotiations with the leadership of national republics of the Russian Federation the fundamentals of a new ethnic and cultural policy were laid in this period. This policy was multi-ethnic in its essence, characterised by recognition and support of ethnic and cultural identity, and was carried out in two forms—ethnic-territorial and national-cultural autonomy. As a policy of 'institutionalisation and sponsoring' and 'multi-nationality' in Russia [Tishkov, 2003a], it actually helped to represent the diversity of ethnic and cultural identities. Integrative issues were badly developed at that time.

2. Given the forced transfer by the Centre of some of its authorities in the field of the ethnic and cultural development to the regions, the refusal to concentrate the management of cultural life in the hands of the central regulatory authorities, the situation itself indirectly contributed to strengthening of regional identities.

3. Taking into account the decentralisation processes taking place in Russia as well as the proclamation and approval of Tatarstan's sovereignty, the republic developed a new relatively independent ethnic and cultural policy. In the conditions of the growing importance of ethnicity stimulated by the national elites, the policy was ethnicity-oriented and primarily contributed to the revival and development of the Tatar language and culture, improvement of the Tatar status. Therefore, this strategy was

not only based on the population needs in preserving their ethnic identities, but also it was aimed at strengthening their importance, increasing the interest of representatives of various ethnic groups of the Republic of Tatarstan, especially the titular population, in their traditions and culture.

4. The republic's policy, including the policy of ethnic and cultural development, was also oriented to building a single regional Tatar identity in those years.

The ethnic and cultural policies of the Russian Federation and the Republic of Tatarstan in the first decade of the 2000s also had their own characteristics in terms of their focus on forming ethnic and cultural identities.

1. In that period the centre's efforts were primarily focused on strengthening the political, legal, and sociocultural space of the country, on forming a single Russian nation. This kind of strategy was implemented in the following way:

- Bringing in line the legislation of the constituent territories of the Russian Federation, including those in the ethnocultural sphere with federal legislation.

- The legislative consolidation of Russia's national symbols, confirming the status of the Russian language (and Russian culture) as the foundations for Russian identity, the formation of a unified state educational standard, as well as other similar measures.

- Developing and implementing of a number of specific ideological projects for integration.

2. While preserving the principle of recognition for ethnic and cultural diversity, the Russian authorities gradually abandoned its sponsorship, instead favouring to support the sociocultural development of small indigenous peoples and some other marginal population groups. They also strove to lead the country away from the tendency of politicising ethnicity, which was characteristic of the 1990s, and to transfer ethnic and national problems into the ethnocultural mainstream. All this should have led to a certain subjectivity of ethnic identities (when their selection and maintenance had become a personal matter and subject for an initiative by the ethnic groups

themselves), to a decrease in the level of their relevance and connection with regional identities. At the same time, the Federal Centre undertook the responsibility to cultivate tolerance in the population, to regulate interethnic relations in the country.

3. The policy of the Republic of Tatarstan in the 2000s was largely a reaction to the requirements and regulations of the Federal Centre, and the region's authorities were trying to stick to the direction of the ethnocultural strategy of the previous period. This concerned the preservation and development of the Tatar language, Tatar culture, and a Tatar national school. At the same time, a number of additional mea-

asures were undertaken to develop Russian language and culture in Tatarstan, which led to confirmation of parity between Tatar and Russian culture. On the one hand, such actions should have contributed to the preservation of a high status and actualised self-consciousness of the republic's titular ethnic group, and on the other hand, improving social welfare and strengthening the positive identity of Russians in the republic of Tatarstan.

4. A regional Tatarstan identity had begun to be articulated during this period as part of a general Russian identity, to be based upon the declared and prescribed at the programme level, policy of multiculturalism.

§ 2. The Dynamics of Interethnic Relations and Identities in Tatarstan in the 1990–2000s

Gulnara Gabdrakhmanova, Rozalinda Musina

The era of Perestroika followed by the collapse of the USSR, and the collapse of the Soviet ideological system marked a cardinal transformation of social values in the entire former USSR. A particular marker for change was the actualisation of the ethnic factor, which in the Russian Federation in the 2000s remained a significant element of the political, social, and cultural sphere. The dramatic element of preserving the role of the ethnic factor in the country lies in the fact that ethnicity showed the highest mobility during the 20 years of post-Soviet history, including through formation of ethnic solidarity, its inclusion in the matrix of everyday social identity of the population and in the processes of state development. This identification and ideological mobility of ethnicity was especially evident in the history of Tatarstan of the 1990–2000s and above all among Tatars. The article discusses the changes of Tatarstan identities during this period. For comparative purposes, the problem is also discussed with regard to the Russian part of the republic's population, which allows showing the role of ethnic identity in the processes of maintaining

interethnic tolerance and the formation of a civil identity.

The ethno-sociological research, conducted in 1989–1990 in the Tatar Autonomous Soviet Socialist Republic towards the end of the Soviet period, showed the existence of a latent conflict in the ethnic sphere of the region. Along with the positive results of the national policy of the USSR (an increase in the rate of social mobility among the non-Russian population, the growth in the education level, the development of national professional art and science, the formation of national creative intellectuals, etc.), there was asymmetric social and cultural development of the peoples. Thus, an imbalance in the ethnic structure of the urban and rural population against a background of training in higher and secondary specialised institutions exclusively in the Russian language predestined disproportions in the educational, social, and professional structure of the region in favour of the Russian part of the Tatarstan population. The Tatar language was virtually not used in the sociopolitical sphere, the sphere of material production and was restrictedly used in the spheres of servicing,

education, mass communications, information, and advertising. In the Soviet period Islam was lost as the integral world view of the Tatar people, having been preserved only at the level of ritual practice.

The process of democratisation of society of the second half of the 1980s contributed to the fact that various social groups received the opportunity to express their interests. In Tatarstan, as in other regions of the USSR, national movements to attain greater political, economic, and ethnocultural rights by peoples began to form. The ethnic and political situation in the entire post-Soviet expanse, the national movements in the Tatar Autonomous Soviet Socialist Republic at the turn of the 1980–1990s led to the actualisation of ethnic self-awareness among Tatars. The subsequent strengthening of the relative political independence of Tatarstan, thanks to the adoption in 1990 of the Declaration of State Sovereignty of the Republic of Tatarstan and in 1992 the Constitution of the Republic of Tatarstan as well as the signing of a bilateral Treaty on the Delimitation of Authority Between the Organs of Power of the Republic of Tatarstan and the Russian Federation secured for Tatars '...the possibility to publicly express a sense of stigma of their own identity' [Makarova, 2010, p. 94]. The use of a modified Kuhn-McPartland test in a 1994 study (try to answer the question 'Who am I?' five times) showed the actualised ethnic identity to be over 40% (41.2%) of Tatar city-dwellers surveyed. The actualisation of the ethnic identity was even more evident because many respondents supported the proposition 'I never forget about my nationality,' 50.5% of Tatars surveyed in the cities of Tatarstan (to determine the degree of actualisation of ethnicity, the respondents were asked to choose one of two statements: 'I rarely think what nationality I am' and 'I never forget about my nationality'). During this period the Russian part of Tatarstan had a weaker sense of their ethnic affiliation than Tatars: only a quarter of them (24.6% among the townspeople) emphasised their ethnic identity in the identification matrix, and 27.2% supported the statement 'I never forget about my nationality.' The rea-

sons for quite an indifferent treatment of their ethnicity among the Russians in this period lied in the social and psychological discomfort and confusion related to the loss of the state-forming function and the alignment of their social status with other nations, in the long-term instability in the Federal Centre, in the policy of Tatarstan concentrated around the issues of preserving and developing the Tatar language and culture, in statements of radical leaders of Tatar national movements and their support by a part of the Tatars. All of these feelings were supported by information about the deteriorating position of Russians in the republics of the former Soviet Union.

The 2000s were marked by an increase in the importance of ethnicity both for the Tatars and for the Russians living in Tatarstan. A more significant actualisation was fixed among the Russian part of the population. While 51.9% of Tatar townspeople supported the statement 'I never forget about my own nationality' in 1999; 61.2%, in 2002; 77.5%, in 2011 (in 2012, 86.4% of villagers), the following percentage of the Russians supported it: 37.8%, 41.7%, 64.9% (71.0% of Russian villagers), respectively. If almost two decades ago the degree of ethnic actualisation of Russians was almost half that of Tatars, then at the beginning of the second decade of the 20th century the difference was even less significant. The growth of ethnic identity among Russians in the 2000s was recorded across the country as a whole [Drobizheva, 2011, p. 19], which is associated with new trends in federal policy aimed at strengthening the vertical power and the positions of the Russian language and culture, by appeals of individual politicians to strengthen ethnic nationalism as the nationalism of a dominant nation, which stimulated the development of a sense of their own ethnicity.

Language, culture, and religion are important components of the ethnic identity for Tatars (Table 3.6). In the 2000s, in comparison to the 1990s, the Tatars' interest in religion and traditional ritual and holidays increased. However, there was a decline in their relationship to their national professional culture. In the 1990s more than half of Tatars preferred the

works of Tatar authors (with the exception of fine arts). From one-third to two-fifths relied upon Russian and general Russian artistic culture. In the 2000s the proportion of the Tatars, who preferred their own national professional culture, significantly decreased. Now less than half of them, and in the sphere of fine arts, only a tenth, demonstrate an interest in the works of Tatar artists, writers, and composers. At the same time, the share of those who prefer Russian and general Russian culture is gradually increasing and is approaching half of the Tatar population [Makarova, 2010, p. 177].

Against the backdrop of a rise in ethnic identity among Tatars and Russians living in Tatarstan, a new territorial identity has begun to develop, including Russian and regional ones. In the first years of post-Soviet Russia a significant portion of Tatars and Russians living in Tatarstan felt that they were 'inhabitants of the USSR.' In 1995, 21.3% of Tatars and 35.2% of Russians in Tatarstan named the USSR as their homeland [Stolyarova, 2008, p. 167], in 1998, 33% of Tatars and 38.1% of Russians living in Kazan felt to some de-

gree connected to the inhabitants of the USSR. However, our studies of the mid-1990s shows that one-third of the Tatars and Russians living in the republic felt that they were Russian citizens and Tatarstan citizens (Table 3.7). The new identity 'We are Tatarstan citizens,' constructed during this time by the political elite of Tatarstan, found wide support among population of the republic and above all by Tatars. In 1994, 90.6% of Tatars and 54.3% of Russians considered themselves Tatarstan citizens in one way or another, of whom about 60% of Tatars and every fifth Russian bound up their identity more with Tatarstan. However, one-third of Russians felt that they were Russian citizens only.

The identity 'We are Tatarstan citizens' in the republic was built on the ethnic and regional consolidation but declared and had some local and civil foundations: 'The government and the Tatar elite... acted on behalf of the multinational people of the republic rather than only on behalf of the Tatars... In Tatarstan they promote an ideologeme 'Tatarstan is a nation,' meaning a community of compatriots '

[Drobizheva, 1996, p. 79]. The policy, which emerged in Tatarstan in the early 1990s, was a policy of cultural pluralism recognised by legislation and did not contain the principle of exclusivity for ethnic affiliation. None of the legislative acts of the beginning of the 1990s concerning the social and economic development of Tatarstan contained ethnic parameters (ethnic protectionism, the lobbying of economic interests of ethnic groups, the requirement of knowing the Tatar language while giving employment to people, etc.). The search for such a policy in this period took place under difficult conditions. Radically-minded members of the Tatar Public Centre proposed the idea of constructing independent 'national' economic systems on the basis of 'traditional labour skills.' The moderately-minded Tatar intelligentsia was searching for a 'middle' path that would be liked by both Tatars and Russians living in Tatarstan. As a variation, it was proposed to implement the idea of 'national capital,' which involved active participation of the state in the economic life of the republic. The authors did not put in any thought to ethnicity in the given project and thereby ensured the equality of various ethnic groups in the economy [Iskhakov, 1997, p. 113]. The magazine 'Idel' became an intellectual platform for discussing the issues of the economic and ethnic revival of Tatarstan. Its pages offered a variety of strategies for developing the republic. Historians bound the economic development

of Tatarstan with the trading traditions of the Tatar people and the educational potential of the Tatar diaspora (R. Amirkhan); economists and political scientists, with the possibilities of practical implementation of contractual relationships with the Federal Centre and the creation of a political system as a basis for the economy (M. Galeev, R. Mukhametshin, R. Kurchakov, R. Khakim); and ethnologists, with the formation of intellectual Tatar centres (D. Iskhakov) [Modeli e'konomicheskogo razvitiya Tatarstana, 1995, pp. 2–3, 52]. The balance of interests of various layers and groups of Tatarstan was later reflected in the formula of the republic's strategy: 'Economics means a decent life in the place where you were born' [Kurchakov, 2012]. It was this formula that ensured the smooth transition of Tatarstan to the market economy, the political and social integration of ethnic groups and laid the principle of division of the economic and ethnic policies in the republic. And as a result, it stimulated the solidarity of the Tatarstan population on the supra-ethnic, civil basis.

The regional identity 'We are Tatarstan citizens' was supported by a significant part of the population in the early 1990s thanks to the policy of 'eased entry into the market' implemented by the authorities of Tatarstan. To some extent, it protected the population from a sharp deterioration of the economic state, which was characteristic of Russia at that time, having ensured relative well-being in

comparison with other regions of the Russian Federation. The priorities of regional identity were also strengthened by a higher trust in the authorities of Tatarstan: 41.2% of Tatars and 20.8% of Russians living in Tatar cities surveyed in 1994, and 59.1% and 21.3%, in villages, expressed their trust to the republican government, while only 4.2% and 11.2% of townspeople (0.5% and 4.9% of villagers), respectively, trusted the federal authorities. This also demonstrated the recognition of the economic success of Tatarstan and of the fact that the authorities had not allowed the radicalisation of the national movement, the ethnisation of the economy and labour sphere, which took place in some regions of the former Soviet Union. However, it should be noted that more than a quarter of those surveyed (26.6% of urban Tatars and 28.7% of Russians, and 29.8% and 21.3% of villagers) trusted neither of the authorities, and each fifth surveyed was undecided about the question trust in the authorities. And this was connected with the general political instability of the period.

As was shown by the last ethno-sociological survey of 2011/2012, the choice of only Russian identity by Russians and Tatars re-

mained at the previous level; the regional one, declined; and the double one (or parity one), Russian and regional, increased (Table 3.7). This means that it remained important for a significant portion of the ethnic groups of Tatarstan to feel that they were Russian citizens, while maintaining the importance of identification with the native region. These feelings were filled with positive content: answering the question 'What do you feel when you realise that you are a Tatarstan citizen?', 94% of Tatars and 79.5% of Russians chose the answer 'the feelings of pride and dignity.' The identification with Russia evoked the same feelings among Tatars and Russians (88%–89%). The all-Russian identity of the Tatars and Russians of Tatarstan combines both the state one (belonging to Russia, its symbols), civil one (responsibility for the fate of the country), and national one (language, culture, customs, holidays, historical past). At the same time, the ideas of the republic's ethnic groups did not widely differ (Table 3.8).

The regional identity of Tatarstan preserved in the 2000s, despite the absence of clearly declared ideologies by the political elites, was filled with new content. Today it

Table 3.8

plays a symbolic role. Half of the Russians and 60% of the Tatars, who participated in the study of 2011/2012, identified 'proclamation of sovereignty by the republics of the Russian Federation' as a positive event in Russian history (Table 3.9). At the same time, 'the strengthening of Tatarstan's independence' as a necessary condition for the development of its people was considered only by a fifth of the Russians and the Tatars living in the republic (Table 3.10). Over the last 15 years the level of support of this position has decreased almost twice. Sovereignisation is perceived by both Tatars and Russians as a significant phenomenon in post-Soviet Russia (60%), which today plays only a symbolic role and does not have a separatist component. At the same time, almost half of our respondents—both Tatars and

Russians—demonstrated a high level of activity and interest in the development of Russia, a readiness to be useful to the country. The same number was potential leaders who felt responsible for what was happening in Russia (Table 3.11). However, solidarity contains a negative symptom—it is to a large extent based upon grievances. In 2011/2012, 36% of Tatar townspeople and 44.5% Russians living in the cities of the republic joined the opinion that 'people of my nationality have lost much over the past 15–20 years.' It is not only grievances for real and imaginary ethnocultural losses that unite but also for the unfulfilled expectations from the real, positive, and large-scale political, socio-economic development of Russian society.

In the 2000s the regional identity in Tatarstan began to organically complement the all-Rus-

sian identity. This organic regime of operation can be primarily explained by the considerable subjective importance for any person for their environment, place of birth, local traditions—that is, a system of valued images, which meet the basic needs of a person, and on the basis of which more high-order needs are built (A. Maslow). In the first decade of the 2000s these primary needs of individuals, associated with the history and culture of the republic, formed a basis for the policy of regional symbolic management in Tatarstan. Its tools were as follows:

- Ethnic and religious symbols: facts and monuments to the ethnic history of the republic (1,000th anniversary of Kazan, 900th anniversary of Yelabuga, Bulgar archaeological site and the Sviyazhsk Monastery, the Kul Sharif Mosque, the icon Our Lady of Kazan), of individual municipalities and villages; elements of traditional and religious culture: holidays (Tatar Sabantuy, Russian 'Karavon,' Kryashen 'Petrau,' Chuvash 'Uyav,' the Spasskaya Fair, etc.), myths and legends (sacred places, springs)

- Cultural symbols: masterpieces of classical music culture (the Nuriyev International Festival of Classical Ballet, the Chaliapin International Opera Festival, the literary and music festival 'Aksenov Fest'), the modern musical art (the International Live Music Festival 'Creation of the World'), prominent figures of culture and science (A. Pushkin, G. Tukay, M.

Jalil, S. Altshuler, A. Butlerov, E. Zavoysky, N. Lobachevsky, etc.)

- Social symbols: charity and benefactors (the monument to a benefactor in the centre of Kazan), sports and a healthy lifestyle (the 2013 Universiade, FIDE Chess Grand Prix, horse races for a prize of the president of the Republic of Tatarstan, the football team 'Rubin' and the hockey team 'Ak Bars')

As the experience of Tatarstan shows, the combination of qualitatively different symbols (ethnic, religious, cultural, social) and their use in a single regional development strategy testify to the significant potential of 'pragmatic pluralism.' The 'capital of diversity' has become the special resource for the development of the Republic of Tatarstan and Russia as a whole. The growth of tourism, entrepreneurs' initiative, the strengthening of identities, stimulating to creativity, improvement of Russia's image as a state possessing culture and science of global importance—all these are the dividends of symbolic management, having national importance. In addition, the use of symbols increases the social and interethnic sustainability of Tatarstan by forming a regional identity among the representatives of various social, ethnic groups, and confessions. The first president of Tatarstan M. Shaimiev, speaking at the presentation of the Republican Fund of Reviving the Monuments of History and Culture on 20

March 2010, noted that 'our strategic goal is to make the complexes of historical monuments of the Bulgarian state (Bilyar, Suvar, Chistopol, etc.) and the city of Sviyazhsk become a common heritage. Bolgar as the first capital of the Golden Horde, the history of the Sviyaga River, the architectural constructions of Sviyazhsk became a reflection of the history and symbols of our territory (our emphasis—G. G., R. M.)' [Shaimiev, 2010 a].

The research materials of 2011/2012 allow us to present the modern matrix of identities of the republic's Tatars. 'We identification' among the Tatars includes a system of complex social roles, the significance of which is not always the same (Table 3.12).

For the majority of the Tatars living in Tatarstan, macro-territorial communities (identification with the country and the republic) are less important than macro-communities reflecting the manifold spiritual closeness of people (identification with socio-economic, professional, religious, and other groups). At the same time, the national and ethnic factor turned out to be much more important within the system of 'we identification' than the civil one. And as has been shown by studies of the Institute of Sociology of the Russian Academy of Sciences, this situation was typical for

Russia as a whole until the mid-2010s. In the following years Russian identity had begun to prevail a little over the ethnic one against the background of the preserving the importance of the latter. This allows the researchers to make a conclusion about a lack of competition between all-Russian and ethnic identities [Drobizheva, 2011, p. 204]. Why does the civil component of the 'we identification' lag behind among the Tatars of Tatarstan?

As the materials of ethno-sociological studies show, the overall positive attitude towards the values of democracy on the part of ethnic groups is combined with a skepticism of its instrumental capabilities. Russian democracy was implemented at the level of a normative model but did not grow into a real participatory democracy. When ethnic groups talk about equality, they mean not only the declared equality in the law (it is recognised by the Constitution of the Russian Federation) but the actual practice of expression of the equality of peoples' rights. Nearly 90% of Tatars and Russians living in the cities of Tatarstan noted the importance of protecting peoples' rights in modern Russia as well as the necessity of ensuring the equality of rights of the representatives of various nationalities and religions (Table 3.13).

**Breakdown of Answers to the Question:
'What is Especially Important Nowadays for Russia?', 2011, Urban Areas (%)
(the Answers 'Totally Agree' and 'Rather Agree')**

Options	Tatars	Russians
Overcoming social inequality, achieving social justice	88.3	89.7
Bringing order in the country, ruthlessly tackling corruption	89.9	91.1
Defense of national dignity, equality of people from different ethnic groups and faiths	89.1	86.6

There are grounds for such concerns. The 2000s was a period of initiation by the Federal Centre of a number of strategies in the ethnocultural sphere. In particular, as it relates to Tatarstan, this was the requirement to bring the legislation of the Republic of Tatarstan in the ethnocultural sphere in conformity with federal legislation. During the period of the census campaigns of 2002 and 2010 there was also a subjectivisation of ethnicity. Finally, a decision to confirm uniform state educational standards and revoke the national component in education. The latter led to a loss of effective means for the development of a national education. The introduction of a test system for the final assessment of students' performance (USE, SFE), conducted in the Russian language, had negative consequences on the development of national education. Attempts to revive the system of higher educational institutions in the Tatar language in the Republic of Tatarstan and beyond were not successful, although a lot was done in this sphere. Serious problems arise in the provision of regional textbooks and other course books in the Tatar language in connection with a change in the order of expertise and classification of textbooks, which deprived regional educational regulatory bodies of the relevant powers. Currently, the Republic of Tatarstan is deprived of the opportunity to influence the situation with the development of Tatar schools in regions of the Russian Federation with a small number of Tatars and provide them with the necessary textbooks. At the same time, they are not being

developed by either the local authorities or the federal government. The constitutional right of citizens to a free education in their native language is violated in the regions of the Russian Federation.

Accepting the 'new rules of the game' and recognising the importance of the integration processes, in the 2000s Tatarstan's political and national Tatar elite tended to adhere to the major directions of the ethnocultural strategy that were developed in the Republic of Tatarstan in the previous period [Makarova, 2010, p. 232]. Welcoming the participants of the All-Russian Gathering of Entrepreneurs of Tatar Villages on 24 March 2012, Tatarstan president R. Minnikhanov said: 'We are all interested in the issue of supporting and preserving the culture of the Tatar people, its consolidation, preservation of traditions and customs of the Tatars' [Minnikhanov, 2012]. The ideology of supporting the Tatar culture and identity in the 2000s was implemented through a series of practical actions. This is the adoption by the State Council of the Republic of Tatarstan on 15 September 1999 of the Law on the Transition of the Tatar Language to the Latin Alphabet, which was rejected by the State Duma of the Russian Federation (16 November 2004). These actions also included the development and adoption of a Concept of State National Policy of the Republic of Tatarstan approved by the Decree of the president of the Republic of Tatarstan on 3 July 2008. These also included the development and adoption of a Concept of Preserving the Ethnic Identity of the Tatar

People on 8 December 2012 at the 5th World-wide Tatar Congress. These also included criticism of the concept of historical education that has been implemented in modern Russia and which, according to experts, 'is based on the domination of the state identity (the term 'national' as understood in the west) over ethnic identities, with their subsequent assimilation (up to the suppression of local identities)' [Gibatdinov, 2012]. As an alternative to the situation, several textbooks and course books on history and religious studies based on a different concept of humanitarian education were prepared and published in Tatarstan at the end of the first decade of the 2000s.

However, a firm position of the Tatarstan authorities with respect to state status of the Tatar language and its teaching in schools of the republic is perhaps the most significant measure of maintaining the political course of the 1990s. Some regions of Russia gradually moved away from the state status of national languages and eliminated them from the educational system at the end of the first decade of the 2000s. In Tatarstan, on the contrary, the strengthening of the status of the Tatar language (along with Russian) and preserving its teaching in schools of the republic in volumes equal with the Russian language as well as support of the development of the Tatar national school have been observed. All this happened in a climate of an unstable legal status of the national school in the field of education of the Russian Federation [Mukharyamova, 2008, pp. 81, 89, 99].

Tatarstan's wish to preserve the position of the Tatar language is quite justified. Upon introduction of the Tatar language as a school subject along with Russian in the early 1990s, the process of language assimilation of the Tatars stopped. So, according to the data of our research, while 88.7% of Tatar townspeople noted knowledge of the Tatar language as good (including 68%, fluent) in 1999, in 2011 their share amounted to 94.6% (72.9%, fluent). Besides this, during the years of ethno-language reforms a new generation of Russian youth grew up that to one degree or another know the Tatar language (Table 3.14).

Knowledge of the language and culture of ethnic groups in contact with one another promotes their mutual loyalty. As our research shows, more than half of the Russian townspeople surveyed would like their children to know the Tatar language, and more than 50% of them believe that the Tatar language should be a compulsory school subject. However, a significant part of those surveyed believe that a fewer number of academic hours should be devoted to it. Note that there is a fewer number of those supporting the teaching of this subject as an elective course, and the portion of those negating the necessity of its teaching is negligible (Table 3.15).

The actualisation of ethnic identity, as discerned in the ethno-sociological research of the Tatars and Russians living in Tatarstan, raises the question about its constructive/destructive nature. Long-term studies in Tatarstan showed that the processes of strengthening ethnic

Table 3.14

The Degree of the Tatarstan Tatars' Proficiency in Russian , 2011, Urban Areas (%)

Table 3.15

Breakdown of the Tatarstan Russians' Answers to Support for Compulsory Teaching of the Tatar Language in Russian-Speaking Schools, 2011, Urban Areas (%)

Answer options	18–24	25–34	35–49	50–59	60 and above
Yes, it should be a mandatory subject for everyone	24.4	29.5	21.0	29.6	25.3
Yes, it should be a mandatory subject for everyone but with fewer hours given to it than now	20.5	26.7	34.7	17.3	16.1
No, it should be an elective subject	41.0	35.2	27.4	39.8	41.4
No, it should be a mandatory subject only for Tatars	9.0	2.9	11.3	5.1	10.3
It should not be in school at all	2.6	1.0	5.6	1.0	1.1

identity do not mean a growth of ethnic exclusiveness. The idea of ethnic exclusiveness did not find support among the Tatars or Russians of Tatarstan: the position 'titular nations should possess more rights than Russians and other nations in the republics of the Russian Federation' or 'Russia is a multinational country, but Russians should possess more rights since they make up the majority' was chosen by not more than 8% of the respondents surveyed in 2011/2012. In Russia the portion of supporters for the position 'Russia is a multinational country, but Russians should possess more rights since they make up the majority' makes up about a third of the poll participants [Drobizheva, 2011, p. 17].

Contact zones are the sources for forming the tolerant direction of the ethnic self-awareness on the basis of actualised ethnic identity. They can be expressed in both imaginary ideas and in real interaction. Empirical data shows that the idea of the closeness of contacting ethnic groups and confessions has received greater support in Tatarstan over nearly twenty years. Thus, in 1994 almost 3/4 of Russians

and Tatars identified the degree of closeness in relation to each other as close and very close. At the same time, not more than a third considered the adherents of neighbouring confessions as close, and a large part (each fourth Tatar surveyed and each seventh Russian) did not want to answer this question. Research conducted in 2011/2012 shows an increase in the number of respondents who reported interethnic (90%) and inter-confessional (over 60%) closeness (Table 3.16).

In the Republic of Tatarstan the indicators of inter-group (interethnic) trust are also very high. More than 91.7% of the Tatars surveyed in the cities of the Republic of Tatarstan in 2011 trust Russians, and 93.2% of Russians trust Tatars (the answers 'completely trust' and 'rather trust' are combined there) (Table 3.17). The study revealed no statistically significant differences in the level of the Tatars' trust to Muslims and the Russians' trust to Orthodox people (81.4% of the Tatars trust Orthodox people, and 88.6% of the Russians trust Muslims). Such a situation is also observed in other national regions and suggests that ethnic

categories, not suppressing other social identities, expand and strengthen social connections and trust relationships. Modern sociological concepts state that '...the stronger the mutual trust, and the more reliable the relations of mutual assistance, the broader and the more intertwined social networks, the more secure connections between people, the more stable, united, and efficient the society, and the stronger their democratic foundations' [Kozyreva, 2012, p. 165]. A wide radius of deep and enduring trusting relations—institutional intergroup (interethnic) and interpersonal—is the key to the further successful development of Russia. Therefore, a positive ethnicity is be-

coming the practical platform for forming further social development and reconstruction of the Russian Federation as it deepens the support by the citizens of their values and norms, allows them to interact on a clear, equal, and mutually beneficial basis.

Real interethnic contacts between the Tatars and Russians of Tatarstan are large-scale. Even in the period of actualisation of national movements in the republic during early 1990s, 88.1% of Russians and 79.7% of Tatars in cities and 96.9% of Russians and 93.7% of Tatars in villages were ready to deal with a representative of any nation, despite of racial and ethnic differences (Table 3.18). During

the last years, the readiness of Tatarstan to accept a person of a different nationality as a resident of the republic, colleague at work, boss, neighbour, close friend has risen up to 99%–92% (Table 3.19).

The E. Bogardus scale, shown in the tables, which permits to determine the nature of interethnic interaction, demonstrates that this readiness is different in various spheres of contacts: it manifested itself the most in the sphere of civil, business, friendship, neighbourly communication and considerably less in family and marriage communication. This sphere of human relationships is the most private and intimate, and the tradition of ethnical endogamy has the primary impact here, especially for Tatars. However, according to our studies, in the 2000s there appeared a gradual softening of ethnocentric trends of the former decade manifested among the considerable part of Tatars in their attitude towards interethnic marriages. It is natural that city dwellers, whose interethnic contacts are determined by their life style, entertain the possibility of interethnic marriages more often. In villages, especially in Tatar ones, the number of people orientated towards these contacts is considerably less: village-dwelling Tatars express the readiness to accept a representative of another nationality as a spouse of their children over 50% less than city-dwelling Tatars (42.6% and 69.3%); the proportion of village-dwelling Tatars with

similar trend is 1.7 times less than Russian village-dwellers (42.6% and 73.9%). Russian city-dwellers are the most open to family and marriage relations (85.9%). A more distinct trend of Tatars towards the ethnic endogamy is also related to the recognisable danger to lose the ethno-national culture and assimilate in case of heterogeneous marriages of future generations. About 2/3 of Tatars surveyed in the republic agreed with the assertion (among whom 33.3% fully agree, 30.7% rather agree) that interethnic marriages lead to the extinction of the nation (2011/2012 research data).

Sociocultural and psychological closeness, projective and actual practices of interethnic interactions in Tatarstan have been formed during the centuries-long common life of Tatars and Russians by virtue of many loans and identical traditions, cultural elements resulted from similar economical-and-cultural and geographical living environment. Longtime neighbourhood within the same territory, long-standing economical and cultural relations, close interaction in domestic and working environment were bound to leave an imprint on the nature of interethnic attitudes and contacts. The established commonality of values of the various ethnic groups, especially in cities, is also a factor for their convergence and consolidation. Research materials from 1990–2000s, accountable for the allowable statistical error of 4% to 5%, show almost a complete match,

Table 3.20

especially in cities, in the life priorities of ethnic groups in Tatarstan (Table 3.20).

In early 1990s one of the popular western theories was S. Huntington's idea of the clash of civilisations. The researcher considered religion as the basis for potential global fractures. Certain materials of mass surveys in the 1990–2000s could serve as a basis to justify such a position. During the last 20 years there has been a positive, dynamically developing trend for growth in the religiosity level among Tatars and Russians in Tatarstan. So, in 1990, 34% of Tatars and 28% of Russians surveyed in the cities of the republic regarded themselves as believers. In 1994, 66% and 56% of city-dwellers, respectively, among whom there were set aside the believers observing rituals and rites (practicing believers), 32% and 23%, and non-observing them (nominal believers), 34% and 33%. In the villages the proportion of persons regarding themselves as believers was 86% among Tatars and 75.4% among Russians; 64.5% and 55.4% of them regarded themselves as practicing believers. In 1997, 81% of Tatars and 72% of Russians called themselves believers, a part of whom (41% and 43%, respectively) considered themselves as rather believer than non-believer. In 2011/2012 about 84% of respondents (both Tatars and Russians) in cities considered themselves believers, half of whom were trying to

observe religious rituals and rites; in villages, above 90% (91.4% of Tatars and 91.% of Russians), practicing believers were 59.8% and 48.5%, respectively, among them.

The growth of religious consciousness is most noticeable among youth: notably, the smallest proportion of non-believers is in youth groups below 35; with this, among Tatars there show up young believers trying to observe rites; among Russians, believers non-observing the rites (Table 3.21).

The trends in the growth of religiosity are manifested in the performance of religious practices, especially in cities. So, according to the research data of 1990, even among city-dwelling believers only 7.9% of Tatars and 31% or Russian attended a mosque or a church, respectively; 15.4% and 10.1% of respondents prayed at home, but the major amount of polled (76.4% and 68.7%) did not observe those religious commands. Their attitude towards the religion was determined by the inner self-awareness ('internally, I feel myself a muslim or an orthodox').

The research materials for 2011–2012 show a positive dynamic in the expression of religious behaviour. Every fifth urban Tatar (19.3%) and every sixth Russian urban-dwellers (16.7%) prayed daily, and about a half of those surveyed (46.1% and 49.1%) did prayers occasionally. 43.2% of Tatar and

Table 3.21

65 and older	66.7	49.1	17.5	33.3	1.8	3.5	14.0	12.3

27.7% of Russian respondents never attended temples, while 56.6% and 70.7% answered the question of attending a mosque or church positively. However, only 2.5% and 4.1%, respectively, answered that they attend it at least one time a week and a little more, 3.1% and 7.1%, from 1–2 times a month. Comparatively low activity of Tatars in attending mosques may result from the fact that Islam does not contain a command to attend mosques on a mandatory basis but merely mentions the pious nature of collective praying. Respondents associate a rather low level of regular attendance of religious temples to participate in services or seek the advice of priests with insufficient professional level and sometimes the manifestation of human qualities in the ministers of religion.

The experience of Tatarstan in the regulation of inter-confessional relations as well as the particularities of Islam among Tatars have shown the unsoundness of the theoretical position of S. Huntington. Even in conditions of actualising religious self-conscience, inter-confessional tolerance and the positive coexistence of different religions are possible, especially in the regions with the experience of longtime interethnic interaction. This is confirmed by the study of D. Furman and K. Kaariainen conducted in Russian regions, including Tatarstan, in 1999. According to the researchers' data, the positive attitude towards Islam was detected in 92% of Russians living the Republic of Tatarstan, and the negative, in only 3%; while in the all-Russian selection it was 57% in the first case and 21% in the second, respectively [Furman, Kaariainen, 2000, p. 214].

During the 2011/2012 study over 95% of Russian city- and village-dwellers defined their attitude towards Islam as positive (57.9% and 38.5%) or rather positive (37.9% and 56.8%). Similar accounts towards Orthodoxy were identified in 96% of surveyed city-dwelling Tatars (among them 63% mentioned positive attitude, and 33%, rather positive) and in 90% of village-dwelling Tatars (38.9% and 51.2%, respectively). Only 4.2% of Russians and 3.7% of Tatars living in cities as well as 4.7% and 10% of village-dwellers, respec-

tively, admitted a negative attitude towards the religion of the ethnic neighbour.

The high level of tolerance is also typical for the believers themselves. So, in 1994 among the Russians of Tatarstan believers somewhat often expressed the wish their children knew the Tatar language (73% against 64% among non-believers). When determining the social-and-cultural distance, the higher degree of closeness was then identified in Tatar believers towards Orthodox Christians as well as in Russian believers towards Muslims. Study materials from 2011/2012 confirmed a higher tolerance of believers in comparison with groups of other world views.

A higher level of religious consciousness is characteristic for the Tatars and Russians of Tatarstan than Russian national average. This is accounted for by longtime and close ethnic-confessional contacts, amplifying the importance of the 'us – them' opposition. However, neighbouring ethnic groups and their confession are perceived as rather close: while it is different, it is not foreign, but one's own. The development of favourable inter-confessional relations in Tatarstan is largely affected by the traditions of Islam practiced by Tatars—that is, open, gentle, and characterised by the term 'Euro-Islam' as well as by the confessional policy of Tatarstan that focused on the equal support of traditional religions. Over the last few years problems in the religious sphere of the republic have been concentrated inside the confessions themselves.

The studies placed special attention on the interethnic relations of youth, who as a rule demonstrates more maximalist views and critical acceptance of reality, but due to the absence of life experience it is often exposed to destructive actions and becomes involved in various radical communities. The 2011/2012 study showed that the opinion of good neighbourly relations in the region prevails among the young generation. Thus, among urban youth over 70% of Russians below the age of 35 (70.5% in the 18–24 year group, 74.4% in the 25–35 year group) and over 80% of Tatars (78.6% and 86.1%, respectively) assess the relations in the republic as favourable or

calm. Among village youth the proportion of proponents of such assessment is even higher. It should be noted that the assessment of interethnic relations in specific cities and villages—places of residence of the respondents—as well as in their work or study groups is 10% to 12% higher. About 90% of Russians under 35 assess the cultural and psychological distance with Tatars as rather close (30% among them, as very close); up to 60% of the representatives of this group perceive Muslims rather close (24% among them, very close). Up to 90% of Tatar youth consider Russians rather close, with up to 66% of those who feel the same towards Orthodox Christians.

A characteristic indicator is the attitude towards the religion of the ethnic group being contacted. The 2011/2012 study materials showed that 85% to 90% of Russian youth in cities and villages of the republic noted a positive (including rather positive) feeling towards Islam; 3% to 5%, negative; 8% to 10% were undecided. A positive relationship towards Orthodoxy was identified among 90%–92% of Tatars in cities and villages; negative, 2.5%–6%; 3% to 5% of those surveyed were undecided. It should be noticed that in the 1999/2000 youth study, with the same proportion of negative assessments for the religion of the neighbouring ethnic group, the proportion of positively assessed respondents was significantly lower—that is, 69.9% of Tatars positively assessing Orthodoxy and 62.5% of Russian similarly assessing Islam (about one-third of those surveyed then were undecided) [Sovremenny'e e'tnokul'turny'e processy', 2000, pp. 54–55].

Along with the high level of interethnic and inter-confessional tolerance, characteristic for the majority of the young generation of Tatarstan, the materials of ethno-sociological surveys also record a part of youth in the republic who have a negative perception of interethnic relations. Thus, according to data from 2011/2012, about 20% of Russian and 12% of Tatar youth in cities as well as about 10% and 16% in villages of the republic, respectively, selected the following position when assess-

ing interethnic relations in the RT: 'Outwardly calm, but there is internal tension.' A further 1% to 3% considered these relations as tense. Such a critical assessment of the condition of interethnic relations is associated with the growth of ethnic self-awareness (about 60% of Russians surveyed and over 80% of Tatar youth support the statement 'I never forget my nationality'), against which many social problems take on ethnic overtones. Problems related to ethnocultural issues, issues of social status, the status of ethnic languages and cultures are perceived as especially painful. The necessity of equal rights for all Russian nations prevails in the public consciousness. The proposition that 'Russia is the common home for many nations. All the nations of Russia should have equal rights' was completely supported by 3/4 of Russians and about 70% of Tatar youth surveyed. At the same time, among Russian urban youth surveyed 10.3% aged 18–25 and 17.1% aged 26–35 as well as 2.4% and 2.7% of rural youth, respectively, completely agreed with the statement 'All means are fair in defence of the interests of my nation.' Among Tatar youth this statement found complete support in 22.6% and 14.9% of the age groups under consideration in cities and 4.8% and 13.3% in villages. But, it is apparent that people meant peaceful, non-violent ways to address problems since over 60% of both Russian and Tatar youth consider violence inappropriate in interethnic and inter-confessional disputes, and about 10% of those surveyed definitively support the statement 'Violence is acceptable if fairness to my nation or faith is violated.'

Ethno-sociological studies make it possible to track the dynamic of changes in the interethnic relations during the last 20 years. In the middle of the 1990s, 15.1% of Russians in cities assessed the interethnic relations in the republic as tense. Among Tatars this assessment was 7.6% of Tatars in cities (in villages, 1.6% and 5.2%, respectively). The twofold difference in pessimistic assessments of interethnic relations in the first half of 1990s between Russian and other nations was also observed in other regions of Russia [Ryzhova, 2011, p.

Table 3.22

Breakdown of Answers to the Question 'How would you Evaluate Current Interethnic Relations in Your Republic?', 2011/2012 (%)

Answer options	City		Countryside	
	tatars	russians	tatars	russians
Favourable	20.5	19.1	26.4	19.4
Peaceful	68.6	62.0	60.2	70.3
Peaceful from the outside, but there is internal tension	9.9	17.0	12.4	10.0
Strained	0.8	1.5	1.0	0.3
On the brink of direct clashes	0.2	0.4	–	–

59]. In the late 1990s (according to research data from 1999) almost every fifth Tatars surveyed in cities of the republic (21.5%) and every third Russian (33.4%) assessed interethnic relations as outwardly calm, mentioning the internal tension, and further 3% and 5%, respectively, called them tense.

Currently interethnic relations in Tatarstan can be characterised as favourable. That is how they are assessed by the majority of participants in the 2011/2012 survey—that is, 73% of Russians and 80.5% of Tatars among urban-dwellers and 88.9% of Russians and 83.9% of Tatars among villagers (Table 3.22).

Over the course of 20 years of post-Soviet history a massive, robust, and considerably strong ethnic identity has been built among the Tatars of Tatarstan. It is coupled with the high

level of interethnic and inter-confessional tolerance and is perceived by Tatars themselves as the element of national and civil identity, consolidating the Russian political nation. The national and civil identity of Tatars contains a high level of interest in the development of Russia and activist policies. The ethnocultural and socio-economic development of Tatarstan in 1990–2000 and a generally positive perception of the republic's model experience by the Russian part of the region show the possibilities to efficiently include ethnic identity into state-building processes. Here it becomes important to reinforce the ethnic sentiments with actual political and ethnocultural rights. Only in this case ethnic identity is capable of ensuring interethnic accord and become an effective resource in the development of the country.

§ 3. Islam in the sociopolitical life of modern Tatarstan

Rafik Mukhametshin

The main phases of the revival of Islam in Tatarstan. The 'Islamic' factor in the sociopolitical life of Tatarstan became the most significant phenomenon in the late 1980s. Initially it was not directly related to revival of Islam itself but to the emergence of national sociopolitical organisations, which consider the Islamic factor as the most important component of the national self-awareness and the essential attribute in the struggle for the sovereignty of Tatarstan. Therefore, the emergence of the

first religious institutes in the republic resulted from the actions of these organisations. The independent Muslim Spiritual Board of the Republic of Tatarstan was established in 1992 (MSB RT), on the one hand, as one of the manifestations of the national movement of the Tatars, and on the other hand, as the quite inevitable in those conditions decentralisation of administration of muslim communities. This period became the first phase of the revival of Islamic values to Tatarstan society; therefore,

1988–1992 can be conventionally called the legalisation period.

The further proliferation and operation of Islam in the sociopolitical life of Tatarstan can also be conventionally divided into the next three periods.

1992–1998 became the period of institutionalisation of Islam. It is namely this period when the basic institutes of Islam emerged in the republic:

a) The establishment of Islamic communities. This process, which had begun earlier, culminated exactly in this period. Thus, if in 1988 there were 18 Islamic communities, by 1992 there were over 700 of them. Although the number of communities is still growing even now, the growth rate has considerably lowered. In 2000 there were about 950 of them, and in 2001, about 1,000. By early 2003 these figures had almost not changed.

b) The first Islamic educational institutions were established; by 1992 there were more than 15 of them. The largest and most authoritative among them for Muslims are the madrasahs 'Muhammadiya' and Millennium of Adoption of Islam (Kazan), 'Yoldyz' (Naberezhnye Chelny).

c) The revival of the Institute of Islamic Clergy. Generally, this process followed the path of turning unofficial and uneducated village mullahs into officially registered clergy. Nevertheless, one can say that the clergy was established as a separate societal layer (of around 3 thousand). However, it was too early to talk about special distinctive world-viewing policies and behavioural patterns of the clergy since it was rather eclectic. Those young people who had studied in Islamic countries, mainly in Saudi Arabia (their number exceeded 100 by the early 1990s), were not game-changers in the Islamic clergy environment.

d) The political activation of the Muslims of Central Russia pertains exactly to this period. Efforts were made to establish Islamic and public organisations and political parties. This process started with establishment of Tatar Community Centre (TCC) in 1989, which took a firm stance, considering Islam as the

most important component of a spiritual revival. The first all-Russian Islamic party, the 'Party of Islamic Revival,' appeared in 1990. Efforts were made in 1991 to create regional Islamic parties: the Islamic Democratic Party of Tatarstan, the Pan-Islamic Democratic Party in Ufa. In the same year Abdulvakhid Niyazov organised the Islamic Cultural Centre in Moscow. In 1995 the Union of Muslims of Russia and the All-Russian Islamic movement 'Nur' emerged. In 1996 the mufti of Tatarstan Gabdulla Galiullin organised the movement 'Muslims of Tatarstan.'

However, the political spectrum of Islam in the Volga-Ural region turned out to be very unstable. One of the reasons was the rather weak social basis of the sociopolitical movements and parties (and not only religious ones). Their influence, even during the rise of the national movement from 1989–1992, according to sociologists, was insignificant. Thus, in August 1991, 6% of those surveyed considered themselves supporters of the TCC; 2.5%, of the 'Ittifaq' party (this could explain where, by whom, and when it was established, its goals, size, and the nature of its activities, and how the TCC differed from other parties). It should be also taken into account that all other parties, working within the Volga region (there were around 10), gathered only 10.6%. And 46.9% of those surveyed did not sympathise with any party or organisation. In November 1997, 0.6% considered themselves supporters of TCC (and in Kazan it was even 0%); 0.6%, of 'Ittifaq.' It is possible that these indicators better characterise the general situation in the region and in Russia than the influence of individual parties and movements on the political consciousness of the masses since 'by the end of 1997 about 68% of those surveyed were not able to name any party they would give their preference to.' This data attests to the 'continuing political disorientation of the mass consciousness,' the inability of a 'majority of citizens to identify themselves politically with any movement or party.'

e) This period saw the establishment of the main elements for the administrative struc-

ture of Islamic communities (the mahallah – mukhtasibat – MSB RT).

However, this period is characterised by the unsystematic appearance of multiple Islamic institutes. They were connected to one another rather conventionally but mostly functioned independently.

The next phase, III, covers the period from 1998–2002 and was the period of structuralisation. This phase covers the period between the February congresses of 1998 and 2002.

This phase is characterised by the creation of the operating administrative system for the Islamic communities and other institutes of Islam. MSB RT became the only supreme body for muslims of the republic. It has its structural subdivisions, the mukhtasibats that organise the activities of one thousand local Islamic societies in all 45 districts of Tatarstan.

During this period all Islamic educational institutions became structural subdivisions of MSB RT, which in turn provided them with educational standards, the use of which led to the reduction in the number of educational institutions that had emerged. Only 8 of them remained; this was quite sufficient to meet the demands of the Islamic communities for imams. More than a thousand shakirds (students) studied in them, full and part-time (excluding students at Sunday schools).

It can be said that a functioning body was established in Tatarstan in the form of MSB RT, which, with some minor exceptions, generally controlled the local situation.

The IV period of internal mobilisation covers the period between II and III congresses (from 2002 to 2006), which confirmed the completion of the phase of radical structural-and-organisational transformations and focused primarily on addressing the internal issues of the Islamic communities of the republic:

a) The training of religious leaders, adaptation to local conditions, being aware of the centuries-long traditions of muslims of the Middle-Volga region, able to organise local work within the framework of the Hanafiyah madhab, traditional for Tatars

b) Determining the internal reserves for operation of Islamic communities, using eco-

nomical leverage in the form of various taxes appropriate for muslims, the development of a branched network of charitable organisations, active use of the property (waqfs) transferred to the muslims of Tatarstan

Today the Islamic communities do not have the opportunity finance clergy and educational institutions to build or repair mosques and madrasahs. Therefore, it can be concluded that although the Islamic communities of Tatarstan received state registration, they have not become an independent cell of Islamic society. For this reason the II congress of the Muslims of Tatarstan in 2002 prioritised the task of the creation of fully-operational Islamic communities. However, the question of their main operational principles in fact remained open. In which form should it be recreated in a modern environment? The point is that the classical Islamic community is the product of traditional agricultural society. Today one can talk about their revival in an environment of an industrial or industrially-centred society. With this, one should take into account that in the environment of an industrial society people are connected not so much by traditional personal mutual relations and ties within their religious community as by goals and symbols molded into an ideology. Islam today has ceased to be only a form for family and community self-awareness and has become the most important element of ethnic self-awareness and ideological comprehension of modern reality.

Religious leaders have not yet produced any ready-to-use recipes to address the arising issues. However, there was understanding that they should be solved by means of internal reserves, without the creation of a consumerist psychology.

The V period of determining the ideological and theological reference points. After the 2006 congress the muslim society of Tatarstan entered a very important phase of its development. It was organisationally and structurally formed, but the ideological and theological reference points and general principles of its existence were not determined. The special significance of this step lies in the fact that it was necessary to apply great intellectual ef-

forts in order to clearly define the future orientation of the Islamic revival in Tatarstan.

The establishment and operation of Islamic institutes in Tatarstan. The ambiguity and difficulty of the process of the revival of Islam in Tatarstan to a certain degree were also reflected in the activities of the Muslim Spiritual Board of the Republic of Tatarstan (MSB RT).

The establishment of the MSB of the Republic of Tatarstan in 1992 was determined by multiple factors. First, the processes of 'democratisation and sovereignisation' as well as the collapse of the USSR (December 1991) largely facilitated radical transformations, which took place within the framework of official religious institutes in the former USSR and Russia. Second, the calls for the necessity to transfer the Spiritual Board from Ufa to Kazan in the Tatar national movement were sounded more and more frequently, especially after the Declaration of the State Sovereignty of the Republic was adopted on 30 August 1990 [Garayeva, 1994, p. 197]. It was also true that the question of the establishment of an independent Muslim spiritual board of the republic had not yet been raised. As it was mentioned in the second revision of the Tatar Public Centre's (TCC) platform, it 'proposed to continue the work in close coordination with the Muslim Spiritual Board of the European part and Siberia.' However, due to the adoption of the Declaration of the State Sovereignty of the Tatar Soviet Socialist Republic, as it was mentioned in the TCC programme, the organisational form for the administration of Muslims in the Republic of Tatarstan should be changed, and the centre of the Spiritual board should be transferred to Kazan. Should the official structures of MSBPS act against this transfer, the TCC reserves the right to commence the creation of independent structures of the Muslim Spiritual Board of the Republic of Tatarstan with inclusion of Tatar Muslims from other regions, who gave their consent for this' [Millät, January 1991]. During the 200 year history of the Muslim Spiritual Board the question of its location had been repeatedly raised by religious leaders

and Tatar intellectuals. As early as in 1897 Sh. Marjani wrote that 'after the opening the Spiritual Board worked in Orenburg. But in three years ... it was transferred to the rundown city of Ufa. However, it is more than obvious that Kazan is the most appropriate place for this organisation' [Marjani, 1989, p. 211].

Galimdzhan Barudi, being a mufti of the Muslim Spiritual Board of Russia in 1920, wrote that 'in ancient times Catherine, with the goal of conquering the Kazakhs and Bashkirs and bringing them to her side, ... opened the Board in a remote and tiny town... If Muslims, of their own volition, transfer the Board to Kazan, there should not be obstacles on the part of the government. The proclamation of the Tatar republic in Kazan and the first steps in its creation are especially beneficial for this task. Its implementation will increase the authority of the Republic in the eyes of the people... The question is as follows: Since the Spiritual Board is the only high religious capital of Muslims, naturally its place is in Kazan, the recognised centre of religion and city of science' [Barudi, 1998, p. 25].

As already mentioned, the adoption of the Declaration of the State Sovereignty of Tatarstan played a large role in determining the attitude of the representative of the Tatar national movement towards MSBPS. Before its adoption MSBPS was considered as one of the incumbent organisational structures, capable to unite Tatars around it and revive the traditional ethno-confessional self-awareness of the people. For the national sociopolitical organisations and movements the adoption of the Declaration was an interim result in the struggle for national independence and opened certain opportunities for its continuation. Therefore, in relation to the Spiritual Board it should be first understood as an essential attribute of statehood. At the same time, the problem of national unification of all Tatars remained relevant. Therefore, from the perspective of the national movement, the transfer of the centre of the Spiritual Board from Ufa to Kazan remained a more acceptable idea rather than the creation of a new religious organisation.

In this situation in order to prevent cardinal changes to the MSBPS, Talgat Tadzhtudin came to Kazan for a meeting with the leaders of the national movement in the summer of 1992. Damir Iskhakov, one of the participants in this meeting, recalled this in one interview that 'the transfer of the Spiritual Board to Kazan was earnestly suggested' to Tadzhtutin. Instead of this, however, he organised a mukhtasibat (department) here' [Kazanskoe vremya, 12 February 1998]. The mukhtasibat administration in Tatarstan did not introduce any changes to the activities of MSBPS. This further aggravated the internal crisis in MSBPS that had been evolving over many years. The rapid growth in the number of Islamic communities, requesting solutions to multiple organisational, staffing, financial problems, the increase of contradictions between regional religious organisations and the centre accelerated the natural process of establishing of independent Spiritual Boards.

Gabdulla Galiulla, imam-khatib of the Kazan mosque 'Nurulla, 'elected mufti of MSB RT, noted that 'there were several reasons for the collapse of MSBPS. One of them is the adoption of declaration of sovereignty by former autonomies... In the republics new presidents were elected, and new power structures appeared. It was natural that spiritual structures, independent from the Central Muslim Spiritual Board of Russia, should have appeared. Each republic had its own interests and its subtlety in interactions with the federal authorities. Talgat Tadzhtudin at that time continued to take the hard line of Moscow those days' [Vremia i Den`gi, 3 October 1996]. According to him, the process of the collapse of MSBPS should not be considered as a 'loss of unity for the Muslims of Russia. Conversely, today they (Muslims.—R. M.) are getting rid of the totalitarian ideology, considering everyone's interests, look for new—based on democratic principles—ways for consolidation [Vatanym Tatarstan, 3 February 1995].

Talgat Tadzhtudin had his own version for the schism of MSBPS and the emergence of independent Spiritual Boards. He argued that 'this, of course, is a reflection of the processes

occurring in society, but primarily it was imposed externally... In this case I feel there was a negative influence of our foreign Muslim brothers. A few so-called 'Islamic charitable societies,' which are far from charitable activity, pitied us, living behind the 'iron curtain' back then. However, when it came to the construction of mosques and madrasahs, it turned out that their activities were aimed in an absolutely different direction... The activity of these organisations in both Middle Asia and at the North Caucasus introduced a schism within the Muslim environment [Şähri Kazan, 18 September 1996].

Official authorities acknowledged the 'fact of the formation of a Muslim Spiritual Board in the Republic of Tatarstan, whether anyone likes it or not' is already a reality [Terentieva, 1993, p. 14].

The establishment of the Higher Coordinating Centre of newly emerged Muslim Spiritual Boards of Russia (HCC MSBR) in 1992 was dictated by the need to create a single organisation capable of coordinating the activity of Spiritual boards and counter MSBPS. From the very beginning this assumed creation of a conceptually new, as distinguished from it, structure, consolidating religious organisations on a democratic basis.

Potential opportunities for the creation of such a centre actually existed since the HCC MSBR was built on a confederative principle, consolidating completely independent Spiritual Boards both structurally and organisationally. However, the HCC MSBR did not translate this opportunity into practice and gradually turned into a terminal Moscow organisation, although Gabdulla Galiulla, a mufti of MSB RT, was elected its chair. The Council of Mufitis of Russia was established in Moscow in July 1996 under the chair of Ravil Gaynetdin, mufti of the Spiritual Board of the Central-European region of Russia [Vatanym Tatarstan, 12 July 1996].

The situation in Tatarstan was additionally aggravated by the meeting of imams of 14 Islamic communities of Kazan, where a resolution was adopted on the creation of a new Muslim Spiritual Board of Tatarstan lead

by Gabdulhamit Zinnatulla, imam of the mosque of the city of Zelenodolsk [Iman, 1 November 1994]. The existence of two Spiritual Boards created a certain tension between the Islamic communities of Kazan. As for Islamic communities beyond the boundaries of the capital, the emergence of a new religious organisation did not make them very enthusiastic as well since for many people it was clear that this was another structural unit of the HCC MSBR, gradually losing its influence and almost incapable of providing financial help for local religious communities. Above all others, the newly emerging Islamic communities were in need of such support. However, neither the still weak and structurally unformed MSB RT nor the HCC MSBR, withstood the test of time and were incapable of reorganising its structures in a new political environment, could become a reliable support for them.

The extraordinary Congress of Muslims of the republic, held in Kazan in January 1995, took upon itself the implementation of the idea of consolidation. Representatives of the national movement and scientific intellectuals actively participated in the preparation of the congress and its documents. Over 80% of Islamic communities sent their representatives to the congress, thereby acknowledging it as their supreme body and its resolutions as mandatory for implementation.

One can say that the Islamic communities of Tatarstan were formally consolidated. The Congress almost reached its goal. However, the following course of events showed that the organisers of the congress, somewhat over-emphasising the necessity to consolidate the Muslims of the republic around the MSB RT, missed a rather significant moment regarding specific measures on renewal of its structure and organisation of its activities on a new foundation. Although the convention discussed these issues, it did not adopt any specific resolutions. For this reason, the achieved positions were lost relatively fast since, as it turned out, the congress rather reflected the hopes and plans of Tatar intellectuals more

than those of the clergy and, moreover, the management of the Spiritual Board.

Events surrounding the occupation of the Muhammadiya madrasah's buildings in the autumn of 1995 largely highlighted the actual situation, which formed in the management MSB RT: in the absence of clearly thought out work on strengthening its position locally through actual help for Islamic communities, if not monetary than with staff, religious and educational literature, etc., mufti G.Galiulla triggered an open conflict with official authorities with his actions. The preconditions of this conflict emerged in 1992 when G. Galiulla became the head of the newly emerged spiritual administration, to which the authorities reacted rather cautiously, not without reason, considering him a representative of the radical wing of the clergy connected with oppositional organisations of the national movement.

The restrained reaction of official authorities mainly meant their recognition of the suitability of a single spiritual administration functioning in the republic and fear of the emergence of an open conflict between the Islamic communities of Kazan. However, the MSB RT was unable to use this opportunity to establish normal relations with official bodies. It was not able to use the intellectual potential of Tatar intelligentsia, who showed their willingness to cooperate with the Spiritual Board after the extraordinary congress of 1995. The Council of Ulama (Golāmälär şurası), comprised of renowned scientists of the republic, was established under the MSB RT in March 1995. This public organisation determined the primary areas of its activities as 'participation in the development of the fundamental directions of the activities of MSB RT in the fields of religious education, the training of religious staff, moral upbringing of citizens, especially youth; the provision of theoretical and methodological support for Islamic educational institutions to elaborate the concept of development of the national-type Islamic education, prepare academic programs, write text books, study guides,' etc. However, the Council of Ulama

had no time to start its activities, and the events surrounding the building of the Muhammadiya madrasah demonstrated the unattainability of the goals set since the management of MSB RT prioritised other goals that focused on real estate (pre-revolutionary waqf property in the form of buildings, plots of land, etc., belonging to the Muslims of the region), which they intended to receive from the state. Political short-sightedness, the absence of a well-thought out action programme eventually translated into almost complete isolation for the leadership of the MSB RT in the autumn of 1995: the official authorities openly condemned its actions, filing criminal charges against the organisers of the occupation of the Muhammadiya madrasah building, including mufti G. Galiulla himself; intellectuals refused to cooperate, preliminarily declaring their position in an open letter [Vatanyam Tatarstan, 24 November 1995]; local Islamic communities, while not condemning the mufti's actions openly, did not support them and gradually distanced themselves from the Spiritual Board, understanding that the standoff between the leadership of MSB RT and official bodies could deprive them from almost the only relatively permanent source of existence. Indeed, almost all mosques in the republic, especially in villages, were built with significant support of local authorities or kolkhozes. Their more or less unimpaired operation largely depended on them as well. Keeping in mind that about 200 mosques were under construction in the republic at this time, the corresponding local reaction, associated with this conflict, is quite understandable.

The end of 1995 and the first half of 1996 were a period of waiting. The leadership of the Muslim Spiritual Board of the Republic of Tatarstan (MSB RT) expected the results of the criminal case, initiated in relation of the seizure of Muhammadiya madrasah building, unsuccessfully trying to arrange some support for themselves from local Islamic communities. The latter also took up a wait-and-see attitude, not without reason, hoping for the solution of this conflict during the next Congress of the

Muslims of the Republic by means of electing new leadership of the MSB RT.

It is possible that was the reason why many processes, connected with the rebirth of Islam in Tatarstan, developed independently of the activity of the MSB RT. Thus, the system of Islamic education, the necessity of which was mentioned by mufti G. Galiulla at the second Congress of the Muslims of Tatarstan in January 1995, was not created. The MSB RT did not become a scientific, methodological, coordinating, moreover, financially supportive centre for the existing Islamic educational institutions of varying status. Nevertheless, despite the absence of a coordinating centre, the first Islamic educational institutions appeared in Tatarstan in the 1990s: starting with elementary courses at the mosques (many of them, especially village ones, were called madrasah), specialised secondary schools (Madrasah 'Tanzilya,' 'Yulduz in Naberezhnye Chelny, etc.), and up to advanced ones (Madrasah 'Muhammadiya,' Kazan Higher Islamic Madrasah named after the 1,000th anniversary of Islam, etc). Even though there were more than 10 registered Islamic educational institutions, ones actually working were less. Among them were the Kazan Higher Islamic Madrasah 'Muhammadiya,' the Kazan Higher Islamic Madrasah named after the 1,000th anniversary of Islam, 'Yulduz,' the Madrasah 'Tanzilya' for girls in Naberezhnye Chelny. This could not but provoke the concern of the religious community and intelligentsia. During these years more and more publications appeared in the periodical press, regarding the necessity of strengthening and expansion in Tatarstan of the Hanafi madhhab, which is traditional for the Volga region. In connection with this, the undertaking by the intelligentsia (with the participation of the clergy) at the beginning of 1998 in attempting to create a Centre for the Study of Traditional Islam is quite understandable. Paradoxical as it may seem, G. Galiulla, while still being a mufti, did not take any serious steps towards the creation of educational institutions, nevertheless, he warned that 'in the near future I do not exclude even more profound schisms in our environment, and not only on political

grounds. At the moment around 100 students from Tatarstan alone are studying in religious institutions in Turkey, Syria, Jordan, Libya, Morocco, Tunisia, Saudi Arabia, the Arab Emirates, Malaysia, Indonesia. These are the countries of the Islamic world, among them there are those which profess Shi'ism.

On returning home, the young imams, willingly or unwillingly, will try to recreate the environment for their congregation, similar to that they have lived in during the 5–6 years of their studies abroad. They will inevitably introduce something new, which can contradict the settled customs. I have no doubts that antagonisms and intrigues will commence, that will lead to a schism. Damage will be inflicted on the entire religious environment. We need our own educational institutions, but there are no funds for their organisation, and the state stands aside. One gets the impression that the schism is beneficial to Moscow' [Vremia i Den`gi, 3 October 1996].

At first glance, the first half of 1997 was not marked by any significant events in the life of the MSB RT. But if we take into account that during that period almost all the members of the Presidium of the MSB RT, elected at the Congress of 1995, due to various reasons found themselves in opposition to the mufti, it is not hard to guess that an unstable unity (or truce, to be more precise) of the clergy, achieved in 1995, was seriously breached.

The official authorities of the republic also supported the idea of the Unification Congress. The president of Tatarstan Mintimer Shaimiev met with Talgat Tadzhtudin and Gabdulla Galiulla in January 1998. Having ascertained the positions of the parties and realising that the Congress of the MSB RT being prepared could hardly solve the accumulated problems, the official authorities stepped up their activity. In his interview to the media Mintimer Shaimiev repeatedly stated that the Congress would take place, thus making it clear that the clergy had no other choice: it is necessary to hold the Congress at the appointed time. The initiative fell almost completely into the hands of the Organising Committee, created at the

suggestion of the official authorities from the 12 representatives of two religious boards. The Organising Committee confirmed the list of the candidates for mufti. Among them were Gabdulla Galiulla, Farid Salman, Gabdulhamit Zinnatulla, mukhtasib of Kazan Mansur Zalyalutdin, imam-khatib of Kazan Sultan Mosque, former qadi of the MRB RT Kamil Bikchantayev, and deputy of the mufti of the MSB RT Gusman Iskhakov. The Organising Committee prepared a new draft of the charter of the Muslim Spiritual Board of the Republic of Tatarstan, which significantly limited the powers of the mufti and was designed to coordinate the work of permanently functioning structures of religious administration.

The Organising Committee could clearly define the most important aims of the preparation for the Congress: the development of a new version of the charter with a focus on collective work of the Muslim Spiritual Board of the Republic of Tatarstan through the participation of all the Islamic communities of the Republic; the elections for a new mufti and a renewed Plenum.

The Congress was held according to the suggested plan on 14 February 1998. At the Congress there were 718 delegates, 653 of them were the representatives from the 686 officially registered Islamic communities of the republic, 43 mukhtasibs from 44 mukhtasibats, and representatives of religious educational institutions; the Congress elected Gusman Iskhakov as the new mufti.

At the Congress the president of the Republic of Tatarstan M. Shaimiev named those problems that troubled the muslims of the republic. In connection with this, the issue about the interference of the state in the internal affairs of the Islamic community of Tatarstan was raised in the central and local mass media before and after the Congress. Indeed, the official circles of the republic were interested in holding a Unification Congress and electing a new mufti: the activity of the MSB RT with its insufficiently considered and at times extremely oppositional policy, and the unpredictable action of the mufti G. Galiulla himself worked

against the political image of Tatarstan. The MSB RT could indeed create new problems, adding to the already existing ones (the preparation of religious ministers, the financial situation of the Islamic communities at the local level, etc).

Speaking at the congress, M. Shaimiev clearly expressed his attitude to the issue of the mutual relations between the state and religion: 'Lately such comments can be heard as 'Why does the government interfere in our religious affairs?'... We are not speaking of interfering, of forcing something to be done, hindering the work of the religious ministers, the governing bodies of muslims, but of collective service to people. While religion is separated from the state, religion and religious organisations are not separated from society' [Vatanym Tatarstan, 17 February 1998].

The Congress indeed became a unifying one. However, some central mass media outlets hastened to announce the deepening of the schism among the clergy of Tatarstan. *Russky Telegraph*, referring to the opinion of a few 'experts in Islamic studies, wrote that 'the schism has become completely evident, and the Tatar Islam, very politicised... Galiulla is preparing to become the standard bearer of the Tatar nationalists' [Russkij telegraf, 24 February 1998].

After the unifying Congress, the new membership of the MSB RT undertook vigorous measures for turning it into a fully fledged body, governing the muslims of the republic. While G. Galiulla had no permanently functioning structures, except for two or three secretaries, the new mufti considered their establishment as the most important task. The authorities provided the corresponding conditions: an old mansion in the city centre was renovated and assigned as the administration building of the Muslim Spiritual Board of the Republic of Tatarstan. The Russian Islamic University, which opened in September 1998, was also given a large building. In July 1999 the republic's law 'On Freedom of Conscience and Religious Associations' entered into force. Article 10 stated that 'Islamic religious organisations in the Republic of Tatarstan are represented and governed by one centralised

religious organisation—the Muslim Religious Board of the Republic of Tatarstan' [Zakon RT, p. 25]. This law, particularly Article 10, caused great controversy in the republic and beyond. As R. Nabiyeu, the chairman of the Council for Religious Affairs under the Cabinet of Ministers of the Republic of Tatarstan, pointed out, 'Many consider us to be in violation of Russian law' [NG-religions, 27 October 1999]. However, he explained that the issue only concerned taking into account 'the desire of Tatar Muslims to create one religious board for the Republic of Tatarstan' 'since Russian legislation, as though intentionally, specifies that three religious communities have the right to establish a centralised religious organisation. And... in each Russian republic two, three, and sometimes more muftiates have been created. There were constant conflicts between them' [NG-religions, 27 October 1999]. What was mainly implied in this case concerned the situation between 1994 and 1998 in Tatarstan itself.

Without dwelling on the legal ramifications of the law that had been passed, it can be said that it did in fact contribute to stabilising the situation within the Muslim community, and for that reason the Muslim Spiritual Board of the Republic of Tatarstan fully supported it.

Having gained the authorities' legal backing and political allegiance, the Muslim Religious Board of the Republic of Tatarstan set about resolving its organisational problems. Departments were created for statistics, architecture and construction, education, international affairs, outreach (da'wah), and science. Attempts were made to restore the Ulama Council as a functioning body. Speaking at a conference in October 1999, Mufti G. Iskhakov stated that 'the structure of the Muslim Spiritual Board of Tatarstan has reached the level needed to solve the tasks we face... However, work to create a properly-functioning vertical structure must continue as we cannot work directly with religious communities, of which there are already thousands' [Iskhaki, 1999, p. 3].

Overall, the Muslim Spiritual Board of the Republic of Tatarstan's review of the process of Islamic rebirth in Russian society and its

contemporary issues were based on the understanding that it had entered a new phase, one which demanded clarification regarding what their main tasks were, and how they could be resolved. Along with unsolved internal confessional problems, the new phase had revealed another, just as important facet of the process. As Mufti G. Iskhakov pointed out, 'the lack of understanding that exists regarding Islam and its role in the spiritual rehabilitation of Russian society, the ceaseless attempts to turn it into a bugbear for the believers of other confessions—these are reflections of the Islamic revival's unsolved problems. It must be acknowledged that successes in returning Islamic values to the life of society mainly concern those that can be quantified... We must note that at present we do not have at our disposal the necessary intellectual resources to provide convincing evidence of the untapped humanitarian potential of Islam, its place in the history of Russian society, or the regional particularities of Islam' [CA MSB RT, p. 3]. One reason G. Iskhakov gave for his point of view was that 'in essence, the Muslim ummah of the country, with rare exceptions, is still a prisoner of its unattractive and primitive soviet-era public image: Islam as a complex of rituals-cum-dogmas, whose rigorous observation defines the true nature of a Muslim. But what of the meaning and moral weight of these rituals? How have they changed and how are they changing in different regions? How accurate or justified is it to equate the essence of Islam only with these rituals? How can we showcase its powerful intellectual potential accumulated over many centuries? Where exactly is Islam's peace-building mission in evidence today? These any many other questions, unfortunately, remain unanswered. Of course, we must also understand that to destroy the established stereotypes and move on to a new phase in the religious and moral rehabilitation of society will require a re-imagining of the concept of the Islamic revival. It has to be more specific and deal more precisely with the burning issues in our society' [CA MSB RT, p. 3].

The next Congress of the Muslims of the Republic of Tatarstan took place in February 2002. It went smoothly. This was natural as in the four years following the unifying congress of 1998 no serious premise for drastic structural change had arisen. By then Muslim unification had taken place. Both the authorities and the Muslims themselves (who had tired of inert hierarchical structures and hoped that a capable unified Religious Board would emerge) had striven towards this aim. In 1999 unification was reinforced by the republic's law 'On Freedom of Conscience and Religious Associations,' which legally secured the priorities of the unified Religious Board and removed the possibility of officially registering any parallel Muslim government structures.

The few who opposed the law soon fell by the wayside. Even though the experience the Muslim Religious Board of the Republic of Tatarstan had gained since 1992 was limited, it had taught them a lesson in pragmatism: Contemporary Muslim communities require neither fine slogans nor multifarious religious boards that argue over their interrelationships. What they need is a body that could at least help to resolve their problems in some way.

Among the main problems voiced at the Congress was the issue of financial provision of Muslim communities at a local level and religious organisations in general. According to the Muslim Spiritual Board of the Republic of Tatarstan's calculations, 75 million roubles per year is needed for these purposes. Of course, it does not have this money.

The Religious Board sees a solution in restoring access to the ummah's traditional sources of funding, those that had served for centuries as the main sources of income for Tatar Muslim communities: tithes (goshër), zakat, income from performing religious rites and use of waqf (religious endowment) properties, etc. However, on solving the financial problems, the congress expressed its unanimity mainly by stating their existence.

There was an impression created that many imams still placed their hopes in local authorities, sponsors, and other sources of funding.

There was still no understanding that the current main task at the local level was to establish strong Islamic communities, mahallas, which exist not simply to unite fellow believers but also to become centres for the spiritual rehabilitation of society.

The absence of permanent and reliable sources of finance in Muslim communities in essence deprives them of the opportunity to engage young educated imams. As was mentioned during the congress, only 8% of the 3,000 Muslim clergymen possessed a theological education.

Of course, graduate employment is not the only problem the religious education system faces. It is still at a crossroads today. One might say that the time of thoughtlessly copying the educational standards in Arab countries has passed. Madrasahs are trying to formulate educational models that suit the local conditions. This is quite natural as they must be formulated taking many factors into consideration, while also being based in solid theory. The necessity of this has long been discussed, unfortunately with no success so far. Jadidism and Qadism, as educational systems functioning in the Tatar community, have not been studied at all. It is therefore entirely understandable that the clergy is apprehensive of Jadidism, blaming it for undermining the basis of traditional Islamic society. Many people, not only religious figures, have serious doubts about the prospect of using Jadidist traditions to revive Islamic values. Of course, the congress gave no clear instructions in this respect, though it underlined the need to study and to make use of the people's spiritual heritage.

Others issues of concern to Muslims can be singled out, but these two have proven to be the most major and significant. It is probably for this reason that, in one form or another, they can be found in all of the resulting documents. In 'Main Lines of Activity of the Muslim Spiritual Board of the Republic of Tatarstan in 2002–2006' [State Duma of the Tatar Autonomous Soviet Socialist Republic, 2004] a strategic goal was set: to form a strong community capable of gathering sensible Muslims who have a decent appreciation of the current

environment and are active participants in solving society's vital problems. An issue concerning waqf property, which requires a legal basis to function fully, was raised in the report to the State Duma. A request to support the Islamic University as a scientific methodological and educational centre in the Volga region was addressed to the president of the Russian Federation Vladimir Putin.

The next Congress of the Muslims of the Republic of Tatarstan took place in 2006. There were no rows or serious disagreements between minor opposition representatives at the Congress. Taking into account that Muslim society had entered a new phase, that of defining its theological and legal guidelines, there can be no doubt this was a deep-reaching process, of which there were few visible signs. However, most important of all was that action over problems voiced at past congresses was put back to a later date. They were mentioned at the following congress in 2010 and seriously discussed after the resignation of the Mufti G. Iskhakov in 2010.

It was no accident that these became significant events for all Russian Muslims. The resignation of Mufti Gusman hazrat Iskhakov of the Muslim Religious Board of the Republic of Tatarstan at the end of 2010, after being its head for twelve years, and the election of Mufti Ildus hazrat Faizov were no coincidence.

In drawing conclusions about Gusman Iskhakov's 12-year tenure, it should be noted that a vertical power structure in the Muslim Spiritual Board of the Republic of Tatarstan was formed. Its effectiveness may require special analysis, but nevertheless, the Muslim Spiritual Board of the Republic of Tatarstan can serve, in a way, as an example to the rest of the religious boards of Russian Muslims. Muhtasibats in all regions of the Republic of Tatarstan, six qadiyats, and an Islamic education system that includes nine educational institutions testify to the formation of an administrative infrastructure. No other Religious Board in Russia has succeeded in creating a similar administrative system. It could be said that Tatarstan took a more serious approach to the problems of institutionalisation and struc-

turing of Islam than other regions. The fact of the matter is that in Islam there is no division between the secular and the religious. This is why Islamic institutions operate in close contact with the power structures in Islamic states. However, as Russia is a secular state according to its constitution, forming institutions is problematic for Muslim communities. The creation of an optimal model, one which is also functional, is undoubtedly very important. It has been created in Tatarstan.

Nevertheless, a year after being unanimously elected Mufti of the Republic of Tatarstan, he resigned. This cannot have happened by accident. The most likely reason is that in recent years the Muslim Spiritual Board of the Republic of Tatarstan and the system for governing the Muslim community that had been formed around it with the support of state bodies had been trying independently to implement its own vision of the development of the republic's Muslim community. State government bodies also took a view on this issue as defining strategic goals for the functioning of the Islamic community is a major aspect of confessional policy. In recent years the state and the Muslim Spiritual Board of the Republic of Tatarstan noticeably differed in their views regarding the future functioning of the Islamic community. Moreover, they were officially in disagreement. The key problem in this context proved to be the understanding of the prospects of the Islamic revival in the republic. The Muslim Religious Board of the Republic of Tatarstan viewed the Islamic revival as a process of bringing Islam back into the spiritual life of society, but without emphasising the role of Islam in the revival of spiritual values. The state authorities in turn saw Islam as a tool to build a mature confessional policy, aiming to use it to return traditions and values to society that over many centuries had helped to foster relationships within and between confessions, something which is to be welcomed in a multinational society such as Russia's.

At the initial stage of Islam's reintegration to society, the process of institutionalisation masked the different approaches. However, in

recent years complex theological issues, ones requiring a clearly defined position, came to the fore. The Muslim Religious Board of the Republic of Tatarstan could not define its position. To be more precise, it was unable to adjust its operational strategy. Religious experts had long observed the development of the relationship between the republic's state authorities and the Muslim Spiritual Board of the Republic of Tatarstan, noting a cooling in their relations and emphasising the serious underlying reasons. A solution to the disagreement was expected to be found at the next Congress of the Muslims of Tatarstan in 2010. However, the congress only took a half-measure on this issue: a role was created—first deputy to the Mufti of the Muslim Spiritual Board of the Republic of Tatarstan—whose responsibility was to define new directions for the board to move in. This was clearly indicated in president of the Republic of Tatarstan M. Shaimiev's congress speech. He drew attention to the fact that 'the process of returning traditions to Tatar society has not yet become a factor influencing spiritual consolidation. On the contrary, we see that views of traditions are becoming increasingly polarised. Moreover, the phrase 'Hanafi madhhab' is increasingly being used by people as a cover to spread religious ideas that are alien to Tatars, otherwise they would not be able to work in Tatarstan's mosques. It states in the charter of the Muslim Spiritual Board of the Republic of Tatarstan that the republic's Muslims are the followers of the Hanafi madhhab. Our clergy must adopt a firm position on this matter. The Muslim Spiritual Board of the Republic of Tatarstan's next term will be key in resolving this' [Shaimiev, 2010 b].

The authorities' harsh critique of the negative aspects of the Muslim Religious Board's activities was voiced by the president: 'Criminal cases against members of radical religious groups and numerous complaints from citizens that imams in districts and towns are not performing rites and sermons in accordance with the traditional rules of our people—these attest to negative developments in Tatarstan's Muslim society. This is becoming quite a seri-

ous problem, and immediate measures are required. The Muslim Religious Board, the mufti, and imam-muhtasibs are the ones who must act in the first instance [Shaimiev, 2010 b].

However, the Muslim Spiritual Board of RT did not make any major conclusions. Mufti G. Iskhakov once again voiced his position regarding graduates of foreign institutes of higher education. In essence, he was counting on them to spread Islamic values: 'Young men who have returned with a madhhab that is alien to us need at least a two to three year rehabilitation period before they can be assigned a post of some kind. However, we should not turn our backs on them, distance them from us, or immediately accuse them of Wahhabism, Salafism, or Sufism. We must work very patiently with them, explaining the postulates and advantages of the Hanafi madhhab—the most moderate, the most tolerant school of thought. It is a delicate matter and should be treated with care and attention so as not to allow any accusations to be made or confrontations to arise. Yes, there are supporters of various organisations banned in Russia (Hizb ut-Tahrir, Tablighi Jamaat), but they are individual cases, and they are not reactionary. Do not confuse terrorism with theological disagreement! If we continue to fight with them, instead of peacefully guiding them to the true path, then relations may become more tense' [Iskhakov, 2010 b].

After the events of November 2010 in Tatarstan's Nurlatsky district, disputes about the accumulated problems became increasingly frank and bitter. An armed group of radical Muslims in the district was eliminated by law-enforcement agencies and special forces.

The Muslim Religious Board of the Republic of Tatarstan adopted a position on the events that was extremely vague but predictable. In the 'Address of the Mufti and chairman of the Muslim Spiritual Board of the Republic of Tatarstan Gusman hazrat Iskhakov to the Muslims of Tatarstan in connection with the events in the republic's Nurlatsky district' it was heavily emphasised that 'recent events in the republic's Nurlatsky district have once again given us serious pause for thought'

[Iskhakov, 2010 b]. What was being thought about was not specified, however. Still allusions were made to political forces in the country that 'reject our peace and calm and strive to sow hostility and turmoil amongst us however they can' [Iskhakov, 2010 b]. The conclusion of the address was vague to say the least: 'We should not give in to these provocations! The Muslim ummah has been noticeably damaged as a result of recent events' [Iskhakov, 2010 b].

The conclusions drawn by the authorities were more concrete and clear than those of the Muslim Religious Board of the Republic of Tatarstan. A. Safarov, minister of the interior of the Republic of Tatarstan, declared that 'With regret, it must be acknowledged that the republic is in danger of being infiltrated by a different, unnecessary, and to put it mildly, extremist ideology. The first attempt to infiltrate Tatarstan was made in the 1990s, in the guise of religious figures. You remember the notorious madrasah Joldy'z... Nowadays the process is different. Groups of followers of the so-called Salafi movement (Wahhabists) are especially active. Unlike usual organised criminal organisations, they have no concept of being in conflict with rival groups: they are united and support each other' [Safarov, 2011].

M. Gallyamov, director of the MIA for Counter-Extremism in the Republic of Tatarstan, also emphasised that 'Salafism has been much talked about of late. In our opinion, this movement represents the greatest threat to the republic's stability. The events in the Nurlat district, the elimination of the armed group... showed that the situation is not simple. We knew this previously and have worked on it... but perhaps we have not been active enough in engaging the general public to warn them of such expressions of religious extremism. Religious community representatives would sometimes say to our staff: 'Why are you making a fuss? We are fine. You are acting in other parties' interests.' Other reputable figures supported them, convincing us not to make a fuss because 'it could harm the republic's reputation.' We have been working without compromise in our field, uncovering plotters and averting imminent crimes. How-

ever, with regard to creating an attitude of intolerance to such things in society, I admit that we have not been very active. Management of public opinion is not one of our objectives' [Regnum, 2012].

The problem of theological disagreement in Russian Muslim society has objective causes. They originated not only in the early 1990s but possibly earlier.

One of the causes of the theological disagreements is easy to see. In the early 1990s young people, who were gradually returning to live in Russia, travelled abroad to acquire a religious education. There is no doubt that they grew up in totally different traditions. The young people who returned were perhaps true Muslims. However, they went abroad immediately after school, having no religious background. They were re-educated from scratch in that environment, believing that they had been taught the basics of true Islam. Young people like these can be found all over Russia today. They are practically the most highly-educated section of the Muslim clergy. The other side of this problem is that if in the 1990s there were complaints about a negative external influence, today the influence is an internal problem. Foreign Islamic charitable foundations and academics from other countries hardly do any work in Russia today. However, many young people who studied in religious institutions have returned from abroad. Young Russians educated in Islamic countries are the bearers of the same ideology that the Arabs once used to spread. Representing the most educated part of the Muslim community, this group of the Muslim clergy has more influence on young people than the less numerous adherents of the Hanafi tradition. In society there is an understanding that reviving these traditions is the major task today, and that it requires significant intellectual and theological efforts. However, today's Islamic community has not yet fully comprehended the deeper essence of the Hanafi madhhab theological traditions. Perhaps this is linked to the fact that there is virtually no Islamic intelligentsia capable of discussing serious theological matters.

Nevertheless, some publications that have appeared in recent years make it possible to assert that research regarding Islam's future in Russian society has risen to a new level. The euphoria, which was quite natural for the first years of religious renewal, is gradually giving way to serious considerations about the essence of the form of Islam that is needed by Muslims and, most of all, Tatars. Differing and occasionally opposite points of view are expressed. This is quite natural because no single society (not only Muslim ones) has ever been unanimous about how religion should manifest itself, where it should be applied, or how it should develop in future.

Disputes between representatives of Qadimism and Jadidism unfolded in Tatar society in the 19 and the beginning of the 20th centuries. But today the situation here is far more complicated. Before the beginning of the 20th century the disputes took place amongst the Islamic intelligentsia, who analysed the proceedings from within and from the point of view of Islam. Therefore, there was much in common between its various groups, even between ideological opponents. But the Tatar intelligentsia today is ideologically more diverse and mostly secular, so the attitude to Islam and to developments around it is, in essence, an outsider's perspective. This undoubtedly has a negative effect on the disputes because it gives many opportunities to create artificial concepts, which have an internal logic but do not always take into account the peculiarities of the dogmatic and ceremonial part of Islam.

