The educational process at the Department of Morphology and General Pathology is focused on skill-building sessions. Students learn the basics of medicine and other fundamental subjects, which are necessary for future doctors practicing in different fields.

The educational process is fully provided by highly qualified teachers, instructional literature, and visual aids: bone and plastinated anatomical specimens.

During the educational process, students enrolled in programs such as General Medicine, Dentistry, Medical Biochemistry, Medical Biophysics, Medical Cybernetics, Pharmacy, Biology, Biotechnical Systems and Technologies receive comprehensive training in the following disciplines:

- Anatomy
- Neuroanatomy
- Histology, cytology and embryology
- Pathological physiology
- Pathology
- Topographic anatomy
- Methods of researches in biology and medicine