Nevertheless, the appearance not only of discrete ideas but also of whole concepts about the paths of Islam's development in Tatar society is, of course, a timely and positive phenomenon. They create a specific intellectual environment, where heated arguments and a search for the essence of Islam and for optimal forms of its implementation and use in Tatar society take place.

That is why theological disagreements amongst the Muslims of Tatarstan originate from the current difficult situation in Islamic society. The situation is complicated by the

fact that the spread of theological ideas uncharacteristic of the Tatars has a somewhat ambiguous nature. Complex aspects of world views are hidden by a single cover of law: following the Islamic legal principles of the Hanafi madhhab, some Muslims adhere to totally different world views. Therefore, among Muslims declaring themselves Hanafis, many are against majlis on certain dates, visiting ancient Bolgar sites, etc.

The results of these disagreements, unfortunately, reach far beyond strictly theological disputes. Today theology with various approaches is an effective tool in raising Muslim youth in Islamic educational institutions, mosques, and different official and informal clubs.

The complexity and ambiguity of the situation in the region lies in the fact that radicalisation takes place at the level of changes to the ceremonial structure. These changes are presented to an unprepared person, not well-informed about the specifics of the ceremonial structure, as a return to the fold of true Islam.

Since radicalisation mainly occurs only within the confines of theological concepts,

government bodies had no serious grounds for taking any measures regarding these communities. Official Islamic institutions represented by the religious boards also do not deal with this problem on a practical level. They themselves are far from the Islamic values traditional for Russian Muslims. They associate the 'export' of theological traditions alien for Russian Muslims with religious values, which have been formed in a full-fledged Muslim society and therefore capable of being a form of an Islamic revival. Being separated from centuries-old theological traditions of Russian Muslims, the main body of modern Muslim leaders cannot evaluate foreign traditions critically because they do not know what other values to rely on.

It is no coincidence that the election of the new mufti in Tatarstan in 2011 was called a milestone. A new team came to the management of the Republic of Tatarstan's Muslim Spiritual Board, which understands the need for cardinal changes in the conception of theological traditions. Only time will tell whether these changes will become a new stage in the Islamic revival in Russia.

§ 4. The Transformation of the Tatar Holiday Culture in the Post-Soviet Period

Raufa Urazmanova

The calendar of holidays was changed after the dissolution of the Soviet Union. The modern holiday calendar in Tatarstan differs slightly from the Russian national calendar due to additional holidays related to landmark sociopolitical events in the republic. They commemorate the adoption of Tatarstan's constitution (6 November) and the proclamation of sovereignty (30 August, Republic Day). In addition, the Islamic festival of Eid al-Adha was declared a public holiday alongside the federal Christmas holiday (7 January). Since 2011 the second most important Islamic festival—Eid al-Fitr, which marks the end of the fasting month of Ramadan—has also been a public holiday, as in Russia's other Muslim republics. Due to the structure of the Islamic

calendar, these holidays' dates are announced every year. For Tatars who since time immemorial have been concentrated in the Russian regions outside of Tatarstan between the Oka and Sura Rivers, in the Middle Urals, and in Western Siberia the holidays have not become official.

Some 'red calendar' holidays remain widely celebrated and loved, particularly New Year's Day and International Women's Day (8 March). However, the scale of the celebration of the latter is more modest. Mainly, it is a day off, as a rule, with presents for women and celebrations both at work and at home.

The form of celebration and the scale of all other holidays established ('presented') by the state depend on the organisers as well as

on financing from local authorities. Especially spectacular can be Republic Day, with celebrations not only in Kazan but also in other cities in Tatarstan. It is the spectacle of the festivities—decorations at the venues, the participation of famous performers (professionals and amateurs), demonstration events by athletes, children's playgrounds, many shopping areas—that attracts thousands of local residents and visitors.

In the post–Soviet period the multicultural and integrating character of the summer festival of Sabantuy has become more evident: the holiday has become an ethnic representation of Tatars both within and outwith Russia.

With the establishment of an active World-wide Tatar Congress (WTC), whose administrative centre is in Kazan, much work is being carried out about to broaden connections between Tatars in Tatarstan and Tatars from different regions of Russia and outside the country, including connections in the field of culture. V. Tishkov called this work 'a political project of 'the Tatar diaspora' beyond the borders of the associated republic,' acknowledging that the project has a sound foundation because modern Tatarstan is the main centre of Tatar culture supported by the republic's autonomy. [Tishkov, 2003 b, p. 438]

Its legal foundation was the Agreement on Cultural, Economic, and Scientific Cooperation signed on 4 June 1999 by Tatarstan's Cabinet of Ministers, the WTC's executive committee, and the Council for the Federal National Cultural Autonomy of Russian Tatars (FNCAT). The ties connecting the Republic of Tatarstan with regions where the Tatar population is concentrated were formalised on this legal basis. This process was strengthened and consolidated in 2002 when Article 14 'On Assistance of the Republic of Tatarstan to Tatars Living Outwith the Republic' was added to the Tatarstan constitution. Work pertaining to the participation of representatives of the Republic in organising and conducting the Sabantuy festival proved to be the most productive.

Training courses for the festival's organisers and directors were launched in Kazan,

which have been attended by representatives of Tatar communities. For example, in 2006, 168 people attended these courses, coming from 112 regions and cities in 42 territories of the Russian Federation and also from two cities in Turkey and Kazakhstan, respectively.

Since 2002, by a resolution of the Republic of Tatarstan's government, a schedule of visits to Sabantuy celebrations in different regions of Russia has been created for delegations from Tatarstan. In 2005 the schedule included 59 regions, to 57 of which delegations were sent. The delegations include—alongside officials from the Executive Office of the president of Tatarstan, the Cabinet of Ministers, deputies of the State Council, and representatives of leading district administrations—amateur artists, athletes, winners of different Sabantuy competitions, and often famous performers. As a rule, the participants assume the greater part of the trip's expenses.

Directors of national and cultural authorities and of WTC branches are local organisers, and Sabantuy is held there as a regional event.

Along with regional Sabantuy celebrations, a federal Sabantuy has been held annually since 2001, an initiative of the FNCAT Council. The first federal Sabantuy was held in Saratov, then in Tolyatti in the Samara oblast; Dimitrovgrad in the Ulyanovsk oblast; in Yoshkar-Ola, the capital of the Republic of Mari El; in Nizhny Novgorod; in Saransk, Republic of Mordovia; Chelyabinsk; Astrakhan; Ulyanovsk; and in 2010 in Izhevsk, Udmurtia.

The very description 'federal' testifies to the increasing scale of participation. Delegations from eight Russian territories (the Ulyanovsk, Samara, Saratov, Orenburg, and Volgograd oblasts, the republics of Mordovia and Mari El, and the Khanty-Mansi autonomous district) took part in the second federal Sabantuy in 2002 in Tolyatti, which was celebrating its 265th anniversary. [Sharafutdinov, 2004, p. 315]. In the federal festival held in Ulyanovsk in 2009 the participating territories numbered more than 50, including Karelia, Chuvashia, Republic of Mordovia, Buryatia, the Komi Republic, and the regions of Irkutsk,

Arkhangelsk, Nizhny Novgorod, Ryazan, Chebysyabinsk, Kaluga, Volgograd, Krasnodar, Perm, and Sakhalin, among others [Mädäni cemga, 10 July 2009]. This is a vivid testimony of the rising interest in Sabantuy on the part of Tatars dispersed by the hand of fate over all Russia, as well as on the part of regional leaders. Many not only actively help and support the festival but also participate themselves.

Evidence of the true popular character of Sabantuy is the fact that after the weakening of the governing (Party) bodies in the post-Soviet period, it was revived on residents' initiative in the villages where it had ceased to be celebrated for various reasons [Urazmanova, 1984, p. 66; Sharafutdinov, 2004, p. 273]. Additionally, celebrations of Sabantuy both in far-flung Russian regions and in foreign countries confirm this idea of its existence. For example, according to WTC data, in 2007 Sabantuy celebrations occurred in 18 different countries. Local residents and representatives of different Muslim communities take part in the festival along with Tatars, learning about the spiritual heritage of the Tatar people [Zaikirov, 2009].

Sabantuy remains an active manifestation of Tatar ethnic culture. It is an effective mechanism for bringing up youth, maintaining ethnic identity in a modern world subject to globalisation, which has already touched and transformed many sides of Tatar life; a mechanism for the intergenerational transmission of ethnic culture. Not without reason do regional delegation members, many of whom grew up in a non-ethnic environment, note that this participation, for them, is not only a way to meet and develop relationships with their fellow Tatars but to gain experience in holding the festival [Fäxretdinova, 2009]. The modern Sabantuy is also an effective mechanism (a means and a way!) to bring Tatars together on a district and regional level—and finally in Russian Federation as a whole. No less important is the fact that Sabantuy is a unique way of presenting Tatar culture to other peoples.

Making the Islamic festival of Eid al-Adha an official holiday at a time when there were practically no functioning mosques—places

where the festival could culminate in ceremonial services—and no clergy as such could not immediately change the situation in Tatar festival culture that had existed in the Soviet period. Nevertheless, it was accepted with enthusiasm, especially among the creative intelligentsia and the numerous 'fighters for national freedom.' The creative intelligentsia became the pioneer in finding ways to revive interest in significant dates of the Islamic calendar, as in specific, distinctive elements of Tatar ethnic culture and of their emotional enrichment. An aspiration arose to take the holidays out of the narrow framework of domestic celebrations—the Quranic majalis—and give them public exposure.

The first decade of the post-Soviet period was characterised by the appearance of 'Evenings of Munajats' in the concert halls of Kazan and in the circus arena, with the participation of famous professional Tatar singers and performers. These concerts attracted the public's attention by their novelty and unusual character.

New 'shows for the masses,' with an Islamic flavour, began to appear, performed at Kazan Central Stadium. A grand staging of the mystery play 'The Dastan of Ancient Bolgar—Mahdi' was performed before an audience of thousands on 22 August 1989 and dedicated to the 1,100th anniversary of the adoption of Islam by Volga Bulgaria. The music and script were written by M. Shamsutdinova, the director and producer was D. Sirazeev, and the soloist was A. Asadullin from Leningrad.

A concert by the popular folk singer Ilham Shakirov, which took place on a Friday (a festive day for Muslims!) in the summer of 1990, started with a sermon and greetings for the approaching festival of Eid al-Adha. More than 25,000 people were at the stadium for the concert [Socialistic Tatarstan, 3 July 1990]. This was a new development, not previously allowed.

The unusual nature of such events also lay in the fact that it gathered a monoethnic audience—only Tatars, as a rule, who exhibited their national identity with elements of their national (Tatar-Islamic) costume: it became

fashionable for men to wear the tyubeteika, while women were dressed in colourful conservative clothing covered with headscarves, scarves, and shawls, often brought from Turkey and Arab countries since it was a time of active 'shuttle trading.'

People attempted to organise special concerts dedicated to specific Islamic festivals, which also intended to intensify the festivals' emotional impact. The Tatarstan State Music and Dance Ensemble (artistic director Lima Kustabayeva) prepared a special show, 'Eid al-Adha' (music by Masguda Shamsutdinova), where, by using artistic means, including a light show by Bulat Galeev, the creators tried to show the festival's essence, an appeal to beneficence, and its universal significance. The show was timed to coincide with the first World Congress of the Tatars, which in its turn coincided with the holiday itself. The show's second part was dedicated to demonstrating Tatars' place in the Turkic world. The concert took place in the Palace of Sports and received the sincere appreciation of thousands of spectators, among which were the congress delegates who had come from many regions of Russia and other countries. According to Kustabayeva, the ensemble receive an official message of thanks from the administration of the Tatarstan Muslim Religious Board. Gali Akkysh, a famous Tatar public figure living in Germany, attended the concert and not only gave a high appreciation but particularly stressed that it was the first time he had seen anything like it in either the Turkic or Islamic world. However, Kustabayeva's sincere desire to continue work in that direction was cut short by the Tatarstan Culture Ministry, which explained the prohibition due to state secularism.

The K. Tinchurin Tatar Theatre of Drama and Comedy was sold out when the administration of the Islamic cultural youth centre Iman organised a celebration of one of the significant dates of the Islamic calendar, Mi'raj.

Grand celebrations on the opening of mosques, the number of which had drastically increased, became noteworthy events in Tatar public life. According to data provided by the

Council on Religious Affairs of the Tatarstan Cabinet of Ministers, there were 154 congregations in 1990, 207 in 1991, 333 in 1992, 399 in 1993, 482 in 1994, 574 in 1995, 653 in 1996, and 695 in 1997 [Religiya i obshchestvo, 1998, p. 133].

In the countryside an opening of a mosque would be a celebration not only for the residents of the village but for the whole local area. One could talk about the creation of a ritual. The opening of a mosque was a reason and chance for aul residents of all ages and their guests—relatives and friends from neighbouring villages—to dress well and to gather around the mosque. It was also an opportunity to demonstrate one's generosity, when a special energy was displayed by natives of an aul who had managed to establish their lives in another place. Along with invited representatives from the Muslim Religious Board, secular officials also took part in the festivities of an official opening, presenting gifts for the mosque appropriate for the occasion—carpets, books, etc.

The sounds of a professional reading and performance of separate surahs of the Quran amplified by a loudspeaker, collective salat, frequently a special offering (korban chalu), and collective treats for the participants—an unusual occurrence—leave nobody indifferent and go deep into the souls of all participants.

Tatarstan press started to publish information prepared by local journalists about times and dates, the essence of significant events of the Islamic calendar, articles on festivities dedicated to the laying of a foundation, or more often to the opening of a new mosque in an aul, a village, a district centre, or a town not only in Tatarstan but also in regions of Russia with a Tatar population.

Special programmes on religious topics appeared on the radio and television. The creators of these programmes were those same secular journalists, many of whom were among the first to attend courses on the fundamentals of Islam at mosques, together with teachers, doctors, and creative professionals. 'These believers came to the mosque on a massive scale not

because of someone's sermon or missionary activities but in search of a new identity and a new system of world views and values, instead of the discredited socialistic ones,' V. Yakupov noted impartially [Yakupov, 2005, p. 32].

Since 1994 a unique calendar called the 'Tatar möselman kalendare' has been published, featuring profoundly religious topics: indicating significant holy days and describing their specifics; giving month names in Arabic; showing dates in Hegira (AH); prescribing the exact times for daily salat for every month, etc.; along with articles regarding literature and art and character sketches of prominent cultural figures. The authors and publishers of the calendar are the husband-and-wife team of journalists Sh. Zabiroy and F. Khuzakhmetova. Later calendars, having only specific Islamic editions prepared by clerics, began to be published in the Tatar language, particularly 'Dini kalendar' by Farid Salman, 'Möselman kalendare' by Valiulla Yakupov, and others. Interestingly, the first publishing company specialising in Islamic literature in Cyrillic in post-Soviet Tatarstan was Iman, established in 1990 and founded by Yakupov, the head of the Iman Islamic cultural youth centre and later one of the deputies of the mufti of Tatarstan.

At that time the celebration of Eid al-Adha, particularly in Kazan, was not confined to ceremonies in mosques where men took part. The feast turned into rallies and demonstrations in squares, where Allah and the Prophet Muhammad were praised not only by believers but also those inspired by new opportunities to demonstrate their national feelings. A festive atmosphere was established with accompanying features, such as a market and performances by artists and amateur talent groups.

By the end of the second decade of the post-Soviet period, also the first in the 21st century, both of the major Islamic holidays have become significant events in the life of Tatar society. These holidays are recognised throughout Russia particularly thanks to live coverage of public worship services by Russian TV channels from the cathedral mosques in Moscow and Ufa. The satellite TV channel Tatarstan — New Age (TNA) offers the

chance for anyone who wants to watch online the services in the Kul Sharif Mosque in the grounds of the Kazan Kremlin. In 2011 they took place in the Marjani Mosque.

Currently the development of a Muslim subculture as a part of Tatar spiritual culture is flourishing, a vivid expression of which is the widely celebrated holidays and holy dates of the Islamic calendar. The driving force of this subculture is the ever-increasingly active and multidisciplinary work of the numerous re-emerging mosques and Muslim administrative structures.

The work of mosques organizing a month of fasting for Ramadan has become a new significant event in the life of the Tatar society. It is becoming a tradition, especially in urban mosques, to have an evening supper (or the first meal after fast), which is now more often called by the Arabic word 'iftar'. And if ten years ago iftars were one-time events, now there are many mosques where they are held every evening during the month of fasting and not only in the cities of Tatarstan. For example, over the last years, having iftars organized by the mosque and held every evening on behalf of (and funded by) certain residents has become a tradition in the town of Mozhga in the Udmurt Republic, with its relatively small Tatar population. Relatives and friends of these residents, along with everyone interested, are invited to the meal. The programme of iftar events is prearranged, sometimes they can be held on behalf of two or three benefactors at the same time. There are special structures in mosques organizing and serving these supper parties under Halal rules. On 26 August 2011 for the first time in Tatarstan, the first republican iftar 'Ramadan 2011' was held in one of the central squares of Kazan, namely Millennium Square, by means of the Muslim Spiritual Board of Tatarstan in cooperation with the Presidential Administration of the Republic of Tatarstan, Kazan authorities, and the Association of Muslim Entrepreneurs. Lower-income families were invited to this iftar. Political, public and religious figures, along with more than 1,000 people, were there. [Halyal' gid, 2011, September, No. 6 (08)].

The so-called *avız açtırı* remains a home dinner party in the countryside, although there people began occasionally to organize iftars in mosques as well. As a rule, they happen when money sent specifically for this purpose by certain descendants from villages has been received.

The number of people who offer a sacrifice (*Korban çalu*) on the date of another important holiday in Islam, called *Kurban Bayram*, has increased dramatically.

The new trend is the arrangement for a collective festive meal in mosques, called *Kurban aşı*. Meat and other products donated by private individuals are used to prepare the meal.

Some work is being done to mainstream one of the most significant holy dates of the Islamic calendar, namely *mawlid*, the celebration of Muhammad's birthday. According to communicants, the hosting of a dinner party, on this occasion at home, that had been typical for the second half of the 20th century, vanished into thin air in the post-Soviet period. One of the reasons for this is found in the fact that the generation of women who knew the essence and the legend of the holiday and histories about the Prophet, such as *mārhābā*, *salavats*, *mawlid*s, and so forth, had passed away. At the same time, it has become one of the most important and widely-commemorated events in the practice of mosques, where people began to organize celebrations involving children attending Sunday schools, popularly called *madrasah*, to learn the basics of Islam. The festive atmosphere is created by the presence of mothers and grandmothers, dressed in appropriate costumes (dresses, kerchiefs, etc.). The main points of the action are short stories about the Prophet, demonstrations of acquired knowledge by children, who are inspired by not only the approval of the attendees but also small gifts which they receive for their skills. A festal dinner is often arranged with packages of treats gifted at the end of the event. In such cases, the initiators and organizers are women who are working as teachers on a voluntary basis in these *madrasah*s. As a rule, they are pensioners — former doctors, teachers or journal-

ists — who had received systematic knowledge of the basics of Islam at *madrasah*s opened in the premises of mosques during the 1990s.

In addition, for several years the G. Tukay Tatar State Philharmonic Halls and Culture Palace 'Saydash' in Kazan hold holiday parties, which are scheduled by specialists, on the occasions of *Kurban Bayram* and *Mawlid*, with funding from the well-off. The religious clerics as well as professional artists and members of amateur groups take part in the concert program. The performances have breaks to conduct regular *namaz* in time, in which everyone interested can participate. Holding these evenings is also a new thing in the social life of Tatarstan.

The activity of new cultural intermediaries, who not only support Muslim subculture but also contribute to its expansion and make it more stable and productively functioning, has emerged, and it is becoming widespread. Those are special print media, such as the 'Din vā māgıyşät', 'Umma', published by the MSB RT, and the Russian-language newspaper of Muslims, 'Medina', that has been published since 2004 with the assistance of the Fund for the Support of Islamic Culture, Science and Education. There is also a diversified infrastructure for servicing this subculture, including the service sector offering assistance in organizing and conducting Muslim ceremonies and holidays. The advent of vocal groups, which present themselves as Muslim ones, such as 'Medina' (Moscow), 'Raiyan' (Kazan), and others, consisting of professional musicians, is a landmark.

A unique phenomenon has emerged in the culture of the Tatar world, which is a folk holiday based on a symbiosis of religious and civil features. It grew up in the forefront of people's historical memory maintenance as a result of aggravation on the ethnocultural identification issue, which has finally achieved the recognition of its religious component. In the summer of 1989, thousands of Tatars from different regions of Russia, having travelled a long way, for the first time crowded simultaneously in the territory of the Bulgar State Historical

and Architectural Reserve (BSHAR) to commemorate the 1100th anniversary of the official adoption of Islam by Volga Bulgaria. It was an initiative of the MSBPS of European part of Russia and personally of its mufti, T. Tadzhutdin.

Starting from this year, T. Tadzhutdin continues to gather Muslims annually in June, coming here under the command of muftis and imams, who have retained their submission to the MSBPS and later, the CMSB. The ceremony of this holiday has gradually formed. The sermon ('vägaz') remains the main part dedicated to historical memory, which was denominated by the term 'Täübä', and the venue is the territory near the Small Minaret. The highlight of the ceremony is a collective midday namaz in situ of the Cathedral mosque foundation, that makes an indelible impression on the audience, not least of all by its mass.

One of the Russian village streets turns into a real fair, where not only Islamic paraphernalia (tasbihs, prayer rugs, religious books, rousans, Tatar skull-caps, gowns, etc.) are sold but also other consumer goods, foods, including horse meat sausages 'Kazylyk' brought from Tatar villages of Republic of Mordovia, Penza oblast, Nizhny Novgorod oblast, as well as chak-chak and others.

The executive committee of the World Congress of the Tatars took the lead in Islamic reunification. Upon its initiative in 2006, the Russia's Mufti Council and the MSB RT, along with the CMSB, became participants in this holiday. Congress undertook the arrangement of a cultural programme, and by doing so, it made significant changes not only in the external form of the event but in its essence. The number of participants has increased. Local organizers become not only muftis but also heads of Tatar, sometimes Tatar and Bashkir, cultural community centres from various regions of Russia. It is treated not only as the integration of Tatars into the world Muslim ummah but as the long-awaited unification, a concerted action of all muftiates in favour of the Tatars.

20 years later, in 2009, the official opening of the holiday — a representative greeting

on behalf of the President and the Government of Tatarstan, the World Congress of Tatars, the regional authorities, representatives of the regions, etc. — was added to the ceremony of the holiday.

Not only the persistence of CMSB leaders, and most importantly, the annual participation of ordinary folks wanting it wholeheartedly, the assistance of Congress of Tatars and other muftiates in its organization, the regularity of its observance make it possible to assert the traditionalization of the holiday. There has been a rethinking of not only goals but also the essence of visiting holy places, that have been typical of all the Turkic Islamic world for centuries.

The names of certain holy men and objects of holiness, in this case, were replaced by broader term 'Izge Bulgar', which can mean both 'holy' and 'sacred' — the name of a particular place and a reminder of the Tatar people's ancestors' history. Often, the word dzhien, which has a number of meanings, is added to the title of the holiday (for example, Izge Bulgar cieni). It can mean an ancient public institution of kinship, national holiday of the Kazan Tatars, people's gathering or meeting, people of the same blood, and a community. The uniqueness of this holiday is emphasized even by the 'specialisation' of the fair, arranged on this day, where people from many regions of Russia come with their goods. The main thing is an opportunity that has emerged to join with this land, the history of the Tatar people, and its spiritual culture through religion [Urazmanova, 2010, pp. 69–83].

The family and household rituals are also transforming. The wedding rituals of the Tatars continue to evolve the phenomena that have become prevalent in recent years. First and foremost is the search for new forms of ritual, or, more precisely, certain actions highlighting the unusual, uncommon, and special festive features of the wedding ceremony. It is promoted by the dynamism of the emerging organisations, offering their services to organise and hold not only the highlight of the event, the wedding itself (a feast, a banquet, an entertainment), but also the preceding ac-

tions, including those associated with the official registration of marriage, creating a special package (depending on the customer preferences), decorations, symbols, background music, taking special photos as mementos, video, etc. This phenomenon is mainly urban, and it is all-Russian rather than uniquely Tatar. Moreover, according to films, the Internet, etc., it is a global phenomenon to a certain extent [Ovchinnikov, 2012]. At the same time, some of its aspects are gradually penetrating into the countryside. For instance, official marriage registrations with appropriate symbols and entourage as well as the wedding itself began to be performed in district centres, where there are suitable facilities, rather than in one's native village. Relatives and friends from different places, and not only from the republic, arrive there in cars and buses. In this case, the amount of mutual hospitality and the number of presents from relatives are very much reduced.

The wedding ceremony still has a Tatar celebration called *nikah*, in the course of which a religious marriage ceremony is performed. This ceremony, as a consequence of changes in the sociopolitical and sociocultural context, became conventional and encouraged instead of being undesirable and persecuted by the government. The conducting of *nikah* is becoming not only symbolic but also significant. Its essence is restoring the realization of this ritual as an act of the beginning of a joint life for a newly married couple, which is approved by Allah, and it is sufficient for its recognition by the community, namely family members, relatives, friends.

There are various options of the place, form and time of this wedding ceremony. The prevailing style by which a *nikah* (*nikah tue*) is carried out is being hosted in the bride's parents' house, both in rural and urban areas. Moreover, it is becoming popular in urban areas to conduct *nikah* in a mosque, and a wedding reception is then held in one of the halal cafes and restaurants.

In the last years of the Soviet period, it took a day or two, a week at most, to carry out a ni-

kah before the official registration of marriage, but now the time gap can be longer.

The emergence of Muslim weddings, whose main features are being alcohol-free and having a halal meal, has become a new phenomenon. It combines religious ceremonies, which are led by an invited cleric from a mosque — imam (mullah), — with the wedding reception hosted by a professional organiser and musicians for a wide range of relatives, friends of the older and young generations, married couples, and youths. The initiators of this wedding, as a rule, are the young couples themselves, who have become practising Muslims. The holding of a religious ceremony of naming has become more widespread. It is becoming more diverse in terms of types of venue and the number of participants in the ritual. The prevailing traditional form is to hold *isem kushu* at home a few days after the return of a new mother from a birthing home. An official mullah, or 'baba', from a mosque is invited to the ceremony; it concludes with the festive dinner in which relatives and neighbours, as a rule, of both sexes (male and female) take part, and they bring a present and some kind of meal, according to the tradition.

Hosting this ceremony in a mosque, where the child's parents receive its Islamic birth certificate, is gaining popularity in cities.

The ongoing transformation processes in the sphere of funeral and memorial rites are primarily connected with the increased activity of legal religious structures and their ministers and are aimed mainly at the Islamic education of the people. It is leading to an even greater harmonisation of Tatar funeral and memorial rites. On the one hand, the sacredness of the elements of folk ritual actions and their necessity, along with the strict order of their execution, which beforehand was quite consistently maintained in some regions of the countryside, are loosening. In particular, the use of certain indulgences (*yavaplama*, *cavapnämä*), written in Arabic type on a piece of paper and called 'correct answers of a Muslim' for the test in front of special angels (*söäl färeştäläre*) who visit the grave of the deceased immediately af-

ter the burial, which were put in the garments of the dead. It also includes a ritual *däver sörü*, *däver itü*: a walk around the deceased, praying and for this receiving from their family a small amount of grain (rye, wheat) — *börtekle äiber* — in the remission of the sins of the deceased. On the other hand, there is a rejection of the Soviet innovations, such as burial in a coffin, burial cloths, and participation of a wind orchestra in the funeral. In other words, it has just about happened. Nowadays, we hear more

frequently that the women in villages ceased to visit the graves of relatives and the cemetery in general. Once again it is perceived and treated as being a taboo for them. The attempts of certain imams, who, as a rule, obtained their religious education in Arab countries, to list funeral rites as sinful innovation — *bidgat* — have failed. It is the combination of the funeral rites and commemoration that is still perceived by the believers as a Muslim and by the others as Tatar one.

§ 5. The science Development Priorities in the Republic of Tatarstan

Akhmet Mazgarov

Science has long-standing and rich history in our republic. Kazan has traditionally been famous as a centre of education and science. The city has survived in the historical memory of people as being the capital of the powerful Kazan Khanate, where numerous madrasahs and well-stocked libraries were located. In subsequent eras, the Tatars has always lived in the hope of a revival of ancient glories in the scientific and cultural spheres. In the latter half of the 19th century, prominent scholars S. Mardjani, R. Fakhretdinov, K. Nasyri, H. Faizkhanov, and others informed the Islamic world through their works that there is still a Muslim component in Russian science. They set the stage for the accelerated development of Tatar culture at the beginning of the 20th century. The foundation of Kazan University contributed to the emergence of internationally acclaimed mathematical, chemical, astronomical, physical, and oriental schools. The international scientific reputation attracted scientists, such as the brilliant mathematician N. Lobachevsky; V. Engelgardt, who built and presented the Observatory to the Kazan University; an expert in Arab studies, the founder of Eastern Numismatics in Russia, C. Fren; a turcologist, A. Kazem-Beg; a founder of the linguistic school, J. Baudouin de Courtenay; a chemist, K. Klaus, and many others. Over the entire period until 1917,

there were 19 academicians and 43 honorary members in the Russian Academy of Sciences, from Kazan.

The Society of Archeology, History and Ethnography, founded in 1878 at Kazan University, undertook the role of being a specific coordinator on knowledge of the humanities.

Under new social and political circumstances, a number of scientific fields were further developed in the Tatar ASSR. By the end of the 1920s, the republic came close to developing its own Academy of Sciences. The Academic Centre at the People's Commissariat of Tatarstan, which is responsible for coordinating scientific research, creating research structures, writing monographs, textbooks, and training scientific personnel, played a major role in this process.

Such scientists as A. Arbuzov, N. Parfentyev, N. Chetaev, A. Aminov, H. Mushtari, G. Kamay, N. Chebotaryov, and others have achieved great success in the fields of physics, mathematics, and chemistry. Following Professor Chebotaryov's initiative, since 1929 a group of Kazan mathematicians and engineers had been working on stability theory, which was of great practical importance when addressing the issues of engineering airplanes and high speed trains. By the end of the 1930s, the Kazan School of mathematics and mechanics dealt with scientific defense-related challenges.

In the 1920s, A. Arbuzov's laboratory developed the methods for the synthesis of phosphorus and carboxylic acids, creating esters of diphosphoric acid, as well as being the first to isolate subphosphoric and pyrophosphoric acids. As a result of these discoveries, the republic became the centre of studies on organophosphorus compounds.

At the end of the 1920s, the Physiology Department of the Kazan University, led by Professor A. Samoylov, became internationally recognised. In terms of accuracy and precision in the detection of electric currents through an organism, this laboratory not only ranked first in the USSR, but also it had an opportunity to compete with similar foreign institutions.

The foundation of the Tatar ASSR stimulated the development of local history research, contributed to the expansion of their topics, training specialists, provided by the Kazan University, Eastern Pedagogical Institute, and the Tatar Communist University. In 1925, the Scientific Organisation of Tatar Studies was created, whose goal was 'to unite persons who work on the comprehensive scientific study of Tatars and Tatar culture...'. The formidable piece of scientific and organisational work was carried out by the chairman of the community and a professor of the Kazan University, N. Firsov, and his deputy G. Ibragimov. M. Khudyakov, E. Chernyshev, and G. Rakhim were involved in capacity of secretary over different years. The publications on local history were given particular emphasis in the periodical publication 'The Bulletin of the Scientific Organisation of Tatar Studies'. The 3rd issue of the 'Bulletin of the Scientific Organisation of Tatar Studies', dedicated to the 5th anniversary of the Tatar ASSR, had a selection of documents from 'The materials and documents on the national question and the organisation of the Republic of Tatarstan' that marked the beginning of the documentary development over the TASSR's foundation history.

At the end of the 1920s, the study of local history was refocused. By the decision of the TASSR Council of People's Commissars, it was decided to establish the Scientific Soci-

ety of Tatar Studies, the purpose of which was 'the comprehensive study of Tatarstan, that is, of its nature, population, way of life, history, culture, and the productive forces', which meant localisation of Tatar studies within the borders of the Autonomous Republic. Based on the Scientific Organisation of Tatar Studies, it united 98 scientists, including 14 honorary members, 74 full-fledged members, and 10 employees, maintaining close ties with more than 120 scientific institutions within the USSR. Being an equivalent of the Tatarstan Academy of Sciences, the Society ceased to exist in 1931, when it was integrated into the Tatar Scientific Research Institute.

The 1920s became a time of high achievements in the humanities. Regarding the field of history, the study of the Tatar medieval history was intensified. Monographs such as 'Essays on the history of the Kazan Khanate' by M. Khudyakov and 'Revisiting the origin of Volga–Kama Bulgars' by V. Smolin were released. Thanks to the works and research of F. Balodis, the question of revising the established views on the Golden Horde as a nomadic and barbaric state was raised. Major works in the sphere of Turko-Tatar literature written by G. Rakhim, G. Gubaydullin, and G. Sagdi evolved into the concept of Turko-Tatar culture study in general and became the basis for the development of the cultural history of the Turkic peoples in Russia.

However, the resolutions of the Central Committee of CPSU(B) on the journals 'Under the banner of Marxism' (January 1931) and 'About the work of the Communist Academy' (March 1931) put social sciences under the strict control of the party. The unwarranted repression of leading scientists, who had launched the study of new scientific fields (G. Ibragimov, F.-S. Kazanly, M. Korbut, A. Rakhim, G. Nigmati, Dzh. Validi, G. Gubaydullin, M. Khudyakov, V. Smolin, and others), did serious damage to the development of science in the republic.

During the Great Patriotic War, the tasks given to the national science were solved in close collaboration between local scientists

and the best scientific staff of the country, who were representatives of the Academy of Scientists of the USSR. The decision to relocate academic institutions was made on 16 July 1941. 33 academic institutions and 1884 research officers, including 39 academicians and 44 corresponding members of the USSR Academy of Sciences, were transferred to the city in a short space of time. Among the scientists who received international recognition were A. Poyray-Koshits, B. Grekov, Ye. Tarle, G. Krzhizhanovsky, S. Vavilov, A. Ioffe, A. Nesmeyanov, S. Obnorsky, P. Kapitsa, M. Keldysh, N. Zelinsky, and others.

The area of research was determined by the need to resolve defensive issues. The theoretical studies of academics L. Mandelstam, N. Papaleksi, V. Fok, and others were used to create radio-technical devices in the laboratories of the Institute for Physics and Mathematics of the USSR Academy of Sciences (IPM UAS). Scientific officers worked to improve methods of combating radio frequency interference control and enhancing the direction finding system, which helps to identify the location of enemy artillery positions, etc.

The defense issues were the main priority at Leningrad Physics and Technology Institute. The research of an academician A. Ioffe contributed to the successful implementation of many state tasks.

Important issues were handled in the laboratory of material dynamics, led by V. Kurienko. When Professor Kurchatov arrived in Kazan in January 1942, laboratory management was devolved to him. An entirely new aircraft armour, based on a change in the structure of the protective metal layer, was proposed and implemented in the production facility there. V. Kurchatov continued the pre-war experiments on nuclear chain fast-neutron reactions studies: these experiments laid the foundation for the creation of national nuclear industry.

Significant work was carried out at the Institute of Mechanical Engineering (IME) in order to implement new production technology for aircraft parts, develop improved alloys for engine construction, etc. New weapon

systems were developed by designers such as A. Tupolev, S. Korolev, V. Glushko, and others.

The activity of Kazan scientists was primarily focused on creating new materials and products that were necessary for front lines and back areas. Thus, the researches conducted by the famous chemist, Professor B. Arbusov, enabled improvements in the quality and frost resistance of rubber, which had a great significance as it ensured smooth operation of military vehicles in winter. Professors G. Kamay and M. Belyaeva were involved developing new types of a surgical suture material technology — catgut. The academician A. Arbusov, when addressing the problems of organophosphorus compounds, obtained the substances which played an important role in the production of optical devices for artillery systems, as well as in the creation of new types of medicines.

The discovery of electron paramagnetic resonance by Kazan physicist Ye. Zavoisky in May 1944 was an outstanding event in world science. Having become a powerful research method, it laid the foundation for a new scientific field: the magnetic radiospectroscopy.

Major efforts were made by biologists. By the summer of 1942, Professor M. Markov completed his research into the wild medicinal plants of the region. Professor N. Livanov, together with employees of the Academy of Sciences Commission for Studies of Natural Productive Forces, suggested a production technology for extracting food proteins and vitamins from shellfish caught in the rivers of the republic, which was a great help in the context of food shortages.

Scientific researches of the republic's geologists were also of a great importance for the national economy. Professor L. Miropolsky was the first to make an attempt to identify the possibility of the production of new building materials. In particular, he was the one who initiated a more extensive use of gypsum both in construction and in agriculture for the production of mineral fertilizers. An assistant professor E. Tikhvinskaya, who completed her doctorate thesis during wartime, studied

the problems of oil-bearing capacity in the region's subsoil resources.

Professors V. Gusynin, F. Mukhamedyarov and A. Teregulov developed effective methods for treating the wounded. The local anesthetic method and the procaine block, introduced by a Kazan surgeon A. Vishnevsky, were a real breakthrough.

The foundation of the Institute of Language and Literature under the Council of People's Commissars in Tatarstan in 1939 was of particular importance for the republic. The task of researching the history of the Tatar people and the region was imposed on it. Since February 1941, the Institute was granted the status of the Tatar Scientific and Research Institute of Language, Literature, and History.

Thus, during the Great Patriotic War, scientific thoughts in Tatarstan were primarily used for defence purposes. The recognition of the scientific community's contribution to the protection of the motherland was the creation of the Kazan Branch of the Academy of Sciences of the USSR on 13 April 1945, the current legal successor of which is the Kazan Scientific Centre, working together with the Academy of Sciences of Tatarstan.

In the post-war period, the rapid development of industry in the republic contributed to an increase in the number of scientific institutions aimed at ensuring scientific and technical progress in the priority areas of the national economy. In 1950–1960s, there were: the foundation of the Kazan branch of the Leningrad Optical Institute named after S. Vavilov; the Kazan branch of the Moscow Research Institute of Technology and Production Organization; the Scientific, Research, and Design Institute for Introduction of Computing Technologies in the National Economy; the All-Soviet Union Research Institute of Raw Hydrocarbons; the branch of the All-Soviet Union Research Institute of Synthetic Rubber; and the Research and Design Institute of Vacuum Engineering.

At the forefront of research there was the Kazan school of physics, particularly the research by S. Altshuler, who laid the founda-

tions of quantum acoustics. B. Kozyrev and N. Garifyanov developed the widespread use of magnetic radio spectroscopy in chemistry, biology and technology. At the end of the 1950s, a new scientific field emerged: polymer physics. The Laboratory of Nuclear Physics was established, and molecular physics began to develop intensively; radio physics emerged. A school of optics and spectroscopy began to be formed as well. Fundamental scientific problems were addressed by physicists K. Salikhov and I. Khaybullin. In 1988 the State Prize was awarded to the team of physicists for their discovery of laser annealing. Researches in the mathematical fields of mechanics and geometry were actively conducted. The achievements of V. Alemasov, A. Dregalin, and A. Zemlyakov in the field of thermal engineering and drive engineering were marked by two State Prizes of the USSR. The works of the scientific officers and the department of astronomy and geodesics of the V. Engelgardt Astronomical Observatory have been widely recognised within international academic circles.

Thanks to the works of A. Arbuzov, Yu. Samitov, and B. Arbuzov, who received The Stalin Prize in 1951, the Kazan chemical school has become a major research centre of organophosphorus compounds. The new method of electrolytic metal machining, which had great practical significance, was developed under the leadership of F. Fayzullin. Chemists P. Kirpichnikov and A. Konovalov, along with biochemist I. Tarchevsky, have achieved great success. In 1978, the hero of socialist labour, an organic chemist B. Arbuzov, and an organic chemist A. Pudovik were awarded the Lenin Prize in science and technology.

In relation to the discovery of oil deposits in the territory of Tatarstan ASSR and the neighbouring Volga and Ural regions, studies of geology were increasing. At the intersection of geomorphology, physical geography and geology, a new scientific direction emerged: the study of karst. The background work to enable the formation of the Kazan school of microbiology was created. On the request of Tatneft association, a large group of scien-

tists — physicists, chemists and geologists — participated in the development of enhanced oil recovery issues.

In the postwar period, the Kazan medical school was famous. Kazan began the history of domestic electrocardiography when A. Samoylov laid its foundation. The most influential clinician, S. Zimnitsky, the founder of the functional diagnostics school, worked there.

The horizons of humanities research expanded, too. From the second half of the 1940s, Kazan University started the revival of ethnography as a science, active investigation of ethnogenesis issues, ethnic development of the Tatars and the Chuvash people, the Russian population of the Middle Volga region, and the processes of interethnic cooperation. Thanks to the efforts of Kazan archaeologists led by A. Khalikov, the systematic ancient history of the region has been created. The question of the ethnogenesis of the Volga and Ural regions was also answered.

The Tatar folklorists' efforts resulted in the creation of 12 volumes of a scientific work, 'Tatar folk art', which is a treasury of the oral legends of the people. Tatar linguists published a 'Glossary of the Tatar language' in 3 volumes.

The turn of the 20th centuries was marked by many important events and processes in the scientific and cultural life of the republic. One such event was the creation of the Tatarstan Academy of Sciences upon the Decree No.DP-138 of the President of Tatarstan, Mintimer Shaimiev, on 30 September 1991. Having formed the Centre for Coordinating Scientific Institutions, the republic has managed to preserve and increase its scientific potential, while also directing intellectual capacity to address the primary social and economic problems faced by the republic.

At the time of the creation of the Academy of Sciences of the RT in Tatarstan, there were 700 Doctors of Sciences. The scientific potential of the republic set the pace and high standard of entry requirements for the newly established Academy. Today, the republic has more than 1,100 Doctors of Science working

in the vineyards of science. The Academy of the republic includes 40 academicians, 84 corresponding members, 8 foreign and 31 honorary members. 7 affiliates are working, too.

Nowadays, the most important task for the scientific community is to make the greatest possible contribution to the scientific, technical, and innovative development of the republic. From this perspective, the highest priority directions of scientific development are established.

Over 30 million tons of oil per year is made in the Republic of Tatarstan. The extraction of recoverable oil remains the most important scientific problem. The comprehensive and highly effective programme of difficult oil reserve extraction was created by virtue of new developments in the field of oil exploration and production, that allowed Tatneft OJSC to maintain a high level of oil production. For example, the exploration of Romashkinsky reservoir, discovered 60 years ago, is still being carried out in the process of the continued support of oil reserves replacement.

The problem of natural bitumen development in the republic is an urgent and prioritised one for all republican scientists and oil experts. Under the auspices of the Academy of Sciences of the Republic of Tatarstan, solvent technology for processing bitumen oil was invented to produce a high-quality unoxidised road bitumen and lightweight oil.

Scientists from the Academy of Sciences of the Republic of Tatarstan lead the world in the refining of oil, gas, and oil products from sulphur compounds. Among the latest developments, one can mention the alkaline catalyst technology for cleaning associated petroleum gas from hydrogen sulphide, which produces electrical energy (the process called 'Seroks-Gaz'), which is recognised as effective in the Volga-Ural region.

At the turn of the century, the breakthrough in medicine was the work of an academician D. Zubairov on microvesiculation in the blood of both healthy and sick people. The implementation of stem cell transplantation methods in the treatment of hepatic cirrhosis and vascular diseases, genetic modification of

stem cells from umbilical cord blood, that significantly improved the efficiency of cell therapy, are the breakthrough areas for Tatarstan, and Russia in general. The new methods of magnetic resonance and X-ray computed tomography for the diagnosis of early stages of the disease by measuring blood flow have been developed and introduced in conjunction with the physicists.

The top-priority goal for the Republic of Tatarstan is in the sphere of nanotechnology. The formation of a nanotech industry should be the most important strategic direction, defining new approaches to the transformation of national industry. An integrated program of nanotech industry development in the Republic of Tatarstan up to 2015 has been developed and approved to achieve this objective.

Kazan Astronomical Observatory, led by N. Sakhibullin, has received the status of the leading Russian school in the field of astrophysics. Opportunities have emerged for the development of research in connection with the creation of a telescope installed in Turkey, where Kazan astronomers are working together with colleagues from the Space Research Institute of the Russian Academy of Sciences and the National Observatory of Turkey.

In the republic, unlike in many regions of Russia, the agro-industrial complex is steadily growing. The republic is self-sufficient in terms of grain, dairy, and meat processed products. These achievements are certainly not possible without science. One of the top priorities is selection of cultivars, based on a fundamental knowledge of the most important branches of biology. Currently, the register of breeds that are approved for cultivation in Russia includes more than 30 varieties of grain, legume, cereal crops, perennial grasses and regional fruit plants.

Kazan mathematical school is famous around the world. Most notably, the mathematicians solved the Slaman's problem, obtained significant results in algebra and in the topology of convergence, created the optimal approximate methods of integral equation solution, etc.

In the field of compressor manufacturing, oilless bearings and consolidators were implemented in production-release design series for the first time in Russia. The computational models of heat-exchange equipment and the methods of high-efficiency heat exchangers development were created on the basis of virtual and experimental studies.

Humanitarian research takes a special place in the activities of the Academy of Sciences of the RT. Academic research institutions do great work in that direction. The result of their joint activity is the publishing of a 6-volume edition of the Tatar Encyclopaedia, the first five volumes of which are already available for the readers. The Tatars, for the first time, have had an opportunity to bring to the attention of the world community the original material and spiritual culture of the Tatars, along with prominent figures of science, art, the economy, and other areas, in encyclopaedic form.

An important event in the national historiography was the implementation of the project to write a 7-volume 'History of Tatars from ancient times to the present day', where the national history is considered on a Eurasian scale, the place of the Tatars in the history of the Islamic world, the Turkic peoples, and Russia is determined, as well as the collected studies 'Tatars' and the 'Tartarika Ethnography' atlas, which represent the result of many years of research concerning the rich cultural heritage of the Tatars. The 'Archaeological Map of Tatarstan', in 6 volumes, was the result of more than thirty years of work by the republic's archaeologists.

In recent years, archaeological research is being conducted outside of Tatarstan. This enables new knowledge of the medieval history of the Tatars to be obtained. Among the achievements of the archaeologists there should be noted the proof that Kazan and Yelabuga are 1,000 years old.

These examples show that in Tatarstan there are serious scientific developments in natural, technical, and humanitarian directions. It is difficult to overestimate the important contributions of our scientists to the develop-

ment of the scientific, technical, industrial, and defence potential of the Russian Federation and the Republic of Tatarstan, along with the enormous role played by scientific figures in the spiritual life of the country's multi-ethnic nation. The image of Tatarstan is inextricably linked to its perception as a major scientific and educational centre.

Tatarstan has great intellectual wealth. This is its national heritage, which should

be treated very carefully. Today, the support for the scientific and university centres of the country, and the maintenance of their capacity to create the conditions for fruitful scientific and creative employees are among the most important national priorities. By contributing to the development of science today, we are laying the foundations for the future of our country.

§ 6. The 200th Anniversary of the Kazan State University and the Development of the Higher School of Tatarstan

Myagzyum Salakhov

The need for a comprehensive understanding of the problems of the development of higher education is a question which became especially important due to the processes of modernisation of the higher school in general that have started in the country. It is particularly important, since it is not about some arbitrary decisions of the respective bodies. There is an idea, that has firmly established in this country lately, that the development of professional education is critically important for the modernisation of society. This is a matter of survival in the rapidly changing world, because those who create knowledge will successfully go ahead, and all the rest will remain in the periphery and will not have any serious chances for development. This means that today education literally determines society's future.

At the same time, this problem — both on the Russia-wide scale and on the regional level, particularly in the experience of our republic — is still poorly studied. As a rule, one can count on there being some informational materials in encyclopaedic or information publications, or can refer to basic formal descriptions of the changes in the education system within any stage of social development contained in many related works.

I will not go deeply into the reasons of such, not other, circumstances, I will merely offer an example. Now, in 2010, when this text is

being written, the scientific and teaching communities of the Republic of Tatarstan and its capital — the city of Kazan — are celebrating the 80th anniversary of the establishment of the Kazan State University of Architecture and Building Construction. According to the order issued by the People's Commissariat for Education of the USSR on 13 May 1930, it was decided to 'establish a building institute as part of the building department of the Kazan Polytechnic Institute and transfer it under the supervision of the People's Commissariat for Internal Affairs'. In fact, after a short while, the management of the People's Commissariat for Internal Affairs transferred the newly created Building Institute to the supervision of the People's Commissariat for Municipal Services. However, the initial decision to 'give away' the builders to the supervision of the NKVD definitely implied an intention to use the Building Institute, not least, for the Gulag (Central Administration of Prison Camps) economy. It should be understood this way: after good reasoning, it was still decided not to make a direct connection between the training of engineer-builders and the structures of the People's Commissariat for Internal Affairs.

The example given is an additional case in the point proving that the higher school history in the twentieth century appears to be a critical issue. What can be said about it? At the very least, that today specialists-humanists should

not and cannot avoid difficult issues, since there are many knots tied in our past which need to be untied today.

I assume that there is a long-standing need to establish a scientific and research institute in our republic which would address the problems of the higher school. Here we can rely on the capabilities of both the Academy of Sciences of Tatarstan and those Kazan higher education institutions that joined the elite higher education institutions of the country — Kazan (Volga region) Federal University and universities conferred the category 'National Research University': Kazan Technical University and Kazan Technological University.

Here I will also share my views on some trends in the higher school development in our territory, along with an account of their historical development.

The system of higher education in our region began to be established due to the founding of Kazan Imperial University in 1804, which soon turned into one of the major training and scientific centres of Russia. Later, in the 1870s, the Kazan Veterinary Institute and the Kazan Teaching Institute were founded, and the Kazan Higher Women's Courses — the first higher education institution for women in the city — were organised. This was how the higher school started in the territory which now is a part of the Republic of Tatarstan.

In order to understand the peculiarities of the process of establishing the system of higher professional education not only in the mid-Volga region but also generally in Russia, one should have an idea of how the relation between science and education was historically formed in this country. It is considered that the 'Humboldt University' model served as the prototype for traditional universities in Russia, including Kazan University. To be more precise: as regards Russia, there was a crossing of the 'Humboldt University' with the French model, which was transferred to Russia by Peter the Great under Leibniz's influence. The specifics of the French model implied exclusion of research from the university and its transfer to the academy.

However, the bipolar pattern of the sciences in Czarist-era Russia should not be overemphasized. The renowned medical professional and backer of science N. Pirogov said that, in fact, 'there was no difference between the academy and the university. Those who moved science forward were also the ones who taught'.

Scientific societies promoted interaction between scientific currents in the Academy and university professorship. Shortly before the twentieth century, they numbered more than 300, nine of which were founded at Kazan University. They included a physics and mathematical society, a psychiatric and neuropathological society, an archaeological society, a historical and ethnographic society, etc.

As this process was gaining ground, the Academy of Sciences began to invite university scientists with increasing frequency to participate in its meetings; many of them were elected its members. Fifteen full members of the Academy and 33 honorary members and associate members graduated from Kazan University during the first century after its founding. Professors from Kazan University were involved with the major scientific societies of Europe, including the Astronomical and Asian Societies in Paris, the Asian and Royal Societies in London, and the Academy of Sciences in Brussels, Berlin, Lisbon, and other cities.

In the latter half of the nineteenth century and the beginning of the twentieth century, the Russian state began to involve traditional universities in practical activity. During this period, Kazan University maintained its top position among traditional educational institutions in the country; they numbered seven at the end of the nineteenth century, and twelve, by 1917.

The drastic changes in social and political development after 1917 strongly affected the situation with higher institutions and education in general. We always emphasize that V. Ulyanov-Lenin Kazan State University played an outstanding role in the establishment of new sectoral research institutes. This is indeed true: during the pre-war decades, around ten specialized higher education institutions were

created as faculties and departments of Kazan State University.

But one should see the other side as well. The new government set a course for the development of single-discipline higher education institutions. In this situation, the 'old' universities, with their pluralistic outlook and academic freedoms, came into collision with the new political principles. Eventually, by the beginning of the 1930s, ten out of eighteen existing universities were closed, including Kharkov University, which was founded in the same year as Kazan University. The remaining universities were on the verge of liquidation. In this vain, the staff of Moscow State University took the collegial decision to close the university as a 'relict of the bourgeois and feudal era', among other examples.

In 1931, only two departments remained at the Kazan University: the physics and math department and the geology and biology department. The head of Kazan University, the distinguished scientist and chemist Kamay, later said at a meeting in Moscow: the new institutes founded at Kazan State University swept away everything, 'including the director's chair'. His words sounded ironic and bitter: 'Kazan University was wealthy and renowned. Its wealth was carried away, but its fame remained'.

The need for the industrial and cultural development of the country eventually called the university system into existence again, though the tendency to bring higher education and academic science closer together, as mapped out before 1917, did not continue. The development of fundamental sciences was assigned to the Academy of Sciences system, while the 'old' and newly founded universities mainly focused on applied sciences, if any. Thus, it is hard to say that the conditions for fundamental sciences at universities were favourable. For example, it is well-known what serious obstacles had to be overcome at Kazan State University by associate professor E. Zavoysky, who made the most outstanding discovery in modern physics in 1944: the phenomenon of electronic paramagnetic resonance. This made the contributions of scientists from Kazan

University, along with researchers from other traditional universities in the country, to the development of world science all the more significant.

Such periods of historical development, or eras, which are characterized by incompetent interference in intellectual processes, inevitably leave a trace with noticeable consequences to the present day. It is no wonder that the share of higher education institutions involved in RTD is slightly over 10% of all organizations involved in those spheres. Even in these conditions, traditional universities in Russia manage to maintain a set high standard in the sciences, but today this is clearly not enough. What is the distinguishing aspect of modern education? The fact is that we are the heirs of the educational system of the industrial era, and without its modernization, we set ourselves up to lag behind as civilization.

Meanwhile, today we face a contradiction between the capabilities of the higher school and the needs for the development of modern society. Our country is not the only one facing this situation. An increased gap between the quality of education and the rise in requirements for the competencies and personal qualities of employees is typical for education around the world generally. The system of education simply cannot catch up with the speed with which knowledge is increasing because information and technologies develop through a snowball effect.

We became aware of this long ago. The first time that the crisis of education was proclaimed was in 1967 at the famous International Conference in the USA, in which representatives of over 50 countries participated. The character of the crisis was said to be global and affected both developed and emerging countries.

Thomas Perkins, a globally known venture entrepreneur, who, by the way, was one of the managers of Hewlett-Packard, made the following conclusion at the conference in his summary report: the nature of the crisis lies in the lack of correspondence between society's needs, on the one hand, and the capabilities of the system of education, on the other.

Since then, the world education system has been trying to resolve this contradiction, which has not always been successful. Education as an institution was formed to solve specific social problems; therefore, its internal capacity is not sufficient to get out of the crisis. It cannot pull itself out by its own hair, like Baron Munchausen.

Therefore, under the current conditions, which one scientist called 'flowing modernity',

the educational system will be, to a greater or lesser extent, constantly modernized according to the plans and estimates of the state. But it is important to learn from the lessons of the past and launch the modernization processes according to the principles and conditions of a free society striving for creative scientific inquiry, where human capital is held as the main value.

§ 7. Development of the Education System of the Tatar People in the post-Soviet Period

Marat Gibatdinov, Lilya Murtazina

In the last decades of the twentieth century, the Tatar system of education experienced rapid development. This was caused by a number of factors: liberalization and democratization of society, removal of ideological restrictions, extension of the rights of regions in the sphere of education, etc.

More than ever before, people became interested in questions about the present and past of their country and began to ponder over the past of their people, culture, traditions, and history. The need for studying many chapters of history, which have remained unknown until now, has grown dramatically. The understanding and interpretation of the history and cultural heritage of peoples have also changed. Education and culture have taken central stage in public discussions directed at finding solutions to the problems of social development, initiating a 'spontaneous search for a new paradigm of the national school' [Zamaletdinov, 2006, p. 98]. The revival of the national system of education was one of the priorities in reforming education in the Republic of Tatarstan. It is also the main course of development of the pedagogical mind of the Tatar people in the specified period [Murtazina, 2012a, p. 16].

The Tatar community began a struggle for the revival of the Tatar language and national school as crucially important factors in the

national revival of any people [Dautov, Sadykov, 1994, p. 5]. As part of this movement, a great number of concepts, programmes, and other documents have been worked out to determine the main direction of the development of Tatar education [Şähri Kazan, 1991, 15 March; Ofik, 1991, No.8; Mägrifät, 1997, 27 August; Naczional'naya doktrina, 1999; Mägrifät, 2000, 19 February; Gayfullin, 2002, p. 4]. Their developers and initiators have been state and social institutions and organizations, scientific groups, individual teachers-enthusiasts and self-motivated citizens, etc. [Valiev, 2001, pp. 8–9]. The situation in the country and in the republic, characterized by democratization and the development of pluralism of opinions and approaches, gave rise to an extensive discussion about the projects. In the 1990s, the Tatar Community Centre announced a competition for the best concept of national education. Twenty works were submitted to the competition. The winner was I. Amirkhanov, who later was instructed to create a new document. The concept he developed, 'Theoretical and practical basics of the Tatar school', was adopted on 22 June 1996 at session 7 of the 2nd Tatar National Assembly (Milli Mäclese). In 2000, at the All-Tatar Kuriltai (Assembly) of Tatar education staff held in Kazan, 'The conceptual framework of the national education of the Republic of Tatarstan' was hotly debated.

The range of views on the national school expressed during the discussion about the concepts was extremely diverse: some people understood the Tatar school as a Tatar-language version of the Russian school ('unitary school with the Tatar as the language of instruction') [Ämirkhan, 2003, p. 129], while others viewed the development of Tatar education outside the official school system and independent from the Russian system of education: 'the whole education system should be in the hands of the nation; it should be organized bottom-up by initiatives of individual schools, teams, people, etc.; in this case, the education and pedagogic system is supported by folk pedagogy and successes in world education' [Ämirkhan, 2003, p. 157].

In the majority of the conceptions, the main message was the idea of raising the national consciousness by using the traditional educational means of the Tatar people: 'today, as never before, society faces the problem of establishing an education system with an entirely different direction of cultural development' [Mägrifät, 2000, 19 February], supported by the bygone traditions of folk pedagogy. Referring to the traditional spiritual values of the people becomes crucially important: 'Only a combination of scientific and technical progress and time-tested ethnic, spiritual, cultural, and national traditions can ensure a sustained development of the society. Today returning to spirituality is not only a need of the soul but also a vital necessity. In fact, it is about returning to the cradle of spiritual civilization' [Mägrifät, 2000, 19 February]. Unlike Russian doctrines, where the main priority is placed on preserving and developing a common education framework, the Tatar doctrines emphasize interests of Tatarstan and the peoples living therein, and the development of their culture and distinctive character. At the same time, much attention is paid to the modernization of the education system in general.

Despite diverse interpretations, [Mäxmütov, 1996, p. 5] what was common for all the conceptions was acceptance of the need to take immediate measures for preserving and developing the Tatar language and culture

and the importance of the role of the education system in the process [Kharisov, 2000, p. 3]. The law-making process in the Republic of Tatarstan developed in the same vein. The education policy of the republic was designed to take into account regional and national differences concerning education and upbringing in the republic.

The republic independently solved questions related to the creation of a national education system (from the legal and regulatory framework to scientific research). The laws on the languages of the peoples of Tatarstan (1992), on education (1993) [News of the Supreme Soviet of the Republic of Tatarstan, 1993, No.10], the plan for the development of Tatar education, and other documents adopted in the Republic of Tatarstan allowed the development of national education to become a priority of state policy in the republic. The state policy on education took into consideration national and cultural traditions in teaching, ensured the freedom to choose the language of instruction, and guaranteed the right to study in the pupil's native language, not only in the Republic of Tatarstan but also for the Tatars residing outside of Tatarstan (Article 14, which regulated this process, was included into the Constitution of Tatarstan).

All of this resulted in an increase in the number of national schools in the Republic of Tatarstan and was conducive to their innovation. While in 1988, in the republic, education and upbringing activities were conducted in the Tatar language in 995 schools (11.8% of the total number of students), by 2002, their number reached 1,220 (49.3%).

With the expansion of innovative activities, Tatar schools of the innovative type (gymnasiums and lyceums) were established. Besides, in the majority of schools with Russian as the language of instruction, so-called 'mentality' classes (classes with an ethnic and cultural component) opened, where the educational process was performed in Russian, but the upbringing process was performed in the Tatar language. However, in fact, this principle works only formally. Unfortunately, the creation of classes where the upbringing process

was conducted in the native language did not contribute to the development of a national education (actually, it was a palliative to national education).

At that time, federal legislation [Federal Laws 'On the languages of the peoples of the RSFSR' (1991) and 'On education' (1992)] also assisted in the development of national education. Having destroyed the Soviet system of methodical and organizational control over national schools, the federal government actually refrained from solving this problem, thus giving an opportunity to the regions to determine the scope of the National–Regional Component (NRC) of education independently. As a result, the teaching of the Tatar language and literature, the history of the Tatar people and of Tatarstan, and the geography and ecology of Tatarstan (elective courses in Area Studies were created) was conducted in Tatarstan. Regional textbooks reflecting the ethnocultural specifics of the region were developed.

The establishment of the Tatar language as the official language of the Republic of Tatarstan in the Constitution of Tatarstan (1992) allowed it to be included in the list of compulsory subjects taught in secondary school, which despite the existing problems of teaching methodology, resulted in a rise in language proficiency among the younger generation in comparison to the older one. An analysis of Tatar language proficiency among school children and their parents in the cities and regions of Tatarstan demonstrates that 10.9% of Russian high school students and 2.3% of their parents speak Tatar. As a result of the support of the Tatar language, Tatars are seen to have preserved their ethnic language competence (77.4% of Tatar high school students and 78.1% of their parents speak Tatar fluently). Despite some protests, in general, the population accepted the official education policy of the republic positively. The compulsory teaching of the Tatar language at schools is observed to receive substantial support. In 2011/2012, only 0.2% of Tatars and 1.2% of Russians believed that the Tatar language should not be taught in school at all. 4.9% of

Tatars and 7.7% of Russians believed that the Tatar language should be compulsory only for Tatars. The rest (46.5% of Tatars and 25.8% of Russians) insist on preserving its compulsory subject status at school. 21.3% and 24.0% respectively propose to reduce the hourly load, and 23.9% and 36.2% propose to teach it as an optional subject. Around 82% of school-age youth admitted the necessity of speaking both Russian and Tatar on a mandatory basis for those who are employed in the public or service sector (survey 2011/2012) [Musina, ed., 2006; Musina, ed., 2011]. However, the Russian population have not become functionally bilingual.

Despite the well-known autonomy and absence of actual control over this area from the federal centre, the education system in Tatarstan has always remained within the common educational system of Russia. Substantively, the republic strictly followed the federal education component. Tatar schools were based on the common curriculum and programmes and textbooks for Tatar schools on all major subjects were translated from Russian, taken from the federal list of textbooks approved by the Ministry of Education of the Russian Federation. The textbooks published independently were textbooks on the history of the Tatar people and Tatarstan [Khuzin, 2006; Gilyazov, 2004; Khuzin, 2005; Piskarev, 2012; Sultanbekov et al., 2006; Istoriya i kul'tura tatarskogo naroda, 2011; Tatar xalkı tarikhy, 2012; Zagidullin, Gibatdinov, 2010; Istoriya tatarskogo naroda, 2012], the geography of Tatarstan [Taysin, 2003], and the Tatar language and literature. Several unique science textbooks for secondary school were also published [Gayfullin, Islamşin, 1993; Gayfullin, Gabidullin, 1997; Gayfullin, Gabidullin, 2005; Gayfullin, 1996; Gayfullin, 1997; Xäliullin, 2001; Xäliullin, 2002; Kazıykanova, 2002]. Attempts to create a fully independent, autonomous system of national education were confined to projects developed as part of the Tatar national movement.

Despite certain achievements, including the expansion of the network of Tatar schools

and pre-school educational institutions and the publication of educational materials in Tatar, the Tatar education system failed to become fully implemented due to several factors. Students began to gradually withdraw from Tatar schools, in many respects, that was caused by the low practicality of the Tatar language in modern society. Tatar schools failed to become attractive and competitive in the common education system.

Despite the high priority given to the development of education in the Republic of Tatarstan, many provisions of the regional and federal laws still remained declarative, which has even been acknowledged at the official level: 'Among... restraining factors, the following can be outlined: gaps in legal regulation of the language policy: the descriptive and declarative nature of certain articles of the RT Law "On the languages of the peoples of Tatarstan"; inadequacy of the mechanism intended to implement provisions of this Law and State Program on Preservation, Learning, and Development of the Languages of the Peoples of Tatarstan; lack of additional regulations in language communication and penalties for violation of the laws on languages; absence of developed infrastructure intended to ensure implementation of the State Program on Preservation, Learning and Development of the Languages of the Peoples of Tatarstan not only in terms of specific events but also in terms of achievement of the goals set and performance of the tasks of the respective stage' [Gosudarstvennaya programma, 2005, p. 24].

As noted by experts, 'implementation of a wide-scale project, such as the establishment of a Tatar national (ethnonational) system of education: occurs in the conditions of insufficient funding of this sector' [Mukharyamova, 2011, p. 194]. Additionally, the Republic of Tatarstan had low performance indicators in the academic year 2004/2005 according to the education development rating of the constituent entities of the Russian Federation: by the level of education of the population (31st place out of 89 entities), in social and economic conditions of education development (53rd place), in accessibility of education (22nd

place), and in the quality of education (25th place). Tatarstan only managed to get into the top ten in three categories: state of pre-school education (10th place), state of general education (7th place), and health of children and teenagers (3rd place) [Gokhberg, Zabaturina, 2006, pp. 33, 35, 38, 41, 45, 47, 50, 53, 57, 61].

All this made the leaders of the republic pay closer attention to education; a number of ambitious projects were launched. In 2010, the wide-scale Strategy of Education Development in Tatarstan for 2010–2015 was adopted in the Republic of Tatarstan. This included 'Kiläçäk' ('Future'), 'Bäläkäç', and the grant programs 'Our Best Teacher', 'Our New Teacher', 'Algariş', and others. However, they were basically intended to implement and update the pedagogic technologies of the teaching of native languages as part of the national education strategy. If in 1990–2005 bilingualism was the topic of the day, afterwards, the emphasis shifted to multilingualism: education in Russian, Tatar and a foreign language (English). However, as it has been noted, actual bilingualism has never been achieved.

It is also noteworthy that the indicators of national school development and level of language proficiency with regard to the native language were not taken into account in the federal ratings. The federal education authorities still do not give prominence to the development of the languages of the peoples of the Russian Federation or the system of national (ethnonational) education and consider the question of preserving native languages to be the prerogative of parents and bodies of local self-government. Thus, such provisions of the Federal Legislation as article 72 paragraphs b and e of the Constitution of the Russian Federation also have a declarative nature. They refer 'the general questions of education, culture and language as its components to co-supervision by the Russian Federation and its constitutive entities'; guaranteeing the right for all peoples of the Russian Federation to preserve their native language, providing conditions for its learning and development (Article 68 p. 3), allowing them to choose freely their language for communication, upbringing, education,

and creative works (Article 26 p. 2). Article 2, p. 2 of the Federal Law 'On education' declares the following state policy guideline for the sphere of education: 'development of the education system of national cultures, regional cultural traditions and peculiarities in a multinational state', Article 6, which guarantees for all citizens of the Russian Federation the right to receive general education in their native language, choose their language of instruction within the possibilities provided by the education system (p. 2); and provides assistance to the representatives of the peoples of the Russian Federation residing outside of its territory in receiving general education in their native language (p. 4).

In our opinion, the main factor thwarting development of national education is the general reduction of its prestige. The Tatar language is not granted the real status of being the second state language in society. Despite the Law of the Republic of Tatarstan, 'On the languages of the peoples of Tatarstan' (1992), the Resolution of the Cabinet of Ministers 'On high priority measures for implementation of the RT law "On the languages of the peoples of Tatarstan"' (1992), and the State Program 'On the preservation, learning and development of the languages of Tatarstan' approved by the RT Parliament in 1994 and 2004, which provide for additional payments to specialists fluent in two state languages (Russian and Tatar), the government have not taken any actual steps to implement this law. No public office except for the President of the Republic of Tatarstan is required to speak two languages. The Russian language still prevails in everyday communication and in official record management. During the last two decades, the communicative function of the Tatar language hardly changed. Only 8.5% of Tatars who participated in the survey of 2011/2012 noted that they used the Tatar language at work. In 2001, their number was 9.6%. No respondent among Russians chose this answer. 42.3% of respondents spoke Russian and 2.6% spoke Tatar at their workplace (in 2011/2012). In 2001, the figures were 41.5% and 1.2% respectively.

The records show that the number of Russians interested in learning Tatar has fallen twofold. While in 1994 this amounted to 63% of Russians, and in 1997, 59% considered it important for their children to know and learn Tatar, in 2011/2012 this included only 23% of respondents. Low motivation for learning the Tatar language is the major problem. As an instrument of social mobility, Russian was chosen in first place (81.3% of interviewed school children in 2011/2012), then foreign, European languages (77.2%), and only after that the Tatar language (34.3%) [Musina ed., 2011].

While national education provides obvious advantages to students in the early stages as it is easier for children to learn in their native language, later on, when they advance to higher education, they encounter problems (students who finish Tatar schools find themselves disadvantaged as they have to write essays and take exams in Russian). Between 1990 and 2000, each prospective student in Tatarstan, regardless of their chosen university, had the opportunity to select their language when taking entrance exams. The problem got worse with the introduction of the USE (Unified State Examination). In Tatarstan, attempts were made to address the issue by introducing the UNE (Unified National Exam), valid only for universities in Tatarstan, in which the Federal Control–testing instrumentation (CTI) and USE tasks were translated into Tatar. But the attempts failed. The number of graduates wishing to take the USE or SFE (State Final Examination) in the Tatar language has been steadily declining. In 2011, the EGE on Tatar language and literature was taken by 40 people (57 in 2010), of which 37 took the exam on Tatar language (55 in 2010), and 3 took the exam on Tatar literature (2 in 2010) (see Table 3.23). In 2012, in 25 out of 43 municipal districts of Tatarstan, there was not a single graduate who chose to take the SFE on the Tatar language. Not a single application for the GIA in elective subjects in the Tatar language was received from the 16 municipal districts of Tatarstan. In Kazan, only graduates from one school in the Moscow district applied. In all of the republic,

only 500 graduates expressed a desire to take their exams in Tatar.

The incompleteness of national education and lack of graduate education negatively affect the situation as well. The question of the establishment of a Tatar National University, which the Tatar intelligentsia has been dreaming of for so long, was firstly raised by the Supreme Council of the RT in 1991 and 1994, discussed by the State Council of the RT in 1998 and at the second meeting of the World Congress of Tatars in 1997. However, such a university has not been established. After the Tatar State Humanities University (TSHU) and then the Tatar State Humanitarian and Pedagogical Institute (TSHPI) were liquidated with the establishment of Kazan Federal University, the question was de facto excluded from the agenda.

Even in the already existing universities, instruction in the Tatar language was not approved. In the 1990s, Tatar groups opened in nearly every university in the republic (the first ones appeared in 1993 at the agricultural academy, the civil engineering academy, and Kama Polytechnic Institute). In 1997, the Inter-University Scientific Methodological Council was established. Its major objective was to provide the teaching process with necessary literature and to develop scientific terminology in Tatar.

There are two basic approaches in selecting which subjects should primarily be taught in Tatar. According to R. Yusupov, Tatar should primarily be the language of instruction in pedagogical universities. Humanitarian subjects related to culture, music, and arts should be taught in two languages. Programmes for

specialists who will work in the countryside or public service (medicine, transportation, etc.) should also be bilingual [Yusupov, 1998, p. 12]. The necessity of Tatar-language instruction in technical universities, in Yusupov's opinion, raised serious doubts, for 'the majority of engineering terms were international, and the graduates of those universities would have to work for large-scale enterprises where Russian was the language of communication' [Yusupov, 2002, p. 3].

N. Tuktamyshev had a different perspective on the issue. He developed the idea of bilingual higher education aimed at expanding graduates' opportunities in the job market [Tuktamyshev, 2001, p. 43]. On the basis of teaching practices at Kazan State University of Architecture and Engineering (KSUAE), he proved that instruction which took into account peculiarities of bilingual education yielded positive results on students' academic performance and social adaptation. During further work, this principle was fully supported by other researchers in the field [Murtazina, 2012b]. Presence of the Tatar language in the higher education system is regarded as not only the logical termination of a complete loop of continuous education in the native language but also as the requirement for the viability and development of the language, which allows it to fully function in the academic sphere [Yagfärov, 1993, p. 3].

A number of ideas for developing higher education in the Tatar language and projects on its theoretical foundations were worked out [Fätxullin, Şakircanov, Narbekov, 1999, pp. 10–15; Yuldashev, 1998, p. 38]. How-

ever, due to shortages of qualified personnel and absence of necessary course books in Tatar at the first stage, of dedicated policy on higher vocational education in Tatar, of effective mechanisms of its implementation, and in recent years, also due to a reduction in those wishing to study in the native language, these groups managed to survive and gain a foothold only in those universities where there were enthusiasts captivated by the issue (primarily technical universities and some faculties of the TSHPI (Faculty of Mechanics, Faculty of Physics, and others)).

Another aspect of the problem is the learning of Tatar. The Tatar language began to be taught in all technical training colleges and technical institutions from the 1989/1990 academic year; enrollment in Tatar groups in pedagogical institutes increased by 2.5 times [Gataullina, 2002, p. 21]. From the 1991/1992 academic year, the implementation of bilingualism in Tatar universities began. In the TSHPI and later in other universities, the Tatar language was taught as the official language of the Republic of Tatarstan, along with Russian. A 64-hour course in Tatar as a foreign language was introduced at all of the faculties [Kharisov, 1998, p. 40]. The teaching of Tatar as a native language was already included in the 1988/1989 academic year. Tatar language departments opened in almost all universities [Väliev, 1998, p. 84].

A problem with the methodology of teaching Tatar as a foreign language to Russian-speaking groups was a major issue, as was teaching it at comprehensive schools [Salekhova, 1993; Safiullina, 2010]. It was particularly acute in comprehensive schools, where due to an inefficient teaching methodology focusing primarily on the cramming of grammar rather than listening comprehension, real functional bilingualism of graduates who studied both official languages was not achieved.

Instead of focusing on the methodology and quality of teaching, education bodies got lost in the purely external, formal side of the issue, trying to expand the 'reach of education in Tatar' and 'reach of studying Tatar'. According to the official statistics of the Ministry of Educa-

tion and Science of the Republic of Tatarstan, the percentage of Tatar pupils receiving education in the Tatar (native) language went from 17% in 1989 to 59% in 2007. However, as the analysis suggests, this growth was achieved by means of 'mentality classes', which, technically, combined the statistical data of those being 'educated' and 'raised' in the native language. To this end, 'the reach of education and upbringing' euphemism was coined. After 2007, the percentage of Tatar pupils receiving education in Tatar was decreasing and reached 46.1% in 2010. By 2000, the number of pupils studying Tatar ('reach of studying') amounted to 99.1%; by 2009, this number rose to 100%, changing only a few tenths of the percentage point. At the same time, the quality of education leaves much to be desired. As a result, parents opt for Russian language schools, graduates of which hold higher chances of being accepted to any Russian IHL.

In the 1990s, the number of schools and gymnasiums providing education in the native language rose at a comparatively fast pace as well as the number of pupils enrolled. However, by the beginning of the 21st century, the situation changed. Both the number of pupils in Tatar schools and the number of Tatar schools decreased (through 'optimization', that is, closure of under-filled rural schools and transition of some schools to Russian-language instruction, etc.). As of 1 September 2006, in the Republic of Tatarstan there were 1,075 schools with Tatar-language instruction (1,093 in 2005). Between 2008 and 2011, this number went down from 1,138 to 852. In addition, the number of pupils enrolled also decreased from 76,500 to 71,400 respectively. We should also highlight a trend toward decrease in the number of Tatar educational institutions of the new type (lyceums and gymnasiums) from 98 to 69, though the number of pupils in them increased from 23,000 to 26,500. There is a clear trend towards increase in the number of mixed (Tatar-Russian, Russian-Tatar) schools from 356 to 371, whereas the number of pupils enrolled decreased from 22,000 to 15,000. All this has a lot to do with decline in the total number of

students in Tatarstan in general and Tatar students in particular (from 202,900 in 2008 to 180,600 in 2011). The percentage of pupils receiving education in their native language fell from 47.6% to 44.41% within this period.

The transition to per capita funding of educational institutions poses additional difficulties to the development of national education. Supporting under-attended national schools and classes, especially in rural areas, becomes economically inefficient. It goes without saying that, if the region grows, schools with Russian-language instruction are founded.

The situation is even worse with Tatar education outside the Republic of Tatarstan.

Article 14 of the Constitution of the Republic of Tatarstan, as well as the Treaty 'On the delimitation of jurisdictional subjects and powers between bodies of public authority of the Russian Federation and bodies of public authority of the Republic of Tatarstan' provide that the Republic of Tatarstan shall assist in the development of national culture, language, and the preservation of the identity of Tatars living outside the Republic of Tatarstan. However, the implementation of this faces a range of significant obstacles. In practice, Tatarstan is de facto deprived of effective leverage over the preservation and development of the Tatar language and system of Tatar education beyond the Republic of Tatarstan.

Even though from 1998 to 2008 the number of Tatar-language schools in the regions of the Russian Federation doubled (from 13 to 26), and by 2009 rocketed (to 416), mainly owing to Tatar schools in Bashkortostan (357), in 2010–2011 there was a decrease (from 371 to 345). The number of pupils enrolled decreased from 16,600 (2009) to 15,600 (2010) and then 14,300 (2011). As of the 2010/2011 academic year, the greatest number of pupils receiving an education in the Tatar language was in Bashkortostan (9,800), Perm district (1,700), and the Chuvash Republic (1,500).

In the regions of the Russian Federation, there are educational institutions where Tatar is taught or is the language of instruction, but their number is also decreasing. Thus, from 2009 to 2011 the number of educational insti-

tutions in which the native (Tatar) language in RF was taught went down from 1,300 to 1,300. The majority of such schools operated in Bashkortostan (962 and 929 respectively), Ulyanovsk oblast (68 and 56), Tyumen oblast (57 and 57), and Orenburg (60 and 57). The number of schools did not change only in 13 regions; in all the other regions, it went down. A positive trend is observed only in the Chuvash Republic (7 and 10) and Astrakhan (11 and 12).

Recent statistical data from the Ministry of Education and Science of the Republic of Tatarstan confirms the downward trend in the regions of Russia. In the 2011/2012 academic year, the number of educational institutions where the native (Tatar) language is taught further decreased (to 1,000), whereas the number of schools offering instruction in the native (Tatar) language dropped drastically (to 294).

In 2009–2011, the number of pre-school educational institutions with Tatar as the language of instruction slightly decreased (from 480 to 479), with most of them operating in Bashkortostan (371) and Perm district (38). In the regions of Russia, the number of Sunday schools offering instruction in the native (Tatar) language has remained unchanged since 2009 (there are 12 schools in 10 regions).

At the same time, the attendance numbers of Tatar classes in the regions of Russia is an acute problem. Due to the absence of pupils and the unwillingness of parents to educate their children in their native language, Tatar schools do not open (Chelyabinsk oblast, Magnitogorsk; Sverdlovsk oblast, Yekaterinburg; etc.); while Sunday schools (Komi Republic) and under-attended Tatar schools and classes close.

An analysis of the situation in the regions of the Russian Federation shows that the proportion of educational institutions where the native (Tatar) language is taught or is the language of instruction, as a rule, accounts for about 1–2% of the total number of educational institutions in the region (less than 1% in 11 regions). Exceptions are Bashkortostan (37.3%), Tyumen oblast (10.7%), Ulyanovsk oblast (10%), Perm district (6.3%), Orenburg (5.2%), Republic of Mordovia (5.3%), the Chuvash Republic (4.8%), and a few others.

The massive shift to Russian-language education is observed in Tatar schools in many regions of the Russian Federation. According to the information provided by the Ministry of Education of the Republic of Bashkortostan, in 2000 there were 604 schools with Tatar-language instruction, 404 in 2005, and 298 in 2011. At the same time, the number of schools where Tatar is taught went from 553 in 2000 to 715 in 2005 and 929 in 2011. The teaching of the Tatar language remains the only characteristic feature in a number of Tatar schools; meanwhile, the basics of folk pedagogy and cutting-edge pedagogical technologies are not sufficiently applied in the education of children.

The policy of ‘optimization’ of educational institutions also negatively affects the system of national education. In Bardymy district of Perm krai, for instance, there used to be 68 Tatar schools. Today, due to the optimization of budget funds, they are merged into 29 educational institutions. Amalgamation often occurs through the incorporation of Tatar schools into Russian-language schools. At the same time, the legitimate interests and requirements of pupils themselves, as well as their parents' opinions, are not always taken into consideration.

Serious problems are encountered in the training of Tatar teachers. Traditionally, national pedagogical personnel were trained in a number of higher schools of the subjects of the Russian Federation besides the Republic of Tatarstan (Moscow State Pedagogical University, Orenburg State Pedagogical Institute, Astrakhan State University, Bashkortostan State Pedagogical University, Sterlitamak State Pedagogical Academy, Tobolsk State Social and Pedagogical Academy, Bashkortostan State University, Mordovia State Pedagogical University, Tyumen State University). But the number of students applying to Tatar departments and classes in these universities is gradually decreasing.

Even though applicants from the regions of the Russian Federation are offered the opportunity to enroll in the universities of Tatarstan on the basis of a recommendation letter from the Ministry of Education and Science of Tatarstan Republic (MEandS TR), the republic itself is not able to provide enough pedagogical personnel to all Tatar educational institutions in the regions of Russia without restoration and development of Tatar departments in the universities located in the regions with large numbers of Tatar residents.

The factors that drove the explosive growth of Tatar national education at the end of the 20th century were: the overall democratization of society and development of Tatar national identity, the rich cultural and pedagogical heritage of Tatar educators of the beginning of the 20th century, and the significant scientific and pedagogical and economic potential of Kazan and the Republic of Tatarstan.

In order to reform the educational system in Tatarstan, the initial goal was to exempt it from the totalitarian hangover and to democratise. The evidence shows that this task was more or less completed. While acknowledging some progress in the implementation of Tatar as the official language of education, we should also admit that many of the tasks declared in state documents were not fully implemented. Thus, the next stage of the process is the development, perfection, and integration of the national education system into the modern domestic and global educational space and the multi-cultural Russian society. Despite all the problems and failures of the past years, the post-Soviet era has seen considerable progress in the way that Tatars view their native language and culture; young people have ceased to be shy about speaking in their native language. Tatarstan is one of the few regions in Russia offering secondary education entirely in the native language.

CHAPTER 7

Place of Tatarstan in the Global Coordinate System of Socio-Economic Development of the Volga Region and Russia

Vadim Khomenko

§ 1. Overview of the Level of Socio-Economic Development of the Republic of Tatarstan

The Republic of Tatarstan is one of the few regions in Russia where the stability of the socio-economic situation is based on a combination of a rich natural resource base and a high level of scientific and human capital.

Tatarstan is one of the most economically advanced regions in the Russian Federation today. For instance, since 2002, the republic has ranked first in the Volga federal district in terms of per capita gross regional product (GRP). Starting from 2006, the difference between Tatarstan and the other developed regions in Volga federal district has noticeably increased for this indicator. Even in the crisis year of 2009, when oil prices decreased, the volume of per capita GRP in Tatarstan amounted to 234,300 roubles; in comparison, this indicator was 201,300 roubles for Perm district; 196,200 roubles, for Orenburg oblast; and 182,600 roubles, for Samara oblast [Regiony' Rossii, 2011, p. 354].

The most intensively used natural gift of the region is oil. Proven reserves amount to 900 million tons. Associated gas is also mined in the republic; there are promising petroleum bitumen reserves (36% of the total reserves of the Russian Federation).

The republic also possesses commercial reserves of limestone, dolomites, mortar sand, and clay. They are used for production of brick, building stone, gypsum, sand and gravel mixes. There are reserves of coal, oil shale, zeolite, copper, and bauxite.

The traditionally intensive agricultural sector is based on a temperate continental climate and a significant area of agricultural land, which amounts to 4,503,400 hectares (8.7% of the

corresponding indicator for the Federal Volga district), including 3,455,300 hectares of arable land (9.7%).

The republic holds strong industrial potential. The leading industries are oil production and petrochemicals, aircraft construction, mechanical engineering, and instrument making. The fundamental structure of Tatarstan's diversified economy was formed in the Soviet period. Industrial enterprises and industrial cities include: Tatneft OJ, KAMAZ OJ and the city of Naberezhnye Chelny, the Nizhnekamsk petrochemical complex, including the tire industry and the city of Nizhnekamsk, Kazan aviation complex, which manufactures airplanes and helicopters (Tu-160, Tu-204, Il-62, Mi-17, ANSAT, Aktai, etc.), and many others — among them, enterprises which were evacuated here from European Russia during the Second World War.

The republic has a well-developed transport network, including highways, railroads, four navigable rivers (the Volga, Kama, Vyatka, and Belaya), oil and gas pipelines, and airlines.

Tatarstan has long positioned itself as Russia's high-end educational and scientific center, forming the potential necessary for the region's innovative development. The Tatarstan Academy of Sciences, RAS Kazan Scientific Center, and more than 60 branches of research and design institutes operate in Kazan. Along with an extensive network of state and private institutions of higher education, there are two national research institutes and one federal university in the republic, which are significant factors in determining the region's unique research and education base.

§ 2. Tatarstan in the Transition from the 20th to the 21st century and the Modern Assessment of the Socio-economic Development of the Volga Federal District

Tatarstan's historical trading profits, based on its unique geographical location, were lost or substantially replaced by other means of economic development since industrial production was moved here during World War II, and, more importantly, due to the discovery of rich oil reserves in the 1940s. However, historical memory stipulates a careful examination of the centuries-old opportunity of obtaining rent payments based on geography in conjunction with organic industrial development. During Russia's integration into the international economy, this fact should form the basis of business forecasts and strategies for regional and federal development. It is also necessary to note the fact that after the republic obtained limited sovereignty at the turn of the 20th century, it made an attempt to preserve its existing industrial potential and achieve modernization based on innovation in the context of developing market relations in order to become a powerful trade and industrial centre. Similarly to the Russian Federation, Tatarstan declared all the natural wealth in its territory as the assets of the nation. The main provisions of national sovereignty were enshrined in the Constitution of the Republic of Tatarstan. The republic entered into negotiations with the Centre with a view to establish contractual relations on matters dealing with administration, ownership and activities in the international arena. On 15 February 1994, the treaty between the Russian Federation and the Republic of Tatarstan was signed on the mutual delegation of powers between Russia's governmental authorities and the authorities of the Republic of Tatarstan. In furtherance of this Treaty, more than a dozen intergovernmental agreements on ownership, military construction, banking, and budget relations, training, and other areas have been signed.

The republic's development at this stage was characterized by a 'soft entry into the market', possibly offsetting the social conse-

quences of 'shock therapy'. Efforts were made to support production and ensure social protection. An important feature of the transition to the market economy was the specialized mechanism of property privatization in the republic. The difference was in the fact that NPA (Name-bearing Privatisation Investment Accounts) were used in Tatarstan along with vouchers; they were registered in the banking system and, consequently, did not appear on the speculative market. The second feature was the fact that the valuation of the property of privatized enterprises was carried out by taking into account the property revaluation factor, which was higher than the Russian one by 26 times. The high price of objects under voucher privatization in Russia at the first stage allowed Tatarstan to keep most of the property and manage it.

By the end of the first decade of the 21st century, there were 33 long-term and 60 departmental programmes in the Republic of Tatarstan. In addition, the republic has been actively involved in the implementation of the federal target program (FTP) and the federal address investment program (FAIP). In 2010, the republic was included in 20 of 53 existing federal programs. By 2010, federal funding for the organization of events in the Republic of Tatarstan reached more than 27 billion rubles, including approximately 11 billion rubles for the Universiade [Murakaev, 2010].

Due to tax benefits and the adoption of the Law on investment activities of the Republic of Tatarstan, the list of companies that implement large investment projects in the republic has increased significantly. Among them are: Taneko, OJC (complex of refineries and petrochemical plants in Nizhnekamsk), the cost of the project amounted to 265.9 billion rubles; 'Development of Kazanorgsintez, OJC', the cost of which consisted 21.5 billion rubles; Severstalavto-Kama, LLC (construction of a plant for the production of FIAT cars in Naber-

zhnye Chelny) the cost of which – 36.5 billion rubles, as well as many others. The republic's Investment Memorandum as of the beginning of this decade included 120 investment projects, totaling more than 1 trillion rubles.

Governmental guidelines of recent years have been aimed at creating a balanced, highly developed industrial complex with capacious foreign economic relations. It's significant number has been implemented but some problematic issues remain as is, it can be seen from the analysis below.

One of the enduring foundations of Tatarstan's modern economy, as noted above, was formed more than half a century ago—the mining industry (tables 3.24 and 3.25). Before the crisis, about 30% of gross added value was produced here. During the crisis period in 2008–2009, this share declined by about 25%, amounting to 22.5% in 2009. However, it was the result of lower oil prices. As it can be seen, at the countrywide level there was also a noticeable reduction in the share of extractive industries—from 12.8% to 9.7%. In 2011, the share of fuel and energy mineral extraction rose again and amounted to 28.0% of the volume of shipped goods produced by regional enterprises (organizations) in the Republic of Tatarstan; the chemical industry accounted for 15.2%, the manufacture of vehicles and equipment for 15.0%, and the production of petroleum products for 11.9%.

As it is shown in Table 3.26, Tatarstan stands out significantly by generalized gross indicators of economic development among the best-performing regions of the Volga federal district. With a wide margin, the republic is ahead of the Republic of Bashkortostan, Samara oblast, Nizhny Novgorod oblast, and Perm krai in the all-Russian ranking by: Gross regional product per capita; investments in fixed capital per capita; receipt of taxes, fees and other mandatory payments to the Russian Federation's budget per capita; commissioning of the total housing area per 1,000 people; number of students of educational institutions of higher education per 10,000 people. Tatarstan leads the way in agriculture as well. Such results provide the

foundation for intensifying economic and innovative development and the growth of the population's welfare.

However, certain raw materials essentially determine the specificity of different output parameters. By the volume of manufacturing enterprises, Tatarstan lags behind Bashkortostan and Nizhny Novgorod oblasts, by per capita income—Samara oblast and Perm krai, by retail trade turnover per capita—Bashkortostan and Samara oblast, by the number of personal passenger cars per 1,000 people—Bashkortostan, Samara oblast, and Nizhny Novgorod oblast. By the ratio of roads paved and the total length of public roads Tatarstan is behind all of these regions.

From the above we can draw the following challenges of Tatarstan's economy:

1. The production of raw materials 'depletes' investment resources while minimizing the utilization of the republic's intellectual potential and the redistribution of tax revenues to the federal budget, which can be classified as 'natural rent'.

2. The given model is sufficiently stable, thus limiting the possibility of expanding the range of manufacturing industries, individual infrastructure areas and household incomes, which are distributed among other alternative areas of life.

The republic undertakes certain steps to solve these problems: Additional refining facilities are under construction in Nizhnekamsk, automotive production development and modernization plans are being developed, etc.. However, the factors preventing fundamental changes in the situation include the following: The general concentration of Russia's capital in the raw-materials branches of the economy, the impact of that capital on the federal government's activities and the absence of clear federal plans for the development of technological production with a clear territorial strategy for disbursing production capacity, the entry of Russian big capital into the economic structures of previously semi-independent 'locomotive' regions, the functioning of the fiscal intergovernmental system, etc. Nevertheless, the Republic has the ability to limit the effect

of these factors by engaging in political dialogue with the federal government, focusing on breakthrough models and schemes of social and economic development, and using a

critical approach towards previously adopted strategic assessments and decisions through consultation with the science and business communities.

§ 3. Tatarstan's Cooperation-Based Positioning as the Global Vector of Historical and Future Leadership

The most evident path of sustainable innovative development of Tatarstan's economy is associated with increased output of high-tech products for the domestic market, CIS countries, and the Customs Union. The large domestic market and the markets of neighboring countries are strategically important for Russia's economic security and anti-crisis policies. In addition, they serve as an intermediate stage for the accumulation of competitive advantages on technological markets and gaining a foothold in developed countries. Tatarstan is able to simultaneously perform its traditional role as a bridge between Europe and Asia as well as a domestic inter-regional cooperative center, thereby strengthening its technological leadership and utilizing historical trade advantages, bolstered by promising new methods of cross-border transportation and logistics services. The use of a modernized cooperation-based trading position, the contours of which were set in the 19th century, improved by the addition of industrial cooperation—this is the basic thesis that will determine the future competitiveness of the region. The genesis and problematic positions of the corresponding set-up are determined by the following analytical cross-sections.

As can be seen from Table 3.27, in the structure of exports and imports with non-CIS countries, Tatarstan is predominantly positioned as a producer of raw materials. The share of raw materials in total exports is more than 80%, while the share of products of chemical, petrochemical, machine building, and mechanical engineering industries is less than 20%. In regards to imports, the ratio is reversed: The share of products of machine building, mechanical engineering, chemical and petrochemical industries approaches 89%.

The situation is different in relation to the CIS countries. In this case, Tatarstan's profile is formed as a high-tech region. Here, the share of products from the chemical and petrochemical industries, machine building and engineering make up about 50%, which is even slightly

higher than the share of mineral products. In regards to imports, there is a significant decline in the share of products from machine building, mechanical engineering, and the chemical and petrochemical industries—65%. Obviously, this structure is more balanced; it reveals equal development levels and the prospect of fully equal partner relations, in which each country can accumulate a positive supply of raw materials as well as high-tech industrial competitive cooperation.

However, as can be seen from Table 3.28, the ratio of exports and imports of products by the republic's enterprises and organizations reveals a huge advantage in favor of non-CIS countries. The total exports and imports of these countries exceeds the corresponding total for CIS countries by approximately 8 times. The levelling of this imbalance is a promising sphere of the Republic's strategy for economic and foreign trade development. The development dynamics of neighboring countries, Russia's 'soft underbelly', will further increase the relevance of this task.

Interregional trade defines an even more advantageous position for the republic. In 2011, certain types of products in Tatarstan's structure of exports were presented as follows:

- Trucks—25.5%;
- Synthetic resins and plastics—18.5%;
- Tyres—8.2%;
- Oil—7.5%;
- Diesel fuel—3.6%;
- Steel pipes—1.4%;
- Fuel oil—1.3%;
- Synthetic rubber—0.9%;
- Other—5.2%.

In this structure, the share of raw materials and primary products of processing is less than 10%. At the same time, the share of technological products appreciably exceeds 50%. As for the structure of imports to the Republic of Tatarstan, consumer products accounted 42%, for the most significant share of imports from other Russian regions in 2012. It indicates the

Table 3.27

The Share of Individual Products in the Export and Import Structure of Enterprises and Organizations in the Republic of Tatarstan in 2010*

Product item	Export		Import	
	Non-CIS countries	Countries CIS	Non-CIS countries	Countries CIS
mineral products	83.0	47.1	1.0	5.9
products of chemical and petrochemical complex	11.0	28.5	15.2	5.6
machinery, equipment, tools and transportation means, and their parts	5.6	20.2	73.9	59.0

*Table compiled by data: [Respublika Tatarstan, 2010, p. 487].

underutilized production of end productions in the republic.

The top ten regions that are deeply engaged in trade and economic activities with Tatarstan include the city of Moscow, the Moscow and Samara oblasts, the Republic of Bashkortostan, the Chelyabinsk, Nizhny Novgorod and Sverdlovsk oblasts, St. Petersburg, the Chuvash Republic, and the Volgograd oblast, accounting for more than 55% of Tatarstan's interregional trade. However, with the exception of separate average figures for the development of regions, for example, the Chuvash Republic, Tatarstan itself is not the leading partner in most cases. This is especially relevant for large 'locomotive' regions. The republic's interregional trade

turnover in 2010 amounted to 328.5 billion rubles, which provides a basis for presenting the following cumulative total turnover structure that goes beyond Tatarstan: Non-CIS countries—56.2%, CIS countries—7%, Russian regions—36.8%. That is, the amount of inter-regional commodity turnover and commodity turnover with the CIS countries is substantially less than that with non-CIS countries. This indicates that the benefits of the sectoral structure of the Republic of Tatarstan have not been used in full in interregional commodity turnover and commodity turnover with CIS countries. Moreover, the range of non-CIS countries involved in active trade relations with the republic is quite narrow. Dominating

Table 3.28

Structure of Total Exports and Imports of Products by Enterprises and Organizations of the Republic of Tatarstan per Group of Countries in 2010*

Countries	Export		Import		Total (export and import)	
	Volume (mln USD)	%	Volume (mln USD)	%	Volume (mln USD)	%
Non-CIS countries	14596.3	89.8	2148.8	83.3	16745.1	88.9
CIS countries	1661.6	10.2	428.5	16.7	2090.1	11.1
Total	16257.9	100.0	2577.3	100.0	18835.2	100.0

*Table compiled by data: [Respublika Tatarstan, 2010, pp. 487–489].

positions are held by European countries and a limited number of Asian countries, with Turkey in a traditionally prominent place. As of 2010, the structure of countries accounting for 1% or more of Tatarstan's foreign trade turnover was as follows: Poland—16.3%; Germany—9.7%; the Netherlands—9.2%; Italy—8.4%; Turkey—8.0%; Hungary—6.3%; Belarus—4.9%; Latvia—2.9%; France—2.6%; Croatia—2.6%; Kazakhstan—2.5%; China—2%; Belgium—1.9%; Ukraine—1.9%; Great Britain—1.8; Bulgaria—1.5%; the USA—1.4%; Finland—1.3%; Sweden—1.2%; Bosnia and Herzegovina—1.1%; Canada—1.1%; Egypt—1%. In short, positive associations with Tatarstan's function today as the 'bridge between Europe and Asia' cannot be established. However, the objective course of economic development on Asian markets and an increase in the share of high-tech production in the Republic of Tatarstan will shift it towards a well-balanced structure of trade turnover. This process will substantially accelerate the formation of the largest international transport corridor projects passing through the territory of the republic. This relates to the existing 'West-East' ITC (Transsiberian), the 'North-South' ITC under formation, and the new 'Europe-Western China' ITC, in the phase of construction.

In particular, the international transport corridor 'North-South' will connect Central Europe and Scandinavia with South Asia and the Middle East. An agreement on establishing such a corridor was signed on 12 September 2000 at the II International Euro-Asian Conference on Transport, held in St. Petersburg, by the Minister of Transport and Communications of Russia, the Minister of Transportation of India, and the Minister of Roads and Transportation of Iran.

The idea of creating the 'North-South' transport corridor appeared in the early 1990s. The project is of strategic importance for Russia. The 'North-South' corridor is intended to return the direction of foreign trade cargo flows along the Caspian Sea coast and Iran, and to significantly increase the volume of trade flows with Kazakhstan, Central Asia countries and China. Up to 15% of the cargo transportation between

Western Europe and East Asia can be carried out through Russia. The Russian budget will annually receive payments for transit. At the same time, the carriers themselves, as it is written in the agreement, will be exempt from paying taxes.

After the 48th session of the UNO Economic and Social Commission for Asia and the Pacific, a comprehensive project for the development of land transport infrastructure in Asia was approved. The Russian Federation has started to develop a national plan for the implementation of the goals set out by the participants of the project. Considerable attention is paid to the development and improvement of routes in the 'East-West' direction with the use of road networks, linking Russia with Kazakhstan, Mongolia, China, and the Korean peninsula. Ongoing studies will determine the optimal and mutually beneficial international routes for transit. In general, the deployment of transport corridors in eastern and south-eastern areas has certain advantages in comparison with the southern direction, given the rapidly developing Chinese economy and the complex geopolitical situation in South Asia.

One of the routes being considered to develop international highways in the North Europe–Central and East Asia direction is the 'St. Petersburg–border of the Republic of Kazakhstan' route within the new road corridor 'Europe–Western China'.

The special role of the Republic of Tatarstan in the system of international transport corridors is secured by a number of circumstances. Tatarstan is one of the most economically developed regions of Russia. At the same time, the republic has an exceptionally favorable economic and geographical position, being located almost in the center of the economically developed Volga federal district, between the industrial regions of Central Russia and the Urals. The region occupies a favorable position with respect to important raw material bases in the Urals and Siberia, and agricultural areas in the Volga region.

Tatarstan has a cost-effective transport and geographical position, being at the intersection of air, rail, road and river routes of stra-

tegic national importance. Making use of this feature, Tatarstan is constructing the Sviyazhsk multimodal logistics center—one of the largest and most unique in Russia. This is the basis for the renaissance of Kazan's role as Russia's 'Gate to the East'. It determines the special mission of Tatarstan among other Russian regions. The words of the President of Russia, said at a meeting dedicated to the 1000th anniversary of Kazan on 26 August 2005, should be viewed in this context: '...building strong and lasting relationships with the Kazan Khanate, Russian rulers began to consciously shape Russia as an integrated Eurasian power. I would like to stress: here, in the Volga region, the role of Russia as a bridge between the two great civilizations—European and Asian—is more obvious than anywhere else' [Putin, 2005].

Road transport plays a particular role in the modern world. Companies in virtually all sectors of the Republic of Tatarstan prefer this mode of transportation for their goods. Road transport is chosen 3.7 times more frequently by Tatarstan's industrial production enterprises than rail by using the complex parameter 'transport speed/cost of transportation'. Road transport is an absolute priority for industries such as textile, food, dairy, as well as all branches of the agri-industrial complex of the republic. On average, the share of costs spent on truck transportation in recent years was about 6% of the total cost of production in the material-manufacturing industry, while rail and inland waterway transport modes accounted for much smaller figures and did not exceed one percent. This clearly demonstrates the high demand for road transport. Based on this, it can be argued that the Republic of Tatarstan has the ability to provide effective management and organization of large sections of international road corridors. The Kazakh government is positive about the participation of the Republic of Tatarstan in the 'Europe-Rus-

sia-Kazakhstan-China' highway project. After a meeting attended by the Prime Minister of the Republic of Tatarstan R. Minnikhanov (current President of the Republic of Tatarstan), the Prime Minister of Kazakhstan D. Akhmetov reported about the unique possibility to build the shortest possible road, which would include Kazan along with St. Petersburg, Orenburg, and several cities in Kazakhstan.

Tatarstan's participation in the construction of this route was supported by the President of the Republic of Kazakhstan Nursultan Nazarbayev, and governors of the regions, the territory of which was included or in the vicinity of the corridor, including the Vologda, Leningrad, Kostroma, Kirov, and Orenburg oblasts, and St. Petersburg.

Given the republic's economic potential, it can play a leading role in the formation of the central company to develop and operate the Russian section of the road corridor under consideration. The corresponding shares in the company's authorized capital may be made by KAMAZ, OJC and a number of other national companies, including Tatneft, OJC. The company's functions may include cargo shipping within the road corridor, maintenance, and refueling. Cars manufactured by the Tatarstan-based enterprise are suitable for the transportation of goods all over the Russian section, as well as over large parts of the Kazakh and Chinese sections, taking into account the quality of roads and the nature of goods being transported through the territories of these states. In the case of direct rehandling of container cargos at (mainly western) border control points from foreign vehicles to Russian ones, the time spent on customs examination of the vehicles will be lower, which will significantly reduce the time spent during border-crossing operations and will increase the efficiency of the total transport cycle.

§ 4. Interbudgetary Relations as a Strategic Incentive in the Development of the Republic of Tatarstan

Interbudgetary relations, both in theory and in practice, are the main mechanism for financial interconnection, ensuring the existence of the country's fiscal system, capable not only of maintaining but also of destroying the integrity and unity of the federal government as a result of the weakening of regions, and then of the federal center itself. In this sense, these relations are not only an economic but also a political aspect of social life in Russia.

The current level of development of inter-governmental relations is marked by reasonably clear eclecticism, complexity and subjectivity, which reduce the efficiency of the entire system of power relations between the center and the regions and between the region and the territories of local governments, and which largely determine the lack of strong and effective state regional policies. Ten years ago, these shortcomings and problems could be explained by the short duration of Russian federal relations, but now it can only be described as one of the characteristics of long-term neglect of the problem of Russian federalism by the country's authorities, leading also to the weakening of relevant scientific, social and political potency. Much of the scientific research in this case is limited to modernizing the existing construction rather than changing its backbone foundation.

Developed and effective interbudgetary relations are one of the most important criteria of the maturity of a federal state. As international practice shows, these relationships are constantly evolving and acquiring specific features in each country. But it would be very shortsighted to fail to see the similarities inherent in them.

The formation of Russia's model of budgetary federalism is associated with a number of fundamentally unique conditions. For this reason, the process cannot be reduced to mechanically copying the Swiss, German, American, etc. options in the early stage. Nevertheless, it is important to identify a number of similarities that unite the Russian model with

relevant counterparts. It is necessary to take into account that tax systems of developed countries are strongly differentiated. The differentiation is characterized either by the predominance of characteristics of federalism or unitary government (the USA and France), or the nature of the initial processes that led to the formation of the federal state—'bottom-up' (the USA) or 'top-down' (Germany). Both unitarianism and the 'top-down' formation of a federal state determine a reduced autonomy of regional and local budgets, as well as the strengthening of interbudgetary redistribution processes.

It is of great significance to define the appropriate targets or groups of targets that determine the initial orientation of the entire process of forming the basis for budgetary federalism, no less than the terms and conditions of it. They include:

- Balancing territorial development;
- Solving of public problems and meeting national interests (in terms of production and transport infrastructure, defense capability, providing basic levels of education and health, etc.);
- Creating incentives for the development of initiatives made by individual territories.

In Russia, the list of targets is being, or may be, expanded:

- Policies for social and cultural development of individual nations and peoples (which was not originally observed in the formation of, for example, German and American interbudgetary models);
- Creating additional centripetal economic gravitation, without which the largest Russian territorial space is doomed to decay under the influence of market processes.

While Russia's first additional goal determines the strengthening of fiscal decentralization processes, the second one focuses on their flow in the opposite direction.

The contradiction between the 'compression' of tax revenues to regional budgets and the relatively small volume of 'secondary' re-

source reallocation in favor of the country's regions was characteristic of the late 1990s. It remains in force at the beginning of the new century as well. In 2001–2002, the ratio of tax revenues to be distributed between the federal treasury and regional budgets was about 50/50. By 2006 Russian regions were receiving just over 30% of the taxes collected. As a result, in 2006 the share of internally-raised funds in regional budgets decreased to 13% [Budget circulation, 2007] (revenues from regional and local taxes as early as 2005 were only 13.2%). The situation did not change much even when it came to strong regions. Thus, by the end of 2011, the distribution of taxes collected in the territory of Tatarstan for the federal and republican budgets was as follows: 68% of those taxes went to the Russian budget, 32% of them remained in the republic's consolidated budget. And in reverse: even in the prosperous year of 2007, intergovernmental transfers accounted for more than one-third of federal spendings. The same concept was applied in the formation of municipal budgets.

Excessive 'compression' of budget capabilities of Russia's regions takes place not only in quantitative but also in qualitative terms. This is reflected in the fact that the vast majority of tax revenues from regional and local budgets is formed at the expense of deductions from federal taxes. It is important to note that in the tax structure of regional budgets, the majority is represented by so-called 'hard-to-collect' taxes. This sharply distinguishes Russia from most other federal states.

The gradual compression of the formal budgetary capabilities of the Russian regions, as well as the avoidance of the federal center to take direct responsibility for the state of socio-economic processes in these regions, gave rise to the situation in which non-budget forms of financing began to intensively develop in the country's regions in order to fulfill the commitments and responsibilities of regional authorities.

This makes them 'dependent' on the interests of regional financial and industrial groups,

decreasing the possibility of objective assessments of the region's level of socio-economic development and the development of market management principles. On the other hand, given the shortage of formal possibilities for financing of social and economic development, regional administrations can shift the responsibility for the state of their region's finances to the federal center. 'Federal budget lobbying' has been intensively developing, becoming the primary tool for assessing the quality of regional officials. It is impossible not to notice that all of this forms the prerequisite for total dependency and corruption. One of the consequences of the situation with territorial budgets has been increasing interterritorial differentiation in the budgets for socially-important expenditures and in providing the population with basic budgetary services. The differences among all categories of expenditures are declining, but very slowly, despite all formal 'efforts' to equalize regional levels via significant transfer reallocations. In 2010, this difference was approximately 13 times (Chukotka autonomous district–333,882 thous. rubles, Bryansk oblast–26,45 thous. rubles) [Calculated according to: *Regiony' Rossii*, 2011, pp. 54, 55, 838, 839]. Even if this figure is recalculated by the budget spending index (BSI), which takes into account price levels and real purchasing power, it will be at least 3-4 times. It is often said that this situation is the fate of Russia, as it lies in different climatic zones. But then we should look at it from another point of view: transfers should have a stimulating effect aimed at equalizing the levels of territorial development in Russian regions as a result of their own economic development, defined as the volume of GRP per capita. However, in 1998, the difference in levels was 9.44 times, while in 2008 it was 12.24 times (and if the Chechen Republic is considered it was 15 times) [Federal'naya sluzhba, 2008]. Ultimately, there are regions that are extremely restricted in their capabilities; they cannot form a fully-fledged regional budget in general. This logic applies to Tatarstan in full.

However, one cannot say that nothing has been formally done. There are important developments:

1. In 2001, a plan for reforming intergovernmental fiscal relations was approved within the framework of the Budgetary Federalism Development Program of the Russian Federation for the period until 2005. As part of it, authorities attempted to make income directly dependent on the success of local 'tax bases' (local economies): success in attracting investors, promotion of entrepreneurship and growth of small businesses. Here we need to single out the principle of the division of powers between different levels of government. A limited number of commitments (mandates) were entrusted to regions and municipalities; obligations not backed by funding sources were eliminated.

2. In 2005, the Law "On amendments to certain legislative acts of the Russian Federation in connection with improvements in the division of powers" was adopted. Accordingly, the creation of the "Institution of Voluntary Powers" was declared, which the regions could utilize unilaterally, even in the absence of funding sources.

3. In 2006, the Concept for improving the efficiency of interbudgetary relations and the quality of managing public and municipal finances in the Russian Federation was adopted. In 2007, the methodology for assessing 'the efficiency of regional authorities' work' in terms of expenditures of regional budgets was adopted; it included 43 indicators to evaluate the work of governors in the previous year as well as their plans for the next three years.

However, the principle of developing a tax base, including their structure and scope of initiatives, was not affected much. There was an attempt to substitute the accountability reports of regional governors to their regions' populations based on their electoral platforms with an assessment of the governors by the federal government in the conditions of a tightening power vertical.

In many aspects, responsibility for budgetary expenses has been simply lost or deliberately replaced with the creation of more points of responsibility (that is, in principle, the same

thing). We are talking about the provision of major services. Let's take school education, for example. A school, formally a municipal institution, is financed from three different budgets at the same time. In this way, classroom management is provided for by the federal budget, salaries—from the regional budget, and the cost of repairs of school buildings and technical maintenance—from the municipal budget. As they say, too many cooks spoil the broth...

Close to the start of the electoral process in 2011, the federal government introduced a package of bills, securing serious changes in the allocation of powers and budgetary resources in favor of regions and municipalities. Additional income of regions, in this case, is expected to account to up to a trillion rubles. The practical implementation can begin in 2013 and last for three to five years. The structure of the proposals is approximately as follows:

1. a number of taxes to be paid not to the federal centre but to regions directly, the tax burden will differ from region to region;

2. a limited number of commitments (mandates) is entrusted to regions and municipalities; obligations, not backed by funding sources, are eliminated.

3. a corporate income tax at a rate of 2% and a water tax, which will allow increasing the revenues of regional budgets, are transferred to the regional level additionally;

4. it is expected to develop a mechanism of incentive grants to regions, 'which reached the best results in entrepreneurship and investment development';

5. benefits for regional and local taxes, established by federal laws, are partially cancelled;

6. it is probable that excise duties on ethyl alcohol, tobacco products, alcohol products, motor gasoline, diesel fuel, etc. will be transferred to regions.

Of course, the transfer of certain taxes in the order of splitting them, and the cancellation of certain benefits increase incentives for regions. It fits into the concept of 'improvement', not the 'fundamental change' in the ideology of intergovernmental relations, as mentioned above. Therefore, we consider it possible to offer a different approach to solving the problem.

§ 5. Interbudgetary Relations Organisation Model

1. Interbudgetary relations are based on the distribution of the rights and powers of the federal centre, regions and municipalities. The minimum amount of powers conferred on each level is mandatory. Further scope of the powers is stipulated by a special agreement between the higher and lower levels of the government. This way, the amount of taxes (duties) that go to a higher budget, decreases. The failure to execute the mandatory scope of powers is seen as a temporary situation, to be eliminated during the regulatory period. It is necessary to proceed from the conditions of the need and possibility to ensure the profitability of economies throughout the country. The potential effectiveness of the regional economy should be determined on the basis of zoning and defining baseline standards for assessing the effectiveness of potential resource groups.

2. The federal budget is replenished at the expense of a single federal tax on gross regional product, or the amount of produced and sold goods and services, to cover the general needs of the state. This guarantees that the federal budget will be replenished and limits the excessive impact on the cost aspect ratio, which is the prerogative of the market regulator. In some cases, during an additional stimulation of certain sectors of the economy, sectoral taxes on manufactured goods and rendered services may be introduced instead of general federal taxes. In any case, the introduction of a reduced sectoral tax rate will determine the minimising of interbudgetary transfers.

3. Regions with a gross regional product per capita above average in fixed percentage terms pay a supplementary fee, which does not undermine their interest in further enhancing of the regional product.

4. The size of the federal tax on the GRP share or goods and services with the nature of rent is established separately. Its size is greater than the size of the standard duty, defined in Clause 2.

5. General state functions are met via federal taxes, which also ensure the financing

of general federal development projects and the temporary transfer assistance to regions.

6. Regions with a GRP per capita below the average level by more than a certain percentage, which is defined as excess deviation, receive temporary transfer assistance. Such a region receives this transfer for a limited period of time with the obligation to reach the prescribed level in a certain period of time.

7. Interregional infrastructure projects should be funded at the expense of normative distribution of the total amount between the federal budget, regional budgets and private investments. Intraregional projects have to be covered at the expense of regional budgets, collective investment funds, and private investments. At the same time, the funds of regional bonds and instruments of regional security should be actively used.

8. A special place in the system of budgets at each level should be taken by reserve funds. These funds should be used as a reserve for unforeseen expenses, as well as to secure guarantees and form the interbudgetary lending system. In this case, an important area of the budget should be horizontal interaction between constituent entities of the federation, municipal districts, as an alternative to the vertical transfer system, which is based on the regional initiative of cooperative interaction.

9. General federal projects that are alternatively implemented in different regions should be performed via tenders only, based on formal criteria, determined by the state expert council, with an obligatory final evaluation of the selected algorithm by the public through the mass media.

10. Regions themselves determine the structure of internal taxes, which is one of the foundations of the election platform for regional governments. A limited list of taxes that are socio-political in nature and define the general socio-political stability in society may be required (for example, a progressive scale of taxation of incomes and property).

11. A similar scheme operates in the relations between regional and municipal budgets. However, it is necessary to prevent the duplication of regional and municipal taxes.

12. The total amount of allocated taxes and duties should have a clear priority – a lower budget level, which is determined during the development of appropriate standards.

11. It is necessary to set deadlines, when the region should reach the desired level of gross regional product per capita, as well as the level of profitability (ratio of the difference between total regional income and losses to the gross regional product), thereby providing extra-transfer financing of regional social standards, some of which have federal foundations (minimum social standards), while the other part is determined by a mandatory election platform of the regional administration. If this deadline is exceeded and no corresponding values are achieved, we can then talk about the need for a series of reorganisational measures (as well as in the case of exceeding the critical volume of overdue regional loans). The first of these is reduced to elective replacement of top officials of the region and, in the absence of the corresponding effect of the measure (within a certain period):

- Submission of the region to direct federal administration;
- Inclusion of this region in the neighboring stably developing one;
- Inclusion of the region in the management jurisdiction of the lender region.

It is possible to expand the list of these reorganisational measures. But in any case, they should be based on business guidelines for this region. A similar scheme can be applied to the level of municipal administration.

However, when forming the structure of Russia's interbudgetary organisation that

raises the status of regional financial autonomy, it should be borne in mind that, if the federal government, for political or other reasons, is not able to withstand severe budget constraints, the decentralisation of power will lead to an increase in economic efficiency, but it also could undermine macroeconomic stability.

It is necessary to form target programs on the development of territories and territorial development funds ("development budgets") with increased investment shares in every region. That is, the priority of mechanical alignment of socio-economic levels of the regional development at the expense of centralised redistribution of budgetary funds should be changed in favour of the alignment, based on the accelerated development of areas, where a higher-level budget ensures the implementation of interregional infrastructure development programs and the required regime of guarantees for regional industrial development projects. In today's Russia, when the corporate financial and banking market is not able to dramatically increase its involvement in this field for many reasons, this approach is extremely necessary.

This model is able to give a strong impetus to 'locomotive' regions, broadcasting their potency of the cooperative development system to similar systems in peripheral regions. In this perspective, the configuration of Tatarstan's leading position, coupled with the responsibility for the integrated economy system of the Volga region and Russia's economy as a whole, will be reinforced. This corresponds to a full-scale response in terms of creating effective alternatives of federal relations, positively perceived by both domestic and foreign political and business communities, civil society organisations and the public.

CHAPTER 8

State Development of the Republic of Tatarstan at the Beginning of the 21st Century

§ 1. New Treaty Meets Modern Realities

Indus Tagirov

On 26 June 2007, Vladimir Putin, President of the Russian Federation, and Mintimer Shaimiev, President of the Republic of Tatarstan, signed an updated version of the Treaty between the federal centre and the Republic of Tatarstan. This act was a continuation of the contractual principles, laid in the foundation of Russia's statehood.

Due to historical conditions, unitarianism and federalism have always coexisted in Russia. By 862 AD, the ancient Russian state consisted of more than a dozen principalities, most of which were in "thoroughly set" contractual relationships.

Turkic-Tatar states, starting with the Turkic Khanate, also functioned on a federal basis. All of this was inherited by the Muscovite state. It evolved from a complicated relationship between Russian principalities, above which the Muscovite principality was steadily rising. Some of the principalities became part of the Muscovite State by virtue of the existing contractual relations, others were included in it as a result of armed clashes. A decisive role in the rise of Moscow played the Golden Horde, khans of which patronised Moscow princes. The Tatar factor was constantly present in the subsequent periods of the Russian state's development.

As Russia transformed into an Empire, the beginning of which dates back to the merger of Tatar states and Bashkiria's voluntary entry into the country's structure, the elements of the contractual relations intensified.

The Soviet state, which appeared after the October Revolution of 1917, was also devel-

oping on the basis of contractual and federal relations. The Declaration of Rights of Working and Exploited People, adopted by the 3rd All-Russian Congress of Soviets in January 1918, proclaimed: 'The Soviet Socialist Republic is established on the basis of a free union of free nations, as a federation of Soviet national republics' [Dekrety' Sovetskoj vlasti, 1917, p.341]. The Congress's decision on the main provisions of the RSFSR Constitution stated that delimitation of the scope and activities of the federation of republics should be determined by the All-Russian Central Executive Committee and the Central Executive Committees of such republics.

Established in 1922, the USSR was also founded on the Union Treaty. However, the principles of free will, first enunciated in the documents of the Soviet Power, remained valid only on paper. Vladimir Lenin agreed to recognize the federation out of necessity, he realised that it was an alternative to the country's disintegration. In his theory, he brilliantly combined the principles of federalism, centralism and unitarianism, absolutely incompatible in practice. Despite their centrist beliefs, the Bolsheviks extended the life of the Empire for another 80 years by formally declaring the federation.

But it is impossible to deceive the history, and this pseudo-federation faced the threat of disintegration. Lenin's companions, especially after his death, did everything to eliminate the national republics and convert them into ordinary administrative units.

During the perestroika years, the issue of using contractual relations in the country was

first designated by Tatarstan after the adoption of the Declaration on State Sovereignty. During the discussions on the republic's status, which lasted for three years, the delegation of the Russian Federation regularly had to deal with the issue of establishing contractual relations between Russia and Tatarstan. As a result, such a treaty was concluded on 15 February 1994. More than forty constituent entities of the Federation, which concluded treaties on the delimitation of powers and jurisdiction with the Russian government, followed Tatarstan's lead. Thus, Tatarstan was able to put the formally federated Russia on truly federal rails.

Not everyone was pleased with the practice of contractual relations in the Russian Federation. It endured violent attacks, resulting in the fact that all constituent entities of the Federation, which entered into treaties with the federal centre, refused to extend them. Tatarstan alone remained faithful to the contractual practices. The republic's government believed that it was necessary not only for Tatarstan but for the whole Russia as well. Evidence suggests that the Republic of Tatarstan, while relying on the powers, recognised by Russia in the Treaty of 1994, came to the forefront of social and economic development.

The Summit of heads of the CIS countries, held in 2005 in Kazan in the celebration of the 1000th anniversary of the republic's capital, showed the effectiveness of the social and economic policy of Tatarstan's government. It served as a proof that the Treaty of 1994 played a huge role in the development of federal relations in Russia.

A new stage of the struggle for the continuation of the republic's contractual development took place in the context of Tatarstan's achievements. The aim was to multiply these advances, which were a model for other regions. Negotiations on this issue began in Nizhny Novgorod. The delegation of the Russian Federation was headed by Dmitry Kozak, Deputy Head of the Presidential Administration of the Russian Federation. The delegation of the Republic of Tatarstan was headed by F. Mukhametshin, Chairman of the State Council. The negotia-

tions, which lasted two years, proved to be difficult. Positions, set out in the previous version, were conceded one by one.

However, it turned out that the most difficult was yet to come. Supporters of the unitary imperial development became active again. They tried to scare the public, stating that the treaty would destroy Russia and strengthen centrifugal tendencies.

However, Russian President Vladimir Putin supported the draft treaty and submitted it to the State Duma. The Duma approved it by a majority vote. Those who were dissatisfied with such an outcome tried to change the situation. Sergey Mironov, Chairman of the Federation Council, made an official statement that he opposed the treaty, which was politically dangerous, threatening the integrity of Russia, though neither Russia's president nor the State Duma had seen any political danger or a threat to Russia's integrity in the document.

The discussion took place in the Federation Council in accordance with the ready-made program, contained in the statement of Sergey Mironov, the Chairman of the Federation Council. It should be noted that such a statement was contrary to the principle of equal rights and self-determination of peoples, as reflected in the preamble and in Article 5 of the Constitution of RF. It is also in contradiction with Article 11, which stipulates that the delimitation of jurisdiction and powers between the government and the authorities of Russian regions shall be carried out within the Constitution, federal and other treaties on the delimitation of powers. As it is known, Tatarstan did not sign the Federal Treaty, and the delimitation of powers between the federal government and Tatarstan was carried out on the basis of a bilateral treaty, dated 15 February 1994.

Of course, opponents of the document could add their commentary, although the draft treaty had already been repeatedly examined at the Administration of the President of the Russian Federation and by the State Duma. But the Federation Council member-opponents of the draft treaty presented their 'philippics' against it, based not on the position of the President

and the State Duma, but on a planned goal, pursued by Sergey Mironov, who sought to 'sink' the new treaty come what may.

Before proceeding to the analysis 'article by article', the Federation Council members had to decide on the possibility or impossibility of contractual relations in the current Russian state. No lawyer could speak up against it, since this would be contrary to the constitutional provision. But the fundamental question strangely remained 'behind the scenes'.

The Federation Council members, however, moved to the article by article analysis of the proposed bill, coming to the conclusion that it had nothing new but merely repeated the provisions of the Constitution of the Russian Federation. In fact, the draft treaty specifies those provisions, thereby creating a mechanism to implement them. And the federal Constitution becomes a working document. Unfortunately, the Federation Council failed to notice merits of the draft treaty at this stage.

During the discussion, some senators, including our compatriot R. Altynbaev, tried to prove that Tatarstan lacked any particular features that would open up the possibility of establishing contractual relations with the federal centre. The question arises, if Tatarstan lacks such features, then what region has them? Altynbaev himself, serving as the Head of the Naberezhnye Chelny City Administration and a member of the Supreme Council of Tatarstan, said a lot about them. Thus, during the adoption of the Declaration on the state sovereignty of Tatarstan and the referendum, he defended the special status of the republic and strongly supported Tatarstan's contractual relations with the federal centre.

If we talk about features, they can be divided into two groups — historical and contemporary, originating from modern realities.

The main historical feature is the role, played by the Tatars in the formation of the Russian state. It is enough to look at the relevant works by N. Karamzin, S. Solovyov, V. Klyuchevsky, and a number of contemporary authors such as V. Tishkov, A. Fursov, Yu. Pivovarov. They testify to the importance

of the Tatar factor in the development of the Muscovite state.

The second historical feature of Tatarstan is its entry into Russia. Part of the Tatars, for example Ryazan, Kasimov and Nizhny Novgorod, became part of Russia voluntarily, as we know. However, the Kazan Khanate, as it is written in numerous works of domestic and foreign historians, was annexed by Russia in an aggressive way. Therefore, Tatarstan does not celebrate it today as the other republics, which entered Russia voluntarily, do. The historical value of the Treaty of 15 February 1994 lies in certain legitimising of its relations with the federal centre. The new treaty is intended to bring these relations in line with the modern realities.

The third feature is the historical memory of the Tatar people, which preserves the thousand-year history of its statehood. The Tatars have always dreamed of equality and a decent life in Russia. Relations with the Russian population evolved a special way after 1552. At the upper level, there was a gradual merging of Tatar ruling groups with the elite part of Russia's society, while strong neighborly, friendly relations developed at the level of the lower classes, as a result of centuries of cohabitation, withstanding the test of time. This is the capital, which you cannot neglect or jeopardise in any case.

The fourth historical feature is the wounded national pride of the Tatars, resulting from accretions of injustice towards them by the state. In school textbooks and works of historians, the Tatars are presented as wild, barbaric people, who caused a lot of troubles to Russia and the Russian people, for example, the myth of the 300-year-old Tatar yoke, which became the cause of Russia's centuries-old backwardness from the West. The treaty is designed to remove these accretions and eradicate the remnants of the 'status' of the conquered people. The previous treaty, in addition to the benefits that had emerged to promote Russia on its path of the federal democratic development, worked in this direction as well.

As for contemporary realities, it is known that only a quarter of the Tatar population of

the Russian Federation lives in Tatarstan. The rest of them are mainly concentrated in Russia and in neighbouring countries. For them, Tatarstan is a centre, where their national culture develops, the sole basis for preservation of the Tatar language, traditions and customs, ultimately, a guarantee for their ethnic survival.

For example, a little more than 2,000-3,000 Tatars remain in the Ryazan region, most of them preserve their nationality only in their historical memory and in some traditions, they do not know their native language. There are a lot of such regions in Russia. They do not have any schools or cultural institutions, nobody is concerned about establishing them.

The early years of the perestroika returned the Tatars the hope for the revival of their language, customs and traditions. More than 50 national organisations, aiming at national revival, appeared in the country's regions. More than 20 of them, including ones in Moscow, are registered under the name "Tugan Tel" ("Native language"), which is a reflection of the Tatars' concerns over the state of their culture, language, and by and large – their future.

All these organisations have been 'drawn in' Kazan, which they regard as their spiritual capital, in the hope that Tatarstan's capital will help them in the revival of the Tatar language, national schools and cultural centres. The Treaty of 15 February 1994 was in conformity with these sentiments of the Tatars. As a result of implementing its provisions, Tatarstan started assisting them in all possible ways.

The establishment and activities of the Federal National Cultural Autonomy of the Tatars of Russia, headquartered in Kazan, became an important stimulus of our nation's spiritual unity. However, as it is well known, the autonomy of the Tatars, as well as other national and cultural autonomies, does not receive anything from the federal budget. Only the efforts of the Council of the autonomy and local national organisations ensure that some small amounts to carry out certain activities are provided. In other words, the Federal National Cultural Autonomy of the Tatars functions only thanks to Tatarstan's support.

The Federation Council members criticised the principle of Tatarstan's co-participation in the implementation of the Russian government's policies in respect of compatriots abroad. Meanwhile, several million Tatars live in the neighbouring countries and abroad. The republic maintains close contacts with compatriots living abroad, it has a number of interesting projects and thus contributes to the strengthening of Russia's positions in these areas.

The discussion of the draft treaty between Tatarstan and the federal centre, held in the Federation Council, to some extent resembles the story of the Constitutional Court of Russia, which denounced the referendum in the republic for political rather than legal reasons at the time. At the time the court appeared a politicized institution that stopped responding to their problems and was dissolved for that reason.

Tatarstan was forced to continue fighting for the treaty. It was necessary to prove its significance not only for Tatarstan, but also for Russia. First of all, it was necessary to overcome the veto of the Federation Council. It could be done by a repeated vote in the State Duma, but Tatarstan's President Mintimer Shaimiev chose a different path. He disagreed with the fact that the Federation Council remained opposed to the treaty. As a supporter of the search of mutual understanding, he called for holding a new discussion in both houses of the Federal Assembly. And this approach proved to be fruitful.

Previously, a few minor changes were made to the draft in accordance with the comments made in the Federation Council. The draft treaty was first approved by the State Duma, then discussed in the Federation Council, and finally got his approval. The President of the Russian Federation signed it, and thus, the treaty was signed into law.

In certain social strata of the republic's community, the treaty was viewed with a critical eye, being allegedly pointless and giving nothing to the republic.

Of course, the new treaty differed from the previous one in content. However, the essence is different. Unlike the previous agreement, the new document underwent all legal procedures

in full. The treaty of 1994 was signed only by the heads of the governments of the Russian Federation and Tatarstan, and therefore it could not have full legal force. It could be appealed at any time. The new treaty is legally flawless, it is approved by the State Council of Tatarstan and both houses of the Federal Assembly of the Russian Federation, signed by the Presidents of the Russian Federation and the Republic of Tatarstan. The President of the Russian Federation signed a corresponding law as well, by virtue of which no claims can arise against the treaty.

The treaty makes Tatarstan Russia's only contractual republic, that is a republic with special status. Russia, since it retains the contractual principle, continues to be a federated country.

The treaty of 2007 provides for developing the principles laid down in the treaty of 1994. The preamble of the document states that it is concluded in view of 'the experience of applying the Treaty between the Russian Federation and the Republic of Tatarstan "On Delimitation of Jurisdictional Subjects and Mutual Delegation of Powers between Bodies of Public Authority of the Russian Federation and Bodies of Public Authority of the Republic of Tatarstan", dated 15 February 1994, concluded on the basis of the referendum in the Republic of Tatarstan, held on 21 March 1992, and in accordance with the Constitution of the Russian Federation and the Constitution of the Republic of Tatarstan.' Consequently, the treaty overrode the decision of the Constitutional Court of Russia, and now the referendum results are legitimate. This is of fundamental importance.

Adding Tatarstan's cultural and other specific features to the text of the treaty, firstly, disavows the statement about the absence of any special features, secondly, it creates in-

centives for further national and cultural development.

According to the treaty, Tatarstan retains the right to establish international and foreign economic relations, which today have reached a significant scale.

There is a very important point, which legalises an article in the Constitution of Tatarstan, which refers to the republic's right to provide 'state support and assistance to compatriots in the preservation of their identity, in the development of their national culture and language'. There was no such provision in the previous version of the treaty. Meanwhile, it is one of the most important conditions for the development of the Tatar nation as a single cultural and ethnic community.

The treaty recognizes the official status of the Tatar language, functioning as an equal to the Russian language in the republic. This makes illegitimate any lawsuits over the status of the Tatar language, which took place in the republic in the past. People of non-Tatar nationalities are incentivised to learn the Tatar language by the fact that the republic's senior official, i.e. its President, is obliged to master both official languages. After all, the position of the President of Tatarstan is open to any citizen of the republic, regardless of nationality.

Thus, the new treaty corresponds to present-day realities. Explanation and implementation of the provisions of this treaty create tremendous opportunities for strengthening Tatarstan's economic and legal framework.

The historical significance of the treaty lies in the fact that it overcomes certain pro-imperial tendencies in Russian society today, clearing the way for the country's democratic development and strengthening its contractual and federal foundations.

§ 2. Legislation of the Republic of Tatarstan under a New Policy in Federative Relations

Farid Mukhametshin

The modern stage of the development of the federative Russian state is characterised by the strengthening of parliamentarism as a system of democratic civil management. In Tatarstan, this institution plays a historic role in forming the legal framework of civic society, developing a multi-party system and determining the strategies and trends of social and political development of society.

In the early 2000s, the State Council of the Republic of Tatarstan continued carrying out legislative activities under the conditions of the 'new federalism', a typical feature of which was to bring the legislation of Federation subjects into accordance with the Constitution of Russia and federal legislation as well as to build up 'a vertical power structure' in relations between the Centre and the regions.

The political power relations and processes that took place in the Russian Federation during recent decades led to the establishment of the main institutions, norms and rules of accepting political decisions, and to the birth of the political elite with powers of authority. Under these conditions, the Parliament of Tatarstan made a lot of efforts to set up a required regulatory legal basis to improve federative relations in general and to improve the effectiveness of constructive interaction between the republic and the federal centre. However, at the turn of the 2010s, within political transforming processes, there are unresolved questions related to ethnic factors of the policy, the federative structure of the Russian state, in general, and 'centre-region' relations, in particular.

In the transition, federalism as a principle of a state structure and a means of supporting stability between the Centre and the Federation subjects is at the top of the agenda. The issue at hand is the forming of a type of federalism that presupposes the organization of relations between the Centre and the regions and, in particular, the Republic of Tatarstan, on the basis of partnership, the division of jurisdiction and

authorities. At the same time, each level of power relations should possess the rights, obligations and resources that will correspond to its tasks and functions. In this case, the process of social reforms in the regions will be stable and dynamic.

Another important task within the context of implementing federative relations is to understand and form an adequate perception of the interests of the federal centre and the Federation subjects as regional policy should not and cannot be limited only to issues of transfers or of material support for regions. First of all, it should embrace the development of the social sphere in the subjects, the organization of resource production, the arrangement of the conditions for small and medium-sized business activities, and promote the regions' use of their own natural advantages. The solution of these problems requires the development of a state doctrine of an economic leveling-off in regions, forming a unified system for assessing the level of economic self-sufficiency in the Federation subjects, introducing a methodology of inter-budget relations based on normative principles, distributing functions of state administration bodies of different levels and mechanisms of the participation of regions in taking decisions on the federal level.

In recent years, the government of Tatarstan has done much to allow representatives of local authorities to play an equal part in outlining a general course of state policy. A significant role is given to the Council of Legislators at the Federation Council, set up to provide a unified legal space and to coordinate activities and experience exchange among regional legislators. A conception to improve interaction between the Federation Council and legislative bodies of the Russian Federation subjects has been prepared and approved, and it stipulates mechanisms for taking into account the opinions of the subjects while outlining and conducting

federal and legislative policy, including by way of introducing consolidated initiatives.

Unfortunately, regional politicians have not yet succeeded in establishing a balanced system of interaction between the centre and the regions. About 4% of the legislative initiatives of the subjects were adopted by the State Duma, meaning that they became federal law, which speaks volumes in itself. Simultaneously, since the early 2000s, a general tendency of limiting regional powers vested by the Constitution has become more pronounced. It objectively led to an excessive centralisation of competences in many fields at the level of the federal centre and it is actually a violation of the principles of federalism. This negative tendency was developed in the Budget, Water and Forest Codes of the Russian Federation. Federal legislation reduced the powers of the subjects in the fields of subsurface use. Truly inefficient centralization of powers is evident in the field of ecology.

Many experts note that if this trend continues, the reformation of regional legislation may ultimately reduce the powers of regional bodies to the passing of their own budgets. The problem of finding human resources and appointing them to positions is quite acute. This means finding heads of federal territorial bodies, who mostly duplicate the functions with the republican organizations.

It is necessary to require by law the mandatory participation of regional governors in appointing the chiefs of territorial federal bodies. The candidatures for the heads of the security agencies should also be debated by regional parliaments. It is also necessary to establish in law the double subordination of the heads of federal bodies, as it was not so long ago. At the same time, they can be subordinated to their ministries and a supreme officer of the region.

On 9 February 2007, the history of the modern Russia began a new period of federal development. After a long and complicated period of agreements and political discussion, both in state bodies and among politicians and academics, the President of the Russian Federation introduced to the Federation Council a draft of

the Treaty 'On the division of jurisdictions and powers between the bodies of state power of the Russian Federation and the bodies of state power of the Republic of Tatarstan'. On 4 July 2007, at the plenary meeting, the State Duma voted to adopt the Federal law ratifying said Treaty. On 11 July, the project of the Federal Law was approved by the Federation Council, and, on 24 July 2007, it was signed by the President of the Russian Federation.

As noted in the preamble to the Treaty, the state power bodies of the Russian Federation and the state power bodies of the Republic of Tatarstan, acting in accordance with the Constitution of the Russian Federation and the Constitution of the Republic of Tatarstan, take into account the experience of applying the Treaty of the Russian Federation and the Republic of Tatarstan 'On the division of jurisdictions and powers and the mutual delegation of authorities between the state power bodies of the Russian Federation and the state power bodies of the Republic of Tatarstan' from 15 February 1994, included on the basis of the referendum of the Republic of Tatarstan held on 21 March 1992.

The Treaty materialises and clarifies the provision of the Fundamental Law of the Russian Federation, stating that, in accordance with the Constitution of the Russian Federation and the Constitution of the Republic of Tatarstan, the Republic of Tatarstan (state), being a subject of the Russian Federation, is empowered with full state authorities (legislative, executive and judicial) out of the jurisdiction and authorities of the Russian Federation.

In the development of the provisions of the Treaty, the Government of the Russian Federation and the Cabinet of the Ministers of the Republic of Tatarstan can conclude agreements about solving jointly issues related to economic, ecological (as a result of a long-lasting exploitation of oilfields within mining and geological conditions of hydrocarbon production), cultural and other specific features of the Republic of Tatarstan, including by introducing joint legislative initiatives to the Federation Council of the Russian Federation.

Taking into account the experience accumulated over the last 15 years, the Republic of Tatarstan, within its authorities in accordance with the Treaty, will be able to carry out international and foreign economic relations more actively, to provide state support and assist fellow people of the republic in preserving identity, and in developing a national language and culture.

Also vitally important to us is the article of the Treaty that states in particular that in accordance with the Constitution of the Russian Federation and the Constitution of the Republic of Tatarstan, the status of official languages and the order of their usage are confirmed.

The provisions of the Treaty establish an additional requirement for candidatures to replace supreme officers that demands a command of the official languages of the Republic of Tatarstan, and the article, stating that the citizens of the Russian Federation living in the Republic of Tatarstan have the right to obtain the main identification document (the Russian Federation civil passport) with the supplement in Tatar, an official language of the Republic of Tatarstan, with an image of the state coat of arms of the Republic of Tatarstan. These provisions are of the utmost importance to Tatars, residents of a multi-ethnic republic, bearers of the ancient Tatar culture and traditions.

Today, more and more regional politicians are coming to believe that Russia is strong not only by being united but also by being different in its parts. And in this lies its power. That is why the regulations of the interaction between the Federal Centre and the Federation subjects should be formed in order to make their implementation politically, economically and socially beneficial and reasonable to all the participants of the interaction.

Developing a treaty practice between federal and regional bodies is an important constitutional tool to strengthen federative relations, to set up a balanced system of mutual rights and obligations for the parties, and to create effective mechanisms of interaction between state power bodies at different levels. That is why, though coming across all the juridical

collisions of the established system, it is quite evident that the treaties concluded earlier functioned and strengthened the consent and mutual understanding of both sides.

At the turn of the century, during the transition stage, federalism in general and state national policy remain a milestone yet to be achieved to a large extent in the social, political and economic development of Russia. However, a range of legislative solutions have been adopted in this area, these solutions actually are the first steps to true federalism, a constitutional state and democracy, and political pluralism. It is also obvious that at the moment there has been a step back from those modest results that were achieved in the 1990s.

That is why when evaluating the results of the last decade from the perspective of implementing a state national policy, it can be said that in this arena we have lived through ten years of stagnation.

The Russian Federation is one of the world's largest multi-ethnic states, where there is over a hundred peoples, each of them possessing unique peculiarities of material and spiritual cultures. Over centuries, the majority of the state's peoples coalesced into ethnic communities across the territory of Russia. In this sense, as it is emphasized in the Conception of the Russian Federation state national policy, 'they are indigenous peoples, who played a historic role in the formation of Russian sovereignty. Owing to the uniting role of the Russian people on the territory of Russia, there is an extraordinary unity and variety, a spiritual community and a union of different peoples.'

Unfortunately, until now, a new version of the Conception of state national policy has not yet been implemented. Federal legislation develops quite slowly in terms of ensuring the rights of Russia's numerous ethnic groups. Under these conditions, the Republic offered its own conception of development for the multi-ethnic population of Tatarstan.

The state national policy Conception of the Republic of Tatarstan (further, the Conception) is a systematized collection of political legal views, valuable key points, principles and priorities regulating the activities of the bodies

of state power and local self-government, national civic organizations, residents of the republic in the area of ethnic development and inter-ethnic relations.

The Conception is built upon two legal components: federal and republican, as well as by taking into account generally recognised principles and norms of international law, such as the Convention for the Protection of Human Rights and Fundamental Freedoms of the Council of Europe (1950), the International Covenant on Civil and Political Rights (1966), the International Covenant on Economic, Social and Cultural Rights (1966), the European Charter for regional or minority languages (1992), the Declaration on the Rights of Persons belonging to National or Ethnic, Religious and Linguistic Minorities of the United Nations (1992) and the Framework Convention for the Protection of National Minorities of the Council of Europe (1995).

The federal component includes: the Constitution of the Russian Federation, the Russian Federation laws: 'On the languages of the peoples of the Russian Federation', 'On national and cultural autonomy', 'On the state policy of the Russian Federation related to citizens abroad' as well as the Conception of the state national policy of the Russian Federation. The republican component includes the Constitution of the Republic of Tatarstan, the laws of the Republic of Tatarstan: 'On the official languages of the Republic of Tatarstan and other languages in the Republic of Tatarstan', 'On the national and cultural autonomies in the Republic of Tatarstan' and the Law of the Republic of Tatarstan 'On adopting the State Programme of the Republic of Tatarstan for preserving, studying and developing the state languages of the Republic of Tatarstan and other languages in the Republic of Tatarstan in 2004–2013'.

The Conception relies upon awareness of the historical traditions of the representatives of the peoples living in the republic, the natural, climatic and economic conditions, the social, psychological, cultural and daily features of their life, the geopolitical and national environment, and the experience of interaction with

neighbours. It reflects ethno-historical features and the current ethno-social situation in the Republic of Tatarstan.

As a political legal act, the Conception is aimed at ensuring general social, political and economic stability, effective cooperation between bodies of state power and local government, at developing traditions of inter-ethnic consent and civil peace, religious tolerance and national cultural inter-enrichment of the representatives of peoples living in the republic. It is designed to be a reference point for all branches of authority, local government and civic organizations involved in national development and inter-ethnic relations, in supporting constitutional human and civic rights, developing and implementing targeted projects and programmes related to state national policy.

Another important area in the national policy of Tatarstan is a range of language issues in the broadest sense. In accordance with the main principles of state policy related to the official languages of the Republic of Tatarstan and other languages in the Republic of Tatarstan, presupposing the development and harmonious interaction of languages, 1 July 2004, the State Council of Tatarstan adopted the Law 'On introducing changes and amendments to the Law of the Republic of Tatarstan "On the languages of the peoples of the Republic of Tatarstan"'. On 9 September 2004, the Law of the Republic of Tatarstan approved the State programme of the Republic of Tatarstan for preserving, studying and developing the official languages of the Republic of Tatarstan and other languages in the Republic of Tatarstan in 2004–2013. It is aimed at the next stage of developing cooperation in the sphere of languages of the republic, taking into account societal changes.

Under the aforementioned law and the programme originating from it, being the heritage of the republic, the official languages in Tatarstan are protected and supported by the state. The language policy as one of the constituent parts of state policy aims to support the optimal functioning of the languages in all areas of society, their interaction and further development. The main tasks of the Programme are to create

the conditions for achieving true equality between the Tatar and Russian languages as the official languages of the Republic of Tatarstan, to preserve and develop the Tatar language as the basis of the national culture and a real means of the communication and consolidation of the Tatar people, to preserve and develop the Russian language as an official language of the Republic of Tatarstan, to promote the preservation and development of the languages of the representatives of the other peoples living in the Republic of Tatarstan, to increase a general level of communicative culture and inter-linguistic tolerance, and in accordance with Article 14 of the Constitution of the Republic of Tatarstan, to support the preservation and development of the Tatar language in the regions of the Russian Federation and the CIS countries with a Tatar population.

In accordance with the state programme for preserving, studying and developing the official languages of the republic and other languages in Tatarstan, the Academy of Sciences of the Republic of Tatarstan and the relevant Ministries have already developed and are still developing drafts of a range of legal documents: on the procedure for using the official languages of the Republic of Tatarstan in records management, interdepartmental activities; on the procedure for using the official languages of the republic in the consumer sphere, by organizing and carrying out popular events; on educational courses to learn and improve knowledge of the Tatar language, and a host of others.

Within the Protocol in the field of applying information technologies between Microsoft Rus LLC and the Cabinet of the Ministers of the republic, there was a pilot localization project of Linux and Microsoft products into Tatar. By the decree of the Cabinet of the Ministers of the republic, a glossary of computer terms in Tatar was developed and approved. This glossary was handed to the Microsoft Corporation, developing the software products maintaining the Tatar language.

In developing this area, in 2005, there was a localization project of the operating systems AltLinux and communication applications

Mozilla Firefox and Mozilla Thunderbird into Tatar. These software products were the first on the market of the global information technologies and developed for e-mailing and Internet browsing. Their development allowed users to learn and use the Tatar language for work and communication on the Internet, which is especially important for the Tatars living or working outside Tatarstan.

The Parliament of the Republic has always paid a lot of attention to improving relations with the federal centre. Within the federative state system and self-government independence, special attention should be given to the mechanisms of managing social and economic processes at the federal, regional and local level, ensuring unity of goals, tasks and actions of all public authority bodies. This requires achieving aims for improving federative relations and local self-government, first of all, by terminating the process of the division of the authorities between bodies of state power and bodies of local self-government, and setting up a system of appropriate implementation. In turn, this will make it possible to a large extent to fulfill another strategic aim of regional policy – setting up an efficient and compact state.

Within this context, on 6 October 2003, after adopting the Federal Law 'On general principles of the organization of self-government in the Russian Federation', the main area of the activities of the State Council of Tatarstan became a legislative support for large-scale municipal reform. Within the tight deadlines, the boundaries were defined and the status of all 43 municipal districts of Kazan and Naberezhnye Chelny was established. The following republican laws have been adopted: 'On local self-government' (new version), 'On the referendum', 'On municipal elections', 'On municipal service', 'On conferring on bodies of self-government in the Republic of Tatarstan powers for state registration of acts of civil status', etc.

During the legislative support for the reforms of the local self-government, there were over 120 republican laws adopted which regulate the procedure for organising the municipal service, defining the borders and the status of the municipal establishments, and giving the

state powers to the districts. In particular, it should be noted that the Republic of Tatarstan was included in the Russian Federation subjects, where, since 1 January 2005, Federal Law No.131-FL 'On the general principles of local self-government' was realized in full.

The current legislative priorities are, first of all, the formation of a democratic state with high living standards, based upon a civic society and a growing and diverse innovative economy with a large middle class. The republic must persistently follow a path of economic growth, based on using new technologies and accumulating scientific and technical potential.

Achieving this large-scale goal depends on a set of factors. However, the leading role will be played by local self-government, the sovereignty of the people. Without exaggeration, it can be said that after the state level of representing the interests of different social groups, municipalities are becoming a powerful political leverage of the state development and a new tool for acquiring norms of democratic society. It is quite natural because only the bodies of the representative power as a basis of their legal and political activities have such an unyielding backbone, which acts as recognition of the people as a sovereign and unique source of power.

In 2010, Tatarstan celebrated the 90th anniversary of the Tatar Autonomous Soviet Socialist Republic. It was a time for looking back at the results of the republic's previous development as well as for determining the priorities and perspectives of the next stage. The agenda of the parliament includes the issues of the formation of a constructive and politically mature opposition, the weakness of the civic community, the development of the mechanisms for civilized compromises, the implementation of the idea of the government of the parliamentary majority, and the formation of an active multi-party system, as the parties are supposed to become a driving force for modernising society.

The development of the Russian political process demonstrates the formation of a stable trend of concentration of the most significant powers and the 'astriction' of the most profitable resources at the federal level. Federal law of 29 December 2006 'On introducing changes to legislative acts of the Russian Federation caused by improving the division of jurisdictions' again redistributed the powers between the Russian Federation and the subjects, but 'from the top to the bottom' this time.

At the same time, it is quite evident that without making use of the objective distributive criteria as well as the mechanisms of the agreement about the interests of the Russian Federation and Tatarstan in particular, further improvement of federative relations will be carried out only on the level of interaction between the state power federal bodies responsible for the affairs in some areas of society, and the administration bodies of Federation subjects. Meanwhile, federative relations are always a complex convergence of interests and needs of the regions and the Centre that presuppose a wider dialogue and a functioning system of interaction between their participants. Otherwise, there is a direct transfer of powers and no interest from Russian Federation subjects in the quality of their implementation.

In other words, the formulation and solution of problems in state organization require a complex approach. The government of Tatarstan has always adhered to the conceptual approach of the three-part political unity: parliamentarism–democracy–genuine federalism. Political relations based on these principles unite different interests in harmony. The Russian Federation is a huge country, and federalism in Russian is the territorial framework of democracy. In defending federative principles, we also support democracy, which is in need of protection today. The best protector of democracy in turn is a parliament that speaks the will of the people and voters.

CONCLUSION

The 20th century is complicated and contradictory. At the same time, it is a crucial period in the history of the Tatars. The bourgeois changes that took hold of the Russian empire helped to develop the nation's capital, its intelligentsia and its civic institutions. This period was known for the formation of the publishing houses network, of the mass media system, and of cultural, educational and charitable organizations. The national school was experiencing a time of radical reorganization. Religious reformation continued the traditions of G. Kursavi and Sh. Marjani and opened up for Muslim society new ways to expose Tatars to the achievements and values of European civilization.

During the period of social revolution that shook up the foundations of autocracy, Tatar society was compelled to start dealing with issues of national self-determination caused by an urgent need to preserve and defend confessional rights, culture, language and traditions. All of these processes meant the renaissance of the political life of the Muslims in Russia, who established the party 'Ittifak al-muslimin', their parliamentary party in the State Duma, a set of monarch, liberal and left-winged organisations.

Outstanding national leaders in the early 20th century were constantly formulating and promoting ideas of national unity, religion and culture preservation, and recalling the thousand-year history of Tatar sovereignty. The attempt to implement the projects of the 'Ural-Volga State', the Tatar-Bashkir Republic reflected a creative and quite complicated search of a form of national state under the conditions of the revolutionary chaos, the Civil War and the Bolshevik dictatorship.

Thus, the formation of the Tatar autonomy within Soviet Russia expressed a centuries-long ambition of the Tatars and became the result of persistent activities of the representatives of sections of society: politicians, intellectuals, military, workers and peasants. It should be noted that the Tatar Autonomous Soviet Socialist Republic was a unique polyethnic formation that reflected the interests of Russian, Finno-Ugrians and other peoples living in friendship for centu-

ries in the Volga and Ural region. Despite some negative ideological influence, the Soviet period of the sovereignty of Tatarstan was characterized by the establishment of a powerful industrial potential, the development of agriculture, the flourishing of science and all forms of the arts. The peoples of the republic honourably overcame the hardships of the Second World War and demonstrated an incredible self-sacrificing attitude both at home and on the battle field. An immortal feat performed by M. Jalil became an eternal symbol of the endurance, patriotism and courage of Soviet people.

The achievements of Soviet Tatarstan built up a strong base for the comprehensive development of the republic during the period of democratic reforms, helping to implement independent social, economic and cultural policies. The activities of the first President of the Republic of Tatarstan M. Shaimiev, aimed at preserving the unity of the Russian state, raising the living standards of the population, keeping a balance between the interests of different social groups, strengthening the union of peoples and confessions, gained honorary acceptance both in the country and abroad.

Today, Tatarstan is a leader of the economic, cultural, innovative, scientific and educational development of the Russian Federation regions. The republic's ambitious aims required the consolidation of all of society. They cannot be realised without the solidarity of the peoples, traditions, friendship and creativity, excluding any traces of xenophobia and extremism. Determining breakthrough directions in social and economic policies, President of Tatarstan R. Minnikhanov pays attention to humanitarian aspects of modernisation processes. Preserving the values of traditional Islam, restoring historical and cultural legacy, uniting creative powers of Tatars for solving pressing modern problems, respecting the language, customs and culture of all the peoples of the republic are defining factors of its progress and prosperity. In works and creations, the Tatarstan of the 21st century continues to craft its own history, a history facing the future.

Appendices

No. 1**A letter of Abdul-Gamid Apanayev to the editorial board of the newspaper Kazansky Telegraph [Kazan telegraph] on the necessity of exempting the Muslim clergy from conscription**

21 January 1905.

The voice of a Tatar man

(Letter to the editor)

Dear Sir, Mr. Editor!

As I know that the Kazansky Telegraph is neutral in matters concerning the Inorodtsy (indigenous people of Russia), I kindly ask you to publish my short note.

I would like to put forth the following question: why has no one paid attention yet to the fact that our Muslim clergy must serve military duty from which mullahs have not been exempted. It is barely possible, that they have not been exempted from the soldiery because we lack soldiers, while Jewish rabbi, Polish priests of the Roman Catholic Church and clergymen of other confessions are excused from service along with the Orthodox clergy.

It offends us, when thousands of Mohammedans die on the battle field, defending their motherland against the foe, when representatives of his and our spiritual father—the intermediary between us and God—are forced to fight in the ranks of the army. Russia will scarcely become more vulnerable if ten miserable mullahs do not join the army.

Our common and fair wish is that the rights of our clergy must be made equal to the rights of clerics belonging to other confessions.

Abdul-Gamid Apanayev

No. 2**Leaflet of the Kazan Committee of the Russian Social-Democratic Labour Party calling upon Russian and Tatar prikazchiks [clerks, administrators] to unite with workers in order to fight for improvements in their living conditions**

3 April 1905.

Russian Social-Democratic Labour Party

Workingmen of all countries, unite!

To all prikazchiks of the city of Kazan, Russian and Tatar

Comrades! It has been a month since we greeted with loud applause the Duma resolution for the holiday. You welcomed your success; it was richly deserved. Indeed, the question on the holiday is not new: for several years, gentlemen from the Duma, most of whom were owners of commercial-industrial enterprises, delayed the resolution. The question was also raised in the Ministry of Internal Affairs and did not produce any results. It would have dragged on for a long time if you at last had not begun to improve your lives yourselves, following the example of our workers.

When your thousand-strong crowd marched along the streets of Kazan, your masters humbly closed their shops. When you gathered in the Duma hall, your masters kept silent, no one dared to say a word against the holiday you rightly deserve.

But it still does not mean your bosses really wanted to make concessions to you: they had beforehand decided to crush the Duma resolution at the first opportunity. Hiding behind religious reasons, Muslim

bosses attempted to provoke discord between the Russians and Tatars; they protested against the Sunday holiday, arguing that their workers did not agree with this. This is wrong: Muslim prikazchiks have no objections to the common day off on Sunday, because they, thanks to their masters' trick, remained at a disadvantage—neither on Sunday, nor on Friday do they have a day off. Russian bosses also schemed.

And here the government, the perpetual enemy of working people, in the name of the local administration rushed to help entrepreneurs. The Governor and the Governorate administration protested the Duma resolution, disputing minor points. Yes, our government is skilled at playing with laws. When it is necessary, they shamelessly flout them, but the law is always here to help them, when they want to deceive and oppress the people! Hypocrisy and deceit are the weapons of our government and its officials. They care neither for you, nor for your needs. They do not hear you moan, neither do they see the tears of the oppressed. They only give way to strength, and you must be strong.

Where does your strength lie? What is the power of the workers?

The power lies in unity, the key to victory and a better future lies in the common struggle.

Prikazchiks of many cities achieved not only the festive holiday, but also the reduction of their working day along with other rights. But they managed to achieve it not through complaints and petitions, but through courageous and friendly struggle—strikes and demonstrations. You should also act in this way. Go to the streets, every holiday gather at 11 in the morning in Prolomnaya Street and close the shops with your crowd. Up to now you have been asking, now you must demand:

1. A complete termination of trade on public holidays at all commercial enterprises, Russian and Tatar.
2. A 12-hour working day, including one hour and a half for lunch and half an hour for breakfast.
3. Bakeries must be open during holidays from 12 to 4 pm and a shift system must be organized,
4. so that those on duty will be free the next day.
5. In case of illness, preserving the working position and treatment at the employer's expense.
6. In case of dismissal, the employer must notify you two weeks before.
7. You must be provided with an annual two-week leave with preservation of the working position.
8. A committee must be organised, half of which would consist of employers and the half of workers. The committee would review and resolve disputes.
9. Moreover, we must be provided with the freedom to organize meetings, unions and strikes.

Here are your demands for the first time. Stick to them, do not let the bosses sow discord in your ranks through promises and tricks. Remember that the interests of all prikazchiks, both Russians and Tatars—are the same. All of you suffer from the same deceptions and oppressions.

Muslim prikazchiks, against the assurances of their hypocritical religious masters, now stand for their days off on Sundays and on festive holidays.

The foundation is laid. Do not stop, step by step claim a better fate for yourselves, but remember that you can achieve stable improvements in your life only through joint struggle, side by side with the whole working class.

Terms of the Committee of Ministers on strengthening grounds of religious tolerance, approved by His Imperial Majesty will on 1905 April 1905.

The Committee of Ministers, in the form of the paragraph 6 of the Supreme Nominal Decree dated 12 December 1904, performing the Highest Will on preservation of tolerance in the matters of faith, delivered the following judgment:

1. On the general grounds of religious tolerance:

1) Recognize that rejection of the Orthodox faith in favour of another Christian confession or doctrine is not liable to prosecution and must not cause any disadvantageous consequences towards personal or civil rights; in addition, an individual who rejected Orthodoxy upon reaching adulthood is recognized as belonging to the confession he or she has chosen for themselves.

2) Recognize that if one spouse changes his or her Christian faith to another, all underage children remain in the faith of the other spouse; if both spouses change their religion, their children under 14 follow their parents' faith. Children who are older than this age remain in their previous faith.

3) Decree in addition to the above mentioned terms (paragraphs 1 and 2) that individuals, who are recorded as Orthodox but who in fact profess a non-Christian faith to which they or their ancestors, had belonged before being baptized, are subject, at their will, to not be counted among the Orthodox. <...>

X. On non-Christian confessions:

1) Order the special council on religious tolerance (section VIII of the decree hereof), on the grounds which are explained in the register of the Committee of Ministers, to develop the following questions and prepared bills without any delay and present them to the judgment of the State Soviet, without any prior communication with offices:

- a) on construction of prayer houses of different confessions;
- b) on the procedure for the election and appointment of officials belonging to the Mohammedan clergy—parish and supreme;
- c) on exemption from conscription into active military service for some representatives of the Mohammedan clergy remaining in the reserve;
- d) on the procedure for opening Mohammedan spiritual schools—maktabs and madrasahs;
- e) on the foundation of special spiritual administrations for the Kyrghiz people of the Akmolinsk, Semipalatinsk, Uralsk and Turgay oblasts, along with the Mohammedan communities in the North Caucasus, the Stavropol guberniya, Turkestan krai and the Trans-Caspian oblast,
- and f) on the possibility of raising abandoned children in the religion of those families of other faiths who take in these children. <...>

No. 4**The petition of political prisoner G. Iskhakov to the Prosecutor of the District Court**

19 June 1907

Kazan

Due to the fact that my mother, wife and sister know not a word of Russian, the gendarme does not allow them to speak in the Tatar language. I am illegally deprived of the pleasure to speak to the people who are closest to me. I consider such a state of affairs illegal and an abuse of my nearest and dearest and thus I ask you to take measures and give permission for visits in the Tatar language.

Mukhametgayaz Iskhakov

I have the honour of presenting this on approval to the Head of the Kazan guberniya gendarme administration. The 22nd day of June, 1907

Prosecutor (signature)

Secretary (signature).

No. 5**A note from the newspaper Kazansky Telegraf about a Tatar dramatic performance**

10 June 1907

From the Islamic world. Tatar dramatic performances, which began to develop relatively recently, are starting to win the sympathies of the Muslims, who eagerly attend them. Several plays which were staged at the new club in the winter drew their interest. With onset of summer, the troupe of male and female Tatar performers moved to Russian Switzerland, where they performed their first play on 25 May, which attracted many Tatar people. After such a success, the same Tatar troupe of artists is planning to give a performance on 15 June (on the Tatar holiday) with participation of widely known actor Gazizov. The performance includes the play 'Tushenu' ('Povetie') and then a vaud[eville]. "The batman short-sold", translated into the Tatar language. It is highly desirable, that actors focus their attention upon plays reflecting the typical Islamic way of living, which Russian people can rarely observe, and thus could attract attention of the latter.

Kazansky Telegraf. – 1907. – 10 June. – No. 4292

No. 6**A note of a peasant T. Ivanov from the village of Nizhne-Alkeevo of the Spass uyezd about his trip to the Volynsky district with the aim of getting acquainted with resettlement and farming in the khutors.**

September 1909.

We, a group of four people from the Alkeevskaya volost of the Spass uyezd, departed from Kazan on 18 September and on 23 September we arrived in the town of Zhitomir where we appeared before the Land Management Committee. After our visit to the Committee, we hired horses and headed to the village of Kamenka, along the route the Committee provided us with. The village was of a common land possession and there we were met by local peasants who, after learning the intentions of our trip, suggested that we should visit their authorized agent. They showed us the new plan of acreage allotment and explained that they, with the consent of the whole society, decided to divide the land into separate lots and at that moment, 29 lots had been allotted; the areas of the lots vary from 9 to 16 desyatinas. They explained the reason for switching from common land possession to separate lots by the fact that many villages in their region passed to voloks (khutors or hamlets) which live much better than they do, for their land is concentrated in one place and they do not waste, as they say, time on travelling from one field to another when reaping and fertilizing their land. After spending a night in Kamenka, we departed for the village of Vilsk in Pulenskaya volost. Khutors were scattered everywhere along the road. We came to many of them and asked how well their owners lived, the answer was the same everywhere: we live much better than when we had the common land possession. Their livestock is grazed by teenagers and elderly people in their own fields. They let horses and cows graze and do not allow the same thing for other livestock. Their horses are similar to ours, but their cows are of an improved breed. They possess their land in different quantities, from 3 to 30 desyatinas. Each of them has a clean hut (izba), with two rooms, with the walls being targeted both from the inside and the outside. Each inhabitant of the khutor keeps geese and therefore has a stack of pillows. Apart from these living quarters, they also have sarais (sheds) for storing threshed crops and other buildings for keeping cattle—and all of these structures are not connected with any fence between each other, which is good in respect of fire safety. Both outdoor and living quarters are roofed with straw, but in such a good way that their soundness are equal to our plank roofs. <...>.

From here, we headed to the village of Reshevka and on our way we examined many Little-Russian and German khutors; the latter cultivated land better than the local people, they also had horses and cows of better breeds. how they lived at the khutors. They replied that they lived very well at the voloks and one of them, Mikhailo Leshchenko, added that if he were asked to come back to the community and were offered 40 desyatins of land instead of 20, he would still reject the invitation. how they lived at the khutors. They replied that they lived very well at the voloks and one of them, Mikhailo Leshchenko, added that if he were asked to come back to the community and were offered 40 desyatins of land instead of 20, he would still reject the invitation.

And thus, we went on horses around 100 versts from the town of Zhitomir and throughout all of this space, almost all peasants live at the khutors, and, having examined these khutors, we confirmed that it is much better to live there than at the communities, because if the land is located in a single place, it is possible to fertilize it without difficulties, and the fertilized land gives more profit. Besides, it is possible to get rid of the useless fallow. The land of the above mentioned peasants is much worse in comparison with our land. Thus, in our region, 5 desyatins of our land go for 10 desyatins of theirs, thus we can settle in smaller agricultural possessions.

If any readers treat the described khutor life with distrust, he or she may direct a letter to the above mentioned individuals.

Peasant of Alkeevskaya volost of the village of Nizhne-Alkeevo

No. 7

Letter of Kazan governor M. Strizhevsky to the head of the Kazan guberniya gendarme administration about the exile from the Kazan guberniya of peasants of the Laishevo uyezd who protested against the transfer from the community to bran lots

16 December 1910.

With the notification #80346, the police department on the 9th day of December of this year notified me that upon examination by the Special Council, which had been founded in accordance with the article 34 of the Statute on state security, of the factual background of the peasants of the Laishevo uyezd of the village of Kurgachina, who are currently held in custody at the Laishevo uyezd prison: 1) Minnigaley Nazmutdinov, 2) Nasybulla Khamidullin, 3) Khasan Galimov, 4) Mukhammet-Vafa Gaynullin who were exposed as members of the gang which aimed at creating obstacles for peasants, who intended to leave from the community into separate lots. And, in order to achieve the set aim, members of the gang used violent methods which were expressed in the arson of those peasants who had transferred land lots into their own property, Minister of Internal Affairs decreed: 1) to exile Minnigaley Nazmutdinov to Olonetskaya guberniya so that he stays under the public supervision of the police for three years and 2) ban Nasybulla Khamidullin, Khasan Galimov and Mukhammet-Vafa Gaynullin from residing in Kazan guberniya for two years.

The Police Department added that the term of Hazmutdinov's exile and police supervision over him, along with the period of ban for Khamidullin and others from living in the Kazan guberniya should be calculated from 1910 November 1910.

Speech of A. Boratynsky¹ on aliens (Inorodtsy) at the session of the Kazan regular guberniya meeting of the nobility

14 January 1911

A. Boratynsky stated that... We should be careful when speaking about a hostile attitude of aliens towards us, since the more repeatedly we point to the discord, the stronger becomes the feeling of mistrust towards us. If you wish to sow love to the Fatherland in the heart of an alien, reach the unity of tribes who inhabit Russia, do not make disaffection acute. Remember what results were spurred by our aspiration to the Russification of the Tatar nation. Although at the same time as were opened 24 Russian-Tatar schools of Ministry of Education aiming at Russifying the alien and Muslim population, at the same time, the Tatars founded 852 their own confessional schools - maktab and madrasahs, i.e. schools to which parents send their children with great pleasure, but which remain out of state control. These maktab and madrasahs create and develop the Tatar culture. As a counterweight, we should create schools which would attract the Muslim population and teachers, who would clearly understand our ideals and aspirations, teachers who could make these ideals come true. We can achieve favourable results on the issue of aliens only through including aliens in our culture.

Journals of the Kazan regular meeting of the nobility recorded during the session of 1911. – Kazan, 1913. – pp. 25–26.

No. 9

Speech of Deputy of the State Duma of the 3rd convocation S. Maksudov in the course of the discussion of the bill 'On adaptation of the Statute about zemsky entities dated 12 June 1890 in Orenburg guberniya'.

23 January 1912

Dear sirs, I will not make a convenience of your attention. As a representative both of the people and the Muslim population, I cannot help sympathizing with regard to the introduction the zemstvo system [county council] into Orenburg guberniya, but unfortunately, I have to say that the sympathy of Muslims has to remain almost platonic. In fact, Muslims will not be able to benefit from the advantages of the zemstvo, and I shall explain why: as you know, in accordance with the existing law of 1890, in all zemstvos, all voters are divided into three groups: 1) nobles, 2) other stratas excluding peasants, and 3) peasants; the bill is composed in such a way that in all uyezd zemsky councils, the noble strata prevails. In 355 uyezd zemsky councils, the number of nobles dominate, while peasants are given a minimal number of places; this is a fact you must agree with. There are no members of the nobility among us, Muslims: our old nobility is not recognized, the new has not been born yet and will possibly never be formed. But we do not regret that, that is not the issue, dear sirs (Novitsky 2, from his place: the new has not been born, but it looks like Maksudov). I am not a noble man, and I am not sorry about that.

¹ A. Boratynsky, a Chairman of the Nobility Assembly of the Kazan guberniya, he is also leader of the nobility of the Kazan guberniya.

Well then, dear sirs, therefore in fact, Muslims cannot take advantage of the benefits the zemstvo system provides; we may elect and may send our representatives to the zemstvo only through representatives of village communities, they are given an insignificant number of places, and this amount is distributed between the Orthodox and Muslim population. That is why in all Governorates, even where Muslims are in the majority, as in Orenburg, Ufa and Kazan guberniyas, we have only two or three councilors both in the uyezd and governorate zemsky councils. We have borne this statue until today, because we thought that the Statute of 1890 was a product of the bureaucratic creativity, that it would change soon and after a wider spectrum of opportunities would be open to representatives of the broad mass of the population. We have waited for that and considered that after the change we, Muslims, would also be allowed to truly participate in the zemstvo system, but sirs, when such deprivation, depreciation and limitation of the electoral rights of the peasantry and thus the Muslim population is carried out by the State Duma, representatives of the population, then we cannot help objecting. We will object, sirs, firstly, as representatives of the population in general and secondly, as representatives of Muslims, because they can only take part in the system as peasants. In Orenburg guberniya, places are also distributed in accordance with the former recipe—that is, the bulk of places is given beforehand to representatives of the rich stratas: city entrepreneurs, landowners and the like, while the poor peasantry is provided with a truly insignificant number of places. Meanwhile, in the explanatory letter, the government itself states that there are really few landowners in this guberniya, thus in that single uyezd officials could not give prevalence to representatives of land ownership even if they wanted, because there are physically not enough of them. In the same manner, there is an insufficient number of landowners in other uyezds. On these grounds, I present you with my amendments related to distribution of places in zemsky councils of Orenburg guberniya. Previously, i.e. according to the Committee's suggestion, 24 places were given to representatives of the rich stratas and 15 to poor peasants. I suggest to change 24 to 13, and put 26 instead of 15. In Orsk uyezd, the committee provides the rich with 13 places and the peasantry with the same number. I propose 8 positions for representatives of the rich strata and 18 for those from village communities. In Chelyabinsk uyezd, the committee suggests giving 18 places to representatives of the rich strata and 20 to peasants; while I propose 13 and 25. Dear sirs, I believe that the state presented some reasons for distributing places in this way, that the government explained these numbers in its explanatory letter. In good faith I examined this report, but it does not contain any explanations or justifications. Rather, I found there data which totally contradict what the committee and the government have suggested. The report says that there are three principles of distribution of places—that is, of councilors in zemsky councils: the principle of land size occupied by the given strata, the principle of the number of the population and the principle of the cultural level. The first principle is not applicable to Orenburg guberniya, as the size of the peasants' land is far larger. The second, the principle of number, will not do either, because the amount of peasants exceeds the number of landowners; and finally, the third principle, of the level of culture, is left. In this respect, representatives of rich layers and stratas stand undoubtedly higher than peasants; therefore, only one principle allows landowners to prevail in all zemsky councils. Sirs, I understand that the zemsky matter is difficult; it is clear that there must be educated and enlightened leaders. But not only leaders are needed in the councils, education is not obligatory to be a councillor on a zemsky council. Peasants may be great spokesmen for their district, and we know many cases when they appeared to have been wonderful councilors. Based on all these reasons, I suggest that you adopt my amendments and I believe that they will do, because they are fair.

Memorandum of G. Galeev, founder of the Muhammadiya madrasah,
to the Kazan vice-governor on his activities

13 February 1912

I take the courage to appeal to Your Excellency in this letter, hoping for your wise attention. The aim of my note is my rehabilitation in the eyes of Your Excellency, because my convictions and my former activities were obviously presented in a false manner and showed through the prism of bias and superstition, which gave ground to present me as an ill-intentioned and almost a harmful person who would be dangerous to the public peace and the joint cultural work of my fellow Muslims with Russians. In the meantime, my acquaintance with the history of nations and my personal observations during my travels throughout the East have fostered a deep conviction in me that there is no greater happiness for the nation to which I belong than being part of the great Russian people, who are more large-hearted than any other nation, be it of the same faith with us or connected with us by the ties of blood. Only here, in Russia, we, Tatar Muslims, can achieve a level of well-being which is ever possible on Earth, both material and spiritual. Could I, who adheres to these convictions not out of fear, but being true to my conscience, who wished only good to my people, behave and act, even in my thoughts, in a hostile way towards the interests of Russia, without causing greater harm to my nation, because the welfare of my people is irrevocably tied to the greatness of this country, our Motherland given to us by God. In times when the minds of the dark masses are clouded by badly comprehended or poorly explained orders of the government, I tried to the best of my weak abilities to enlighten these dark masses in word and in deed. Thus, in 1894, after the decree issued by the censor committee about the withdrawal of schoolbooks from circulation, which were mostly handwritten at that time, there began a fairly strong movement and even migration to Turkey. In order to keep people away from this ill-considered action and explain to the supreme authorities the reasons for Muslims' confusion, who have viewed this decree as an invasion into the freedom of their religion, I, together with my deceased father Mokhamedzhan Galeev and mullah Abdulbadigov, went to St. Petersburg to visit the then Minister of Internal Affairs. The result of this trip was the explanation given to us by the Ministry, which pacified the population and stopped the migration.

During the latest census, in 1898, as a result of instigation by dark and ill-intentioned people, the dark masses attempted to resist this census, because they considered it, as the same ill-intentioned people put it, to have been a measure leading to Russification. My ceaseless and persistent exhortation explaining the real meaning of the census made these people so angry, that I even had to leave for Saratov guberniya for a while, because a threat to my personal security hung over me. This circumstance may be attested to by everyone who knows me in Kazan.

In the period of intellectual ferment of the studying youth in 1904–1905, I took great pains to resist penetration of adverse ideas into the madrasah at the 5th mosque. And after noticing objectionable elements, I always removed them and one day I expelled 50 students at once, who were keen on new fashionable ideas.

These facts, along with other similar cases, sufficiently portray both my personality and my convictions as a supporter of order, and my constant loyalty.

Now let me proceed to presenting my pedagogical activity which began in 1882. In this sphere of my activities, not a single instance was found which ran counter to the views of the government and interests of Russia. Knowing by my personal bitter experience the heaviness and imperfection of the existing system of primary education in parochial schools and medieval Scholasticism at madrasahs, I started introducing more contemporary methods of training and teaching in the school at the 5th cathedral mosque of Kazan, which is under my management. On the one hand, my aim was to give students the opportunity to receive the highest amount of knowledge with the smallest expenditure of time,

thus allowing them to get rid of the unnecessary burden which our hidebound mullahs loaded on their heads under the guise of teaching science. On the other hand, I attempted to prove that if desired, we still have enough time for learning the Russian language, which is necessary for us, Russian Muslims, because upon demands to demonstrate its knowledge, our opponents, who treat learning of the Russian language as one of the stages of Russification, constantly refer to complexity and length of learning Islamic theological disciplines so that there is no time left for learning the Russian language. In place of the incompetent teaching, which had existed at all madrasahs, I introduced in my school training led in accordance with programmes and also personally created many study guides in order to get rid of the need to fall back upon foreign guides of the kind and thus anticipate various reproaches on the part of my school superiors who treated foreign schoolbooks with suspicion. And in this sphere of my activities, the common threat was the idea, to which, I repeat, I adhered not out of fear, but following my conscience, that Tatar Muslims have to aspire to an everlasting loyalty to Russia, their Motherland, because their material welfare could not be possible outside of it. It was not discord that I preached, but unity, and I led youngsters to it, following my own convictions.

My work and efforts were misunderstood and misinterpreted, and my aspirations to demarcate the truth from the popular established opinions brought me only unpleasantness and grief. The dark, unenlightened masses, obedient to similar unenlightened mullahs, virtually saw heresy and apostasy in the innovations I introduced. These adherents to routine started spreading rumours that I had been bribed by missionaries, that I went hand in hand with them in the matter of Russification of the Tatars, and other similar tall tales. No matter how bitter it was to listen to and read such a false evaluation of my activities which was expressed in letters sent to me and my father, I withstood everything with tolerance, I pitied those people who neither knew nor understood what they did, hoping that the truth would finally triumph and that my work would be appreciated by my fellow Muslims and would be properly valued by the authorities, though I worked not for fame or praise, but I was incentivised by love and sympathy for my minor neighbours, sunken in ignorance, superstitions and bias.

How bitter my disappointment was. My ideological opponents who had used all means at their disposal to compromise me and my deeds in the eyes of my fellow Muslims, and being already unable to stop and prevent the ignited fire of the truth, relied on the last means—false denunciation.

What happened to me in May 1908 was even more shocking. Without dwelling upon moral sufferings, this event so distressed my parents at their advanced age, that their remaining number of days on this earth decreased. I am far from murmuring against God, who sent me such a hard challenge. I bore it humbly, but independently of my will, it produced a bitter awareness of two things. First of all, awareness that it is extremely hard to prove right-mindedness and loyalty of Muslims to the government, as there still exists such a vexing prejudice.

The second relates to me personally. I spent all of my 50 years reading books, doing science and teaching, having neglected the trading occupation of my father. My vocation lies in this, and I would like to devote the rest of my life to this great matter of enlightenment of my brothers and thus deserve mercy of God in my future life; I would like to leave this world with a pleasant feeling of my fulfilled duty to Almighty God and to people.

This is my sincere confession, my heart is open to the eyes of Your Excellency, and I trust that my hope will not be vain, and my senile voice will not be the voice of wailing in the desert.

Galeev.

No. 11**From the extract from undercover agents information, obtained by the Kazan guberniya gendarme administration, about the funeral of Tatar poet Abdulla Tukaev**

6 April 1913

Today, on 4 April, was held the funeral of Tatar national poet Abdulla Tukaev, who died on 2 April after suffering from chest trouble [tuberculosis]. Due to this fact, the following Tatar bookshops were closed today: Sabax, Gasr, Yul, and Maarif; Sharaf and Co. – a resident of the Maarif bookshop. The deceased left, apart from his literary works, money in the amount of 500 rubles. But in spite of this, booksellers raised circa 400 rubles. A part of this sum was directed to funeral expenses and the rest together with the deceased's 500 rubles, will be directed to a scholarship fund in his name. Today—on the funeral day—classes were cancelled at almost all madrasahs. Students of the madrasah collected money, part of which was sent to the above mentioned fund and another part was used for laying wreaths. Many people attended the funeral ceremony. The following people delivered speeches over the grave: Abdulla Gismetullin, Fakhrel'islam Ageev (a teacher), Shaykhulgattar Imanaev (a barrister), Gilmeldin Sharaf—a representative of the publishing house Maarif, and student Abdurakhman Mustafin on behalf of Vakt and Shuro. At the end of the last orator's speech, shouts were heard: 'Long live Vakt and Shuro!' and 'Long live our nation—millyam.' In their speeches, the orators visibly attempted to influence the national feelings of Muslims. Money will continue to be raised by the publishing houses Maarif, Sabax, Gasr and Yul.

No. 12**Opinion of M. Pinegin, head of the Kazan Committee for Press, about Mohammedan educational institutions**

20 October 1913

<...> the matter of national education among the Mohammedans is strongly organised and represents such a sound organisational system, that it will be a highly complex and difficult task to change it or implement other principles into it. Tatar schools have existed for a long time, they have their own traditions—quite specific and purely national, and bear a religious-moral character; scholarly mullahs, heads of madrasahs and their shakirds are the people's honour; mudarrises, mullahs and teachers (mugallims) bear the idea of holiness of their pedagogical work, because they teach free of charge, in the name of God and in the name of spreading and consolidation of Islam, and according to the ShariA. This explains the Tatars' strong attraction to their madrasahs and receiving education at their national institutions.

Because of the literature, which comes from the same environment, the Muslim clergy and school create such strong fanaticism, that we will be able to achieve success in Russification—only secular in the near future—only through the repeated energetic and systematic activity directed to planting ideas of the Russian enlightenment in Islamism. Only in the event that we build a similarly sound and logical system which Muslims now have can we possibly expect favourable results.

It is also necessary to add to the above stated that the described type of madrasah and maktab is the most widespread. But 20 years ago, innovations were introduced to Tatar madrasahs which, however, touched few schools in Kazan guberniyA. The changes lie first of all in the external cir-

cumstances of institutes: classrooms now have an academic environment and are even furnished with school desks, colleges are divided into separate departments and forms, a timetable of classes and separate teachers for different courses were introduced; apart from the very theological sciences, secular subjects were also introduced: history and geography, arithmetic, even geometry, basics of natural science and physics. Mullah Galimzyan Galeev was the one who laid foundation of such a new-method institution in Kazan; after becoming head of this madrasah, he at first widened its territory by building new premises, which were funded by donated money and then started to carefully introduce these changes. This is the first innovative madrasah, where secular sciences unfamiliar to Tatar confessional schools began to be taught. Some time later, a similar madrasah was opened in Orenburg, its foundation funded by millionaire Khusainov who, under his will, donated a building with shops located at the Nizhny-Novgorod fair with the income of ten thousand rubles a year to the Kazan madrasah of Galimzyan Galeev. Mullah Galeev invited teachers (mugallims) of the new stream to his madrasah; Yusuf Akchura was distinguished among them. He came from the Simbirsk Tatars, but was educated in Turkey. At the beginning of the 1900s he was appointed as one of the leading masters of that madrasah and quickly started to turn it into a secondary educational institution. The same Akchurin, having persuaded the Kazan Tatars to join the cadet party, held the presidency of the pedagogical committee at the Muslim congress in Nizhny Novgorod and presented his report on the necessity of conducting national education for the Tatars in their native language. The goal of mullah Galeev was to train teachers at his madrasah for nationalistic new-method schools. The alumni of his madrasah dispersed throughout the whole Volga-Kama region as mugallims. At first, they were accepted reluctantly and they often came into conflict with local village mullahs, but in order to consolidate the position of his former students, Galeev raised money and gave salaries to the best mugallims from various villages. The teachers who were educated at the new madrasahs of Galeev and Khusainov (in Orenburg) started pushing for the opening of independent schools in villages, which would not be influenced by mullahs. Whenever a mullah died anywhere, Kazan initiator mullah Galeev made arrangements at the parish so that his alumnus would be appointed to the vacant position. Muslims of all the Volga region were enraptured by this movement. Mullahs would be divided into two camps: adherents of the new methods and adherents of the old methods. The progressives released a range of works in which they revealed different prejudices rooted among the masses and accused the old school mullahs of stagnation in Tatar life; at the same time, conservatives argued that the new-methodists shook the foundations of the faith. A whole community "El-Islax" (reform) was formed, the aim of which was to spread the educational institutions and literature of the new generation. A newspaper with the same title was established, which devoted all of its pages to the reform of the Tatar education; this newspaper was published by shakirds of Kazan madrasahs, who discovered in themselves a strong motivation for studying the Russian language and persistently proved the need to learn it. Three book firms for publishing and spreading of the literature of new-methodists were opened. As mullah Galeev was one of the main figures involved in attracting the Tatars to the cadet party and a famous disseminator of ideas of Pan-Islamism and as he provoked strong anger among conservative Tatars, in order to stop the harmful agitation, he and other two mullahs were exiled to Vologda guberniya for two years. After his departure, the madrasah retained its forward-looking nature, though the spirit and direction of its teaching were changed, as it absorbed a business character without a trace of the bold anti-state (cadet) policy. Today, mullah Galeev, who was restored to his rights, has again taken up management of the madrasah.

It is clear from the above described that until today the most widely spread type of Mohammedan colleges have been old confessional (i.e. for teaching religion) schools, but there has already appeared a new type of these educational institutions—the so-called new-method maktab and madrasahs at which general courses are taught along with religion. In addition, some of such madrasahs (Galeev's in Kazan, Khusainov's in Orenburg, Bobinskaya in Malmzyzh (*Sarapul – Ed.*) uyezd of Vyatka guberniya) aspire to be some kind of teachers' seminaries from which mugallims graduate, who then begin their work at

Mohammedan colleges in the new direction. If the new-method schools are not yet widely represented at the moment, we can state with confidence that they could gradually replace the old-method madrasahs and maktabas in the near future under favourable conditions. This way, Tatar youngsters would continue being taught diverse subjects at their national schools in the spirit of isolation from everything Russian and without any control from the state.

Is such state of affairs permissible from the government's point of view? Undoubtedly, no. Public school in Russia has to remain the same for all tribes and nations, and all courses except for religion must be taught in the Russian language.

This is one of the pillars of the state body, the key to its unity and strength. If the law recognises the existence of madrasahs and maktabas at mosques, they have to fulfil a single role: teach Mohammedan children their religion; therefore it should by no means be allowed to present general education courses there. But since the Tatars have recently started to feel a lack of real knowledge and general education, it is necessary for the sake of satisfying this legitimate need to make it easy for the Tatar youth to receive such education in the Russian language. The following things are necessary to do this: first of all, it is necessary to open a greater number of Russian-Tatar colleges, of one or two form years, and even higher junior colleges—handicraft, agricultural, etc. where all courses, except for the Mohammedan religious doctrine, would be taught in the Russian language.

Secondly, for those Tatar Mohammedans who desire to study at secondary educational institutions, the process of enrolment must be made easier through increasing the age threshold by at least 2 years, which is caused by the difficulty of preparation in their native language.

Thirdly, the Russian language requirements, established by the Ministry of the Mass Enlightenment dated 30 December 1890, must be raised for candidates applying to the position of village mullahs, in particular, no later than since 1 January 1916 the above mentioned candidates must know the Russian language at the level adopted at state single form year Russian-Tatar colleges. This measure would prompt the Mohammedan population to call for the opening of Russian-Tatar colleges in their villages in order to teach their children the Russian language there. Under the current conditions, when candidates for the position of village mullah can pass the Russian language examination after preparing for only 3 to 6 months through taking personal lessons, the number of Russian-Tatar schools cannot increase quickly.

Fourthly, adopt the requirements for the level of the Russian language and grammar set out by the rules of 26 March 1870 on the measures towards educating Inorodtsy and apply them to the Mohammedans elected to public positions (zemsky, city and village) and implement them as soon as possible (approximately from 1 January 1917).

The latest measures are undoubtedly desirable for the needs and goals of the administration and will have special significance as a means of the rapprochement between Muslims and the indigenous population of the empire. The need for knowledge of the Russian language will prompt the Muslim population to take heed to open Russian-Tatar colleges in their villages and send their children there to be educated. Learning the state language and other general education courses in the Russian language will distract the Mohammedans' thoughts from the exclusive interests of Islam, show them the world of new ideas and contribute to softening that inflamed religious discord which up to the present moment has been brought up and supported by the teachings of Islam dominating Islamic schools and brought Russian Mohammedans spiritually closer to Turkey rather than to Russia.

No. 13

A note of Kazan governor P. Boyarsky 'On the question of modern direction of thought prevailing among the Muslim population of Kazan guberniya in connection with the developing propaganda of Pan-Islamism and on the measures which may contribute to establishment of the proper course in local public life in accordance with our state tasks'.

**Appendix to the journal of the Special Council on Muslim Affairs,
created under the Ministry of Internal Affairs**

on 29 April 1914

<...> Kazan guberniya is one of the centres of Russian Islam not only by the number of Muslims living within it, but because of the significance of the city of Kazan and the local Tatar intelligentsia in the matter of development and consolidation of contemporary movements, first of all, of the nationalistic character which is observed in the environment of the Russian Muslims in general.

According to the latest statistical data, the total number of the Mohammedans of both genders living within it is 820,000 people, which amounts to 33% of the overall population of the governorate. The prevailing nationality among the Mohammedans is Tatar, amounting to 819 of both genders, and in some uyezds, Tatars amount to 71–73% of the overall population and they do not inhabit the two uyezds (Kozmodemyansk and Yadrin), where Inorodtsy live. Thanks to this ratio, Tatars dominate both in the economic and social lives of many uyezds. A characteristic feature of the ethnographic composition of Kazan guberniya is that the Russian element does not form the majority in any of its uyezds, and Sviyazhsk, Spass and Laishevo uyezds, which in this respect are in the most favourable conditions, are inhabited by 68 to 56% Russians. The percentage of the same persons is insignificant throughout all other uyezds.

If, regardless of the statistical data, we take into consideration that Kazan, which used to be the capital of the Kazan tsardom, is surrounded by a halo of great historical national memories, the logical consequence is that Kazan Tatars could not stay indifferent to the evolution which has recently been observed among Muslims all over the world and, due to the historically formed cultural domination and influence of the Volga Tatars upon Muslims Inorodtsy [aliens] of Russia, the former have occupied something of a leading position.

<...>.

Famous Turkish activist Mahmud Esad Efendi who in previous years visited some Russian regions including Kazan, said the following in conversation with an employee at 'Sabax' newspaper issued in Constantinople about the role played by Kazan and Kazan Tatars in public enlightenment: 'Kazan and its neighbouring region spread the rays of enlightenment among the Muslims inhabiting the areas to the east from the Chinese borders. Wherever you go, everywhere you meet ulamas (scholars), muallims (teachers) and businessmen of the Kazan region. Everywhere among the population you see striving for progress and a serious work in this arena. Kazan and its suburbs are the most enlightened cultural centre of the Muslim world. Unfortunately, we have not understood it well enough until today.'

We can have the idea of how advanced the Tatar publishing industry is in Kazan by the fact that Kazan's four Islamic typographies printed and issued 456 non-periodical publication in 1908, 412 in 1909 including 108 study guides, and 319 in 1913. This scale of publishing corresponds to the quantity of Tatar bookshops, of which there are now nine in Kazan.

However, the influence of Kazan over the intellectual life of the Russian Muslims and the formation of Muslim social thinking is not limited to issuing of schoolbooks and books of various content. Three newspapers are printed here ('Bayanulxak'—Expression of truth, 'Koyash'—Sun, 'Yulduz'—Star (of a progressive character) and three magazines 'Ang' (Notion), 'Mektebe' (School) and 'Xokuk va Xayat' (Right and life). On the pages of periodical publications issued in the city of Kazan, Tatar publicists preach the necessity of brotherly unity of Muslims as an essential condition of the preservation of Mus-

lims' significance and the rights which belong to them. The same publicists, who present themselves as adherents of European education, at the same time advocate for the necessity of preserving and developing national identity in all spheres of life.

Parallel to this, publications often speak about the Tatars as members of the same family of nations, in particular, the Turkic one, and also point to the necessity of learning the common Turkic language in Tatar schools.

At the same time, it is noteworthy that last year, during the celebration of the 300th anniversary of the Romanov dynasty's happy reign, all Kazan newspapers sympathized with the jubilee; all of their editions were filled with articles and poems referring to the celebration and described the Russian Muslims' loyalty to the throne and the Russian tsars' merciful attitude to their Islamic subjects. <...>.

Letter of Head of Kazan city V. Boronin to Kazan governor P. Boyarsky about organisation of aid for refugees

4 August 1915

In order to properly resolve the issues which will be caused by the expected arrival of refugees in Kazan, I called a meeting of the city committee on Monday 3 August, which came to the following conclusion: in order to provide proper help to refugees, representatives of national organizations have to be included in the committee—three from each—the Polish, Latvian, Jewish and Islamic committees; the executive commission has to be detached from its structure, so that one representative of each national committee participates in its sessions. The commission has been given broad powers in terms of practical work, so that in case of difficult situations, it can appeal to the city committee.

In order to fulfil this task, the executive commission met on 4 August and issued the following orders: 1) in order to clarify the issue of refugees' accommodation, examine city Baraks in the Tatar part of the city, the building of the former tea house of the Temperance Society, the city tea house at the Ustinsky wharves, etc. and analyze whether they are suitable for accommodating refugees and if their reconstruction and alteration are possible; 2) clear up the question of the possibility of renting rooms and separate apartments for educated refugees and those who have families. In order to do this, enter into agreements with hotel owners and publish advertisements in local newspapers targeted at house owners saying that the committee needs cheap apartments and asking them to notify the city administration in case of their presence and availability; 3) start making up straw mats which could be used instead of mattresses; 4) paste up notices in the Russian, Tatar, Polish, Latvian and Hebrew languages in different parts of the city, at the railway station and wharves which would inform refugees where they can find shelter and displaying the addresses of national committees; 5) arrange catering for refugees at city canteens and by the Latvian committee which will serve lunches and dinners; 6) provide arriving refugees with the ability to use banyas [steam houses] and provide them with clothes for changing; 7) medical assistance will initially be carried out by the Duma doctors. Further arrangements are to be made by the city sanitary commission; 8) provide refugees with returnable financial allowance on the most favourable terms. The appointed allowance is to be given by the city committee in accordance with the degree of need. Up to 1500 people may be accommodated in the buildings prepared for refugees. Regarding resources needed for organizing aid for refugees, the committee decreed to ask Your Majesty whether you consider it possible to transfer 3,000 rubles belonging to Your Excellency to the committee in order to provide first aid to refugees and, moreover, ask Your Excellency to petition for

giving the whole sum, which was collected in favour of the desolated outskirts to the committee. The petition has been organised on behalf of the committee which is under patronage of Her Imperial Highness Grand Princess Tatiana, keeping in mind that Kazan had already provided help to the desolated areas last year, in November of 1914.

I have the honour of presenting the propositions of the committee stated above to the consideration of Your Excellency.

Chair of the Committee,
head of the city,

V. Boronin

The article 'Imams' from a Tatar newspaper, translated by Professor N. Katanov

1915.

The financial situation of our rural and urban imams is not secured and will possibly continue to be not secured for a long time. Imams live on the funds of parishes, but the amount of these funds, which are directed to the imams, are undefined. In recent years, imams have been put into a more uncomfortable situation. Their cares have increased. Because of the war, they have to submit different metric statements and various information sheets. They need paper for these documents, and fairly good paper at that. And thus, a rural imam spends his last money, which was supposed to buy tea and sugar, on papers. And so it happens sometimes that an imam, after spending his last money buying papers, is forced to live without tea and sugar. And the conditions of living for such imams are the most acute.

The harvest has been excellent this year. That is why some people say rural imams' earnings have been increased this year. But they are mistaken. I made enquiries about more than fifty imams and muezzins. 48 of them received between 8 and 20 carts of the ushur (an ushur is one tenth of all grain which was supposed to be granted to poor people and at the moment goes to benefit imams and muezzins), two people were given 35 carts each, one muezzin was given 35 carts, and the mullah of the same parish received only 1.5 carts. Only one mullah received 50 carts of the ushur (*gushur – Ed.*).

On average, one mullah is given 14 carts. If we count in poods, that is 84 poods of grain. If an imam could wait until grain goes up in price, he would possibly earn as much as a village shepherd earns in 8 months. But his material conditions do not allow him to wait for a long time. He needs to sell rye as soon as possible in order to pay off his debts to Altunbaev. His belongings are pawned to this Altunbaev.

Finally, he owes A[n]drey for tea and sugar. So he also needs to be paid. Therefore, the poor mullah in the peak of field work has to sell all 84 poods at the price of 50 kopecks a pood. This will give him 42 rubles. From this money, he takes 10 rubles to pay workers who would grist his crops. Now, 32 rubles are left. In such a state of affairs, he should even against his will think in the following way: 'Surely, it would be great if that merchant died. Something would be left after him so that I could repair holes.' What morality can be taught by such a mullah?

Now let us turn to the mullahs themselves. If I say that 2/3 of all mullahs are worth their title and the rest are absolutely not, I will hardly be wrong. At the moment there are papers from different mullahs at my disposal. Many of these mullahs commit grave errors in writing. Three of them do not know how

to write at all. Among mullahs, some even have nine children. How can a mullah who earns 32 rubles feed them?

Today everything is expensive. Therefore, salaries of all representatives of labour were increased. In the meantime, this year mullahs' earnings are lower than usual. Moreover, this year mullahs were forced to pay back the 25 rubles, which they borrowed from the government through the Spiritual Assembly in the year of hunger. Those who could not make the payment had their property seized. Back in the day, people would get married and marriages would provide mullahs with some income. No more marriages are concluded, as men have gone to war. There are no bridegrooms left for girls, and the birth rate has fallen, because the men are gone.

The only thing a mullah has to do in such conditions is to preach sermons which would be beneficial to some village kulak, or butter up some rich men if he is in the city.

Undoubtedly, there are fair people among mullahs. It is possible that the one who received 1.5 carts when another got 35 carts, as we have described above, is a really honest man. He never sells himself, even for millions.

The press is also sinful in this respect. The press has portrayed mullahs as gluttons, fleecers of people. The mullahs have not said a word against it. But why, fathers, do you not protect yourselves? Can you not count? Or perhaps you have not noticed the newspaper articles? You clearly see what a great influence the press can have. If we do not take efforts to defend ourselves, who will? You are not angels, but neither can you live without eating, drinking or dressing yourselves. Moreover, you should not forget that you all have children to raise.

Akhun Giniyatulla, son of mullah Gizatulla.

No. 16

From the review of the economic and living conditions the population of Kazan guberniya has found itself in over the period of 9 months since the beginning of the war—about the aid to the families of conscripts or those who volunteered for service in the active army

20 July 1915

Among all sources which have provided help to the families of those who were called up for military service or who joined the active army as volunteers—the allowance provided by the state in accordance with the law of 25 June 1910 is undoubtedly the most valuable. All other types of aid almost without exception are of a temporary nature. Public organizations rarely dispose of sufficient resources and therefore their aid ends too early, and in a lot of cases it is limited to one-time payments. The only exception here is the aid organized by the Kazan city municipality which is provided from the city funds. It is similar in character to the state allowance, which we will discuss below.

Since the beginning of the first military conscription of reservists and militia fighters through May 1915, the state treasury provided allowances to cities with the total amount of 270,171 rubles 15 kopecks and to rural areas amounting to 5,683,068 rubles 56 kopecks. In total, the treasury spent 5,953,239 rubles 71 kopecks or 567,000 rubles a month. In urban settlements, allowances are granted monthly, and in rural areas—every three months <...>.

The initial size of the ration was set for Kazan at 2 rubles 24 kopecks and for the uyezds with their cities—depending on prices for groceries: from 2 rubles 9 1/2 kopecks for the Kazan uyezd to 2 rubles 34 kopecks for the Spassk and Chistopol uyezds, moreover, in the majority of uyezds, the ration was set at an amount of 2 rubles 17 kopecks. <...>

Therefore, at the existing sizes of rations, an average family of four members aged over 5 years-old, who had the right for receiving a full ration, must have been granted the allowance of 9 rubles 4 kopecks from the state treasury, if the family lived in Kazan from September to June; the minimum allowance for those living in uyezds was supposed to be 8 rubles 60 kopecks with the ration of 2 rubles 16 kopecks, and the maximum sum of the allowance was to be 9 rubles 36 kopecks with the ration amounting to 2 rubles 34 kopecks—that is, in this case even higher than for people of Kazan. In accordance with the reports of tax inspectors, some families, because of the big number of their members, received allowances amounting up to 17–22 rubles a month—that is the sum, which had not even been earned by their conscripted breadwinners. In general, the amount of the state allowance for inhabitants of villagers is considered to be normal and enough to keep conscripts' families and even allowing sometimes to save money, deposit the rest in the bank, settle conscripts' debts, etc., according to the words of the tax inspector of the Yadrin uyezd who himself was a witness of this. Tax inspector of the Spassk uyezd provides a more explicit description of the state allowance. He considers the amount of state allowances to be totally sufficient and suggests that in case of its increase, some families' energy and labour abilities would be artificially decreased.

If the state aid could be insufficient for some peasant families in the rarest cases, then it was complemented with charity which helped them buy clothes for children, for example, or bring logs to the families where no more men were left, and so forth.

Moreover, civil public funds were sometimes spent not on the requirements of the families of conscripts, but on satisfying the needs of the latter. Thus, for example, some village communities of the Tsarevokokshaisk uyezd assigned 2650 rubles for the needs of reservists and militia soldiers. <...>

If peasant families received the amount of allowance equal to the urban families, or somehow smaller, the former would always find themselves in better material conditions than the latter. Peasant families with some minor exceptions have their own izba [hut], are often supplied with fuel if not in the form of logs from the public forest, then in the form of straw. The most essential groceries from private farms will help survive if not until the new harvest, then at least for some time. At last, in peasant families we can often come across items of clothing and shoes of their own production (linen, valenoks, bast shoes, etc.).

Families of conscripts who lived in cities as workers, craftsmen, serving to private individuals and the like who were sustainably self-sufficient through their own labour, found themselves in a difficult material condition. The situation was even more grinding for those families who were left without the breadwinner.

Apart from worries about daily bread, such families had to find a way to provide themselves with living quarters, fuel, clothing, etc. The state allowance which had been intended to be given to reservists' families surely could not provide an advantaged living to any family if it had not been provided with property or profits through some investment or family business which could be continued after the head of the family was recruited (trade, for instance). Very few families of conscripts found themselves in a comparatively good situation. Some rich trading-industrial companies, as well as private individuals who sympathized with the conditions conscripts' families were in, provided the latter with a free temporary dwelling and in some cases lived in the same apartments where they used to live with the conscripts who, thanks to their service, could take advantage of a free-of-charge apartment. Some companies allowed conscripts' families to receive part of their breadwinners' salaries.

Thanks to such a state of affairs, a difficult task was set before the cities: they had to ease the need, which had encompassed the families of the urban population in a broad wave.

The Kazan city public administration was one of the first who stepped on this path and allocated 100,000 rubles for covering the needs of conscripts' families. By April 1915, 55,064 rubles 73 kopecks were spent from this sum. In order to implement this measure, the city organized a special committee which, in addition to city counselors, included representatives of various stratas of the society. This city committee has provided help in four spheres. First of all, it grants allowance in the amount

set by the state to individuals who by law do not have a right for that, for example, to civilian wives and their families who were sponsored by conscripts, if it is proved by the examination conducted by special district protectorships, by which the city was divided in accordance with the number of police departments. In general, the city granted allowances to 2706 families which amounted to 13,384 rubles 33 kopecks for the period since 17 July 1914 to March 1915. The second most widely spread type of aid is granting the housing benefits which during all the time have been given away in the amount of 21,991 rubles 16 kopecks to 10,398 families. These benefits were only granted to families who, after the local examination, appeared to be in a strong need. And it was granted at the rate of 75 kopecks per person a month, but no higher than 3 rubles per one family even if it included more than 4 members.

During December and January, the city provided reservists' families with 1,200 sazhen of logs amounting to 6,690 rubles 48 kopecks. These logs came from the private storage of the city woods. Since it was really difficult for the city to organize distribution of logs, the last one was made with the support of church protectorships as public organizations, which were really close to the local population and well acquainted with the material prosperity of certain members of their parish. Thanks to this agreement, logs were brought to church protectorships and the latter then defined the degree of need certain families were in. And on the basis of such examinations, they distributed fuel material approximately by 1/2 sazhen per a family. At last, with the broad support of the local community, the city managed to organize free canteens, and 13 of them currently operate in the city. The city spent 12,998 rubles 26 kopecks before April for its keeping. This sum does not cover all spendings on canteens, as they also receive many private donations by products and money, the overall amount of such voluntary contributions is hard to calculate. Every day canteens feed children of reservists whose family are in the greatest need. In extreme cases, for example, because of a disease or another reasonable excuse, lunches are served outside of the canteens.

Apart from their direct purpose, city canteens also pursue pedagogical purposes. Local genteel ladies who de facto manage everything at these canteens, strive, where possible, to eradicate bad habits and inclinations noticed in children's behaviour; to cultivate in them love of religion and the Motherland, to interest them in various scientific disciplines suitable for their age, etc. The result of such activities is quickly apparent, and the children become more polite.

The activity of the city in the discussed sphere would be insufficient if we did not mention the organization of collection of items at the end of 1914 in favour of our fighters, with broad participation of the local community. This collection exceeded all expectations. There was collected a great number of various items which, because of their character, could not be used as intended. This way, for example, articles of female and some items of male clothing were given out immediately to families of reservists through church protectorships.

Apart from the mentioned city organization, several other organizations operated in the city of Kazan which pursued the same purpose—provide material help to the families of those called to arms. First of all, we should mention activities of local church protectorships, which give away circa 1 ruble per month from their own funds to the families of over 1 member, who are in a special need or burdened with a great number of members. Activities of such protectorships have always been efficient because their spheres touched small areas and thus, examination of financial situation of reservists' families was not a difficult matter for members of protectorships, as they are inhabitants of the same areas.

The Kazan department of the society of general help, which is under protection of His Highest Imperial Majesty, has the task of providing help to Russian warriors injured at the battlefield and their families, and expressed a noticeable activity in the matter of aiding those called up for active service. In 1914, the department examined with the help of its members 1,115 families and gave away aids amounting to over 4,000 rubles, and it has given away 2,000 rubles more in the current year. Moreover, through fiduciaries, the department gave away over 700 items of clothing and underwear to the poorest families of reservists. The department's activity is vividly broadening, because the number of

its members increases and the amount of in-payments gets higher. Local public entities made the following donations in order to strengthen the department's work: the zemstvo gave away 300 rubles and Kazan—500 rubles.

Among other cities of the Governorate, the highest activity at taking care of reservists' families was expressed by the town of Chistopol which in the period through April 1915 provided the following aid: with money amounting to 6,905 rubles, with groceries—tea, sugar, flour amounting to 683 rubles 63 kopecks, with petrol—3,000 rubles and water for 400 rubles, with the total sum of 10,988 rubles 63 kopecks.

Apart from that, since January of this year, children from families of reservists, from 3 to 14, were provided an opportunity to be fed at canteens. During the first three months of existence of these canteens, their expenditure has been set at circa 1,500 rubles, while they take care of 709 families with 2,359 eaters.

The activity of other city self-administrations in the defined area was expressed to a lesser extent—as far as their resources allowed.

In the uyezd cities, various charity organizations also functioned as far as their resources gave possibilities for that.

If we calculate the sum given away to reservists' families, who were called up for military service through March, it will be 6,128,597 rubles 46 kopecks, including grants: from the treasury—5,953,239 rubles 71 kopecks, from the zemsky and city unions —21,015 rubles 70 kopecks, from the zemstvos—37,708 rubles 83 kopecks, from the cities—74,202 rubles 15 kopecks, from the population—17,894 rubles 44 kopecks, from the volost protectorships—754 rubles, from parish church protectorships, the association of general help and diverse charity organizations—23,782 rubles 93 kopecks.

From the message of head of Kazan guberniya P. Boyarsky to the Police Department about the resentment among Kazan inhabitants due to the economic crisis

17 October 1915

It seems to be calm on the surface, but from the inside, hidden irritation and exasperation are felt very strongly, which are particularly caused by growing living costs, from rent bills to essential goods. With these rising costs, they see the speculation of entrepreneurs who relish the opportunity to line their pockets. And the anger towards them is very potent. The efforts of the city administration to fight rising living costs by introducing competition cannot be fulfilled because there are no resources, and the city's petition for a million loan was rejected.

Dissatisfaction shows through even in the most unexpected circles, where we would least expect, and talks of revolution as the finale of the war have become an ordinary phenomenon.

No. 19**A note in the newspaper 'Kzyl bairak', 'The goals are different, or everyone has their own goals' about the real purposes of the war loan**

18 June 1917

What is a soldier's purpose in war and what responsibilities are laid on the shoulders of a bourgeois? The government's announcement of a war loan gives a clear response to this question.

It reads: 'The Army has fulfilled its purpose before the Motherland—it has gone on the offensive. You must also fulfil your responsibilities—sign up for the loan of freedom, help the Army.'

Indeed, a soldier's responsibility to his Motherland is to receive wounds, be injured and die in war, while the responsibilities of the bourgeois are to stay at home and acquire bond loans, make 6% profit and count their other lucre. The poor bourgeoisie, what a heavy burden rests on their shoulders! Comrade soldiers headed for the battlefield, have a mercy upon the poor bourgeoisie!

Report of the Khvalynsk Muslim subdivision of the Saratov gov. division for national affairs dated from April 1919 to 15 June 1920.

Not earlier than 15 June 1920²

The Islamic division was organized in April 1919. Data was collected from volosts of the uyezd on the number of Muslim inhabitants. Political literature, newspapers and magazines were distributed among Muslims. Muslims express a friendly attitude towards the Soviet government. They are very interested in the newspaper and magazine. The Muslim division ordered Islamic typography fonts in Kazan. The Tatars love the theatre. They accommodate orphan children in orphanages. But there are no resources. Not so long ago, we received a notification from the Saratov gov[ernorate] division for national affairs about the approval of the cost sheet for 1920, but the credit has not been lodged yet. Instead of three employees, only one has been approved. It is extremely hard for one instructor-agitator to carry out work among the 70,000-strong Muslim population.

No. 22

From the Resolution of the 1st All-Tatar Founding Congress of Soviets^{3*}

26–27 September 1920

Upon becoming familiar with the report of the People's Commissariat of Education about its activity which due to several reasons is in miserable conditions, the 1st Foundation Congress of the Tatar ASSR still has successes which were achieved by a long and persistent struggle of agencies for enlightenment under adverse conditions of the economic collapse of schools and lack of teaching staff.

At the same time, the Congress has found that the People's Commissariat of Education which united the whole enlightenment and ideological work of the Tatar Republic, has to manage its activities on the basis of regional peculiarities, so that all workers and peasants themselves were creators and participants of the proletarian culture in all of its spheres.

The agenda of the Congress included:

1. Current state of affairs.
2. Report of the Tatar Revolution Committee.
3. Food question.
4. Economic development.

² Dated as per the document.

³ The first All-Tatar Constituent Congress of Soviets was opened in Kazan on 26 September 1920. The Congress proclaimed the formation of the Tatar Autonomous Soviet Socialist Republic within the Russian Soviet Federative Socialist Republic. After the formation of the secretariat of the Congress, the election of the Mandates Commission and the editorial board, three sections were set up—agriculture, education, and healthcare, which were instructed to prepare reports to the Congress on their respective areas of management.

5. Report of the land department.
6. Report of the social welfare department.
7. Report of the Tatar public health service.
8. Report on the public enlightenment.
9. Elections of the Central Executive Committee.

<...>

Along with suggesting the future People's Commissariat of Education to conduct its practical work through implementation of all the orders in the sphere of social education, as well as school and pre-school education, the 1st Congress of Soviets suggests the People's Commissariat to pay close attention to organization of professional and technical education, which has up to date faced almost insuperable obstacles in its implementation.

In this respect, the Congress finds it necessary to: 1) start an intensive preparation of the teaching staff, 2) necessarily organize groups of teachers who could teach not only in Russian, but also in other languages of the Tatar ASSR, for which it is suggested to appoint some of the teachers to send on special courses, 3) prepare a stock of equipment for professional schools and work shops, 4) either unite weak schools with stronger ones, or organize in the latter: a) boarding schools and b) preparatory groups for individuals of different nationalities, 5) begin intensive translations of special books in the Tatar and Chuvash languages, 6) finish as soon as possible the development of study plans and programmes, 7) focus on the development of professional and technical knowledge among adults thus organizing courses not only at factories, but also at well-equipped schools.

Moreover, in terms of organization, the Congress recommends the future People's Commissariat of Education to establish more long-lasting connections with other Soviet departments: establish stable contact and natural integration of the work of all bodies subordinate to the People's Commissariat of Education, in particular, the work with the city department and, at last, properly and soundly organize labour tracking and distribution of enlightenment workers, to the possible extent provide them with favourable material conditions and simultaneously increase labour discipline among them.

No. 26**661The decree of the Central Executive Committee and the Soviet of People's Commissars of the Tatar ASSR about introduction of the Tatar language into records management of Soviet institutions of the republic⁵**

25 June 1921

In view of the opportunity of a peaceful construction of the Tatar Republic, which has finally appeared after longstanding escalations of the civil war, the Tatar Central Executive Committee and the Tatar Soviet of People's Commissars, decrees in respect of the Tatar labour population:

⁵ The question of the implementation of the Tatar language for use in documentation was considered at a meeting of the Presidium of the Central Executive Committee of the TASSR on 14 February 1921, when a resolution was adopted on the need to adopt the Tatar language. (National Archives of the Republic of Tatarstan. Fund P-732. Inv. 1, File 6, Sheet 45).

1. To introduce the Tatar language as obligatory at all Soviet state organizations.

Note: Public, cooperative and professional organizations introduce the Tatar language at their discretion.

2. In order to implement the given decree systematically and as soon as possible at the Tatar Central Executive Committee, for the purposes of its department, a special committee for Implementation of the Tatar language has to be founded. The committee should use and develop all the Tatar cultural forces through their tracking and distribution both in the Centre and locally⁶; moreover, the Tatar People's Commissariat of Education has to hold take measures for hiring Tatar cultural staff who know the Tatar language and the national lifestyle of workers. The committee's decrees are obligatory for all Soviet institutions and can only be protested at the Tatar Central Executive Committee and at the Soviet of People's Commissars.

3. When Implementating the Tatar language, the new orthography—developed by the People's Commissariat of Education—is obligatory. The People's Commissariat of Education is also ordered to found a special committee for developing an appropriate terminology for state communications and the Tatar alphabet for telegraph communications.

4. The People's Commissariat of Education is ordered to immediately organize courses of the Tatar language for all volunteers from the rows of workers of the national communications service as well as Soviet workers⁷. It is necessary to introduce the course of the Tatar language at the 2nd degree schools for everyone who wishes to study it, and adopt the same language course of Russian at 7 Tatar schools.

5. The People's Commissariat of Education is ordered to re-open the Tatar schools which were closed the other day, and intensively develop Tatar national theatres, besides, all Soviet institutions must provide support of all kinds to the People's Commissariat of Education.

6. In accordance with the practical agreement between the Tatar Central Executive Committee, the People's Commissariat of Justice and their bodies, Tatar courts should be immediately organized in the areas where the majority of the population is Tatar, so that proceedings and verdicts would obligatory be held in the native language of the accused. As and when necessary, bodies of the people's courts hire interpreters approved by the Tatar Executive Committee and the People's Commissariat of Justice, or their local branches.

Notice 1. Texts of interpretations are appended to the minutes and are read to the accused and witnesses, in addition, interpreters bear responsibility for wrong or felonious interpretations before the court of the Revtribunal (Revolutionary tribunal).

Notice 2. The People's Commissariat of Justice is ordered within a period of one month to develop the decree on mixed records managements.

7. Reception and transmission of telegrams at telegraph offices must be immediately introduced in the Tatar language with the use of the Russian font in accordance with the agreement between the Tatar Central Executive Committee and the post and telegraph department where it is necessary, until the Tatar font is developed and until the Committee for Implementation of the Tatar language, the Tatar Central Executive Committee and the Tatar Soviet of People's Commissars issue their decrees. All telegraph offices immediately start accepting correspondence where addresses are written in the Tatar language. At the same time, the Committee for adoption of the Tatar language is

⁶ A resolution of the Central Executive Committee of the TASSR dated 13 May 1922 approved the regulation for the canton committees to implement the Tatar language. They were entrusted with the management of the work of all Soviet institutions within the canton to adopt the Tatar language for use in documentation. (National Archives of the Republic of Tatarstan. Fund P-732. Inv. 1, File 2. Sheet 136. Original).

⁷ By a resolution of the Council of People's Commissars of the TASSR dated 24 May 1921, it was proposed to the People's Commissariat of Education of the TASSR that courses in the Tatar language should be arranged in Kazan, the cantons, and volosts by 15 June 1921. The courses were to be made available, first, to responsible workers, second, to Soviet officials, and third, to anyone interested. (National Archives of the Republic of Tatarstan. Fund P-3682. Inv. 2. File 436. Sheet 44).

suggested to take urgent measures to introduce free transfer of simple correspondence, containing Tatar addresses.

8. All decrees and statements of the Tatar Central Executive Committee, the Soviet of People's Commissars and Soviet bodies which are subject to be published, are to be issued in the Tatar and Russian languages.

9. Given the high percentage of the Russian proletarian and peasant population inhabiting the city of Kazan, for whom adoption of the Tatar language may become highly difficult, the Russian language should be implemented as a state language along with the Tatar.

10. Correspondence between state institutions and records management within them must be carried out in one of the state languages, besides, in both cases bureaus of translation should be organized at these institutions, which would provide assistance in any of the state languages.

Notice 1: Bureaus of translation must be arranged by a special order of the Committee for Implementation of the Tatar language and cannot hire more than three translators/interpreters if there are no special chancelleries at the central people's commissariats and 1–2 at local branches on the same terms.

Notice 2. The Committee for Implementation of the Tatar language is entrusted with the responsibility of hiring translators and interpreters for all bodies, where the need for organizing bureaus of translation was found.

Notice 3. In case of absence of translators/interpreters, bodies adopt the Tatar language by their own means within the limits of feasibility.

11. All difficulties and misunderstanding when implementing the present decree are settled by the Committee for Implementation of the Tatar language.

Decree of the Academic Centre of the People's Commissariat of Education of the Tatar ASSR⁸

3 December 1921

I. General provisions

The Academic centre is in charge of general theory and programme management of the scientific, educational (educational-pedagogical and educational-technical), enlightenment and artistic activities of the People's Commissariat of Education.

The primary objectives of the Academic Centre are:

a) Development of the general plan of people's enlightenment for one period or another in accordance with the projects presented by the centres and head commissars of the People's Commissariat of Education.

b) Development of private plans for one or another sphere of enlightenment on special instructions of the collegium of the People's Commissariat of Education.

⁸ The regulation was approved at the board meeting of the People's Commissariat of Education of the Tatar ASSR on 3 December 1921 (National Archives of the Republic of Tatarstan, Fund P-3682, Inv. 2, File 432, Sheet 388).

- c) Development of plans and programmes of activities at scientific institutions as well as programmes of teaching at all types of educational institutions of the TASSR.
- d) Direct management of institutions the objectives of which include purely scientific, theoretical and artistic-academic work.
- e) Management, direction and coordination of work of centres and chief commissars of the People's Commissariats of Education at the bodies which carry out academic work.
- f) Development of plans and projects directed to organization of scientific expeditions, researches and convocation of scientific conferences.
- g) Acquiring of scientific works, books, schoolbooks, literary works and fiction via declaring contests and gathering teams of interested individuals.
- h) Tracking and registration of the existing scientific communities as well as organization of new ones.
- i) General management by the institutions stated in the paragraph 3 hereof.

II. Structure of the Academic Centre

3. There are scientific commissions at the Academic Centre: 1) scientific and political, 2) scientific and technological and 3) scientific and pedagogical, 4) artistic with five sub-commissions: a) literary, b) theatrical, c) musical, d) of visual arts and e) cinematographic. Moreover, it includes the Main Archive and the Main Museum, along with the Secretariat of the Academic Centre.
4. The Academic Centre is managed by the collegium, which consists of 5 people.
 - 1) head of the Academic Centre, 2) head of the State Scientific Soviet, 3) head of the main committee for arts, 4) head of the Main Archive and 5) head of the Main Museum, along with one representative of TTSPS (Tatar Central Soviet of Trade Unions).
 - 5) head of the collegium manages the Academic Centre and bears full responsibility for the work of the Academic Centre.
6. The manager of the Academic Centre is appointed by the People's Commissariat of Education and approved by the Soviet of People's Commissars <...>⁹.

People's commissar of enlightenment of the Tatar ASSR Sh. Akhmadiev
Secretary of the collegium of the Tatar People's Commissariat of Education.

No. 28

Data on the Tatar nationality on the territory of the RSFSR.

Data from 1920

13 February 1922

Petrograd: The bureau translates political books into the Tatar language. There operate two schools of the 1st degree and two preschool groups within schools. Orenburg: 16 schools of the 1st degree and 74 schools of the 2nd degree. Three-year pedagogical courses were opened. There is the Institute of Eastern Studies with the following faculties: of Eastern philology, geography, biology, history and physics and mathematics. There were opened clubs for workers and peasants and People's Houses. There were opened libraries with reading rooms in 23 locations. Clubs for peasants and workers were opened at 5 schools for adults.

⁹ Information about the staff of the Academic Centre is omitted.

Data from 1921

Saratov. The Tatar section publishes the newspaper 'Yalkin'. 5–6 million Tatars are scattered outside the Republic of Tatarstan. Only 1,700,000 Tatars live within the republic.

100 people work in Siberian mines. 100 people in Donbass.

The overall number of population inhabiting Ufa guberniya is 1,790,572 people. The Tatars represent 50% of this number—966,619 people.

Up to 20 people of Tatar nationality (circa 20% of the overall population) live in Samara guberniya.

250 Tatars (10% of the overall number of population, while there are no Tatars working at administrative bodies) live in Saratov.

Siberia is inhabited by 1.5million Tatars (its administrative bodies do not include Tatar people).

Data is taken from the newspaper Zhizn Natsionalnostey [Life of nationalities] of 1920–1921.

Record keeper of the Tatar department A. Babushkina.

No. 30

Extract from the report of the Spass Political Bureau to Republican Committee about moods among the canton's population from the period 15 to 30 November 1920

15 December 1920

Moods among employees of Soviet organizations are calm, some only express discontent because of the failure to provide dry goods and essentials in general. They, however, treat the Soviet regime with sympathy and perform their duties in an honest manner. Meanwhile, peasants are in an oppressed mood because of the current situation. They keep grumbling that the Soviet regime takes away the last they have and wants to starve them to death, because the harvest have been bad this year and despite this, in their opinion, the tax assessment did not take this into account. Moreover, peasants are dissatisfied because they are not provided with items of urban production and, first and foremost, dry goods. Moreover, there have been cases in the canton where peasants have begun to eat acorns. At last, the peasantry complains that the regime ignores everything—knowing that there is nothing to feed horses, they are anyways used in carts daily and, in the majority of cases, the kulaks have a dominant influence, as they skillfully find a way into local Soviets [councils] and try their best at exploiting poor people, because, in the opinion of the kulaks, the poor were the ones who had imposed the emergency tax upon them and thus they try to take revenge and arrange it this way that the Soviet regime would be blamed for everything—that is, for various taxations and duties. Cases have been recorded where tax assessment for livestock would be done incorrectly, because of these kulaks who had squeezed themselves onto

¹¹ The signature is illegible.

the village Soviets [councils]: during taxation, the class principle was not observed. The peasantry also complains that some organizations and village Soviets force them to cut and chop wood and, as they say, this duty has never existed even in the time of landlords and now even a watchman does not want to work, not to mention Soviet employees. The peasantry is particularly dissatisfied when they are sent to chop wood for Sovkhozoes [state owned farm], because in the majority of cases, wood chopping was carried out for the apartments of employees at sovkhazes. In view of this, peasants say: we have not a single minute for working for ourselves, because everyone tries to ride on a labourer's neck, our farming is being destroyed and if we keep being forced to perform these duties, we can say with confidence that by spring the peasants will not be capable of sowing fields, recuperate their farming and so on.

The poor respond in the following way to the question why the population of the above mentioned canton treats the Soviet regime and the Communistic party with suspicion: Soviet power is our power and we do not want another one. But the problem is that locally its orders are not carried out in the proper way.

No. 31

Data from cantons of the Tatar Republic according to Circular Telegram No. 475 dated 14 December 1921

As of 22 January 1922

1. ARSK CANTON. 388,735 [people] starving; 347,376 adults have no access to canteen; 2,287 adult evacuees by now; 19 school canteens, each having a capacity of 50 to 100 people; 325 ARA canteens having a capacity of 50 to 100 people; 94 Pomgol canteens having a capacity of 50 to 200 people; 2,000 children to be evacuated; weekly deaths: 30 [people] due to famine, 15 [people] due to typhus; weekly typhus incidence: 150 people; weekly famine incidence: 360 people.

2. BUGULMA CANTON. 240,310 [people] starving; 132,000 adults have no access to canteen; 2,188 adult evacuees by now; 10 meal stations for ill children and adults, each with a capacity of 50, and 123 school canteens having the following capacity have been opened: 121 canteens, each with a capacity of 50–150, 2 canteens with a capacity of 600–1,200 each, which provide meals for 25% of the all ill and disabled people; 2 ARA canteens to host 479 people and 2 isolation units are available in the city; 129 Pomgol canteens to host 13,000 people; 1,334 children evacuated; 2,000 to be evacuated; deaths from 1 December to 22 January: 1,266 [people], 101 [people] due to typhus; total typhus incidence over the entire period: 3,063 [people]; total famine incidence: 5,112 people.

3. BUINSK CANTON. A total of 147,428 people starving; 88 public canteens available to host 1,700 people; 5,859 evacuees; 115 school canteens to host 4,368 people; 206 ARA canteens to host 15,376 people; weekly deaths: 57 [people] due to famine, 10 [people] due to typhus; weekly typhus incidence: 576 people; weekly famine incidence: 655 people.

4. LAISHEVO CANTON. 28 locally funded canteens to host 944 people. A total of 165,512 people starving, including 72,051 children; 75 school canteens to host 3,390 people; 156 ARA canteens to host 15,000 people; weekly deaths: 28 [people] due to famine, 15 [people] due to typhus; weekly typhus incidence: 118 people; weekly famine incidence: 764 people.

5. MAMADYSH CANTON. 26 public canteens to host 1,326 people; a total of 152,935 [people] starving; 29,111 adults evacuated; 336 children's meal stations to host 8,648 people; 75 Pomgol can-

teens to host 13,000 people, and 171 ARA canteens to host 14,200 people opened; 685 children evacuated; 300 children to be evacuated; total deaths over the entire period: 2,371 people due to famine, 121 people due to typhus; typhus incidence over the entire period: 1,699 people; famine incidence: 21,616 people.

6. MENZELINSK CANTON (data as of 15 January). 19 adult public canteens to host 1,237 people; a total of 175,530 people starving; 2,900 adults evacuated; 4 children's meal stations to host 800 people; 60 Pomgol school canteens to host 3,100 people; 161 ARA canteens to host 13,032 people; 832 children evacuated; total deaths due to famine over the entire period: 1,926 people.

7. SVIYAZHSK CANTON (data as of 15 January). A total of 165,309 people starving, including 20,591 people from Chuvash region; 23,035 adults evacuated; 101 ARA canteens to host 12,500 people; 384 Pomgol canteens to host 33,897 people; 204 children evacuated; 200 children to be evacuated; weekly deaths: 100 [people] due to famine, 40 [people] due to typhus; weekly typhus incidence: 110 people; weekly famine incidence: 641 people.

8. SPASSKY CANTON 34 public canteens to host 2,100 people; a total of 158,271 people starving; 19,411 adults evacuated; children's meal station to host 382 people; 165 school canteens to host 3,750 people; 184 ARA canteens to host 17,500 people; 2,309 children evacuated; deaths from 1 to 22 January: 277 [people] due to famine, 201 [people] due to typhus; total famine incidence over the entire period: 8,288 people.

9. TETYUSHI CANTON. 181 public canteens to host 7,289 people; a total of 174,720 people starving; 25,515 adults evacuated; 66 children's meal station to host 28,322 people; 154 school canteens to host 7,653 people; 302 ARA canteens to host 20,700 people; Pomgol canteens to host 7,622 people; 12,662 children evacuated; total deaths due to famine over the entire period: 12,662 people; total typhus incidence over the entire period: 15,000 people; total famine incidence: 32,500 people.

10. YELABUGA CANTON. 1 public canteen to host 300 people; a total of 141,133 people starving, 109 ARA canteens to host 9090 people; 71 Pomgol canteens to host 2,952 people; 693 children evacuated; weekly deaths due to famine: 106 people; total famine incidence over the entire period: 4,366 people.

11. CHISTOPOL CANTON (data as of 15 January). Adult public canteens to host 2,300 people; a total of 279,901 people starving; 13,793 adults evacuated; 244 ARA canteens to host 18,000 people; Pomgol canteens to host 6,650 people; 1,604 children evacuated; 10,000 children to be evacuated; weekly deaths: 2,016 [people] due to famine, 40 [people] due to typhus; weekly typhus incidence: 226 people; total famine incidence over the entire period: 39,008 people.

12. CHELNY CANTON. 35 adult public canteens to host 1,275 people; 13 locally funded canteens to host 601 people; a total of 260,872 [people] starving; 131,894 adults without access to canteens; 197 ARA canteens to host 13,120 people; 123 Pomgol school canteens to host 7,098 people; 994 children evacuated; 1,000 children to be evacuated; total deaths due to famine over the entire period: 11,308 people; total famine incidence over the entire period: 35,046 people.

13. AGRYZ CANTON. A total of 37,943 [people] starving, including 17,073 children; 715 adults evacuated, 77 ARA canteens to host 4,909 people; 32 Pomgol canteens to host 1,335 people; 65 children evacuated; total deaths over the entire period: 269 people due to famine, 47 people due to typhus; incidence of typhus: 180 people; incidence of famine: 4,994 people.

TOTAL STARVING POPULATION OF THE TATAR REPUBLIC: 2,462,599 people; 1,181 Pomgol canteens hosting 101,234 people; 2,237 ARA canteens hosting 191,586 people; 798 children's meal stations hosting 47,306 people; 448 adult canteens to host 16,201 people; 41 locally funded canteens to host 1,545 people; 651 school canteens to host 34,361 people; 392,233 people in the cantons get nutrition.

The cantons' total deaths from 15 to 22 January: 3,333 people due to famine,
533 people due to typhus

No. 32

Report by the Far East Department for Public Education on the Size of the Tatar Population of the Far Eastern District According to the 1923 Census.

Not earlier than 1924¹².

No.	Governorate names	In towns and urban settlements	In rural localities	Total
1	In Trans-Baikal guberniya	1718	1070	2788
2	In Amur guberniya	1197	375	1572
3	In Primorskaya guberniya	1264	354	1618
	Total	4179	1799	5978

Tatars account for 0.9% of the total urban population of the Far Eastern district. A large number of them live in the cities Chita, Khabarovsk, Blagoveshchensk, and Vladivostok.

Turko-Tatars live scattered in rural communities in Amur and Primorskaya guberniyas; only in Trans-Baikal guberniya are there two exclusively Tatar localities: Novo-Kurchataysk village, Aksha uyezd (51 families, 325 people) and Yelizavetinskaya village, Chita uyezd (40 families, 180 people).

The Tatar literacy rate is not lower than among the Russians. For instance, in Trans-Baikal guberniya, accounting for about 50% of the total Tatar population of the F[ar] E[astern] D[istrict], both Tatar and Russian literacy rates are 32.7%.

The network of Tatar institutions in 1924–1925

No.	Governorate names	Schools	Instructors	Students
1.	In Trans-Baikal guberniya			
	a) in Chita	1	2	57
	b) in Novo-Kurchatay village	1	1	32
2.	In Amur guberniya			
	a) in Blagoveshchenskoe	1	2	35
	b) in Surozhevka settlement	1	1	60
3.	In Primorskaya guberniya			
	a) in Vladivostok	1	1	
	b) in Nikolayevsk	1	1	
	Total	6	8	242

Instruction is provided in Russian and Tatar in Blagoveshchensk and Chita, which thus have two teachers. In other schools, instruction in the indigenous language only. All schools are funded from the local budget. Text books and training aids are procured at the cost of students' parents from the Tatar Republic.

¹² Dated as per the content of the document.

There are clubs in the city of ChitA. No other education institutions for Tatars are available.

Adult alphabet books in the Tatar language were received from the Main Political Education Committee of the People's Commissariat for Education (Glavpolitprosvet) and distributed among governorate departments for public education in the 1st quarter of this year. 'Nasha sila—nasha niva' ('Our Field is Our Power'): 125 copies; 'Rabochij bukvar' ('Workers' Alphabet Book'): 125 copies.

RF State Archive, Fund A.–296, Inventory 1, File 88, Sheet 30–30 reverse.

No. 33

Situation in Popular Education in Ethnic Groups in the RSFSR (except for Autonomous Republics) as of the 1925–1926 Academic Year

Not later than 1925¹³.

The RSFSR total ethnic minority population (except for regions and republic) is approximately 19 million people, including about 9 million in autonomous regions. <...> The following ethnic groups are the largest: the Mordvins (1,500,000), the Tatars (1,360,000). The Tatars are scattered across 41 governorates and districts.

Local ethnic employment

By comparison...¹⁴ For instance, 806 Russian social education institutions training services to 70,819 students functioned in Ulyanovsk Governorate in 1923–1924. A total of 158 ethnic minority institutions offered training to 10,374 people. The ratio of Russian students is about 65 per 1,000, the ratio of ethnic minority students in Ulyanovsk guberniya being about 36 per 1,000. That is, ethnic minorities have access to education which is about two times lower than the total value. No material changes were introduced in the school year 1924–1926, as the records of the inspection dated January 1925 suggest. According to the inspections statistics, 27.81% of the governorate's Mordvin children and 28.0% of its Tatar children receive education services, while the percentage of Russian children is at least 46.61%.

No. 34

Application to the Secretary of the Central Committee of the Russian Communist Party (Bolsheviks) dear Comrade Stalin and all Central Committee Members by workers of factories and plants of the centre of the Tatar Republic, the city of Kazan, and delegates to factory committees

1924¹⁵.

We hereby inform our dear Comrade Stalin, Executive Secretary of the Central Committee of our woe.

¹³ Dated as per the content of the document.

¹⁴ Omitted text.

¹⁵ Dated as per the content of the document.

In 1920–1921, <...>¹⁶, in spite of the heavy famine, industry improved, and <...> labour force increased. Salaries were paid on time, and illiteracy rate <...> was reduced. As <...> industry improved and <...> workers' and peasants' consciousness cleared, the friendship between workers and peasants grew firmer. When our representative <...>Comrade Mukhtarov and his colleagues, who had ensured <...> a lot of achievements through great efforts, were removed from our environment, the industry and agriculture of the Tatar Republic <...> deteriorated, <...> and the output of factories and plants reduced dramatically <...>. Redundancy happened at factories, plants, and other industrial establishments; <...> thousands of workers were put out on the street. An increasing number of plants and factories was closing down. Even in years of famine, we have never witnessed redundancy or factory closing.

As for schools, a <...> dramatic reduction has been happening <...>: 5–6 auls share one school. <...> Schools that used to be quite active and provide <...> knowledge to thousands of workers' and peasants' children are out of operation. <...>. Children, the stars of our future life, are deprived of knowledge and left ignorant.

Speaking of peasants, their situation is even worse. The current People's Commissariat for Agriculture does not implement the serious undertakings previously introduced by the old one. <...> For instance, nothing has been done to increase the number of horses and agricultural tools, which are the 'heart' of agriculture, in the republic. Agriculture is in challenging circumstances at present. Unless <...> measures are taken, our Republic could relapse <...> into the conditions of the famine year, leaving education, improvement of <...> peasant economy, and industry enhancement out of the question.

To speak of cooperation, kulaks and bloodsuckers head most of cooperatives in auls and volosts. <...> Thus, they are not only inefficient but often of no use for the peasantry. Neglect by local <...> authorities has been causing the peasants' situation in general to deteriorate.

We would like to send back Comrade Mukhtarov, who is of value and importance for our republic, and his colleagues, who used to work among us hard to save us from famine, improve our industry and <...> contribute to the improvement of the peasant economy, thus <...> correcting <...> the mistakes made and <...> put an end to our current <...> difficult situation. We can only put an end to this situation <...> with the help of the above comrades and their skillful work <...> taking into account the actual situation in our republic.

For some reason, the number of orphanages and nurseries has reduced dramatically, causing thousands of proletarian children to be put on the cold street and starve. <...> Their vision of the future is rather obscure now. They roam the streets, <...> stretching out their hands to passers-by and begging for handouts.

We do not submit the present application locally. We send it to you directly, as we trust in you greatly <...>. We believe and hope that you will understand us and our difficult situation, fulfil our request, and thus secure our future.

The original bears <...> signatures of workers of <...> (the Gunpowder, Alafuzov, Pugachyov, and other plants).

Minutes of Public Meeting of the Baltasi vol[ost] party unit of the CPSU(B) attended by poor people, labourers, medium-income peasants, and young military trainees

20 November 1926.

Attendees: 124 people and 26 young military trainees.

Agenda: 1. Report on the party's activities in the village.

2. Miscellaneous. Presidium: Sultanbekov, Ibragimov, Gerfanov, Sagautdinov, Fayzullin, Secretary Sergeev.

Reports: Report on the party's activities in the village (reported by Comrade Ivanova).

The following questions are asked by attendees from the floor:

1). We welcome the Soviet government. We will not spare anything to restore the Soviet government. We have sent our children to the Red Army and supplied crops and livestock. We are satisfied with all activities and measured by the Soviet government. We only wonder why schools cannot be established to give religious instruction to children?

2). The situation with access to loans for the poorest stratum of the population is bad. Loans are only given to wealthy peasants, while poor ones cannot benefit. Are any measures being taken to ensure long-term loans for poor people?

3). Is the cooperative association right to issue a loan of 30 rubles to wealthy peasants, while poor people cannot obtain any loan?

4). Farm workers have no opportunity to form an opinion on political issues and cannot stay up-to-date with the situation. A lack of literature is the reason. Are any measures being taken to provide the country with Tatar literature?

5). The network of schools available is insufficient to provide education to all people of school age. The existing schools want new equipment. New schools have to be established, too. Are any measures being taken to expand the school network?

6). A lot of bridges and fire extinguishing equipment fell into disorder during the civil war. The Soviet government has to take measures to build tractor* bridges and provide the settlement with fire extinguishing equipment, which is of utter importance in the country.

7). People disabled during the civil war have not been provided with timber, though they are entitled to it.

This problem should be solved.

8). The situation is bad with the repayment of the seed loan received by poor and medium-income peasants for sowing. An overdue interest of over 50% per pood has accumulated over 2 years. Having obtained a sowing loan of 3–4 poods, the poor peasant has to repay 7–8 poods, which is very difficult. Measures should be taken to prevent such high overdue interest or any overdue interest on seed loans from being accrued. The interest accrued should be deducted.

9). Poor and medium-income peasants in Baltasi village are recorded to have obtained a seed loan of 250 poods of rye in 1921. Though we have never obtained the rye, they want us to repay it. Measures have to be taken to clarify the situation.

10). It should be noted that the 1926 elections to the Soviets were successful. Poor farm workers used to be insufficiently involved in the Soviet election campaign, so the percentage of participants yielded a material non-enlargement.

11). Cooperative shops sell groceries at prices as high as in private shops. Measures should be taken to reduce prices for cooperatively produced goods.

12). The Mutual Help Committee in our volost was very inefficient. It is attributable to an unfit worker, who was replaced during the re-elections.

13). Peasants who have 1 horse, 1 cow, and two pairs of sheep often suffer dramatic need for lack of crops, and in cases when they have to pay for medical drugs for their sick horses and cows. We would like to know the concrete definition of a medium-income peasant.

14). The poor peasant is dissatisfied, because he gets no free medical aid. We cannot afford medicines, which we often need. Issuing medicines to poor peasants free of charge is a proper solution to the problem.

15). Peasants and poor people complain about a lack of midwives at rural feldsher stations. Village midwives are often unable to provide the help which female workers can receive in town. Rural feldsher stations should employ a staff of midwives.

16). A connection has been established between the poorest stratum of the peasantry and the party unit. The party cell, as well as individual party members, never refuse aid to any poor people who apply for it.

17). Certain party members have been found to be violently anti-religious. This should be eradicated.

18). The people's judge, who has arrived to Baltasi volost, is a bit too rude to peasants again. Such behavior of the people's judge should be checked too.

19). Last year, young military trainees were housed by individual householders, for which a daily rent of 2 kopecks per trainee was to be paid. We would like to know if the money will be paid.

20). Some of our poor and medium-income peasants are willing to move. Can they expect any benefits?

21). A vocational school opened in Baltasi volost which is poorly supplied. It needs aid from the Soviet authorities.

22). People make vodka at home. What measures will be taken to prevent further vodka production in the country?

A greeting telegram Ivanova answers all questions to the attendees' satisfaction.

The audience is in a good mood. <...>

No. 36

Resolution on National Culture by the Bureau of the Tatar Regional Committee of the CPSU(B)

14 June 1927.

Taking into account the discussion on the further development of the Tatar national culture among party organizations in the Tatar Republic, the Bureau of the Regional Committee finds it necessary to essentially establish its policy for the issues raised during the discussion:

1. The camp of classes defeated by the revolution, naturally trying to impact the working masses, has grown more active against the backdrop of increased socio-political activity among all social groups and strata. The perseverance of anti-revolutionary bourgeois ideology, expressed as a promulgation and spreading of nationalist ideas (great-power chauvinism in the Great Russians and bourgeois nationalism in other USSR ethnic groups), an intensified religious movement, and attempts to establish ideological influence over the most backward strata of workers and peasants.

A number of additional reasons contribute to it in national republics:

a) small proletariat, which reduces the ability of the working mass to resist the pressure of bourgeois and petite bourgeois ideology;

b) a peculiar situation and special conditions, under which party and Soviet activities take place (mostly in terms of implementation of the national policy);

c) the ability of the bourgeoisie to use common language, script, and ethnic origin to influence the backward working strata.

As the party and Soviet agencies grew more concerned with issues of cultural construction, cultural activities became more intense in every aspect. The population has been found to be more actively involved in cultural activities.

Thus, bourgeois nationalist elements have been taking attempts more often to propagandize separate development of the national culture and common interests for all social strata within the ethnic community in terms of cultural construction. The propaganda is ultimately aimed at directing our entire practical work to develop the culture of the USSR peoples, improve the cultural services provided to the working masses of all ethnic groups (especially backward workers) in their mother tongues, and engage them in the socio-political life and socialist construction under the aegis of the proletariat towards national separation and ethnic alienation of workers from proletarian internationalism, from the USSR working class, and the government of the Communist Party.

2. Speaking of further development of the national culture, we have to admit that all attempts at revising or 'amending' the existing resolutions by party governmental bodies (the 10th and 12th Party

Congresses, the 6th National Meeting) in this aspect are groundless. Any reference to the end of the recovery period and the changed economic situation, any mention of the epoch of socialist construction, which allegedly requires a new approach to national culture at this stage, rely on no facts and data to confirm the 'novelty' and the necessity of revising the existing party decisions. Our approach to national culture is in full accordance with Comrade Stalin's rule that the culture should be 'proletarian in its content and national in its form.'

To the contrary, bourgeois ideologists rely on dominance of form over content, that is, in fact, on hollowing out our cultural construction of its proletarian content.

We have to attribute the views, popular among indigenous party members, especially among the youth, that rely on a simplified approach to the issue and underestimate and understatement of importance of national culture as a means of engaging the working masses in socialist construction, to a response to such approach, to the intensified bourgeois nationalist activity. The camp's statement that other ethnic groups have to be introduced to the superior Russian culture immediately is in fact assimilation-oriented and suggest a series of anti-Leninist conclusions. Comrade Vaganyan expressed a similar opinion in his recent book 'On National Culture'.

Statements made by Comrade Atnagulov during the discussion in the party organisation of the Tatar Republic are somewhat similar to those presented by Comrade Vaganyan.

3. The following should be viewed as Comrade Atnagulov's principal mistakes:

- a) incorrect and superficial contrasting of spiritual and material culture;
- b) a simplistic approach to the issue of what role the language should play (reference to the changes in the language of the Penza, Saratov, and Siberia Tatars, as well as the decisive impact of technical terminology, which is becoming increasingly international (radio, tractor, etc.) on the language);
- c) overestimating the influence of the superior (Russian in this case) culture, to which Comrade Lenin was opposed especially resolutely;
- d) ignoring the role of national culture not as a goal in itself but as a means of engaging the working masses of certain ethnic groups (especially backward ones) in the Soviet socialist construction;
- e) summarizing the separate ideas as a clearly assimilation-oriented system, which is sure to repel the Tatar working masses and enable the bourgeoisie to take advantage of the public fear and mistrust to enhance its influence on it;
- f) corrupting the nearest prospect in terms of the party and Soviet government's local practical cultural measures, since assimilation as a goal would require our work to favor elements of assimilation as opposed to national culture development, which is clearly inconsistent with the interests of the working class and the party's main objectives.

All this is clearly inconsistent with Lenin's ideas and resolutions by party congresses. Therefore, the Bureau of the Regional Committee believe the petition by Comrade Atnagulov and other comrades sharing his ideas to be absolutely wrong.

4. Though somewhat closer to the party's official policy for the issues of national culture, the statements by Comrade G. Ibragimov contain a number of significant drawbacks, of which the following are the most important:

- a) overestimating the independence and somewhat idealising of the forms of national culture ('the special way which the Tatar culture will take', the extraterritorial cult[ural]-nat[ional] community), which altogether reminds of the old disputes on cultural-national autonomy;
- b) downplaying the role of the proletariat in the development of the Tatar national culture and overestimating that of the national intelligentsia;
- c) focusing on anti-Left political blows combined with a clearly insufficient and vague separation from right bourgeois nationalist ideas, which yields a goal of the entire brochure that makes it downplay the promulgation and pressure of the bourgeois nationalist ideology to aim a blow solely on the incorrect statements by the author's party colleagues, thus ensuring a warm reception among bourgeois ideologists;

d) unacceptable approaches to the party discussions like comparing a number of party members and honest Soviet-oriented non-partisans to mirzas - tsarist officials who implemented the violent Russification policy, the memory of which is repulsive to the large Tatar working masses. This being the keynote of the brochure, it is natural that it not only failed to clarify the situation to comrades mistaken but, to the contrary, caused the discussion and controversies to escalate, applying old disputes between groups to the newsphere of ideological struggle.

Taking into account these facts, the Bureau of the Regional Committee finds it necessary to express its negative attitude to the brochure by Comrade G. Ibragimov.

5. At the same time, the Bureau of the Regional Committee believes that any further discussion in terms of where the Tatar culture is going is an unreasonable waste of the party's energy to distract the party organisation from more pressing challenges presented by the political and economic situation. The discussion also distracts us from practical measures to develop the national cultures—work, that requires results and achievements far better than what we currently have. Overcoming the assimilation twist resolutely as a clearly anti-party trend, standing up against any pressure of the bourgeois nationalist ideology, the party organization must focus its hardest efforts on the practical issues of national culture (combating the religious movement, building schools, improving the language, literature, art, theatre, opening a house of national culture, etc.), enhancing Soviet and party organizations in charge of the tasks, gathering around the party representatives of the Tatar Soviet intelligentsia willing to fill the forms of national culture with proletarian content, and explaining the meaning of our general policy for this matter and the meaning of certain practical measures to the public.

6. Suggest that the APD of the Regional Committee of the CPSU(B) should develop a number of measures to enhance practical work for national culture under the present resolution. It is to submit its suggestions to the Bureau of the Regional Committee not later than August 1 of this year.

SA HPD TR, Fund 15, Inventory 8, Sheet 119.

**Report on the success of the Saniya opera exhibits at the exhibition abroad
by the newspaper 'Krasnaya Tataria'**

23 July 1927.

The Tatar People's Commissariat for Education has received a letter by the Society for Cultural Connection with Foreign Countries, which reads as follows:

'Dear Comrades! The Soviet Department of the international music exhibition in Frankfurt am Main opened the other day. It was a success. Thousands of people have come to visit the department. Our representative has reported the manuscript of the first Tatar opera Saniya, which suggests a considerable rise in musical culture in Tatarstan, has aroused the greatest interest among the Soviet exhibits. You can find extracts from German newspapers here.' <...>

Krasnaya Tataria.—1927.—23 July.

No. 38**An extract from S. Sagidullin's speech¹⁷ at the 4th Plenary Session
of the Tatar Regional Committee of the CPSU(B)**

17 September 1927

I have to speak on Sagidullin, as many other subjects are taboo to me. I have not delivered a single speech in two years. However, my name has been on people's lips all the time. A greeting telegram Comrade Boyarsky, as a speaker of the R[egional] C[ommissariat], declared officially on behalf of the RC at the Verkhnegorodsky District Party Conference of 13 November this year that Sagidullin had not spoken yet and that he had not brought any charges against me, or accused me of anything yet. The mobbing continues, however.

As you know and can see, I have been acting in accordance with my statement. Comrade Boyarsky did not deny it. But I have to protest against my statement expanding in every direction.

Comrades have been introducing new paragraphs and new obligations without my signing them. They have made a contract out of my statement and a 'contractual communist' out of me. It is a new way to hold an activist prisoner. If I keep silent and don't speak, they say I violate the contract, I have to speak against Shaymardanov; if I go to my homeland for a vacation, they say it is a breach of an obligation, and so on and so forth. I claim that I have never undertaken to refrain from coming to Menzelinsk or to criticise Shaymardanov. I am resolutely opposed to this expanded interpretation of my statement,...¹⁸ against inappropriate references to my statement aimed at paralyzing my activities, I ask the RC Bureau...¹⁹

Many comrades have been using my statement as a lead for me...²⁰ as a dog to frighten 'good people'. I cannot but protest against their making use of me in such a 'rational' way. The question is whether I am the only one on this path. No, I am not alone on this path. Our situation forces every indigenous promoted worker to walk this path. Having reached the Regional Committee, having obtained a top job, he is labeled a 'sectionalist'. The trend is abnormal, and it has to be eliminated. I believe my statement to be limited to a certain period and a certain situation. I have to protest against people using my statement, that is, a document of credit, as a 'permanent passport' to keep me prisoner. I have to, and I will, struggle for equal rights in the party, I will demand that my statement should not be used to ostracise me.

SA HPD TR, Fund 15, Inventory 3, File 1457, Sheets 43–45.

No. 39**An extract from a report by Executive Secretary of the Central Committee
for the I[mplementation] of the T[atar] L[anguage] Valeev.
On the State of Korenization of Government Institutions and Engagement of Tatars
in Educational Establishments in the City of Kazan**

1 November 1927

Implementation of the Tatar Language issues generally reduce to the following:

- a) organisational issues;
- b) staffing governmental apparatus with officials proficient in both official languages;

¹⁷ S. Sagidullin (1900–1938), politician. In 1920–1925 Secretary of the Menzelinsk Canton, head of the department of the Tatar Regional Committee of the Russian Communist Party. Was dismissed from his post in 1925. Was executed in 1938.

¹⁸ Omitted text.

¹⁹ Omitted text.

²⁰ Omitted text.

- c) engaging the Tatar proletariat in industry;
- d) training workers proficient in both official languages;
- e) adjusting the recording technique to Tatar records management <...>. We have to present the following figures of the rate of mass apparatus korenization:

The figures suggest that both the total number of officials and the number of Tatar officials have decreased; but the percentage of Tatar officials in the total staff has increased by 2.7%.

Territorial indicators	As of 1 July 1926			As of 1/ 1927			Changes
	Total	Tatars	% Tatar	Total	Tatars	% Tatar	
In central bodies and in Kazan bodies	14,425	2395	16.6	11,558	2130	18.43	-1.83

The increase of Tatar percentage is attributable not to junior service staff, as it used to be, but to middle technical staff and high-ranking officials, who have the greatest involvement in providing services to the working masses and peasants. For instance, the percentage of Tatar high-ranking officials in central²¹ and Kazan bodies over the period in question has been 1.4 %; that of middle technical staff being 3.14 %; the percentage of junior service staff has, to the contrary, decreased by 1.2 %. The situation is the same in the cantons <...>. The following central institutions have witnessed a material increase over this period: People's Commissariat for Justice—by 8%, People's Commissariat for Internal Affairs—by 9%, People's Commissariat for Finance—by 6.6%, and Tattorg Trade Association—8.3%. The percentage of Tatar employees has decreased in the People's Commissariats for Labour and Social Welfare—by 6.7%, in the Tatar Union—by 2.4%, in the Soviet for People's Economy—by 1.2%, and in Khleboprodukt (Bread Production Association) —by 1.6%.

The figures thus suggest a lack of pre-planned normal progress in the korenization of state apparatuses, since some institutions, such as the Tatar Union, Khleboprodukt, and the People's Commissariat for Labour, witness a steady decrease of the percentage.

If we analyse the figures by the Regional Bureau for Labour Statistics on employees of institutions and organisations from 1 October 1926 to 1 July 1927, we will see a relative increase of [the percentage of] Tatars.

The figures suggest a general increase of the number of Tatars, both relative and absolute. <...>

Let us now briefly study the issue of training workers proficient in both official languages in general and indigenous Tatars in particular.

	As of 1 July 1926			As of 1/ 1927			Changes
	Total	Tatars	% Tatar	Total	Tatars	% Tatar	
Employed	77,719	16,390	21.1	82,724	18,870	22.8	1.7
In particular, by trade unions	25,058	4,959		11,558	5,341		0.1

We have several ways to train such employees. The main way it to train employees at permanent educational establishments. In addition, provisional courses offering training in various spheres of construction can be useful in exceptional circumstances. In our situation such courses are predominant.

²¹ The term 'central institutions' refers to: The People's Commissariat of Justice, The People's Commissariat for Internal Affairs, The People's Commissariat of Finances, The Tatar Union, The Council of National Economy, Hleboprodukt (Bread Products), The People's Commissariat of Labour

Therefore, figures [on this method] should be used to prove the state of our cultural construction. It is as follows.

Ethnic composition of students of all types of educational establishments

	In the academic year 1925/1926			In the academic year 1926/1927			Changes
	Total	Tatars	% Tatar	Total	Tatars	% Tatar	
Primary and secondary schools offering 7–9 years of training, peasant youth and adult schools	161,284	84,847	21.1	174,422	90,051	51.6	-0.9
In professional technical and vocational schools, professional courses and factory schools.	8,870	3,319	37.4	7,795	3,388	23.4	0.5
At workers' faculties and the Tatar Communist University	1,390	603	43.4	1,286	430	34.1	0.7
In all IHLs	4,464	346	7.7	4,539	382	8.4	0.7
Total	176,008	89,115	50.6	188,042	94,260	50.1	-0.5

These figures give a clear insight into the state of our educational establishments in terms of offering occupational training to backward indigenous Tatar youth. The data suggest that the number of pupils in primary schools corresponds to the ratio in the population of the Tatar Republic. The situation in professional technical schools is also more or less favourable. As for the ethnic composition of IHL students, no progress has happened or is likely to happen in the coming years. Even though the admission for the current academic year yielded a certain increase (by 41 people), the preparation of the Tatar youth for entering IHLs is far from brilliant, since Tatars account for as little as 22.8% in secondary schools and only 14.9% in nine-year schools. Apart from the small Tatar percentage, the schools' approach to the issue makes any well-prepared experts trained in accordance with IHLs' requirements unlikely to appear. Workers' faculties is another, more reliable source to supply more or less suitable students to enter IHLs. But what is the situation in such educational establishments? Last year, 164 of 337 newly admitted students were Tatar, while this academic year Tatars account for 104 of 322 newly admitted students, or 32%. That is, the number of Tatars has decreased by 60 people, reducing the percentage by 16.6%. This cannot be normal. <...>

Executive Secretary of the ITL Central Committee

Valeev.

An extract from the Report on Ethnic Minority Activities²³ by Astrakhan guberniya

1928²⁴

<...> Concentrated Tatar and Kazakh population is present in the city and the following districts: Zatsarevo, Krasnoyarsk, Marfino, Zelenchino, Kharabali, Nizny Baskunchak, and Bolkhuny.

In Zatsarevo district, Tatar-Nogays account for over 50% of the total population, thus representing the dominant ethnic group. They are mainly engaged in gardening and melon growing.

In Krasnoyarsk district, Tatars, who constitute the lower part of the population, are engaged in live-stock breeding, seasonal work, fishing, and the salt industry.

Cultural level

Zemsky Russian-Tatar schools were established in Astrakhan guberniya after the revolution of 1905: 5 zemsky schools and 2 ministries. Tatar is the language of instruction. The indigenous language has been introduced to records management in 10 districts and 3 village soviets this year.

From reports by Kazan scientists on the activities of the laboratories they manage, published in the newspaper 'Krasnaya Tataria'

Professor A. Samoylov²⁵

I should gratefully mention our talented university mechanic A. Nikolaev, with whom we cooperated to control devices which were to attract some attention even abroad. In terms of accurate recording of electric currents in the animal body, our laboratory is not only the USSR's number 1 but can compete with foreign institutes. <...>

We have studied certain responses of muscles, nerves, and glands at the laboratory. We have lately used data on muscular electrical response to study reflex processes.

A number of works which I co-authored with my colleagues have appeared in various Russian and foreign journals. I have given papers on them at many international congresses. Various foreign scientific societies have invited me to deliver lectures concerning our laboratory's studies in Holland (Utrecht), America (Harvard University Physiological Society, Boston). Last year, I presented a lecture at the Week of Russian Natural Scientists in Berlin, in which I expressed my opinion on the transition of excitation from cell to cell with a chemical agent. I relied on the data of a study on nerve and muscle currents.

I attribute the fact that I have been invited to attend the Harvey Meeting in London to our laboratory's achievements. It is true. But what is the practical outcome of all the studies? First of all, I should say the following. There is no natural-historical branch of science that would not yield practical results sooner or later. Any theoretical knowledge should have practical implications. We should be reasonable, though, and keep from shaking the tree before the fruit is ripe. The science of animal electricity is a most vivid example. We are lucky to witness the historic moment when a theory that seemed to be purely academic, somewhat aloof from life and thus unjustified, for 100 years, has come to demonstrate its power in practical matters. Our heart produces an electrical current with each beat. When recorded, the beats reveal such intimate details about its life, both healthy and ill, that the so-called electrocardiography (recording heartbeats) is essential to cardiac clinical practice. Our laboratory was the first in Russia to record the heart's electrical current. We contributed significantly to developing the issue. The Lenin Institute for Advanced Training of Physicians, where I have been teaching a course in electrocardiography, was the first in Kazan to rise to the call. When in America, I taught the same course to physicians at the invitation of the administration of the General Hospital in Boston. Such institutes are currently being established under clinics and hospitals across the USSR. Botkin Hospital, Moscow, has a well-equipped electro-physiology laboratory, which I guide. I am also assisting the Obukh Institute of Occupational Diseases in equipping an electro-physiology laboratory. I have trained the assistants of the institutions here in Kazan. I have received numerous invitations to deliver lectures on heart currents, and requests to accept young experts for training. Our health resorts are also interested in heart currents. They send their assistants here to study the technique. This summer I worked in a cardiographic laboratory with advanced equipment at the Kislovodsk Cardiological Clinic, which invited me as a consultant. Thus, our laboratory has grown far beyond its actual limits. However, the Kazan laboratory, which remains central to my work, as my most important scientific work is connected with it, is growing old. It's actually cracking, sinking. It seems like the large amount of equipment it has received has only made it smaller. It is nearly impossible to continue to work in the building. A building and funds to match its importance should be provided to the laboratory.

²⁵ Professor A. Samoylov, a world-renowned scientist in the field of physiology. In Kazan he started working at the Department of Physiology, Physics, and Mathematics of the Kazan State University in 1903. Made important discoveries in the field of electro-physiology.

Professor A. Arbuzov²⁶

Professor A. Arbuzov said when talking to our employee,

'I expect it to be difficult to fulfil the many requests by the editorial office of the newspaper 'Krasnaya Tataria', that I should describe my scientific activities and the working conditions of the organic chemistry laboratory that I manage.

My predecessors Academics N. Zinin and A. Butlerov and my teacher Professor A. Zaycev raised the Organic Chemistry Laboratory of the University of Kazan higher than it had even been; they made it globally famous.

As a nursling of the laboratory, I happened to be far from Kazan at the first stage of my academic career, which must be the main reason why most of my works show little connection to the Kazan Laboratory in terms of subjects and range of issues.

For nearly 30 years, my research has been centred on underexplored organic phosphorus derivatives, which are difficult to find.

I think at least ten of over 100 new organic phosphorus derivatives produced by my colleagues and me could be tested as pharmaceutical drugs. This issue has been put on the agenda many times, but each time it was postponed for various reasons.

When our connection to the West had been restored after the war and the revolution, I was happy to find out that Swedish chemists from the Chemical and Pharmaceutical Institute of Uppsala had found my research interesting and continued it. Apart from phosphorus compounds, our laboratory has been studying so-called acetals for the recent 10–15 years. The studies are closely connected to phosphorus research.

Hopefully, some of the experts will be able to suggest a practical application. Liquid camphor acetal is of special interest in this respect. When introduced into the blood, the agent is expected to slowly decompose into alcohol and camphor. Animal studies of camphor acetal are being carried out.

I cannot mention our laboratory's activities in establishing chemical production even briefly for a lack of space.

However, I cannot but provide more details on our laboratory's research on resins and turpentine.

Theoretical and practical activities in the sphere are simultaneous.

I have carried out a number of pine tree studies in the woods, which yielded a discovery of interest for both plant physiologists and, partly, wood growers—the fact that tar in the tree trunk is under enormous pressure. The way in which a damaged tree oozes tar is attributable to the pressure, which underlies the theory of bleeding (artificial tar production). Our laboratory has adopted advanced West European approaches (mainly those developed by Institut du Pin (Pine Institute), Bordeaux, France) to studying the composition of turpentine and tars. The research is unparalleled in our Union so far. <...>

The studies by our laboratory have been reported to the Supreme Soviet of the National Economy many times and partly funded by it.

Theoretical development of certain aspects of studying bleeding as well as turpentine and tar composition evolves directly into practice. For instance, my colleagues and I have developed the project for bleeding young pine forests in Mari region on the instruction of the Tatar Supreme Soviet of the National Economy. We further study the composition of turpentine and turpentine at the plant put back in operation by the Supreme Soviet of the National Economy.

Dulyovo Works of the Porcelain Trust Company had entrusted us with a difficult task—to establish turpentine acceptance standards, which the works need for porcelain gilding.

This fragmented list of activities, although far from being complete, suggests that our laboratory functions not only as a chemical laboratory under a higher educational establishment but as a research institute.

²⁶ A. Arbuzov, an academician of the Academy of Sciences of the USSR, world-renowned scientist in the field of organic chemistry.

Unfortunately, certain drawbacks in the laboratory's equipment prevent us from working at a more intensive pace.

Unstable power supply and the fact that we don't have even a small gas plant can reduce to nothing a day's work if not more.

The lack of premises is also considerable, preventing the laboratory from engaging gifted students in its scientific and technological activities.'

Professor E. Lepsky²⁷

Professor E. Lepsky, Head of the Pediatric Clinic, Lenin Institute for Advanced Training of Physicians, said to our colleague,

'Our clinic emerged in very difficult times in 1920. It was impossible to receive a well-equipped proper room and the necessary devices for scientific research at once. We had to equip the clinic and ensure more or less favorable research conditions on the go, during intense treatment and educational activities. However, medical journals began to report our studies about two years after the clinic was founded.

All of our studies address certain life challenges that we face during work. For instance, our clinic received many children with famine-related diseases such as scurvy, edema, and so on during the famine in the Volga region. We had to study the unexplored aspects of the conditions, develop new methods of treatments, etc. My colleagues and I published the findings in medical journals. I reported them to the 2nd All-Russian Pediatric Congress as suggested by the Organizational Committee of the Congress.

As tuberculosis gained momentum following the country's hardships (epidemics, famine, etc.), we studied its incidence among children, tested new diagnostic, prevention, and treatment methods.

In addition, a number of printed reports by our clinics deal with malaria in children, epidemic meningitis, diphtheria prevention, and other issues.

Some of my colleagues and I have been studying rickets, which is widely spread among children in Kazan, especially in the Tatar community, in the recent years. We carried out a series of scientific experiments by causing animals to develop the disease (to the best of my knowledge, no similar experiments had been carried out in the USSR before). This yielded important implications for rickets treatments.

In particular, we found out that seal oil, large amounts of which are produced on the Caspian shore, and dolphin oil, which is also produced in large amounts on the Black Seas shore, are efficient in preventing rickets and can replace cod-liver oil, which is hard to find and used to be imported from Norway. The application of seal and dolphin oil in our country used to be limited to industry.

Prevention might be even more important in pediatrics than in other branches of clinical medicine. Therefore, we have been trying to establish connections with prevention institutions since the clinic was established. At present, the following institutions function under the clinic (unprecedented in Kazan): children's consultation service, diet kitchen for infants issuing up to 300 servings daily, and day-time sanatorium for preschool children.

These institutions have enabled us to carry out a number of studies on children's health. For instance, consultancy data yielded the first normal weight and height curves for Kazan infants. People had been using those relying on examination data from Leningrad, Kharkov, and even abroad. However, the population of different regions is characterised by different anthropometric data (measures), so standards established for one region are not applicable to another. Our clinic employs 20–30 full-time physicians taking one-semester advanced training at the institute and 10 young employees who have been staying here for several years. Most of physicians working in motherhood and infancy protection institutions in Kazan and the Tatar Republic have received training at our clinic. I also participated in the construction of the network of motherhood and infancy protection institutions in Kazan—first as the Head of the Preparation Department in the Governorate Health Department, then as a Consultant at the Tatar People's Commissariat for Health.

²⁷ Professor Ye. Lepsky, a renowned expert in the field of paediatrics.

The tasks that our clinics has to face are increasingly challenging. Another reason why the clinic has been employing more physicians is to ensure smooth operation, which also requires new equipment—in particular, the laboratories want expansion and improvement.

Awareness-raising is essential to the science of pediatric diseases. The better the mother understands the child's physiological needs, the healthier it will be. For this purpose, the clinic offers short-term courses in physical childcare to mothers. The system of public lectures for non-experts has met with no success. It would be good to arrange excursions and work demonstrations at treatment facilities.

Report by the newspaper Krasnaya Tataria on the Latin alphabet

The new Turkic alphabet has an advantage even over Russian in terms of diversifying printing types, as it can adopt all Latin typefaces.

The New Turkic alphabet makes book production quicker and cheaper, bringing the East closer to the technical wealth of the West European printing industry.

An extract from the Resolution by the 8th Congress of Soviets of the Tatar ASSR^{29*} of the report by the People's Committee for Education and Yanalif State Committee³⁰ ** on the Introduction of Yanalif in the Republic

8 May 1929

1. The 8th Congress of Soviets of Tataria declares that the transition to Yanalif is a major step forward in fulfilling the objectives of cultural revolution. The transition to a new alphabet to replace the backward, flawed Arabic alphabet, associated with medieval vestiges, is of great political and cultural importance. Yanalif enables the working masses to master the socialist international culture sooner and ensures accelerated development of the Tatar workers' culture.

2. The Tatar working and peasant masses as well as the working Tatar intelligentsia have expressed full support of the new alphabet, realizing the revolutionary meaning of the new one, and did not hesitate to break with the part of the top intelligentsia, who had been influenced by bourgeois nationalist elements and was thus opposed to the Yanalif movement. Spreading rapidly, the Yanalif movement turned into a mass revolutionary movement among Tatar workers. The government of the Tatar Republic formalised the movement as a natural and timely expression of the workers' will and requirements.

3. The first Yanalif introduction measures revealed an enormous appeal of the new alphabet to workers, great enthusiasm in the Soviet society, and active association of the Tatar intelligentsia, in particular comrades, who had broken with those in opposition to Yanalif to work sincerely for Yanalifization. The workers of Tataria supported the new alphabet unanimously.

²⁸ Signature in the Latin script.

²⁹ The VIII Congress of the TASSR was held 3–8 May 1929.

³⁰ The State Committee 'Yanalif' was established under the Central Executive Committee of Tatarstan 22 February 1928 to organise the work on the introduction of a Romanised script.

4. Approving the resolutions and measures by the government of the Tatar Republic in this aspect, the 8th Congress of Soviets finds it necessary to accelerate the promotion of Yanalif in order to complete Yanalifization before the 10th anniversary of the Tatar Republic.

5. The following essential measures ensure further successful Yanalifization:

a) While celebrating the success of the current elimination of Yanalif illiteracy in workers who can use the old Arabic alphabet, the Congress finds it necessary to pay as much attention as possible to the elimination of Yanalif illiteracy in old alphabet users next year, for which purpose a number of governmental measures is scheduled, ensuring large-scale involvement of public forces and funds. In addition, training must be provided for more eliminators of Yanalif illiteracy, for which purpose budget funds must be allocated both to illiteracy eliminator training and to their salaries.

The next Yanalif illiteracy elimination campaign is to cover 100000 workers possessing the old Arabic languages, taking into account the drawbacks of the current year's campaign (poor involvement of women, farm workers, and Kryashen people in illiteracy elimination).

Kryashen Yanalif illiteracy liquidation should be a major focus, since it is of great political importance for fusing Kryashen workers with the general Tatar masses, enabling wide access to the riches of the Tatar culture for Kryashen workers.

b) Full transition to Yanalif at regular likbez centres of the People's Commissariat for Education in all cultural and educational institutions of Tataria must be completed before the beginning of the academic year 1929/30. Full transition to Yanalif must be ensured in Tatar schools since the same academic year. To ensure proper supply of Yanalif literature to Tatar schools and other cultural and other educational institutions, the 1929/30 budget must allow for enhanced Yanalif publishing.

c) In order to enhance and improve Yanalif literacy rate, special attention should be paid to distributing mass Yanalif literature among the population and engaging wide working masses in the Down with Illiteracy society. Make sure that all plans in terms of publishing and printing as well and translating periodical and non-periodical literature into Yanalif are fulfilled both by Tatizdat and by other publishing offices in the Tatar Republic. Take measures to expand Tatizdat's plan in terms of cheap mass Yanalif literature, especially fiction.

g) Immediately ensure transition to Yanalif in the records management of all Soviet, cooperative, and public institutions, and develop measures to ensure that the institutions introduce Yanalif records management before the 10th anniversary of the Tatar Republic (employee training, typewriter supply, development of Yanalif shorthand and training in stenography).

6. Being aware of individual cases of neglect of Yanalifization by certain organisations and institutions in the Tatar Republic, the Congress of Soviets finds it necessary to enhance supervision to ensure smooth and timely fulfilment of the Yanalifization plan and increase liability for negligence of the matter as undermining and sabotage of socialist construction.

Resolutions by the 8th Congress of Soviets of the ATSSR. 8 May 1929—Kazan, 1929.—pp. 21–23.

No. 45

Resolution by the Bureau of the Tatar Regional Committee of the CPSU(B) on Training Tatar and Ethnic Minority Research Scientists

18 October 1929

The problem of training research scientists from among Tatars and ethnic minorities in the Tatar Republic is of large political importance as a measure determining the extent to which the national policy is implemented in practice.

The RC [Regional Committee] Bureau reports the work to have been poorly planned and indecisive both in IHLs and in the party organization.

The RC Bureau states that a staff of indigenous experts fit both for scientific activities and for managerial positions in IHLs has formed.

Therefore, the RC Bureau suggests the following:

a) the RC APD should develop a series of measures to ensure systematic and well-planned training for research scientists from among ethnic minorities, which it should submit to the Bureau within a month.

b) As specific measures for the nearest future, the issue of replacing of a number of IHL managers by ethnic minority representatives should be discussed and addressed immediately; a staff of scientific workers should be presented.

a) appointing one of the most well-trained Tatar teachers as Professor of the Tatar Language Department; b) appointing a number of ethnic minority representatives associate professors and assistants at the National Department of the Institute; c) appoint Comrade Kudoyarov the rector of the Institute. a) appointing one of the most well-trained Tatar teachers as Professor of the Tatar Language Department; b) appointing a number of ethnic minority representatives associate professors and assistants at the National Department of the Institute; c) appoint Comrade Kudoyarov the rector of the Institute.

Signed by Deputy Executive Secretary of the RC of the CPSU(B)—Garifullin

Correct:

Secretary of the RC Bureau: (Grojsman)

No. 46

An extract from the report by M. Razumov, Executive Secretary of the Tatar RC of the CPSU(B) presented at the 3rd Plenary Session of the Tatar Regional Committee of the CPSU(B) on training for ethnic Tatar staff and the state of apparatus korenization

3–9 November 1929

<...> National proletarian staffing is one of the most important objectives of the national policy. What is the situation in this sphere? We have witnessed an increase of 1.25% over the last year. Ethnic employees now account for over 25 percent of the total staff. If we analyze such economy branches as sovkhozes, the percentage of Tatar workers is as small as 9%. Tatar workers are the same in railroad transport. It should be stated that we have been treading water in terms of the ethnic proletariat's share of the staff, because all party organizations have failed to be persistent. We want to ensure a Tatar percentage in our industry of at least 30% next year. It is a challenging objective to fulfil. It would require us to set the limit value of at least 40–45% Tatars of the total new employees for all industrial plants, in particular those newly established. We believe that this should be a strategic industrial objective.

The implementation of the Tatar language is the second issue. I cannot provide any figures on this matter, but the situation is even less favorable, even though we have raised the issue many times at plenary sessions and conferences. Canton centres and Tatar volosts maintain correspondence in Russian. We are aware of a number of cases where institutions demonstrate negligence of the issue. We have to admit that even in central institutions we still have a red-tape approach to this essential aspect of our policy. We can supply most curious examples concerning the policy of central Tatar institutions. For example, the Tatar Workers' Faculty and the Tatar Pedagogical Technical Professional School, their teaching staff and students being 100% Tatar, issue orders—everything—in Russian. As for the boards for the implementation of the Tatar language, I should say that they do nothing to enhance the activities,

being nothing but a screen for whose reluctant to seriously execute the party's guidelines on language implementation. We should oblige institutions to maintain correspondence with volosts and between themselves in Tatar by establishing most severe liability for violating such guidelines. We should be able to overcome the conservatism in this matter.

The issue of apparatus korenization. The number of Tatars in canton apparatuses has increased by 4.5% over two years to make 36.8%, Tatars accounting for 55% of the cantons' population. It is beyond doubt that apparatus korenization and Soviet official training should be enhanced to ensure a better social composition. In order to be able to regulate our work correctly at this stage, local organisations should separate accounting for junior technical workers (guardians, coachmen, and firemen) from that for medium- and high-ranking groups in the Soviet apparatus.

I would also like to shed some light on the issue of local expert staffing. What is the current situation? 29.7% out of 202 agronomists and instructors are Tatars; 4.1% belong to ethnic minorities. 31% out of 238 land planners and surveyors are Tatars; Tatars account for 8% of veterinarians and 5% of feldshers.

8.5% of experts at the People's Commissariat for Health are Tatars; only 5 of 116 local industrial experts are Tatars. It is clear that the situation is bad. It is also clear that we have to enhance our expert training, inspect all our measures, develop a number of additional measures to ensure the proper pace of expert training in various branches.

Educational establishments have achieved a number of improvements in this respect. 35% of workers' faculty newly admitted students, 51% of those in professional technical schools, and 20% of those in IHLs are Tatars. The situation used to be especially unfavorable in the Agricultural Institute. However, it has been able to achieve a value of 20% this year, as compared to 13% last year. But comrades, this is not enough to ensure the force that we need. Thus, we have to be resolute in ensuring every condition to enable IHLs to admit a higher percentage of Tatars in the following. We should expand the network of institutions offering preparation for IHLs, take decisive measures to prevent the dropout of Tatar worker and peasant students that we often face.

Regarding scientific staffing. At present, only 90 of 600 research scientists in the T[atar] R[epublic] are Tatars. A minor achievement has been made in the recent years—22 more Tatars have been employed. Last year, we obtained two Tatar professors for the first time. It seems like we have been able to suppress the opposition of our higher and other educational establishments recently. But comrades, our relevant organisations working in IHLs, in universities, in institutes have been even more persistent to ensure quicker progress and ethnic scientific staffing <...>.

No. 47

Memorandum

**by the Central ITL Board to the Department of Nationalities under the Presidium
of the All-Russian Central Executive Committee on the Progress in State Apparatus
Korenization and Occupational Training in the TSSR**

1931

The state of korenization is a key issue related to state apparatuses. Lenin's national policy in the context of the Tatar Republic is implemented through ethnic staffing and state apparatus korenization, reconstruction and adjustment central and district institutions to provide services in the mother tongue

of the indigenous population, and ensuring services for national minorities in their mother tongue. The main method of korenization is establishing governmental positions to be re-filled within the framework as korenization, which are to be established by the ITL Board for central institutions and by district boards for district ones.

The following figures are available on state apparatus korenization.

	As of 1 January 1931			As of 1 July 1931		
	Total number of employees	Including Tatars	Tatar percentage	Total number of employees	Including Tatars	Tatar percentage
In central institutions of 2						
People's Commissariats:						
a) senior officials	280	119	42.7%	248	114	46.5%
b) middle technical staff	437	123	28%	459	143	31.1%
b) junior service staff	80	27	33.6%	90	34	37.1%
Total:	797	269	35.7%	797	291	36.2%

In general, the situation with apparatus korenization has not changed materially in central People's Commissariats in the recent time. Certain institutions demonstrate a growth trend like the apparatuses of the Central Executive Committee and the Council of People's Commissariat of Education—57% as compared to 51.5% as of 1 January 1931; the People's Commissariat for Education—50% as compared to 44.8%, and the People's Commissariat for Finance—47% as compared to 45%. A certain shift has taken place in the apparatus of the State Planning Committee (Gosplan)—16.9% as compared to 10.8% as of 1 January 1931. The People's Commissariat for Justice has shown a reduction trend—37% as compared to 34.6% as of 1 January 1931. Apparatus korenization in branch offices of all-Union central institutions (9 institutions) is 21%, the USSR Meat Administration and the USSR Fish Administration being the weak link—only 10% of their employees were Tatar as of 1 January 1931.

The state of apparatus korenization in the trust management apparatus is also unsatisfactory, the average korenization rate being 19%. The weakest trust companies are Tatkozhtrest (Tatar Leather Trust Company) (7.1%) and Tatstrojobj`edinenie (Tatar Construction Association) (10%).

Korenization of trade cooperative institutions accounts for 32.8% of the total growth of engagement of Tatar employees, Tataptekoopravlenie (Tatar Drugstore Administration) being somewhat behind.

Apparatus korenization in bank institutions (State Bank and Tatar Bank Office) is 25% as compared to 34.3% as of 1 January 1931. The percentage of Tatar workers in the Kazan Office is 19% as compared to 21.2% as of 1 January 1931; the figures for the Tatar Bank are 39% as compared to 51.7% as of 1 January 1931. These institutions have a rate of korenization lower than average, because they have peculiar Tatar involvement against the backdrop of a general increase of employee count as compared to the past.

28 TR districts (out of the total 45) were found to have a predominantly Tatar population, that is, a percentage of the Tatar indigenous population of over 84.5% of the total Tatar population in districts, within the framework of division into districts in 1930.

The TR Central Executive committee resolved that the districts should have records management and correspondence in the Tatar language to provide services to the indigenous population in its mother tongue; village soviets in such districts are to maintain records management in Tatar as well.

The following list suggests which districts and village soviets have introduced the indigenous language³¹ to their records management:

No. Item	District name	Total number of village soviets	In particular, ethnically			
			Tatars	Russians	Representatives of ethnic minorities	Mixed
1.	Agryz	24	18	6	–	–
2.	Aktanysh	53	47	2	1	3
3.	Alkeyevsk	44	21	19	4	–
4.	Almetyevsk	29	22	3	3	1
5.	Apastovo	51	40	9	2	–
6.	Arsky	63	45	18	–	–
7.	Atnya	60	55	4	–	1
8.	Bavly	30	16	7	7	–
9.	Buinsk	78	38	14	13	13
10.	Chelny	65	39	20	–	7
11.	Drozhdzhanoye	40	23	1	16	–
12.	Dubyaz	60	40	19	–	1
13.	Kama-Ustinsk	35	25	8	2	–
14.	Kaybits	44	21	17	1	5
15.	Krasnyi Bor	29	16	7	6	–
16.	Kukmor	53	40	2	11	–
17.	Mamadysh	52	26	23	3	–
18.	Menzelinsk	64	33	23	1	7
19.	Muslyumovo	48	37	9	2	–
20.	Nurlat	33	19	14	–	–
21.	Pervomayskoye	30	17	2	6	5
22.	Rybnaya Sloboda	70	40	27	0	3
23.	Saby	70	53	10	–	2
24.	Sarmanovo	59	49	10	–	–
25.	Shugurovo	25	15	4	6	–
26.	Takanysh	39	28	9	2	–
27.	Tumutuk	29	27	2	–	–
28.	Tyunteyevo	59	47	1	11	–
Total:		1337	902	290	97	48

Thus, the percentage is 65.2% of the districts' Tatar village soviets and 88% of the total village soviets.

These districts mostly practice both internal records management in district institutions and correspondence with central institutions in the indigenous language. However, the Tatar language is not being implemented completely in certain districts (Kamsko-Ustyinsky, Tyunkeyevsky, and Atninsky).

³¹ Style of the document.

Some district institutions practice records management in Russian, while certain central institutions send materials in Russian.

The TR CEC Resolution of 22 November 1930 specifies that records management in two ethnic minority districts (Aksubayevsky and Oktyabrsky) must be in then Chuvash language to ensure service provision to the ethnic minority (the Chuvash people) in its mother tongue. The following regulations on service provision to ethnic minorities in their mother tongues in general have been adopted within the framework of language implementation: a) all village soviets within the TR that provide services to a linguistically homogeneous ethnic minority population shall practice internal records management in the ethnic group's language; b) village soviets that provide services to a linguistically heterogeneous population can practice records management in the language of the majority of the population served at their discretion.

No complete data is available on the state of apparatus korenization in district institutions. The statistics submitted by individual districts suggest the following state of apparatus korenization:

District name	Tatar percentage of the total population	Tatar percentage of the total employee count	Percentage of employees representing ethnic minorities
Arsk	77%	60%	–
Dubyaz	72.3%	58%	0.9%
Drozhzhanoye	64.7%	35.1%	56%
Kama-Ustinsk	61.3%	56%	4.7%
Menzelinsk	56.1%	32.4%	2.8%
Muslyumovo	77.2%	75.5%	4.7%
Nurlat	71%	58.1%	3.2%
Sarmanovo	89.2%	78.3%	–
Tumutuk	90.7%	88%	1.8%
Tyunkersk	84%	88%	8%

The data suggests a poor engagement rate in Drozhzhanov district, where high korenization rate is attributable to ethnic minorities.

State of Ethnic Proletarian Staffing

The RC Plenary Session in November adopted exhaustive guidelines on indigenous staffing. According to the guidelines, a percentage of Tatar workers of 38–40% must be achieved in 1931. Statistics as of 1 January 1931 report a total of 26,726 workers at all-Union and trust industrial plants, of which 8,527 are Tatar, yielding a percentage of 31.9%. Thus, the task is to supply several more thousands of new Tatar workers within 1931. Apart from increasing the growth rate, it is necessary to improve the qualifications and political awareness of Tatar workers through courses, clubs, etc.

Tatars account for 33% of all attendees of the existing courses. Besides, specialized Tatar courses host 181 people. Taking into account the need for industrial training within the framework of staffing, the goal is to make sure that various courses and clubs cover up to 50% of all Tatar workers within 1931. However, plants hardly implement the measures in practice. For instance, the Brick Plant has arranged courses to host 34 people without engaging a single Tatar; the courses at the Mullanur Vakhitov Plant only provide instruction to 2 Tatars out of 37 students. Of 64 water transport course students, only 8 are Tatar. <...>

Therefore, the rate of engagement of skilled Tatar workers is 69.5% of 2790 people.

The total count of workers in trust³² industry, except for apprentices and junior serv[ice] staff, is 15,782 in [19]31, which suggest a growth rate of 6.9% as compared to [19]30. The growth rate for Tatar workers is 51.8%. The expected Tatar percentage in the total worker count by the end of 1931 is 38.15%.

FTA are the main source of training and labour force engagement. The Union Trust Industry statistics for FTA reports 2658 students, of whom 64.2% are male and 35.8% female; 46.1% are Tatar, 46.3% Russian, and 7.6% belong to other ethnic groups. The figures for social origin are as follows: workers—53.6%, farm workers—1.6%, low-income peasants—18%, medium-income peasants—6.1%, office workers—11.6%, handicraftsmen—4%.

In spite of a significant growth, FTA will only be able to supply 12% of the total demand for labour force in 1931. Therefore, it is an industrial objective to increase the number of students by 2500 in 1931. Engineers and technicians are a weak point in the TP industry. A private study on trust industry revealed 3.6% of 110 engineers and 9.7% of the total 154 technicians to be Tatar.

The statistics available claims the percentage Tatars to be 36.5% of managers of trust companies and plant within such companies (54 presented), while representatives of ethnic minorities accounted for 1.8% and other ethnic groups for 9.2%.

Though the general Tatar engagement rate is satisfactory, the share of ethnic minorities in the management is too small. <...>

**An extract from the article by P. Dulsky on the art of Tatarstan at exhibitions abroad,
published in Krasnaya Tataria**

The fact that Soviet artists participate in international exhibitions abroad is undoubtedly important, which importance is not restricted to art. The shows are of enormous political significance as they prove and confirm the growth and development of the proletarian culture, the Soviet country's advance at the front of cultural revolution. Taking into account the large-scale objectives that are characteristic of our epoch and progress in visual arts, which have taken the way of socialist realism, artistic representation abroad is an undeniable need of the Soviet art to present the success of arts in our country to the international proletariat.

It would be too bad to omit any depiction of the life in Tataria in this important undertaking.

Back in 1929, Europe's best magazine 'GebrauchsGraphic' (1929, No. 2), which appears in two languages—English and German—showed interest in the extraordinary works by artists from Tataria in a dedicated article. When the article was published, Los Angeles, California, invited Tatar artists to participate in a graphic exhibition at a public library, specifying a preference for ultramodern items.

The artist sent their works soon. This means that the article about Tatar artists in 'GebrauchsGraphic' impressed the distant America as something very straightforward and expressive.

The year 1925 is of special importance for Tatar art as a milestone in introducing the art of the Tatar Republic to the West. A giant board was provided for exhibits from Tataria at the Landmark International Exhibition of Decorative Arts in Paris in 1925. Craft items dominated the show—fabrics, dyed leather articles, embroidery, jewelery, partly contemporary Tatar book design. Unfortunately, it did not quite represent the experiments of young Tatar artists. However, famous art critic YA. Tugenhold did note the poignancy of certain book ornaments and presented the work by Faik Tagirov in his article 'L'elementnational dans l'art de L'URSS'.

It should be noted that the period 1924–1925 was the dawn of the national revolutionary graphics of the Tatar Republic. It was not until the big anniversary Exhibition of Arts of the Peoples of the USSR in Moscow (1917–1927) that a group of Tatar appeared as the founders of the contemporary book art.

Having won a name for themselves, the Tatar artists were invited to participate in a very important exhibition in Paris—Book Art—in 1930. The exhibition represented a number of countries, and the VOKS (All-Unity Society for Cultural Relations with Foreign Countries) established a Soviet department. Our ambassador in Paris M. Dovgalevsky headed the Soviet department. 'Union des Republiques Socialistes Sovietiques' presented up to 150 works by the most prominent Soviet graphic artists. Some of them were made by famous artists from Tataria. Works by G. Yusupov, F. Tagirov, compositions to the books 'October and the Young Generation' and 'Mysterious Hut' by Muxametzhyanov, covers for the book of poems 'Days of Shock Work' by Tlyashev, etc. A number of linoleum printing celebrating 1905 by Kozlov, graphic works by N. Sokolsky and his cover for '10 Years of Socialist Construction in Tatarstan', 'Tractor Station' by Nikitin (photomontage). Besides, the exhibition represented Tatizdat, the Art Technical Professional School, the State University, and the Printing School. Foreign printed media covered our contribution to the exhibition. The Times published an especially valuable article.

In 1933, the VOKS sent a Soviet art exhibition including works by artists from the Tatar Republic to America. The exhibit first visited Chicago and opened in Philadelphia in the summer of 1933. An article by famous American art scholar X. Brenton, who had visited the Soviet Union many times and was well familiar with our art, appeared in a guide.

An exhibition illustrating the achievements of the Social Union is to open in Paris to celebrate the October holidays of this year, in which Tataria will play a major role—the visual arts of Soviet Republic will be represented by kolkhoz photos taken by Soyuzfoto this summer.

We do not claim our review to cover all materials ever exhibited by the Tatar Republic in the revolutionary period. We have not mentioned international exhibitions attended by individual artists from

the Tatar Republic (the International Exhibition in Venice in 1924), but what we have said is enough to prove that Tatar keeps up-to-date with this sphere of art. In conclusion, we still have few indigenous graphic artists—far too few to supply the high demand that we have because of the developing book production.

We need to restore the Graphic Department of our Art Professional Technical School (now closed), which was the major contributor to the education of those young people who now participate in exhibitions abroad.

An extract from the Special Report on Deviations in Crop Requisition in the Tatar Republic³⁴

1. Unrealistic crop targets for certain districts.

Crop requisition rate in the Tatar Republic was essentially satisfactory at the first stage of implementation (the June plan was 125% fulfilled). The republic-wide bread requisition plan is also generally realistic. However, the dramatic impact of drought during the ripening of spring crops has caused major variations in crop yield depending on the district and settlement. Therefore, some crop balances proved to be unsustainable, while target figures for crop requisition for June and July and for certain districts appeared unrealistic and had to be revised in detail recently. <...>

Top secret.
13 July 1933

The peasants' sentiment in Krupskaya Kolkhoz, of Malaya Dubovka, Rykovsky Village Soviet has changed completely as compared to 1931–1932. They will not believe anyone praising the kolkhoz life. Some kolkhoz members reply, [']Stop fooling us, we can see that life gets harder as we live in the kolkhoz.['] The yield was much worse in 1931 than in 1932, but life was better; the kolkhoz had no crops of its own and was permitted to sell horses to buy some crops. The canteen offered dinners to workers. They were thus able to survive until the new harvest. The 1932 being abundant, kolkhoz members still had to starve—they took most of the crops away, leaving us famished. There were public food funds and a school fund. They took all the crops away, leaving only the insurance and sowing funds. We applied to the District Executive Committee for allocating some of the insurance fund to kolkhoz member nutrition several times, but the DEC categorically forbade us to spend the insurance fund<...>

No. 53
An extract from a report on dekulakization in the Tatar Republic

15 March 1930

Mistakes and Deviations

The main drawback of all the dekulakization measures is insufficient awareness-raising among poor peasants and farm laborers. Few measures are taken to clarify the slogan 'liquidate the kulaks as a class' to the people. Instead, authorities limit themselves to administrative measures, often without any clear connection to collectivization. The examples below are a clear illustration.

Secretary of the Arbor volost committee, Arsk canton, summoned the kulaks of the Shuda village and suggested that they should turn in their property 'of their own volition'. The Chairman of the Tryokhozyorsk volost executive committee, Spassk canton, in Porfir'evka village made lists of those to be dekulakized himself and confiscated their property without discussing it at a meeting. The situation was similar in Shonguty volost, Buinsk canton, and other localities.

In Chershely volost, Bugulma canton, all the kulaks were arrested and exiled from the volost before the dekulakization meeting.

At the same time, there are cases where party cells, volost committees, and appointed representatives do not lead the intensified dekulakization activities of the poor population but tail on, accepting any dekulakization decisions made at meetings of the poor, that is why there are fairly numerous instances in all the cantons where medium and merited households are subjected to dekulakization, as well as the victims of the White counter-revolutionary groups. This is confirmed by numerous facts:

In Kalinin volost, Arsk canton, 20 medium households were dekulakized; the figure for Novy Kishit volost is 25. Naberezhnye Chelny canton, Afanasyevo volost, Probuzhdenie village. Medium peasant Zotin was dekulakized because his father had a woollen mill. He was an active participant of the October Revolution, who spent the entire Civil War period at the Baltic Fleet front. The Whites confiscated his house and property. In Tyaguzino village, medium peasant Mutyashin was dekulakized for buying a feather bed in a famine year. He had one horse, one cow, and served in the Red Army. He was wounded twice, and his brother was killed during battle with the Whites. In Isenbaevo volost, Chelny canton, a

medium peasant was dekulakized for speaking out against grain procurements; in Aktash volost dekulakization was carried out because of the 'kulakification trend'. Similar cases took place in Tarkhan volost, Buinsk canton, Semiostrov volost, Menzelinsk canton, etc. There are also isolated incidents where not only medium peasants, but poor peasants are subjected to dekulakization. For example, the Vakhitov volost executive committee, Mamadysh canton resolved to 'make up lists of all peasants, including poor and medium ones'. Or the incident in Mamalay volost of the same canton, where an inventory was compiled of the property of poor and medium peasants as part of preparation for dekulakization.

Unnecessary arrests of medium peasants, and sometimes even poor ones took place in certain localities (Aktash, Afanasyevo and Chelny volosts; in the villages of Betki and Suksy of the Chelny canton, etc.). Medium peasants are sometimes subjected to dekulakization to settle personal scores.

At the same time, the authorities overlook actual kulaks, and they avoid dekulakization by disguising themselves as medium peasants in certain localities. For example, in Aktanysh village, Menzelinsk canton (December 1929), a kulak sold 14 heads of cattle and 2 horses. He was able to avoid dekulakization on the pretext of having one horse.

Certain volost committees and party units are apparently unaware of the fact that the dekulakization process is part of collectivization and should strengthen the kolkhoz movement. In fact, they interpret dekulakization as an extension of the policy of the Poor Peasants' Committee. Therefore, there are several cases where poor peasants divide amongst themselves kulak property and personal items. This distribution is so inefficient that it causes disaffection among poor peasants, causing resistance in individual cases. The following facts are a clear illustration.

In Mashkaush village, Menzelinsk canton, 10 houses are taken away from kulaks. Poor peasants are forced to move into these houses, furthermore, a widow's potatoes were frozen. In Baltayevo and Kildurazy volosts, Buinsk canton, Panovka and Tyulyachi volosts, Arsk canton, Zainsk volost, Chelny canton, and Agryz district, the property taken away from kulaks was divided amongst poor peasants. In some villages, poor peasants were forced to move into kulak homes.

It was also observed, that several small low-value items were taken away from kulaks—clothes, bast shoes, children's skates, and clutter.

Kulak Resistance

In order to avoid property confiscation or mitigate the impact of dekulakization, the kulak hurried to liquidate his property before dekulakization was announced, hiding things at the homes of friends and relatives in nearby villages and towns (Ten'ki), actively disposing of governmental loan obligations and withdrawing deposits from savings banks, selling valuables, silverware, and old coins (Menzelinsk). In certain localities the Kulaks resort to threats, terrorism and sabotage. Recently, the Kulaks have been using women, mostly their family members, as petitioners to protect themselves. The kulak mainly refers to mistakes and drawbacks in the activities of our authorities, mostly in terms of collectivization, to stir women. Here are some facts. Tatarskoye Imenkovo village, Laishevsky district. The dekulakization of 13 households triggered campaigning against the kolkhoz by those dekulakized and their families. On 3 March of this year, 75 women forced the Chairman of the village Soviet to sign them out of the kolkhoz by use of threats. Their slogan is 'Kill all the Commissioners'. Urmancheyevo village, Mamadysh canton. Women demanded that dekulakization be stopped and the kolkhoz be dissolved. In Baysarovo village, Menzelinsk canton, a kulak set fire to his property which had been confiscated within the framework of dekulakization.

Manifestations of Rightism

Both locally and in some central institutions, dekulakization revealed a number of cases where low-rank party organizations (volost committees, party units) and soviet, cooperative institutions had been showing rightism in their practice. Informational Letter No. 12 by Tatsoyuz is a vivid example — it contains the following instructions for its network: 'All kulak activities have been suppressed, the kulak has

been defeated'. However, the same letter states below that in Mendeleyevsk Propaganda Department the kulaks had tried to make a decision against workers referring to peasant oppression, while in Urymovo the kulaks had arranged a counter-revolutionary women's demonstration to undermine dekulakization.

A number of volost and village officials claimed that there were no kulaks in their localities, that is, there was nobody to dekulakize. Some even tried to suspend dekulakization or abolish property confiscation that had already been carried out. The following cases are a clear illustration.

The Baltasino volost executive committee, Arsk canton ordered that dekulakization should be suspended, while the Kalinin volost executive committee denied having any kulaks in the volost. In Kordryakovo village, Novoye Mazino volost, Menzelinsk canton, party cell Secretary Gafurov supported kulaks by claiming 'we have no kulaks here, there is nobody to dekulakize', and personally abolished the confiscation of a kulak's property because they often drank together. The Chairman of the Kuzykino volost executive committee, Chelny canton, Tkachev sent a letter to a kulak informing him in advance of dekulakization.

In addition, certain authorized officials and heads of low-rank Soviet authorities deviated from the guidelines for dekulakization by acquiring confiscated items by bidding, misappropriating such items, and even taking bribes. For example, in Gorokhovoye Pole village, Mamalayevka volost, Mamadysh canton, authorized official Golov misappropriated a fur coat, a pair of trousers, and a hat. In Tukayevo village, Nurlat district, Assistant Public Prosecutor Sadykov misappropriated items confiscated from kulaks—gloves and a razor—and took a feather bed and pillows as a bribe. In the same district, the Head of the Administrative Department and a People's Judge acquired items confiscated within the framework of dekulakization by bidding.

Such actions cause discontent with the local population, enabling the kulaks to discredit the local officials responsible for dekulakization.

It should be noted that senior local authorities do not take efficient measures to stop such incidents.

No. 54

Letter of Instruction by the Tatar Regional Committee of the All-Union Communist Party (Bolsheviks) to canton and district committees of the All-Union Communist Party (Bolsheviks) on the Anti-Kolkhoz Movement in the Republic's districts

24 March 1930

We hereby inform you of local reports on an ongoing serious anti-kolkhoz movement in Arsk, Spassk, and Chistopol cantons as well as Laishevsky, Nurlatsky, Agryzsky, Rybnoslobodsky, and Kaybitsky districts. The movement has reached a relatively insignificant amount of villages in other cantons. There are few cases of explicit counter-revolutionary slogans. The Regional Committee has made the following decisions today: to continue the persistent struggle relying on mass activities in order to preserve villages of total collectivization. In case of any large-scale kolkhoz quitting it is imperative that the stable part of kolkhoz members should be preserved by rallying them around the most active members of the group, and viewing them, organizationally and economically, as a kolkhoz to make sure that the group continues its determined struggle to restore full collectivization of the village, winning back

dozens of peasants and individual ones. After correcting all the overreaches, the property of liquidated kulak households shall remain at the disposal of such kolkhozes. As an experiment, start allocating the land to the remaining kolkhoz members in individual localities without any overreaches. Resort to all convincing methods to resist and delay seed privatization until sowing time. Explain to poor and inefficient peasants and warn them that seed privatization poses a direct threat to the sowing of their fields.

Avoid harmful forcing of actual horse collectivisation until favorable conditions are ensured.

As the period established for canton and district committees to return wrongfully confiscated churches and mosques to believers has expired, figures on the execution of this instruction shall be reported immediately. Present recommendations to canton and district committees to send brigade members and conscripts who interfere with the implementation of the party's anti-overreach policy back to Kazan. The Regional Committee states that several local organizations have been delaying the correction of overreaches, based on a false understanding of the authority of governance. Such a mindset, which often verges on sabotaging the party's policy, is a direct means of support for the kulaks. Raise your requirements for village volost authorities and their responsibility as much as possible; check their everyday practical measures to correct overreaches. Inform all lower organizations of any prosecution for overreaches immediately.

Tatar Regional Committee

No. 55

An extract from the internal memorandum by agents of the Regional Committee of the All-Union Communist Party (Bolsheviks) on the anti-kolkhoz movement in Arsk canton

10 April 1930

<...> Causes and Nature of the Movement.

First of all, we should categorically repudiate the myth that the anti-kolkhoz movement was triggered by Comrade Stalin's article and the Central Committee's resolution on combating overreaches. In Arsk canton, the movement is present not only in every volost, but in every village. Its root cause is an outbreak of long accumulated dissatisfaction among the canton's medium and poor peasants. General overreaches, characteristic of the excessive pace of collectivization in the TSSR, have worsened in Arsk canton due to a specific practice. This practice has manifested itself mainly in the taxation sphere and the recovery system, in the administrative anti-religious campaign and re-dekulakization.

It is beyond doubt that in the context of Arsk canton the CC policy only caused the decisions to relieve the tension, which would otherwise have ended up as an explosion, thus ensuring a less serious outcome. <...>

On Overreaches in Arsk canton.

During the Kolkhoz Establishment Period.

Not a single gathering over the period in question has omitted to claim that they were brought into the kolkhoz by force. It is beyond doubt that such statements are exaggerated. However, a recent study on specific approaches during the kolkhoz organization procedure revealed coercion and intimidation with all types of hardships, even to the extent of dekulakization in Siberia. Such perfunctory engagement was interpreted as the art of kolkhoz forming. It was common practice to ignore any transactional offers by peasants who were at least slightly inconsistent with the approved policy introduced by the kolkhoz organizers. The best proof of this is the following: only 126 villages out of 612 now have a naturally formed kolkhoz nucleus, which contains as few as 12–15% of the canton's households. <...>

Dekulakization. Dekulakization was carried out on the basis of not only economic, but also political and religious indicators; routine squabbles also influenced the process. An approximate allotment figure was given for volosts which was unrealistic, eventually stirring up the quantitative appetite. As a result, some volosts, like Arsk, were initially dekulakized up to 5%. Preliminary adjustments reduced the canton's total to 2.5%, while an actual inspection revealed a rate of 1.17%. Naturally, those rehabilitated included poor peasants, medium peasants, and non-kulak mullahs, people with a long past with no economic signs of being kulaks in the present. It did not occur to the canton committee that they should take into account the lack of land (the canton had no vacant land) and the general poverty of the district when determining the number of kulaks for the district. The telegram by the secretary of the canton committee to the Novoye Churilino volost committee, dated 17 March, is suggestive of his competitive enthusiasm on excessive dekulakization. In the telegram comrade Safarov, referring to the article by comrade Stalin and reporting cases of unacceptable overreaches, at the same indicates a reduction in the target value for dekulakization, from 60 to 55. In fact, 23 kulaks of all categories were detected in the volost. Such an attitude to work is described as ad-libbing. <...>

SA HPD TR, c. 15, l. 2, f. 842, s. 3–5.

Published: G. Faezova, S. Elizarova 'Vse krichali, chto kolhoz ne zhelaem' ('Everybody shouted they did not want kolkhoz') // *Gasırlar Avazı = Echo Vekov.*—2009.—No. 2.—Pp. 72–74.

No. 56

An extract from a confidential letter by the Tatar Regional Committee of the All-Union Communist Party (Bolsheviks) to the secretaries of canton, volost, and district committees of the All-Union Communist Party (Bolsheviks) on combating deviations of the party policy in the kolkhoz movement in Tataria.

17 April 1930

The outflow of people from kolkhozes, that has taken place in the RT during the last month, causing a dramatic reduction in the peasant household collectivization rate, has stopped by now. It is safe to say that the situation in the village has been reversed. Poor and medium peasants in kolkhozes and individual poor and medium households outside of kolkhozes are approaching the sowing period, which will open the next stage of our work to intensify socialist reconstruction of agriculture in RT. <...>

From November 1929 to March 1930, the number of collectivized peasant households increased rapidly in the RT. It is beyond doubt that the kolkhoz movement in the RT, as well as in other regions of the Soviet Union, is essentially indicative of a shift of poor and medium peasants towards the path of collectivization, and the attraction to this path of the broad masses of poor and medium people in general. Undoubtedly, if all of our practical kolkhoz building measures had been in full compliance with the CC instructions, we would have been able to achieve a much broader and stabler success in the kolkhoz movement than we actually have at present.

However, there is factual evidence that blatant violations of the party's policy in the village have been occurring within the framework of collectivization in respect of the key issue—that of medium peasants—in the RT as well as in some other regions of the Soviet Union. The basis of these mistakes is the substitution of organizational and explanatory work with violence against medium peasants in terms of kolkhoz building. Here in the RT, the mistakes have affected many aspects of kolkhoz building on a large scale <...>³⁵

These overreaches have primarily brought about the violation of the key principle of collectivisation, that is the principle of voluntariness, as there were practices in the form of coercion in order to join the

³⁵ Examples of excesses and corrective measures in carrying out the collectivisation are omitted here and hereinafter.

kolkhoz. Suffice to say that the Bugulma canton committee published a telegraph instruction to volost officials in its newspaper, stating that they were to 'stake their life' on achieving a collectivisation rate higher than the canton's average. Moreover, 'Krasnaya Tataria' mistakenly reported Bugulma to be on the black-list for insufficient collectivization rates. The Kuznechikha volost executive committee, Spassk canton, arrested those members of the village soviet who had not entered into kolkhozes. It was common practice to mention Solovki, Siberia, and forced migration as a threat to those who would not enter a kolkhoz. <...>

The most blatant, downright criminal deviations from the party's policy are associated with dekulakization. For instance, over 6% of all households in Laishevo district were dekulakized. An entire settlement (Voskhod) was dekulakized. Medium households were mainly affected. Dekulakization was sometimes determined not so much by economic considerations, but by the political standing of a specific medium peasant, or even a poor one. All religious workers, Lishenets (disenfranchised citizens), some families of workers employed in the town were subjected to dekulakization, which was even used to settle personal scores and in some cases took the form of looting. The directive of the Regional Committee dated 9 January of this year, under which dekulakization cannot affect medium households, and the resolution of the Tatar Central Executive Committee dated 16 February, according to which those found guilty of dekulakizing medium peasants are to be prosecuted, were not adhered to.

Taking into account that this situation, occurring in a number of regions of the Soviet Union, posed a threat to break our alliance with the medium peasantry, the party's Central Committee decided to embark on a fierce struggle against the deviations from the party's policy detected in the kolkhoz movement by introducing amendments to the Charter of the Agricultural Artel, published in Comrade Stalin's article 'Dizzy from Success' and, finally, issuing the Resolution of 10 March, which appeared in Pravda on 15 March. But did everyone understand the directives of the Central Committee? Were party organizations able to adjust their practices to the Resolution? As far as we know, it never happened. The Salikhovky volost committee, Bugulma canton, delayed the distribution of the article by Comrade Stalin among the population, as it had been deemed harmful. The Levashevo volost committee, Spassk canton resolved that the article by Comrade Stalin and the new Charter of the Agricultural Artel did not apply to it. As of 17 March, the Arsk canton committee limits its efforts to correct dekulakization mistakes to reducing the number of households dekulakized from 60 to 55 in one of the volosts, though an inspection has revealed a total of only 23 households to be dekulakized. Certain activists are still unaware of the importance of the Central Committee directives for the anti-overreach campaign and there are attempts to discredit these directives. Such sentiments are the reason why most of the low-rank party organizations took a passive approach to correcting their overreaches until the kulak began to correct them. The kulak was able to take the lead in a number of localities, making use of the mistakes and inactivity of the party organizations, and proceeding to give false interpretations of the Central Committee directives. Thus the way was paved for the mass outflow of kolkhoz members, which we have witnessed during the past month.

No. 57

An extract from the report by Chairman of the USSR Central Executive Committee and the All-Russian Central Executive Committee M. Kalinin on Kolkhoz Withdrawal in the TASSR

27 May 1932

<...> 1. 52 householders in Entuganovo village, Buinsk district submitted an application to quit the kolkhoz in January (they constitute 65% of the kolkhoz), because they were dissatisfied with lack of

concord and frequent disputes between kolkhoz members. No reply was given to their application until April. They have recently been informed that they are considered to be excluded from the kolkhoz with all the ensuing implications (no land for sowing, no horses, tools, etc.).

2. Troubled relations between old and new kolkhoz members (less seeds demanded from old members, etc.) and the suppression of any criticism in regard to the actions by the kolkhoz board, as well as its poor performance, caused 29 householders to quit the kolkhoz of Nizhny Shendyr village, Mamadysh district.

3. Kolkhoz 'Kyzyl Uryak 3', Rybnoslobodsky district, which was founded in May 1931, unanimously, along with the board, resolved to switch to individual husbandry. The minutes of the general meeting, where the question of withdrawal was raised, state: '1. Taking into account the dramatic decay of the kolkhoz and the fact that is generating low income to the Socialist state and to our householders, the general meeting of 25 attendees voted unanimously to present a petition to the Tatar Central Executive Committee calling for withdrawal from the kolkhoz. <...>

4. Pervomaysky kolkhoz (Bogorodok settlement, Chirpy village soviet, Laishevsky district) contained 50 households in April 1931. Now 45 households have withdrawn since after working there 'for one whole year', they have seen that our economic establishment provides no opportunities in terms of workers' and peasants' rights and that they have achieved nothing as kolkhoz members. <...>

7. 30 kolkhoz members from Panovo village, Nurlatsky district have withdrawn from 'Krasny Oktyabr' kolkhoz. 'The kolkhoz is mismanaged and chaotic. They burned rye on the drier. The fire did a lot of damage, but they never compensated the losses of the peasants. The field had 4 desiatinas of rye, cut down, in formations under hay, 7 hectares of oats, also in seams under snow, and 75 hectares of oats in bundles—they lay there until Christmas, all scattered. They probably scattered it all across the barn when they brought it there. The rotten oats were given to horses instead of fodder. 60% of the crops was lost. We were only able to turn in the full amount of unripe crops, and now we are starving. This is why we don't want to be in the kolkhoz', they write.

8. 19 people withdrew from the kolkhoz of Sergeyevki settlement, Chirnovka village soviet, Laishevo district. 'It is exactly a year since we joined the 'Krasny Dol' kolkhoz on 28 April 1932', their application states. 'Now that we have worked there for one whole year, we understand that the kolkhoz offers no opportunities in terms of workers' and peasants' rights. We, however, did our best to be useful to the state'.

9. 'Udarny' kolkhoz, Arsky district, used to contain 160 households. 54 householders are currently withdrawing from it, because they are dissatisfied with the board's poor performance, crop allocation, payment for labor days, and the drinking of local workers.

10. 'Markis' kolkhoz, Maly Shinar village, Saby district used to contain 110 households. 50 households are currently leaving the kolkhoz. The leavers attribute their reluctance to stay in the kolkhoz to economic mismanagement that has led to dramatic cattle mortality, disruptive behavior by the kolkhoz chairman, and a general lack of any mass work.

Eyewitness Accounts of Collectivisation in the TASSR

From a letter by E. Kungurova

'... In August 1932, they put our mother and her five children on a cart and took her to an unknown destination. They sent 3 families out of the village. One of the families stayed in Irkutsk. They took us, two families, to the north of Irkutsk region—to the Stalin kolkhoz, Ilyino village, Kirinsky district. It

was already snowing when we came. Our clothes were no good for such cold weather. But there was no way out. We had to survive. And so we suffered in the freezing cold, without knowing why we were being punished...'

From a letter by V. Savelyev

'My knowledge of those distant years 1930–1932 is limited to what my grandmother Darya Bezenova, my grandfather Demyty Bezenov, and my mother Agakhina Savelyeva told me. My brother Mikhail Savelyev, born in 1931, died of starvation and disease when he was about four years old.

My paternal grandfather Sergey Savelyev and all his children, who lived apart from him, were dekulakized and exiled to the town of Magnitogorsk. They would not give them any clothes, so they remained in what they were wearing.

My father went to prison; my mother returned to her parents with me and my little brother. Then, my maternal grandfather was dekulakized and sent into exile along with my grandmother and my mother with her two babies. But they sent them back from Bugulma station for some reason. They probably were not fit to work—my grandparents were old. When we returned to our house, other people were living in it. They wouldn't let us in.

My grandmother took me and we went roaming from village to village, begging; my mother went away with my younger brother. After these wanderings, Grandpa's brother gave us a bath near the river. We reconstructed the bath to resemble a house. Having an area 9 square metres, it hosted the five of us, later four.

My grandfather had an oil-mill, which the kolkhoz had used for several years. Shortly before dekulakization started, a mill was built on the Ik river in Kyzlyarovo village, Bavly district, where I was born. Grandpa destroyed the mill lest the kolkhoz should use it...'

From a letter by M. Galiullin

'... Before exile to Siberia, our Galiullin family lived in Chuma Yelga village, Arsky district, Tatarstan. It was a large family: my father Zinnatulla Galiullin, born in 1874, my mother Fakhrilbanat Galiullina, born in 1877, and 9 children. We lived in peace and friendship. Both parents and we the children worked our fingers to the bone from early morning till night. We built a two-storey house, various farm buildings, and a bath. We had 2 horses, 2 cows, 15 sheep, agricultural tools, a 'Singer' sewing machine (we made hats), etc.

But in the spring of 1929 they 'dekulakized' us, confiscated everything and sent our parents and six siblings into exile to Siberia. At first, we worked in the 'Luzhenki' and 'Butan' mines, Far Eastern Krai. I remember some names: the Shilka river, Kularka village, Sretensk district (it might be somewhat inaccurate—it has been a long time since then).

We lived in dugout shelters. They brought us to Krasnoyarsk after two years. We worked in the mines and built roads in the taiga. We lived in dugout shelters and tents there too.

In 1935, we arrived in Yeniseysk to live in cramped baraks. My sister Darya (born in 1916) died of cold and starvation. My brothers Malik (born in 1906), Abrar (born in 1911), and Nasyr (born in 1918) went to the front in 1942. I was conscripted into the labor army in the same year, where I served until 1944. I worked in Krasnoyarsk. Then I returned to Yeniseysk and worked at the same plant until I retired...'

From a letter by L. Lushnikova

'When the tsar was overthrown, mayhem and gossip began in the village; the elderly gathered to discuss events and read the Bible, and agreed that Satan's time had come, which would not last long.

My parents had separated from their parents by that time and had been able to build their house by selling personal belongings, clothes. The livestock allotted to my parents produced offspring. By the time dekulakization began, my parents had a stable household and a lot of land. They worked their fingers to the bone, getting only 4 to 5 hours of sleep. They had six children at that time.

The robbery began with crop confiscation—they brushed all the granaries clean, leaving no single sowing seed. Then they summoned everyone to the kolkhoz, suggesting that they should turn in all cattle, agricultural tools and machines. Father refused. On the following day his cousin Lavrenty, who had entered the kolkhoz and lived next door to us, and two other kolkhoz members (Mother never mentioned their names) came to take household items, livestock and everything we had in the house to the kolkhoz. They even checked the oven. My uncle began to tear out window frames; but Mother took the axe and said, 'Don't you dare tear out the window, or else I'll cut off your head'. This stopped him. They took everything from our house—my father's sheepskins, bags of wool, the sewing machine, the clock, and so on. The two other men were catching sheep, tying up their legs, and putting them onto a cart. My elder brother Pyotr (born in 1923, he was 8–9 years old) was untying their legs, and the sheep were running away. So they caught him and gave him a beating. Mother slaughtered our hens and hid them in the manure. They did not hesitate to take our cows, calves, and horses (I do not know how many there were) to the kolkhoz herd. On the following day they told my father: 'Either you enter the kolkhoz or you leave the house'. Father answered, 'If I enter the kolkhoz, they'll make me take what others have earned away from them. I will not go, so I won't become a kolkhoz member'.

Mother took the children to Bugulma, first to her brother's, then to her sister's place. Both brother and sister were threatened, 'If you shelter the kulaks, we'll send you away too'. Father was hiding at that time. He worked secretly for the miller until he was dekulakized. Then he hid in a dugout shelter. They were looking for Father. Mother said that he had abandoned them. Father came to her in the night to bring whatever food he could get.

Father chanced to meet the Chairman of the village soviet Uvarov, who issued a certificate stating that he was a medium peasant. They used it to go and find a job in Siberia'.

Letters by Eyewitnesses on Repressions in the Villages of TASSR in the 1930s

From a letter by Zaynap Nabiullina (Lukmankhakimova) from the town of Magnitogorsk

I was born in 1936 in Magnitogorsk where my parents lived in exile. Unfortunately, neither is alive now. My grandmother and my brother Sultankhakim Lukmanov could not stand the starvation and died in Magnitogorsk in 1935. If I had known that we were to live to see such times, I think I would have asked them for more details, but they were afraid to talk...

I remember going with my grandfather in 1951 to his native village Urazayevo, Aznakayevsky district. He sent me into his house (it was hosting a kolkhoz brigade) to see in what conditions the house and the outbuildings were. He was afraid to enter it himself. I could see him looking at his house through the neighbours' window. Such were the times. Our neighbours, who witnessed everything, said that during dekulakization, all was taken: the house, the cattle, the samovar from the table, and weight clocks from the walls. My grandmother Nazelya was wearing a new dress. The village activists demanded that she take it off and put on an old one; they were pulling her dress. Poor Grandma should have worn the new dress beneath an old one.

From a letter by Mariya Koledina

<...> Our parents were dekulakized; they lived in Udelno Yenoruskino village, Aksubayevsky district. Father and Mother lived with my paternal grandparents. Our grandparents were old. They had a large house, they called it a five-wall house, a horse, a cow, a heifer, and some sheep. Father's friends said, 'They will be dekulakizing you today'. So Father ran away without even changing his clothes. When they came, they looked for him, but he was gone. They took Grandfather and everything we had,

leaving only the clothes that we were wearing. My grandmother was wearing new felt boots. They took them off, sent her out of the house, took all cattle—there was no inventory...

Father came for Mother after six months; but somebody saw him arriving, although it was night-time. At once they came to search my grandmother's place, shouting, 'We shall kill him! We shall kill him...' But my family had hidden Dad in a chest, under cloths, and they did not find him. Mother's brother took Father to the station. Father then reported his whereabouts to us. Mother went to the Urals, to the town of Karabash, Chelyabinsk district. Dad worked in a mine. They lived in an apartment for several years, then they made a frame house, and we lived there during the war. We had no vegetable garden. Rainwater came down from the mountains and flooded our place. Dad was at the front throughout the war. About two years after he returned from the war, we bought another house. He was a disabled person of group I and he had a lot of orders. Dad would often say until his last breath, 'We have had to live in the hardest times'.

From a letter by Kamil' Bagautdinov

I was born on 15 October 1931 in Biyabashi village, Kaybitsk district. The details that I am going to share are from my mother Bibikhazyar Bagaveeva (1907–1981), as well as my neighbours and fellow villagers—very few of them are alive now. This is what they said about the total lawlessness in regard to my parents in 1931.

My father's name is Zalyaletdin Bagautdinov, also Zalyal Bagaveev, also Zalyali Bogovov. His birth years are 1897 and 1894, respectively.

Can one same man have this many names and surnames or be born and re-born after several years?

The dekulakization 'board' raided our village suddenly in October or November 1931. They dismissed and arrested Father, although there is no resistance on his part. They made an inventory of our property. All this happened during the night.

The following morning, they began removing our belongings. They took everything—my mother's dowry, clothes, and items stored in a chest, women's and men's jewelry, decorations, bedsheets, downy mattresses, even our everyday towels. They dismantled the house and installed it between two Russian and Tatar villages—Verkhneye Biyabashi and Sredneye Biyabashi—to use it to host the village soviet administration and the board of the 'Trudovoy Put' kolkhoz. The house remained in this guise until the 1960s. They dismantled and took away five-wall granaries (having a total length of about 40m) to use them as a kolkhoz grain warehouse. They seized several horses, cows, and other livestock, as well as the apiary consisting of several dozen beehives. Everything was to be for collective use. It would have been more or less fine if that had even happened. However, members of the 'board' divided whatever plunder they could take home.

They threw the baby (me), a few weeks old, onto the bare boards of the wooden bed. Mother had wrapped me in a blanket and put me to bed. One of the 'board' members pushed Mother aside to grab the bedsheets with one hand and unwrap the blanket with the other—and so I fell heavily on the wooden boards, spraining my wrists and breaking my fingers on both hands. The deformities are still visible today. Mother was reluctant to recall these events and did not tell anyone up until the year she passed away. Maybe she did not want to instill hatred of the regime in us, or probably she was still in fear of the 'board', which terrorized the neighbourhood for several years, always at night. They continued to frighten, threaten and victimize people in every way. They would not leave us children in peace, as we were stigmatized as kulak children until we left the village for different places. Father was released (although he was not really free) only after Stalin's article 'Dizziness from Success' appeared.

Not until now did I realize what terror Mother had to bear and why she would often jump up at night as if touched by red-hot iron. And this continued until her hour of death. Have you ever seen a woman cry without tears? We, her children, saw her cry and sob. But there were no tears left in her eyes after all these years. As I write these lines with a lump in my throat, I picture to myself the horror of what she went through.

No. 60

**An extract from the application to the CPSU Central Committee
by G. Fominys**

August 1931

<...> I hereby request the relevant Soviet authorities to rehabilitate me and restore all my civil rights, relieve me of the disgraceful, immensely tormenting labels 'kulak' and 'enemy of the people' <...>

We, Fomin brothers, have never been kulaks or despised enemies of the people. We have never been amongst the opponents and enemies of the Great October Revolution, the CPSU, or the Soviet regime. We have never obstructed or undermined the creation of the kolkhoz or collectivisation in our Shishur village, Orshansky district, or any other places <...>

We both left military service in 1923 and rolled up our sleeves to restore the ruined agriculture. While we were fighting, our elders, wives, and children were at home <...>

We were interested in arable farming, machinery, horticulture, gardening, beekeeping, poultry keeping, and industrial crops. We were agronomists, livestock experts, mechanics, and economists in our farm units. We knew no rest.

We had no meadows. We only had some angular clover patches for horses to graze. So we had little livestock. We had 2 cows and some bull calves, two horses, 5–6 sheep, a couple of pigs, and 15 hens. We also had 5 beehives.

And so the Fomin brothers unwittingly gained a good reputation and popularity throughout the district. At first, the local, district authorities encouraged and praised us. They were proud to have such an exemplary household. Later, when the policy changed, they got an order to enlist us as 'kulaks' and liquidate us.

In the spring of 1928, they made an inventory of stacks in the field—ours and those of our neighbours. We had a stack of oats, which they forced us to grind. We were instructed to supply the crops—oats. We did it three times—we supplied a total of 100 poods. They demanded more in the summer of 1928. We protected and wanted to prove that we had no more crops.

They put my brother Timofey to an isolation cell in the yard of the Orshansk Executive Committee and kept him there for a week. I spent some time there, too. They released me under travel restrictions.

In March, my brother Timofey was convicted of failure to supply crops for public needs under Article 61 of the Criminal Code. He was sentenced to three years of 'free exile' in Kazan, where he went at his own expense, never to return to his homeland.

They arrested me a week after my brother Timofey and sent me to the district prison at first, where I spent a week. Then I was sent to prison in Yoshkar-Ola until 1 August 1930.

They took Timofey's family—his wife and children—from Shishur village in July 1930 and brought them to Yoshkar-Ola. They took me out of the prison so I joined my brother's family, his wife and children. They put us into a cart, where two other families were sitting. We travelled to the Urals under harsh conditions for three days. <...>

No. 61**To all authorized agents of the District Committee and the Regional Executive Committee and cell secretaries of the CPSU(B)**

5 July 1932

We suggest that assistance should be ensured for labor force recruitment under the personal liability of cell secretaries of the CPSU(B) and authorized agents of the d[istrict] C[ommissariat] and the District Executive Commissariat. Your cell of the CPSU(B) and All-Union Leninist Young Communist League is to supply ' ____ ' members, cand[idates] of the CPSU(B) and members of the All-Union Leninist Young Communist League. It is imperative that you should fulfill the demand. In case you are unable to supply members and cand[idates] of the CPSU(B) and members of the All-Union Leninist Young Communist League, you must supply the demand with individual householders and kolkhoz members by conducting mass explanatory work.

The District Committee demands that the specified allotment be provided.

Deputy Executive Secr[etary of the] d[istrict] C[ommissariat] of the CPSU(B) signature³⁶

No. 62

**From materials provided by local TASSR industrial plants.
On the implementation of the resolutions of the December Plenary Session
of the Central Committee of the CPSU(B) in regard to the Stakhanovite movement.**

For the first time in recent years, the TASSR local industry was capable of early execution of the plan in 1935. Its output in terms of constant prices for 1926/1927 (except for agricultural milling) made 133,986,000 roubles compared to the target value of 129,324,480 roubles, that is, 103.6% of the target value.

The labor productivity plan for 1935 was executed at 102.5%. That of reducing product cost was executed at 101.9%, as a result the local industry by the end of 1935 was in over-fulfillment of the savings plan (22 million compared to the target value of 14.6 million roubles).

<...> It should be noted, however, that the RSFSR People's Commissariat for Local Industry expects the total gross product to increase by 22.3% in 1936. The fact that the growth rate of the ATSSR local industry is lower than the RSFSR average is explained by the fact that a number of local industrial plants, mostly those relying on imported difficult-to-obtain raw materials, are growing at an extremely slow rate or even diminishing in comparison to the level reached in 1935.

<...> The following data suggests the growth pattern of the Stakhanovite movement: the total average list-based number of plant workers varies between 15,300 and 16,200 people. The number of Stakhanovites as of 1 November, 1935 was 237 people, that is, 1.8[%] in terms of the total number of workers. The figure as of 1 January, 1936 was 1,165 people, or 6.8%. The figure as of 1 February, 1936 was 2,410 people, or 15.2%. On 1 March 1936, there were 3,060 people, or 19.4%. On 20 March 1936, there were 3,260 people, or 20%. <...>

Pages from Musa Dzhallil's Diary,

12 January 1942

I don't fear death. It's not an empty phrase when we say that we despise death. It is true. The noble sense of patriotism and full awareness of our public duty kill fear.

When a thought about death comes to you, you think there is life after death, not the 'life in the other world' that priests and mullahs used to advertise but life in the people's consciousness and memory. If I have done something important, something that people need, I deserve another life—a 'life after death'. People will remember me, speak and write about me. Why fear death if I deserve it? That's the purpose of living—to do it in a way to ensure another life after death.

So I think to die bravely in the Great Patriotic War would be a good death. My existence has to end some day, the thread of my life has to tear. It is the law of nature. If I am not killed, I will die in my bed. Yes, I might live to be very old and be able to do good things and be very useful to society for 30 or 40 years. Of course, it is true. To live more means to work more, to be more useful to society. Thus, the fact that we don't fear death doesn't mean that we don't want to live long. That's not it at all. We love life, we want to live. This is why we despise death! If death is necessary, and it can serve as much use as those 30 to 40 years of work, then there is no reason to fear an early death.

'He lived and worked for his Motherland and, when it was needed, died for his Motherland'. To die in such a way is to become immortal!

³⁷ The signature is illegible.

In fact, death is not that scary. However, we don't only think but feel, sense things. Thus, we have the awareness in our nature, in our blood <...>³⁸

**An extract from the letter by commanders of Belarus partisan detachments
to the workers of Tataria³⁹**

November 1942⁴⁰

The partisan movement in Belarus is gaining momentum. The ground is burning under the German robbers' feet. Hitler's gangs are approaching their final defeat.

Our brothers—Russians and Tatars, Ukrainians and Uzbeks—are behind Germans' lines shoulder to shoulder with us Belarus partisans. We are proud to know that brave sons of glorious Soviet Tataria have joined us against the German invaders. The partisan sniper Gaynulla Ulengov from Bilyarsky district, Tatar ASSR, shot dead 83 Germans with his rifle in a Belarus partisan detachment. The government awarded the Red Star Order to comrade Ulengov.

A greeting telegram Suleyman Khaliulov from Drozhzhanoye district, Tatar ASSR, blew up the railroad ground work in a Belarus partisan detachment. When Hitler's troops arrived, comrade Suleyman Khaliulov came to blows with them and killed 10 Germans. The commanding staff of the partisan detachment is going to grant a decoration to comrade Suleyman Khaliulov.

We could provide numerous examples of heroism and courage demonstrated by sons of the glorious Soviet Tataria in our partisan detachments. This joint struggle against the abominable German occupants is evidence of concord among all nations in our Soviet Socialist Motherland. <...>

We strongly believe that the enemy will soon suffer new heavy blows by the Red Army on the front and partisans behind its lines. Our land will be free of Hitler's occupants.

The enemy will be crushed. The sun will shine on us.

With greetings,

**From the letter by the Tatar people to their sons and daughters fighting
on the fronts of the Patriotic War⁴¹**

5 March 1943⁴²

Tatar jigits [valiant ones]!

The Tatar people send their ardent salam to you who do not spare your energy and life to contest every inch of their native land on the fronts from the White Sea to the Black Sea, you who march in the forward lines of guard regiments and divisions, to celebrate the 25th anniversary of the glorious Red Army, our troops' brilliant victories!

Fearless, honest, unflinching sons and daughters of the Tatar nation! Your mothers, who nursed you, and your fathers, who left you a legacy of generosity, send you greetings as hot as the sun and bless you to move on tirelessly for merciless revenge!

May your fathers' blood burn in your hearts as the quenchless fire of hatred for our enemy!

May your mothers' love protect you against the enemy's bullets!

Heroes whose deeds will become songs and legends! Your children follow your lead and, entrusting their future to you, send you a bow of hope and confidence in you.

Jigits who inflict death on beasts above the clouds, in the sea, in the mountains and in valleys! Your faithful sweethearts, your families and neighbours, who proudly repeat your names, send you bows as numerous as stars in the sky.

The Tatar people send a fraternal salaam and best regards to your brave comrades-in-arms, your senior and junior commanders, heroes of all nations in the Soviet land. Tatar jigits who fight shoulder to shoulder, heart to heart with the sons of those who struggle for the liberty of Soviet peoples!

You do not fear death. Death has to retreat in the face of your adamant courage.

You love life, and it will not turn its back on you. Life is on your side, comrades! The people are on your side!

As the saying goes, every battle has a brave jigit. Your compatriot Hero of the Soviet Union Ildar Mannanov is such a brave jigit. Dozens of enemy tanks have attacked the land protected by our arms. Artillery men held off the attack courageously. But the Germans were many, and defenders fell one by one until Ildar found himself standing at his gun all alone. He loaded and directed it all alone to shoot enemy tanks, working like a whole gun crew. Ildar made one hundred eight shots. He shot until the German tanks turned into a mass of metal on fire.

All honour to our batyrs [valiant ones]!

All honour to the sons of the Tatar nation—selfless heroes of the great war of liberation: brave aircraft pilots, sharp-eyed snipers, courageous reconnaissance officers, skillful anti-tank riflemen and anti-aircraft gunners, fearless artillery and mortar men, masters of machine-gun fire, cavalrymen with their never-rusting swords, valiant tank crew officers and sailors—everyone who exterminates the enemy and crushes its arms.

All honour to you, Bolshevik machine gunner Abrar Zalyaleev! By destroying over a hundred fascists in a single battle, you showed the world what a Tatar jigit can do to defend his fatherland.

All honour to you, Akhmet Khalimov, who turned 19 foe tanks into charred logs!

On the North-Western Front, aircraft pilot Kamaletdinov stayed in the burning plane and bombarded the enemy, decimating German soldiers and officers. On the Western Front, fearless tanker Abutalipov

⁴¹ The title of the document.

⁴² The date of publication in the Pravda newspaper.

crushed 25 German trucks with munitions, 6 guns, 8 mortars, and up to 200 soldiers and officers with his powerful machine.

The Great Patriotic War has given birth to hundreds and thousands of Tatar heroes. We saw them among the guardsmen who repelled the enemy's tank attack near Moscow. We saw them among the brave warriors who held on to the important high ground near Stalingrad. Wave after wave of German soldiers were marching, firing their machine guns incessantly. Seeing nearly 300 fascists advance, Mikhail Kabrirov, who commanded the detachment defending the heights, spoke to his ten warriors, Tatars, Uzbeks, and Kazakhs,

'There are thirty Germans per bayonet. Those who are afraid, front and center!'

Not a single warrior moved. 'We will die but not retreat!' they say. When they had run out of cartridges, each killed 10–15 fascists with his bayonet. Fighting heroically, they were able to keep the important hillock at the cost of their lives. This is how one should defend one's Motherland. [...]

Over three thousand sons of the Tatar nation have been awarded USSR orders and medals at the Patriotic War, Red Army soldiers, commanders, and political officials.

In the Don steppe, three warriors—Russian Fyodor Lipatov, Ukrainian Stepan Mikhno, and Tatar jigit Farrakh Bikbulatov—defended a field-readied earth and timber bunker. All of a sudden, two German tanks and about forty automatic rifle men attacked them. The Soviet combatant realized that the enemy will enter the rear area of the adjacent Red Army Unit if they refuse to fight and retreat. None of the heroes lost control. None retreated. They fought like lions. They burn down a tank, kill half of the attacking Germans, and put the rest to flight. Three brave common soldiers keep a seemingly small but very important part of the line. This is how one should contest every inch of one's ground!

Evidence of how the unbreakable bonds of friendship between the peoples of the Soviet State.

The example recalls the ardent lines by the Tatar national poet Ğabdulla Tukay:

The Russian nation has been our friend since ancient times.
Can the friendship ever end?
We were born, and we grow taller
Like beads on the same thread.
We are stronger than tigers in the battleground
And work harder than sturdy horses.

This is not the first time that the Tatar nation has faced German invaders. The joint forces of Russians and Tatars have won every battle. <...>

Dear sons and daughters!

We strongly believe that you will hold the enemy's forces at bay, driving them all back to the west till you have exterminated all the fascist invaders.

Today we shall stand on the banks of our mother Volga, in the manner of our forebears, and swear as we kiss the earth that suckles us,

'Whatever front we are on, whatever arms we fight against, we will not spare our lives to protect our Motherland, its honour and freedom!

The sun is our witness, dear Volga! We will not sheathe our swords until we have liberated our homeland.

Long live our Motherland, where every inch of ground, every blade of grass, every drop of water are sacred!

Long live our Red Army!

This letter has been signed by 1,511,137 people.

Pravda.—1943.—5 March; Krasnaya Tataria.—1943.—6 March; Kzyl Tatarstan.—1943.—6 March.

No. 68**An extract from the commendation lists of two-time Hero of the Soviet Union****N. Stolyarov on his feats of arms**12 January 1944⁴³

<...>⁴⁴ Comrade Stolyarov has performed 96 successful sorties on an IL-2 plane on the front of the Patriotic War. He has been awarded the 1st Class Order of the Patriotic War and the Order of the Red Banner for excellent performance in 28 sorties in the Belgorod and Kharkov airspace. He has performed 40 sorties after the second governmental award. During combat operations he has exterminated 24 tanks, 115 automobiles carrying foot troops and cargo, 10 anti-aircraft artillery batteries, blew up 2 fuel storehouses, and killed up to 450 soldiers and officers.

He has participated in 14 air fights against foe fighters. He has crashed 6 fighters in a group fight.

He has led a reconnaissance group of two IL-2 planes to study enemy troops and machinery 10 times, each time with excellent performance. He was able to provide valuable information on groups of enemy tanks and automobiles on every occasion.

The Supreme Command has issued 6 commendations to him for excellent fulfillment of combat missions. A whole series of commendations have also been issued by the commanders of the Air Army, Air Corps, and Air Division. <...>

Every sortie by comrade Stolyarov was a heavy blow to the enemy's manpower and equipment. He is a fearless strike pilot and a brilliant reconnaissance officer.

Comrade Stolyarov deserves the highest governmental award—the title of Hero of the Soviet Union—for excellent performance in 96 sorties on an IL-2 plane, 6 foe fighters crashed in a group fight, and excellent strafing attacks in the Velikiye Luki, Demyansk, Belgorod, Kharkov, and Kirovograd directions, for courage and heroism. Fit for the highest award in the form of the title of Hero of the Soviet Union.

<...> Comrade Stolyarov has performed 185 successful sorties on an IL-2 planes with strafing and bombing attacks on the enemy's manpower and equipment on the front of the Patriotic War.

<...> He has been awarded the Order of the Red Banner for 30 successful sorties of excellent strafing and bombing attacks in the Battles of the Dnieper, Poltava, Kremenchuk, and Kirovograd.

He has been awarded the Order of Lenin and the Gold Star medal for courage and heroism shown in 96 successful sorties, excellent strafing and bombing attacks in the Belgorod, Kharkov, and Kirovograd airspace, and enormous damage to the enemy's manpower and equipment.

He has been awarded the 2nd Class Order of the Patriotic War for 24 successful sorties in cooperation with the troops of the 2nd Ukrainian Front to exterminate a German group in Korsun-Shevchenkivsky District, during the liberation of Uman, and in the Battles of Chişinău and Iaşi.

He has been awarded the Order of Alexander Nevsky for 30 successful sorties as the leader of groups of 6–18 IL-2 planes, excellent strafing and bombing attacks, assistance to the troops of the 1st Ukrainian Front in the January offensive, skillful management of subordinates, pro-activity and perseverance in fight.

He has performed 89 efficient sorties on an IL-2 plane since he received the title of Hero of the Soviet Union as a government award on 12 January, 1944.

No. 69**An extract from the commendation lists of Hero of the Soviet Union G. Gafiatullin
on his feats of arms**14 January 1944⁴⁵

<...>⁴⁶ Second-in-Command of a rifle regiment unit Sergeant Gazinur Gafiatullin has acted as a true patriot of our socialist Motherland in offensive battles; being a communist, he encouraged the soldiers of his unit and fulfilled the battle mission successfully.

When his troop was attacking Ovsishchevo village, he and his unit were the first to enter it, got to the earth-and timber bunker near the enemy's anti-tank gun battery, grenaded it, captured one German prisoner and exterminated the rest.

Sergeant Gafiatullin took the lead of common soldier Alexander Matrosov advancing to occupy the village of Ovsishchevo, he was checked by an enemy machine gun in an earth-and timber bunker, which was preventing infantry troops from moving any further.

The German machine gunner continued to fire at our infantry. Sergeant Gafiatullin, with an automatic rifle and a grenade in his hand, crawled up to the earth-and timber bunker. When he was close enough, he threw the grenade, rushed to the earth-and timber bunker, and blocked the embrasure with his body so that the mission could be fulfilled.

Sergeant Gafiatullin died with over 20 ballistic wounds. He died but was able to defeat the enemy. The heroic deed of Sergeant Gafiatullin enabled the foot troops of the rifle regiment to attack and occupy Ovsishchevo village, inflicting heavy casualties on the enemy.

Sergeant Gafiatullin deserves to be awarded the title of Hero of the Soviet Union, the Order of Lenin, and the 'Gold Star' medal for his deed of arms against the German mob.

No. 70**A. Alish's letter to his family from a fascist torture chamber**

28 January 1944

18/19 Dzerzhinskogo Street, Apt. 1, Kazan, Soviet Union
to Rukkiya Tulpanova

My dear helpmate, beloved mother, my dear children, family and friends! It is probably the last time that I am able to send ardent greetings to you!

I, Abdulla Alishev, the writer A. Alish, Red Army soldier, was surrounded and taken prisoner near Bryansk on 12 October 1941. I traveled from camp to camp until I arrived in Czechoslovakia, where I worked as a polisher at a factory. I met poets Musa Dzhahil and R. Sattar (from 'Kızıl yaşler' newspaper) in a camp near Berlin in late 1942. In August 1943, I was arrested on charges of distributing leaflets among Tatar prisoners of war, legionnaires as they called them.

⁴⁵ Date of the heroic deed.

⁴⁶ Biographical data is omitted.

Along with me were arrested the following people: 1. Musa Dzhilil, a poet from Kazan, 2. Garif Shabaev, a financial officer from Tashkent, 3. Sayfulmulyukov, Deputy People's Commissar for Trade of Uzbekistan, 4. Fuat Bulatov, an engineer from Kazan, 5. Akhmet Simayev, a journalist from Moscow, and 20 to 25 legion members.

We spent six months in prison in Berlin. The trial is to take place in Dresden on 7 February 1944.

I came, I fought, and I left. It must be our destiny. We remain true to our people until we draw our last breath. O, how badly do I want to see you, my dear ones, and tell you what I have been through. (R. Sattar escaped in June 1943, and no information is available on his further life). Many of the things that we write and think fall with us into oblivion. Many, many kisses to you all. Especially to my Almaz and Ayvaz. Please make sure they get an education. Goodbye.

Your faithful son, husband, and friend A. Alish.

The letter from Base N to the parents of Hero of the Soviet Union V. Piskunov on his feats in arms

19 October 1944

Gorky Kolkhoz, Bondyuzhsk district, to Grigory and Yekaterina Piskunovs.

On 18 September of this year, the officers' meeting of our unit celebrated the 150th sortie by your son Vasily, the glorious falcon of our aviation.

He has taken the long path of glory while defending his Motherland from the German invaders since March 1942. The battles of Staraya Russa were his baptism by fire. Since then this warrior of the air has walked the path of immortal glory of heroic deeds. He carried the courage and valor of the Russian officer on the wings of his powerful attack plane in the battles of Stalingrad, Soviet Ukraine, the Donbass, Crimea, Sevastopol...

Comrade Piskunov is famous as an expert in strafing attacks. The glorious pilot proudly wears the Order of Lenin, two orders of the battle Red Banner, and the 1st Class Order of the Patriotic War. He has been awarded the honorary title of Hero of the Soviet Union.

We appreciate the valour, courage, and heroism of your son. We are proud of him.

Mr. and Mrs. Piskunov! Thank you for raising a fearless warrior, a brave officer, and a true patriot of our Motherland.

Stakhanovets.—1944.—19 October.

Letter of Response by Workers of Tataria to Combatants, Sergeants, and Officers of The Tank Corps

December 1944

Dear friends and brothers!

We were extremely proud and satisfied to read your letter about the glorious deeds of the tank corps possessing the powerful machines presented by the workers of the order-bearing Tataria.

We were happy to learn that you had covered over 1500 km on tanks bearing a signature 'Kolkhoznik of Tataria', fulfilling your battle mission, and had been the first to cross the silver Dnieper to continue your victorious westward advance.

We were immensely grateful and overwhelmed by love for you as we read that 71% of the corps had been awarded for heroism and courage and that 37 warriors had been awarded the title of Hero of the

Soviet Union. We found the names of our brave fellow countrymen, the faithful sons of the Tatar nations Sharipov and Fatykhov, on the list of the glorious tankers.

All honour to our batyrs [valiant ones]! All honor to the brave tankers—selfless heroes of the Great Patriotic War!

Our whole nation welcomes you and glorifies you. The people have entered the names of the fearless tankers who committed a heroic deed for their Fatherland to its chronicles in letters of gold. The generations whose future you determine in the battlefield utter your names with veneration and compose ardent songs and legends about your immortal glory. [...]

Here on the far home front we can see, hear, and feel out steel tanks approach with the words 'Kolkhoznik of Tataria' glowing on their turrets as a symbol of the rock-solid unity of the front and the rear. We can see and hear our courageous tankers in the thick of a powerful attack crush any obstacles in their way, slay German invaders with the shattering of Soviet weapons, making your way along the poor spring roads to advance further westwards. People in the western regions of Ukraine can already hear the squeal of your steel treads. Our sisters and brothers' hearts across the line already echo with the rustle of the victorious banners of the tank corps. The further you move to the west, the closer the longed-for victory. <...>

All honor to our courageous tankers, who struggle heroically for the honour, freedom, and independence of our Soviet Fatherland!

All honour to the heroic tank corps, which is advancing victoriously to the west!

N. Zagitov's commendation certificate on his feats of arms

1 May 1945

1. Name: Gizy Zagitov
2. Military rank: Senior Sergeant
3. Position, military unit: Head of the flash-ranging platoon station of Reconnaissance Division, 136th Army Cannon Artillery, Rēzekne Red Banner Brigade.
Awarded the title of Hero of the Soviet Union
4. Birth year: 1921
5. Ethnicity: Tatar
6. Party membership: member of the CPSU(B) since June 1942.
7. Participation in the Civil War, further military actions to defend the USSR, and the Great Patriotic War: Patriotic War since 22 June 1941
8. Casualties or shell-shock in the Great Patriotic War: Severe wound on 30.04.1945.
9. Start date in the Red Army: August 1940.

10. Recruiting district military commissariat: Mishkinsky District Military Commissariat, Bashkir ASSR.

11. Previous awards: Medal for 'Battle Merit' under Order No. 030 of the 3rd Shock Army d/d 13.01.1943, Medal for 'Courage' under Order No. 0148 of the 3rd Shock Army d/d 29.9.1943, and '3rd Class Order of Glory' under Order No.0189/n of the 3rd Shock Army d/d 5.08.1944.

12. Permanent residential address of the soldier and his family: Yanagush village, Mishkinsky district, Bashkir ASSR.

1. A concise summary of personal feat of arms or merits

As our troops were approaching the centre of Berlin, the Reichstag Building, Comrade Zagitov expressed willingness to participate in its assault and be the first to plant the victory banner on the Reichstag. On 26 April 1945, Zagitov and Sergeant Minin, Senior Sergeant Bobrov, and Senior Sergeant Lisimenko began to perform the battle mission. Marching against of the advancing foot troops, Zagitov developed approaches to the Reichstag Building, thus helping our foot troops to advance.

On 28 April, reconnaissance officers entered the German rear and came across a German sentry. They acted bravely and resolutely to shoot the sentry dead and break into the cellar, where they captured 25 German soldiers.

On 29 April, Zagitov and his comrades got into the German camp and cued our artillery on the Reichstag Building. The Germans surrounded their building, but the heroes did not give up. They used automatic rifles and grenade to kill 40 Germans and keep the house until our infantry arrived.

On 30 April, Zagitov and his comrades found a channel 100 m away from the Reichstag Building which, was not on the maps, and a crossing on it. They reported the findings to the Commander of the 79th Corps immediately on the radio.

On 30 April, during the attack on the Reichstag Building, Zagitov was the first to break into the Reichstag but received a trough-and-trough wound in the chest; the bullet penetrated his party membership card. Wounded, Senior Sergeant Zagitov and Sergeant Minin climbed the Reichstag tower and planted the first victorious banner.

Comrade Zagitov deserves the title of Hero of the Soviet union for displaying courage, valour, and heroism during the assault of the Recihstag Building.

Greeting by Commander of Troops of the Leningrad Front Marshal of the Soviet Union L. Govorov

June 1945⁴⁷

I sincerely greet and congratulate the workers of Tataria on the republic's 25th anniversary on behalf of generals, officers, sergeants, and combatants of the Leningrad Front.

The sons and daughters of Tataria are famous as selfless warriors immensely loyal to the Soviet people, the party of Lenin and Stalin, who do not spare their lives to fulfill their duty to our Motherland on the battlefield. They demonstrated commendable valour and courage during the heroic defense of the town of Lenin, when breaking the Leningrad blockade, cleansing Leningrad and Kalinin regions of German occupants and liberating the Soviet Baltic states.

I am happy to tell you that many Tatar warriors have become much celebrated heroes of our front. We utter the name of the courageous son of the Tatar nation guardsman Akram Valiev, who was the first to cross a water barrier with a group of combatants, destroy the enemy's firing-points and thus enable our units to advance successfully in that part of the line. Akram Valiev was awarded the title of Hero of the Soviet Union. The sergeant woke up as an officer. The warriors of our front hold sacred the memory of hero of the Soviet Union Sergeant Gazınur Gafiatullın, who repeated the indelible feat of Alexander Matrosov by sacrificing his life for victory. The warriors of our front are proud of the brothers Mugalimsabirovs. One has been awarded the title of Hero of the Soviet Union. The second brother carries six governmental decorations on his chest. I could name dozens of Tatar warriors who have won high credit by glorifying their people, their republic <...>.

**Political Report by the TASSR Military Commissariat to the Volga Military District
on Patriotic Uplift in the Republic**

29 June 1941

The republic has been witnessing a major patriotic uplift over the six days of mobilization. The following evidence is available. Patriotic men and women willing to serve in the Red Army have submitted up to 5,000 applications to military commissariats.

Here are some moving patriotic applications and memoranda submitted to district military commissars and directly to the TASSR Military Commissariat, both on the first day of mobilization and more recently.

Participants in the struggle against the Finnish Whites, husband and wife Nikolay Makarov and Evdokia Fusova, sent the following telegram to Moscow:

'We, husband and wife, hereby earnestly request you to send us to the Army in the Field to defend our socialist motherland against the overweening brazen fascist bandits of Hitler'.

Signatures: feldsher Fusova, reservist Makarov.

Participants in the struggle against the Finnish Whites Comrades Anatoly Molkin, Ivan Makarov, Rakhim Khayrullin, Mukhutdinov, and Zhuravlyov submitted similar applications to the Volga district Military Commissariat.

Twin brothers Aleksandr and Arkady Krupnovs from 'Krasny Klyuch' kolkhoz, Tyulyachi district said to the District Military Commissar at the conscript parting ceremony, 'We will hold our rifles firmly. We shall combat fascism to glorify the great, invincible people of our socialist Fatherland'.

Patriot Aleksandra Lyvina, communication agency employee, communist, said:

'The low act of the fascist mob who dares attack our Motherland has engendered hatred towards our worst enemy in me. The government awarded my brother I. Ivanov the Order of Lenin for crushing the Japanese samurai. During the struggle against the Finnish Whites, my sister E. Ivanova volunteered to the Army in the Field and was awarded the Order of the Red Star for valor in the battlefield. I took nursing courses twice, am a good motorcycle driver, and know telegraphy. Comrade Military Commissar, please send me to the Army in the Field. I will not spare my life for my dear Motherland'.

The request by patriot Lyvina has been fulfilled. She is to join the Army in the Field.

The queues in the Drozhzhanoye district Military Commissariat [on these days] never end. We can see Chairman of the Staro-Duvzhovsky village soviet Rafikov standing at the desk. He has brought along the conscripts of his village soviet and insists on going to the front himself. Comrades Dzhaililov, Serazetdinov, Salakhov, Khramov, teacher Fedorova, and kolkhoz farmer Valeev join him at the desk. They have a very brief conversation with the military commissar. 'We all want to stand up for our Motherland', they say.

The Chistopol Conscription Centre is always crowded, specially during radio broadcasts by the Soviet Bureau. The faces of the conscripts and their parents show strict determination after each programme. They all are eager to crush the fascist vermin.

'I want to hold arms again', said participant in the war against the Finnish White Guard Stepan Polyakov. 'Send me to the front lines'.

'I volunteer to defend my native Soviet land', member of the CPSU(B) Comrade Levushkin wrote in his application. 'Please send me to the front. I will not spare my blood and even life to crush the enemy, as I want to measure up to the heroic glory of the great Red Army'. <...>

This indicates an exceptional patriotic surge on the sixth day of mobilization in the order-bearing Tatar Republic. Kolkhozes and kolkhoz farmers lovingly provide their best horses and motor vehicles for the Army in the Field. To conclude:

1. Mobilization takes place in the context of a large political uplift.
2. The sentiment of both conscripts and the population in general is sound. Everyone is willing to go to the front.
3. We carry out all activities in close cooperation with local party and Soviet organizations.
4. All reception and delivery stations and conscription centres work as planned.
5. All units are fully provided with political staff.
6. Five hospitals are prepared to receive casualties.
7. I will submit an additional report on the departure of all units.

Minutes of the Party Meeting of the Communist Members of 'Unysh' Kolkhoz, Novo-Pismyansky District on Establishing the Defense Fund

6 July 1941

Agenda:

1. Establish the defense fund.

Reports: 1. Report by Comrade Garayev. He says that it is necessary to establish a defense fund to aid our country against German fascism.

2. Speaking on the same subject, Comrade Mavlyudov reads out the Pravda newspaper and says that the fund to be established by us is the victory fund.

Therefore, the meeting passes the following resolutions:

1. Every communist must pay a daily salary per month until the end of the war.
2. Every communist must participate actively in establishing the defense fund.
3. All propagandists and deputies must meet no later than tomorrow.

No. 77

**Memorandum by the Tatar Regional Committee of the CPSU(B) to Chairman
of the Soviet for Evacuation under the USSR Soviet of People's Commissars N. Shvernik
on Accommodating Evacuees in Tataria**

26 July 1941

I report the following in response to your telegram:

According to the resolution by the Soviet for Evacuation under the USSR Soviet of People's Commissars, the Tatar ASSR is to receive and provide accommodation to 115,000 people evacuated from Moscow and 34 trains, that is, at least 34,000 evacuees from other cities. Besides, according to the telegram by member of the Board of the People's Commissariat for Lines of Communications Comrade Martyshev dated 24 July 1941, 6 trains, that is, about 6,000 evacuees from various localities have been sent to us. According to the telegram by Authorized Agent of the Ivanovo Region Soviet for Evacuation under the USSR Soviet of People's Commissars comrade Konovalov dated 24 July 1941, we are to receive 10 more trains, that is, about 10,000 people. Thus, over 165,000 people are coming to the Tatar ASSR.

Besides, a large amount of evacuees who were not received in Kuybyshev, Ulyanovsk, and other towns are arriving to the station and pier of Kazan. Head of the Kuybyshev Region Department for Evacuation Comrade Begel refers to your order to send 185 families to the Tatar ASSR on the Volodarsky steamship. Over 150 families of officials of the USSR People's Commissariat for Internal Affairs assigned to Kuybyshev but rejected there have arrived on the 'Uritsky' steamship.

As the result, 10,000 people aside from the above 165,000 are staying in the Tatar Republic. Cross-shipments overloaded the transport, and the planned quartering has been upset.

Evacuees are accommodated in districts of the Tatar ASSR according to the plan approved by the Soviet for Evacuation under the TASSR Soviet of People's Commissars through key evacuation centres at the railway station and the Kazan pier. 56,789 people have been accommodated in districts as of 1 August 1941. Vacant houses of kolkhoz farmers, school and club buildings, etc. are used to accommodate evacuees.

Evacuation centres at the pier and station of Kazan provide evacuee provisions. There were some interruptions in provisions at the Kazan station at first, but they have now ceased. On the first day, evacuees receive hot meals twice a day (breakfast and lunch) and 500 grams of bread per person. Steamship and station cafeteria provide bread and catering on the way. Many evacuees complain about a lack of bread on the way from Arzamass to Kazan and a lack of boiled water. That is, railway travelers spent 3 to 4 days without bread or boiled water.

When in districts, evacuees get provisions for 5 to 7 days. An additional bread fund to ensure an allowance of 500 grams per person has been allotted to evacuee transit points. Evacuees from the immediate battle area get free meals. Evacuees from Moscow and Leningrad receive food at their own cost. Financial and welfare aid to evacuees from the immediate battle area is provided to those most needy only and controlled by the Soviet for Evacuation. A dedicated board presided by Vice Chairman of the Presidium of the TASSR Supreme Soviet—Vice Chairman of the Executive Committee of the District Soviet of Worker Deputies in districts—is responsible for estimating the degree of need and determining whether manufactured goods should be issued. The evacuee financial aid money has been allocated to districts according to the evacuation plan. District health departments have been instructed to provide medical aid to evacuees. All trains arriving at the railway station and pier of Kazan are inspected by assigned physicians. Parenting rooms with pediatricians on call provide aid to children. An isolation ward of 50 beds is being established on the Kazan pier.

Speaking of evacuee cultural services, they are unsatisfactory because for lack of funding. Evacuation centres hardly provide any cultural services to evacuees. Even mass propaganda among evacuees

takes place on an extremely small scale. The scope of activities being broad, trade unions have been keeping aloof of such cultural services.

The Regional Committee of the CPSU(B) met to address the issue of evacuee accommodation, provisions, and mass work on 23 July. <...>

Secretary of the Regional Committee of the CPSU(B) S. Mukhametov.

No. 78

Report to Head of the Military Department of the Tatar Regional Committee of the CPSU(B) Sidaev on Activities of Anti-Soviet Déclassé Elements

4 September 1941

Data supplied by secretaries of district committees of the CPSU(B) and heads of military departments suggest an intensification of the activities of anti-Soviet declassified elements in certain districts, who are trying to cause mass panic and undermine our home front work, and a number of cases where conscripts evade service in the Red Army in various ways. For instance, citizen Kashaf Galimov, a member of the CPSU(B), from Almetyevsk district, became a school principal in 1928. He began to spread anti-Soviet rumours after he was drafted to the Workers' and Peasants' Red Army. Consequence: expelled from the CPSU(B), sent to prison.

In Yutazinsky district, conscript Garay Abdullin from 'Rosa Luxemburg' kolkhoz arrived at the reception centre under the influence of drink, fell behind his team on the way to the base, and returned home on the same day. Consequence: sent to prison, committed to trial by the military tribunal. Son of a kulak, A. Teneshev from 'Zarya' kolkhoz in the same district, refused to serve in the Red Army and said, 'When I was the son of a kulak, the government did not need us. Now it does. I won't serve in the Workers' and Peasants' Red Army'. Consequence: sent to prison.

Citizen I. Chebotaryov (formerly a kulak) from Aktash village, Aktashsky district says, 'Let the Germans destroy Moscow'. V. Kildushev from Buton village says, 'The Soviet government will fail soon. Hitler will win and introduce corvee. We need to encourage kolkhoz members to quit kolkhozes as soon as possible. Otherwise Germany will send landlords to kolkhozes. They are very nasty. They will beat kolkhoz farmers with sticks'. A. Tikhonov (Bukharay village), A. Kuzmina (Nizhny Yelan), M. Tokarev, Isayev, and others say that 'Communists must be exterminated' and show a defeatist attitude.

A citizen of Bekchantaevo village from Kalininsky district spreads anti-Soviet propaganda, 'Soviet citizens are poor, naked, barefoot and without the strength to defeat Germany'. When a meat tax was introduced on a per hectare basis, he said that it was meant to reduce animal breeding and not develop it. A citizen from the Apasovo village of the same district Salikh Garipov said during loan implementation at the meeting of the village soviet, 'They robbed kulaks and wealthy people 10 years ago. Now they are robbing poor people'. Worker of Kirov sovkhov Khobi Khabibirakhmanov said, 'May Germany win soon and put an end to the Soviet regime'. <...>

The fact that such cases are concentrated in certain districts is attributable to poor mass enlightenment and insufficiently resolute combating of counter-revolutionary elements.

I consider it necessary to inform you of this.

Instructor of the Military Department

of the Tatar Regional Committee of the CPSU(B) N. Gafarov

No. 79**An extract from the Minutes of the Meeting of the Bureau of the Tatar Regional Committee of the CPSU(B) on Collecting Warm Clothes for the Red Army**

9 September 1941

Reports: Resolution by the Central Commissariat of the CPSU(B) dated 5 September 1941 ['On Collecting Warm Clothes for the Red Army'].

It was resolved:

1. Refer to and execute the Resolution by the Central Committee of the CPSU(B) dated 5 September 1941.

2. To ensure practical collection of warm clothes and underclothes for the Red Army, establish a board with the following membership:

a) Comrade Mukhametov (Secretary of the Regional Committee of the CPSU(B), Board Chairman),

b) Comrade Tinchurin (Vice Chairman of the TASSR Council of People's Commissars),

c) Comrade Evdokimov (TASSR Military Commissar),

d) Comrade Doronin (Secretary of the Regional Committee of the All-Union Leninist Young Communist League),

e) Comrade Kolesova (Chairman of the Regional Committee of the Medical and Sanitary trade union).

3. Suggest that the regional board should instruct city and district committees of the CPSU(B) on the procedure for receiving, recording, storing, and transporting warm clothes collected for the Red Army.

4. Suggest that city and district committees of the CPSU(B) should establish board presided by the secretary of the relevant city and district committee of the CPSU(B) with the following membership: Vice Chairman of the District Executive Committee (Vice Chairman of the Executive Committee of the City Soviet in cities), District Military Commissariat, Secretary of the District or City Commissariat of the Komsomol, and a trade union representative for practical collection of warm clothes and underclothes for the Red Army.

5. Oblige city and district committees of the CPSU(B), city and district committees of the All-Union Leninist Young Communist League, and professional bodies to carry out large-scale mass education concerning the collection of warm clothes and underclothes for the Red Army at factories and institutions, in kolkhozes, sovkhozes, dormitories, and residential houses.

6. Oblige regional and district newspaper editors to ensure regular and large-scale coverage of the progress in warm clothes collection for the Red Army.

No. 80**Resolution by the TASSR Soviet of People's Commissars on the Introduction of Blackout**

12 October 1941

The TASSR Soviet of People's Commissars hereby resolves:

1. Introduce full blackout in the cities of Kazan and Zelenodolsk, in the area of the Urmaly-Zelenodolsk-Yudino-Kazan-Vysokaya Gora railway line and the Yudino, Vysokaya Gora, Zelenodolsk, Stolbishchye, Verkhniy Uslon, Nurlat, Kaybitsy, Tenky, and Dubyaz districts of the Tatar ASSR from 13 October 1941, 6 p.m., until further notice.

2. Approve the Resolution on the Blackout Procedure in the Territory of the Tatar by the TASSR People's Commissariat for Internal Affairs and immediately put it into effect in the Tatar ASSR by publishing it in a newspaper.

3. Oblige the head of local defense systems—chairmen of city and district executive committees of soviets of workers' deputies, plant, institution, and organization directors, chairmen of village soviets and kolkhozes—in the cities and regions specified in Paragraph 1 of this resolution to make sure that all measures specified for full blackout are carried out in a timely manner under their personal responsibility.

4. Oblige the local air defense systems and bodies of the Workers' and Peasants' militia to ensure accurate and timely implementation of this resolution.

Chairman of the Soviet of People's Commissars of the Tatar ASSR S. Gafiatullin

Administrator of the Soviet of People's Commissars of the Tatar ASSR D. Aseev.

Krasnaya Tataria.—1941.—12 October.

No. 81

Address by the workers of the Kazan Machine Building Plant to Encourage the Citizens of Moscow to Spare Nothing for the Front

23 October 1941

A rough time has come for our Motherland. In spite of dreadful casualties and losses in equipment, the blood-thirsty fascist mob is stepping over their dead soldiers and officers to get to the country's very heart—our much loved capital Moscow.

At this difficult time when the capital is in danger, we speak to you, dear citizens of Moscow. We are by your side, the entire country, all Soviet people! We have been doing our best to help the front, to support the people of Moscow in their heroic struggle against the fascist hordes.

Our plant, just as ant plant in the great Soviet Union, is engaged in an intense pre-October socialist competition. An increasing number of workers have been fulfilling the plan by 200%. We are producing 2 to 3 times as much as planned to increase our output. There is still more to come. We will continue to improve our performance.

Keep strong and brave, comrades in Moscow! Exterminate the enemy mercilessly! Let German fascism be buried at the threshold of the capital.

The plant's 200% and 300% Stakhanovites

M. Benderov, G. Sharifullin, A. Battalov, A. Pavlov, and A. Naumov.

Report by 'Krasnaya Tataria' on the establishment of the Kazan Defense Committee

26 October 1941

In order to ensure complete concentration of civil and military power and a stringent order in the city of Kazan and its suburbs, the USSR State Defense Committee has established the Kazan Civil Defense Committee. <...>

The Defense Committee has commenced to work.

Krasnaya Tataria.—1941.—26 October.

No. 83**An extract from the memorandum by Acting Prosecuting Attorney of the Tatar ASSR Nadeev on the measures taken by investigation authorities within the framework of implementing the decree on the workers and employees' accountability in military production,**

22 January 1942

A check of the implementation of the decree 'On the Liability of Workers and Employees in Military Industry for Unauthorized Leave' dated 26 December 1941 by the TASSR Public Prosecution Office⁴⁹ revealed cases of excessive delays in executing and submitting to public prosecution agencies' reports on those abandoning their work posts without authorization (defectors).

The administration of Plant No. 387 had taken no measures to commit to trial worker I. Sukhanov, who left work without permission on 2 December 1941 and did not appear until 2 January 1942. Shortly before Sukhanov left work, he received work clothes, which he sold for drink and then went for a month working nowhere.

On 2 January of this year, Sukhanov came to the plant. It took the Head of the HR Department Nalyotov 10 days (until January 12 of this year) to address the issue of whether he should be admitted to work and how he could be used instead of submitting his case to public prosecution authorities.

Worker P. Izharin deserted the same plant on 3 January of this year. Being well aware of the fact, the administration took no action. When the Public Prosecution Office intervened upon revealing the facts on 17 January of this year, Izharin was found and arrested on the following day. He was committed to trial by the military tribunal on 19 January . <...>

178 cases of violation of the Decree were submitted to court between October and December 1941. Acting TASSR Prosecuting Attorney Nadeev

SA HPD TR, c. 15, f. 5, f. 472, s. 2–3.

No. 84**Record of the conversation with Vice President of the USSR Academy of Sciences Academician E. Chudakov on aid to Tataria's national economy by institutes of the USSR Academy of Sciences**

28 January 1942

Now that our dear Motherland is suffering through a time of war, scientists of the Soviet nation are well aware of their duty to take every effort and apply the best of their knowledge and expertise to provide as much assistance and ensure as much success as possible on the home front. Love for our Motherland and hatred for the dehumanized enemy inspire scientists to come up with new discoveries and improvements for the sake of our socialist country.

⁴⁹ By the Decree of the Presidium of the Supreme Soviet of the USSR dated 26 December 1941 'On the Responsibility of the Workers and Employees of Military Industrial Enterprises for the Unauthorised Withdrawal from the Enterprise,' all workers and employees, employed in the military industry and in enterprises associated with it, were declared mobilised for the period of the war and were given permanent work with the enterprises they were working for. When it was found necessary, these workers were subject to compulsory evacuation. Those who left the factories without permission and 'persistent absentees' were regarded as 'deserters of the labour front' and were punished in corrective labour in camps and colonies for a period of between 5 and 8 years. If serious accidents occurred as a result of negligence, the perpetrators were sentenced to execution by a firing squad. These cases were considered by military tribunals.

Apart from a number of purely defensive tasks, institutes of the Academy of Sciences have been addressing issues related to the TASSR national economy, in particular that of Kazan. Though little time has passed, the Academy of Science can already share some achievements with the workers of Tataria.

Before I present a summary of Tataria-related works by the USSR Academy of Sciences, I would like to mention that the TASSR is to play a special role in the Great Patriotic War of the Soviet people. The performance of its factories largely determines the supply for our brave Red Army.

Tataria is a region in our great Union that has every prerequisite to brilliantly meet the requirements that the party has set for industrial, agricultural, and cultural workers. The peoples of Tataria possess a wealth of minerals, which it has not yet been used at a satisfactory scale. Therefore, the USSR Academy of Sciences initiated a research to detect such reserves and develop measures to make sure that they are used efficiently.

The proclamation in 1918 In 1941, the Academy of Sciences (the Institute for Fossil Fuels) largely focused its research on oil presence, which was of great use for local organizations.

The Soviet for the Study of Production Forces was able to present a number of maps containing various data on the territory's geologic structure and the occurrence of certain minerals in the republic. The maps are expected to underlie Tataria's natural resource exploitation plans.

When finding and studying natural resources, the Academy of Sciences also wants to determine their applications. For example, it has developed a technique for purifying glass industry sand of harmful contaminants, a process diagram for a cement plant relying on locally produced raw materials, etc. A laboratory study revealed the possibility of using dolomites, which are common in Tataria, to produce cement with features similar to that of Portland cement. The institution is preparing to test the war materials under production conditions. The dolomites turned out to be good raw material for the production of white water paint, which can be used for winter camouflage.

A study on the waste and refuse of certain plants in Kazan revealed that they could substitute for deficient raw materials (the waste of Vakhitov Combine Plant and others). Common floridin clay is a promising raw material both for petroleum refining and for other industries, such as soap production.

Large-scale measures have been taken to utilize local fuels in particular (coal, peat, schist) for rail transport.

The introduction of domestic fuel gas generators is undoubtedly of economic importance far beyond the TASSR. Economy gas generator designs have been developed.

Small water plants are very numerous in Tataria, which brings up the issue of their efficient use. To this end, the republic's People's Commissariat for Agriculture developed and proposed an instruction for kolkhozes on making simple units to enable power plants to thresh crops.

Working in close cooperation with 'Kazenergo', the Power Institute of the Academy of Sciences studied the electrical facilities of Kazan and developed measures for short-notice increases power station capacity.

Importantly, we provide continuous aid to plants and organizations. Nearly all plants in Tataria have been enjoying a close productive cooperation with the Institute of the Academy of Sciences. In some cases, the cooperation takes the form of consulting assistance, when scientists help the plant address an issue of production on site. Sometimes it takes the form of regular joint work by employees of academic institutes and industrial plants to solve specific problems. To ensure such cooperation, some plants have provided the Academy of Sciences with laboratory and production facilities.

Many members of the Academy and research fellows of its institutes are actively involved in political and educational activities, delivering lectures and reports to a broad audience. The scientists' lectures and reports are very popular in Kazan.

Krasnaya Tataria.—1942.—28 January.

No. 85**An extract from the application by mother teachers of the Kuzbas Primary Middle School, Chistopol district, TASSR to the District Committee of the CPSU(B)⁵⁰**

17 February 1942

We, teachers and single mothers, have minors aged 5 months to 4 years. Sizova has a five-month-old baby and a 3-year-old, Polteva also has two children, aged 17 months and 4 years. At present, our children are in need of food. We have no household of our own and live on our school salary. There is no side work for us in the countryside. Our governmental ration is limited to 9 kg rye flour per month, on which we basically exist. We are unable to buy food on the market, since our salary is too low for the growing market prices. Malnutrition and constant undernourishment has been causing severe wasting and diseases in our children. They develop rickets, but we have nothing to support their health.

Please consider our application and ensure proper nutrition for our infants and children, at least partly, to prevent them from dying. In town, people had ration cards for dry goods, sugar, soap. They can obtain dried pretzels and gingerbread for their children, not just rye. Employees' children go to kindergarten, which provide proper food for the children. A mother in the country who works as a school teacher does not have such opportunities. Every district organization ignores our application. This is why we turn to the District Committee of the CPSU(B), to you, Comrade Semyonov. <...>

Teachers: A. Polteva
 A. Sizova

SA HPD TR, c. 48, f. 3, f. 291, s. 249.

No. 86**An extract from the memorandum to the Tatar Regional Committee of the CPSU(B), the TASSR Soviet of People's Commissars, and the Presidium of the TASSR Supreme Soviet on the evacuee situation in the TASSR (according to data provided by the Public Prosecution Office)⁵¹**

26 March 1942

The TASSR Public Prosecution Office possesses extensive evidence of local authorities demonstrating an inappropriate approach to the conditions of evacuees' everyday life.

Though superior organizations have instructed district and village ones to take appropriate care of evacuees, their children and families, employment and fuel supply, such local organizations neglect to respond to evacuee complaints in time. <...>

The TASSR Public Prosecution Office submitted a memorandum to the TASSR Soviet of People's Commissars concerning the revolting cases of cruel attitude of local organizations (district soviets) to the living conditions of evacuees on 2 February 1942. On 13 October 1941, it reported extremely poor sanitary and disease prevention services for evacuees in Kazan to Chairman of the TASSR Soviet

⁵⁰ The document contains a resolution: 'Call in Comrade Fedorovsky for questioning, with the data on the supply of teachers in rural areas. 25/III. Semenov.'

⁵¹ The document contains two resolutions. The first is addressed to Comrade Mukhametov: 'I request that you take measures in respect of the organisations allowing such intolerance towards the evacuees'. The second is a directive of Mukhametov to inferior authorities: '1) On the issue of children living in dormitories of plant 22 an instruction is given to the City Health Department and the Urban Department of Public Education. 2) Those responsible for the squandering of foodstuffs intended for the evacuees are to be brought to justice by the Prosecutor's Office.'

of People's Commissars Comrade Gafiatullin. It mentioned that the Tatar People's Commissariat for Health had been taking no proper measures to improve the medical and sanitary services provided to evacuees or against violators of sanitary regulations. However, no shift has taken place in evacuee medical and sanitary services on the initiative of any agencies of the Tatar People's Commissariat for Health.

1. On 15 March this year an inspection of the employee dormitory of the evacuated Plant No. 22 in the centre of the city, at the Kremlin premises, hosting 1,430 people, including 283 children of pre-school age and 155 children of school age, revealed revolting facts concerning evacuee medical services as well as housing and utilities. The dormitory is cramped, cold, unsanitary. There is no boiler room, no laundry, no warm lavatory or running water. <...>

The building has only been heated once over the heating season. The temperature can be as low as -5 to -10 to 0. There is hoarfrost on the walls. The wallpapers, transoms, floor, and doors decay. Most of the residents say that they have to sleep in outdoor clothes for a lack of firewood and heating. They cannot go to the bath several times a month, so they have to do the laundry and dry their linen in the room. <...> The building is crowded above the sanitary limit. The overcrowded accommodation without any running water, firewood, laundry, and boiler room has caused completely unsanitary conditions, dirt and lice infestation resulting in fatalities and cases of camp fever.

Both the City Soviet and the plant administration neglect the living conditions of employees. A number of families live in cold corridors (Sosnovskaya, Lytnev, and others).

This is characteristic that Comrade Lytnev, with a family of 7 members, including a nursing infant and sick wife, lives in a cold corridor. He has raised the question of improving their living conditions many times, but neither the factory administration nor local organizations have provided any assistance to him. Lytnev's wife said that she gave birth to her children under such conditions (in a cold room) without any aid from either the District Health Department or the Housing Administration. <...>

2. Data submitted by the Yudino district Prosecuting Attorney contain evidence that the Yudino district Health Department neglects to provide medical aid to evacuees. A closer investigation revealed gross negligence and inconsiderateness of evacuees by the authorities of Yudino district in terms of evacuee employment, medical and financial aid.

For instance, evacuees assigned to Yudino district for evacuation did not receive proper medical aid. On 16 January 1942 Vice Authorized Agent for Evacuation denied sanitary treatment and medical examination to 25 Estonians demobilized from the Red Army. Chairman of the Yudino district Executive Committee Comrade Ermishin entrusted Head of the District Health Department Galimov to allocate them, without any preliminary sanitary treatment and medical examination, dirty, sick, and lice-ridden, among 4 kolkhozes in the district, which he did. Most of the newcomers were ill-dressed, bare-footed; but Chairman of the District Executive Committee Comrade Yermishin, having an outstanding amount of 9700 roubles, did not provide any aid or ensure footwear or clothing for them. <...>

In conclusion, in spite of numerous instructions by superior policy-makers, chairmen of executive committees of district soviets of workers' deputies, secretaries of district party committees have neglected to take proper care of evacuees, ensure adequate control over the condition of evacuees accommodated in districts, provide employment, fuel, and accommodation for evacuees or secured proper medical services, take measures to engage schoolchildren in studying, or control the application of dedicated occupational funds.

TASSR Prosecuting Attorney D. Isupov

SA HPD TR, c. 15, f. 5, f. 472, s. 44–49.

No. 87

**An extract from the Report by the Party Bureau of V. Ulyanov-Lenin Kazan State University
on mass-political activities among the University's Students and Researchers,**

26 August 1942

The patriotic war of the Soviet people against German fascism has compelled the university staff to provide everyday assistance to the front, mobilize the students and researchers to solve the most burning problems.

The beginning of the academic year was marked by students' and researchers' involvement in autumn agricultural activities. Over 700 people worked in kolkhozes in Pestrechinsk district in September 1941. In October, 500 people were engaged in potato harvesting.

Political mass education events as well as measures to improve discipline, efficiency, and performance were part of the student engagement. Faculty meetings widely discussed the outcome of student participation in the 1941 harvest campaign. The meetings had great educational importance due to public criticism of students' poor performance or discipline during the kolkhoz work.

In late October, 550 students and researchers undertook building defenses. They remained on site until 1 February 1942. It is quite obvious that all the agit-prop measures were aimed at improving work performance and labor discipline. Political briefings on the reports by the Soviet Bureau of Information took place daily.

The university's staff did a great deal of work on the road. As the students went through the mill of hard work, those who were too weak and lacked perseverance were revealed and consequently quit the university.

Student dropout rate was high in the first semester.

Students,	1st year	2nd year	3rd year	4th year	Total
As of the date of September 1941	321	267	264	306	1158
As of the date of 1 March 1942	93	104	125	204	526

Reasons for dropouts vary: [the largest] part was conscripted to the Red Army; some went to factories for financial reasons; some did not have confidence that the course of study would proceed normally.

When the 2nd semester began, agit-prop measures were taken to mobilize the staff so that they could assist the front and to enhance academic discipline, improve lecture attendance, and ensure timely preparation for tests and examinations. Non-governmental organizations had to do a big job of consolidating the university and setting straight the academic activities.

No. 88**Telegram by the Tatar Regional Committee of the CPSU(B), the Presidium of the Supreme Soviet, and the TASSR Soviet of People's Commissars to Chairman of the State Defense Committee on Fund-Raising for the Establishment of the 'Kolkhoznik of Tataria' Tank Column,**

3 January 1943

Swelling with deep patriotism, male and female kolkhoz members of our republic have initiated a fund-raising effort to build the 'Kolkhoznik of Tataria' tank column. They have contributed 100,000,000 roubles from their personal savings. Contribution are continuing to arrive. May this New Year's gift by the freedom-loving people help the brave Red Army bring closer the day when we crush the German occupants.

Secretary of the Tatar Regional Committee of the CPSU(B) Kolybanov

Chairman of the Supreme Soviet
of the Tatar ASSR Dinmukhametov

Chairman of the Council of People's Commissars of the Tatar ASSR S.Gafiatullin

Krasnaya Tataria.—1943.—3 January.

No. 89**An extract from the Resolution by the TASSR Soviet of People's Commissars on Training Tractor and Combine Harvester Operators, Mechanics, and Tractor Brigade Foremen for the Republic's MTS's and Sovkhozes,**

15 January 1943

The Soviet of People's Commissars of the Tatar ASSR and the Regional Committee of the CPSU(B) hereby resolve:

1. Refer to and implement the Resolution by the USSR Council of People's Commissars and the Central Committee of the CPSU(B) 'On Training Tractor and Combine Harvester Operators, Mechanics, and Tractor Brigade Foremen for the Republic's MTS's and Sovkhozes' dated 9 January 1943.

2. Confirm the plan for machine operator training for MTS's in the Tatar ASSR approved under the decision of the Bureau of the Tatar Regional Committee of the CPSU(B) dated 9 November 1942: 8,100 tractor operators; 1,700 combine harvester operators; 1,370 assistant combine harvester operators; 225 mechanics; 450 tractor brigade foremen; 175 drivers; 400 mechanics. Suggest that the People's Commissariat for Agriculture of the Tatar ASSR should make reasonable preparations to arrange individual training in tractor operation during field activities for kolkhoz members operating trailers.

Approve the following training plan for sovkhozes: 791 tractor operators; 126 combine harvester operators; 188 assistant combine harvester operators; 10 mechanics; 22 tractor brigade foremen; 65 drivers; 54 mechanics. Oblige sovkhoz trusts to report the machine operator training plan to sovkhozes until 17 January 1943.

3. Mobilize male and female kolkhoz and sovkhoz members, workers of MTS's, and individuals able to work not employed in industry and transport, at least 16 years of age, for mechanization courses

and schools according to the Resolution by the USSR Council of People's Commissars and the Central Committee of the CPSU(B). <...>⁵²

7. Recommend kolkhozes to pay kolkhoz members who attend mechanization courses and schools for up to one labor day per training day. Pay the specified scholarships to attendees of mechanization schools and courses by the People's Commissariat for Sovkhozes <...>⁵³.

The Soviet of People's Commissars of the Tatar ASSR and the Regional Committee of the CPSU(B) stress the fact that to ensure timely and complete staffing of MTS's and sovkhozes with well-trained tractor and combiner harvester operators, mechanics, and tractor brigade foremen is the principal task of Soviet, party, and land authorities in terms of preparation for the agricultural work of 1943. They demand that the machine operator training plan be fulfilled unconditionally.

**An extract from the memorandum by the Tatar Regional Committee of the CPSU(B)
to the Central Committee of the CPSU(B) 'On the progress in the implementation
of the Resolution on Measures to Improve the Performance of Soviet Authorities and Local
Party Organizations in Providing Aid to Service Families' by the Central Committee
of the All-Union Communist Party (Bolsheviks) dated 22 January 1943**

April 1943⁵⁵

The Soviet and party organizations of the Tatar Republic did the great work of providing aid to service families in February–March 1943 under the Resolution by the Central Committee of the CPSU(B) dated 22 January 1943.

In 32 village districts of the Tatar Republic alone, needy families received the following: 4,008 centner foodstuffs and vegetables, 16,389 items of clothing and footwear, 401,582 rubles in money (lump-sum allowance), 116,153 cubic metres of firewood, a large number of cows, calves, and sheep. Families numbering 2,952 of those serving on the front received new and redecorated apartments, 240 children entered kindergartens and day nurseries.

In Baltasi district in February 1943, 419 families received 1,295 cubic metres of firewood; kolkhozes issued a total of 9,400 kgbread to 690 families, 993 centners of fodder to 637 households, 51 pairs of felt boots, 150 pairs of underclothing, and more industrial goods, all amounting to 40,000 roubles, were sold through the District Consumers' Union.

In Kuybyshev district, service families received 3,326 cubic metres of firewood, 350 centners of potatoes, a lump-sum allowance of 9,900 roubles for 75 families, clothes for 247 families, and various footwear for 271 families.

Many kolkhozes in Chistopol district allocate calves, cows, lambs, and sheep to kolkhoz service families.

The Tatar Republic was enthusiastic to support the initiative of the non-governmental organizations of Ivanovo regions that arranged a Week of Assistance for Red Army Service Families. The ten-day campaigns for service families held in a number of cities and districts in the republic yielded material results.

The outcome of the ten-day campaign in Kazan was as follows: 15,907 service families received 34.3 tonnes of potatoes, 16,908 items of clothing and footwear, 4,689 metres of fabric, 10,802 cubic metres of firewood, and 337,000 roubles in cash. 425 apartments were re-decorated and re-allotted. 377 children entered childcare institutions. 1892 people were assigned to canteens.

A total of 2,532 front service families were inspected in Agryz district within the ten-day campaign. 1,487 families received firewood (a total of 3,442 cubic metres); 830 families got food aid. 1,160 live-stock-owning households got fodder aid. 31 families received a total of 5,200 rubles in money. Besides, 200 pairs of footwear were repaired for combat veterans' children; 70 children entered day nurseries and 42 kindergartens.

⁵⁵ Dated as per the content of the document.

A fund of manufactured goods was established for very needy families in Chistopol during the local ten-day campaign. The fund included 5,620 pairs of footwear, 4,553 items of knitwear and underclothing, etc. Reserves for further supply of service families' needs, funds of manufactured goods or food were also established in Atnya, Baltasy, Vysokye Gory, Krasnoborsk, Buinsk, and other districts in the Tatar Republic.

Within one day, members of 'Iskra' kolkhoz, Buinsk district contributed 37 poods of bread, 125 poods of potatoes, 10 poods of butter, 120 litres milk, and 4,800 roubles in money from their personal savings to the service family fund. Besides, the kolkhoz permitted them to sow 10 more hectaresspring crops than planned to add the harvest to the fund.

Soviets of senior officers' wives make an essential contribution to improving the financial status and living conditions of service families. This work established under the Sovetsky District Military Commissariat of Kazan (presided comrade Shestakova) is especially active. Its members have inspected 1500 front service families. Following the inspection, 30 families received apartments with more modern conveniences. Very needy families received 2,400 clothing items. 1,800 families got firewood. A total of 19,000 rubles was issued in money.

No. 92

An extract from the report by the Chairman of the Presidium of the TASSR Supreme Soviet G. Dinmukhametov at the meeting of front-line propagandists in Moscow on providing assistance to Stalingrad and Stalingrad Region

3 August 1943

<...> The workers of Tataria are enthusiastic to join the patriotic movement of the country's advanced regions to help Stalingrad. The workers of our republic have taken under their patronage the Dzerzhinsk city district, Stalingrad, and Gorodishchensk and Krasnoarmeysk districts, the Stalingrad region. The workers of the Tatar Republic have sent several trains of equipment, tools, and personal care items collected in Tataria to Stalingrad.

For instance, the workers of the Tatar capital—Kazan—have sent the following to Stalingrad: household equipment and clothing having a total value of 2,859,000 roubles and 2,593,000 roubles in money. They have sent 11,900 pairs of shoes, 20,000 books, underclothing and clothing amounting to 153,000 roubles, 65 cinema films, 20,000 children's toys, and more.

On 24 June 1943 Chairman of the Executive Committee of the Stalingrad Region Workers' Soviet Comrade Zimenkov wired to Secretary of the Molotovsk City District Committee of the CPSU(B), 'Please send Bolshevik thanks from the workers of Stalingrad and our region to those of Molotovsk city district, Kazan for supplying materials and equipment for the reconstruction of our much-loved city.

We will be able to revive our city Stalingrad with your help and the help of all workers in our country'. <...>

**Memorandum by L. Beria to J. Stalin on the Activities of Prisoner Experts
of the 4th Special Department of the USSR People's Commissariat for Internal Affairs**

16 July 1944

Top secret

The following activities of high defensive importance were performed according to design by prisoner experts of the 4th Special Department of the USSR People's Commissariat for Internal Affairs at Factory No. 16 of the People's Commissariat of Aviation Industry of the USSR:

1. RD-1 jet liquid engines, designed by V. Glushko, were built to be installed on planes as accelerators. RD-1 prototypes showed satisfactory performance in production flight and joint bench running tests. Plant No. 16 is currently producing a prototype batch of RD-1 jet engines to address any issues concerning application and further development of the engine model.

2. High power aviation engines MB-100, having a takeoff power of 2200 hp, and MB-200, having a takeoff power of 2450 hp, have been built according the design by A. Dobrotvorsky by merging two standard M-105 engines. The M-100 engines are currently undergoing a flight test on a Yer-2 plane, while the M-102 engines are being prepared for installation on a 102 plane.

Besides, experts of the 4th Special Department of the USSR People's Commissariat for Internal Affairs provided material technical assistance to Plant No. 16 during its construction and mounting. In particular, an experiment mechanical air engine production unit was built at Plant No. 16 according to the design by and under the supervision of experts of the 4th Special Department of the USSR People's Commissariat for Internal Affairs. A group of skilled workers of the 4th Special Department of the USSR People's Commissariat for Internal Affairs possessing senior technical positions at the plant made a large contribution to the plant's successful production.

According to People's Commissar for Aviation Industry comrade Shakhurin, prisoner experts of the 4th Special Department of the USSR People's Commissariat for Internal Affairs have done work of high value in terms of technical novelty and an efficient approach to a number of technical and design problems.

Taking into account the importance of the activities, the USSR People's Commissariat for Internal Affairs finds it reasonable to release the most distinguished prisoner experts, restore their pretrial status, and assign them to work in the aviation industry. Please find the attached list of 35 imprisoned experts and provide instructions.

No. 94
On the Progress and Improvement Measures of Political and Ideological Work
in the Tatar Party Organization

9 August 1944⁵⁶

In the Central Committee of the CPSU(B)

The Central Committee of the CPSU(B) has adopted the Resolution 'On the Progress and Improvement Measures in Mass Political and Ideological Work in the Tatar Party Organization'. The Central Committee of the CPSU(B) has noted the general negligence of political and ideological work in the Tatar ASSR and estimated that control of such activities by the Tatar Regional Committee of the CPSU(B) is unsatisfactory. According to the Resolution by the Central Committee of the CPSU(B), party organizations in Tataria neglect to ensure that party, Soviet, and Komsomol officials have a deep knowledge of the Marxist-Leninist theory. The Tatar party organization neglects the method of individual study of Marxism-Leninism by party and Soviet officials, arranging too few lectures and consultations for those studying the history and theory of the Bolshevik party. A large number of political classes has been imposed on the staff in spite of a lack of well-trained propagandists. The Tatar Regional Committee of the CPSU(B) has not ensured Marxist-Leninist training and re-training for district and party officials, propagandists and newspaper editors, resulting in dramatic theoretical backwardness that prevents the staff from performing efficient political work among the population. The Regional Committee, city and district committees of the CPSU(B) have been overlooking the harmful practice of distracting propaganda and newspaper employees from their direct responsibilities by assigning them to village soviets and kolkhozes on a long-term basis as authorized agents, thus, in fact, liquidating the propaganda apparatus in party organizations and undermining mass political work. Party organizations do not make full use of the Soviet intelligentsia for political as well as public cultural and educational work.

The Tatar Regional Committee of the CPSU(B) has failed to ensure proper control over republic-wide and district newspapers. The republic's newspapers have not developed to be true organizers of public political work. They provide poor coverage of top performance in industry and agriculture as well as the activities of the Party and the Komsomol. The republic-wide newspaper 'Krasnaya Tataria' has made serious mistakes in articles on military-political and international issues.

According to the Resolution by the Central Committee of the CPSU(B), not all strata of the urban and rural population of Tataria have access to political briefings. Many district party and Soviet officials neglect to deliver public political reports. Tatar kolkhoz farmers and workers very rarely have the opportunity to attend reports or discussions in their mother tongue. Daily political briefings in Kazan have not been secured. District Committees of the CPSU(B) do not carry out any regular activities for propagandists or provide the assistance that they need. Their propaganda on the key principles of kolkhoz building and agit-prop measures to enhance labor discipline and collective economy in kolkhozes are poor. Cultural and educational institutions in the Tatar ASSR also work unsatisfactorily. Many village reading rooms and libraries have closed down. Pilferage is common in libraries. A large part of cinema units stand idle. Many kolkhozes have not seen any films since the war began. Radio broadcasting is absent in 29 districts of the republic; many village Soviets do not use telephone wires for radio.

The Tatar Regional Committee of the CPSU(B) has been carrying out poor supervisions over writers and artists, insufficient control over the repertoire of art institutions, and little, if any, ideological and political education for intelligentsia, resulting in serious ideological mistakes concerning the history of the Tatar people and well as in Tatar literature and art in the republic.

⁵⁶ The date of adoption of the resolution by the Central Committee of the All-Union Communist Party.

The Central Committee of the CPSU(B) obliged the Tatar Regional Committee of the All-Union Communist Party (Bolsheviks) to eliminate any drawbacks of political and ideological agit-prop detected, suggesting that the Regional Committee and party organizations of Tataria should put an end to the negligence of propaganda by embarking on a large-scale mass political campaign and improving the ideological and political-educational work within party organizations and for the republic's intelligentsia. The Central Committee of the CPSU(B) specified that a radical improvement of political and ideological work must be the key means of mobilizing the working masses to fulfill the economic and political missions that the Tatar ASSR is facing.

In order to improve the ideological and political level of the republic's party and Soviet officials and intelligentsia, the Central Committee of the CPSU(B) suggested that the Tatar Regional Committee of the CPSU(B) should embark on large-scale measures to make sure that party members and member candidates study the history and theory of the Bolshevik Party, re-introduce the method of individual study of Marxism-Leninism by party, Soviet, and Komsomol officials, arrange lectures and consultations on issues of Marxism-Leninism to assist those studying the theory, introduce Marxist-Leninist educational work for the rural and urban intelligentsia, establish departments for researchers and artists in the Evening University of Marxism-Leninism in Kazan, arrange lectures and consultations on issues of the Marxist-Leninist theory for intelligentsia in city and district centres by engaging lecturers from the Regional Committee of the All-Union Communist Party (Bolsheviks) and university teachers.

The Central Committee of the CPSU(B) also recommended the Tatar Regional Committee of the CPSU(B) to establish district part-time party schools for party and soviet officials in district centres, secretaries of grassroots party and Komsomol organizations <...>.

Noting that poor theoretical training for party and propaganda officials had impeded proper agit-prop work in the Tatar ASSR, the Central Committee of the CPSU(B) suggested that the Tatar Regional Committee should establish a republic-wide one-year part school to re-train district and city senior party officials. The school is to have a propaganda department to re-train district propaganda and newspaper employees and a Komsomol department to re-train secretaries of city and district committees of the All-Union Leninist Young Communist League <...>.

In its resolution the Central Committee of the CPSU(B) stressed the need of truly transforming newspapers into important centres of political work and obliged the Tatar Regional Committee of the CPSU(B) to enhance its control over the activities of republic-wide, city, and district newspapers and supervision over newspaper editorial offices. The Bureau of the Regional Committee of the CPSU(B) should meet to discuss the work plans of republic-wide newspapers. The Propaganda Department of the Regional Committee is to ensure control over the activities of all newspapers by submitting reviews of each newspaper to district committees at least once in three months, regularly publish reviews of district newspapers in republic-wide ones, and introduce practical training for editors and editorial office secretaries of district newspapers in the editorial offices of republic-wide ones to ensure experience exchange and upgrading skills for district newspaper employees. The Central Committee of the CPSU(B) suggested that the Regional Committee of the CPSU(B) should restore the departments for party activities and propaganda departments in republic-wide newspapers of Tataria, recommending that they should publish (3–4 times per month) articles and consultations on theoretical, political, and economic subjects as well as other aid for propagandists.

The Central Committee of the CPSU(B) also recommended that the republic's newspaper limits should be revised to make sure that at least $\frac{3}{4}$ of all copies of each republic-wide newspaper goes to districts, grassroots party organizations, village reading rooms, village soviets and kolkhozes. Newspaper show-cases should be made in all village soviets and kolkhozes.

Believing that the most important mission of party organizations in terms of political work is to inform the population of military, political, and international events correctly and in a timely manner, the Central Committee of the CPSU(B) obliged the Tatar Regional Committee of the CPSU(B) to

ensure regular training for propagandists, including briefings in the current policy to be held at least once a week, district or branch propagandist meetings at least once in two months (all-plant meetings at least once a month for large plants) to present instructive political reports as well as those by secretaries of district committees of the CPSU(B) or plant party committees on economic and political objectives, workers' and employees' meetings at plants and institutions at least once a month to present reports by city and district party and soviet senior officials, plant and institution directors on the current military, political, and international events. Control over the ideological and political content of reports and lectures delivered at plants and in kolkhozes as well as discussions on the content of reports at reporters' meetings must be ensured. The Propaganda Department of the Regional Committee of the CPSU(B) must make sure that district reporters and propaganda team leaders receive aid in the form of proceedings, shorthand records of the best lectures as well as instructive reports by lecturers and reporters from the Regional Committee of the CPSU(B) to take place at least once per month and a half.

In order to improve the performance of political-educational work in the Tatar ASSR, the Central Committee of the CPSU(B) suggested that the Regional Committee of the CPSU(B) resume the operation of all idle village reading rooms, culture houses, and district libraries; prohibit using village reading rooms and libraries for any purposes not provided for; provide fuel for all the republic's political educational institutions; embark on a large-scale scientific and educational propaganda campaign engaging intelligentsia to deliver public lectures for non-experts; arrange 6-month courses for political-education staff; have any idle cinema equipment repaired and make sure that films are showed in every village soviet at least once a month; ensure local radio broadcasting in all districts before the end of 1944, secure smooth operation of radio stations and adjust all telephone equipment in village Soviets to radio broadcasting.

The Central Committee of the CPSU(B) obliged the Tatar Regional Committee of the CPSU(B) to ensure scientific research on the history of Tataria, eliminate serious nationalist flaws and mistakes made by certain historians and writers in terms of the presentation of the history of Tataria (flattering the Golden Horde, popularizing the khanist feudalistic epic of Edigu), focusing on research on and presentation of the history of the joint struggle of Russians, Tatars, and other USSR nations against foreign invaders, tsarism, and the oppression of capitalist landlord, as well as the history of Tataria's socialist transformation under the Soviet regime and popularizing prominent Tatar politicians, scientists, and revolutionaries, as well as sons of the Tatar nations—heroes of the Patriotic War.

The Central Committee of the CPSU(B) also obliges the Tatar Regional Committee of the CPSU(B) to materially improve its guidance of youth political education, ensure organizational-political enhancement of Komsomol organizations, and make sure that a Komsomol organization is established in every kolkhoz of the republic, and secure regular coverage Komsomol organizations' activities by republic-wide newspapers. According to the Resolution by the Central Committee of the CPSU(B), the Regional Committee, city and district Committees of the CPSU(B) are obliged to provide assistance to Komsomol organizations in youth agit-prop, supply propagandists to manage clubs and deliver reports, lectures, moderate discussions.

No. 95**Memorandum to the Soviet for the Russian Orthodox Church under the USSR Soviet of People's Commissars on the Number of Believer's Petitions for New Churches and Prayer Houses in the TASSR**

28 December 1944

I hereby report the requested information on the number of believers' petitions for new churches and prayer houses:

a) petitions dated 1943, unconsidered:	13,
b) submitted in 1944:	46,
c) consideration denied for any reasons:	4,
d) dismissed by the bishop:	none,
e) considered by the Council of People's Commissars of the Tatar ASSR:	21.
In particular, dismissed:	18.

Accepted: 3; one approved by the all-Union government; 2 decisions delayed and submitted to the Soviet.

Redundant petitions by believers to different addresses on the same church: 17.

3⁵⁷. No complaints have been submitted concerning the decisions made by the TASSR Council of People's Commissars.

4. All submitted petitions for new churches have the following district representation:

- a) the republic contains a total of 70 districts, of which 69 have no functional churches;
- b) petitions for new churches have been received from 27 districts without any functional churches;
- c) petitions for new churches have not been received from 42 districts without any functional churches and one district with a functional church.

5. 68 visitors have been received over the reporting period to discuss church opening issues and 7 chairmen of executive committees of district soviets to discuss issues related to the Russian Orthodox Church.

6. Three site visits to verify petitions for new churches have been performed in 1944.

Authorized Agent of the Soviet
for the Russian Orthodox
Church under the USSR Council of People's Commissars
in the Tatar ASSR

Gorbachev

No. 96**An extract from the article by TASSR People's Commissar V. Prokushev on the activities of the healthcare authorities of the Tatar Republic during the war period**January 1945⁵⁸

The patriotic war against German fascist invaders determined the new missions of healthcare authorities, in particular to maintain the quality of public medical services, ensure better medical services for families of servicemen and disabled veterans of the Patriotic War.

⁵⁷ The numbering of the document begins with the third clause.

⁵⁸ Dated as per the text of the document.

In spite of the difficult situation and wartime hardships, the healthcare authorities of the Tatar Republic have not only preserved the existing network of healthcare institutions but even expanded it over the period of the Great Patriotic War.

Five city hospitals re-opened during the war. The Republic-Wide Hospital of Plastic Surgery was re-established and fitted out with equipment for all advanced treatment techniques to host 300 disabled veterans of the Patriotic War.

The hospital has provided treatment to over 1500 disabled soldiers in 1944. About a half of them have resumed military service. Over one quarter have returned to work. The hospital was able to achieve such success due to proper treatment structuring and by engaging skilled professionals (orthopaedist, physiatrists, neuropathologists, general practitioners) to work under the aegis Distinguished Doctor Professor of the RSFSR L. Shulutko.

The hospital has been developing and successfully implementing innovative therapies for ballistic wound recuperation. The hospital offers training to young doctors. Fifteen district surgeons have taken specialized courses on its premises and now work in plastic surgery in their district hospitals.

Healthcare authorities have been paying special attention to the rural healthcare network. Eight rural hospitals have re-opened since the beginning of the Patriotic War. The total number of rural hospitals has thus reached 100.

At present, the Tatar ASSR has a total of 9461 hospital beds (apart from psychiatric, clinical, and other agencies). The expansion of hospital farms is of great importance for hospital performance. While in 1941 no hospitals engaged in agriculture by 1944 they harvested 680 tonnes of grain, 224 tonnes of potatoes, and 119 tonnes of vegetables. Hospitals have a total of 356 head cattle, 855 sheep and goats, and 532 swine.

Outpatient care has improved in wartime as well. Five outpatient care institutions and 65 medical assistant and first aid/obstetric centres have re-opened. Local kolkhoz-funded medical aid stations have been established in dozens of kolkhozes.

Seventy district centres (except for Kazan, Chistopol, and Zelenodolsk) have a total of 55 clinical laboratories, 67 dental offices, 11 X-ray rooms, and 12 physiotherapeutic rooms. Surgical aid is available in 31 districts. There are 44 surgeons, 24 ophthalmologists, 21 obstetrician-gynaecologists, and 53 pediatricians in the districts.

The healthcare authorities of the Tatar ASSR have done a great deal of work of providing mobilization-related services, establishing evacuation hospitals, receiving casualties, providing medical aid to plant workers, and maintaining proper sanitary and epidemiological conditions behind the front.

Our best surgeons have been sent to the front. They have been fulfilling their honorary duties brilliantly, for which many have been awarded governmental decorations (Mukhamedyarov, Samoylov, Osipovsky, S. Smirnov, Leyzerovsky, and others). A large part of the doctors and professors at our IHLs has been engaged in the activities of evacuation hospitals in Tataria.

Experts in various spheres have enabled the Tatar ASSR to establish a large network of specialized hospitals. Apart from locomotor injury hospitals, we have those treating cranial, cerebral, neural, thoracic, abdominal, ear, eye, and jaw injuries.

The authorities have done great work in providing advanced training for physicians, training in surgery for pediatricians, gynaecologists, etc. A large number of doctors have been promoted to chief surgeons. The following appointees have proven to be well qualified for their high positions: Baybekova, Kalgatina, Medvedev, Lyubimova, Efremov, Garfinkel, and others.

While in the 1st war year only 20% hospitals offered mud and paraffin therapy, all hospitals have well-equipped electrophotherapy rooms and practice mud and paraffin therapy as of 1 January 1945.

Hospital physiotherapeutic rooms have performed over 8 million treatment sessions over the 3.5 years of war. In the first war year, 40% of wounded patients had access to such therapies, a figure increasing to 70% by the second half of 1944. The session ratio was 8 per patient in the second half of 1941, the 1944 value being 33 sessions per patient <...>.

The following professors are influential hospital researchers: Sokolov, Shulutko, Ratner, Gusynin, Meleshchenko, Pechnikov, Murzin, Lozanov, Rusetsky.

Now that the Tatar Republic is approaching its 25th anniversary, it can be proud of its achievements in treating wounded soldiers and commanders of the Red Army. The entire staff of evacuation hospitals has been mobilized to ensure maximum success in restoring the health of wounded soldiers and officers of our heroic Red Army in the happy days of final victory over the fascist beasts.

Healthcare authorities has been paying special attention to medical and sanitary services at plants in operation over the years of the Patriotic War. Closed-type polyclinics have been established under all occupational health facilities. Two hospitals have opened to host a total of 125 people. The network of factory health stations has grown. Night care tuberculosis sanatoria to host 280 patients have opened at factory facilities. A factory has established a general sanatorium of 60 beds. Factory polyclinics have become much better-equipped with specialized devices. Highly specialized rooms have been established. The doctor and nursing staff has grown.

General practitioners have been re-trained to specialize in tuberculosis, malaria, industrial health, laboratory science, gynaecology, and dermato-venereology while on the job. It is a common practice for well-trained employees of IHLs and republic-wide institutions to offer consultation.

Therapeutic and prevention measures resulted in a reduction of the number of cases by 14% in 1944 as compared to 1942, while the number of lost work days decreased by 17.5%. No cases of occupational poisoning and disease were reported for all plants in 1944.

The healthcare authorities of the Tatar Republic have done great work in the prevention and anti-epidemic measures since the beginning of the Great Patriotic War. As the result, cases of typhoid fever have decreased by 26% as compared to 1944, and dysentery has been reduced by a factor of 5. Pediatric disease incidence has also decreased: by a factor of 2.5 for diphtheria, 3 for scarlet fever, and by 30% for measles. No typhoid fever epidemics occurred in the republic, any local disease outbreaks were eliminated immediately.

TASSR People's Commissar of Health V. Prokushev.

No. 97

An extract from the article by TASSR People's Commissar U. Kontyukov on the state of the republic's public education system during the Great Patriotic War

January 1945⁵⁹

In spite of wartime hardships, schools in Tataria have been successfully struggling to implement Stalin's Vseobuch Law (the Law on Universal Compulsory Education). The Law on Universal Compulsory Education has become especially important since the Great Patriotic War broke out. Our leader comrade Stalin's invitation to transform and adjust any work to defending the country against fascist invaders applied to school activities directly. The defense of the country required of the schools, as well as of teachers and public education authorities, an education for all children of school age without exception. Schools in Tataria provide universal compulsory education to children aged 7 years and older.

The approach to school-level educational activities, the teaching system and quality have changed radically as well.

⁵⁹ Dated as per the text of the document.

A key issue of school quality improvement is the approach to Russian language classes in Russian and non-Russian schools and well as those in the indigenous language in the cases of Tatar and other ethnic schools. The highest priority in language teaching is to improve students' spoken and written language and ensure good grammar.

Major changes in the life and work of the Soviet school have favored improved educational activities since the outbreak of the Great Patriotic War. The introduction of military physical primary and pre-service training for students, sex-segregated school education (in Kazan), the implementation of the Student Regulations, a series of measures to enhance school discipline and order, the cancellation of socialist competition in school teaching, the transition to the five-mark numerical grading system for knowledge and conduct, measures to improve school instruction quality under the Resolution by the USSR Soviet of the People's Commissars dated 21 June 1944—these measures required the schools and teachers to do a great deal of organizational and educational work both within the school and in the parent environment as well as with the wider Soviet public. The quality of school education improved greatly when school-leaving examinations for graduates of primary and seven-year schools, secondary school final examinations, and gold and silver medals for outstanding academic performance and excellent conduct were introduced. It should be noted that the schools and teachers of Tataria have been able to fulfill their most important missions superbly.

The Soviet country appreciates the labor of teachers. In 1939, 85 people's teachers in Tataria were awarded USSR orders and medals for selfless work and outstanding performance. In 1945, that number stood at 139. Exemplary national teachers are renowned across Tataria for brilliant performance in providing academic and Communist education to Soviet children. These include Khabibullin, Lastochkina, Seloustyeva, Tarasova, Saydasheva, and many other exemplary teachers who have received high governmental rewards. Being skilled teachers, they provide all-round education, solid knowledge and good practical skills, instilling selfless devotion to the Motherland and the Party of Lenin and Stalin in children, who feel confident to enter the adult life with a certificate of mental and moral maturity. <...>

As public education develops, the number of teachers increases in Tataria. While in 1913 the number of school teachers in the territory of today's Tataria was as few as 3,500 people, the figure had reached 18,170 by 1 September 1944, that is, five times as many as in 1913.

These are, in particular, 6,998 primary school teachers, 7,688 incomplete secondary school teachers, and 3,484 secondary school teachers. Among them 3,159 teachers have received higher education.

Our teachers do not confine their work to school, to the children's environment. They perform a great deal of community work. The timid, cowed, narrow-minded school employee of the past has turned into, under our conditions, a pro-active enthusiast of the cultural front, both a teacher and a community worker. Teachers in Tataria have demonstrated heroism on the front and selfless work behind the lines over the years of the Great Patriotic War. Along with their pupils, school teachers have been doing all kinds of community work, thus enhancing the front and rear and becoming one with many millions of Soviet patriots. In 1943 alone, 157,065 pupils and 8,287 teachers participated in agricultural activities. The pupils worked a total of 3,302,350 work days, and the teachers 389,927.

The schoolchildren of Tetyushi district completed 46,458 work days in 1943. Those of Agryz district were able to keep snow on 5,500 hectares of land, take over 1,300 carts of fertilizer to the fields to complete 65,218 work days.

The teachers and pupils of Chistopol district raised 139,000 rubles for school reconstruction in the liberated district, for which they received a citation from Comrade Stalin. Schoolchildren were enthusiastic to raise money for the Victory Fund as well. Schools in Verkhniy Uslon district raised 26,000 roubles, in Kukmor district, 17,884 roubles, and in Agryz district, 65,246 roubles.

Teachers and schoolchildren of Kazan took great efforts to improve the appearance of their home city. They participated in numerous voluntary clean-up events and other community activities.

Many schools in Kazan successfully collected scrap metal. For instance, Secondary School No. 15 collected 15 tonnes, School No. 83, 7 tonnes, etc.

Young teachers graduate from courses at higher or vocational pedagogical educational institutions regularly, thus expanding Tataria's teaching staff. At present, three higher educational establishments in Tataria (Kazan State Pedagogical and Teaching Institutes, Yelabuga Teaching Institute) and 10 secondary ones offer pedagogical training.

The number of students at pedagogical secondary education establishments is as follows:

1.8 teaching vocational schools train	3,035 people
2. The Pre-School Care Pedagogical Vocational School trains	298
3. The Library Technical Professional School trains	90 people
Total:	3,423.

All pedagogical educational establishments have farming facilities, which are a great financial and economic help for them.

No. 98

An Extract from the Report by the Kazan City Committee of the CPSU(B) and the Tatar Regional Committee of the CPSU(B) to the Central Committee of the CPSU(B) on the Victory Day Celebration in Kazan

9 May 1945

With the speed of lightning spread the news about Germany's unconditional surrender and about the end of the war. Hardly had the voice of the announcer ceased that the German Instrument of Surrender had been signed when the people of Kazan broke into ardent jubilation. Though it was late in the night, there was hardly a house not festive with bright lights. Jubilant, happy people began to fill the streets and squares of the city. They shouted, 'Hoorah for the Red Army!', 'Hoorah for the Victory!'. People were exchanging hugs, kisses, congratulations on the victory.

At 4 a.m., the chief management of the city's worker community met in the building of the City Committee of the CPSU(B). This included secretaries of district committees of the CPSU(B) and All-Union Leninist Young Communist League, party organizations of large enterprises, etc. A brief meeting was held, at which the City Committee of the CPSU(B) ordered that Victory Day should be celebrated. Similar meetings took place in district committees of the CPSU(B).

Even though everyone knew 9 May to be a day-off, all workers of the city, students, officials—everyone was eager to visit his or her enterprise, organization, or educational institution to share the good news.

Factories began to hold meetings in the morning. Kazan had never seen such numerous meetings, nor had they been so enthusiastic. The Mechanical Plant carried out its meeting at 4 a.m. It was opened by Party Committee Secretary Comrade Zhukov, who congratulated the workers, employees, and intelligentsia of the plant on the day of the Red Army's historic victory. Then comrade Zhukov gave the floor to Secretary of the Regional Committee of the CPSU(B) comrade Muratov.

Stakhanovite technician and assembler comrade Kozlov also spoke at the meeting. He said, 'In the tough years of the Great Patriotic War, we workers behind the lines took every effort and applied all knowledge to reinforce our brave Red Army and help it crush the German fascist invaders. Now we can

proudly say that our humble effort was not in vain. By working honestly, we will help our much-loved Motherland heal its wounds and recover'.

A greeting telegram Lych, Deputy Operations Manager, said in his speech, 'We shall never forget the years of the Soviet people's great heroic war against German fascist invaders. We will never forget the sanguinary invasion of our sacred land. We will always remember how German barbarians tried to enslave our free people... Through its labour and knowledge the Soviet nation will help the country reconstruct its ruined plants, factories, and agriculture, putting them into working condition'. <...>

The city celebrated for the whole day of 9 May. Orchestras played on its central streets and squares. Young people danced on the street. Theatre actors, circus performers, members of the Tatar State Philharmonic Society and corporate amateur art clubs performed on improvised stages in the open air. Each club and red corner held festive events of its own.

Secretary of the Kazan City Committee of the CPSU(B) Baryshnikov.

**Resolution by the Bureau of the Tatar Regional Committee of the CPSU(B)
on the Establishment of the Kazan Branch of the USSR Academy of Sciences,**

7 June 1945

As resolved by the policy-making authorities. The Soviet of People's Commissars of the Tatar ASSR and the Regional Committee of the CPSU(B) hereby resolve:

1. To establish research institutes for the following 5 branches of science within the Kazan Branch of the USSR Academy of Sciences: 1) Mathematics, Physics, and Mechanics; 2) Chemistry; 3) Geology; 4) Biology; 5) Literature, Language, and History, and the Sector for Water Resources Issues and Energy under the Presidium of the Branch of the Academy of Sciences⁶¹.

⁶¹ Clauses 6–13 on the material and technical base of Kazan affiliate of the Academy of Sciences of the USSR are omitted.

2. Request the Presidium of the USSR Academy of Sciences to approve the Presidium of the Kazan Branch of the Academy of Sciences with the following membership: Academy Member A. Arbuzov, Corresponding Member N. Chebotaryov, Corresponding Member B. Arbuzov, Professor L. Miropolsky, Doctor of Geological and Mineralogical Sciences, Professor N. Livanov, Doctor of Biological Sciences, Professor G. Kamay, Doctor of Chemical Sciences, Professor A. Trufanov, Doctor of Technical Sciences, Professor P. Tikhonov, Doctor of Agricultural Sciences, Assistant Professor K. Sitnikov, and Assistant Professor M. Gaynullin.

3. Recommend Professor L. Miropolsky as Deputy Chairman of the Presidium of the Branch of the USSR Academy of Sciences and Professor G. Kamay as Academic Secretary.

4. Recommend an Academic Board of the Kazan Branch of the Academy of Sciences with the following membership: Academy Member A. Arbuzov, Corresponding Member N. Chebotaryov, Corresponding Member B. Arbuzov, Professor L. Miropolsky, Professor N. Livanov, Professor G. Kamay, Professor A. Trufanov, Chairman of the TASSR Soviet of People's Commissars S. Sharafiev, Secretary of the Regional Committee of the CPSU(B) G. Shafikov, Secretary of the Kazan City Committee of the CPSU(B) A. Grzhegorzhevsky, Rector of the Kazan State University K. Sitnikov, Chairman of the State Planning Committee under the TASSR Soviet of People's Commissars A. Polyansky, TASSR People's Commissar for Agriculture S. Talypov, Professor P. Syrnev, Doctor of Agricultural Sciences, and Professor A. Teregulov, Doctor of Medical Sciences.

5. Request the Presidium of the USSR Academy of Sciences to approve Academy Member A. Arbuzov as Director of the Chemical Institute, Corresponding Member N. Chebotaryov as Director of the Institution for Physics, Mathematics, and Mechanics, Professor L. Miropolsky as Director of the Geological Institute, Professor N. Livanov as Director of the Biological Institute, Assistant Professor M. Gaynullin as Director of the Institute for Language, Literature and History, Professor A. Trufanov as Academic Manager of the Sector for Water Resources Issues and Energy under the Presidium of the Branch of the Academy of Sciences <...>.

Literary and Artistic Works by Authors from Tataria during Wartime⁶²,

25 June 1945

The Great Patriotic War against the German invaders roused our entire country. The Tatar people demonstrated their heroism in a way more powerful than any ever before in that unprecedented battle. The Tatar literature followed the nation through the hardships of wartime and thus reached its maturity. The voice of Tatar poetry sounded as a call for heroic struggle against the enemy, for victory. Wartime poems developed more specific images and vivid, impressive psychology. Some poets went to the front. Poems and songs by Tatar front poets reveal enormous patriotism and an ardent love for their Soviet Motherland.

Let death not make you grieve
Think, instead, of the Fatherland.
So long as home is prized more than life,
You will triumph and you will live!...

⁶² Headline in a newspaper.

These are lines by F. Karim. Another poet crossed paths with him. He wrote to his friend,

Who knows what will befall us,
But now, to stave off the end,
We will not sheathe our dagger
So long as a drop remains.
Whatever comes, Comrade, clear
The road to victory extends...

Poet of the front, Musa Dzhaliil, the author of this verse, never returned. Neither did Fatykh Karim, who died heroically during the storm of Königsberg. Their images will live forever in the heart of the victorious people.

The most noble theme of love for one's Fatherland, international friendship, and, most importantly, friendship with the great Russian people is the keynote of each Tatar poet's verses.

Journalistic style was common during the Great Patriotic War. Many books on the heroic everyday life of the front and homefront were published. A valuable work titled 'The Book of Heroes', edited by Kavi Nadzhmi, appeared.

The Tatar nation had no composers, except for a few self-taught melodists, before the revolution. Now a major shift is clearly coming in the development of Tatar musical arts. Talented musicians have grown. The name of Salikh Saydashev is widely known. His soulful songs are utterly delightful. The Tatar State Opera and Ballet Theatre, which was established six years ago, is closely connected with the name of Näcip Cihanov. His talented and emotional operas 'Altınçäç' (libretto by M. Dzhaliil) and 'Qaçqın' (libretto by A. Fäyzi) are broad and free, as is the epoch itself.

The oeuvre of talented composer D. Fäyzi is marked by a bracing and fresh sense of novelty, a heartfelt passion and noble patriotism. His musical comedies and numerous songs are suggestive of his excellent composing skills. Mansur Muzafarov and Z. Khabibullin created many valuable works. The young composer Färit Yarullin managed to create the first Tatar ballet 'Şüräle'.

Composer A. Klyucharyov is one of the best experts in Tatar musical folklore. The composers V. Vinogradov and Yu. Vinogradov made a great contribution to the development of Tatar music culture.

The opera 'Färida' by Professor M. Yudin, based on the libretto by K. Nadzhmi, is a valuable contribution to Tatar lyric opera.

The art of performing is also representative of the general growth of Tatarstan's musical culture. Nationally recognized artist Gulsum Suleymanova is famous for her brilliant performance of Tatar folk songs. The development of Tataria's vocal culture is connected with the names of TASSR People's Artists M. Rakhmankulova, G. Kaybitskaya, and A. Izmaylov. The wonderful singer Sitdik Aydarov authored a number of outstanding works. Merited artists S. Sadykova, F. Nasretdinov, M. Bulatova, and Kh. Zabirowa are very popular with the Tatar audience. U. Älmeev has chosen an unusual way of combining vocal art with subtle humour and genre scenes.

Everyone has heard about All-Union Vocalist Competition prize winner N. Rakhmatullin. Representatives of ballet art—Gatsullina, Romanyuk, Akhtyamov, Aydarskaya, Karamysheva, Tagirov—are highly appreciated by the audience.

The G. Kamal Tatar Academic Theatre is truly a Tatar highlight. It will celebrate its 40th anniversary in 1946. Thanks to party and governmental nourishment, the Tatar theatre has been able to become one of the country's most influential. It has been home to such prominent artists as Kh. Abzhalilov, F. Ilskaya, Z. Sultanov, G. Bolgarskaya, and N. Tazhdarov. During the Great Patriotic War alone, the theatre staged the following plays: 'Mariam' and 'Hoja Nasreddin' by N. İsanbät, 'The Taymasovs' and 'Yalkın' by T. Gıyzzät, 'Minnikamal' by M. Amir, 'Hajji Gets Married' by Ş. Kamal, 'Bankrupt' by Ğ. Kamal, 'Tukay' by A. Fäyzi, 'Kayyum Nasyri' by M. Gali and Kh. Urazikov, and others.

The painter B. Urmancheev, sculptor S. Akhun, architect Gaynutdinov, and graphic artists B. Almenov and D. Krasilnikov have made significant contribution to the development of Tatar visual arts.

Paintings by A. Ishmametov and R. Ponomaryov are also marked by talent. Artist P. Speransky enjoys great popularity as well.

The Tatar State Philharmonic Society is of great importance to popular aesthetic education. The Tatar people's choir established as a successor of the Song and Dance Company (director Z. Akhmetova) and the Folk Song Group (director F. Askarov) deserve to be mentioned here. A folk instrument orchestra, including bayan, harmonium, dombra, and gusli players has been established. The Philharmonic Society has done a lot for Red Army units. In 1945 alone, its artistic groups presented over 200 concerts on the front and visited Red Army units in Germany. The Philharmonic Society sent dozens of groups to kolkhozes across Tataria.

Russian writers, composers, artists, and performers work in close cooperation with Tatar writers and artists. Wonderful plays by the Russian Great Drama Theatre, where such masters of the stage as F. Grigoriev, Ardarov, Yakushenko, Preobrazhenskaya, and Gusev perform, are widely appreciated by workers. Paintings by N. Sokolsky, Zhitkov, Maksimov, Badyul, Timofeyev, tales by M. Bubennov, L. Golosnitsky, songs and poems by Bruno Zernit are also famous in Tataria. <...>

Our party has taken great care of Tatar literature and arts. The Resolution by the Central Committee of the CPSU(B) dated 9 August 1944, titled 'On the Progress and Improvement Measures of Political and Ideological Work in the Tatar Party Organization' contains clear instructions for our writers and artists.

Tatar Soviet literature and arts have made major achievements. Yet, they owe a great debt to their people. The literature and art of Tataria have not yet been able to depict our life as full and as diverse as it is. We still face a lot of serious drawbacks. It is our duty and responsibility to take every effort to eliminate them to ensure a further rise of Tatar literature and arts.

Secretary of the Soviet Writers' Union
of the Tatar ASSR A. Erikeyev.

Krasnaya Tataria.—1945.—25 June.

No. 102

An Extract from the Report by the Labour Reserve Administration of the Tatar ASSR on the Performance of the Republic's Labour Reserves during the Patriotic War

October 1945⁶³

A new Inflow into the Working Class

On 14 December 1940, FWT schools opened their doors to the people of Tataria. Youth came from both the cities and kolkhozes alike. Such towns as Kazan, Chistopol, Zelenodolsk, Bugulma, and Bondyuga, as well as the settlement of Yudino now offered high qualification training for young metal workers, chemists, builders, and railway workers. Five trade schools opened to host a total of 1,800 people, and 10 FWT schools admitted a total of 3,000 people. An active and diverse academic and production life began.

But suddenly the war broke out, imposed on the Soviet people by German fascists. Workers gave up their machines for weapons and went to the front to defend their Motherland. The labour reserve system was facing the new challenge of training new well-qualified plant, factory, and transport workers. The network of FWT schools began to grow continuously. While new soldiers were going to the front, FWT schools called for new detachments of Soviet youth.

⁶³ Dated as per the publication.

Wartime hardships determined the need to receive and provide accommodation to students from western regions and arrange for their studies and proper living conditions.

From 1941 to August 1942, FWT schools in Moscow, Leningrad, Pskov, the Donbass, Stalingrad, Yefremov, and Kalinin regions admitted a total of 10,150 students. Besides, 3,315 people from Smolensk, Tula, and Kalinin regions entered trade, railway, and FWT schools in Tataria after an end was put to the German occupation of the areas.

In 1942, 15 additional one-off factory training schools hosting 5,000 students were established in the Tatar Republic.

An enormous number of teenagers with different characters, academic performance, and natural abilities found their way to the future. The young people have studied industriously and worked for the sake of their Motherland in acknowledgment of the care of the party and government.

Over five years, Tataria's labour reserve system has been able to train a total of 11,697 well-qualified young railway trade school students and 37,564 mass trade workers from FWT schools and ensure their employment in industry, construction, and transport.

Industrial plants have provided employment to 49,260 young workers, which includes 33,035 metal workers, 1,913 chemists, 8,282 builders, and 1,540 railway and water transport workers.

They came to machine shops and factories to revitalize the working class. These young men and women were not novices but confident experts at their machines. The youth have met the government's expectations as decent successors to their fathers and elder brothers. Many letters of recommendation and other documents on the selfless labour and excellent performance of these young workers have been produced over the years.

SA HPD TR, c. 4034, f. 26, f. 162, s. 5–7, 12–13.

No. 103

An Extract from the Report by the Republic Board for the Collection of Gifts for Soldiers and Commanders of the Red Army in the Field

December 1945

In late 1941 and early 1942, sending gifts from plant employees and the working population of the Tatar ASSR to the Red Army became a mass-scale activity requiring centralized management and accounting of gifts to the Red Army by the population and corporate teams.

This determined the necessity of establishing the Republic Board for Red Army Gift Collection.

Under a Resolution by the Bureau of the Regional Committee of the CPSU(B) and a Resolution by the Presidium of the TASSR Supreme Soviet, presided by the Chairman of the Supreme Soviet, a republic-wide board of 5 people (Secretary for Propaganda of the Regional Committee of the CPSU(B), Head of Department of the Regional Committee of the CPSU(B), Secretary of the City Committee of the CPSU(B), and Secretary of the Regional Committee of the All-Union Leninist Young Communist League) and district boards was established.

Workers transferred a total of 31,436,336 roubles 82 kopeks in cash to the current account of the Republic Board and 6,802,899 roubles 40 kopeks to other destinations over the period from January 1942 to 1944.

Thus, the total inflow amount is 38,239,236 roubles 22 kopeks. The amount was used to acquire and send gifts (food, clothing, sweets and tobacco products, cologne, etc.) to the following forces:

- the Red Army (23,237,914 roubles),
- Ukrainian partisans (6,362,536 roubles 54 kopeks)
- Belarus partisans (3,537,863 roubles 61 kopeks)
- partisans in Leningrad (700,493 roubles 58 kopeks)

Individual gifts to Heroes of the Soviet Union and disabled veterans of the Patriotic War (65,366 roubles). Total: 33,904,173 roubles 73 kopeks.

This does not include New Year presents (1 January 1942) having a total value of 500,000 roubles and presents for the 24th anniversary of the Workers' and Peasants' Red Army (1942) having a total value of 666,737 roubles 40 kopeks.

Besides, workers from Tataria provided a very large amount of food (meat, eggs, poultry, butter, honey, vegetables, rusks, biscuits, tobacco products) and clothing amounting to tens of millions of rubles over the Patriotic War. These were sent to soldiers and commanders of the Red Army, partisans of Ukraine, Belarus, and Leningrad.

Worker delegations from Tataria were sent to deliver gifts to soldiers and commanders at the Kalinin Front and carry out major mass political work among the soldiers, which is of great significance in terms of the front-rear connection. Members of such delegations told warriors about the heroic labour of Tatar workers behind the lines.

The front command and units expressed their gratitude to the workers, kolkhoz members, and intelligentsia of the republic for taking care of the warriors many times, expressing their confidence that the workers of Tataria would help the Army even more and provide a growing amount of munitions and victuals for the front.

Having returned from the front, delegation members spoke at numerous meetings at plants, institutions, and kolkhozes to report on their trip to the front and feats of arms committed by our front soldiers.

The meetings were of great importance for further performance and the improvement of labour discipline.

The Republic Board for Red Army Gift Collection did a big job of improving the morale of front-line soldiers and commanders and improving the performance of the republic's plants, factories, transport institutions, and kolkhozes.

Chairman of the Commission of the Republic
for the Collection of Gifts for Soldiers and Commanders of
the Active Red Army G. Dinmukhametov

Published: *Tatarskaya ASSR v gody Velikoi Otechestvennoi Voyny: A Collection of Documents and Materials*. Kh. Gimadi.—Kazan, 1948.—Pp. 244–246.

No. 104

An Extract from the Report by Deputy Secretary of the Kazan City Committee of the CPSU(B) Ilyin on Industrial Operations in Kazan over the Period of 1941 to 1945

16 September 1946

The city's industry faced the challenge of providing the front with the necessary arms and munitions after Nazi Germany's treacherous attack on our country and the entrance of Soviet people into the Great Patriotic War.

Factories had to switch to war operation mode as soon as possible. Apart from this production transformation of active enterprises, the big job of re-locating evacuated ones had also to be done.

Over 20 large plants of great importance for the country's defense capacity, including Plants No. 22, 16, 387, 230, 448, 237, 144, 543, 708, 10, 3, Factories No. 13 and No. 14, and other institutions, were brought to Kazan.

A number of central design offices and scientific institutions were also evacuated to the city. These included Central Design Offices 4, 17, 19, 32, Central Research Institute 45, and others. A total of 150

workers, engineering and technical staff, and employees along with their families were evacuated to the our city <...>.

Yet, the transformation was not easy for our factories. It took them about a year to achieve the military product output specified in the State Plan. Even though production output grew by a factor of 1.5 in 1941 (as compared to 1940) and by a factor of 2.5 in 1942, the city plan was not fulfilled in those years. The commercial product plan was fulfilled by 81.6% in 1941 and by 96% in 1942. All branches except for the food industry failed to fulfill the plan.

In 1941 and 1942, our largest facilities, such as Plants No. 22, 16, 230, 144, 543, 708, 741, the Catgut Plant, the Rendering Plant, and other facilities, were unable to fulfill the plan.

The City Part Committee and the entire party organization of the city were greatly concerned about the fact that the city and a number of large plants had been unable to fulfill the plan. Every measure was taken to rectify the situation <...>.

The city's transformed industry was able to fulfill the plan every year by increasing its output from 1943.

The industrial statistics are presented as follows:

Item	1940	1941	1942	1943	1944	1945	Total
commercial products (USSR roubles, millions)	840	1,118	2,348	2,825	3,220	2,284	10,524
Actual output (% of plan fulfillment)	97.5	81.6	90.6	105	102.6	103.7	-

In 1944, our products amounted to 3.2 million roubles. We were able to multiply the output by almost 1940 as compared to 1940.

The total wartime output of the city's industry amounted to 10,5 million roubles, including defence products amounting to 8,6 million roubles, which is 4/5 of all wartime commercial products.

Kazan's plants and factories produced over 600 items of critical weapons and munitions, which included airplanes, motors, devices of different applications, cartridges, detonating fuses, mines, explosives, and other military products.

The following munitions were produced during the war years:

822 trench coats,
2,350,000 sets of wide trousers and a high-collared blouse,
8,169,000 sets of underclothes,
6,000,000 pairs of felt boots,
5,000,000 pairs of army boots,
118 fur coveralls,
197 pairs of mukluks,
4,400,000 hats,
113 tonnes of soap,
21 tonnes of rusks.

Industrial cooperation artels fixed over 1 million sets of clothing. About one million grenade bags and 250 park accessory sets have been produced.

The number of plants and factories increased by 18 over the war period to amount to 157 by the end of the war. Plant No. 15, the Motor Repair, Bearing Repair Plants, Children's Footwear and Primary Wool Processing Factories, seven district industrial combined plants, and some other facilities were re-established.

The number of industrial workers in the city grew from 80,000 to 127,000 people. Direct labour grew proportionally from 52,000 to 90,000 people.

Worker productivity was increasing year by year.

Gross output per worker for the city's industry was:

in 1941	19,8 roubles
in 1942	26,8 roubles
in 1943	32,2 roubles
in 1944	40,0 roubles

Workforce productivity increased by 60% over the war period. The reason behind such workforce productivity was intense measures taken at our plants to introduce new labour organization methods and devices.

The introduction of production flow lines was of special importance. 165 flow lines involving up to 8,000 workers were established. <...>

Inventors and efficiency experts played a major role in the plant's technical growth. Efficiency innovations saved a total of 177 million rubles over the war period.

By practicing social competition and using new forms of labour organization, our Stakhanovite workers made a major contribution to improving workforce productivity.

It was a common practice at plants and factories to establish youth Komsomol and front teams.

The number of Stakhanovites was growing year by year. While the total number of Stakhanovite and shock workers in 1941 was about 27,000, or 41% of the total direct labour, the amount had grown to about 45,000, or 58% of the total direct labour, by 1944 <...>⁶⁴.

Our youth and women played the important part of replacing male workers who had gone to the front. The pre-war percentage of female workers being only 18%, the figure had grown to 49,500, that is, 44.5% of all workers, in 1944. The percentage of women in the consumer goods industry was as high as 83%. The young constituted more than a half of the staff at many facilities, including our leading plants, such as No. 16.

Plants in our cities were engaged in the All-Union Socialist Competitions and came out high in the rankings several times. Of 47 plants engaged in the All-Union Competition, 42 were prized 334 times for high performance. 14 plants took the Red Banner of the Central Committee of the CPSU(B), the SDC, and the All-Union Central Council of Trade Unions 144 times.

The city's following 6 largest plants were awarded governmental orders for uninterrupted supply of weapons and munitions to the Red Army:

1. Plant No. 16—the Order of Lenin
2. Plant No. 237—the Order of Lenin
3. Fur Factory—the Order of Lenin
4. Plant No. 22—the Order of the Battle Red Banner
5. Plant No. 387—the Order of the Battle Red Banner
6. Plant No. 8—the Order of the Labour Red Banner

Deputy Secretary of the City Committee of the CPSU(B) Ilyin

SA HPD TR, c. 26, f. 18, f. 17, s. 38–48.

⁶⁴ Specific examples of Stakhanovite labour in industrial plants are omitted.

No. 105

**An Extract from the Resolution by the Tatar Regional Committee of the CPSU(B)
'On Mistakes and Drawbacks in the Work of the Tatar Scientific and Research Institute
for Language, Literature, and History'**

6 October 1944

Top secret

Instead of carrying out scientific research on the history of Tataria, studying and widely presenting the history of the joint struggle of the Russian, Tatar, and other peoples of our country against foreign occupants, against Russian tsarism and oppression by capitalist landowners, as well as the history of the social transformation of Tataria over the Soviet period, instead of popularizing prominent people, revolutionaries of the Tatar nation and heroes of the Patriotic War, the institute has been primarily engaged in studies on the history of the Golden Horde and literary records of the 12–16th centuries. <...>

In its works <...> the institute has made serious mistakes. They largely consist in presenting the Golden Horde as an advanced state, a country with a well-developed economy and culture, which is undoubtedly inconsistent with the historical truth. While preparing the works, the institute ignored such features of the Golden Horde as its being an aggressive state that initiated wars of conquest and campaigns to rob the land of the Russian nation and its neighbours, a state where peoples were heavily oppressed and impoverished. <...>

It was a fundamental mistake to fully equate the history of the Golden Horde with that of the contemporary Tatar people. <...>

The institute also made a serious mistake in studying, estimating, and popularizing the feudalistic khan epic of Edigü. The institute has been popularizing an entirely false concept of it as a heroic epic of the Tatar nation across Tataria. The institute has omitted the fact that the 'Edigü' epos expresses ideas alien to the Tatar people, as well as any other USSR people—hatred for the Russian people and the ideas of uniting all Tatar tribes in all steppe areas across the Desht-i Kipchak. <...>

Works by some historians (Bashkirov, Cherepnin) present the annexation of Kazan by Moscow only as a conquest and occupation while ignoring the historically progressive meaning of the event.

The Bureau of the Regional Committee believes that the institute's mistakes consisting of embellishing the Golden Horde, completely ignoring its aggressive nature, presenting the Golden Horde as the origin of the Tatar people, which is unscientific, misinterpreting the feudalistic khan epic of 'Edigü', and taking a biased approach to the annexation of Kazan by Moscow—interpreting it as a conquest—are nationalist mistakes aimed at undermining friendship between the Russian and Tatar peoples.

The Bureau of the Regional Committee has also found serious mistakes in the institute's materials on the history of Tatar literature. The circular note on the periodization of the history of Tatar literature, accepted in 1940, ignores the enormous progressive influence that Russian culture has had on Tatar literary works and fails to present either the negative way in which Islam affected the development of Tatar literature or the struggle of advanced representatives of the Tatar people (K. Nasyri, G. Tukay) against religionism and the Islamic clergy.

The institute has also made mistakes in studying Soviet Tatar literature. The work 'Tatar Literature over 25 Years' essentially denies that Tatar literature has improved ideologically and artistically over the Soviet period. <...>

The Bureau of the Regional Committee of the CPSU(B) hereby resolves:

1. To remove from office the Director of the Tatar Scientific and Research Institute for Language, Literature and History Comrade Kh. Yarmukhametov for failure to cope with his work and overlooking grave nationalistic mistakes in the institute's works and issue a reprimand to him. <...>

2. Suggest that the Management of the Tatar Scientific and Research history should rectify the mistakes and radically transform the institute's scientific and research activities in full concordance with the Resolution by the Central Committee of the CPSU(B) 'On the Progress and Improvement Measures of Political and Ideological Work in the Tatar Party Organization'. <...>

3. Request the Central Committee of the CPSU(B) to establish a permanent board for the history of Tataria under the Historical Institute of the USSR Academy of Science, which is to be responsible for both studying the most difficult and under-researched issues related to the history of Tataria and editing the most important scientific and popular scientific works by the Tatar Institute for Language, Literature, and History. <...>

No. 106

An Extract from the Resolution by the Bureau of the Tatar Regional Committee of the CPSU(B) 'On the Textbook in Tatar Literature for the 8th Form of Secondary School'

2 September 1948.

Top secret

The Bureau of the Regional Committee of the CPSU(B) hereby notes that the textbook (chrestomathy) in Tatar Literature for the 8th grade of the secondary school, finalised for publication in 1946, was published in 1947 without any radical revising in spite of serious mistakes and corruptions in it. No. 19 of the newspaper 'Kul'tura i zhiz'n' ('Culture and Life'), dated 11 July 1948, contained the entirely correct remark that the compilers of the textbook 'lack a critical approach to the literature of the past, omitted to mention mistakes by some writers, and deliberately included wrong and harmful works'. <...>

The textbook provides a poor coverage of Russian classical literature and contains too little information on the influence that Russian literature has had on the development of the Tatar national culture. The sections on ancient Tatar literature and that of the 17th–18th century are badly written and confusing. The text lacks consistency and cohesion. Many historical events are presented in a corrupted manner.

The textbook includes harmful works (the poem 'Saxıpcamalga' by G. Kandaly, the drama 'Raddı bıçara Kız' by F. Khalidi, etc.), which idealize the life of mullahs, beys, and merchants, while overestimating such writers as Utyz İmyani, Maulya Koly, and G. Kandaly and failing to correctly depict their works as idealistic, primitive, and unrepresentative of the popular interests. The textbook fails to cover the negative way in which Islam and Sufism affected the history of the Tatar people's culture and misinterprets Jadidism, which eventually turned into a counter-revolutionary movement. <...>

The Bureau of the Regional Committee of the CPSU(B) hereby resolves:

1. To declare that the textbook of Tatar Literature for the 8th form of the secondary school, 1947 edition (written by L. Zalyay, edited by Gazi Kashshaf), fails to meet the requirements of a communist upbringing of pupils and contains grave misinterpretations of Tatar literature and harmful works; and to forbid the textbook for secondary schools of the Tatar ASSR. <...>

No. 107

**An Extract from the Resolution by the Bureau of the Tatar Regional Committee
of the CPSU(B) 'On the Mistakes in Textbook in Literature for the 8th grade
of the Secondary School'**

18 January 1952

Top secret.

The Bureau of the Regional Committee of the CPSU(B) hereby notes that the Ministry of Education of the Tatar ASSR and the Institute for Language, Literature, and History of the Kazan Branch of the USSR Academy of Sciences have shown neglect of the resolution by the Bureau of the Regional Committee of the CPSU(B) dated 2 September 1948, under which they were obliged to make sure that a textbook meeting the requirements of communistic upbringing of pupils was published through wide engagement of leading teachers and academic workers. <...>

In contradiction to the historical truth, the textbook still idealized the religious and mystical works of the early 17th–late 18th century's Sufi Maula Kuly, who praised the most retrograde Islamic sects in his poems, namely Sufism, Ishanism, which advocated for keeping aloof from earthly concerns, surrendering to fate and oppressors. <...>

The textbook also misinterprets works by Utyz Imyani, the author of the poem 'The Clarification of Thoughts.' The poem is religious and mystical, that is, retrograde in nature. Yafarov has corrupted the content of the poem heavily. He took advantage of the text being not widely known in the academic community to give a false assessment of the poem as containing messages which it by no means contains and to present Utyz Imyani as a person who praised the friendship of peoples, namely the Tatars and the Russians, while the poem praises Islam and teaches hatred those of other faiths. <...>

The textbook omits to clearly identify Jadidism as a bourgeois nationalist movement. The Jadid movement originated with the Tatar bourgeoisie to protect the local market from any 'foreign' bourgeoisie. Its ideology was that of pan-Islamism, pan-Turkism, class peace within the Tatar nation for the sake of 'national unity', which would sever the Tatar nation from Russia and turn it into an appendage of the corrupt empire of Turkish sultans.

After the October Socialist Revolution, Jadidism became part of the national counter-revolution, its representatives fighting against workers and peasants in alliance of White Guardians and intervenors. What remained of them later joined Trotskyist-Bukharinist nationalist gangs as agents for capitalist intelligence services. <...>

The Bureau of the Regional Committee of the CPSU(B) believes that the occurrence of bourgeois nationalist opinions and mistakes in Tatar literature and history suggests that historians and literary scholars of Tataria have not made any conclusions from the Resolution by the Central Committee of the CPSU(B) dated 9 August 1944, and have taken a formalist approach to executing it <...>. Literary scholars and historians have not transformed their activities in accordance with the instructions by Comrade Stalin specified in 'Marxism and the Problems of Linguistics'. <...> The Bureau of the Regional Committee of the CPSU(B) hereby resolves to:

1. To expel B. Yafarov from the CPSU(B) for grave nationalist mistakes and falsification of literary records.

2. Issue a reprimand to the Director of the Institute for Language, Literature, and History of the Kazan Branch of the USSR Academy of Sciences M. Gaynullin for negligence of the Resolution by the Bureau of the Regional Committee of the All-Union Communist Party (Bolsheviks) dated 2 September 1948. <...>

5. Oblige the TASSR Ministry of Education (comrade Valiullin):

a) to develop and report to all Literature teachers methodology guidelines for correcting the mistakes in the textbook. Withdraw the Tatar Literature textbook for the 8th form as soon as the academic year ends <...>.

SA HPD TR, c. 15, f. 33, f. 108, s. 113–117.

No. 108

**An Extract from the Letter by N. Sokolov to Chairman of the Presidium of the USSR
Supreme Soviet N. Shvernik**

17 January 1949

I, Nikolai Sokolov, am a young Communist. I was born in the time of the Soviet government, brought up at a Soviet school, and I am currently being brought up by the great party of Lenin and Stalin. I am true to the Komsomol idea in every cell of my body, to the bone.

<...> The truth of our propaganda about the past and the future is pure and great; it appeals to every Soviet heart. However, our propaganda about the present is runs over with stinking dirt and impedes, oppresses, and ruins our trust in the future. <...> Newspapers describe and depict our kolkhoz members as 'rolling in cheese and butter' <...>. What is the actual situation?

<...> Expecting to get some grain, even a little, kolkhoz members have worked hard. But when harvest time was over and the specified amount was handed in to the government, there was hardly anything left for them. However, 'chief' commissars issued an 'obligation' to J. Stalin to oversupply crops. They wrote 'in behalf of kolkhoz members'; but kolkhoz members did not read the obligation until it appeared in 'Pravda'. In the meanwhile, cars and carts came to kolkhoz granaries with orders to confiscate any crops, and kolkhoz members were never rewarded for their hard work, they have to feed on potatoes grown on their household plots; some have processed orach.

<...> This is the sentiment of the kolkhoz. They curse our party, our leader J. Stalin, and our Central Committee, blaming Moscow for their suffering, their hunger. <...> Where is our Communist conscience, our truth? They say one thing and do another. It is the 3rd letter that I have written to you; dozens of people have written to you and the Central Committee of the CPSU(B), but no measures have been taken. People are famished, fraud, subservience, lies, and deception are blatant <...>.

<...> I think you never get to read the letters, for 'censorship' must be 'honorably' destroying them.

<...> Urban workers and dwellers have enough bread now, because the country of our breadbasket is severely famished. This is especially true in the Apastovo district of our republic. We cannot stand it anymore; people do not hope to see the spring; it is brutal, a hundred times worse than imperialism <...>. The attitude to working peasants is not Communist-like; its imperialistic and even worse; it's brutal <...>.

Suggestions:

Since kolkhoz members have lost faith in a happy future, as they previously lost faith in God, the following has to be done to get them interested:

1. Abolish the practice of 'trudodni' and payments in kind.
2. Introduce task work with monthly monetary payments.
3. Introduce free cooperative governmental grain trade in the country, as it is in the town. It would bring about the following benefits:
4. All kolkhoz workers would be a hundred times more motivated.
5. All people would be equally well-nourished.

This would eliminate fraud, subservience and deception. <...> People keep thinking and saying that even the serfdom of the past was a hundred times better than the present moment, for people had enough food and their masters did not lie to them.

SA HPD TR, c. 15, f. 30, f. 1, s. 6–7.

No. 109

An Extract from the Protocol by the CPSU Regional Committee 'On the Progress and Improvement Measures of Russian Language Teaching at the Republic's Primary Schools'

1954

The Bureau of the CPSU Regional Committee hereby notes an unsatisfactory state of the practice of teaching the Russian Language at the republic's ethnic schools. The scope of knowledge of pupils of primary, seven-year, and secondary schools still does not meet the requirements specified in the Resolution by the USSR Council of People's Commissars and the Central Committee of the All-Union Communist Party (Bolsheviks) dated 13 March 1938 'On Compulsory Training in Russian Language at Schools in National Republics and Regions'. Russian Language academic performance at the republic's ethnic schools remains low.

This results from the fact that the TASSR Ministry of Education and its local agencies, as well as party city and district committees, executive committees of city and district soviets of workers' deputies have neglected to draw the necessary conclusions from the instructions by the Central Committee of the CPSU(B) and the USSR Soviet of People's Commissars that, given the multi-ethnic community of the USSR, Russian skills must be a powerful means of communication among the peoples of the USSR to ensure their further economic and cultural growth, improvement of national human resources in terms of academic and technical knowledge, and that Russian skills are a prerequisite for successful military service in the Soviet Army and Navy for every citizen of the USSR.

An inspection has revealed the low ideological, theoretical, and academic level of Russian teaching at many national schools. Russian grammar is studied separately from the living spoken language. This practice often consists in the mechanical learning of definitions and rules without any systematic exercises to reinforce knowledge. Too little attention is being paid to correct pronunciation and representative readings. Students' requirements are low while the marks they get are often high. Many national schools teach Russian Language without any connection to the grammar of the native language.

Out-of-school activities and out-of-school Russian reading have been underestimated and underdeveloped. School libraries at national schools have a very poor choice of literature in the Russian language. The Regional Committee of the All-Union Leninist Young Communist League, Komsomol district and city committees have failed to make sure that Komsomol organizations at ethnic schools take measures to ensure successful development of Russian skills in pupils or initiate enough themed literary evenings, readers' conferences, or group film watching.

The TASSR Ministry of Education has been exercising no systematic control over and profound analysis of the state of Russian Language teaching at national schools. It has failed to apply proper requirements to inspectors of the Ministry of Education as well as heads of schools and departments for popular education in terms of improving academic performance in the subject. As a result, the state of Russian Language teaching has not been checked in any district of the republic for a long time. Intra-school control is also poor.

No. 110**An Extract from the Anonymous Letter by Oil Industry Workers to N. Khrushchev**

1955

'Tataria has become a major oil-producing area. But why is Tataria not taken into account? Towns and settlements that are built here look like prisoner camps. There is nothing but barracks. No streets, running water or electricity. It's very much like camps of the Ministry of Internal Affairs. Schools have 2 to 3 shifts. There are no proper hospitals. There are no cinemas or cultural centres. If Ukraine, Uzbekistan, or Georgia had Tatar oil, I think the regions would have everything. But nobody seems to care about the Tatar people. It looks like someone is mocking us'.

No. 111**Report by First Secretary Z. Muratov to the CPSU Central Committee on Anti-Soviet Leaflets Found in Kazan, 30 April 1956.**

The Tatar Regional Party Committee hereby reports that 35 letters were found in post boxes in the city of Kazan on 30 April of this year, each consisting of 5 pages and containing an anti-Soviet bourgeois nationalist proclamation. The letters address various establishments and figures of the Tatar and Bashkir ASSRs, Arzamas, Chkalovsk and Kuybyshev regions, primarily to the Tatar pedagogical institutes, academies and schools.

The proclamation is signed by I. Bikbulat on behalf of a 'committee for the organization of opinions on the question of national freedom'. The proclamation is handwritten in block letters in the Tatar language and copied by one person using copy paper.

The proclamation says that the Tatar people have been suffering for 400 years. 'The sanguinary centuries have been marked by every kind of misfortune, including poverty, famine, suffering, exile, forced baptism, torture... It applies not only to the past but to the present. The Bolsheviks try to look like liberators of oppressed peoples. But what is the difference between the 'freedom' that they have given to the Tatar people and the burden brought by bloody Ivan's Oprichniki?

How many sons and daughters of our nation have they destroyed over the past 30 to 40 years? How many people have died in prisons, mountains in the Far East, steppes in Siberia, concentration camps in the Ural Mountains, in Vorkuta, innocent sons and daughters... The Tatar people suffer as heavily as they did before the October Revolution, heavy forced labour and grinding poverty.

The author then writes that a policy of pressure, Russification, and persecution for national traits has been implemented in education. Children have no access to higher education in their mother tongue; secondary schools provide poor education. The number of secondary schools has been gradually decreasing even in Kazan. No Tatar schools offer instruction in the native language in Ufa and Tatar-populated districts... One cannot discuss any issue related to Tatar culture freely. Over the past 20 to 30 years, many sons and daughters of the Tatar people have become victims to the Bolshevik terror for saying out loud, 'I am a Tatar'. Tatars living in other districts of the Union have no access to books, newspapers, magazines, and fiction in their mother-tongue... Newspapers and magazines in the Tatar language were issued, Tatar clubs and libraries worked in Moscow, towns in the Volga Region, the Urals, Siberia, and other republics for a long time; but now everything is gone... Where can our people find food for thought to enrich their national culture under such conditions? These are the fruits of the Leninist-Stalinist

policy for the Tatar people. Even though we have not tasted the fruits of the ethnic policy meant for the peoples of the Crimea and the Caucasus, the Bolshevik policy here is the same as it is in the Crimea and in the Caucasus. Works by such writers as G. Ibragimov, K. Tinchurin, and F. Amirkhan must not be mentioned, not to speak of their being published. The only purpose of this is to keep the Tatar people completely dependent and instill a lack of self-confidence in them.

The proclamation ends as follows: 'What has to be done to put an end to this unfair practice? Some people think that we should turn to the CPSU Central Committee. Waiting for something from the Central Committee or their hirelings in the regions is a form of self-deception... The current leaders are wrong to blame all the atrocities of some 30 or 40 years on Stalin alone. Their hands are also covered in blood, shed throughout the years of Stalin's dictatorship. They contributed to the establishment of a bloody dictatorship. Stalin's supremacy, based on terror, survived with their help, and the Tatar people do not care whether there is one dictator leading the Russian government, or 10 to 15 party aristocrats, or whether the national policy of the ruling communists is called that of Leninist or Stalinist. Their policy relies on Russian chauvinism... We can only trust in the people, who have suffered a lot. We should turn to them, mobilize their pure, fresh power. We have to explain the basics of the Russian chauvinists' policy to our people now. We have to take measures to make our people unite against the policy. Our people should be ready to take their future in their hands when the day comes'.

The proclamation contains the following request: 'To begin with, please copy the proclamation and distribute it. Hide the original as far as possible. It will prove your participation in the movement when the time comes. Let us struggle for the future of our people! Let our first step be exchanging opinions in this way'.

Measures are being taken to prevent further distribution of the proclamation and to find its author.

No. 112

An Extract from the Speech by Director of the Local History Museum Dyakonov at the Meeting of Party Activists of Bauman district, Kazan

27 January 1956

Visitors arriving in Kazan find it extremely hard to find a hotel room. We have 4 hotels. Part of the rooms are occupied by permanent residents /it's outrageous!/. Part of the rooms in the 'Kazan' Hotel are being repaired. They are meant to be used for foreign tourists in the future. Just imagine, Kazan has 4 hotels now, while there were 34 before the revolution! The population of Kazan was only 120–140 thousand people back then. Now it is almost 5 times as large.

We need to build at least 2–3 more hotels. Maybe we should rather build 2–3 nice residential houses to accommodate residents of the dedicated hotel buildings in the city centre. This might be a bad idea, but the issue of increasing the hotel capacity of Kazan is a burning one and has to be addressed.

Let me make a couple of remarks and mention some issues as soon as we are talking about construction. Firstly, comrades say that the construction of the House of Soviets has been temporarily shut down. Why is it so? We prepare designs, discuss and approve them, arrange sites, provide equipment, make foundation pits, spend large amounts of governmental money and... nothing happens! This seems to be a common practice in Kazan. If a decision has been made, we should persevere, we should complete the construction to prevent the notorious theatre story from repeating.

Secondly, a group of French journalists visited the State Museum of Tataria in the autumn, and we felt uneasy again as we had to provide explanations concerning our famous 'Begemot' (museum building) to foreign journalists, and—mind it—those of a retrograde French newspaper. Did the Germans throw bombs on it? No.

So what's the matter? We find ourselves in the same situation whenever a group of visitors comes to Kazan. We shouldn't deceive the public and the Kazan people anymore. We have no money. So we have to put in order the awfully dilapidated building in the city centre.

Directive guidelines are issued concerning the construction of the Kazan–Gorky gas pipeline. We are happy to know that Gorky people will soon be using our Tatar gas. However, we are not happy to know that it is apparently Gorky and not Kazan where most of apartments will have gas supply first. The population is beginning to view our City Gas Service as a second opera theatre. The city's gas supply network is developing poorly and at a very slow pace. If we made a competition board for cities struggling to ensure gas supply, I'm afraid our City Soviet would be riding a turtle. Isn't it going to unmount the turtle as a symbol of backwardness even at the end of the five-year plan?

I should make a television remark, too. We need to consider building a TV centre in Kazan. That amateur centre is ridiculous. We need to establish a new centre, which is a need of ours.

SA HPD TR, c. 19, f. 45, f. 72, s. 19–21.

No. 113

An Extract from the Speech Delivered at the Meeting of Party and Economic Activists of Bauman district, Kazan, on the Issues of Development of the Republic's Historical Science and State Museum

22 March 1956

We hardly ever have arguments and discussions. I can think of only one episode when we were engaged in really enthusiastic discussion. It seems like some leading historical academicians of Kazan are eager to protect their historical backstage from any fresh breeze, or maybe it's their esprit what they are protecting. Maybe someone doesn't want to upset their relations with friends.

Consider the issue of the Kazan Khanate. Comrades from the branch of the Academy of Sciences believe it to be very clear and unambiguous. But some comrades in Moscow disagree with these comrades from Kazan. Why not have a round-table discussion? Don't shrug it off. As the saying goes, truth is sprout in discussions.

A Society of Historical and Archaeological Ethnography once existed in Kazan. The society united historians residing in the city and regularly published its 'Izvestiya' journal, which contained many works on the local history, for many years. Both the society and the journal ceased to exist in the 1930s. Why not re-establish these bodies now that the historical community of Kazan has grown a lot and its need for such a journal has become pressing?

It is no secret that many comrades here have manuscripts finalised for publishing, which nobody is willing to print, though. Why? We should call a spade a spade. They are afraid lest something goes wrong... They want to play it safe!

Several years ago, the museum finalised a volume of its proceedings for publishing. We had several reviews per article. The Tatgiz Publishing House, in its turn, began to look for more reviews. Everything was fine. However, that was not enough: Tatgiz did not trust the reviewers and sent the manuscripts to the Regional Party Committee—just in case.

Every trace of our work was lost until after a year or a year and a half. Nobody seemed to mind publishing it, but nobody took any measures to make it appear sooner. The so-called cautiousness caused many works in local history to be buried in secret collections, withdrawn from academic use, sometimes for petty reasons; access to archives was impeded; candidate's theses on collectivisation,

industrialisation, the history of the Stakhanovite movement relied on newspapers and not archive references. In a manner of speaking, serious reprimands to historians announced at the meeting oblige us to make the appropriate conclusions. Institutions engaged in historical academic activities need fresh air.

Speaking of opening archives for academic studies, we should mention the declassification of some cases which, I think, have never been secret. Once, we made a model of self-propelled combine harvester produced by a plant of ours. We invited representatives of the Glavlit to see it. They refused flatly on the pretext that it was a secret. We file a complaint to Moscow, because we even had posters on the streets in Kazan, reading like, 'Today the Club of the Self-Propelled Combine Harvester Plant... ' Moscow sends a paper to Kazan. Another no. 'Ogonyok' appears with a color photo titled 'The Kazan Self-Propelled Combine Harvester Plant... ' Yet, it's a no. 'Ogonyok' has already reached London and Washington, but the instruction is no.

The situation was the same with the outboard motor, the 'Zvezda' TV set, and even the ill-fated washing-machine.

We still mustn't mention the Compressor Plant here in the museum, while trams are running on the streets with a banner reading, 'Kuybysheva Str.—Compressor Plant,' but the Oblit (official censorship organ) says, 'why, there's no compressor plant in Kazan'. So our exhibits here are soap and candles, women's shoes, fur articles and cakes. These are lawful, so we get a false mirror.

I would therefore like to raise another issue—that of publishing at least rough plans of the Kazan city centre for tourists. Of course, I can see Oblit faces express fear. Is there anything to be afraid of? Once in Leningrad I saw a blue-water sailor, who, by the way, came from Kazan, hold a beautifully printed plan of Kazan in English. He had bought the plan in a New York tavern. Last year, a French tourist used the same plan for his tours around our city. However, we prefer to lie low. Is it really what we should hide?

Scholars, propaganda workers all have been banned from viewing statistics. Try and get a trifle of a reference from the Central Statistical Directorate, for instance, how many passengers the Kazan tram carried in 1947. No way! You have to get a special permission, executed in writing and bearing the stamp and signature of the Chairman of the Council of Ministers.

No. 114

'On the Future of Tatar Culture!'

An Extract from the Letter to the Editorial Office of *Literaturnaya Gazeta*
(The Literary Newspaper) by Readers Gumer Enverov and Shamil Fakhrulislamov

1956

Our country is a multi-national socialist state. The backward and downtrodden nations within the Russian Empire, which was the prison of nations, soon were able to develop their economy and culture to an unprecedented extent after the October Revolution. Thus applies to our Tatar people. Tatar literature and art, national by form and socialist by content, have been created. A Tatar intelligentsia has formed; we have national composers and writers, many of whom are popular not only with their nation, but also across the Soviet Union and even abroad. Our republic is currently preparing for the Decade of Tatar Literature and Art in Moscow to demonstrate the cultural achievements of the Tatar Republic.

The classic theorists of Marxism-Leninism expected nations to cease to exist under the conditions of Communism. However, this is to happen over a large period of time, after each nation has enjoyed its prime. This also applies to our people.

However, to ensure further development of the national culture, the youth has to become the successor to the past generations, inherit the best traditions of our culture.

It is obvious that the younger generation not only does not have any knowledge of the native literature and art, but it cannot even express its thoughts correctly in its mother-tongue; it is not uncommon for our young people to have vague knowledge of even the colloquial language. But we had famous writers and poets, such as G. Tukay, G. Ibragimov, M. Dzhilil, and many others. What causes these adverse trends? The reason is that most Tatar children, even in some villages, go to Russian schools, which offer no classes in Tatar language and literature. Don't we have national schools? Yes, we do, and each citizen can send his or her children to such a school. However, no matter how much the parents love their language, they will rather send their children to a Russian school for the sake of their future, since IHLs and technical schools carry out their entrance examinations and provide instruction in Russian. Taking into account the current competition, it would be difficult for a Tatar school leaver to enter an institute. This is why Tatar schools are not widely popular and have been gradually losing pupils.

For instance, School No. 18 had to establish forms with instruction in Russian because of poor admission statistics. At the same time, Tatar percentage is high at Russian schools.

It would be reasonable to introduce an optional examination in Tatar at Kazan IHLs. This would be helpful for gifted young people from rural areas, where opportunities of mastering the Russian language can be scarce. The role of Kazan as the cultural centre of the entire Tatar nation would therefore become more important, since a large part of the Tatars lives in rural areas.

Since a large part of Tatar young people attend Russian schools, where their percentage is considerable (sometimes they even constitute the majority), it would be reasonable to introduce classes in Tatar Language and Literature to Russian schools. This is the only way to make sure that the young generation develops good knowledge in its native language, script, and literature. It is also a common fact that IHLs in unity republics carry out entrance examinations in national languages. Russian schools also teach national languages. The TASSR is as big by area and population as the union republics. The only difference is that it does not border on foreign states. It is this minor aspect of bordering on foreign states what determines the difference between our schools and entrance examinations to IHLs and those in other republics. We believe it to be wrong. There was a period when all schools in our republic offered classes in Tatar Language and Literature, but the practice was abolished for some reasons. Our republic has a larger population than the Kyrgyz, Turkmen, Tadzhik, Armenian, Moldavian, Estonian, and Latvian union republics. The Tatar population of the TASSR alone is as large as 2 million people. There are over 600,000 of them in Bashkiria and many in other republics and regions.

The thing is, however, that all nations in the USSR have equal rights. The TASSR Constitution stipulates that the Tatar language along with Russian is an official language of the TASSR. How can comprehensive schools not provide classes in the republic's official language? What kind of a republic is it, by the way? The republic is the USSR's largest oil producer and has well-developed industry of all-Union importance and advanced agriculture. The Tatar percentage of TASSR workers is high; most of our republic's kolkhoz peasants are also Tatars.

Most of school and technical school leavers become workers at plants, MTS's, kolkhozes (collective farms) and sovkhozes (state farms), where knowledge of Tatar will not prevent but rather favour close connections with the masses. Many go to the virgin land of Kazakhstan, where the population speaks Tatar, for those who know Tatar can easily express their thoughts in any Turkic language. The population of five union and several autonomous republics, largely concentrated in the country's east, speaks Turkic languages. These areas are our country's future. They develop rapidly, shifting the gravity centre of our industry to the east, which has been causing and will continue to cause youth migration to the regions.

So we suggest that an entrance examination in Tatar (for Tatars) should be introduced to increase the percentage of Tatar students in IHLs in our republics and refill the Tatar intelligentsia with fresh force coming from the deepest of the people. We also suggest that Tatar Language and Literature subject be introduced at schools in our republic, which will ensure more polytechnic education and bring the Soviet school closer to life as intended by the 20th Congress of the Communist Party of the Soviet Union.

**The Letter by Sh. Mannur to First Secretary of the CPSU Central Committee
N. Khrushchev**

18 May 1957

Dear Nikita Sergeevich!

Even though I know you to be very busy, I would like you to dedicate 10 minutes to this letter. I considered turning to you for a long time but would not dare to, since I was afraid that I could be wrong. Then the Hungarian events prevented me from doing so. Now that it is over, I can write to you a letter about the most burning issue for me. It is that of the situation in the Tatar ASSR.

We, the common 'national' Communists believe that the 20th Congress was a Leninist shift of our Party turning its face to the peoples of the Soviet Union. Its greatest concern have been the union republics: their political, economic, and cultural rights have been extended; many plants and institutions have been transferred to them, national human resources have been grown and they are encouraged to administer their republic. Shortly speaking, measures have been taken to ensure truly equal rights for all the 15 union republics with time.

We were also happy to hear the 6th Session of the USSR Supreme Soviet declare the restoration of the rights of smaller nations, which had been recently abolished without any legal justification. That act will wipe the disgrace off the socialist country in the face of history. (It remains unclear, however, why the Crimean Tatars have to remain in exile.)

We find these measures taken by the party very inspiring. Locally, however, the situation is less favourable. The life is especially tough in certain autonomous republics and regions. It seems like the rights of autonomous republics have been limited increasingly over the recent 25 years. The present situation in the Tatar ASSR has aroused concerns in a number of Communists, in a number of honest people.

Firstly, the republic's kolkhoz peasantry is facing a serious economic challenge. Most of the peasants never have enough bread, which they make themselves. The majority has been receiving an average of 200 to 500 grams of grains per workday over the past 18–20 years. They largely rely on their potato gardens and had to feed on grass during the war and for some time after it ended. A generation of stunted teenagers called 'potato generation' has grown. Of course, we have up to 50 million-strong kolkhozes and several dozens (even up to one hundred) of medium kolkhozes. They do not determine the situation, though. Once again, the vast majority are backward kolkhozes. They have no monetary income and poor animal breeding. Lack of fodder in the winter causes considerable stock losses. For instance, one of the districts lost 1500 heads of livestock from October to March this winter. Swine breeding farms in most Tatar kolkhozes are not only unprofitable, but also in a sad condition.

To make it even worse, croplands, especially in the north-east, are heavily impoverished. The entire right bank of the Kama River is hilly fields with many deep ravines, where red clay soil contains very little crop nutrients and where spring-autumn streams is increasing soil erosion year by year, putting more and more land out of use. Though the south and south-east of Tatarstan are characterised by better

soil, the area is mostly occupied by the oil industry. Even those areas, just as the rest of Tataria, are too dependent on climatic conditions. If we see no rain in June, we get no crops.

In spite of this, the crop supply rate for our republic is rather high. They say we have to supply twice as much as our neighbours do in Chuvashia, which, by the way, has better and more fertile soil than we do. In some years, kolkhozes are unable to keep their seed stock or any fodder—everything is taken away to fulfill the crop supply requirement. Payment for workdays is out of question. Another reason why our kolkhozes are so backward is the lack of truly gifted, pro-active, and skillful human resources. The republic's authorities have practiced a superficial, aloof approach to kolkhozes. For instance, I know a rural district where the Secretary of the Regional Committee has not been for 6 years.

Therefore, our kolkhoz peasantry is economically far behind that of Ukraine, Azerbaijan, Uzbekistan, Kazakhstan, Kyrgyzstan, Baltic republics, and many regions within the RSFSR. ... The question I would like to raise is why should the kolkhoz peasant of the Tatar Republic suffer so heavily in economic terms when compared to its brothers from other republics and regions? (I think the situation is pretty much the same with the Udmurt, Mari, and Bashkir ASSRs).

Secondly, the living conditions of urban workers in Kazan, Chistopol, Yelabuga, Mamadysh, Bugulma, Tetyushi, etc. also leave much to be desired. The city of Kazan, as the capital of autonomous republics, has a much poorer supply of articles of prime necessity when compared to Kiev, Kharkov, Sverdlovsk, Tashkent, not to mention Moscow and Leningrad. A vast majority of Kazan's population buys food on the market at the double or triple price. Rural areas are not even properly supplied with tea and sugar. This is especially hard for Tatars. Housing is inadequate in Kazan. There are many emergency houses, in very poor condition, buildings, requiring a capital master plan, where large families of workers and employers live in precarious conditions. The City Executive Committee workers don't care much about it, residential construction in the city is miniscule. Only the outskirts are growing with numbered plants. The city is utterly neglected; its streets are in a horrible condition; splendid buildings are rotting and falling apart because of inadequate roofs, guttering, basement repair.

Thirdly, the percentage of national production and academic staff is ridiculously small. There are hardly ever any Tatar managers and senior staff in the republic's state apparatus, ministries, institutions, plants, factories, railway and water transport, oil industry and numbered plants, IHLs in Kazan, and no training is offered, though it would be logical if they occupied key positions. At least 90% (if not more) of the engineering and technical staff in our oil industry come from other areas. About 40 oil industry workers come from other areas, while even larger labour force leaves Tataria for other regions and areas. Characteristically, Bavly, Almetyevsk, and Aznakayevo, which constitute the centre of oil industry, are all-Tatar areas. However, the percentage of Tatar oil industry employees there is as low as 40%. Thus, the engagement of population in production is extremely poor.

Most industrial workers in Kazan have low or middle qualifications. Nobody cares to ensure training for highly qualified Tatar workers to constitute the core staff of their plants. I am saying this because the Tatar worker had no access to machines in the tsarist times. Now we should ensure a maximum involvement in advanced technologies for him.

Tatar doctors and candidates of sciences, professors, and teachers are very few in IHLs in Kazan. There is not a single Tatar member of the Academy of Sciences. Secondary school teachers are also poorly trained. At least 50–60% of the staff has to be replaced. Most of our secretaries of CPSU regional committees and chairmen of district soviets are outdated and have no higher education. Many of them can only control people and communists through administration and tongue-lashing. Unfortunately, they include some officials of the Tatar Regional CPSU Committee.

Fourthly, we have a lot of confusion and perversion in the sphere of enlightenment, language and literature, culture and art. All records management and even legal proceedings in Kazan and many other districts are based upon the Russian language. Our leaders make all their public speeches in Russian. They keep cutting down on Tatar Language and Literature in Tatar secondary school curricular. The hours are used either for polytechnisation or to reduce the number of subjects and reinforce training in

the Russian language. However, Tatar secondary school leavers are mostly unable to enter IHLs of Kazan because of their poor Russian skills. Part of the Tatar people have come to view the Tatar language as outdated and unnecessary, for everything is in Russian, as it used to be in the old time.

As a result, there are only 4–5 Tatar schools in Kazan. They will also cease to exist soon. Parents are reluctant to send their children there. However, such issues as education in the native language and cultural development in the national form were among the people's revolutionary achievements of the Great October.

The aforementioned facts arise the following questions:

Does the great Russian people need us, or does the Party demand us to fully switch to Russian and gradually replace our mother-tongue?

Will the languages of the peoples of the Soviet Union die, and do they have to die, even before Communism comes, and do the peoples have to achieve Communism through the Russian language, that is to say, by losing their most important national trait?

Are the peoples of the Soviet Union entitled to instruction in their native languages at IHL and is this nationalism, lack of unity, backwardness in science and culture?

If yes, what is wrong with European peoples, who get education in the native language without falling behind the general level of development and communication?

Furthermore, many village schools, clubs, and district cultural centres are in a poor state. Most of them need capital repair or complete re-construction. The clubs practice no cultural and educational activities. Our Ministry of Culture does not care to control them. Most importantly, we lack funding to meet the needs.

During the post-war decade, Tatar literature and art made very little progress. The Tatar drama theatre is in a particularly difficult situation. Every year it loses its best old actors, but does not train new ones. In this decade, the secretaries of the Regional Committee supervised literature and art only through clamour, elaborations, expulsions and stentorian resolutions. That is why the development of literature and art is far from being encouraged, it is actually being artificially restricted. The tragedy of the situation is that these comrades do not read and do not understand their own literature. Hence, the lack of vivid party leadership in this area.

Fifthly, it is especially oppressive that, for some reasons, there exist two laws, namely that of union republics and that of autonomous ones. Attitudes to them are also different. Union republics have more advantages in any aspect, more political, economic, and cultural rights, more budget and other funding, etc. Let me provide some minor examples.

All union republics are always properly represented during trips abroad, while everyone seems to forget about autonomous ones.

Even at meetings and congresses in Moscow, delegates from union and autonomous republics get different accommodation. 'Union republics' get rooms in hotels like the 'Moscow', while representatives of autonomous republics have to stay in the 'Ural' and the like.

Writers, composers, artists, and playwrights in autonomous republics get 30% less for their work than those from union republics.

Publishing houses in Tataria yearly allocate 200,000 rubles to the literary fund, but the USSR Literary Fund has been allocating to us as little as 40,000 rubles annually.

All speeches by our political leaders are warm with care about the union republics, which does not always apply to our autonomous republic. RSFSR leaders tend to forget about us.

The sad impression is that we, representatives of autonomous republics, are second-rate people. Is this true?

Dear Nikita Sergeevich, I have one more question. The thing is, there are over three million Tatars beyond the TASSR. They live as the indigenous population of Ulyanovsk, Kuybyshev, Ryazan, Penza, Gorky, Satarov, Moscow, Astrakhan, Stalingrad, Chkalov, Molotov, Tyumen, Omsk, Tomsk, Kemerovo, Novosibirsk, and other regions, the Bashkir ASSR, and the Uzbek, Kazakh, Kyrgyz and other SSRs.

Before 1935, over 10 newspapers and 3–4 magazines were issued for them in various cities; they had access to national schools, cultural institutions, and theatres. Now everything has been abolished. Even some rural primary schools are closed to be replaced by mixed-type or Russian schools. Thus, an enormous number of Tatars is artificially severed from their culture and mother-tongue. I will only provide one example. I have found out recently that there are 515 Tatar permanent residents in Moscow alone. No work is done for them; they have access to no cultural services. At the same time, the clergy work there. They have mosques of their own. This means that they remember to take care of their flock, while we, Communists, seem to have forgotten about it! Is it not a grave deviation from the Leninist national policy?

Secretary of the Party Regional Committee Batyev has recently told us that somebody distributed a leaflet on behalf of a 'Society for the Recovery of Tatar Culture'. He did not mention, however, why it was possible. I think the reason why it happened is that both officials of our regional committee and we, Communist members of the intelligentsia, have ceased to take care of the people, provide spiritual guidance for them and supply their cultural and political needs. So the enemy has taken the responsibilities.

Finally, here is the last question. Tataria produces millions of tons of oil for the country, but the people hardly have access to the riches. It would be nice if the RSFSR or other authorities allocated a large amount of the oil money to improving the living standards of the Tatar people and meeting their cultural demands.

These are the questions that have been bothering me. It is possible that I am entirely wrong, but I do believe that you will correct me in a paternal way, if I am.

I earnestly ask you not to send my letter to the Tatar Regional Committee. They will rather tongue-lash the author of this letter than address the issues raised in it.

With deep respect yours,

Signature Sh. Mannurov, party member since 1944, No. 04269603.

S. Ignatyev's speech at the meeting of the bureau of the Tatar regional party committee held prior the May 1958 Plenary meeting of the Tatar regional party committee devoted to the development of the Tatar schools

April 1958

Last year in autumn, I happened to receive some writers who were very emotional telling me about the state in which our culture is developing. At that time, I had not realized how things were with the language, its teaching and how useful the language was for a party worker to be able to get home the party's message in their native tongue. As I started looking into the matter more closely and in greater detail, I felt scared. Never before, during all the time I had worked in the national republics, had I had to face such a bad situation as here—disrespect for one's native tongue and lack of support, poor work on its development and improvement; what's more, the high-ranking officials were ashamed of speaking their native tongue even when they had to. After all that, we took counsel and decided to raise this question properly—we needed to encourage people to start speaking and writing slogans and messages in Tatar, and have Tatar people make reports in Tatar, etc. In order not to go to extremes, however, as we did not

consider ourselves experts, we informed the party Central Committee and asked for help. We wanted to send Faseyev there for consultation. However, the Central Committee treated us like small children and said: What good will it do if one of your officials arrives with a bundle of documents? What will he be told? Would not it be better to do otherwise: you yourselves will examine it in greater depth do research in schools, IHLs and cultural facilities; you will gather more information which will enable you to arrive at the right decision. As far as we are concerned in the Central Committee, when the time is right we will send you a team of well-qualified comrades who are knowledgeable about the problem, and together you will examine the matter and make proposals to be considered by the centre—by the party Central Committee. This is because the party bodies in other autonomous republics and districts are also worried by these issues, including the party Central Committee. You know that the party Central Committee has always attached and attaches great importance to the issues of language and national culture. Here is the history of the problem, about which comrades Derbinov, Maksimenko and others came to us. They were kind enough to look into the school affairs and do extensive research into our achievements, and mainly our drawbacks which need to be eliminated at once or gradually, after they have been revealed.

What kind of problems did we have? Comrades Faseyev and Batyev, not to mention Vasily Ignatyevich who has made an in-depth report, have revealed the main reasons. It's good that our local party workers were self-critical and agreed that it was the result of a one-sided solution to improve Russian language learning with disregard for their native tongue whose learning is fundamental as a basis for the Russian language to grow and develop, and as access to Russian and world culture. This was an accidental but serious blow to the native tongue and the development of national culture. I might be mistaken, I don't know, but I see the problem like that.

A greeting telegram Batyev says they were not afraid to be accused of being nationalistic. He was not, but I know the sort of comrades who fear the damned word 'nationalism' like death, and because of this word they betrayed the interests of the whole Tatar people. What was really hidden behind it? The desire to be seen as innocent and educated so as not to have a single stain on their reputation; instead, there was one huge stamp on the reputation of many bodies and institutions. That was the end of it.

Which is the most outstanding feature of a nationality?—The language! Why should one be afraid of their native tongue? why not learn it? Why not improve and enrich it? Why should it be tolerated that even national party and Soviet leading personnel have lost the ability to speak to their people in their native tongue? How can remain silent seeing that a Tatar mother does not understand her 3-year-old son, just because the mother does not know Russian and the child does not know Tatar? I insist that such facts are on record. A mother takes her child to a nursery or a kindergarten where he stays there with Russian children until 8 pm; in the evening she picks him up and quickly puts him to bed; and early in the morning again back to the kindergarten. He is always surrounded by Russian children.

I want only one thing—I want our language to develop, I want it to be loved, otherwise, we will come to see a day when we will speak to our people in an incomprehensible language; I don't want the culture, which has been created for centuries, to fall into oblivion. Without knowing the language, you can't do what the people and the party Central Committee entrusted you with; you can't train new personnel. One can't live like that. Therefore, once again I would like to express my heartfelt gratitude to the Central Committee and the comrades who helped us examine things in greater depth and address the problem properly. We will continue this work until the very end, whatever the cost.

Time frame? We can't be slow in doing it. If we use a magnifying glass or any special optical devices and start scrutinizing every single thing separately, trying to find out what is hidden there, everything will remain as it is. Since we have started acting, let us do it with resolve and persistence. No draft decision reached by the regional party committee can give answers to all the questions, but the draft decision presented by the bureau addresses the problem correctly. It provides guidelines and routes for our work. From 12–16 May, we will convene a plenary meeting of the regional party committee, so we

will prepare a more detailed and clear decision, the way it should be. So, we can start doing practical work in the latter half of May.

We need to develop our activity training personnel, supervise construction of school buildings, and do our best to make everybody participate in school construction. If we set up the base, if not by the beginning of this academic year, but next year, and if during the next 5 years we manage to radically improve the situation, the people will be grateful to us. However, it does not mean that we have to wait for 5 years. Everything that can be done today ought to be done. As for all those party ultra leftists and nihilists who demand that Russian schools be built, because somebody's son has to start school, will be made to change their ways. Is that man a high lord or something? Why can't he place his son in a boarding school? There is no need to set up classes because of 2–3 pupils. No need. Let the comrades change their ways; but if they don't want to, they are free to go; we are able to find people who understand the Central Committee's tasks. However, if a man does not understand that, then he won't be able to understand other things and can lead people astray from the party line.

I'm not going to raise special issues, like methodology and other things. I mean to say that it is with resolve and persistence that we must take the line reflected in the draft resolution. We must do it just not for no particular reason but because we have all been exposed to grave danger, faced by none other than the republic's whole Tatar population.

On setting up Tatar-speaking groups in the nurseries and kindergartens. I think it is the right thing to do. We don't need to enter this in the draft resolution now, but we must immediately set up pilot groups in 2–3 kindergartens and then develop this initiative.

Copies of the draft resolution have been given to Bureau members. There haven't been any special remarks, but it will need to be improved after the local party organizations have exchanged their opinions. I propose that Batyev, Faseev, Bashirov, Tabeev, Shakirzyanova, Zaripova, Kremenskaya, Tuishev, Nuzhin, Valiullina and Shadrina work it up for 2 days and then submit it to the bureau.

Excerpt from the resolution of the plenary meeting of the Tatar CPSU regional committee 'On the state and measures aimed at the improvement of the Tatar general schools' performance'

21 May 1958

<...> A fundamental principle of the Soviet national school, which predetermines its success, is the fact that education and upbringing is carried out their native tongue, the language which is more intelligible and familiar to children. The rich Tatar vocabulary ensures profound and fast acquisition of all kinds of knowledge by Tatar youth that school provides. At the same time, the national school creates favourable conditions for the acquisition of the Russian language and access to Russian and world cultural achievements. In a Tatar school, Russian is the main and integral element of education and upbringing which is entirely in line with the great thirst for the Russian language displayed by working Tatars, which facilitates closer relations between Russians and Tatars and their future stronger friendship.

The 20th Congress of the CPSU defined the new tasks of the general school as the school which is labour and polytechnic, and required that all party and Soviet organizations as well as local education authorities should improve the quality of children's education and upbringing and correct the fundamental mistake in the school performance—the gap between education and real life. It also sets the goal of introducing schoolchildren to socially useful work in industry and agriculture on a mass scale.

The decisions of the 20th Congress of the CPSU still greater enhance the responsibility of the party and Soviet bodies for further consolidation of the national school.

In addition to that, the plenary meeting of the Tatar CPSU regional party committee points out that recently the republic's party and Soviet bodies have paid considerably less attention to the Tatar schools, to educating and upbringing children in their native tongue. Some party workers have an erroneous impression that the problems of the national school and language have apparently been completely resolved and that now the national school does not require serious attention and constant care. As a consequence, in recent years there has been a stronger desire on the part of the indigenous communities, especially among the intellectuals, party and Soviet workers, to have their children taught in Russian schools instead of Tatar ones. While in the 1947–1948 academic year, 95% of Tatar children were taught in their mother tongue, only 70% of them do it now. In Kazan, only 16.8% of Tatar children are taught in their mother tongue. Many rural secondary schools have opened up Russian classes where the overwhelming majority of pupils are Tatars. <...>

In this way, the school enrollment in the national school has started to decrease, which violates the fundamental principle of the Soviet school—teaching must be done in one's native tongue. The Russian schools admit children who do not know Russian. This makes it difficult for children to learn general subjects and causes them to stay down and repeat the year, and drop out. There are Tatar residential communities in the republic with incorrectly situated schools. Quite often Tatar pupils have to walk 5 km or more to reach their school. Kazan and other towns of the republic have seen national schools where one teacher supervises 2–3 classes because of their small sizes. <...>

Russian and Russian literature teaching is especially badly done in the Tatar schools, particularly the primary classes. A considerable part of teachers are bad at Russian and are unable to provide pupils with sound knowledge. <...> The unsatisfactory teaching of Russian in the Tatar schools is not in line with the working Tatars' aspirations to master the Russian language, which depreciates the role of the national school causing parents to send their children to Russian schools.

There are also grave shortcomings in teaching Tatar language and literature. The plenary meeting considers it inadmissible that the majority of Tatar children studying in Russian schools, absolutely do not know or learn their native language and literature. As a consequence, the number of Tatars, who know badly or do not know their native tongue at all, is growing. They are alienated from their culture created by the Tatar people which is centuries old. They are unable to do socio-political, educative and organizational work among the Tatar people. <...>

The grave shortcomings revealed in the Tatar schools have made their school-leavers inferior to those who graduated from Russian schools due to the low level of teaching of a number of general subjects, especially Russian. In recent years, the Tatar schools have deteriorated in the preparations for their school-leavers for life, production activity and entry to higher and secondary educational establishments. Besides, on admission of applicants, the republic's IHLs did not take into account the specifics of the Tatar national school, which made it much more difficult for the Tatar school leavers to be accepted.

The Plenary meeting of the CPSU regional party committee does not consider it normal that in recent years, the republic's secondary specialised schools have stopped setting up groups consisting of indigenous students. This has almost led to the discontinuation of training such specialists as workers in the commerce sector, agro technicians, live stock experts, doctor's assistants, nurses, etc., who have a good command of the Tatar language necessary for work in the Tatar communities.

Attaching great political importance to the national school as the most important basis for further development of the language and culture of the Tatar people, for the training of nationals and with the aim of eliminating shortcomings in this matter, the plenary meeting of the Tatar CPSU regional committee has decreed:

1. That the bureau of the party regional committee, the Soviet of Ministers of the Tatar Autonomous Soviet Socialist Republic, the district and city party committees, the executive committees of district and city Soviets, the Ministry of Education and its local bodies be obliged no longer to underestimate the role and significance of the national school; to contribute in every possible way to enhancing its

prestige; to take under its unremitting control the Tatar schools' performance; to take greater care of them. <...>

4. The Ministry of Education of the Tatar Autonomous Soviet Socialist Republic and its local bodies be obliged to resolve the issue of the chaos and anarchy in the supervision of the Tatar schools and to carry into effect the following measures:

<...> d) to radically improve the quality of the Tatar language and literature teaching; to have children display more interest and respect to them; to reintroduce a school-leaving state examination in Tatar literature; to revise the school curricula and textbooks in the Tatar language and literature in the line of their perfection; to improve the academic staff by employing university graduates; to introduce the Tatar language and literature teaching with subsequent exam taking for the Tatar children, studying at the Russian schools and Russian classes of mixed schools. <...>

No. 118

Some performance data of the Tatar schools in the city of Kazan, as presented by Rogova, head of the department of propagandaat Kazan city party committee

14 May 1958

In the 1957–1958 academic year, there are 119 schools of general compulsory education, out of which there are: 3 Tatar schools (No. 49, 106, 89) and 17 Russian–Tatar schools (No. 82, 57, 26, 35, 113, 91, 92, 118, 30, 95, 18, 80, 76, 12, 13, 114).

180 Tatar classes have 4,026 pupils.

On average, the class size is 18–25 pupils.

The enrollment of Tatar pupils in the Tatar schools decreases with every year. While in the 1947–1948 academic year, the city schools had 6,650 pupils taught in the Tatar language (there were 12 Tatar and 2 Russian–Tatar schools), then in the 1950–1951 academic year, there were 10 Tatar schools left, and 13 Russian–Tatar schools and the number of pupils have reached 6,932; but in the 1954–1955 academic year, there were only 7 Tatar schools left, and 5,500 pupils were taught in their native tongue; in the 1956–1957 academic year, there were 6 Tatar schools, 10 Russian–Tatar schools, and the school enrollment was 4,246; in the 1957–1958 academic year, there were 3 Tatar schools, 17 mixed schools, and the school enrollment was 4,026.

At present, the number of Tatar pupils studying in all the schools of the city of Kazan is 23,676, out of which only 4,025 pupils are taught in their mother tongue, which is 17% of the total Tatar pupils.

Recently, due to the general growth of the school enrollment in the city, there has been a marked shortage of school buildings. With every year, the Tatar schools have introduced more and more Russian classes, and as a result, a number of Tatar schools have been transformed into Russian ones.

Some of the existing mixed schools (No. 35, 57, 91 and others) are housed in badly adapted buildings or have limited classroom space, in comparison with Russian classes, as they don't have necessary facilities for the teaching and educational process which should guarantee training necessary for the pupils' future practical activity.

The instructional plans and syllabus for the Tatar schools are far from being ideal. The pupils' workload in the Tatar schools is much heavier than that in the Russian ones.

A serious factor is that teachers who teach in the Tatar schools have a small teaching load. As a consequence, those teaching in the national schools are less fixed financially, as compared to the teachers working in the Russian schools.

The local education authorities show little interest in the Tatar schools. The performance of the Tatar schools is not studied and the positive experience has not been reviewed. Native language teaching is not popularized among the rural communities.

The Urban department of public education has only one employer who is a Tatar, and district education authority No. 5 employs 2 inspectors who are Tatars.

The city is able to widen the network of the Tatar schools and improve their working conditions. More attention should be paid to this matter. First and foremost, the local education authorities need to be consolidated by employing nationals. All Tatar secondary schools need to be provided with self-contained standardized school buildings and more attention and interest to their work needs to be shown.

No. 119

**Extract from the report of K. Faseev, Chairman of Presidium of Supreme Soviet
at the 8th Plenary session of the Tatar Autonomous Soviet Socialist Republic Oblast
[Provincial] Committee of the CPSU**

21 May 1959

In the construction of ethnic Tatar culture, the Party and Soviet bodies as well as creative workers base their work upon the achievements of both global and, overwhelmingly, the advanced Russian culture.

Russian culture and language exert an extremely salutary influence over our culture. The majority of the Soviet Tataria cultural luminaries have a deep understanding of this.

Along with the above, we currently dare not pass by in silence that a certain part of our intelligentsia hold unhealthy and demagogic sentiments about the condition and development of Tatar culture. This undermines the firm foundation of our culture and is an attempt (be it conscious or unconscious) to antagonise Tatar culture against the cultures of other peoples, retreat into their shell, position themselves above all and, if possible to impose their culture upon other peoples.

Certain representatives of our intelligentsia seem to possess an unjustifiable feelings of conceit, arrogance, dedication to everything Tatar, limited point of view, and ideological world view restricted to everything which is Tatar.

Yes, we heartily wish the prosperity of our ethnic culture, language, literature and art. We wish to raise standard of culture of the Tatar people in every possible way. This is a crucial task for all the Party, Soviet, Komsomol and Labour bodies.

However, we are opposed to any localistic tendencies, self-absorption and national narrow-mindedness. Since this does encourage the development of our culture, but hinders it.

<...> How then are these unhealthy phenomena manifest in our culture development?

First and foremost, the question at issue lies in the position of some part of the Tatar intelligentsia, in particular, the writers N. Fattakh, Sh. Mannur, G. Latypov and the others over the years who have tied hard to assert that the Tatar culture, language, literature are at the alleged risk of elimination and extinction. They claim that the present-day Tatars learn the cultural achievements of Russia, the Russian language, that Tatar children study in Russian schools, that republic government neglect the cultural advancement of the Tatars inhabiting other republics, districts and provinces in terms of the ethnic Tatar culture. They also claim that these Tatars have ceased to be Tatar and that the field of Tatar cultural influence has been restricted.

Could we agree to such a contention? Certainly not. It is an explicitly erroneous and harmful point of view. It is nothing short of an attempt to rekindle the previously debunked theory of ethno-cultural autonomy which is radically antagonistic to the Leninist national policy of the Communist party.

<...> The Tatar language as well as any other can continue to develop, enrich and improve on a daily and yearly basis by virtue of both the new linguistic realities of its own and linguistic borrowings. It is a naturally determined process. However, as strange as it may seem, certain people persist in attempts to oppose the enrichment of our tongue, in favour of the Russian language, while polluting the Tatar language with subliminal and alien borrowings from Arabic.

However strange it might sound, certain printed media have taken an unacceptable position. Arbitrarily, at the insistence of certain writers and journalists, the magazine 'Azat Khatyn' substituted generally accepted Russian words which have long existed in our language with Arabic words incomprehensible which are incomprehensible to any but for elder generation who have studied in the madrasah. The magazine prints 'räis' instead of 'predsedatel' (chairman), 'säyasät' instead of 'politika' (policy), 'sänä-gat' instead of 'iskusstvo' (art), 'yugari sovet' instead of 'Verkhovnyi Sovet' (Supreme Soviet). <...>

Such impermissible liberties, I regret to say, are also taken by the children's magazine 'Yalkın'.

The 'Sovet Tatarstanı' newspaper's editorial office allocate too much paper space for writers who repeatedly misinform the readership and antagonise them towards terms and definitions borrowed from Russian. Comrades, this is intolerable since such connivance and failing to take timely measures is likely to lead to very bad consequences.

While some of the comrades oppose the very use of definitions derived from Russian, others, for instance, N. Fattakh, support the position of Tatarisation, that is, adapting them to the local Tatar pronunciation. They keep trying to make us spell and write 'kalkhoz' instead of 'kolkhoz', 'satsializm' instead of 'sotsializm', 'prisidätel' instead of 'predsedatel' (chairman), 'abkum' instead of 'obkom' (the Party oblast [provincial] committee), 'gÖzit' instead of 'gazeta' etc.

They claim that the Tatar people are used to speaking this way. How little they know about this people! Workers and peasants have long mastered these definitions, use them properly and have a deep understanding of them. Nevertheless, certain linguistics amateurs are trying to pull us backwards which, without saying, might lead them to defeat.

We, comrades, should safeguard the integrity of our language, avoid doing violence to, distorting and debasing our tongue by anybody. The Party, Soviet, Komsomol, trade-union officials, representatives of art and literature communities, media people need to be active in this 'war of words' for the further advancement and enrichment of the mother tongue using it as a powerful instrument for communist education of toiling masses.

The transition of the Tatar script to the Russian-based alphabet is considered to be an act of great significance which contributed to the further positive advancement of the Tatar language. Therefore, certain appeals to restore the Latin alphabet or even the Arabic script uttered heard at the linguistic conference affiliated with the KBAS USSR, must be castigated.

No. 120

From reports of the TASSR Chief Department for Literature and Publishing

1958

There have been cases when certain employees of some publishing houses have tried to encourage certain harmful publications. To exemplify the above said one could cite a collection of poems by the poet Sh. Mannur 'Evening melodies'. The case surrounding this book is very scandalous. Prior to being submitted for editing we had discussed the volume several times at the editorial board gatherings of Tatknigoizdat (The Tatar Book Publisher) where the author had been given warnings regarding political and ideological inconsistency of certain verses. Alas, Sh. Mannur showed no desire to defer to any opinion. The matter came to the attention of the Regional Party Committee. There the verse collection was

discussed in the culture department. The author remained of the same mind. Thus, Sh. Mannur's book reached us. I. Muzafarov, the chief censor, read the work and informed the Director of the Department that the collection contained certain individual works with political and ideological defects and that he was not able to authorise this book for printing in its present state. Thereafter the entire censor board of the Department became familiar with this collection of verse. This led to an operational meeting of censors who all agreed that that the book could not be published as it stood. They decided to submit an official letter to the Party Regional Committee Secretary Batyev.

S. Batyev delegated the task to Faseev who in turn gathered a special conference. Others present at the conference included officials from Tatknigoizdat, Party Regional Committee officials, the Director of Tatoblit (Regional Department dealing with literature) and censor Muzafarov. The key objection related to the poem 'Past Life' and the epigram 'About stunted poets'. The poem's contents revealed that the poet who had spent all his conscious life in the USSR, painted his entire path in life in black tones, and with a single stroke of the pen he had erased everything bright and positive which the Soviet system had given to the ordinary people, including Sh. Mannur.

The verbatim translation of the epigram read as follows:

The times of Tukay and Taktash when they wrote their verse have passed
And they are not unlikely to return
Oh you, the last Gullivers, give way!
The Lilliputs have invaded poetry

The poet bewails the passing years, the times when Tukay was writing, while overlooking the fact that of the depravity of the Tsar's autocracy. Our Party nurtures the young talented generation of poets with care while Mannur labels them as Lilliputs. Moreover, this epigram clearly reveals the idea that Mannur and other of his kind are the last Gullivers, the last of the Mohicans and that after their death no real poetry would exist.

Those present at this conference unanimously condemned the verses by Sh. Mannur and the decision was taken to remove them from the collection. Only after this decision had been taken was the collection authorized for printing.

Another example. In the run-up to the All-Russian Constitutive Congress of Writers, Tatknigoizdat prepared a monograph by Kh. Usmanov for publication. It was entitled 'About Modern Tatar Literature' which was also filled with an abundance of politically wrong statements. The monograph claimed that the Tatar writers had consolidated their connection with the masses only during the Great Patriotic War. Many of the Tatar men of letters were not even mentioned therein, while the literary activity of some of them was misinterpreted. After the Regional Party Committee intervened to improve the situation the work underwent significant revision.

However, it should also be said that the Obkom (Regional Party Committee) did not share our negative position regarding the play by Yunus Aminov 'Roots'. Censor Z. Aminov found that it accusatory of the collective farm system. He submitted a report to this effect to his senior official. All the censors had read the play and a conference was held on the matter at which they subsequently criticized it sharply. However, the Regional Party Committee found that although the play was poor, there were no grounds to remove it from the repertoire and permitted that it be staged. Censor Aminov sent an official letter to the Glavlit (the USSR Head Office for Literature) of the USSR. Glavlit gave orders that the play be halted in a letter to the regional committee. Again the Obkom got its own way. If truth be told, the play was met with recognition from the theatrical public.

1959

In 1959 there was an increase in the number of plays being performed without the permission of the censors. Umetbaev, stage director in the Menzelinsk collective-and-state farm theatre clearly stepped out of line when he staged the uncensored play 'She' by Emma Shamil, 'Çulpan' (Venus) by Sh. Khu-

sainov, 'Gyulçaçak' and 'Tamırlar' by Yu. Aminov, 'The Unpardoned Sin' by Kh. Sabirov. The Ministry of Culture was informed but took no effective measures.

The Republican House of Folk Art, despite more than one warning, persisted in allowing uncensored plays to be part of the repertoire and to be published. Duplicate copies of 'Ramay' by G. Zainasheva and 'Jafalar' by Ishmuratova were disseminated. The Almet'yevsk republic kolkhoz theatre staged the play 'The Stars Shine' by S. Kalmetov. Those facts were highlighted in an official letter addressed to the Obkom Secretary Tabeev, putting an end to this practice.

The satirical magazine 'Çayan' published a poem 'Who is He' by Kh. Tufan which from a political point of view was quite underhand. The same magazine published a cartoon that interpreted the essence of revisionism from a non-Marxist standpoint. After the intervention of the Obkom the items in question were removed.

1961

The editorial office of the newspaper 'Tatarstan yaşları' published on 12 December 1961 the article 'Two Letters, Two Points of View'. The article incorporated the author's letter rejecting everything which was new in the country and tried to revise and rebut the decisions of the 22nd Party Congress. He writes: 'There is no end or edge in sight of the path towards Communism. In order to satisfy and improve the living conditions of the Soviet people, the government has recently adopted a detailed seven-year plan. However, I assume that we are unlikely to be able to fulfill it in time and in full. I dare say that we lack people who work honestly and to the full extent of their power. We have to listen on the radio and read in the newspapers all the positive comments about honesty and conscientiousness typical of the Soviet people, the builders of communism. However, I cannot agree with this and I would like to give a few examples...

Editorial comments on it are lacklustre and unconvincing in comparison with the author of the letter. The editorial office does not face up to the author of this letter. After an urgent demand the editors made corrections to the text.

The Kazan State University issued a monograph 'The Soils of Tatar' under the editorship of M. Vinokurov. The book is written from the point of view of the travopol'e [crop rotation] supporters. It contains given tables, comparisons and evidence to show that perennial grasses are good predecessors for wheat and rye.

1962

In 1962, a book by lieutenant general G. Safiullin was published entitled 'On the Roads to Victory'. It was a book of memoirs. With the consent of the Regional Party Committee over fifty references to Stalingrad were removed from the book. Serious political and ideological interventions were made in the materials which were due to be broadcast on television. Two films were banned: '20 years later', and 'Turn Beauty into Reality'. The article 'Alexander Blok' was reworked before approval by the censor for broadcasting.

At the beginning of 1961, Tatknigoizdat published a booklet by N. Aitov 'Peasants' coming together with the Working class during extensive Building of Communism'. The booklet was abundant with subjectivistic speculations. According to the author, Socialism is one stage and Communism—quite another.

On 26 November censors removed the poem 'The Sun' by N. Belyaev from a television broadcast. The verses had been authorized by editor R. Kutuy and editor in chief R. Mustafin. The verse was dedicated to defending the rights of an unknown person. It suggests that people were not allowed creative freedom, that the sun was falling and fading, while the creator was disobedient and angular. The poem offers such ideas as 'mistrust has not yet been stifled in man, while the poet passes from the collective apartments'. As it later emerged, the 'individual' referred to was the abstract artist Anikienok. By

removing 'The Sun' from the broadcast, the censors had done the right thing, while those editors who defended the abstractionist were not right.

In September 1962, a booklet by R. Rakhmatullina and I. Yafaeva 'On the use of Local Folk Materials in Economic Geography lessons' was authorized for printing. Censors Shamsutdinova and Galeyeva approved it. The brochure was stopped after an urgent telegramme from Glavlit of the USSR signed by Avetisyan. The entire press run in stock, as ordered by Glavlit of the USSR, was destroyed. Shamsutdinova was reprimanded. Galeyeva was given a serious administrative warning.

Librarians put 155 thousand copies into storage. Confiscated literature included works by the anti-party group of writers Malenkov, Molotov, Kaganovich, the short biography of Stalin, booklets by Enver Hoxha 'The Albanian People for Peace and Socialism', 'The People's Republic of Albania'. Literature related to the dissemination and propaganda of political science published between 1953 and 1955 was removed from many libraries. As a rule, this concerned works of Marx and Engels imbued with the spirit of personality cult.

1963

In March 1963, the Regional Department for Literature approached the Regional Party Committee with a letter that concerned the book 'The Formation of the Tatar ASSR' (collection of documents and records). The book of 32 quires was presented by the Tatar Book Publisher. The publication of the book was not a matter of necessity, especially in the context of the recent publication of the two-volume 'History of the Tatar ASSR'. The text contained incorrect wordings, a 20-page long name index, certain documents aggrandized the cult of personality of Stalin.

From the lyrics of musical comedy by Sh. Zayni 'Irrelevance of being humorous' a duologue was withdrawn where the longing for primeval communism shone through.

In July an article by literary critic R. Mustafin entitled 'Thoughts about literary criticism' was removed from 'Sovet Ədebiyatı' magazine. It promulgating the ideas of jadidism (a reactionary pre-revolutionary trend of the Tatar bourgeois intellectuals).

On 21 October 1963, the Department officially wrote to Tutaev concerning the book by Karimullin 'The Bibliographical Guide to the Tatar Fine Literature'. The book contained many book titles and collections of verses related to the Stalin's personality cult. Although bibliographical year books were exempt from preliminary control, the Publisher decided to refer to us for advice. However, with regard to the second book by Karimullin 'Bibliography of literary Collections and Almanachs', we were unable to exercise operative control. We were too late to advise the Party Obkom of our mistake. Not all the facts about political and ideological interference can be mentioned here.

1964

While monitoring the book 'Consolidation of Soviet Power', the censor Timergalina committed a political-ideological error. At the instructions of Glavlit of the USSR, two extracts were removed. The name 'Sultan-Galeev' was deleted in four places.

Extract from the USSR Glavlit's analysis of the report of the TASSR Glavlit:

The annual report specified the reasons for the oversights in the book, 'Consolidation of Soviet Power in Tatarstan'. The entire print run was confiscated and the necessary corrections were made at the instructions of the Tatar Obkom of the CPSU.

Articles and books unauthorized for print:

16. R. Muzafarov 'Tatar Folklore Associations with East Slavs' (Publishing House of the Kazan State University). The book was submitted to the Department for ideology of the CPSU Obkom for approval. The printing was stopped due to the erroneous interpretation of the nationalities question.

Letter from Gaptelkhalim Khusniev, a worker from the 'Khimenergostroy' trust

2 February 1960

My request

Soon it will be 40 years from creation of our Autonomous Republic. During these glorious years Tatarstan became a blossomed garden. Through the visionary wisdom of our party, all branches of national economy tread with the fast and a broad steps. Our national culture has also achieved a high level. Tatar literature and art which give great talents: Gabdulla Tukay, Salix Säydäşev, Galimjan İbrahimov, Hadi Taktash and Musa Dzhilil day by day achieved a new successes.

Before the approaching jubilee, I am a simple worker, want to express two of my wishes. If the 'Literature and Art' newspaper will be published soon in our native republic. The readers will be happy about this.

In my opinion, it is urgent and important to find a film studio in the capital of our republic—Kazan, in order to shoot movies in the Tatar language. It is time to start doing it, because a millions of people for a long time have impatiently been waiting for the possibility to watch national movies.

By doing this, we will give a great stimulus for development of Tatar culture.

Written by: Gäptelxälim Xösniyev worker of the 'Khimenergostroy' trust.

No. 122

From the record on the communal and everyday services of the population of Nizhnekamsk, the town under construction,

11 January 1966

<...> Population of the town of Nizhnekamsk is growing rapidly'. On 1 January 1966, its population reached 27,000 <...>.

Everyday services are provided by Nizhnekamsk industrial complex. 200 people work in the complex, 80% of them are engaged in servicing the town population. The main operating units of the complex are located in the public town centre. The premises for sewing, shoe-making, watch, knitwear workshops and the hairdresser's shop are very limited. Since November 1965 the sewing workshop with 30 employees has occupied two unadapted cold carriages in the temporary settlement. The only photographer's studio in the district with one employee has been placed in the basement of a building since December 1965. <...>

At present there is only one hairdresser's and barber's shop in the whole district <...>.

The repair services for household appliances, radio equipment and communal dwellings, dry cleaning and dyeing the clothes and shoes etc are not organized.

The branches of the industrial complex which provide only part of the services, are located only in two built-up areas of the district—in Sheremetyevka and Sheshminka. <...>

There are only two booths for long-distance calls, <...> the town's provision of shopping facilities can satisfy only 50% of the demand. There are two bakeries and one furniture shop in the town, and no specialised shops selling sport and recreational goods, vegetables, meat and dairy products. <...>

In the functioning schools of Nizhnekamsk, which have 2,404 places for pupils, 4,000 pupils are being taught. According to the existing norms, there must be 4050 pupils' places, therefore, the provision of school facilities constitutes 59%. The pre-school institutions meet the demand by 33%.

The communal services are organized unsatisfactorily. Prior to the 5 January 1966, the heating was not sufficiently supplied to the houses, the temperature in the rooms was 10–12 degrees <...>. Electricity is often cut off, as a result the water and heating are cut off as well, and canteens, shops, saunas and telephone lines stop working. There is no hotel and laundry in the town, and the sauna, which accommodates 26 people, absolutely does not satisfy the needs of the population <...>.

The demand in hospitals and polyclinics is met by 32% <...>.

The normal operation of public transport is not provided. <...> There are drawbacks in the town planning and landscaping. Completed buildings are approved without planning or landscaping of the surrounding grounds. In spring and autumn the town is barely passable even in special rubber boots.

The report of A. Bichurin, the KGB Chairman of the Soviet of Ministers of TASSR, to the First Secretary of the Tatar Obkom (Regional Committee) of the CPSU comrade F. Tabeev

dated 3 February 1966

Confidential

In the elapsed time, the Cheka investigation of Zaynullin, Aydeldinov, Mukhamedzhanov and Yakupov in connection with clarifying their plans and precluding adverse actions had been carried out.

Since the information was received about the presence of documents (manuscripts) of operational interest in the flat of Aydeldinov, a secret inspection of his flat was undertaken. As a result, many manuscripts and copies of the letters, addressed to different authorities, were discovered, in which he referred to numerous statistics and other information, trying to show the 'humbled' position of the Tatar nation and the 'absence' of the conditions for the growth and development of the national language and culture.

Although these handwritten materials cannot give grounds for initiating a criminal case against Aydeldinov, they are rich in skillfully selected numerical data, accompanied by tendentious, erroneous conclusions, and, undoubtedly, have a politically harmful character, capable of producing certain negative influence on an ill-informed reader.

As it can be seen, Aydeldinov is erudite, very diligent and hard-working. He systematically reads a lot of various literature, starting from the Party documents and periodical press of the national Republics, up to the works of G. Iskhaki and religious editions about the 'prophet' Muhammad. Probably, this is why Aydeldinov has a reputation of a 'theorist' and an advocate of the 'interests' of national culture among the Tatar youth, acquainted with him. The main methods of Aydeldinov's activity are collection and summarizing of official numerical data, allegedly supporting his demagogic statements, compiling and sending letters, addressed to the State Party authorities, both anonymously and on behalf of a group, aspiration to identify like-minded people among the Tatars in other districts and persuade them to send similar 'addresses' of Aydeldinov to the authorities.

The negative views and actions of Aydeldinov might be to some extent caused by an unhealthy influence of Maneev, an inhabitant of the town of Baku. According to their correspondence, discovered dur-

ing the secret inspection of Aydeldinov's flat, and to the documents of 'PK', Maneev has a nationalistic mindset. He advises Aydeldinov on composing and distribution of tendentious letters, misrepresenting the matters of national policy.

The local KGB authority was informed by us about the materials concerning Maneev. Simultaneously, measures on cutting their correspondence and coordinated actions in the future have been taken.

Together with the research regarding Zaynullin, Aydeldinov, Mukhamedzhanov and Yakupov, arrangements have been made for limiting their harmful influence on their surroundings. Thus, a preventive conversation with Yakupov about his unhealthy statements and behaviour deviations was held by comrade Zamoryanov, the Secretary of the factory Partkom (Party Committee), p/ya [restricted access facility] 157, with participation of operational officials. During the conversation Yakupov admitted his mistakes and assured not to make them in the future. Further monitoring showed that he had understood our conversation in a correct way and had cut off all relations with Mukhamedzhanov and his friends.

According to our recommendation, the literary and anniversary evenings, conferences of readers and meetings with creative professionals, carried out by the Palace of Culture of Sovetsky district (in Derbyshki), were taken under immediate control of the Partkom of the factory p/ya [restricted access facility] 157. Prominent writers and journalists, who were able to influence the course of the public events in a necessary way, rebuked or explained the erroneous statements by Zaynullin, Mukhamedzhanov and others, were specially invited to such events.

At the same time, the Partkom of the factory enhanced the monitoring of their behaviour at the factory and involved them into beneficial social work. As a result, the possibility of them using the tribune of the readers' conferences and literature evenings for openly tendentious speeches was eliminated.

The acquired information testifies that Mukhamedzhanov and his friends in private started to express opinions about the necessity to change the tactics of open actions and follow some conspiracy rules. In Mukhamedzhanov's opinion, there is a need to organize work among the Tatar youth, studying in Kazan IHLs. He gives special importance to the Tatar students from the Agricultural Institute, who go to the countryside after their graduation and can carry out the work among the Tatar population.

Mukhamedzhanov, Aydeldinov and Zaynullin undertook some attempts to practise meetings with the Tatar youth, interested in the history and culture of their people, in such places, that would guarantee the absence of social control to their 'events'.

That was the underlying motivation of the collective trip to Bulgar, organized by them in June. The people were selected to the group on the basis of national origin and well acquainted with each other. According to the idea of the trip organizers, the given 'event' was supposed to a cover-up for making unhealthy conversations about the history of Bulgar and for aheating up the national sentiments of the group's participants. A special role in this matter was assigned to F. Valeev, a research assistant of the Kazan Institute of the Language, Literature and History of the USSR Academy of Sciences, as to a like-minded person, well-informed on the history of Bulgar. On the surface, Valeev did not express any active initiative in organizing the trip to Bulgar, but he prepared to act as a guide in Bulgar. Valeev had undergone a preventive conversation in the past for his nationalistic views, and his trip to Bulgar as the leader of a team of Tatars was extremely undesirable. Moreover, according to available data, although he has stopped speaking openly speak of nationalistic views after the preventive measures, but in private he continues to express discontent about the 'humbled position' of the Tatar language and culture. Furthermore, Valeev sometimes gives Mukhamedzhanov various literature, which proves, in his opinion, the 'unequal' position of the Tatar nation.

Taking into account all the above-mentioned, Valeev was excluded from the trip to Bulgar, by the influence through the Institute directorate.

The writer N. Fattakhov and the actor G. Shamukov acted as tour guides on the way to Bulgar and during the sightseeing. In their explanations they made some politically harmful, nationalistic statements.

According to the received information, the writer N. Fattakhov, despite the preventive conversations he had in the past with the KGB at the Cabinet of Ministers of TASSR, continues to nurture nationalistic sentiments. The actor G. Shamukov also expresses opinions about the allegedly unequal position of the Tatar nation. By the request of Mukhamedzhanov and his friends, he edited some of their letters to the authorities, concerning national matters.

Taking into account the circumstances, we deem it reasonable to carry out other preventive conversations with Zaynullin, Aydeldinov, Mukhamedzhanov, Fattakhov and Valeev by summoning them to the KGB at the Cabinet of Ministers of TASSR. At the same time, beneficial influence should be exerted on Aydeldinov, Mukhamedzhanov and Zaynullin by our means.

With the purpose of additional positive influence, the corresponding conversations should be carried out (in the Partkom of the factory p/ya 157) with the wives of Mukhamedzhanov (member of CPSU) and Zaynullin.

We also deem it necessary to take preventive measures in relation to Shamukov via the Party bodies.

**The letter of T. Idrisov to the editorial office of the newspaper
'Pravda' ('Truth').**

13 April 1982

Dear 'Pravda'.

I wonder why the Tatar television broadcasts in Russian. Are two All-Union channels not enough? The programs are varied, to every taste and at any time.

The television programmes in Kazan last for only 3-4 hours. They can be and should be in the Tatar language.

Our people, who know Russian poorly or do not know it at all, suffer the most. Rare TV programmes in the Tatar language become real small celebrations for them. I do not want to think (as I often hear), that it is done on purpose, so that the Tatar language slowly gets out of use. It cannot be forgotten that the language is spoken by the people, who occupy the fifth place in terms of their number among more than a hundred nations in the USSR.

The people of many regions of the Republic are completely deprived of the opportunity to watch the Tatar television programmes.

The student of the Kazan Pedagogical Institute Tagir Idrisov.

Confidential information on the letter of T. Idrisov.

The letter, signed with the name 'T. Idrisov', about increasing the number of the television programs in the Tatar language has been considered by the staff of the State Committee of TASSR on television and radio broadcasting

1982

As the analysis of the Republic television shows, the programs are broadcast both in the Tatar and Russian languages, that is, taking into account the national composition of the Tatar ASSR. The programs in the Tatar language take up the average of 50%, and literature, drama and musical content take up to 60–70% of the daily broadcasting time.

The author of the letter was invited for a discussion to the Obkom (Regional Committee) of CPSU, but our letter was returned by the post with a reply: 'the addressee does not live at the indicated address'.

By our request, the Partkom of the Pedagogical Institute engaged in the identification of 'T. Idrisov', but such a comrade was not found among the students of this educational institution.

**The letter of D. Kasimov to the First Secretary of the Tatar Obkom of CPSU
(Regional Committee)**

1982

In all your speeches you say, that Lenin's national policy is being carried out in TASSR. What is happening to our people today, the young people do not know their native language, despise, do not respect their native language, native culture, people have diverged from their nation, everything native has become alien.

Tatar children, raised from the very early years in Russian nurseries, Russian kindergartens and Russian schools, lose their national feelings, native language, native culture, way of life etc. Intensive Russianisation of the Tatar people, the indigenous people of our land, has been going on and still is. This is what V. Lenin said about the national policy of the Russian Marxists:

'He, who does not accept and does not defend the equality of the nations and languages, does not fight with any national oppression and inequality, is not a Marxist, not even a democrat'.

'National programme of workers' democracy: absolutely no privileges to any nation, any language'. However, in TASSR all rights are given only to the Russian language, our language has become a dead weight. If you are a Marxist, you have to fight for equal rights of the languages.

The Russian Marxists say that 'the absence of state language at the schools for the people, teaching in all local languages' is necessary. What does a compulsory state language mean? What does the language of the Great Russians, who constitute the minority of Russian population, mean? (V. Lenin)

A compulsory state language in a multinational state is violence, it destroys national features. The compulsory Russian state language is set in TASSR, but according to Lenin, we should have Tatar. The path to life, labour, bringing-up, education is laid only via the Russian language. The significance of the Tatar language has been reduced to zero.

'There is a unified school system, therefore, do not dare teach in other language, besides Russian! In my opinion, such a communist is a Great Russian chauvinist'. (V. Lenin) The Tatar schools have gradually closed and are closing even in the villages, because there is no way in life for our language. The present fate of the people of the Volga region, the future fate of the people of the Union republics and not only <...>.

According to the data of the census of 1978, 1,200,000 Tatars have rejected their nation and language. The television programmes in the Tatar language are strictly limited in TASSR, to no more than 40%.

There is no spirit of Lenin's national policy in TASSR. Those, who say, that we put into practice Lenin's national policy, are lying with Lenin's Party card in the pocket.

The crusade against national minorities has led the nations to a national catastrophe.

V. Lenin was against Russianisation. 'The policy of tsarism, landlords and the bourgeoisie towards these nations was to extinguish any dawn of statehood, cripple their culture, oppress the language, keep in ignorance, and, finally, Russianise them, when possible' (V.Lenin.).

The national policy, carried out in TASSR, is 100% contradictory to Lenin's principle. V. Lenin wrote in the resolution on the national matter: 'Special laws have been issued, that provide for the usage of the native language in all state bodies'.

You all know this very well, there is no use writing to you about it'.

The information on the letter of D. Kasimov. A letter signed by D. Kasimov without a return address was received by the Obkom (Regional Committee) of CPSU

The author writes that Lenin's principles of national policy are not followed in TASSR, young people of Tatar nationality reject their native language, that there are few television programs in the Tatar language.

Due to the absence of the return address it is impossible to reply to the author. I request that the matter of this letter be closed'.

The letter of a Tatar, resident of Almaty, Rashid Akhmetshin in the Tat[ar] Regional Commissariat of CPSU

1982

Dear Rashid Musinovich!

I have carefully read your article entitled 'Education by making strict demands' published on 22 March 1982 in 'Pravda', and cannot but share some thoughts. I will be brief, not trying to embrace the unembraceable.

Your article does not contribute to further increase of the prestige of the Tatar people among other nations of the USSR, to the growth of its national consciousness. On the contrary. And this problem (you know this better, than me) along with the development of internationalism, will not be removed from the agenda any time soon. Is it possible, that in all Tatarstan, no other more worthy Tatar leader could be found, except for such a rogue as I. Akhmetsafin? Why such self-flagellation, who needs this?

Being aware of numerous facts, I state that no official document, say nothing of a publication for central press, is approved by the Party, and Soviet administration of Almaty without positive examples involving the representatives of the native nationality. If necessary, far-fetched examples are given. I am sure, you would not need them.

Two years ago I had a business trip and was lucky to go for the first time in my life to the homeland of my ancestors, Tataria, and, of course, to Kazan. What a glaring contrast with Almaty! Almost all the visual propaganda, advertisements, all the banners, titles of cultural and social facilities and others are only in Russian. If it was not for the greeting in the railway station 'Raxim itegez Tatarstanga!' ('Welcome to Tatarstan!') and the sweet chattering of the old women in buses and trams, I would not have believed my luck.

And the registration of a the million resident of Kazan? I do not think, that the happy mother comes from the Christian Tatars. Even if it is so, it cannot be explained to everyone. In Almaty, where there are only 12% of the native population at the time of the 250th anniversary of Kazakhstan's voluntary annexation to Russia, the Party authorities selected a young Kazakh couple.

Why and on behalf of whom does comrade R. Sabirov suggest in the pages of 'Pravda' that the future city for the builders of the Tatar nuclear power station be named Kamskie Polyany' (Kama Meadows)? Are Nizhnekamsk, Naberezhnye Chelny, Zelenodolsk, Chistopol, Spassk, etc. not enough?

Why not name the city, for example, Dzhali! There is the city of Dzhambul in Kazakhstan, the city of Salavat in Bashkiria, etc.!

Is it by chance, that even after the things said here, young people, some Komsomol activists, whom I met in Tataria, do not know the history of their own people, prefer to speak Russian, change their names, so that they sound Russian? Moreover, they are not going to teach (I mean not only in school) their children the native language. You see, they are 'afraid that the children will have Tatar accent'.

Is it by chance, that the reporter of APN (Agency of Political News), when publishing an article on the 150th birth anniversary of I. Shishkin, writes that he was inspired by the most powerful Russian nature? This happened in Alabuga, the very heart of original Volga Bulgaria.

Is it by chance, that the First Secretary of Bashkir Regional Committee of CPSU comrade M. Shairov in the article in 'Pravda', dedicated to the 100th birth anniversary of Akmulla, has not said a single word about his connections to the Tatar people, that he studied and created in the Tatar language? While he mainly writes about his Odyssey across the Kazakh steppes.

Bearing in mind my promise to be brief, I will say in the end, that your initial was not changed by accident in 'Pravda', dated 22 March 1982. Instead of R., it was typed V. Musin. Does it not speak of the attitude?

Dear Rashid Musinovich, please, do not think, that I am narrow-minded or limited by my national views. Usually, various 'schizos' annoy the Party Committees with such long and discursive letters. I perfectly understand that the process of convergence and then merging of the nations (in very distant prospect) is irreversible, dialectic and objective. But do we have to urge this process and artificially speed it up?

Respectfully yours, Rashid Akhmetshin. 28 years old.
Almaty.

P.S. As far as possible, do not limit the circulation of the magazines 'Chayan', 'Azat Khatyn', 'Kazan Utlary', 'Yalkyn', do not deprive us (more than three million), who by an evil fate left Tataria in the past, of the opportunity to excel in the native language, and know modern life of our beautiful homeland.

Thank you so much for the literature in the Tatar language, which is sold in Almaty in the shop 'Otan' (in Tatar Vatan), for regular tours of the masters of the Tatar culture.

**The letter of a student of Kazan State University I. Ilyin to the editorial office
of the magazine of the CK ALYCL (Central Committee of All-Union Leninist Young
Communist League) Komsomolskaya Zhizn`**

9 September 1985.

Dear editors, This letter is written to you by Ilyin Igor Petrovich, a student of Kazan S[tate] University. I shall directly formulate the matter about which I am writing without introductions et c[etera], in order not to take up much time (by the way, always lacking before the end-of-term exams).

Do you consider that the title (or brand perhaps) of Komsomol member has been devalued? Say, as compared to the 1930s? Or even the 1950s? I think it has⁶⁵. The title of Komsomolets, putting it mildly, has become lacklustre and has somewhat lost what it had. Well, ask anyone, who comes by, about it. Of course, quite naturally, he will answer, that Komsomol is a militant body, having an important meaning

⁶⁵ Hereinafter underlining is used to reflect the highlighting in the document.

in... and for... etc. I personally met more than once such Komsomolets (and not only), who openly spoke of Komsomol with disregard and disdain. And there is a grain of truth in it.

I expect your negative reaction to all this. But is it not high time to raise the question of further promotion of Komsomolets name? 'To make it shine again', so to say (like Mayakovsky wrote, remember?)

I will give (maybe not exactly adequate) an example of an engineer's job becoming less prestigious. A rather suitable analogy, in my opinion.

You may say: we all can talk and reply.

I suggest specific actions:

1) Strictly limit the admission to the membership in ALYCL in many cases the admission is almost forced. The indifference for everything begin with a dialogue:

— What, are you a redhead? Everybody joins and you don't.

You will talk of voluntariness. However, while such 'propaganda' will be carried out in the primary organization, the ALYCL District Committees will get information about everybody's great desire to join the ALYCL.

2) Exclude from the members of the ALYCL all those unworthy of the name.

You may say: they should be re-educated. Well, re-education is another question. In my opinion, the re-educated ones are very few compared to those being re-educated. And this is good, you will say. And I think, the foundation to all is laid at a very young age, and the emphasis should be put [on] education, not [on] re-education. And we, let's say it straight, do not pay enough attention to the organization under patronage. (Leave the re-education out for some time as a last resort).

3) I suggest that the conditions for joining ALYCL be set. To cut a long story short, I think it's too early (for many) to join Komsomol at 8–9th grade].

4) It's time to start effective campaign against bureaucracy and red tape.

5) It's time to end window dressing in many cases.

With this, I finish, sending my Komsomol regards, Ilyin I[gor] P[etrovich].

P. S. I apologise for this unusual letter. However, if I'd started to re-write it, I'd have softened and sugarcoated many things. And like this, I've blurted out [what] I had on my chest.

No. 128

From the letter of a member of the Tatar Youth Union 'Azatlyk' A. K. to the editorial office of the newspaper 'Suverenitet' ('Sovereignty')

January 1992
Nizhnekamsk.

*Even if the homeland is in the desert,
still she is the most beautiful.
There cannot be several homelands,
the homeland is one for many years.*

(R. Fayzullin)

Nationalism originally was defined in the English Political Dictionary as a national liberation movement of the Irish. [...]

1902, the draft of the Russian Social-Democratic Labour Party programme says: 'item 7 The recognition of the right to self-determination for all nations, constituent in the State'; 1913 'item 5. It is inadmissible to mix up the issue of the right to self-determination for all nations with the issue of feasibility of separation of some nation from the state'.

And so the democrats decided to shape the destiny of a great ancient nation, which had acquired its culture and script several centuries earlier.

You want an 'emblem and flag'—you can get them from us, a variant of imperial design. You need 'independence'—take it. Here are empty carriages, you need a namestnik representative—we will send him. The Parliament does not work well—we will send you [...] Kashchey, Zmey Gorynych (Russian fairy tale characters) and Bluebeard. You have much land—we will make a referendum and divide it between the 'centre' and the 'empire'. You want freedom—we will send OMON (Special Purpose Mobility Unit). [...]

However, the democrats have forgotten, that any humiliation or deceit towards another—is a weakness of mind and inferiority of their heads, if they have any [...].

Our people will not let anyone suffocate and destroy the Tatar people. The people, who had been creating their culture, language and script for centuries, having made its contribution to the development of world culture; who [...] lived in friendship with all people, famished equally with Russians, Bashkirs, Ukrainians..., preserved the warm feelings to everybody, now are being portrayed to humanity as 'outcasts' and 'deficient people'.

Bayramova, Mulyukov, Makhmutov are the ideals of moral unity and solidarity of the people, the guardians of a great clan.

It is hard for us to fight for sovereignty, but I am sure, that the 'empire' will fall under the purity of the Tatar people's ideals. [...]

People of Tatarstan, let us unite in the rows of defenders, [for] freedom of the independent state of Tatarstan.

Let us unite around the Tatar social centre, 'Ittifak' Party, T[atar] Y[outh] U[nion] 'Azatlyk' and 'Suverenitet'. Bülenmäs⁶⁶ Rossiya—Çir yözendäge soñğı imperiya (Indivisible Russia - the last empire on the Earth)⁶⁷.

A. Fatkhutdinov, Member of T[atar] Y[outh] U[nion] 'Azatlyk'.

Declaration on the State Sovereignty of the Tatar Soviet Socialistic Republic

- Supreme Soviet of the Tatar Autonomous Soviet Socialistic Republic,
- being aware of the historical responsibility for the destiny of the multinational people of the Republic;
 - showing respect to sovereign rights of all people, inhabiting the Russian Federation and the Union of Soviet Socialistic Republics;
 - marking the inconsistency between the status of the Autonomous Republic and further political, economic, social and spiritual development of its multinational people;
 - implementing the inalienable right of the Tatar nation, all people of the Republic to self-determination;
 - striving to create a democratic state of law,

⁶⁶ 'Bülenmes' in the Tatar language translates as 'indivisible.'

⁶⁷ 'Çir yözendaäge soñğı imperiya' in translation from the Tatar language is 'the last empire on Earth.'

1. Declares state sovereignty of Tataria and reorganizes it into the Tatar Soviet Socialistic Republic—Republic of Tatarstan.

2. The soil, subsoil, natural and other resources on the territory of the Tatar SSR are all the exclusive property of its people.

3. The Tatar SSR guarantees all citizens, living on its territory, irrespective of their nationality, social origin, religious and political affiliation and other differences, equal human rights and freedoms.

Equal functioning of Tatar and Russian as state languages, preserving and developing the languages of other nationalities are guaranteed in the Tatar SSR.

4. Henceforth, the 'Tatar Soviet Socialistic Republic' ('Tatar SSR' or 'Republic of Tatarstan') is to be used as an official name of the State in the Constitution, other legal acts and in state life.

The supreme body of the Republic state authority is to be named the 'Supreme Soviet of the Tatar Soviet Socialistic Republic', and the acts, promulgated by it—acts of the Supreme Soviet of the Tatar Soviet Socialistic Republic.

5. The present Declaration is the basis for drafting the Constitution of the Tatar SSR, development of the Tatar SSR legislation, participation of the Tatar SSR in preparation and signing the Union Treaty, treaties with the RSFSR [Russian Soviet Federative Socialist Republic] and other republics, putting forward for discussion with its people the most important questions of the Tatar SSR state building, its relationships with the Union of SSR, RSFSR and other republics. The constitution and laws of the Tatar SSR have the supremacy on all territory of the Tatar SSR.

6. Before adopting the new Constitution of the Tatar SSR, other laws and normative acts of the Tatar SSR, the laws and by-laws of the Tatar SSR, RSFSR and the Union of SSR, that do not contradict the Declaration on the State Sovereignty of the Tatar SSR, are in force on the territory of the Tatar SSR.

The present Declaration shall enter into force upon the moment of its adoption.

The Chairman of the Supreme Soviet of the Tatar Soviet Socialistic Republic

The Resolution of the Supreme Soviet of the Tatar SSR on the Draft of the Union Treaty

The Supreme Soviet of the Tatar SSR, expressing the will of the multinational people of the Republic of Tatarstan for creating a voluntary Union of the Sovereign States:

- based on absolute priority of human rights and universal human values;
- supporting the historical right of the people to self-determination and equal rights;
- preserving and deepening the historically developed economical and political connections between all nations and nationalities of the Soviet State;
- marking the necessity to acknowledge the sovereignty of the republics and distribution of competences between the Union of SSR and its subjects on constitutional and contractual basis;

1. Takes the draft of the Union Treaty as a basis. Considers that the soonest signing of the Union Treaty is an urgent socio-political task, a condition for achieving economical stability, harmonization of transnational relations, respect for the human rights and freedoms, individual rights, guarantee for civil peace and concord. Division of property is considered a necessary condition for signing the Treaty.

2. In accordance with the Declaration about the state sovereignty of the Tatar SSR dated 30 August 1990 and the Law of USSR dated 26 April 1990 'On Delineation of Competencies Between the Union of SSR and the Federation Subjects', declares its readiness to become a co-founder of the Union of Sovereign Soviet Republics, independently sign the Union Treaty and enter into the resulting high commitments.

3. To organize a plenipotentiary delegation of the Republic of Tatarstan for preparation of the official text of the Union Treaty and its further signing. To entrust this delegation with the preparation and signing of the Treaty with the RSFSR and other Sovereign Republics.

4. To instruct the Presidium of the Supreme Soviet of the Tatar SSR to summarize the proposals and comments, expressed during the discussion on the Union Treaty draft, and to submit them to the Supreme Soviet of the USSR together with the present Resolution.

The Chairman of the Supreme Soviet of the Tatar SSR

The Chairman of the Supreme Soviet of the Tatar Soviet Socialistic Republic

We live in difficult times, times of change and hopes.

The commonwealth of the people of our country, united by thousands of live threads, is at a brink. As the events in some regions of our country show, one incorrect, unconsidered move of any republic, region, district, town, political leader of any rank—and something irremediable may happen. And it is impossible to predict, how much time our descendants will need to collect again the parts of the still integral society, split by political ambitions and shortsightedness.

Is there a chance to preserve this integrity? Yes, there is a chance! It is in the hands of each person, nation, republic, it is in wisdom, a sense of reality, flexibility of governmental bodies and their leaders.

There is also a means for this—the Treaty of the Union of Sovereign Republics. It guarantees the renewal of the Union State, observance of human rights, irrespective of national, religious and other affiliations. It is the real way to social and economic well-being, civil peace and concord. Therefore, we appeal to the Republics to co-operate more actively in working over the completion of the Treaty and its soonest signing.

We confirm with great satisfaction, that to the question of the All-Union Referendum, whether the new Union should be or not, the multinational people of Tatarstan answered: 'Yes!'. This is the will of the people, and it is the supreme law to us.

Being guided by this declaration of will, based on the Declaration of the State Sovereignty of the Tatar SSR, the Supreme Soviet confirms the readiness of the Republic of Tatarstan to sign the Union Treaty immediately and independently. We see this as our contribution to the building of a renewed Union, where each Sovereign Republic will be a monolith, without which our future home cannot be constructed.

Our desire to make a Treaty with the Russian Federation is dictated by the same holy and pure intentions; it will be an embodiment of democratic principles of self-determination and equal rights, cooperation and mutual help.

Our position is clear and constructive. It has been communicated to the President of the USSR, Soviet of the Federation, administration of the RSFSR. We hope for a just evaluation of this position

and its support on behalf of the Supreme Soviet of the USSR, Supreme Soviet of the RSFSR and all fraternal republics.

16 April 1991.

No. 132

Joint Statement of the Presidium of the Supreme Soviet of the Tatar SSR, Soviet of the Ministers of the Tatar SSR, the Tatar Republican Committee of the CPSU, the Tatar Republican Soviet of Trade Unions, the Tatar Republican Committee of ALYCL 'On Participation of the Republic of Tatarstan in signing the Union Treaty

To the President of the USSR Comrade M. Gorbachev
To the Presidium of the Supreme Soviet of the USSR
To the Constitutional Review Committee of the USSR
To the Presidium of the Supreme Soviet of the RSFSR and
to the Presidiums of other Union Republics,

on 25 April 1991 the Joint Statement of the leaders of nine Union Republics and the President of the USSR 'On urgent measures for stabilizing the situation in the country and overcoming the crisis'. The people of the Sovereign Republic of Tatarstan share the concern, reflected in the Statement, caused by a deepening crisis of our society, which has penetrated all areas of its political, social and economic development; support the parties of the Statement in their aspiration along with the attempt to analyze the situation, to talk openly not only about the errors of the historical past, difficulties of the transition period, but also the errors, made during the course of perestroika, the fundamental purpose of which was to restore historical justice.

At the same time, some provisions of the statement about the ways to overcome the current situation raise serious concern.

While advocating universal restoration of the Constitutional order, the Statement parties came into conflict with the existing laws, in particular, with the Law 'On distribution of competences between the Union of the SSR and the Subjects of the Federation', and also with the Resolution of the 4th Congress of People's Deputies of the USSR 'On general conception of the new Union Treaty and procedure of its conclusion'.

The Statement about signing the Treaty by 'the delegations of the named Republics' in essence debar the Republic of Tatarstan from signing it, though the draft of the Union Treaty has been developed in common collaboration with the plenipotentiary representatives of the nine Union and all former Autonomous Republics. In fact, a narrow circle of the leaders of the Union Republics is trying to decide the fate of Tatarstan and other Autonomous Republics, which voted at the Referendum on 17 March 1991 for the renewed Union of Sovereign Republics with equal rights.

The essence of decisions of the Tatar SSR Supreme Soviet, taken after the adoption of the Declaration on State Sovereignty, is that the Republic of Tatarstan considers itself an independent co-founder of the Union of SSR equal to all Union Republics. This position is not separative, it is directed at eliminating the division of the Republics into Union and Autonomous ones, and at strengthening the USSR as a Union of Republics with equal rights.

The Tatar SSR has a developed economy, trade surplus, high level of integration of national economy with all Republics of the country. An attempt to preserve former structures nowadays means noth-

ing but a return to the failed national and state structure of the country. Our position does not mean breaking connections with Russia, which have been formed in a natural historical way. The session of the Supreme Soviet of Tatarstan has taken a decision to strengthen these relationships on the basis of a treaty with the RSFSR.

Tatarstan declared its intention to become a co-founder of the Union of SSR back in 1922, when the USSR was being created, then during the adoption of the Constitution in 1936. However, the personal stand of Stalin hindered the implementation of the will of the people of the Republic. Attempts to change the status of Tatarstan were undertaken in the 1960s and 1970s. Finally, on 30 August 1990, the Supreme Soviet of Tatarstan unanimously accepted 'The Declaration on State Sovereignty of the Tatar Soviet Socialistic Republic', which became a form of international and civil concord in the Republic.

As a result of the legal and organizational conditions which have arisen in the recent years, the Republic of Tatarstan has travelled the path from autonomy to sovereign statehood, which does not contradict the Constitution of the USSR. Therefore, any attempt not to take into account the reality of what has happened is unfounded, excludes 'rigorous adherence to the laws in force', and contradicts the founding principles of a state of law.

The Joint Statement in this part not only downgrades the sovereignty, but also humiliates the dignity of the people of Tatarstan.

Guided by the people's will, expressed at the Referendum, by the Declaration on the State Sovereignty, we declare the firm determination and readiness of the Republic of Tatarstan to sign the Union Treaty immediately and independently.

Resolution of the Supreme Soviet of the Tatar SSR on the Act on State Independence of the Republic of Tatarstan

Based on the Declaration on State Sovereignty of the Tatar SSR, taking into account the current situation, when the Republic of Tatarstan is deprived of the quota in the Supreme Soviet of the USSR and of the right to participate in signing the Treaty on Economic Commonwealth of Independent States, the Supreme Soviet of the Tatar SSR decides:

1. The Supreme Soviet of the Republic of Tatarstan confirms its adherence to the principles of the Declaration on State Sovereignty of the Tatar SSR, that are not to be revised in any way. Realization of these principles, real implementation of the sovereignty is a duty of all bodies of state authority and government.

2. The Republic of Tatarstan, as a Sovereign State, expresses its will and determination to have plenipotentiary direct representation in the Supreme Soviet of the USSR, other state and trans-republican bodies of the Union of SSR, their structures, and also declares its right to participate in preparing and making agreements between the Republics, that affect the Republic of Tatarstan.

3. Taking into account extreme importance of the Act on State Independence of the Republic of Tatarstan, being aware of the liabilities that are imposed on the supreme authority bodies of the Republic, on its multinational people, to instruct the Cabinet of Ministers in a month's time to submit for consideration by the Supreme Soviet of the Tatar SSR an analysis-forecast on the change in political, legal, social and economic position of the Republic of Tatarstan resulting from the adoption of the Act on State Independence.

4. On the basis of the submitted materials, the Supreme Soviet is to prepare and carry out a nation-wide vote (Referendum) for the citizens of the Republic of Tatarstan concerning the state status of the Republic of Tatarstan.

Resolution of the Supreme Soviet of the Republic of Tatarstan 'On carrying out the Referendum of the Republic of Tatarstan' about the issue of the state status of the Republic of Tatarstan

Taking into account that the definition of the state status of the Republic of Tatarstan is the most important question of the state life, in that it affects the interests of each citizen of the Republic of Tatarstan, and implementing the constitutional principle of exercising the state power by the people directly via the Referendum, the Supreme Soviet of the Republic of Tatarstan decides:

1. To put forward the question about the state status of the Republic of Tatarstan, to be determined in a Referendum of the Republic of Tatarstan.

2. The Referendum be carried out on 21 March 1992.

3. To include in the ballot papers the following phrasing of the question, being put forward at the Referendum, and the variants of the voters' answers:

'Do you agree that the Republic of Tatarstan is a sovereign state, and a subject of the international law building its relations with the Russian Federation and other republics and states on the basis of equitable treaties?'

'Yes' or 'No'.

4. To determine that in accordance with the Article 19 of the Law of the Republic of Tatarstan 'On Referendum in the Republic of Tatarstan', the power of the Central Referendum Commission of the Republic of Tatarstan carried out on 21 March 1992, shall be exercised by the Central Commission for the elections of the people's deputies of the Republic of Tatarstan, and the powers of district and city Referendum Commissions are exercised by the corresponding district and city Election Commissions for electing people's deputies of the local Soviets.

5. To determine that people who do not have permanent residency in the Republic of Tatarstan do not take part in the Referendum.

6. The Presidium of the Supreme Soviet of the Republic of Tatarstan, local Soviets of People's Deputies in strict accordance with the Law 'On Referendum in the Republic of Tatarstan' are to provide free expression of will for the citizens on the question asked in the Referendum, exclude the possibility of any influence on the citizens which may hinder the execution of their right for participation in the Referendum.

7. To invite the representatives of the CIS States, Republics of the Russian Federation and representatives of international organizations, who want to take part in monitoring the Referendum as observers.

8. The district and city Soviets of People's Deputies are to ensure the organization of the stations and station commissions of the Referendum no later than 25 February 1992.

9. The Cabinet of Ministers of the Republic of Tatarstan upon the proposal of the Central commission of the Republic of Tatarstan is to handle the issues of material and financial provision for the Referendum of the Republic of Tatarstan, its servicing by the enterprises and organizations of transportation and communication by the 1 March 1992.

10. To recommend the civil-society associations, mass media, their editorial offices to provide a thorough and objective explanation of the substance of the issue, being put forward to the Referendum, and the voting procedure, in a way, easily accessible for general public.

11. To calculate the results of the voting for the Republic of Tatarstan as a whole.

12. In accordance with the Article 1 of the Law of the Republic of Tatarstan 'On the Referendum in the Republic of Tatarstan', the decision, taken by means of the Referendum of the Republic of Tatarstan is final, is binding on all territory of the Republic of Tatarstan and can be cancelled or changed only by a new Referendum of the Republic of Tatarstan.

Chairman of the Supreme Soviet of the Republic of Tatarstan

F. Mukhametshin

No. 136

The Presidium of the Supreme Soviet of the Republic of Tatarstan

The Presidium of the Supreme Soviet of the Republic of Tatarstan received numerous letters from labour collectives and citizens' requests for clarification of the issue submitted to a referendum on 21 March 1992, and acts on the state sovereignty of the Republic of Tatarstan.

Following clause 7 of Article 101 of the Constitution of the Republic of Tatarstan, the Presidium of the Supreme Soviet of the Republic of Tatarstan presents the official interpretation: the question submitted to the referendum on 21 March 1992, provides for neither secession nor non-secession of the Republic of Tatarstan from the Russian Federation, nor Tatarstan's state separation from Russia.

The referendum seeks to determine observance of the interests and will of the people of the Republic of Tatarstan in the transition constituted by the Constitutional Law of the Republic of the previously autonomous Tatarstan to the status of a sovereign state remaining within the common economic and geopolitical space with the Russian Federation, but which on the basis of the generally recognised principle of self-determination and equality of peoples, correspondingly builds its relations with the Russian Federation and other states, and republics in a new way, on the basis of equal rights treaties and the delegation on that basis of certain power to the authorities of the Russian Federation.

The definition of the state status of the Republic of Tatarstan referred to in the first paragraph of the Resolution of the Supreme Soviet of the Republic of Tatarstan of 21 February 1992, 'In the holding of a referendum in the Republic of Tatarstan on the state status of the Republic of Tatarstan', should be construed as elevation of its status provided for by the Declaration on the State Sovereignty of the Republic Tatarstan.

Given the existing economic, cultural and other ties between the Republic of Tatarstan and the Commonwealth of Independent States, which due to the legal nature of the Commonwealth are in fact of an international and legal character, and considering developing relations with foreign countries, the Republic of Tatarstan as a state should have the necessary and corresponding scope of international legal personality, which, actually, is reflected in the question submitted to referendum. These powers are not meant to be put beyond the scope of constitutional law.

All the more so, since the question of the referendum on 21 March 1992, does not provide for changes in the current constitutional law of the Republic of Tatarstan, which is already based on the sovereign status of the republic, the basic provisions of the Law of 29 November 1991 'On referendum in the Republic of Tatarstan' is not incompatible with the international practice of elections and plebiscites, as well as with the relevant provisions of the Law of 16 October 1990, 'On referendum in the RSFSR'. Article 35 of the Law of the RSFSR, as well as the Law on a referendum in the Republic of Tatarstan, establish that resolutions made on the issue of referendum shall be deemed as adopted, if they are voted for by more than a half of the citizens who participated in the referendum.

The necessity of transition from the old subordination relationships to the relations of coordination has been repeatedly confirmed in the course of negotiations between the official delegations of the Republic of Tatarstan and the Russian Federation. So, in the Protocol, following consultations between delegations of the RSFSR and the Republic of Tatarstan held on 12–15 August 1991 in Moscow, it is stated that the Russian Federation understanding and respecting the desire of the Republic of Tatarstan to renew and upgrade its status, agreed to focus on the use of contractual forms in regulation of its relations with our country taking into account the priority interests of both parties. The agreement between the Government of the Russian Federation and the Government of the Republic of Tatarstan on economic cooperation of 22 January 1992 provides that the parties are to carry out their foreign trade activities independently and conclude agreements on other issues of mutual interest.

As regards the legal nature of decisions passed by the Supreme Soviet of the Republic of Tatarstan on 24 October 1991 and 21 February 1992, they in general are enforcement regulations issued pursuant to the Declaration of State Sovereignty of the Republic of Tatarstan, the current Constitution of the Republic of Tatarstan, the Law on the referendum in the Republic of Tatarstan, and Article 4 of the Declaration of state sovereignty of the RSFSR, and focused on the practical organization of the referendum.

The Presidium of the Supreme Soviet particularly notes that the regulations on State Sovereignty and referendum of the Republic of Tatarstan in no way impinge on the state and territorial integrity of the Russian Federation. They neither discriminate nor divide the citizens of the republic on the ethnic or religious basis, and are based on the legal equality of citizens regardless of their ethnicity or religion es-

tablishing Tatar and Russian as official languages, and unconditionally preserving the Russian Federation citizenship for all citizens of the Republic of Tatarstan, including the right of citizens to voluntarily change their nationality.

All these above-mentioned acts of the Republic of Tatarstan are in compliance with the principle of a free nation-state self-determination of peoples enshrined in Article 4 of the Declaration of State Sovereignty of the RSFSR, and the international legal obligations of the Russian Federation.

No. 137

Address of the Presidium of the Supreme Soviet of the Republic of Tatarstan to the people of the Republic of Tatarstan in connection with the Address of the Supreme Soviet of the Russian Federation to the Supreme Soviet, President and people of the Republic of Tatarstan

Dear fellow citizens!

On 21 March 1992, in accordance with the Constitution of the Republic of Tatarstan, for the first time in our history, there will be held a referendum on the state status of the Republic of Tatarstan as an expression of genuine power of people.

The main purpose of the referendum consists in confirming through the direct and free will of citizens the provisions of the Declaration of State Sovereignty of the Republic of Tatarstan unanimously adopted by the Supreme Soviet, and which became the basis for democratic transformation, preservation of interethnic harmony, and respect of human rights regardless of nationality. The principles and ideas of the Declaration are reflected in the current Constitution, laws, and intergovernmental agreements between the Republic of Tatarstan and the Commonwealth countries, including the Russian Federation.

The referendum will help to make a decisive step towards the development of democracy, protection of human rights in accordance with international standards, genuine self-government and economic independence of the country.

The referendum is a promise of new, equitable and mutually beneficial relations between the peoples of Russia, the prospect of a genuine Union of Tatarstan and Russia based on the historical ties between Russia and Tatarstan.

It is incomprehensible why the clear and precise objectives of the referendum, as well as the democratic procedure of its holding evince rejection on the part of the Supreme Soviet of Russia, particularly since the Russian Federation Supreme Soviet has repeatedly stated its commitment to the ideals of democracy, and its leaders have repeatedly called on the Supreme Soviet of Tatarstan to solve problems regarding the republic's status through a referendum.

The Presidium of the Supreme Soviet of Tatarstan categorically rejects the accusations of separatism made against the Republic in an effort to 'break the centuries-old ties with the Tatars and other peoples to secede from the Russian Federation' expressed in the Address of the Supreme Soviet of the Russian Federation.

Tatarstan has always solved and will continue to solve all the existing problems only in a civilized way. We reiterate our readiness to continue full-scale talks with Russia on political, economic and humanitarian issues, and express our confidence that they will result in the signing of the Treaty, which will be a significant contribution to the renewal not only of the Russian Federation, but also in the creation of a Union between Tatarstan and Russia.

Holding a referendum on the most important questions of life is an inalienable constitutional right of the people to be exercised in accordance with the law.

Dear fellow citizens!

The fate of the republic, peace and harmony in our multinational home, and well-being of each of us depends on the conscious, responsible and balanced approach of citizens to the issue regarding Tatarstan's future.

The Presidium of the Supreme Soviet of the Republic of Tatarstan

**Resolution of the Supreme Soviet of the Republic of Tatarstan On clarification
of the wording of the referendum question of the Republic of Tatarstan,
scheduled for 21 March 1992**

In connection with numerous formal requests from citizens and labour collectives to clarify the subject matter of the referendum of the Republic of Tatarstan of 21 March 1992, as well as in confirmation of the Declaration of State Sovereignty of the Republic of Tatarstan, and in accordance with the Constitution of the Republic of Tatarstan, the Supreme Soviet of the Republic of Tatarstan decides to:

1. Explain that the purpose of the referendum of the Republic of Tatarstan, 21 March 1992, consists in a confirmation of the Declaration of State Sovereignty of the Republic of Tatarstan.

2. Questions regarding separation of the Republic of Tatarstan from the Russian Federation, as well as the changes in its territorial integrity and borders shall not be the subject of the held referendum.

3. The Republic of Tatarstan is in favour of reforming its relations with the Russian Federation on the basis of a Treaty on the delegation of authority.

4. The Republic of Tatarstan guarantees within its territory the equality for all its citizens, and respect for universally recognized human rights, regardless of ethnicity, religion and other characteristics.

5. The Republic of Tatarstan provides within its territory dual citizenship, equitable functioning of the Tatar and Russian languages as official languages, as well as preservation and development of other national languages and cultures.

**Resolution of the Supreme Soviet of the Republic of Tatarstan 'On the measures
for realization of the state sovereignty of the Republic of Tatarstan arising from the outcome
of the referendum on the status of the Republic of Tatarstan held on 21 March 1992'**

Having heard and discussed the report of the Chairman of the Supreme Soviet of the Republic of Tatarstan F. Mukhametshin on the measures to implement the state sovereignty of the Republic of Tatarstan, arising from the outcome of the referendum on the status of the Republic of Tatarstan held on 21 March 1992, the Supreme Soviet of the Republic of Tatarstan decides: 1. State bodies, officials and

public organizations in the Republic of Tatarstan located within its territory in their activities shall proceed from the fact that based on the outcome of the referendum, the Republic of Tatarstan is a sovereign state, and a subject of the international law building its relations with the Russian Federation and other republics and states on the basis of equitable treaties. 2. To appeal to states and international organizations to build relationships with the Republic of Tatarstan according to its new state status.

Report by the Central Referendum Commission on the outcome of the referendum of the Republic of Tatarstan of 21 March 1992

The total number of district and city committees	60
The total number of polling stations	2611
The number of sites at which the information is available	2611

Based on the protocols of district and city referendum commissions on the voting results of the referendum of the Republic of Tatarstan on the following question: 'Do you agree that the Republic of Tatarstan is a sovereign state, and a subject of the international law building its relations with the Russian Federation and other republics and states on the basis of equitable treaties?'

Central Referendum Commission has determined:

1. The total number of citizens eligible to vote in the referendum	2,600,297
2. The number of citizens who received ballots	2,134,271
3. The number of citizens who participated in the voting	2,132,351
4. The number of citizens who answered 'Yes'	1,309,056
5. The number of citizens who answered 'No'	794.444
6. The number of ballots pronounced invalid	28.851

Based on the foregoing, and in accordance with Article 33 of the Law of the Republic of Tatarstan 'On referendum in the Republic of Tatarstan', the Central Referendum Commission of the Republic of Tatarstan has established:

The question submitted to the referendum of the Republic of Tatarstan, 21 March 1992: 'Do you agree that the Republic of Tatarstan is a sovereign state, and a subject of international law building its relations with the Russian Federation and other republics and states on the basis of equitable treaties?' shall be deemed accepted as voted for by more than a half of the citizens of the Republic of Tatarstan that took part in the vote

The legislative initiative of the Supreme Soviet of the Republic of Tatarstan

To the Chairman of the Constitutional Commission
of the Russian Federation Boris Yeltsin

Dear Boris Nikolayevich,

In connection with the development of the new Constitution of the Russian Federation-Russia, the Supreme Soviet of the Republic of Tatarstan, using the right of a legislative initiative, in accordance with Article 110 of the current Constitution of the Russian Federation shall make the following proposals:

1. To exclude the following words from Article 56: 'Republic of Tatarstan (Tatarstan) '.
2. To add Article 56.1 with the following wording: 'The Republic of Tatarstan is a sovereign state, and a subject of international law, associated with the Russian Federation, Russia, on the basis of the Treaty on mutual delegation of powers and jurisdictions'.

No. 142

Statement by the President and Chairman of the Supreme Soviet of the Republic of Tatarstan

We, the plenipotentiaries of the Republic of Tatarstan, express our concern with the progress of the first phase of the work of the Constitutional Council and its bodies. Taking an active part in the discussion of the draft of the Constitution, we proceeded from the fact that the new Constitutional Law would reflect and legally consolidate those irreversible political changes that had occurred in recent years in the country.

The leadership of the Russian Federation, becoming a pioneer of political reforms in the historically outmoded principles of state and legal structure of the country, marked the beginning of deep democratic reforms in all the republics and regions. The Declaration of State Sovereignty of the Russian Federation confirms rigorous commitment to its universally recognized norms of international law in upholding and respecting the interests of indigenous peoples. As declared in the name of the higher aims of the Russian Federation, state sovereignty had become the guarantor of the inalienable right of every nation to self-determination in their national and state forms. A strong impetus had been given to irreversible changes in the former autonomies. The historical will of our peoples, and the age-old aspirations of achieving genuine statehood have achieved their representation in the adopted Declaration on

the State Sovereignty of the Republic of Tatarstan, the outcome of the referendum on the state status of Tatarstan, and newly adopted Constitution of the Republic.

At the same time, in the draft prepared at the first phase by the Constitutional meeting, there appears a desire to belittle, and discredit the very idea of establishing a qualitatively new type of federal relations. It ignores the legislative initiative of the Republic of Tatarstan on the new vision of federalism in Russia, and on constitution in its Fundamental Law of a provision on contractual and constitutional relations between the Republic of Tatarstan and the Russian Federation, Russia.

It is impossible to create a new Russian Constitution determining the fate of its multinational people, which is in favour of the ambitions of certain political circles, and which does not take into account the interests of the republics.

All this gives rise to reasonable doubts as to the commitment of the authors of the draft to the ideas of new statehood and reforms in the Russian Federation on genuinely democratic principles. It is impossible from the standpoint of yesterday to undertake policy decisions contrary to the will of the multinational people. The constitution of the renewed Russian Federation should be established by taking into account the current objective realities rooted in the minds of people over the years of perestroika. Only such a Constitutional Law can become a reliable guarantor of the rights and freedoms of individuals and nations.

Considering it impossible in these conditions, to continue our participation in the work of the Constitutional Council and its bodies, we express our confidence that in the future the political wisdom and good will prevail in dealing with crucial issues, and remain committed in our efforts to build relations between the Republic of Tatarstan and the Russian Federation on the basis of the Treaty on mutual delegation of powers.

The protocol on the results of the consultations with the delegations
of the Russian Soviet Federative Socialist Republic and the Republic of Tatarstan,
held on 12-15 August 1991 in the city of Moscow

During the consultations, the sides exchanged views on a wide range of political, legal and economic relations of the Russian Soviet Federative Socialist Republic and the Republic of Tatarstan.

Taking into account the principles of the Declarations of State Sovereignty of the Russian Soviet Federative Socialist Republic and the Republic of Tatarstan,

considering the historical, economic, cultural and other relations of their peoples,

and understanding the need to build their relations on a new basis and striving towards their further development, the delegations agreed as follows:

1. Understanding and respecting the desire of the Russian Soviet Federative Socialist Republic and the Republic of Tatarstan as the Parties to the Treaty on the Union of sovereign states to renew and improve their status, and focus on the use of contractual forms of regulation of relations of the Russian Soviet Federative Socialist Republic and the Republic of Tatarstan, taking into account their priority interests without infringing the interests of other republics and the Union as a whole.

2. To deepen and improve economic relations and mutually beneficial cooperation on the basis of a single economic zone, and development of market relations, with stimulation of entrepreneurship and social protection of population.

3. To ensure the observance and protection of the rights and legitimate interests of citizens regardless of their national, religious and other differences.

4. To foster the development of national cultures and languages.

5. To deem it appropriate to continue consultations in Moscow and Kazan.

The protocol on the results of the consultations of the working group of the Supreme Soviet and the Soviet of Ministers of the Russian Soviet Federative Socialist Republic and the delegation of the Republic of Tatarstan held on 3–4 October 1991 in the city of Kazan

In accordance with the protocol on the results of the consultations between the delegations of the Russian Soviet Federative Socialist Republic and the Republic of Tatarstan, held in Moscow on 12–15 August 1991, on the basis of an agreement on deepening and improvement of economic relations and mutually beneficial cooperation on the basis of a common economic zone,

the participants of the consultation agreed as follows:

1. To recognize the need to focus on the development of relations between the RSFSR and the Tatar SSR on a contractual basis.

2. To consider it expedient to adopt as agreed decisions on the following issues of mutual economic cooperation in 1992:

– provision of the supply of industrial products (including raw materials) and consumer goods;

– implementation of pricing policy;

– reorganization of the budget and tax system;

– implementation of foreign economic activity, including setting of quotas and product licensing;

– development, production, and sales (including exports) of natural resources, primarily of oil and gas;

– environmental policy.

Furthermore, it is necessary to proceed from the need to reach agreements on a wide range of socio-economic and political issues regarding development of relations between the RSFSR and the Tatar SSR.

3. The participants confirmed their readiness to continue consultations in October 1991, in Moscow.

The consultations were attended by:

No. 148

The Agreement between the Russian Federation Government and the Government of the Republic of Tatarstan on economic cooperation

The Russian Federation Government and the Government of the Republic of Tatarstan, further called 'Parties', on the basis of the existing traditional links between them, taking into account the interests of both Parties in the further development and deepening of the mutually beneficial economic cooperation on a long term and stable basis, have agreed on the following:

Clause 1. The Parties confirm that the land, its minerals, waters and natural resources located on the territory of the Republic of Tatarstan, are the property of its people. The Parties recognize the presence on the territories of the federal, republic (belonging to the Republic of Tatarstan), and co-ownership property, established on the basis of mutual interest and by their voluntary consent.

Clause 2. On the basis of mutual economic interest and responsibility, the Parties are in favour of preserving the common economic zone and developing the existing economic relations between enterprises, associations and economic entities. The Parties will assist them in keeping the volume of product supplies in 1992, as a rule, not less than its volume in 1991. The range and volume of mutual supplies of basic products for public use are regulated by a special agreement.

Clause 3. Supporting the expansion of inter-republican relations, the Parties confirm the need for the implementation of joint target complex programmes on science and technology, conversion, ecology and other spheres of social and economic development. Russia provides funding for the conversion of the production of enterprises and organizations, wherein the feasibility of conversion of which will be recognized by the Parties.

Clause 4. The Parties believe that the military units, military institutions and educational institutions, located in the Republic of Tatarstan, are provided with all kinds of material, food and energy resources from the funds of the United Armed Forces. The Parties are involved in the formation of these funds. On the territory of the Republic of Tatarstan, the lands, assigned to locate them, remain the exclusive property of the Republic of Tatarstan.

Clause 5. The transfer of goods and services on the territory of the republics and between them is carried out on a free basis. Each Party ensures on their territory the mode of unimpeded and duty-free movement of transport, goods and products that are sent by the other Party (or the economic entities) to the Party or to third parties (including abroad) by air, sea, river, highway routes and railway, as well as pipeline transport.

Clause 6. The Parties recognize that the Republic of Tatarstan independently controls the development, production and sale of natural resources, especially oil and the products of oil, gas and chemical processing on its territory. The deliveries of them to Russia are organized on the basis of mutually beneficial annually signed agreements. The volume of oil supplies for 1992 is determined in accordance with the Annex to this Agreement.

Clause 7. The Parties carry out foreign trade activities independently, except for quota and licensed products. The Parties annually approve the agreed quotas for the export of products, manufactured in the Republic of Tatarstan. The issuance of licenses within the agreed quota is carried out by decisions of the Government of the Republic of Tatarstan by the authorized Committee of Russian Foreign Economic Relations in the Republic of Tatarstan. In the event that the agreed quotas are exceeded, the RSFSR suspends the licenses issued. A unified customs system operates on the territory of the Parties.

Clause 8. The Parties implement coordinated policy in the field of employment and social guarantees: make special agreements on the regulation of migration processes, undertake mutual commitments on social protection, pensions and social insurance.

Clause 9. The Parties cooperate in the spheres of science, education, health and culture. The jurisdiction of the corresponding institutions and organizations located on the territory of the Republic of Tatarstan, and the participation of each of the Parties in the insurance of their activities are determined by agreements of the Parties.

Clause 10. The Parties, on the basis of integrity and indivisibility of the environment, and, maintaining full autonomy in making appropriate decisions, coordinate measures to prevent environmental disasters, jointly develop a single comprehensive approach to assessing the state of the environment and take measures for its stabilization and protection.

Clause 11. The Parties agree that special agreements for areas of cooperation of mutual interest, described by this Agreement, will be signed in the agreed time.

Clause 12. The permanent representative authorities of the Parties with equal powers are formed in the governments. The Parties shall provide premises and create the necessary conditions for their work.

Clause 13. The Parties will jointly consider the problems arising in the implementation of the Agreement, and take action to solve them. To monitor the implementation of the Agreement and coordinate the actions, an intergovernmental commission is established, which holds joint meetings alternately in Moscow and Kazan.

Clause 14. This Agreement is signed for five years and shall become effective on the day of its signing. In the event of the non-fulfillment of the commitments, the Agreement may be terminated by either Party with prior notice to the other Party not less than 12 months. Executed in Moscow on 1992 January 1992, in two copies, each one in the Russian and Tatar languages, both texts having equal validity.

No. 149**The protocol on the results of the consultations of the Russian Federation and the Republic of Tatarstan delegations 30 March—2 April 1992, in Moscow**

During the consultations, the Parties exchanged views on a wide range of political, legal, economic and humanitarian relations between the Russian Federation and the Republic of Tatarstan.

Taking into account the Declaration of State Sovereignty of the Russian Federation and the Declaration of State Sovereignty of the Republic of Tatarstan and the processes of their implementation, considering the historical, economic, cultural and other relations of their peoples, guided by the desire to preserve the integrity of the Russian Federation, based on the understanding of the need to build their relations on a new constitutional and contractual basis and seeking for their further development, delegations agreed on the following:

1. On the need to establish a special relationship with the Republic of Tatarstan of the Russian Federation.

2. On the early implementation of the intergovernmental agreement of the Russian Federation and the Republic of Tatarstan on Economic Cooperation of 22 January 1992, and its further development in order to strengthen the economic sovereignty of the Republic of Tatarstan on the basis of common economic space.

3. On the guarantees of the human rights and freedoms irrespective of national, religious and other differences, including the regulation of questions of citizenship, equitable functioning of the Tatar and Russian languages.

During the consultations the Parties discussed a draft of a bilateral agreement on the delegation of authorities, submitted by the delegation of Tatarstan, and the proposal of the Russian delegation on the accession of the Republic of Tatarstan to the Federal Treaty.

The sides agreed to continue consultations in Kazan and Moscow in April–May 1992.

The consultations were attended by:

On the side of the Russian Federation:

S. Shakhrai, V. Tishkov, S. Stankevich, V. Podoprigora, V. Shamshurov, E. Kuzmin, A. Kirin, A. Krichevsky

On the side of the Republic of Tatarstan:

No. 150**Communiqué of the meeting of the working commissions of the state authorities of the Russian Federation and the state authorities of the Republic of Tatarstan**

On 2 July 1992, a regular meeting of the working commissions of the state authorities of the Russian Federation and the state authorities of the Republic of Tatarstan took place, in which the draft of the Agreement, proposed by Tatarstan, was discussed.

During discussion of the draft of the Agreement, the Parties have agreed on the following: on the need to create expert groups for the detailed preparation of the Agreement; on giving dynamism to the negotiating process with a view to completion of them in July–August of the current year; on the recommendation to the experts in their further work on the draft of the Agreement to proceed from the sover-

eign status of the Republic of Tatarstan; from the need to consolidate its international legal personality; from the principles of territorial integrity; from the unconditional respect for human rights, regardless of ethnicity, religion and other differences; from the respect for history, traditions, culture, language and national dignity of the peoples; from the agreed mutual distribution of powers on a wide range of issues.

Heads of working Commissions:

on the side of the Russian Federation

Vice Chairman

of the Supreme Soviet of the Russian Federation.

Yu. Yarov

on the side of the Republic of Tatarstan:

Vice-President of the Republic of Tatarstan

V. Likhachyov

The communique on the meeting of the delegations of the Russian Federation and the Republic of Tatarstan

The meeting of the delegations of the Russian Federation and the Republic of Tatarstan was held on 21 January 1993 in Moscow.

The negotiation was attended by Russian President B. Yeltsin, President of the Republic of Tatarstan M. Shaimiev, the Chairman of the Supreme Soviet of the Republic of Tatarstan F. Mukhametshin, Vice-Chairman of the Supreme Soviet of the Russian Federation N. Ryabov, Chairman of the Soviet of Ministers of the Russian Federation V. Chernomyrdin, Prime Minister of the Republic of Tatarstan M. Sabirov, Vice-President of the Republic of Tatarstan V. Likhachyov, Vice-Chairman of the Soviet of Ministers of the Russian Federation S. Shakh-ray, Vice-Chairman of the Russian Soviet of Ministers of the Russian

Federation Yu. Yarov, People's Deputy of the Republic of Tatarstan G. Kobelev, Advisor to the President of the Republic of Tatarstan R. Khakimov.

The draft of the Treaty was discussed at negotiations between the bodies of state power of the Russian Federation and state authorities of the Republic of Tatarstan on the mutual delegation of competences and powers. The Parties exchanged views on the political and legal, and economic issues. It was noted that under current conditions the relations of the Russian Federation and the Republic of Tatarstan should be developed on the contract and constitutional basis.

It was agreed about top-priority preparation at the talks within the framework of the draft of the Treaty on economics of environmental issues, foreign trade and others. Particular attention was paid to the fight against crime.

The President of the Russian Federation B. Yeltsin and the President of the Republic of Tatarstan M. Shaimiev appreciated the work of the delegations and experts. Mutual understanding was achieved over the questions considered at the session. It was noted that the participation of the presidents at the talks gave a fresh impetus to the work on the draft treaty.

The next meeting of the delegations is scheduled at the mid-February of the following year.

The report about the meeting of the delegations of the Russian Federation and the Republic of Tatarstan

The meeting of the delegations of the Russian Federation and the Republic of Tatarstan was held on 27 May 1993 in Moscow.

The negotiation was attended by Russian President B. Yeltsin, President of the Republic of Tatarstan M. Shaimiev, the Chairman of the Supreme Soviet of the Republic of Tatarstan F. Mukhametshin, Vice-Chairman of the Supreme Soviet of the Russian Federation N. Ryabov, First Deputy of the Chairman of the Soviet of Ministers of the Government of the Russian Federation O. Lobov

, Prime Minister of the Republic of Tatarstan M. Sabirov, Vice-President of the Republic of Tatarstan V. Likhachyov, Vice-Chairman of the Soviet of Ministers of the Russian Federation—B. Fyodorov, Vice-Chairman of the Soviet of Ministers of the Russian Federation S. Shakhray, Chairman of the Committee on projects and budgets of the Supreme Soviet of the Republic of Tatarstan G. Kobelev.

The procedure of drafting certain agreements between the Russian Federation and the Republic of Tatarstan was discussed at the talks. It was noted that agreements on cooperation in the field of environmental protection, in the field of higher education, on the implementation and transportation of oil and petrochemical processing products, as well as property issues are prepared and the heads of government will sign them in the near future. The work on the agreements on custom regulation issues, on relations in the sphere of banking activity, taxation policy, budget and other will be continued.

The course of preparation of the draft treaty between the Republic of Tatarstan and the Russian Federation on mutual delegation of competences and powers of public authorities was discussed at the negotiations.

In addition, the Parties exchanged views on the development of the constitutional process in the Russian Federation.

Mutual understanding was gained over the questions considered at the meeting.

The President of the Russian Federation B. Yeltsin and the President of the Republic of Tatarstan M. Shaimiev appreciated the work of the delegations and experts.

Draft Treaty between the Republic of Tatarstan and the Russian Federation 'On Delineation of Jurisdictional Subjects and Mutual Delegation of Competences and Powers between State Bodies of the Russian Federation and State Bodies of the Republic of Tatarstan'

Plenipotentiary representatives of the Federal State Bodies of the Russian Federation and the State Bodies of the Republic of Tatarstan;

having regard to the Declaration of State Sovereignty of the Russian Federation and of the Republic of Tatarstan;

pursuant to the Constitution of the Russian Federation and to the Constitution of the Republic of Tatarstan;

proceeding from the universally recognised right of peoples to self-determination, principles of equality, voluntary participation and freedom of will;

striving [guaranteeing—*version of Russian Federation experts*] to preserve the territorial integrity and the common economic space;

facilitating the preservation and development of historical and national traditions, cultures, and languages;

providing for civil peace, inter-ethnic harmony, and the overall security of the peoples;

effectuating the precedence of fundamental rights and freedoms of the person and citizen, regardless of ethnicity, religion, place of residence, or any other differences;

taking into account that the Republic of Tatarstan is a sovereign State Body subject to its international and foreign economic relations; have agreed as follows:

CLAUSE I.

The Russian Federation and the Republic of Tatarstan are united (associated) on the basis of this Treaty. The Republic of Tatarstan shall independently exercise state powers other than those for which the procedure of execution is provided herein.

CLAUSE II.

The Federal State Bodies of the Russian Federation-Russia and the State Bodies of the Republic of Tatarstan jointly execute the following powers:

- 1) providing for the rights and freedoms of the person and citizen, and the rights of ethnic minorities;
- 2) protection of sovereignty and territorial integrity;
- 3) establishing the procedures for recruitment into the Armed Forces of the Russian Federation and military service by citizens of the Republic of Tatarstan [providing defense and security for both Parties —*version for experts of the Republic of Tatarstan*]; organizing the mobilization of preparation of the national economy, guidance of the development and production of weapons and military equipment in the territory of the Republic of Tatarstan; the sale of arms, ammunition, military equipment and other military property; and issues concerning conversion of the defense industry. The forms and the share of participation of the Parties in the execution of the appropriate powers are determined by separate agreements;
- 4) general and confrontational issues of citizenship;
- 5) coordination of international and foreign economic relations. Customs Service of the Republic of Tatarstan and of the Russian Federation shall work on the basis of a separate agreement;
- 6) coordination of the basis of pricing policy;
- 7) the formation of regional development funds;
- 8) conducting of monetary policy;
- 9) administration of possessions of the Russian Federation or the Republic of Tatarstan, which can be transferred to joint administration with respect to interest in a voluntary and mutual agreement. The forms and procedures of joint administration of the specific possessions are determined by separate agreements;
- 10) coordination of the activities of law enforcement, judicial and prosecutorial authorities and security agencies, the development and implementation of targeted programs to combat crime; education and training of judicial, prosecutorial, and law enforcement agencies;
- 11) Coordination on geological surveying activities, the meteorological service, standards and measures of time;
- 12) the creation of common funds for the financing of joint programmes, the cleanup of consequences of natural disasters and accidents on the basis of mutual agreement;
- 13) coordination of management of the common energy system, roadways, railways, pipeline, air and water transport, communications, information systems;
- 14) providing for the duty-free and unhindered movement of transport, cargo and goods by air, sea, river, railway, motor road, as well as pipeline transport;
- 15) assessment in accordance with international standards of quality of the natural environment, the implementation of measures for its stabilisation and reconstruction; providing environmental security, coordination in the use of land, water and other natural resources; prevention of ecological disasters; issues concerning specially protected natural areas;
- 16) implementing a common policy in the social sphere: employment, migration, social protection, including social security;
- 17) coordination of health, protection of the family, motherhood, fatherhood and childhood, education, science, culture, physical training and sports; training of state personnel for schools, educational

institutions, cultural institutions, the media and other institutions and organizations; provision of pre-school institutions and schools of literature in the native language; coordination of research on the history and culture of peoples and their languages;

18) [administrative, administrative-procedural, labour, family, housing, water, and forest legislations; legislation on subterranean and environmental protection—*version for experts of the Russian Federation*]; [the foundations of criminal-procedural, civil-procedural, arbitral-procedural, administrative-procedural law—*variant for experts of the Republic of Tatarstan*];

19) conflict of laws;

20) legal regulation of intellectual property;

21) other authorities as established by mutual agreement.

CLAUSE III.

Legal documents issued by the governments, agencies and officials of the Russian Federation entities and of the Republic of Tatarstan within the power of these bodies, institutions and officials, are recognised by the parties without additional identification of their authenticity.

CLAUSE IV.

The Federal Government of the Russian Federation as well as the authorities of the Republic of Tatarstan cannot issue legislative acts on matters not falling within their jurisdiction. The State Bodies of the Republic of Tatarstan, as well as the Federal State Bodies of the Russian Federation shall have the right to suspend and appeal the activities on its territory of laws of the Russian Federation and the Republic of Tatarstan, if they violate this Treaty. Disputes on the implementation of the powers in the sphere of joint jurisdiction of the Russian Federation and the Republic of Tatarstan shall be allowed in a consistent manner by the parties.

CLAUSE V.

In the aims of fulfilling this Treaty, the Russian Federation—Russia and the Republic of Tatarstan may make additional agreements, build up joint structures; on a parity basis they establish a permanent Joint Commission, the structure of which is determined by the Presidents of the Russian Federation and the Republic of Tatarstan.

CLAUSE VI.

State Bodies of the Russian Federation and the Republic of Tatarstan by mutual agreement establish plenipotentiary representatives in Moscow and Kazan.

CLAUSE VII.

The Agreement or its provisions cannot be cancelled, modified or amended unilaterally. This Treaty shall come into effect upon signature. Executed in Moscow on «__» _____ 1994 in two copies, each one in Tatar and Russian, both texts being authentic and having equal validity.

The President of the Russian Federation, B. Yeltsin

Agreement between the Governments of the Russian Federation and the Republic of Tatarstan on Budgetary Relations between the Russian Federation and the Republic of Tatarstan

The Russian Federation and the Republic of Tatarstan, on the assumption of necessity of financial support for social and economic development of the Republic of Tatarstan, the efficient use of the natural and economic potential of the Republic of Tatarstan, and participation in financing the federal program for the benefit of both parties, having considered the budgetary relations, have agreed as follows.

Clause 1. The Republic of Tatarstan for the execution of the authority delegated by the Russian Federation, as well as the execution of joint programs, makes a contribution to the national budget of the Russian Federation on the basis of the following regulations and agreements: – corporate tax at the standard of 13%; – income tax on individuals at the standard of 1%; – the value added tax at the standard defined in the annual agreements by the Ministries of Finance of the Russian Federation and the Republic of Tatarstan.

Clause 2. For the purposes of financial support for the implementation of the Republic of Tatarstan environmental programmes related to the need to restore the natural resources and environmental protection, to keep in the budget of the Republic of Tatarstan the excise tax on alcohol, vodka and distillery products, oil and gas excise, fee for land, income privatization, a special tax for the financial support of the most important sectors of the economy.

Clause 3. The Parties bear mutual responsibility for breach of obligations under this agreement. Amendments to this Agreement may be adopted by mutual agreement of the parties and issued by a special protocol.

Clause 4. This Agreement shall come into effect on the day of its signing and is valid for 5 years.

For the Government of Russian Federation V. Chernomyrdin

For the Government of the Republic of Tatarstan M. Sabirov

15 February 1994

Evening Kazan.—1994.—14 October.

No. 161**The Agreement between the Russian Federation and the Republic of Tatarstan
'On Delineation of Jurisdictional Subjects and Mutual Delegation of Authority between
State Bodies of the Russian Federation and State Bodies of the Republic of Tatarstan'**

Plenipotentiary representatives of the State Bodies of the Russian Federation and the State Bodies of the Republic of Tatarstan:

pursuant to the Constitution of the Russian Federation and to the Constitution of the Republic of Tatarstan;

proceeding from the universally recognised right of peoples to self-determination, principles of equality, voluntary participation and freedom of will;

ensuring the preservation of the territorial integrity and unity of economic space;

facilitating the preservation and development of historical and national traditions, cultures, and languages;

providing for civil peace, inter-ethnic harmony, and the security of the peoples;

effectuating the precedence of fundamental rights and freedoms of the person and citizen, regardless of ethnicity, religion, place of residence, or any other differences;

taking into account that the Republic of Tatarstan as a state is united with the Russian Federation by the Constitution of the Russian Federation, the Constitution of the Republic of Tatarstan and the Treaty on Delineation of Jurisdictional Subjects and Powers between State Bodies of the Russian Federation and State Bodies of the Republic of Tatarstan, is involved in international and foreign economic relations, have agreed on the following:

CLAUSE I.

The delineation of jurisdictional subjects and powers between state bodies of the Russian Federation and state bodies of the Republic of Tatarstan is effected by the Constitution of the Russian Federation, the Constitution of the Republic of Tatarstan, and the Treaty.

CLAUSE II.

The Republic of Tatarstan has its own Constitution and legislation. Bodies of Public Authority of the Republic of Tatarstan shall exercise the powers of the government, including: 1) protect human and civil rights and freedoms; 2) form the national budget, establish and collect republic taxes; 3) resolve issues of lawyers and notaries; 4) carry out the legal regulation of administrative, family, housing relations, relations in the field of environment and natural resources; 5) give pardon to persons convicted by the courts of the Republic of Tatarstan; 6) resolve questions of ownership, use and disposal of land, mineral resources, water, forest and other natural resources, as well as state-owned enterprises, organisations, other movable and immovable state property, located on the territory of the Republic of Tatarstan, are the exclusive property and property of the people of Tatarstan, with the exception of federal property. Delimitation of state ownership is governed by a separate agreement; 7) establish a system of state bodies of the Republic of Tatarstan, the order of their organisation and activities; 8) resolve the national issues of citizenship; 9) establish the procedure of alternative civilian service in the territory of the Republic of Tatarstan by citizens having the right under federal law to replace military service; 10) establish and maintain relations and conclude treaties and agreements with the republics, Krai [regions], oblasts [provinces], autonomous oblasts and autonomous Okrugs [districts], the cities of Moscow and St. Petersburg of the Russian Federation, not contradictory to the Constitution of the Russian Federation and the Republic of Tatarstan, the Agreement and the other agreements between public authorities of the Russian Federation and public authorities of the Repub-

lic of Tatarstan; 11) participate in international relations, establish relations with foreign states and sign agreements with them, not contradictory to the Constitution and the international obligations of the Russian Federation, the Constitution of the Republic of Tatarstan and the Agreement, participate in the activities of relevant international organizations; 12) create the National Bank in accordance with a separate agreement; 13) independently carry out foreign economic activity. Separation of powers in the field of foreign economic activity is executed by a separate agreement; 14) in the manner determined by a separate agreement, resolve the issues of conversion of enterprises, owned by the state of the Republic of Tatarstan; 15) establish state awards and honorary titles of the Republic of Tatarstan.

CLAUSE III.

The State Bodies of the Russian Federation and the State Bodies of the Republic of Tatarstan jointly exercise the following powers: 1) providing for the rights and freedoms of the person and citizen, and the rights of ethnic minorities; 2) protection of sovereignty and territorial integrity; 3) organising the mobilization of preparation of the national economy, guidance of the development and production of weapons and military equipment in the territory of the Republic of Tatarstan; the sale of arms, ammunition, military equipment and other military property; and issues concerning conversion of the defense industry. The forms and the share of participation of the Parties in the execution of the appropriate powers are determined by separate agreements; 4) general and confrontational issues of citizenship; 5) coordination of international and foreign economic relations; 6) coordination of the pricing policy; 7) the formation of regional development funds; 8) conducting of monetary policy; 9) administration of possessions of the Russian Federation or the Republic of Tatarstan, which can be transferred to joint administration with respect to interest in a voluntary and mutual agreement. The form and procedures of the joint administration of the specific possessions are determined by separate agreements; 10) coordination on geological surveying activities, the meteorological service, standards and measures of time; 11) the creation of common funds for the financing of joint programs, the cleanup of consequences of natural disasters and accidents on the basis of mutual agreement; 12) coordination of administration of common: energy system, roadways, railways, pipeline, air, and water transport, communications, information systems; 13) providing for the duty-free and unhindered movement of transport, cargo and goods by air, sea, river, railway, motor road, as well as pipeline transport; 14) assessment in accordance with international standards of quality of the natural environment, the implementation of measures for its stabilization and reconstruction; providing environmental security, coordination in the use of land, water, and other natural resources; prevention of ecological disasters; issues concerning specially protected natural areas; 15) carrying out a common policy in the social sphere: employment, migration, social protection, including social security; 16) coordination of health, protection of the family, motherhood, fatherhood and childhood, education, science, culture, physical training and sports; training of national personnel for schools, educational institutions, cultural institutions, the media and other institutions and organizations; provision of pre-school institutions and schools of literature in the native language; coordination of research on the history and culture of peoples and their languages; 17) personnel of the judicial and law enforcement authorities; 18) advocacy, arbitration and notaries; 19) coordination of activity of law enforcement bodies, the interaction of security bodies, the development and implementation of targeted programmes to combat crime; 20) the establishment of common principles of organization of the system of state authorities and local self-government; 21) administrative, administrative—procedural, labor, family, housing, land, water, and forest legislation; legislation on subterranean and environmental protection; 22) issues of land sharing, subsoil, water and other natural resources; 23) other power, established by mutual agreement.

CLAUSE IV.

The following shall be under the administration of the Russian Federation and its bodies: 1) adoption and amendment of the Constitution and Federal laws, control over their observance; Federal structure and the territory of the Russian Federation; 2) regulation and protection of the rights and freedoms of the person and citizen; citizenship in the Russian Federation; regulation and protection of the rights of national minorities; 3) establishment of the system of Federal legislative, executive and judicial authority, the procedures of their organization and activities; formation of Federal State Bodies; 4) Federal state property and its management; 5) establishment of the principles of Federal policy and Federal programs in the sphere of state, economic, ecological, social, cultural and national development of the Russian Federation; 6) establishing the legal framework of the single market; financial, currency, credit, customs regulation, money issue, the principles of pricing policy; federal economic services, including Federal banks; 7) the Federal budget; Federal taxes and fees; Federal funds of regional development; 8) Federal power systems, nuclear power, fissile materials; Federal transport, railways, information and communication; activities in space; 9) Foreign policy and international relations of the Russian Federation, international treaties of the Russian Federation; issues of war and peace; 10) foreign economic relations of the Russian Federation; 11) defense and security; military production; determination of the procedure of sale and purchase of arms, ammunition, military equipment and other military property; production of poisonous substances, narcotic substances and rules for their use; 12) determination of the status and protection of the state border, territorial sea, air space, exclusive economic zone and continental shelf of the Russian Federation; 13) the judicial system; the prosecutor's office; criminal, criminal-procedural and criminal-executive legislation; amnesty and pardon; civil, civil procedure and arbitration procedure legislation; 14) Federal conflict of laws; 15) meteorological service, standards, metric system and time measurement; surveying and mapping; names of geographical entities; official statistics and accounting; 16) state awards and honorary badges of the Russian Federation; 17) the Federal public service.

CLAUSE V.

Legal documents issued by governments, agencies and officials of the Russian Federation entities and the Republic of Tatarstan within the powers of these bodies, institutions and officials, are valid.

CLAUSE VI.

The bodies of state power of the Russian Federation, as well as the authorities of the Republic of Tatarstan may not issue legal acts on matters not within their jurisdiction.

The state authorities of the Republic of Tatarstan, as well as Federal authorities, have the right to challenge the laws of the Russian Federation and the Republic of Tatarstan, if they violate this Agreement.

Disputes on the implementation of the powers in the sphere of joint jurisdiction of the state authorities of the Russian Federation and state authorities of the Republic of Tatarstan are resolved in a consistent manner between the Parties.

CLAUSE VII.

For the purposes of fulfilling this Agreement, the State Bodies of the Russian Federation and the Republic of Tatarstan may make additional agreements and establish joint structures and commissions on a parity basis.

CLAUSE VIII.

The State Bodies of the Russian Federation and the Republic of Tatarstan by mutual agreement establish plenipotentiary representatives in Moscow and Kazan.

CLAUSE IX.

The Agreement or its provisions cannot be cancelled, modified or amended unilaterally.

The Agreement comes into effect 7 days after its signature and publication.

Executed in Moscow on 15 February 1994 in two copies, each one in Tatar and Russian, both texts being authentic and having equal validity.

President of the Republic of Tatarstan

M. SHAIMIEV

Prime Minister of the Republic of Tatarstan

M. SABIROV

The Republic of Tatarstan.—1994.—19 February

No. 162
Official letter

To Russian Federation President B. Yeltsin

To the Constitution of the Russian Federation project

The stance of the Republic of Tatarstan towards the draft Constitution of the Russian Federation is based on documents that have been adopted by the Supreme Soviet of the Republic of Tatarstan, in particular 'The Declaration on the State Sovereignty of the Republic of Tatarstan' and the new 'Constitution of the Republic of Tatarstan'. According to these documents, relations between the Republic of Tatarstan and the Russian Federation are defined as treaty-constitutional. Under article 61 of the Constitution of the Republic of Tatarstan it is noted: 'The Republic of Tatarstan is a sovereign state, and a subject of international law, associated with the Russian Federation, Russia, on the basis of the Treaty on the mutual delegation of powers and jurisdictions'.

The Supreme Soviet of the Republic of Tatarstan, following the adoption of the Constitution of the Republic of Tatarstan, appealed to supreme Russian state authorities with a proposal 'on the institutionalization in the Fundamental Law of the Russian Federation the provision about the contractual constitutional relations between the Republic of Tatarstan and the Russian Federation—Russia'. However we are still waiting for an official response.

Russia's leaders have repeatedly expressed their commitment to the democracy and the formation of the statehood taking into account the will of the people and the republics. The free will of the people of Tatarstan and its political priorities as of a sovereign state were legitimately reflected in the Republic of Tatarstan presidential election of June 1990 and in a referendum held on 21 March 1992 about the legal federal status of the republic (61.4% per cent voted in favour). We are also aware that the Russian referendum of 25 April 1993 is not considered as binding in the republic as voter turnout was only 22.8%. These political facts must be considered with regard to the constitutional definition of the relationship between the Russian Federation and the Republic of Tatarstan.

Negotiations between the official delegations of the Russian Federation and the Republic of Tatarstan concerning the conclusion of a treaty on mutual delegation of powers and jurisdictions were carried out on the combined initiative of the Russian Federation President, B. Yeltsin, and President of the Republic of Tatarstan, M. Shaimiev, with the participation of the representatives from the Supreme Soviets and Governments. Over this period, a draft treaty and a series of agreements were drawn up. However, more recently, the negotiating process was halted and the reached agreements were not realized. This was not the fault of Tatarstan. This situation has created doubt among the population and international community representatives that the commitment of Russia's leadership to the ideas stated in the 'Declaration on State Sovereignty of the Russian Federation' and to the reform of the Federation based on new democratic principles. Moreover, this uncertainty in regulating our bilateral relations may create further real difficulties when forming new power and administrative structures in the Russian Federation and also result in a lack of representation for the Republic of Tatarstan within the federal system. The Republic of Tatarstan considers that the time has come for formal recognition of the new state status, and incorporation into the draft of the new Constitution of the Russian Federation of a separate provision for treaty-constitutional relations between the Russian Federation and the Republic of Tatarstan in accordance with the association set out in the Treaty and bilateral agreements.

No.163

Treaty on Delineation of Jurisdictional Subjects and Powers between State Bodies of the Russian Federation and State Bodies of the Republic of Tatarstan.

26 June 2007

Moscow

State Bodies of the Russian Federation and the State Bodies of the Republic of Tatarstan, governed by the Constitution of the Russian Federation and the Constitution of the Republic of Tatarstan, by the federal laws, and laws of the Republic of Tatarstan;

taking into consideration the experience gained in applying the Treaty between the Russian Federation and the Republic of Tatarstan 'On Delineation of Jurisdictional Subjects and Mutual Delegation of Powers between State Bodies of the Russian Federation and State Bodies of the Republic of Tatarstan' dated 15 February 1994, concluded on the basis of the referendum in the Republic of Tatarstan held on 21 March 1992 and in accordance with the Constitution of the Russian Federation and the Constitution of the Republic of Tatarstan,

on the basis of historical, cultural, economic, environmental and other specificities of the Republic of Tatarstan,

have agreed on the following:

CLAUSE 1

Delineation of jurisdictional subjects and powers between state bodies of the Russian Federation and state bodies of the Republic of Tatarstan is effected by the Constitution of the Russian Federation, the Constitution of the Republic of Tatarstan, and this Treaty.

CLAUSE 2

1. In accordance with the Constitution of the Russian Federation and the Constitution of the Republic of Tatarstan, the Republic of Tatarstan (a state) — a constituent entity of the Russian Federation — possesses full state authority outside the competence of the Russian Federation and powers of the Russian Federation concerning the matters within the joint competence of the Russian Federation and constituent entities of the Russian Federation.

2. Taking into consideration that the use and protection of land, subterranean resources, water, forest and other natural resources inside the territory of the Republic of Tatarstan constitute the basis of life and activity of its multinational people, the Government of the Russian Federation and the Cabinet of Ministers of the Republic of Tatarstan conclude agreements providing for the joint resolution of the issues related to economic, environmental (resulting from the long use of oil deposits taking into account the mining and geological conditions of hydrocarbon extraction), cultural and other specificities of the Republic of Tatarstan. The Government of the Russian Federation and the State Soviet of the Republic of Tatarstan introduce the corresponding draft laws pertaining to issues mentioned in this clause to the State Duma of the Federal Assembly of the Russian Federation.

3. The Republic of Tatarstan, within its competence, handles international and foreign economic relations with constituent entities and administrative and territorial divisions of foreign states; participates in the activities of bodies of international organizations specially created for these purposes; signs agreements for the implementation of international and foreign economic relations and handles communications with foreign states' public authorities as agreed by the Ministry of Foreign Affairs of the Russian Federation in accordance with the procedure established by the Government of the Russian Federation.

4. The Republic of Tatarstan, with the approval of the Government of the Russian Federation, provides state support and assistance to its compatriots in the preservation of identity and in the development of national culture and language.

5. State languages in the Republic of Tatarstan are the Russian and the Tatar languages, the status and procedures for the use of which are determined by the Constitution of the Russian Federation, the Constitution of the Republic of Tatarstan, federal law, and law of the Republic of Tatarstan.

In order to be nominated for the supreme official position of the Republic of Tatarstan, an additional requirement to those introduced in accordance with the procedure stipulated by federal law is established, providing for competence in the state languages of the Republic of Tatarstan. Competence in the state languages of the Republic of Tatarstan is established in a declarative way.

CLAUSE 3

The Russian Federation citizens residing in the Republic of Tatarstan shall have the right to obtain a primary identity document (a Russian Federation citizen domestic passport) with an inserted page in the state language of the Republic of Tatarstan (Tatar) and bearing the State Emblem of the Republic of Tatarstan.

CLAUSE 4

The Republic of Tatarstan public authority bodies shall have a corresponding representative office under the President of the Russian Federation in Moscow.

CLAUSE 5

1. This Treaty is valid for 10 years from the date of its coming into force.

2. The procedure for renewing this Treaty, as well as the procedure and the grounds of its early termination (cancellation) are determined by federal law.

CLAUSE 6

Executed in Moscow on 26 June 2007 in two copies, each one in the Russian and Tatar languages, both texts having equal validity.

№ 164

CONSTITUTION OF THE REPUBLIC OF TATARSTAN (Excerpts)
(as amended by the Law of the Republic of Tatarstan on 19 April 2000 No.1380,
on 15 September 2003 No.34-LRT, on 12 March 2004 No.10-ZRT;
on 14 March 2005 No.55-LRT, on 30 March 2010 No.10-ZRT;
on 22 November 2010 No.79-LRT; on 22 June 2012 No.40-ZRT)

The present Constitution, expressing the will of the multinational people of the Republic of Tatarstan and the Tatar people,
embodies the priorities of human and civil rights and freedoms,
proceeds from the universally acknowledged human right to self-determination, principles of equality, voluntariness and freedom of will,
contributes to the preservation and development of historical, national and spiritual traditions, cultures, languages, maintenance of civil peace and interethnic harmony,
promotes the strengthening of democracy, the social and economic development of the Republic of Tatarstan, and the preservation of the historical unity of the nations of the Russian Federation on the basis of the principles of federalism.

SECTION I. FOUNDATIONS OF CONSTITUTIONAL ORDER

CLAUSE 1

1. The Republic of Tatarstan is a democratic constitutional State united with the Russian Federation by the Constitution of the Russian Federation, the Constitution of the Republic of Tatarstan and the Treaty between the Russian Federation and the Republic of Tatarstan 'On Delimitation of Jurisdictional Subjects and Mutual Delegation of Powers between the Russian Federation State Bodies and the Republic of Tatarstan State Bodies', and a constituent entity of the Russian Federation. The sovereignty of the Republic of Tatarstan is expressed in possessing the entirety of state power (legislative, executive and judicial) out of the jurisdiction of the Russian Federation and out of the authorities of the Russian Federation in the fields of the joint jurisdiction of the Russian Federation and the Republic of Tatarstan and is an inexorable quality of the Republic of Tatarstan.

<...>

CLAUSE 3

1. The holders of the Republic of Tatarstan sovereignty and the only source of power in the Republic of Tatarstan are its multinational people.

2. The people shall exercise power directly, as well as through the state bodies and local self-government bodies.

3. The supreme direct expression of the people's sovereignty shall be a referendum and free elections.

4. The Constitution of the Republic of Tatarstan and its amendments shall be adopted by the State Soviet of the Republic of Tatarstan or by referendum.

5. No one may usurp power by themselves in the Republic of Tatarstan. The seizure of power or the arrogation of the State competences shall be prosecuted by federal law.

CLAUSE 4

1. Outside the jurisdiction of the Russian Federation, and the joint competence of the Russian Federation and its subjects, the Republic of Tatarstan shall exercise its own legal regulation, including adoption of statutes and other normative legal acts.

2. In case of inconsistencies between a federal law and a normative legal act of the Republic of Tatarstan issued on subjects belonging to the jurisdiction of the Republic of Tatarstan, the normative legal act of the Republic of Tatarstan shall prevail.

<...>

CLAUSE 6

The Republic of Tatarstan shall be entitled within its powers to enter into international and foreign economic relations with constituent entities, administrative and territorial units of foreign states and with foreign states, conclude international agreements, arrange reciprocal diplomatic representation, and participate in the activities of international organizations.

CLAUSE 7

The Republic of Tatarstan shall be entitled to enter into relations with constituent entities of the Russian Federation, to conclude contracts and agreements, arrange reciprocal representation and participate in the activities of joint organizations.

CLAUSE 8

1. The Tatar and Russian languages shall be the state languages in the Republic of Tatarstan.

2. The official languages of the republic of Tatarstan shall be used on equal terms in all governmental organisations, self-government bodies and official institutions.

CLAUSE 9

1. State authority in the Republic of Tatarstan shall be exercised on the basis of the division of powers into legislative, executive and judicial. The legislative, executive and judicial powers shall be independent.

2. State authority in the Republic of Tatarstan shall be exercised by the President of the Republic of Tatarstan, the State Soviet of the Republic of Tatarstan, the Cabinet of Ministers of the Republic of Tatarstan and the courts of the Republic of Tatarstan.

3. The executive authority of the Republic of Tatarstan shall be constituted by the Cabinet of Ministers of the Republic of Tatarstan, ministries, state committees of the Republic of Tatarstan and other executive bodies of the Republic of Tatarstan.

4. In the exercise of their competencies, the authorities of the Republic of Tatarstan shall take into account historical, national and other characteristics of the Republic of Tatarstan.

CLAUSE 10

The Republic of Tatarstan shall recognise and guarantee local self-government. Local self-government shall be independent within its powers. Local self-government bodies shall not belong to the system of state authority.

CLAUSE 11

1. The Republic of Tatarstan is a secular state.
2. Religious associations shall be separated from the state and equal under the law.

CLAUSE 12

1. The Republic of Tatarstan recognises ideological diversity. No ideology may be established as state or obligatory.

<...>

CLAUSE 13

The Republic of Tatarstan is a social welfare state, pursuing a policy aimed at the creation of conditions that provide dignity and human liberty.

CLAUSE 14

The Republic of Tatarstan shall assist in the development of the national culture, language, and the preservation of the identity of the Tatars living outside of the Republic of Tatarstan.

CLAUSE 15

1. The Republic of Tatarstan rejects violence and war as a means of settling disputes between states and peoples.
2. War propaganda is prohibited in the Republic of Tatarstan.

CLAUSE 16

1. The land, mineral resources, water, wood and other natural resources, the fauna and flora shall be used and protected in the Republic of Tatarstan as a basis of life and activity of the people.

2. The public funds of the Republic of Tatarstan, state property, cultural and historical assets and other assets that contribute to the economic self-sufficiency of the republic and preservation of material and spiritual culture shall belong to the people.

<...>

CLAUSE 18

1. In the Republic of Tatarstan, private, state, municipal and other forms of property shall have equal recognition and protection.

2. Land and other natural resources may exist as private, state, municipal and other forms of property.

CLAUSE 19

1. Property shall be inviolable. No proprietor's rights regarding possession, use and management of lawfully acquired property should be restricted except otherwise provided by the federal law.

<...>

CLAUSE 21

1. The Republic of Tatarstan has the right to accord its own citizenship.
2. A citizen of the Russian Federation permanently residing in the Republic of Tatarstan shall be a citizen of the Republic of Tatarstan.
3. A citizen of the Republic of Tatarstan shall simultaneously be a citizen of the Russian Federation.

CLAUSE 22

Citizens of the Russian Federation shall in the Republic of Tatarstan possess all rights, freedoms and equal duties, according to the Constitution of the Russian Federation, the Constitution of the Republic of Tatarstan, conventional principles and the norms of international Law.

<...>

CLAUSE 25

The Treaty between the Russian Federation and the Republic of Tatarstan 'On the Delineation of Jurisdictional Subjects and Mutual Delegation of Powers between State Bodies of the Russian Federation and State Bodies of the Republic of Tatarstan State' shall be a component part of the legal system of the Russian Federation and the Republic of Tatarstan.

21 МАРТА — РЕФЕРЕНДУМ

ГРАЖДАНЕ ТАТАРСТАНА!

Ваше "ДА" — это РАЗВАЛ РОССИЙСКОЙ ФЕДЕРАЦИИ, СОГЛАСИЕ НА ГРУБОЕ РАСЧЛЕНЕНИЕ РУССКОГО И ТАТАРСКОГО НАРОДОВ.

Ваше безразличие — это помощь национал-экстремистам.

Ваше "НЕТ" — это СВОБОДНЫЙ ТАТАРСТАН В СВОБОДНОЙ РОССИИ.

ТОЛЬКО СИЛЬНОЕ ДЕМОКРАТИЧЕСКОЕ МНОГОНАЦИОНАЛЬНОЕ ГОСУДАРСТВО МОЖЕТ ЗАЩИТИТЬ ПРАВА И СВОБОДУ КАЖДОГО ЧЕЛОВЕКА, ОБЕСПЕЧИТЬ МИРНОЕ БУДУЩЕЕ ДЛЯ ВАС И ВАШИХ ДЕТЕЙ.

**ТАТАРЫ И РУССКИЕ!
НАША СИЛА — В ЕДИНСТВЕ!
РАЗВАЛУ РОССИЙСКОЙ ФЕДЕРАЦИИ — НЕТ!!!**

**21 МАРТА — РЕФЕРЕНДУМ
ГРАЖДАНЕ ТАТАРСТАНА!
ЗАДУМАЙТЕСЬ!**

Пять лет назад армянин и азербайджанец вместе пили вино на свадьбе. Теперь они пьют порознь на поминках убитых сыновей.
Разве кто-нибудь из них хотел этого?

Татарское отделение ДПР

**МНОГОНАЦИОНАЛЬНЫЙ
НАРОД
РЕСПУБЛИКИ
ТАТАРСТАН!**

21 марта 1992 года состоится всенародное голосование о будущей судьбе Татарстана.

Цена ответа на референдуме слишком высока, чтобы поддаваться эмоциям. Мы должны проявить мудрость и единогласно ответить «ДА»!

«ДА» — благополучию и уверенности в будущем для каждой семьи;

«ДА» — согласию в нашем многонациональном доме;

«ДА» — мирному труду на благо нашей общей родины — суверенного Татарстана в союзе с Россией. Будущее Республики Татарстан зависит от каждого голоса!

ВСЕ НА РЕФЕРЕНДУМ!
